This meeting with Mr. Vander Graaf prompted Mr. Coleman to engage Mr. Kroeker to conduct an independent review of anti-money laundering measures in the gaming industry. When Mr. Vander Graaf met with Mr. Kroeker as part of this review, Mr. Vander Graaf again shared his concerns and his recommendations and subsequently provided feedback on a draft of Mr. Kroeker’s report, clearly in the hope that they would be reflected in his report when presented to government. Similarly, when asked by interim general manager Sue Birge to prepare a “Q&A” document intended to assist in briefing the responsible minister, Mr. Vander Graaf instead prepared a lengthy summary of his concerns about money laundering in the industry, again clearly in the hope these would be provided to the minister. These instances of the investigation division communicating directly to government are rare, as it does not appear to have been within the normal duties of Mr. Vander Graaf or his subordinates to regularly engage with government officials above the rank of the general manager. That they seem to have unfailingly taken the few opportunities they did have to speak with senior government officials to press their concerns about money laundering speaks to their persistence in raising the alarm about these issues.

Regrettably, these efforts did not result in meaningful action to address the growing suspicious activity in the province’s casinos during this time period. Still, the significance of the division’s efforts to raise the alarm about money laundering in the industry should not be overlooked. Mr. Vander Graaf and his colleagues recognized the magnitude of the emerging money laundering crisis virtually at the moment it began and soon identified the precise money laundering typology connected to the suspicious activity in casinos. They offered recommendations that, if implemented, would have likely brought the problem to a halt before it flourished. By identifying for GPEB and BCLC both the problem and the solution, Mr. Vander Graaf and his colleagues provided the industry with the road map it needed to navigate its way, unharmed, out of the hazardous territory it had entered. Mr. Vander Graaf and the investigation division did so without access to any special information or intelligence that gave them an enhanced opportunity to identify the emerging and growing problem with illicit cash and money laundering in casinos. They were simply seeing and reporting on patterns and trends that should have alerted anyone connected to the industry that a serious problem was emerging.

**Actions of GPEB Generally**

Leaving aside the distinct actions of the investigation division, the actions of GPEB during this period played a significant contributing role in enabling the growth and
perpetuation of money laundering in the province’s casinos. As noted above, the Branch’s leadership, including successive general managers, received nearly constant warnings from the investigation division as to the severity of the money laundering crisis building in the industry that GPEB was responsible for regulating.386 Rather than following the recommendations that accompanied these warnings or otherwise taking action to address the concerns raised by Mr. Vander Graaf and his colleagues, GPEB focused its efforts during this time period primarily on the introduction of voluntary cash alternatives.

Focus on Introduction of Voluntary Cash Alternatives
As the investigation division repeatedly raised the alarm about growing money laundering in the gaming industry and recommended meaningful action to reduce suspicious cash in the province’s casinos, the anti–money laundering efforts of the remainder of GPEB were focused primarily on the development of voluntary cash alternatives.387 As discussed in Chapter 12, GPEB renewed its efforts to respond to the crisis building in the industry that GPEB was responsible for regulating.386 Rather than warnings from the investigation division as to the severity of the money laundering risk of money laundering in the gaming industry in the wake of Mr. Kroeker's 2011 report.388 In September 2011, GPEB formed a cross-divisional working group with the following strategic focus:389

The gaming industry will prevent money laundering in gaming by moving from a cash-based industry as quickly as possible and scrutinizing the remaining cash for appropriate action. This shift will respect or enhance our responsible gambling practices and the health of the industry.

Over the course of the remainder of 2011 and beginning of 2012, this group developed a three-phase anti–money laundering strategy.390 The first phase involved the introduction and promotion of cash alternatives as GPEB continued to gather information on the nature of cash being used in the industry.391 The second involved BCLC and service providers more actively engaging in the promotion of cash alternatives with “high-volume patrons” and the introduction of enhanced customer

389 Exhibit 181, Vander Graaf #1, paras 77–81 and exhibit O; Exhibit 557, Scott #1, paras 27–33.

391 Evidence of D. Scott, Transcript, February 8, 2021, pp 32–33; Exhibit 557, Scott #1, para 40.
due diligence and analytical capacity. The third, which Mr. Scott testified would have been necessary only if the first two phases did not achieve the desired outcomes, involved direct regulatory action by GPEB to prevent money laundering. Phase one was intended to commence in April 2012, phase two in May 2013, and phase three, if required, in December 2013.

In their evidence, Mr. Scott, who served as the general manager of GPEB when this strategy was developed, and Mr. Mazure, who succeeded him, both agreed that, in retrospect, this strategy should have been rolled out more quickly. I agree with this assessment. Moreover, in my view, this should have been clear at the time that the strategy was developed. The investigation division, by this point, had been warning GPEB for years about the growth of suspicious cash and – in the view of the division – the certainty that it was connected to money laundering. Despite these warnings, GPEB made a plan that contemplated no action at all to require that even the most suspicious transactions be turned away for nearly two years following its initiation. While I acknowledge Mr. Scott’s evidence that he anticipated concurrent intervention with high-risk patrons by BCLC in the form of interviews about the source of the funds those patrons were using to gamble, it is clear from his evidence that it soon became apparent to him that BCLC was unwilling to take this step. He did not, in response, accelerate plans to have GPEB intervene more directly in suspicious activity in casinos, including by conducting such interviews themselves. I note as well that even if BCLC had taken the step of interviewing patrons, as suggested by Mr. Scott, this action would have been targeted specifically at high-risk patrons and not broadly applicable to all suspicious transactions.

Instead, the focus of the first two phases of this strategy was on the introduction and promotion of voluntary alternatives to the use of cash. There is nothing wrong with the inclusion of cash alternatives as part of a strategy for addressing suspicious cash in the industry. If the industry was intent on moving players away from cash, there would be an obvious need to provide alternative means by which they could buy in and gamble. The evidence demonstrates, however, that GPEB was under no illusion that

392 Exhibit 557, Scott #1, para 40.
394 Exhibit 557, Scott #1, para 40.
395 Ibid.
398 Exhibit 557, Scott #1, paras 73–74; Evidence of D. Scott, Transcript, February 8, 2021, pp 53–56.
voluntary cash alternatives would be sufficient to resolve this issue, even at the time that
the strategy was adopted. Mr. Vander Graaf gave evidence that he did not believe this
approach was adequate, and even Mr. Scott acknowledged that it did not surprise him
“at all” that cash alternatives “didn’t change the amount of suspicious cash coming in [to
casinos].” Given the rate at which suspicious cash was entering the gaming industry
at this time, it was incumbent on GPEB to ensure that immediate action was taken to
prevent that cash from being accepted. Trying to entice patrons to move to strictly
voluntary cash alternatives without even the expectation that it would stem the flow of
suspicious cash was obviously insufficient.

The third phase of the strategy was not implemented in December 2013 as
scheduled. By 2015, GPEB was still trying to identify precisely what this phase of
the strategy would involve. Based on the evidence before me, it appears that this
delay was, in part, the result of GPEB’s failure to begin planning for phase three while
phases one and two were being deployed. Mr. Scott gave evidence that, being new to
government at the time, he failed to appreciate the pace at which government action
moved and, as such, did not commence preparations for phase three early enough.
Following Mr. Scott’s departure from GPEB, it appears this phase of the strategy was
further delayed at the outset of Mr. Mazure’s tenure due to a review and reorganization
of the Branch that he initiated shortly after his appointment. These delays
exacerbated the impact of the initial decision to delay implementation of phase three,
effectively limiting the industry’s efforts to reduce suspicious cash to voluntary cash
alternatives until 2015, as the rate at which suspicious cash entered the industry grew,
largely without interference, until this time.

Succession of General Managers
Before moving on to the impact of its actions in and following the summer of 2015,
it is necessary to comment briefly on the succession of four general managers (three
permanent and one interim) that led GPEB over the span of three years. In my view,
the turnover in GPEB’s leadership provides important context for its actions and
omissions during this period and causes me to temper any criticism of the individuals
that held these positions. It does not, however, in my view, significantly mitigate
GPEB’s responsibility for the money laundering crisis that arose during this period.

Mr. Sturko, the founding general manager of GPEB, left the Branch for another position in government in December 2010. When Mr. Mazure was appointed to the general manager role in September 2013, he was the third person to occupy the position in less than three years since Mr. Sturko’s departure. This high rate of turnover was undoubtedly disruptive to GPEB, and I have no doubt that there was a steep learning curve for each new general manager, particularly Mr. Mazure, who was new to the gaming industry, and Mr. Scott, who was new to the public service entirely. I accept that this turnover mitigates the responsibility borne by each individual general manager, particularly at the beginning of their tenures.

With respect to GPEB generally, had these transitions resulted in delays of a few weeks or even months in actions taken by the Branch to address suspicious transactions, this would be understandable. The failure of GPEB to take any meaningful action until 2015, seven years after the investigation division began to issue warnings about the emerging crisis, simply cannot be explained by staff turnover. While I do not mean to minimize the importance of the role of the general manager, two of the most critical staff members during this period – Mr. Vander Graaf and Mr. Schalk – who were responsible for monitoring suspicious activity in casinos and therefore best positioned to advise the general managers as to the necessary action, were present and forcefully voicing their views throughout this time period. Mr. Sturko, Mr. Scott, and Mr. Mazure were each well aware of these views and had ample time to act on Mr. Vander Graaf’s concerns and recommendations. That no meaningful action was taken until 2015, approximately six months after Mr. Vander Graaf and Mr. Schalk had been terminated from their positions, simply cannot be explained by changes in personnel.

Contribution of GPEB’s Actions Following the Summer of 2015

The efforts of GPEB to respond to suspicious cash transactions in the gaming industry underwent a noteworthy shift around the summer of 2015. This was marked by efforts to persuade government and BCLC to take meaningful action and represented a substantial increase in the efforts of the general manager, relative to his predecessors and his own previous actions, to address the flood of illicit funds then flowing into the province’s casinos. While an improvement on previous inaction, these efforts continued to fall short of what was necessary to respond to the magnitude of the crisis facing the gaming industry. In particular, after initially making appropriate and effective efforts to inspire government action, GPEB failed to seek further government intervention when these initial actions failed to achieve the desired results.

Actions Taken in Response to the 2015 Spreadsheet

As described at length in Chapter 11, the summer of 2015 marked an important turning point for efforts to address money laundering in British Columbia’s gaming industry. As BCLC formalized and expanded the cash conditions program and related measures, GPEB likewise began to improve upon the minimal efforts described above. In the Branch’s case, this improvement primarily took the form of efforts on the part of the general manager, Mr. Mazure, to prompt action from BCLC and Mr. de Jong, then the minister responsible for gaming.

A spreadsheet produced by GPEB investigators Rob Barber and Ken Ackles, discussed in Chapter 11 seems to have been a critical catalyst for this change. This spreadsheet was provided to Len Meilleur, then the executive director of GPEB’s compliance division; Cheryl Wenezenki-Yolland, an associate deputy minister within the Ministry of Finance, with responsibility for the gaming portfolio; and Mr. Mazure. It identified all suspicious cash transactions of $50,000 or more (as well as two transactions just below $50,000) that took place in Lower Mainland casinos in the month of July 2015. In total, it indicated that more than $20 million, including over $14 million in $20 bills, had been accepted in such transactions. While the contents of the spreadsheet largely replicated the type of information found in earlier reports of findings and contained minimal analysis, it appears to have had its intended effect of persuading GPEB’s leadership of the urgency of the situation and the need for further action. Most significantly, it prompted GPEB

to initiate a briefing with Mr. de Jong. In sharp contrast to the message delivered to government previously, this briefing, which followed closely on the heels of a very limited briefing of Mr. de Jong regarding the E-Pirate investigation, impressed upon Mr. de Jong the urgency and scale of the money laundering crisis facing the industry and sought his direct intervention.

The most significant results of this briefing included the establishment of the Joint Illegal Gaming Investigation Team (the creation of a similar unit had also been recommended separately by Mr. Lightbody shortly before the briefing), and a letter from Mr. de Jong to the BCLC board chair directing the BC Lottery Corporation to take the following actions including, critically, enhancement of processes for evaluating the source of funds prior to cash acceptance:

1. Ensure that BCLC's [anti-money laundering] compliance regime is focused on preserving the integrity and reputation of British Columbia's gaming industry in the public interest, including those actions set out in [Mr. Mazure's] letter of August 7 ... and any subsequent actions or standards that may follow;

2. Participate in the development of a coordinated enforcement approach with the Gaming Policy and Enforcement Branch (GPEB), the RCMP, and local police to mitigate the risks of criminal activities in the gaming industry; and

3. Enhance customer due diligence to mitigate the risk of money laundering in British Columbia gaming facilities through the implementation of [anti-money laundering] compliance best practices including processes for evaluating the source of wealth and source of funds prior to cash acceptance.

Alongside these efforts to encourage Mr. de Jong to take action, GPEB's appreciation for the magnitude of the challenge confronting the gaming industry was also reflected

in other ways. Most significantly, this included GPEB engaging Meyers Norris Penny, an external consulting firm, to conduct a review of the industry’s anti-money laundering measures and a series of letters written by Mr. Mazure to Mr. Lightbody between 2015 and 2017, in which Mr. Mazure repeatedly urged Mr. Lightbody to ensure that BCLC take further action to reduce the volume of suspicious cash accepted by casinos.

Limited Impact of Measures in Response to the 2015 Spreadsheet

Based on the actions taken in response to the spreadsheet produced by Mr. Barber and Mr. Ackles, I have no doubt that, by this point, Mr. Mazure had come to appreciate that illicit funds were entering the province’s casinos on a massive scale. I accept as well that these actions had some ameliorating effect on this problem. The creation of JIGIT was undoubtedly a significant step for an industry that had long suffered from neglect by law enforcement, and the report prepared by Meyers Norris Penney included several recommendations that were quickly implemented.

It is clear, however, that, like the efforts made by BCLC during this time period, GPEB’s response was not commensurate with the scale of the problem. As discussed previously, the number and value of suspicious transactions accepted by the province’s casinos remained at alarming levels for years following the September 2015 briefing of Mr. de Jong and as such, GPEB’s efforts were clearly insufficient to bring the volume of suspicious cash accepted by casinos down to anything approaching a reasonable level.

It is clear from his evidence and from his persistence in urging Mr. Lightbody to take additional action that Mr. Mazure recognized that the measures implemented at this time were not having their desired effect. Asked whether, in his view, BCLC ever implemented measures that satisfied the requests made in his initial letter of August 7, 2015, Mr. Mazure responded “No. And that’s why I kept writing the letters.”

Failure to Seek Subsequent Intervention from the Minister

The persistence of this suspicious activity and Mr. Mazure’s concerns about BCLC’s inaction called for further intervention on the part of the minister in the form of a directive to BCLC from the minister directly or from Mr. Mazure with the minister’s consent. In my view, GPEB did not take adequate steps to seek this intervention. Mr. Mazure testified that he believed Mr. de Jong understood his concern that BCLC was not taking appropriate action, and there is evidence that supports that Mr. Mazure endeavoured to communicate this message to Mr. de Jong. It is clear from the evidence of Ms. Wenezenki-Yolland, to whom Mr. Mazure reported, that he had

---

429 Exhibit 505, Lightbody #1, exhibits 48, 54, 55, 57.
430 Exhibit 490, Kroeker #1, para 124 and exhibit 51; Exhibit 711, Table of Response to Recommendations in MNP Report; Evidence of C. Wenezenki-Yolland, Transcript, April 27, 2021, p 137.
communicated his concerns to her. Ms. Wenezenki-Yolland also gave evidence of a “pre-briefing” on October 12, 2016, in which Mr. Mazure “advise[d] the minister candidly about his disagreements and concerns with BCLC,” as well as a briefing that took place the following day, in which both she and Mr. Mazure advised Mr. de Jong that BCLC was not taking adequate action to determine the source of funds used in large cash buy-ins.

Given this evidence, I accept that Mr. Mazure sought to impress upon Mr. de Jong his concerns about the adequacy of BCLC’s response to suspicious cash transactions. What Mr. Mazure did not do, and which in my view was clearly required, was take adequate steps to explicitly seek the minister’s direct intervention through a ministerial directive or the minister’s consent to a directive from Mr. Mazure. Mr. Mazure gave evidence that he “took every opportunity [he] could to put forward the idea of a directive” at least “where it made sense to do so.” I do not accept this evidence. Rather, it is clear from the record before me that he attempted to do so only twice, once in the September 2015 briefing prompted by the spreadsheet prepared by Mr. Barber and Mr. Ackles, and once just prior to the 2017 provincial election.

It should have been apparent to Mr. Mazure that he needed to seek the minister’s intervention long before he attempted to do so for the second time prior to that election. Mr. de Jong wrote to BCLC on October 1, 2015, seeking action in response to the volume of suspicious transactions in the province’s casinos. Mr. Mazure, who had previously communicated a similar message in an August 2015 letter to Mr. Lightbody, followed up to the minister’s letter the following January, expressing concern about the continued prevalence of suspicious cash transactions in the province’s casinos and reiterating the need, among other things, to “develop and implement additional Customer Due Diligence ... policies and practices ... with a focus on identifying source of wealth and funds as integral components to client risk assessment.” The following July, Mr. Mazure wrote to Mr. Lightbody again, reminding him that “[t]he Province has previously provided written direction to BCLC to establish the source of funds prior to accepting cash at gaming facilities.”

Mr. Mazure testified that he continued to write to Mr. Lightbody because he did not believe that BCLC had taken actions that satisfied his requests or the direction from the minister’s October 2015 letter. In my view, it should have been apparent to Mr. Mazure by the time he wrote his January 2016 letter that there was a need for further ministerial

434 Ibid, para 175.
436 Evidence of J. Mazure, Transcript, February 5, 2021, p 144.
439 Exhibit 505, Lightbody #1, exhibit 54.
440 Ibid, exhibit 55.
intervention. In the absence of a rapid and significant reversal of BCLC’s failure to take
the action Mr. Mazure thought necessary, he should have immediately sought such
intervention. Instead, he waited nearly a year before attempting to do so (by which time
he was told it was not possible due to the upcoming provincial election), as suspicious
cash continued to flow into the province’s casinos at unacceptable levels.

While the need to seek direct intervention from the minister should have been
clear long before the briefing on October 13, 2016, referred to above, this briefing
represented an opportunity for Mr. Mazure to have sought a directive and is illustrative
of his continued failure to do so. By the time of this briefing, BCLC had been in receipt
of Mr. de Jong’s letter of October 1, 2015, for over a year and Mr. Mazure had written to
Mr. Lightbody on three occasions urging him to ensure that BCLC take more decisive
action to reduce the volume of suspicious cash accepted by the province’s casinos. Yet,
the “next steps” identified in the briefing document presented to Mr. de Jong at this
briefing included only that “GPEB and BCLC have established an executive working
group that will carefully consider the recommendations and work on next steps.” In his
evidence, Mr. Mazure described his level of confidence at that point that this “executive
working group” would succeed in prompting BCLC to take the action he believed was
required as “little to none” but that, in his words “that was the direction given.”

I understand the “direction” referred to by Mr. Mazure here was a direction he
testified he had been given by Ms. Wenezenki-Yolland that GPEB and BCLC “were to
work together on issues.” He described his understanding of this direction in his
affidavit as follows:

It was made clear to me by Ms. Wenezenki-Yolland that there was an
expectation that I would be expected to work with BCLC to resolve issues
and that even though both organizations reported to the Ministry of Finance
at the time, issues between the two organizations were not routinely going
to be resolved at the Ministerial level. This expectation that GPEB and
BCLC were to resolve issues between themselves without the Minister’s
intervention was consistent throughout my tenure with GPEB.

In her evidence, Ms. Wenezenki-Yolland disputed that this direction precluded
Mr. Mazure from raising concerns with Mr. de Jong without the agreement of BCLC.
She testified that, at the time she joined the ministry, there was a pre-existing
practice in place that BCLC and GPEB would “present joint briefing notes on issues
where they had shared accountability.” Ms. Wenzenki-Yolland’s evidence was
that, while this practice continued during her tenure, it “did not apply to very many

442 Exhibit 922, Wenezenki-Yolland #1, para 176.
Facilities (September 30, 2016).
444 Evidence of J. Mazure, Transcript, February 5, 2021, p 139.
446 Exhibit 541, Mazure #1, para 15.
447 Exhibit 922, Wenezenki-Yolland #1, para 185.
briefing documents.” Ms. Wenezenki-Yolland disputed that there was any direction or expectation that disagreements between the two organizations be downplayed. When Mr. Mazure advised her that GPEB and BCLC had differences of opinion, she directed that each organization “set out their respective positions and rationales” in briefing notes provided to the minister “so that the minister could weigh the different perspectives.” Ms. Wenezenki-Yolland went on in her evidence to explain that Mr. Mazure also had opportunities to express his views in telephone and in-person briefings, many of which did not include BCLC representatives; that she had few briefings with the minister on matters related to gaming without Mr. Mazure (or someone acting in his stead) present; and that her practice was to have Mr. Mazure lead those briefings. Mr. Mazure himself gave evidence that he could “speak freely” in oral briefings with Mr. de Jong.

I accept Ms. Wenezenki-Yolland’s evidence in this regard and reject the notion that Mr. Mazure was somehow prohibited from seeking the minister’s direct intervention at or before the October 13, 2016, briefing. It is difficult to understand how, charged with regulating an industry he believed to be rife with criminal activity and illicit funds, Mr. Mazure would have been expected to remain silent about those matters unless BCLC – whom he believed to be the barrier to effective action in response to this problem – agreed that he could raise them. Mr. Mazure had not been restrained by any such direction in raising his concerns about suspicious transactions in the September 2015 briefing prompted by the spreadsheet prepared by Mr. Barber and Mr. Ackles, and it is clear from Ms. Wenezenki-Yolland’s evidence that, in the October 13 briefing, both Mr. Mazure and Ms. Wenezenki-Yolland did voice their disagreements with BCLC. I do not accept that Mr. Mazure was restricted from seeking a direction from the minister or the minister’s consent to issue a direction himself. Further support for the conclusion that Mr. Mazure was able to seek a direction from the minister at or before this briefing is found in the evidence that he, in fact, did attempt to seek such a direction in the months that followed (but was told that he could not do so because of the upcoming provincial election).

Further, it is clear in my view that Mr. Mazure had particular reason to raise the prospect of a ministerial directive at the October 13 briefing, which focused on the Meyers Norris Penney report. As discussed at length in Chapter 11, this report contained the following recommendation:

GPEB, at the direction of the Minister responsible for gaming, should consider issuing a directive pertaining to the rejection of funds where the source of cash cannot be determined or verified at specific thresholds. This would then provide specific guidance for BCLC to create policies and procedures for compliance by all operators.

448 Ibid, para 187.
449 Ibid, para 190.
450 Exhibit 922, Wenezenki-Yolland #1, paras 191–92.
452 Exhibit 73 OR: Gaming Reports and Recommendations, Appendix J, para 5.52.
For the reasons set out in Chapter 11, I reject the contention that this recommendation was misdirected at GPEB and that it should have instead been directed at BCLC. While I accept that BCLC could have – and, in my view, should have – implemented a measure of this sort far earlier than it did, the recommendation clearly anticipates a direction from GPEB with the consent of the responsible minister, which was entirely consistent with the Gaming Control Act at that time. Given Mr. Mazure’s reservations about the efforts of BCLC, I cannot understand why, armed with this recommendation, he did not leap at the opportunity to seek a direction empowering GPEB to impose upon the industry precisely the sort of measure Mr. Mazure had been urging BCLC to implement for nearly a year and which would eventually resolve the industry’s problems with suspicious cash 18 months later when implemented in response to a recommendation from Dr. German.

Following the 2017 election, Mr. Mazure again raised his concerns to the ministerial level in GPEB’s initial briefing with Mr. Eby but again failed to seek a directive from the minister. As they had done in 2015 with Mr. de Jong, Mr. Mazure and Mr. Meilleur successfully impressed upon Mr. Eby their ongoing concerns about suspicious cash in the gaming industry and ultimately inspired him to take action, this time in the form of Dr. German’s review. As noted previously, this briefing was incomplete, failing to properly represent the actions taken by BCLC in the preceding years, but it seems clear that these failings did not interfere with GPEB’s ability to convey to the new minister the urgency of the situation facing the industry.

Where this briefing was lacking in a material way was in the inexplicable decision not to present to Mr. Eby the direction that Mr. Mazure had intended to seek from Mr. de Jong prior to the election. While Mr. Mazure could not recall whether or not he sought this direction from Mr. Eby, I am satisfied, based on Mr. Eby’s evidence, Mr. Fyfe’s evidence, and the absence of any evidence suggesting a briefing note recommending the direction was put before the new minister, that he did not. This represents a further missed opportunity on the part of Mr. Mazure to seek much-needed ministerial intervention into an issue that, by that time, was abundantly clear GPEB and BCLC were unable to resolve themselves. While it is uncertain that Mr. Eby would have issued this direction if sought by GPEB, given the gravity of GPEB’s continued concern about the issue, it was, in my view, incumbent upon the Branch to ensure that Mr. Eby at least had the opportunity to do so.

**Deployment of GPEB’s Investigators**

In considering the extent of GPEB’s contribution to the growth and perpetuation of money laundering in the gaming industry prior to 2018, it is necessary to comment briefly on the deployment of GPEB’s casino investigators. This issue attracted

---

453 Evidence of D. Eby, Transcript, April 26, 2021, pp 34–35.
significant attention during the Commission’s hearings. Various current and former GPEB staff members were questioned as to what GPEB investigators were doing themselves to respond to suspicious cash transactions and, in particular, why investigators were not present in casinos and interviewing patrons as to the source of the substantial volumes of suspicious cash with which they were gambling.

Prior to recent changes to the deployment of GPEB investigators referred to below and discussed in detail in Chapter 12, the role of GPEB’s casino investigators with respect to suspicious transactions was largely limited to preparing reports about those transactions based on second-hand information supplied by service providers, BCLC, and, in some instances, law enforcement databases. These reports were not without value. They were used in the efforts made by the investigation division to persuade BCLC and the Branch’s general managers to take action in response to this activity, and they were provided to law enforcement, including during the probe into suspicious transactions commenced by the IPOC unit in 2010. It appears, however, that these efforts closely mirrored those of BCLC investigators and do not seem to have been a particularly effective use of the time and skills of the GPEB investigators, many of whom had significant law enforcement experience.

These past functions can be contrasted with the current role of investigators in the GPEB enforcement division. As discussed in Chapter 12, GPEB investigators now maintain a regular physical presence in the province’s casinos during peak hours, rather than attending occasionally during standard business hours only to collect materials and speak with staff, as was the case previously. While present in casinos, investigators are now empowered to intervene directly in suspicious transactions by interviewing patrons and, where justified, seizing suspicious cash while waiting for police attendance and directing service provider staff to refuse transactions. It is important to acknowledge, however, that this expanded role for investigators has been

implemented in a context that differs in some ways from that which existed in the past. Presently, there is a relatively harmonious relationship between relevant units within GPEB and BCLC; the BC Lottery Corporation seems to have a genuine commitment to addressing suspicious transactions; the Branch’s general manager is supportive of an expanded role for investigators; and there is an engaged law enforcement unit in the form of the JIGIT that can be counted on to respond to suspicious activity in casinos when law enforcement involvement is needed.

I am encouraged that GPEB appears to have found ways to make better use of its investigative resources than it did in the past. The contrast between the current deployment of GPEB investigators and their past role gives rise to the questions of why these investigators were not more effectively deployed previously and, if they had been, whether doing so could have enhanced GPEB’s response to the money laundering that was prevalent in the province’s casinos for at least a decade. The different context referred to above is a partial answer to the first of these questions. GPEB investigators, for example, could not have seized suspicious cash while waiting for police attendance without the existence of an engaged law enforcement unit that could be counted on to attend urgently. Less clear, however, is why GPEB investigators could not previously have at least taken the step of approaching patrons engaged in suspicious cash transactions, asking them questions about the source of their funds and warning them that the funds they were receiving were likely illicit in origin. Based on the record before me, it appears there are two reasons why the role of GPEB investigators in responding to suspicious transactions was previously limited in the way that it was: perceived limits on the authority of GPEB investigators and concerns for investigator safety. As I discuss below, I am skeptical that either was truly a barrier to more direct intervention by GPEB investigators in suspicious transactions.

There is evidence before me that perceived limits on the legal authority of GPEB investigators prevented Mr. Vander Graaf and subsequently Mr. Meilleur from instructing the investigators under their direction to interview casino patrons about the source of their funds. During his tenure as executive director of the GPEB compliance division, Mr. Meilleur received legal advice that he understood to preclude GPEB investigators from conducting such interviews. Similarly, Mr. Scott testified that when he raised the prospect of GPEB investigators conducting such interviews with Mr. Vander Graaf, he was told that investigators lacked the authority to conduct such interviews. While I do not question the sincerity of these beliefs, there is, in my view, reason to question whether they were objectively accurate. Some of the legal advice

468 Exhibit 586, Dr. Peter German, Compliance Under the Gaming Control Act – An Opinion Prepared for BC GPEB and BCLC (December 4, 2016); Exhibit 587, Meilleur #1, paras 67–73; Exhibit 1058, Affidavit #3 of Joseph Emile Leonard Meilleur, made on September 17, 2021, exhibits A, B; Evidence of L. Meilleur, Transcript, February 12, 2021, pp 39–40.
469 Evidence of D. Scott, Transcript, February 8, 2021, p 34.
relied on by Mr. Meilleur is in evidence before me in the form of written legal opinions. These opinions do not refer specifically to patron interviews, but rather indicate that GPEB investigators could not enforce legislation outside of the Gaming Control Act, such as the Criminal Code of Canada, or identify limits on the authority of GPEB investigators to conduct investigations under the Criminal Code or exercise Criminal Code investigative powers. While I understand that these opinions do not represent the entirety of relevant legal advice received by GPEB it seems that there is a significant difference between the enforcement of the Criminal Code or exercise of investigative powers under the Code and asking casino patrons where they obtained their money. I note as well that Dr. German, the author of one of the opinions in evidence, agreed in his testimony that GPEB investigators could have questioned patrons about their source of funds.

Perhaps most significantly, GPEB investigators have now begun conducting interviews of precisely this sort despite the absence of any relevant legislative changes.

There is also, in my view, reason to question the objective validity of the safety concerns cited as a second reason why GPEB investigators could not interview casino patrons. These are described in detail in Chapter 10. While, again, I do not doubt the sincerity of these concerns, I am skeptical of their legitimacy. There may have been isolated incidents in which genuinely dangerous individuals brought suspicious cash into casinos and it would not have been safe to approach them. The prevailing theory of the money laundering typology at issue, however, was that the patrons buying-in with this suspicious cash were not themselves responsible for the criminal activity from which it was derived, but rather that the patrons obtained their funds directly or indirectly from those who were, perhaps, in some cases, without realizing that the funds had criminal origins. That these patrons, in the secure environment of a casino, posed such a threat to GPEB investigators that it was unsafe to even speak with them seems implausible. Further undermining the legitimacy of this concern is evidence that interviews of patrons have and continue to be conducted, seemingly without incident. BCLC began routinely interviewing patrons as part of its cash conditions program in 2015, and GPEB itself has now decided that its investigators can begin conducting patron interviews. In light of this evidence, it is difficult to accept that GPEB investigators could not have done the same in previous time periods.

I cannot say with certainty how these actions might have affected the trajectory of the money laundering crisis that emerged in the gaming industry. While, in my view, additional information was not necessary to understand the urgency of the situation facing the industry, it is possible that further information gleaned through such interviews would have persuaded GPEB’s general managers, BCLC, government, or law enforcement.

470 Exhibit 586, Dr. Peter German, Compliance Under the Gaming Control Act – An Opinion Prepared for BC GPEB and BCLC (December 4, 2016); Exhibit 587, Meilleur #1, paras 66–67; Exhibit 1058, Affidavit #3 of Joseph Emile Leonard Meilleur, made on September 17, 2021, exhibits A, B; Evidence of L. to take more aggressive action to combat money laundering. These interviews could also have offered an opportunity for direct intervention by GPEB investigators with patrons engaged in cash transactions, allowing them to warn patrons about the likely sources of the cash they were using to gamble and the risks associated with those sources. GPEB investigators issuing such warnings and asking patrons questions about the source of the cash they were using to buy-in may well have served to deter this conduct. While it is not possible to determine whether these benefits would have materialized had GPEB investigators been directed to interview patrons, the possibility that they could have suggests that the failure to do so represents a missed opportunity.

**Contribution of GPEB’s Actions Following the Delivery of Dr. German’s First Interim Recommendations**

As was the case with BCLC, it is necessary to consider separately the extent to which GPEB’s actions contributed to money laundering in the gaming industry during a third time period, beginning at or around the time of the delivery of Dr. German’s first interim recommendations in late 2017. It is at this point that GPEB’s actions finally begin to resemble a response commensurate with the nature and scale of suspicious activity in the industry at that time.

The shift that occurred at this time within the two organizations is distinct, however, in that, except for the contribution it made to motivating Mr. Eby to initiate Dr. German’s review, GPEB’s actions did not play a significant role in finally resolving the money laundering that had afflicted the industry for so many years. This was primarily the result of the actions of BCLC, prompted largely by Dr. German’s recommendations and the urging of the minister responsible for gaming. However, the positive shift in GPEB’s approach has contributed, in my view, to safeguarding the industry from the risk of future money laundering.

As discussed in Chapter 12, since the issuance of Dr. German’s first interim recommendations, GPEB has implemented important changes, including the creation of a new enforcement division, the establishment of new mechanisms for working collaboratively with BCLC and law enforcement, and crucially, the reimagined role for GPEB investigators referred to above.

These measures were not implemented in time to contribute to the significant progress made in the elimination of suspicious cash in the industry through the measures implemented by BCLC in response to Dr. German’s recommendation. However, these changes, alongside a legislative change eliminating the requirement for

ministerial approval of directives to BCLC from the general manager,\(^\text{477}\) will significantly enhance GPEB's capacity to contribute to the prevention of money laundering in the future. Accordingly, I view them as important steps forward for the industry's efforts to prevent money laundering and commend GPEB for taking them.

**Conclusion**

Despite the repeated and forceful warnings issued by the investigation division, GPEB's general managers failed to act on this advice and, for several years, failed to take any meaningful action to address it, largely limiting GPEB's efforts to collaborating with BCLC in the development of voluntary cash alternatives. Once the industry reached the height of the money laundering crisis in 2015, Mr. Mazure seemed to have finally understood the urgency of the situation and took more meaningful action in response. While this action led to some positive results, GPEB failed to do all that it could to address the problem including, crucially, failing to seek further intervention from the minister. In recent years, however, as BCLC was taking action to finally resolve the crisis, GPEB likewise took steps that I believe will significantly enhance its ability to respond to the risk of money laundering in the future and help protect the industry and the people of British Columbia from this form of criminality going forward.

While their failings may have followed a similar trajectory, the underlying factors that contributed to BCLC's inaction do not seem to apply to GPEB. The Branch is not subject to revenue motivations; it did not seem hostile to external viewpoints; and while it had some level of commitment to risk-based approaches,\(^\text{478}\) it does not appear that it maintained an undue faith in national and international standards and expert guidance. Rather, it seems that GPEB's contribution to the development of the money laundering crisis that afflicted the province's gaming industry was the result, in part, of a lack of certainty about and confidence in its role in the industry. At various times, and despite some level of recognition of the magnitude of the crisis facing the gaming industry, GPEB seemed to maintain a fixation on working collaboratively with BCLC to resolve issues by consensus and co-operation. During Mr. Scott's tenure, for example, he urged BCLC to take action to verify the source of funds used in suspicious transactions, but when BCLC refused to do so, he seemed willing to live with that refusal until phase three of the anti-money laundering strategy was implemented.\(^\text{479}\) Similarly, despite agreeing on some level with the views of Mr. Vander Graaf and Mr. Schalk, Mr. Scott directed them to stop corresponding directly with BCLC and apologized to Mr. Graydon for that correspondence,\(^\text{480}\) seemingly motivated by a desire to preserve a harmonious relationship between the two organizations. Likewise, Mr. Mazure indicated that he

479 Evidence of D. Scott, Transcript, February 8, 2021, pp 53–56.
480 Ibid, pp 95–96; Exhibit 557, Scott #1, paras 68–70 and exhibit 32.
had been directed to “work together” with BCLC to resolve issues\textsuperscript{481} and, in the face of resistance to his efforts to convince Mr. Lightbody to take additional action, continued with an obviously hopeless campaign of persuasion for over a year\textsuperscript{482} rather than seeking the minister’s intervention to force BCLC into action.

In an ideal world, GPEB – or its successor organization – and BCLC would work in harmony on appropriate and mutually agreed-upon efforts to prevent money laundering in the gaming industry. Where this is not possible, however, ensuring harmony between the two organizations should never be prioritized over ridding the industry of illicit cash or otherwise responding decisively to money laundering or other serious criminal activity in the gaming industry. GPEB, or divisions within GPEB, repeatedly identified as necessary the kinds of measures that would likely have eliminated widespread money laundering in the gaming industry, long before Dr. German’s review. And yet, when BCLC did not agree to implement them, GPEB seemed to accept this refusal out of fear that pressing the issue or seeking to force BCLC’s hand would damage the relationship between the two organizations.

This experience suggests that it is necessary for there to be a clear hierarchy within the industry. In my view, it is essential that the regulator be positioned at the top of that hierarchy. This does not mean that GPEB should abandon efforts to work collaboratively with BCLC, but where there are intractable differences, it must be the Branch – with its statutory mandate to safeguard the integrity of gaming\textsuperscript{483} – that has final say. I am hopeful that GPEB’s new authority, established through legislative amendments in 2018, to issue directions to BCLC without ministerial consent\textsuperscript{484} assists in establishing this clear hierarchy and that this needed structure for the industry will be reflected in the creation of the new, independent regulator, which I understand to be underway.\textsuperscript{485} In order to preserve the advancements already made in establishing a clear hierarchy in the industry, I recommend that the new Independent Gaming Control Office maintain the authority to issue directives to BCLC without the consent of the minister or any other external authority.

\textbf{Recommendation 7:} I recommend that the Province ensure that the Independent Gaming Control Office, once established, maintain the authority to issue directives to the British Columbia Lottery Corporation without the consent of the Minister Responsible for Gaming or any other external authority.

\end{itemize}
Actions and Omissions of Elected Officials

As discussed in Chapter 9, Mr. Coleman was the minister responsible for gaming when the Gaming Control Act was enacted in 2002 and British Columbia's gaming industry began to assume its modern form. In remarks made in the Legislature at that time, and reiterated in his evidence before the Commission, Mr. Coleman explained that one of the objectives motivating the reform of the industry at that time was to remove the influence of members of the provincial cabinet from British Columbia's gaming industry.486 While I have no reason to doubt Mr. Coleman's sincerity in this regard, it is clear from the evidence before me that the Gaming Control Act failed to achieve this objective.

To the contrary, elected officials – in particular the minister responsible for gaming – have held significant authority over the industry since 2002. While individual responsible ministers have not always actively exercised this authority, until 2018, the structure of the Act placed them in a critical position in which they were effectively the only external authority to which either BCLC or GPEB were answerable. Rather than take influence over the industry out of the hands of elected officials, the Act gave the responsible minister the authority to issue directives to both organizations487 at the same time that, at least until 2018, 488 it denied either the authority to direct the other. In doing so, it not only granted the responsible minister the authority to direct both organizations but also placed the minister in the position of being the only authority that could resolve intractable conflicts between the two organizations.

Given this legislative structure, it is clear to me that even though the minister responsible for gaming – and by extension, government – does not have day-to-day involvement in the operation, conduct, management, or regulation of gaming in British Columbia, the minister continues to occupy a critical role in the gaming industry. As such, it is necessary to examine whether and to what extent the actions of elected officials within the provincial government contributed to the growth and perpetuation of money laundering in the industry.

It is essential, in my view, that “government” not be treated as a singular entity and that the actions of individual elected officials be considered on their own merits. This is so for two reasons. First, it does not seem as though the topics of money laundering, illicit funds, and suspicious transactions in the gaming industry were matters of significant discussion within cabinet or government caucus during the time period that I have found money laundering was occurring in the gaming industry. Accordingly, it would not be fair to paint the entirety of any cabinet or all members of the Legislative Assembly (MLAs) with a single brush in this regard. It seems likely that individual cabinet ministers and MLAs whose work did not lead them to have direct involvement with the gaming industry may well have had little reason to be aware of suspicious activity in casinos or the actions of government in response to these issues. As such, the focus ought to remain on the actions of those individuals that did have direct involvement with the gaming industry.

487 Gaming Control Act, ss 6, 26.
488 Ibid, s 28(3); Exhibit 541, Mazure #1, para 224; Evidence of S. MacLeod, Transcript, April 19, 2021, p 20.
Second, it is clear that even those individuals in relevant cabinet positions operated in significantly different contexts from one another. The circumstances within the industry and the information available to different individuals in cabinet varied over time. It is essential that the actions of those with relevant responsibilities be considered based on the circumstances that they faced and the information to which they had access, and not with the benefit of hindsight available to their successors or to this Commission. For these reasons, the analysis that follows will focus separately on the actions and omissions of four former ministers responsible for gaming – Mr. Coleman, Ms. Bond, Mr. de Jong, and Mr. Eby – and one former premier, Ms. Clark.

Despite the conclusion that it is necessary to consider the actions of individual elected officials independently, there is one matter that, in my view, is best addressed collectively and at the outset of this discussion. The Commission’s Terms of Reference require that I consider whether actions that contributed to money laundering in this province amounted to corruption. The Commission inquired thoroughly into the activities of government officials with authority and responsibility over the gaming industry during the relevant time. During the Commission’s hearings, I did not hear any evidence that is capable of supporting a conclusion that any of the individuals discussed below – or any other government official – engaged in any form of corruption related to the gaming industry or, indeed, the Commission’s mandate more generally. This finding should be understood to mean that, in my view, none of these individuals knowingly encouraged, facilitated, or permitted money laundering to occur in order to obtain personal benefit or advantage, be it financial, political, or otherwise.

I pause to emphasize this finding. Given my mandate, I looked for corruption in government, and specifically in relation to gaming. It is not possible to definitively conclude that any government is completely free of corruption. What I can say is that, after a thorough inquiry, I found no evidence of corruption. I think that residents of British Columbia should take comfort from the fact that, whatever political theories or accusations may be advanced, my examination of the evidence did not reveal corruption of any sort. To the extent there were failures or missed opportunities to prevent or respond to money laundering, my conclusion is that they were not motivated by any corrupt purpose.

This does not mean, of course, that there were no failings or shortcomings in the actions taken or decisions made by these elected officials. As I will discuss below, there were actions available to several that were not taken that could have furthered efforts to combat money laundering in the gaming industry.

**Mr. Coleman**

Mr. Coleman served as an MLA for nearly 25 years, from 1996 until 2020. During his time in elected office, Mr. Coleman held a number of cabinet posts, including minister

---

of housing and social development, minister of forests and range, minister of energy and mines, deputy premier, and on multiple occasions, minister of public safety and solicitor general. Alongside these portfolios, Mr. Coleman also served on three separate occasions as the minister responsible for gaming, the first from 2001–2005, the second from 2008–2011 (during the first part of which he was responsible only for the “policy” aspects of the portfolio, as distinct from the “enforcement” aspects), and the third from 2012–2013. Given the manner in which the gaming industry changed over the course of these time periods, it is necessary, in my view, to consider Mr. Coleman’s tenure as minister responsible for gaming in two distinct blocks of time. The first of these includes his initial term from 2001–2005 and the second encompasses his second and third tenures from 2008–2013, recognizing that Mr. Coleman was not responsible for the industry for approximately one year during this second time span and that the scope of his authority during this period was initially limited to the policy aspects of the portfolio.

2001–2005

As discussed in Chapter 9, the first period in which Mr. Coleman served as minister responsible for gaming was a significant one for the industry. Following the 2001 election, the new government recognized that there was a need to modernize gaming in the province. In response, the government, under Mr. Coleman’s leadership, developed and enacted the Gaming Control Act. Based on the evidence before me as to the operation of the industry before this time, I agree with the assessment of the government of the day that the province’s regulatory structure for gaming required an overhaul, and I accept that the new legislation streamlined and modernized the industry.

As discussed earlier in this chapter, however, the regulatory structure put in place in 2002 did, in my view, contribute to the growth and development of money laundering in the industry beginning later that decade. In particular, the Act failed to provide for any meaningful regulatory oversight of BCLC and, contrary to Mr. Coleman’s intentions, established a central role for the responsible minister by ensuring that it was only the minister who could issue directions to either BCLC or GPEB.

While in hindsight this suggests that the regulatory structure of the industry embodied in the legislation spearheaded by Mr. Coleman contributed to the eventual growth of money laundering in the industry, it is not, in my view, reasonable to suggest that

491 Ibid, pp 5, 56, 95.
495 Ibid, pp 3–6, 8, 12.
496 Ibid pp 11–12, 21.
497 Ibid, pp 11–12, 95.
499 Ibid, pp 11–12, 124.
Mr. Coleman is, on this basis, somehow responsible for the crisis that eventually emerged in the industry. This is so for several reasons. First, it is clear from Mr. Coleman’s description of the process of developing the new Gaming Control Act that he was not directly responsible for developing the details of this regulatory structure, and that this task was appropriately assigned to professional public servants. Second, there is no evidence that the shortcomings in this legislation were recognized at the time the legislation was enacted or that would support a conclusion that the problems that arose in time were predictable. There was no reason, for example, at the time the legislation was enacted, to suspect that BCLC would eventually require a level of regulatory oversight not provided for in the Act, and there is no basis, in my view, to suggest that Mr. Coleman should have anticipated that this would eventually come to pass. Finally, and most significantly, regardless of who was responsible for conceiving of, drafting, or tabling the legislation, it was ultimately passed by the Legislative Assembly as a whole, the intentions of which cannot fairly be attributed to a single member.

It is important to note here as well that Mr. Coleman’s initial tenure as minister responsible for gaming concluded several years prior to the beginning of the period of time in which I have found that money laundering took place in the province’s casinos. Mr. Coleman gave evidence that, while he was advised of issues at casinos related to thefts and loan sharking, neither money laundering nor the acceptance of the proceeds of crime were ever raised to him as matters of concern during this period. This is unsurprising, as the rapid growth of suspicious transactions did not commence until several years later.

Accordingly, I have little difficulty concluding that Mr. Coleman’s actions during this period did not significantly contribute to the growth and perpetuation of money laundering in the province’s casinos. Mr. Coleman did not act to curb large or suspicious transactions during this period because they simply were not an issue for the industry at the time. While certain features of the Gaming Control Act enacted under his leadership would play a role in the development of this crisis years later, there is no evidence that there was any basis at the time to foresee that this would be the case, let alone that any such concerns were brought to the attention of Mr. Coleman.

2008–2013

Mr. Coleman resumed responsibility for gaming in 2008 at another critical time for the industry. Whereas his previous tenure in this role had ended years before initial concerns about suspicious transactions arose, his return coincided with the earliest concerns from the GPEB investigation division about the beginnings of what would become a money laundering crisis in the years ahead. By the time Mr. Coleman was relieved of responsibility for the industry for the final time in 2013, the rate at

504 Ibid, pp 31, 44–45.
which suspicious cash was being accepted in the province’s casinos had accelerated to significant levels. According to a GPEB investigation division report of findings from October 2014, the Branch received 1,059 section 86 reports of suspicious cash transactions in 2012–13, with a total value of $82,369,077.  

Given the authority of the responsible minister to direct both BCLC and GPEB, Mr. Coleman’s return to the gaming portfolio in 2008 positioned him to respond to this burgeoning crisis from its earliest stages. Mr. Coleman had the authority to issue directions imposing limits on cash transactions, requiring proof of the source of funds used in suspicious transactions or to undertake any number of other measures that would have stemmed the flow of illicit cash into the province’s casinos just as the rate of suspicious transactions was beginning to rise.

Mr. Coleman’s legal authority to take this action, however, is not the equivalent of a genuine opportunity to do so. Based on the evidence before me, it is not at all clear that Mr. Coleman had the information required to recognize that there was a need for action until the very end of his second tenure as minister responsible for gaming in 2010. Prior to this time, there is simply no evidence that information about growing suspicious transactions or the emerging concerns of the GPEB investigation division were making their way to Mr. Coleman. While the concerns of the investigation division ultimately proved well founded, the rates of suspicious cash transactions at this time remained a fraction of what they would become by 2012–13. According to an October 2013 investigation division report of findings, the Branch received only 103 section 86 reports related to suspicious cash transactions in 2008–09 and only 117 such reports in 2009–10, barely 10 percent of what they would become in the year that Mr. Coleman left the portfolio for the final time in 2013.

Despite the comparatively low volume of suspicious transactions, it is clear that, by December 2010, Mr. Coleman had some notice of the crisis developing in the industry for which he was responsible. As detailed in Chapter 10, Mr. Coleman met with Mr. Vander Graaf directly that month. While there is some uncertainty as to the details of that conversation, I accept that Mr. Vander Graaf raised with Mr. Coleman his concerns about suspicious transactions in the province’s casinos. Given the evidence before the Commission of Mr. Vander Graaf’s focus on this issue, it is difficult to imagine that he could have met with a sitting minister, or anyone else in a position of authority in the gaming industry, without doing so.

In addition to his conversation with Mr. Vander Graaf, Mr. Coleman was interviewed in January 2011 about media coverage of suspicious transactions in the province’s
casinos,\textsuperscript{510} establishing that he was aware of this coverage. Of particular note, Mr. Coleman was asked in a CBC interview about the following comments made by Barry Baxter, then an Inspector with the RCMP IPOC unit:\textsuperscript{511}

“Police became aware of the activities after the fact,” said Inspector Baxter with the RCMP’s Integrated Proceeds of Crime section. “We were suspicious that it's dirty money,” Baxter told CBC. “The common person would say this stinks. There’s no doubt about it.” The casino industry in general was targeted during this time period for what may well be some very sophisticated money laundering activities by organized crime.

Accordingly, it is clear that by the end of his second stint as minister responsible for gaming, Mr. Coleman had received – or was at least aware of – the concerns of both the executive director of the GPEB investigation division and a senior officer with the RCMP IPOC unit that British Columbia casinos were accepting proceeds of crime.

At the same time, however, Mr. Coleman was also receiving information and advice from BCLC. Based on Mr. Coleman’s evidence, the message he was receiving from this source was that BCLC had industry-leading anti–money laundering strategies in place and that the players responsible for the large cash buy-ins of concern to Mr. Vander Graaf and Mr. Baxter had been “checked out.”\textsuperscript{512}

Accordingly, just as Mr. Coleman was receiving warnings of serious criminal activity in an industry for which he was responsible, the Crown corporation charged with the “conduct and management” of that industry was delivering the message that there was nothing to be concerned about. Mr. Coleman responded by seeking out independent expert advice to assist him in understanding what was occurring in the industry and how to move forward. He did this by engaging Mr. Kroeker to conduct a review of anti–money laundering measures in the gaming industry.\textsuperscript{513}

I can appreciate that there may be a temptation to suggest that Mr. Coleman should have simply acted on the information provided by Mr. Vander Graaf and Mr. Baxter, and that the time spent waiting for Mr. Kroeker to complete his review was additional time that illicit funds were flowing into the province’s casinos. While I understand this perspective, in my view, Mr. Coleman’s decision to seek out independent advice was prudent and appropriate. Given the comparatively low volume of suspicious transactions at the time, the conflicting advice that he was receiving, and the absence of evidence that Mr. Coleman had received any comprehensive or actionable policy recommendations alongside the warnings from Mr. Vander Graaf or Mr. Baxter, it was

\textsuperscript{512} Evidence of R. Coleman, Transcript, April 28, 2021, pp 60–70, 137, 152–55; Exhibit 934, BCLC Minutes from the Board Meeting (July 23, 2010); Exhibit 935, BCLC Board Meeting July 23, 2010, Presentation regarding AML and FINTRAC.

\textsuperscript{513} Evidence of R. Coleman, Transcript, April 28, 2021, pp 114–15.
wise, in my view, for Mr. Coleman to take the time to try to understand the issue he was facing and identify the proper response before acting.

It is necessary to comment briefly here on the distinction between Mr. Coleman’s private response to these warnings, described above, and his public response to Mr. Baxter’s comments. Whereas Mr. Coleman’s private reaction to the concerns expressed by Mr. Vander Graaf and by Mr. Baxter was measured and appropriate, the same cannot be said of his public reaction. Mr. Coleman’s decision to engage Mr. Kroeker suggests that he was, at least, open to these concerns and genuinely interested in determining whether there was a real problem developing in the gaming industry. As discussed in Chapter 10, however, comments made by Mr. Coleman in the media at this time seem focused instead on quashing any public discussion of these issues and maintaining public confidence in the gaming industry, whether or not it was deserving of such confidence.

Responsibility for the gaming industry was transferred from Mr. Coleman to Ms. Bond around the time that Mr. Kroeker’s review was completed.514 Accordingly, Mr. Coleman had no role in determining whether and how Mr. Kroeker’s recommendations would initially be implemented. By the time Mr. Coleman returned to the gaming portfolio in 2012, Ms. Bond, acting on the advice of the public service, had already decided that nine of Mr. Kroeker’s 10 recommendations should be implemented immediately, while the final recommendation, which called for the creation of a “cross-agency task force to investigate and gather intelligence on suspicious activities and transactions at BC gaming facilities” would be delayed until the impact of the first nine recommendations were known.515

When Mr. Coleman returned to the gaming portfolio, he again received assurances that the anti-money laundering regime in place in British Columbia’s gaming industry was highly effective and “among the most stringent of any jurisdiction in Canada.”516 This advice would have been bolstered by Mr. Kroeker’s review, which concluded that BCLC had a robust anti-money laundering regime in place and that GPEB was capable of providing effective oversight of anti-money laundering and related criminal activity.517 While Mr. Kroeker’s report made recommendations for improving the industry’s response to the risk of money laundering, it hardly raised the alarm about the illicit funds becoming increasingly prevalent in the province’s casinos. Despite this advice, Mr. Coleman’s evidence was that he did press the civil service to move forward with Mr. Kroeker’s recommendation to establish a cross-agency task force.518

Coleman, Transcript, April 28, 2021, pp 57–70, 72–84.
517 Evidence of R. Coleman, Transcript, April 28, 2021, pp 72–73; Exhibit 928, Advice to Minister Issues Note; Exhibit 141, Summary Review 2011, p 15.
Given the warnings that Mr. Coleman had received at the end of his previous tenure as minister responsible for gaming, however, it was not enough for him to simply rely on the assurances of BCLC and GPEB and the conclusions set out in Mr. Kroeker’s report. Mr. Coleman had been warned by Mr. Vander Graaf and Mr. Baxter of serious criminality in the industry for which he was responsible. Further, Mr. Kroeker’s recommendation that “BCLC should better align its corporate view and staff training on what constitutes money laundering with that of enforcement agencies and the provisions of the relevant statutes”519 ought to have given Mr. Coleman reason to take a cautious approach with advice from BCLC. While Mr. Kroeker’s overall conclusions suggested that there was no great cause for concern regarding money laundering in the gaming industry at this time, given the information available to him suggesting otherwise, it was incumbent upon Mr. Coleman to continue to carefully monitor suspicious activity in the industry.

To Mr. Coleman’s credit, it appears from his evidence that, to some extent, he did so. Mr. Coleman recalled that, in 2012, he had been informed that large cash transactions had increased and testified that he expected he would have been aware of the numbers of large cash transactions at the time.520 If this is true, then Mr. Coleman would have had some awareness that such transactions had increased significantly since he was last responsible for the industry. Whereas only 117 section 86 reports related to suspicious cash transactions were reported to GPEB in 2009–10, the number of such reports increased rapidly to 459 in 2010–11, 861 in 2011–12, and 1,062 in 2012–13.521 Mr. Coleman could not recall precisely what information he was given about these numbers at this time,522 so it is not possible to say with certainty whether he was aware of these precise figures. However, in my view, given the warnings he had received from Mr. Vander Graaf and Mr. Baxter, he ought to have been. In response, he should have recognized that there was a need to take aggressive action to bring an immediate end to the suspicious activity that, by the end of his tenure, was clearly spiralling out of control. Mr. Coleman did not take such action. In this regard, in my view, a critical opportunity for decisive action was missed.

Ms. Bond

Shirley Bond has served as a member of British Columbia’s Legislative Assembly for approximately 20 years and has held a variety of cabinet posts.523 Unlike Mr. Coleman, Ms. Bond served as minister responsible for gaming for only a single brief period from March 2011 to February 2012.524 During the 11 months that she held this position, Ms. Bond also served as the minister of public safety and solicitor general.525 The

519 Exhibit 141, Summary Review 2011, p 3.
520 Evidence of R. Coleman, Transcript, April 28, 2021, p 190.
521 Exhibit 181, Vander Graaf #1, exhibit O.
522 Evidence of R. Coleman, Transcript, April 28, 2021, p 190.
525 Ibid, p 53.
gaming portfolio was reassigned to Mr. Coleman in February 2012, when Ms. Bond was appointed minister of justice and attorney general, effectively unifying the portfolio of the solicitor general, which Ms. Bond already held, with that of the attorney general.526

While her tenure was brief, Ms. Bond served as Minister responsible for gaming at a critical time in the evolution of money laundering in the gaming industry. As indicated in the discussion of Mr. Coleman's tenure, suspicious transactions in the industry began to accelerate during this time period. A report of findings prepared by the GPEB investigation division in October 2013 reveals that, from 2010–11 to 2011–12, the number of section 86 reports related to suspicious cash transactions received by the Branch nearly doubled from 459 to 861.527 The same report suggests that a similar increase was observed in the value of suspicious cash accepted in these transactions, indicating that while $39,572,313 in suspicious cash was accepted in the one-year period between July 1, 2010, and June 30, 2011, ending a few months into Ms. Bond's tenure, $87,435,297 was accepted between January 1 and December 31, 2012, which began just before Ms. Bond's tenure ended.528 As Ms. Bond was in the role of minister responsible for gaming for only 11 months, none of these time periods precisely correspond to the dates of her tenure, and I do not suggest that her actions were responsible for this acceleration in suspicious transactions. However, these figures are indicative of the rate at which suspicious transactions in the industry were growing in and around the time that Ms. Bond was responsible for the portfolio.

These data also make clear that Ms. Bond's tenure was a pivotal opportunity for ministerial intervention. That the rate at which suspicious transactions and the volume of suspicious cash being accepted by casinos were both accelerating make it abundantly clear that there was a real need to look closely at what was taking place in the gaming industry at that time and to take more aggressive steps to curb suspicious activity. Further, knowing what we now know about how suspicious transactions continued to accelerate in the years that followed, there can be little doubt that had Ms. Bond, during her tenure, issued an appropriate ministerial directive to BCLC requiring meaningful limits on cash transactions or proof of the source of funds used in those transactions, she could have excluded vast quantities of illicit cash from the province's casinos in the years that followed. That Ms. Bond, like her predecessor and successor Mr. Coleman, did not issue such a directive represents an important missed opportunity to stop money laundering in the gaming industry just as it was reaching crisis levels.

As was the case with Mr. Coleman, however, it is essential that Ms. Bond's actions be considered in the context of the information available to her during the time of her tenure as minister responsible for gaming. When viewed in this light, it is not at all clear that Ms. Bond had a genuine opportunity to exercise her authority as suggested above, nor, in my view, is there a basis for faulting Ms. Bond for failing to do so.

527 Exhibit 181, Vander Graaf #1, exhibit O.
528 Ibid.
Ms. Bond had no prior experience with the gaming industry before being assigned responsibility for this portfolio.\(^{529}\) She testified that she received no briefings or directions from the previous minister or the premier as to issues of priority facing the gaming industry at this time.\(^{530}\) Ms. Bond had no recollection of being briefed on the subject of large and suspicious cash transactions or money laundering in the province’s casinos by BCLC\(^{531}\) or GPEB.\(^{532}\) She denied that she was ever advised that high-limit players were buying-in at the province's casinos for hundreds of thousands of dollars in cash, predominantly in $20 bills,\(^{533}\) that Lower Mainland casinos were accepting millions of dollars in cash that they were reporting as suspicious,\(^{534}\) or that some GPEB staff were concerned that these transactions might consist of the proceeds of crime provided to patrons by criminal organizations as part of a money laundering scheme.\(^{535}\)

While it is undoubtedly alarming that these matters were not brought to the attention of the minister responsible, it is unsurprising given the evidence before me regarding the attitudes of BCLC and the leadership of GPEB during this time period. Ms. Bond was appointed minister responsible for gaming at a time when the GPEB investigation division was struggling to persuade the Branch’s general managers and BCLC of the urgency of the crisis facing the industry. BCLC, at this time, was actively denying that suspicious cash transactions presented a money laundering threat, because patrons were putting their funds at risk and often losing.\(^{536}\) GPEB went through a leadership transition from Mr. Sturko to Mr. Scott during Ms. Bond’s tenure. There is insufficient evidence to establish that Mr. Sturko made any significant efforts to raise this issue with government,\(^{537}\) and Mr. Scott gave evidence that, at this time, he was engaged in developing GPEB’s anti–money laundering strategy and that the message he was communicating to government was that the matter was “under control.”\(^{538}\) As such, Ms. Bond’s evidence that she did not receive advice or warnings impressing upon her the nature and extent of the crisis emerging in the gaming industry that required her urgent attention is consistent with the evidence before me of the perspectives of GPEB and BCLC.

It is not the case, however, that Ms. Bond received no information about money laundering in the industry. While there is no evidence that Ms. Bond had the opportunity to meet with Mr. Vander Graaf as Mr. Coleman did, she testified that she was aware of media reporting on this subject\(^{539}\) and had distinct recollections of Mr. Kroeker’s report,

\(^{529}\) Evidence of S. Bond, Transcript, April 22, 2021, p 55.

\(^{538}\) Ibid, p 73.
which was completed around the time that she assumed responsibility for the gaming
industry.\textsuperscript{540} Her evidence was that implementation of Mr. Kroeker’s report became the
priority for her work within the gaming industry\textsuperscript{541} and that, in accordance with the
recommendations of the public service,\textsuperscript{542} she accepted all 10 of the recommendations in
Mr. Kroeker’s report and directed that the first nine recommendations be implemented
immediately, while the tenth would be delayed until such time that the impact of the first
nine could be evaluated.\textsuperscript{543} In Ms. Bond’s words:\textsuperscript{544}

\begin{quote}
I think that from the beginning there was agreement that ... we agreed
to all of the recommendations. The question was about the timing
and implementation. The advice that I received was that the first nine
recommendations could be implemented in the short term and would
make a material difference to enhancing anti–money laundering measures
in British Columbia. So those moved forward immediately. We agreed
with the tenth recommendation and it would be a matter of looking at the
impact of the first nine before moving on to the tenth.
\end{quote}

As discussed previously, the tenth recommendation involved the creation of “a
cross-agency task force to investigate and gather intelligence on suspicious activities
and transactions at B.C. gaming facilities.”\textsuperscript{545} A “confidential issues note” addressed
to Ms. Bond at this time reveals that the advice Ms. Bond received with respect to this
recommendation was as follows:\textsuperscript{546}

\begin{quote}
The Province believes action on other recommendations will significantly
improve B.C.’s anti–money-laundering regime. Given that creating a cross-
agency task force can be complex and costly, the Province will consider
this recommendation only after GPEB has evaluated the effectiveness of
responses to other recommendations.
\end{quote}

It would be five years before any law enforcement unit that could be said to satisfy this
recommendation was created. I am skeptical that JIGIT, which was established in 2016,
was in any way motivated by this recommendation, but I do accept that, in effect, it did
satisfy it. As discussed above, the creation of such a body was long overdue and filled a
critical gap in the anti–money laundering apparatus surrounding the gaming industry.

Had Mr. Kroeker’s recommendation been acted upon immediately, the existence
of such a task force could have made a significant impact on money laundering in the
gaming industry. While speculative, it is conceivable that such a task force could have
taken up the operational plan developed by the RCMP IPOC unit in 2012, discussed earlier

\begin{footnotes}
540 Ibid, pp 56–57, 61, 63–64.
541 Ibid, pp 63–64.
542 Ibid, p 64.
545 Exhibit 141, Summary Review 2011, p 15.
546 Evidence of S. Bond, Transcript, April 22, 2021, pp 76–77; Exhibit 888, Advice to Minister, Confidential
\end{footnotes}
and in Chapter 39, when the IPOC unit was disbanded. Regardless, it seems clear that the existence of a force like the one proposed would have ensured much needed law enforcement engagement with the gaming industry, potentially disrupting the supply of suspicious cash and spurring enhancements to the anti-money laundering efforts of BCLC, GPEB, and other stakeholders, as the E-Pirate investigation would years later.

As such, in my view, had Ms. Bond directed the immediate implementation of this recommendation, it may well have advanced efforts to respond to money laundering in the gaming industry. In this sense, this too can be viewed as a missed opportunity during Ms. Bond's tenure as the responsible minister.

Again, however, it is difficult, in my view, to fault Ms. Bond for failing to take this action when viewed in the context of the information available to her. As noted above, Ms. Bond was not given an accurate picture of the urgency of the emerging money laundering crisis facing the industry during her tenure. Mr. Kroeker's report itself furthered the impression that there was no urgent need to take action with respect to money laundering in the industry. While making recommendations for improvement, it concluded that:

BCLC, in terms of policies and procedures, has a robust anti-money laundering regime in place. Further, it was determined that GPEB has the required level of anti-money laundering expertise and is capable of discharging its responsibility to provide oversight as it relates to anti-money laundering and associated criminal activities at gaming facilities.

In my view, Ms. Bond's actions cannot be said to have significantly contributed to the growth and perpetuation of money laundering in this province's casinos. There were, undoubtedly, actions that Ms. Bond could have taken to address the burgeoning money laundering crisis in the industry during her tenure as minister responsible for gaming. These include issuing a directive to BCLC requiring meaningful limits on cash transactions, or that patrons present proof of the source of funds used in large or suspicious transactions prior to their acceptance or directing the immediate implementation of Mr. Kroeker’s recommendation to create a cross-agency task force.

However, given the information available to Ms. Bond at this time, it is simply not reasonable to expect that she could have recognized the urgent need to take these actions. There is no evidence before me sufficient to establish that Ms. Bond was briefed on the rapid rise in suspicious transactions that occurred during her tenure, or of the details of those transactions. Further, Mr. Kroeker’s report would have impressed upon her that there was no need for urgent measures as the anti-money laundering regime implemented by BCLC and GPEB was robust and adequate to address money laundering and associated criminal activities.

With respect to Mr. Kroeker's recommendation that a “cross-agency task force” be established, I can understand how the advice Ms. Bond received to implement

547 Exhibit 141, Summary Review 2011, p 15.
90 percent of the report’s recommendations immediately, while evaluating the costliest and most complex recommendation once the impact of the first nine were known, would have seemed entirely prudent. For a newly appointed responsible minister, with no background in the industry, it was not only reasonable but entirely prudent for Ms. Bond to have followed the advice she received from the civil service in this regard, and, in my view, she cannot be faulted for having done so.

Mr. de Jong

Mr. de Jong was first elected to the Legislative Assembly in 1994. Between 2001 and 2017, Mr. de Jong served in government, holding cabinet posts including minister of forests, minister of labour and citizen services, minister of aboriginal relations and reconciliation, attorney general, minister of health, and minister of finance. Following the 2013 provincial election, while serving as minister of finance, Mr. de Jong was appointed the minister responsible for gaming, a position he held until the subsequent provincial election in 2017.

While suspicious transactions had already accelerated to extreme levels by the time of his appointment, it was under Mr. de Jong’s watch that the flood of suspicious cash entering the province’s casinos reached its peak in 2014 and 2015. It was also during Mr. de Jong’s tenure, however, that the industry finally began to see a reversal of this trend and, by the end of Mr. de Jong’s term as the responsible minister, a significant decline in both the volume and value of suspicious transactions in the province’s casinos had occurred.

In order to consider the significance of Mr. de Jong’s conduct and the extent to which it contributed to money laundering in the province’s gaming industry, it is necessary to divide his tenure into two time periods. The first of these spans the time from Mr. de Jong’s appointment as responsible minister in 2013 to September 2015. During this period, despite the unprecedented volume of suspicious cash being accepted in the province’s casinos, Mr. de Jong took no meaningful action in response. In my view, however, it does not appear that Mr. de Jong received information that would have led him to identify a need for action. In contrast, at the outset of the second period, beginning in September 2015 and continuing to the end of Mr. de Jong’s tenure in 2017, Mr. de Jong finally received accurate information about the state of the crisis facing the gaming industry and took meaningful action in response. While significant, in my view, the actions taken by Mr. de Jong at that time – and in the years that followed – were not commensurate with the gravity of the crisis facing the industry. The inadequacy of these actions permitted money laundering to persist at unacceptable levels in the gaming industry for more than two additional years.

548 Evidence of S. Bond, Transcript, April 22, 2021, p 76–77; Exhibit 888, Advice to Minister, Confidential Issues Note, Anti–Money Laundering Review, August 24, 2011.
2013–2015

During the first half of Mr. de Jong’s tenure as minister responsible for gaming, the rate at which suspicious cash was accepted in the province’s casinos accelerated beyond even that observed during the tenures of Mr. Coleman and Ms. Bond. In 2014, his first full year in the role and the final year before the formalization of BCLC’s cash conditions program, BCLC reported 1,631 suspicious transactions to FINTRAC with a total value of $195,282,302 – an average of nearly 4.5 transactions and more than $500,000 per day. Because these figures include eGaming and external request reports, it is not the case that each of these transactions occurred within a land-based casino. Nevertheless, they all took place within the industry for which Mr. de Jong was responsible and offer insight into the volume of suspicious funds being accepted by the gaming industry at the outset of his tenure.

It is difficult to envision a stronger case for ministerial intervention than that presented by these figures alongside the descriptions of suspicious transactions discussed earlier in this Report. The absence of any such intervention by Mr. de Jong during the first half of his tenure can only be viewed as a missed opportunity to stem the flow of illicit funds into the gaming industry at a time when such intervention was essential.

As in the case of his predecessors, however, Mr. de Jong’s inaction during this period must be viewed in the context of the information that was provided to him. Despite the obvious urgency of the circumstances facing the gaming industry at this time, there is no evidence that anyone brought to Mr. de Jong’s attention the rate at which suspicious transactions were being accepted in the province’s casinos at the time. Rather, the evidence before me suggests that the message conveyed to Mr. de Jong at this time was that the province’s gaming industry had a robust anti–money laundering program, that there was a strategy in place to enhance that program, and that anti–money laundering was a priority for both BCLC and GPEB. As an example, an “Estimates Note” dated June 14, 2013 – very early in Mr. de Jong’s tenure – signed by both Mr. Graydon and Mr. Scott indicated that “[t]he anti–money laundering policies and procedures in place at all BC casinos are among the most stringent of any jurisdiction in Canada.” Similar messages continued to be conveyed to Mr. de Jong as late as April 2015 – mere months

558 Exhibit 896, Advice to Minister Estimate Note April 2015.
before GPEB abruptly changed course and urgently sought his intervention. The first bullet point in an “Estimates Note” dated April 22, 2015, stated that “British Columbia has a robust anti-money laundering program with significant investments in technology, training, and certification.”

I do not mean to suggest that Mr. de Jong was an entirely passive recipient of information during this period. As the minister responsible for gaming, he, of course, had the capacity to seek out additional information and, had he done so, may well have discovered the crisis facing the industry long before it was brought to his attention in September 2015. In retrospect, it would have been highly beneficial if Mr. de Jong had done so. I am cognizant, however, of the reality that gaming was only a small part of Mr. de Jong’s very heavy portfolio as minister of finance. It is not realistic to have expected him to take the time to interrogate all of the advice he received on all aspects of his responsibilities. Absent some reason to doubt the information provided to him, it was, in my view, reasonable for Mr. de Jong to rely on that information. On that basis, I am unable to fault Mr. de Jong for failing to intervene to stop the flow of illicit funds into the province’s casinos during this period.

2015–2017

The informational deficit under which Mr. de Jong was operating through the first half of his tenure abruptly disappeared in September 2015. As described in Chapter 11, and in Mr. de Jong’s evidence, he received two briefings at this time, the first providing a basic overview of the E-Pirate investigation and the second raising to the minister’s attention GPEB’s concern about the rate at which suspicious cash was entering the gaming industry. That Mr. de Jong had not previously been made aware of the extent of this issue is underscored by his evidence that this information “sparked concern” and was “surprising.”

Having received this information, Mr. de Jong developed an immediate appreciation for the urgency of the situation and clearly took the matter seriously. His response consisted principally of two actions: initiating the creation of JIGIT and issuing a letter containing directions to BCLC. While both positive, the second of these actions was not, in my view, commensurate with the scale of the crisis facing the industry.

The creation of JIGIT was a critical and long overdue step in resolving the deficiencies in the anti-money laundering apparatus surrounding the gaming industry. As discussed

Wenezenki-Yolland, Transcript, April 27, 2021, pp 49–52; Exhibit 587, Meilleur #1, paras 86–90.

above, the absence of law enforcement resources available to the industry had been recognized as a gap in enforcement for two decades prior to the creation of this team. In August and September 2015, both BCLC and GPEB raised their concerns about this gap directly to Mr. de Jong.\footnote{Exhibit 505, Lightbody #1, exhibit 49; Exhibit 552, MOF Strategy; Evidence of M. de Jong, Transcript, April 23, 2021, pp 99–100.} In response, Mr. de Jong spearheaded an effort to establish this new team within CFSEU with remarkable speed,\footnote{Evidence of C. Clark, Transcript, April 20, 2021, p 56; Exhibit 922, Wenezenki-Yolland #1, paras 141–48; Exhibit 541, Mazure #1, paras 199–207; Evidence of M. de Jong, Transcript, April 23, 2021, pp 31, 67–68, 79–83.} deliberately leveraging the weight of the offices of the Minister of Finance and the Government House Leader, both of which he held at the time, to lend momentum to the effort and make clear that any funds devoted to this effort must remain dedicated to their intended purpose.\footnote{Evidence of M. de Jong, Transcript, April 23, 2021, pp 82–83.} In this regard, Mr. de Jong’s efforts were appropriate and adequate and should be recognized as a critical contribution to eliminating money laundering from the gaming industry.

Regrettably, the same cannot be said of Mr. de Jong’s second major act at this time, the issuance of directions to BCLC in the form of a letter to Mr. Smith dated October 1, 2015.\footnote{Exhibit 900, de Jong Letter 2015.} The contents of this direction were discussed in Chapter 11 and I will not address them in detail again here. My concern is not what was included in the direction, all of which I accept was helpful and appropriate, particularly Mr. de Jong’s direction to BCLC to take further action to evaluate the source of funds prior to cash acceptance. Rather, my concern is that Mr. de Jong’s direction failed to go far enough, in that it did not require that BCLC immediately cease accepting the highly suspicious cash that had become commonplace in the industry. I note that, at the September 2015 briefing, Mr. de Jong was presented with example directives that would have achieved this objective, including those requiring BCLC to:\footnote{Exhibit 553, MOF Briefing Document.}

- enhance all anti-money laundering initiatives and measures, including ensuring legitimacy of all currency used for gaming in BC;
- determine all high-limit players’ source of funds and source of wealth; and
- at a minimum and in all circumstances, determine source of funds and source of wealth as part of BCLC’s existing Customer Due Diligence Program and its Know Your Customer policy and programs.

I understand and accept Mr. de Jong’s evidence that he had been repeatedly advised to avoid prescriptive approaches to regulation and that he may have perceived measures such as those identified in the example directives as falling afoul of this advice.\footnote{Evidence of M. de Jong, Transcript, April 23, 2021, pp 1–13, 35–37, 87–92, 139–40, 144–49.} While there may be room for debate as to whether these measures were actually incompatible with a risk-based approach, I accept Mr. de Jong’s evidence that he understood this to be the case and was adverse to such measures for this reason.
However, the urgency of the crisis facing the gaming industry at this time was, in my view, so great that it required that philosophical preferences for particular forms of regulation be set aside in favour of actions guaranteed to immediately solve the crisis in the industry. In the first six months of 2015, BCLC reported 954 suspicious transactions, including 315 suspicious transactions with individual values of over $100,000.\textsuperscript{570} This amounts to a daily average of more than five total suspicious transactions, including two of $100,000 or more. The total value of these suspicious transactions was $107,324,958, meaning that an average of nearly $600,000 in suspicious funds was accepted each day.\textsuperscript{571} Notably, these values are for transactions occurring before the July 2015 spike in suspicious transactions that saw more than $20 million in suspicious cash transactions of $50,000 or more, including $14 million in $20 bills, accepted by casinos in a single month.\textsuperscript{572}

These figures, alongside the limited information Mr. de Jong now had about the E-Pirate investigation,\textsuperscript{573} illustrate the level of criminality to which the province’s gaming industry was subject at that time. While it is not clear that Mr. de Jong was advised of the precise figures outlined above for the first half of 2015, he was made aware of the scale of the suspicious activity identified in July 2015. Aware of the E-Pirate investigation and armed with the information provided to him in the September 2015 briefing, it was incumbent upon Mr. de Jong to immediately take whatever steps were necessary to stop the flow of illicit funds into the province’s casinos, regardless of their fit within a particular regulatory model. Despite having ministerial directives put before him that would have accomplished this end, he did not do so. As a result, casinos continued to accept the proceeds of crime, which ultimately formed part of government revenue.

In his evidence, Mr. de Jong indicated that he continued to monitor rates of suspicious transactions in the gaming industry in the years that followed and took the decline in these rates as evidence that the measures imposed by BCLC were having their intended effect.\textsuperscript{574} I have already discussed how BCLC’s cash conditions program and related measures resulted in a decline in the rate at which the province’s casinos were accepting suspicious cash. While I agree with Mr. de Jong that the data from this period demonstrates progress, it is also, in my view, reflective of the inadequacy of these measures. In 2016, Mr. de Jong’s final full year as minister responsible for gaming – and the first following the issuance of his directions in October 2015 – BCLC reported 1,649 suspicious transactions, with a value of $79,458,118.\textsuperscript{575} While this value represented a decline of more than $100 million from 2015 levels,\textsuperscript{576} it nevertheless continued to represent an enormous volume of suspicious cash flowing through the

\textsuperscript{576} Exhibit 784, Cuglietta #2, exhibit A.
industry for which Mr. de Jong was responsible and which ultimately contributed to the provincial government’s revenues.

Some insight into the results that could have been achieved from a direction commensurate with the urgency of the circumstances is observed in the impact of Dr. German’s recommendation, implemented as modified by BCLC, which, generally speaking, was consistent with the example directives put to Mr. de Jong in September 2015.577 In 2018, the year in which that recommendation was implemented, BCLC reported only 290 suspicious transactions with a total value of $5,520,550.578 A more decisive direction requiring a comparable policy response would have been far more impactful than that issued by Mr. de Jong and would have excluded substantial quantities of illicit funds from the gaming industry that were, in the absence of a more decisive direction, accepted by casinos and ultimately received by government.

It follows from this reasoning that, rather than being content with the pace of progress observed following his direction, Mr. de Jong should have seen, in the time that he remained responsible for the gaming industry following his October 2015 direction, that it had not adequately resolved the issue and that the rate at which suspicious funds were entering the industry remained unacceptably high. Mr. de Jong should have recognized prior to the end of his tenure that further intervention was required and issued additional directions requiring more decisive action. That he did not do so, in my view, exacerbated the inadequacy of his initial direction.

**Conclusion**

Despite these shortcomings, it is important to recognize the significance of the actions that Mr. de Jong did take in response to the information presented to him in September 2015. To some extent, Mr. de Jong appears to have recognized the urgency of the situation facing the gaming industry and taken action to respond. His efforts to create JIGIT were a significant achievement, and his direction to BCLC was a step in the right direction. That it was under Mr. de Jong’s watch that the tide of suspicious transactions finally turned and the suspicious cash entering the province’s casinos began to decline is a testament to the significance of his efforts.

However, that Mr. de Jong made progress in this regard does not mean that his actions met the challenge with which he was confronted. In my view, they did not. The scale of the crisis gripping the province’s casinos at this time required much more decisive action. While positive, the steps taken by Mr. de Jong were simply not commensurate with the urgency of the problem facing the industry at that time. The decline in suspicious activity that occurred under his watch is evidence that Mr. de Jong left the province’s gaming industry in better condition than he found it, but the scale of such activity that remained at the time of his departure is proof that the steps he took simply were not enough.

Ms. Clark

Christy Clark served as the premier of British Columbia from March 2011 to July 2017.579 Prior to her tenure as premier, Ms. Clark was an MLA from 1996 until 2005580 and occupied cabinet positions including deputy premier, minister of education, and minister for children and families while in government from 2001 to 2005.581 As Ms. Clark's initial tenure in the Legislature pre-dated the rise of money laundering in the province's gaming industry and because she did not hold cabinet positions of clear relevance to this Commission's mandate, the discussion that follows will focus on Ms. Clark's term as premier.

Ms. Clark served as premier through much of the rise and subsequent decline of suspicious cash transactions in the province's gaming industry. Although she was not in government when these transactions began to attract concern from the GPEB investigation division in 2007 and 2008,582 Ms. Clark became premier as the rate of suspicious cash entering the province's casinos began to rise in earnest. She remained in this role as the acceptance of suspicious cash peaked in 2014 and 2015 and as it declined but remained at significant levels following that peak. While Ms. Clark's tenure did not span the entirety of the timeframe in which I have found that money laundering was occurring in the province’s gaming industry, there was not a day that Ms. Clark occupied the premier's office that did not fall within this period of time.

Ms. Clark's role as premier was, of course, distinct from those of the individuals who served as ministers responsible for gaming during her tenure. Ms. Clark did not have – and could not be expected to have had – the same level of direct engagement with the industry as the responsible ministers. Nor did she have any of the statutory powers granted to the responsible minister by the Gaming Control Act. As premier, Ms. Clark was charged with providing broad oversight and direction to government as a whole, and I accept that the gaming industry was a small part of a vast area of responsibility.

This does not mean, however, that Ms. Clark exercised no influence over the gaming industry. To the contrary, Ms. Clark selected the responsible ministers,583 issued directions to those ministers in the form of mandate letters,584 and was engaged in setting the priorities of government.585 As such, while Ms. Clark did not have day-to-day, hands-on responsibility for the gaming industry, and while her role was distinct from that of the responsible ministers who served in her cabinet, it is clear that she did bear some level of responsibility for the industry. It is fair to consider whether her actions or omissions contributed to the growth and perpetuation of money laundering

585 Ibid, pp 8–12, 49–50.
in the province’s casinos. For the reasons outlined below, in my view, they did. As was the case with Mr. Coleman and Mr. de Jong, it is useful to consider Ms. Clark’s tenure as premier in two distinct time periods, the first starting at the beginning of her tenure as premier in 2011 and lasting until the summer of 2015, and the second beginning at the conclusion of this first period and continuing until the end of her premiership in 2017.

**2011–2015**

Ms. Clark was aware of concerns about money laundering in the gaming industry from the beginning of her tenure as premier. She knew of and was very concerned by media coverage of suspicious cash transactions in the province’s casinos leading up to her taking office and understood that this coverage suggested that these transactions may have been connected to money laundering. Upon taking office, Ms. Clark soon learned of and reviewed Mr. Kroeker’s report. Her initial response to the report was that government needed to implement all of Mr. Kroeker’s recommendations.

In the years that followed, Ms. Clark took limited steps to monitor the progress being made on this issue. She does not seem to have been aware that the rate at which suspicious cash was being accepted in the province’s casinos had accelerated substantially. While Ms. Clark did not seek regular briefings on this subject, she maintained some level of awareness of what was occurring in the industry through letters of expectations issued to BCLC and through BCLC’s service plans and informal reporting to government. Despite these efforts, Ms. Clark did not have a clear understanding of what was occurring in the industry following the delivery of Mr. Kroeker’s report. While Ms. Clark acknowledged that she understood that “more needed to be done,” she testified that she was not aware, prior to 2015, that buy-ins for hundreds of thousands of dollars, predominantly in $20 bills, had become commonplace at Lower Mainland casinos, or that casino patrons were having hundreds of thousands of dollars, often largely in $20 bills, delivered to them at casinos, often late at night. She was also not aware that, after 2011, maximum betting limits increased to $100,000 per hand. Ms. Clark testified that, until 2015, she understood that Mr. Kroeker’s recommendations were having their desired effect, further suggesting that she was unaware of the rapid acceleration in large and suspicious cash transactions following the receipt of Mr. Kroeker’s report.

594 Ibid, pp 41–42.
595 Ibid, p 49.
596 Ibid, p 53.
With the benefit of hindsight, it would have been helpful for Ms. Clark to have remained actively engaged with this issue and taken steps to ensure resolution of the issues she acknowledged were of concern to her. I accept, however, that based on the information available to Ms. Clark at the time, her engagement with this matter was reasonable and appropriate. Having learned of a potentially serious issue facing an industry regulated by government and “conducted and managed” by a Crown corporation, Ms. Clark took steps to understand what her government was doing in response. She learned that a previous responsible minister had commissioned an independent report examining this issue, reviewed that report, and indicated her support for the implementation of its recommendations.

Having done so, it was not unreasonable, at that point, for Ms. Clark to redirect her attention elsewhere, trusting that the issue would be brought to her attention again if her further engagement was required. The conclusions set out in Mr. Kroeker’s report were largely positive and would not have indicated to Ms. Clark the extent of the crisis developing in the province’s casinos. Given the succession of experienced, highly capable ministers appointed by Ms. Clark to oversee the gaming industry, it was reasonable for her to rely on her ministers to bring matters requiring her involvement to her attention. There is no evidence that, prior to 2015, Ms. Clark received any such advice.597

2015–2017

In 2015, however, Ms. Clark was advised of troubling developments in the gaming industry that, in my view, did require her direct and immediate engagement. It is at this stage that Ms. Clark’s actions fell short of what was required. Ms. Clark testified that she was advised by Mr. de Jong in 2015 that “we have a problem” and that “there had been a spike in reports of suspicious activity” in the province’s casinos.598 Ms. Clark understood at that time that a significant number of transactions at Lower Mainland casinos were being reported as suspicious.599 She explained that she recognized this as a “serious problem” and viewed it as cause for “serious concern.”600 Asked whether this was the first occasion that she was made aware of an increase in suspicious activity since 2011, Ms. Clark confirmed that it was.601

Despite Ms. Clark’s concern about this issue, it is clear from her evidence that she took minimal steps to engage with, or even fully understand, the suspicious activity taking place in the province’s casinos at this time. Ms. Clark testified that she did not make inquiries as to whether the vast quantities of cash identified as suspicious were being accepted by casinos, and consequently, contributing to the Province’s revenues.602 She acknowledged that she never discussed with any of the responsible ministers that

598 Ibid, pp 34, 44, 54.
599 Ibid, pp 34, 44.
600 Ibid, pp 42, 44.
601 Ibid, pp 34–35.
served in her cabinet the options of placing a cap on the quantity of cash that could be used to buy-in in casinos or implementing requirements that cash be sourced prior to its acceptance.603 Ms. Clark also gave evidence that she never had discussions with any of those ministers regarding the advisability of offering high-limit gaming that allowed bets of up to $100,000 in an industry that remained dominated by cash.604

While Ms. Clark’s decision to focus her attention elsewhere prior to learning of the 2015 spike in suspicious transactions was reasonable, upon learning of this development from Mr. de Jong, it should have been abundantly clear to Ms. Clark that the gaming industry was facing a crisis requiring her urgent attention. It was incumbent upon Ms. Clark at this point to ensure that she fully understood the issue and that her government was taking the action necessary to resolve it as quickly as possible. While Ms. Clark’s government did take positive steps at this point, including the creation of JIGIT,605 Ms. Clark did not engage with this issue to the extent required. Ms. Clark failed to discuss with Mr. de Jong obvious steps that could have been taken to immediately cease the acceptance of these suspicious funds and did not even inquire as to whether or not casinos – and, in turn, the government – were, in fact, accepting the enormous volumes of suspicious cash she now knew were present in the province’s casinos. While Ms. Clark certainly does not bear sole responsibility for the perpetuation of this problem beyond 2015, Ms. Clark’s lack of engagement at this time meant that she was not in a position to ensure that her government took steps sufficient to make certain that casinos did not continue to accept illicit cash and that her government was not funded by the proceeds of crime. Having been made aware of the extraordinary volume of suspicious funds present in the province’s casinos, it was incumbent on Ms. Clark, as the leader of the government, to ensure that decisive action was taken to bring this unacceptable state of affairs to an immediate and complete end. While I accept that some meaningful action was taken in the wake of these revelations and that the quantity of suspicious cash accepted by casinos declined in the final years of Ms. Clark’s tenure, the volume of suspicious cash in the gaming industry remained at an elevated level until the end of Ms. Clark’s term as premier. Given Ms. Clark’s lack of engagement with this issue following 2015 and her failure to make inquiries that were, in my view, clearly necessary at that time, some responsibility for the perpetuation of this activity following 2015 must lie with Ms. Clark.

603 Ibid, pp 48–49.
604 Ibid, pp 34, 47, 54.
605 In her evidence, Ms. Clark suggested that the creation of JIGIT represented the eventual fulfillment of Mr. Kroeker’s 2011 recommendation that the Province establish a “cross agency task force to investigate and gather intelligence on suspicious activity and transactions at BC gaming facilities.” The creation of JIGIT does appear to have fulfilled the spirit of the recommendation made by Mr. Kroeker. However, the evidence before me does not demonstrate that the creation of this unit in 2016 was in any way motivated by it. The creation of JIGIT was motivated by the recommendations of BCLC and GPEB made immediately prior to the creation of the unit. There is no evidence that government had been actively working on the creation of a cross-agency task force since the time of Mr. Kroeker’s recommendation and no evidence that any of those actually involved in bringing JIGIT to life were motivated by Mr. Kroeker’s recommendation.
Conclusion

The problem of illicit cash in casinos grew substantially during Ms. Clark’s tenure as premier. While the rate at which suspicious transactions were accepted by this province’s casinos began to decline in the latter part of her premiership, this issue was not finally resolved until after her departure. When, in 2015, she was made aware that suspicious cash was being accepted at Lower Mainland casinos at an alarming rate, she did not engage with that issue to a sufficient degree to ensure this practice was immediately and definitively stopped. The premier learned that casinos operated by a Crown corporation and regulated by government were reporting enormous quantities of suspicious cash and, in her words, this was cause for “serious concern.” A response that failed to determine whether these funds were contributing to the revenue of the Province and failed to stop this practice for the remainder of her tenure as premier was inadequate.

Mr. Eby

Following the 2017 provincial election and the resulting change in government, Mr. Eby succeeded Mr. de Jong as minister responsible for gaming.606 Mr. Eby was first elected to the Legislature in 2013 and served as opposition spokesperson for gaming, among other roles, prior to the 2017 election.607 Like many of his predecessors, Mr. Eby’s responsibility for gaming was a small part of a much larger cabinet portfolio, as he was also appointed attorney general608 and assigned responsibility for the Insurance Corporation of British Columbia and the Liquor Distribution Branch.609

Thanks to the progress made during Mr. de Jong’s tenure, the gaming industry for which Mr. Eby assumed responsibility in 2017, while still characterized by significant quantities of suspicious cash, was much improved from what it had been in 2015. In the year in which Mr. Eby became the minister responsible for gaming, BCLC reported 1,045 suspicious transactions610 with a total value of $45,300,463.611 While still troublingly high, these numbers represent a vast reduction from the peak of the crisis only a few years earlier.612

Mr. Eby detailed in his evidence how he received briefings from GPEB and BCLC that seemed to present vastly different perspectives on the issue of money laundering in the gaming industry. Whereas GPEB’s briefing depicted an industry awash in illicit funds and a lottery corporation resistant to taking any steps in response,613 BCLC described the

613 Evidence of D. Eby, Transcript, April 26, 2021, pp 34–43; Exhibit 906, Provincial AML Strategy by John Mazure and Len Meilleur (August 2017); Exhibit 907, Provincial AML Strategy (Part II) by John Mazure and Len Meilleur.
industry’s anti-money laundering regime as “North American-leading” and FINTRAC-approved, leaving Mr. Eby with the impression that BCLC had no concerns about the volume of suspicious cash entering the province’s casinos or the potential that casinos could be used to launder the proceeds of crime.

Mr. Eby responded to this conflicting advice by seeking the external advice of someone he understood to have the requisite expertise to assist him in making sense of the situation and identifying a path forward. This was, in my view, a prudent choice. It is apparent from Mr. Eby’s evidence that he did not consider himself equipped to discern which of the two conflicting briefings was accurate – as discussed in Chapter 12, the answer proved to be neither – or how to move forward. As such it was entirely sensible to seek further guidance and ensure he had an accurate understanding of the problem he was facing before deciding how to respond.

This course of action proved fruitful. Within months of the commencement of Dr. German’s review, he delivered an interim recommendation that patrons be required to declare the source of funds used in transactions of $10,000 or more in cash or other bearer monetary instruments. Mr. Eby made clear to BCLC his expectation that this recommendation be implemented. Once strengthened by BCLC and implemented, this recommendation dramatically reduced suspicious cash transactions and effectively ended the money laundering crisis that had plagued the gaming industry for a decade.

Given the success of these efforts, Mr. Eby’s actions cannot be said to have contributed to the rise or perpetuation of money laundering in the gaming industry. To the contrary, in my view, Mr. Eby’s efforts, which built upon the progress made during Mr. de Jong’s tenure, contributed significantly toward the final resolution of the problem.

**Discouragement of BCLC Proposals to Enhance Anti-Money Laundering Efforts**

In light of this conclusion, I believe that it is necessary to briefly comment on the evidence before the Commission that, as Dr. German’s review was ongoing, Mr. Eby encouraged BCLC to consult with Dr. German prior to taking action to enhance its anti-
money laundering efforts.\footnote{Evidence of D. Eby, Transcript, April 26, 2021, pp 71–74; Exhibit 911, Email chain, re AG File No. 546040 (January 26, 2018); Exhibit 505, Lightbody #1, para 290–312.} As this encouragement ultimately resulted in some of these measures not being implemented, viewed in isolation, these events could be viewed as Mr. Eby inhibiting anti–money laundering reforms that would have accelerated the reduction in suspicious cash that occurred during this tenure. A proposal put forward by BCLC to impose a cap on the value of cash transactions, in particular, may have resulted in suspicious cash being turned away that was otherwise accepted.

As discussed in Chapter 12, however, in the context of Dr. German’s ongoing review, it was entirely sensible for Mr. Eby to encourage BCLC to consult with Dr. German prior to implementing any new anti–money laundering measures. Mr. Eby had retained an expert to evaluate money laundering in the industry and make recommendations to enhance efforts to combat it. In that context, it would not have made sense to make significant changes to the industry’s anti–money laundering regime without coordinating or consulting with Dr. German.

Mr. Eby’s request that BCLC consult with Dr. German regarding any such measures is akin, in my view, to the decision he made to seek external advice before acting. Mr. Eby could have taken action more quickly had he been concerned only with the appearance of doing so and was not interested in ensuring that he understood the circumstances confronting him and that any actions taken were appropriate. In the same way, BCLC’s proposals, while satisfying the objective of taking action quickly, posed a risk of proving misguided or, at least, inconsistent with the direction proposed by Dr. German and as such it was sensible to obtain Dr. German’s input before they were implemented. For this reason, I am unable to conclude that Mr. Eby’s efforts to encourage BCLC to consult with Dr. German in any way contributed to the perpetuation of money laundering in the gaming industry. In my view, they were prudent and appropriate.

Conclusion
For the reasons outlined above, in my view, the actions of Mr. Coleman, Mr. de Jong, and Ms. Clark contributed, to some extent, to the growth and/or perpetuation of money laundering in British Columbia’s gaming industry. I am unable to reach the same conclusion with respect to Ms. Bond and Mr. Eby.

In drawing these conclusions, I believe it important to emphasize again that identifying the actions of some of these elected officials as having contributed to this problem is in no way equivalent to a conclusion that they did so deliberately. As discussed at the outset of this section, there is no evidence capable of supporting a conclusion that any of these individuals engaged in any form of corruption with respect to matters within the mandate of the Commission. On the contrary, I accept that each was, at all times, motivated by their responsibility to work in the best interests of the province and its citizens. Some fell short in their efforts to do so, but I reject any suggestion that any were deliberately working contrary to the public interest.
I do not wish to be seen as counselling perfection, or otherwise establishing an unrealistically high standard of conduct for those who have taken on the responsibility of governance of the matters falling within the Commission's mandate, including elected officials, service providers, civil servants, or those in the role of law enforcement. It is necessary to exercise caution in attributing discredit or finding blame for decisions or actions that may have led to unintended consequences.

At the same time, however, it is important to not evade the tasks that I have been assigned in this Inquiry, which include “making findings of fact [about] the acts or omissions of regulatory authorities or individuals with powers, duties, or functions in respect of the sectors referred to in paragraph (a) or any other sector, to determine whether those acts or omissions have contributed to money laundering in British Columbia and whether those acts or omissions have amounted to corruption.”

It is necessary to recognize the importance of making findings of the nature and extent of accountability, where, as here, there is powerful evidence that for a decade or more, criminal actors used a government-run and -regulated industry to their financial advantage. Those are circumstances that are manifestly certain to provoke widespread feelings of mistrust in those responsible for the gaming industry and for its governance.

To the extent that those best positioned to put a halt to the profligate criminal misuse of the gaming industry between 2008 and 2018 failed to take necessary action despite the clear warnings of many knowledgeable and well-intentioned people, this represents a significant failure of will at a time, and in circumstances, when it was most needed.
Part IV
The Real Estate Sector

Real estate presents enormous money laundering vulnerabilities in British Columbia, no less than in other jurisdictions. In Chapter 15, I examine how real estate provides a safe and attractive investment for both legitimate and illicit proceeds, and is vulnerable to multiple money laundering methods. In Chapter 16, I turn to the regulation and anti-money laundering responsibilities of real estate professionals – real estate agents and mortgage brokers. These gatekeepers are in a position to both detect and report suspicious activity if it is recognized as such, but also to knowingly or unwittingly assist money laundering activity.

In Chapter 17, I address a particular area of concern, private lending secured by real estate. In Chapter 18, I examine how the large amount of data collected in the real estate sector provides an opportunity for data analysis that can help to identify money laundering trends and risks and to assist in responding to them proactively.

The remarkable rise in residential real estate values, in particular, has both sharpened public attention on the real estate sector and created further opportunities to clean the proceeds of crime. In Chapter 19, I examine the extent to which it can be concluded that money laundering has contributed to housing unaffordability in the province.
Chapter 15
Vulnerabilities to Money Laundering in Real Estate

In the public discourse around money laundering in this province, skepticism has been expressed about the prevalence or even existence of money laundering in real estate. To their credit, none of the participants in the hearings before me took the position that money laundering was not happening in or through real estate.

In order to dispel any lingering doubts about the existence of money laundering in the real estate sector, I have set out in this chapter a review of the intergovernmental, governmental, and academic consensus on the prevalence of money laundering in real estate. This chapter also canvasses the commonly understood typologies involving the use of real estate to launder the proceeds of crime.

One of my purposes in doing so is to illustrate that, in the real estate sector, money laundering transactions are usually one or more steps removed from the physical cash that some members of the public may associate with the words “money laundering.” While money laundering typologies involving real estate do not conjure up dramatic images of hockey bags or suitcases of cash being emptied onto the desks of realtors, that does not mean that money laundering is not happening in this sector. A focus on physical cash when considering the risks of money laundering reflects a misunderstanding of how various money laundering typologies work. In the real estate sector, this sort of focus on cold cash can lead to a failure to appreciate the magnitude of the risk and to recognize indicators of money laundering.

This chapter reviews some of the recognized typologies in brief. Later in this Report, I return to certain typologies to discuss them in context and in detail.
Why Real Estate Is Attractive to Money Launderers

The literature repeatedly cites a number of practical benefits and attractions of real estate for money launderers, notably:

- enjoyment of the property, both in terms of residing / conducting business on the property, and as a display of one's success;
- the benefit of having a location at which to conduct criminal activity;2
- the fact that a large amount of money can be laundered with a single transaction, due to the high value of real estate relative to other goods;3
- the relatively low transaction costs, as compared to other methods of money laundering,
- the perception of real estate as a safe investment;4
- the potential for income generation via rental income or the appreciation of property;5

---

• opportunity for further money laundering via real estate, such as by construction on the property;⁶

• the fact that taking out a mortgage to pay for real estate provides an opportunity to use illicit funds to service the debt and legitimize the money that is moving into financial institutions;⁷ and

• the ability to develop influence and power at a local level, such as in cases where a large real estate portfolio is owned in a small town or neighbourhood.⁸

In addition to these practical benefits, structural and regulatory factors are cited as incentives for using real estate to launder funds, such as:

• pressure on financial institutions to avoid doing business with potential money launderers, which has led to reforms that have encouraged launderers to seek alternate means of laundering;⁹

• the ability to manipulate price of real estate;¹⁰

• the ease of maintaining privacy, because of the lack of transparency in public corporate and land registries (see more below);¹¹

• conflict for real estate professionals, who are expected to balance expectations of performing due diligence as to the source of funds, but also attract clients;¹²

---

⁷ AUSTRAC, Strategic Analysis Brief: Money Laundering Through Real Estate, p 7.

• minimal reporting of suspicious transactions, whether on the part of the opposite party in the sale, or on the part of real estate professionals;\textsuperscript{13} and

• poor enforcement and insufficient sanctions for facilitating money laundering in real estate.\textsuperscript{14}

**Canadian Money Laundering Vulnerabilities: FATF 2016 Mutual Evaluation Report**

In September 2016, the Financial Action Task Force (FATF) released its fourth mutual evaluation report\textsuperscript{15} for Canada.\textsuperscript{16} The key findings of the Canada fourth mutual evaluation report with respect to real estate were as follows:

• The real estate sector in Canada is “highly vulnerable” to money laundering, including international money laundering.\textsuperscript{17} The sector is exposed to high-risk clients, including politically exposed persons from Asia and foreign investors from locations of concern.\textsuperscript{18}

• Certain real estate products, such as mortgage loans, were considered high risk.\textsuperscript{19}

• The main typologies identified in reviewing real estate-related suspicious transaction reports submitted to the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC) ranged from the use of nominees by criminals, and structuring of cash deposits, to sophisticated schemes involving loans, mortgages, and the use of a lawyer’s trust account.\textsuperscript{20}

• The existence of a memorandum of understanding between the RCMP and the People’s Republic of China was important, but “no assistance with this country was reported in the province of British Columbia, despite the fact that it appears to be at greater risk of seeing its real estate sector misused to launder [proceeds of crime] generated in China.”\textsuperscript{21}

\textsuperscript{15} See Chapter 6 for a discussion of the mutual evaluation process. Mutual evaluations are essentially peer reviews in which members of the Financial Action Task Force evaluate other members’ anti-money laundering and counter-terrorist financing measures against the task force’s 40 recommendations.

\textsuperscript{17} Ibid, p 16, para 52.

\textsuperscript{18} Ibid.

\textsuperscript{19} Ibid, pp 78–79, para 206.

\textsuperscript{20} Ibid.

\textsuperscript{21} Ibid, p 112, para 310.
• The supervision of real estate sector is not commensurate with the money laundering risks in that sector; more supervision is necessary.\textsuperscript{22}

• Real estate agents are not aware of their anti-money laundering obligations.\textsuperscript{23} Real estate agents are not familiar with basic customer due diligence processes and, in particular, are non-compliant with the third-party determination rule, which requires that real estate agents determine whether their customers are acting on behalf of another person or entity.\textsuperscript{24}

• Real estate agents “consider that they face a low risk because physical cash is not generally used in real estate transactions ... [and they] are overly confident on the low risk posed by ‘local customer[s],’ as well as non-resident customer[s] originating from countries with high levels of corruption.”\textsuperscript{25} Further, “detection of suspicious transactions is mainly left to the ’feeling’ of the individual agents, rather than the result of a structured process assisted by specific red flags.”\textsuperscript{26}

• Suspicious transaction reports have gradually increased, but remain very low in real estate.\textsuperscript{27}

• More dialogue is necessary with the real estate industry.\textsuperscript{28} FINTRAC “needs to further develop its sector-specific expertise and increase the intensity of supervision of [designated non-financial businesses or professions], particularly in the real estate sector and with respect to [dealers in precious metals and stones], commensurate with the risks identified in the [national risk assessment].”\textsuperscript{29} FINTRAC should update money laundering and terrorist financing typologies and red flags to assist in detection of suspicious transactions.\textsuperscript{30} FINTRAC does not provide enough sector-specific compliance guidance and typologies especially in the real estate sector.\textsuperscript{31}

\section*{Typologies and Academic Literature}

\subsection*{Intergovernmental / Governmental Reports on Typologies}

On June 29, 2007, the FATF released its report on money laundering and terrorist financing through the real estate sector.\textsuperscript{32} This report addressed the topic generally

\begin{itemize}
\item \textsuperscript{22} Ibid, p 4, para 9.
\item \textsuperscript{23} Ibid, p 5, para 19.
\item \textsuperscript{24} Ibid, p 82, para 222.
\item \textsuperscript{25} Ibid, p 80, para 213.
\item \textsuperscript{26} Ibid, p 85, para 234.
\item \textsuperscript{27} Ibid, p 7, para 30, Table 2 at p 41.
\item \textsuperscript{28} Ibid, p 5, para 18.
\item \textsuperscript{29} Ibid, pp 7–8, para 31.
\item \textsuperscript{30} Ibid, p 78.
\item \textsuperscript{31} Ibid, pp 98–99, para 276
\item \textsuperscript{32} Exhibit 601, Overview Report: Literature on Money Laundering and Real Estate and Response from Real Estate Industry, Appendix 1, FATF, \textit{Money Laundering & Terrorist Financing Through the Real Estate Sector} (June 29, 2007) [\textit{FATF Real Estate Report}].
\end{itemize}
and internationally, rather than focusing on any one country. The report aggregated case studies in order to identify the following basic techniques:  

- use of complex loans or credit finance;
- use of non-financial professionals;
- use of corporate vehicles;
- manipulation of the appraisal or valuation of a property;
- use of monetary instruments;
- use of mortgage schemes;
- use of investment schemes and financial institutions; and
- use of properties to conceal money generated by illegal activities.

The 2007 FATF report goes on to identify specific typologies as instances of the use of each technique. I will review those briefly here.  

**Use of Complex Loans and Credit Finance**

**Loan-back schemes:** illicit funds are used to purchase shares in property investment funds, which then provide loans back to the criminal investor for the purpose of buying property, creating the appearance of a legitimate loan from a real business activity.  

**Back-to-back loan schemes:** a financial institution lends money on the basis of security (real property) that was acquired with criminal funds.  

**Use of Non-financial Professionals**

**Obtaining access to financial institutions through gatekeepers:** money launderers seek out the services of accountants, lawyers, tax advisors, notaries, financial advisors, and others in order to create the structures they need to move funds unnoticed. Professionals lend credibility to transactions by, for instance, approaching financial institutions on behalf of their clients to obtain loans for the acquisition of property.  

---

33 Ibid, p 7.
34 Exhibit 601, Appendix 10, European Parliament Real Estate Report. In February 2019, the European Parliamentary Research Service released Understanding Money Laundering Through Real Estate Transactions, a briefing report that sets out typologies and case studies and provides suggestions for combatting money laundering. The report repeats many of the indicators articulated by FATF and set out in the academic literature. As with the FATF reports, the EU report indicates “... real estate plays a role (mainly) in the third and final stage of the money-laundering cycle, after the placement and the layering phases.”
**Assistance in the sale or purchase of property:** professionals such as notaries and real estate agents are used to help carry out real estate transactions. FATF noted that “[t]heir professional roles often involve them in a range of tasks that place them in an ideal position to detect signs of money laundering or terrorist financing.”

**Trust accounts:** the FATF identified the use of lawyers’ trust accounts (and advice) as a technique used to launder illicit funds through real estate.

**Management or administration of companies:** professionals are engaged to set up, and then manage and administer, corporate entities that engage in financial transactions, including real estate investments, with laundered funds. FATF notes that such professionals’ “access to the companies’ financial data and their direct role in performing financial transactions on behalf of their clients make it almost impossible to accept that they were not aware of their involvement.”

**Corporate Vehicles**

**Offshore companies:** the use of legal entities incorporated in another jurisdiction can make determining beneficial ownership and actual control difficult. Offshore companies can also take advantage of enhanced bank secrecy and other protective rules applicable in other jurisdictions.

**Trust arrangements:** trusts, which can be arranged even without the need for a written document constituting them (unlike corporations), can be used to hide the identity of the beneficial owner of assets or funds.

**Shell companies:** companies with no significant assets or operations may be set up engage in a particular transaction or to hold an asset, while hiding the identity of the beneficial owner(s).

**Property management companies:** real estate purchased with illicit funds may be rented out to provide a legitimate source of income. Further, illicit income can be mingled with legitimate rental income to camouflage it.

**Manipulation of the Appraisal or Valuation of a Property**

**Over-valuation or under-valuation:** the purchase of a property from a related or complicit party at an inflated price allows criminals to insert more money into the financial system than they would otherwise be able to. The over-valuation of a property at the appraisal stage may also allow a borrower to obtain a larger mortgage than the fair market value would justify (and, in some cases, to later default on the mortgage and abscond with the proceeds).

---

38 Ibid, p 10, para 19.
40 Ibid, p 11, para 23.
41 Ibid, pp 15–16, para 32.
42 Ibid, p 17, para 36 and p 24, paras 54, 55.
With under-valuation, the seller may agree to sell for a reduced price on paper, but accept the balance of the fair market value in a cash payment directly from the buyer.\textsuperscript{43} Under-valuation also has the benefit of creating an apparently larger capital gain on a future sale of the property at market value, thereby creating an explanation for funds that otherwise have no explained source.\textsuperscript{44}

**Successive sales and purchases:** related parties sell the same property to each other in successive transactions, providing cover for transactions with no real economic purpose, but which enable the transfer of funds.\textsuperscript{45}

**Monetary Instruments**

**Cash:** although the FATF identifies purchases of real property with physical cash as an indicator of money laundering,\textsuperscript{46} I conclude that this methodology is not prevalent in the British Columbia real estate market. However, cash can be injected into real estate by other means, including by adding to property value through renovations paid for in cash. Cash can also be used for smaller-scale real estate transactions, such as rental payments or even mortgage payments to private lenders. This typology is discussed later in this chapter, in the context of a small study completed by Commission counsel on the use of cash in the purchase of building supplies.

**Cheques and wire transfers:** funds are paid into an account by way of multiple wire transfers and cheque deposits, with little or no economic of commercial justification. Funds may then be used to purchase real estate.

**Mortgage Schemes**

**Illegal funds in mortgage loans and interest payments:** criminals obtain a mortgage and then repay the loan with illicit funds. This typology is discussed further in the section of this Report on mortgage brokers.\textsuperscript{47}

**Mortgage fraud:** one method of generating illicit funds is to obtain a mortgage by fraud. The fraud can consist of inflating the value of a property or overstating the qualification of the borrower. A nominee purchaser may also be put forward to obtain the mortgage (hiding the actual owner). An inflated property valuation can lead to a large mortgage loan, which a bad actor may steal and abscond with.\textsuperscript{48}

\footnote{46} Ibid, p 18.
\footnote{47} Ibid, p 21, para 49.
\footnote{48} Ibid, p 24, para 55.
\end{footnotes}
**Investment Schemes and Financial Institutions**

Like anyone else, criminals may invest their funds directly or indirectly in real estate. This may take the form of buying property directly or through a legal entity, or it may take the form of investing in a partnership or a real estate investment trust (REIT).\(^{49}\)

**Concealing Money Generated by Illegal Activities**

**Investment in hotel complexes, restaurants, and similar developments:** in the final phase of money laundering – integration – illicit funds may be invested in real estate-based businesses, which not only provide stable investments, but may also provide an opportunity to develop a cash-based business that can further assist in the ongoing money laundering process.\(^{50}\)

The 2007 FATF report includes case studies from a number of countries. One Canadian example involved the conviction of an individual who had provided false information on multiple mortgage applications, and used nominee purchasers (family members) in order to purchase five properties.\(^{51}\) Both the individual and all nominees paid more toward the properties than could be supported by their income as declared to the Canada Revenue Agency. The individual was later convicted of drug trafficking as well as money laundering.\(^{52}\)

The report’s authors emphasized that real estate agents are well placed to detect suspicious activity or identify red flags, because they generally know their clients better than other parties to the transaction.\(^{53}\) The report concluded:

> Professionals working with the real-estate sector are therefore in a position to be key players in the detection of schemes that use the sector to conceal the true source, ownership, location or control of funds generated illegally, as well as the companies involved in such transactions.\(^{54}\)

As noted by the Expert Panel on Money Laundering in Real Estate, the transactions above are examples of legitimate and frequent types of transactions that occur in the real estate market. In the absence of a red flag indicating a direct connection to criminal activity, it is difficult to distinguish a transaction with a criminal purpose from a legitimate one.\(^{55}\) In general terms, they look the same.

Academic Reports

There is considerable academic and quasi-academic literature describing the appeal and use of real estate as a money laundering vehicle. The use of real estate by criminals, particularly organized criminals, as a means of offloading and laundering proceeds of crime occurs globally. There are documented occurrences in Europe, Southeast Asia, Japan, South and Latin America, the United Kingdom, the United States, Australia, and Canada. One study of 52 Dutch criminal cases found that, in 30 to 40 percent of money laundering cases, money was invested in real estate.

Cash and Money Laundering in Real Estate

Elsewhere in this Report, I address the ongoing academic debate over the accuracy and utility of the traditional conception of money laundering as having three phases (placement, layering, and integration). For present purposes, however, I will make use of that conventional framework to discuss how real estate is employed for money laundering. Professor Louise Shelley observed that real estate is used at all three phases of the traditional conception of the money laundering cycle. She describes those phases as follows:

**Placement** involves the introduction of dirty money into the system. **Layering** occurs when the money is already in the system and the audit trail is deliberately obscured. **Integration** occurs when the money is already functioning within the system. [Emphasis added.]

While purchases of real estate with physical cash occur in some developing nations, in countries like Canada there are usually barriers to purchasing real estate with physical cash. In developed nations, purchasing real estate with cash is seen as suspicious, such that financial institutions become the initial entryway (or placement stage) for proceeds of crime entering real estate. However, in the latter two phases of the money laundering cycle, layering and integration, money laundering occurs everywhere. Professor Shelley writes:

Transactions in the layering stage are intended to obscure any financial (traceable) links between the funds and their original criminal sources.

---

58 L. Shelley, “Money Laundering into Real Estate,” p 132; as per Professor Brigitte Unger: “To sum up, the real estate sector is by its very nature complex and prone to criminal abuse”: B. Unger et al, *Detecting Criminal Investment in the Dutch Real Estate Sector*, pp 202–3; F.M.J. Teichmann, “Real Estate Money Laundering in Austria, Germany, Liechtenstein and Switzerland,” p 371.
60 Ibid.
61 Ibid.
In this stage, laundering typically occurs by moving funds in and out of offshore bank accounts. Overseas, the money may be used for real estate investments or may assume the form of a foreign bank loan to buy a house, when the loan is in reality the purchaser's own money parked overseas. Finally, the goal of integration is to create a “history” showing that funds were acquired legally. In the integration phase, the criminal places money in the real estate sector and is not interested in trading in real estate but in investing.\(^\text{62}\)

**Types of Real Estate Susceptible to Laundering**

Experts agree that both commercial and residential real estate are vulnerable to money laundering.\(^\text{63}\) Significant examples of laundering in commercial real estate include: the *yakuza* in Japan prior to the long-term recession,\(^\text{64}\) laundering using cattle ranches in Colombia,\(^\text{65}\) property purchases in the red-light district of Amsterdam,\(^\text{66}\) and hotel purchases in tourist areas in Spain and Turkey.\(^\text{67}\)

Of course, residential examples abound.\(^\text{68}\) While attention has often focused on the use of lavish, high-end real estate by criminal organizations, low-end real estate is also subject to use for money laundering. Examples of the latter include Arizona,\(^\text{69}\) rural Ohio, and central Tokyo.\(^\text{70}\) In some cases, property is purchased but left vacant, and “[s]uch decay may be allowed so the criminal investors can subsequently buy neighboring properties at depressed costs, thereby increasing their territorial influence.”\(^\text{71}\)

---

\(^{69}\) L. Shelley, “Money Laundering into Real Estate,” p 140.

\(^{70}\) Ibid, p 134.

\(^{71}\) Ibid, pp 135–36.
Germany, Liechtenstein, and Switzerland, money launderers were observed to prefer to buy property in large metropolitan areas where they can maintain anonymity.\(^{72}\)

In a study of money laundering through real estate in the Netherlands, one study found that the type of property used by money launderers differed depending on the predicate offence. For those who engaged in criminal activities like drug trafficking, human smuggling, and the illegal arms trade, 45 percent of the property acquired was for residential use while 18 percent was for commercial use (such as hotels and casinos). In comparison, only 24.5 percent of the property acquired by those who engaged in fraud and money laundering was residential, while 69.9 percent was for commercial use.\(^{73}\)

**Conclusion**

My purpose in this chapter has been to highlight the international consensus that (a) real estate is an attractive vehicle for money laundering, and (b) money laundering does, in fact, occur with some frequency in this sector. The remainder of this section will set out evidence of money laundering occurring in the British Columbia real estate sector and will identify particular areas of vulnerability. I begin with a case study on building supply companies and their vulnerability to money laundering.

---

**Case Study: Building Supply Companies and Money Laundering Vulnerability**

Neither builders nor building supply companies are reporting entities under the federal *Proceeds of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 (PCMLTFA)*. As such, they fall outside the *PCMLTFA* regime, including the requirement to submit reports for suspicious and large cash transactions to FINTRAC.

Reporting entities in the real estate industry are expected to assess all clients for suspicious activity that may indicate money laundering, including a long list of indicators outlined in guidance published by FINTRAC, in accordance with the *PCMLTFA* and its associated regulations.\(^{74}\) Certain client activity automatically triggers a reporting entity's requirement to file a report with FINTRAC. One such activity is where a reporting entity receives a cash transaction of $10,000 or more, or multiple cash transactions in a 24-hour period that total $10,000 or

---

\(^{72}\) F.M.J. Teichmann, “Real Estate Money Laundering in Austria, Germany, Liechtenstein and Switzerland,” p 372.

\(^{74}\) *Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations, SOR/2002-184.*
more. In such circumstances, the reporting entity must file a large cash transaction report with FINTRAC within 15 calendar days.

As noted, builders and building supply companies are not reporting entities under the PCMLTFA. They are therefore not obligated to report large cash transactions or conduct know-your-customer due diligence, including inquiring about their customers’ sources of funds.

In order to gain a better understanding of the prevalence of large cash transactions in the building supply industry, the Commission issued summonses to eight randomly selected building supply companies in the Lower Mainland. The aim of this undertaking was to gain some insight into the extent of large cash activity at building suppliers, which in turn would help understand the risk arising in this sector.

The summonses asked recipients to produce the following information and records in their possession related to cash transactions:

• records of cash transactions with a value of $10,000 or greater, related to the purchase of building supplies from the recipient;
• records related to the return and refund of the purchase price of any building supplies purchased in cash (over $10,000) from the recipient; and
• records related to the policies and practices of the recipient with respect to the acceptance of cash as a means of payment for the purchase of building supplies.

Of the eight companies that received summonses, five provided records to the Commission. While the sample was small, the responses provide some insight into the extent to which cash is used in the building supply industry. The results are summarized below.

The five responding companies were smaller, principally family-owned companies operating in the Lower Mainland outside of Vancouver. They provided records of all cash transactions over $10,000 from 2015 to 2020. In total, there were 77 cash transactions reported to the Commission from 55 individual buyers. The tables below provide details on the transactions from each responding company:

Most cash transactions were conducted by unique buyers, with only one or two repeat customers per company. However, one company did have a single buyer who used cash for 17 different transactions between 2015 and 2018, amounting to $184,500.

Of all the cash transactions recorded, almost one-third of transactions (24 of 77) were for exactly $10,000. Only seven of the 77 transactions were for more than $25,000, and of those, only one transaction was for more than $50,000. A summary of the transactions is provided in Table 15.3:

Source: Compiled by the Commission.

It is worth noting that of the 77 transactions recorded, 24 were in the exact amount of $10,000, four were in the exact amount of $15,000, and six were in the exact amount of $20,000. No information was provided about the denomination of the cash used by purchasers (i.e., whether it was all $20 or smaller denomination bills).

From the review of the records provided, many of the cash transactions occurred when contractors would charge orders to their account with the building supply company, and then use cash to pay off some, or all, of their account.
Cash Refunds
No records for cash refunds over $10,000 were provided. One company informed the Commission that orders in excess of $1,000 would be deemed “custom ordered” and therefore would generally not be eligible for a refund. A second company was noted to have a policy of not allowing returns of special orders, as cited on the invoices the company provided to the Commission.

Cash Policies
No records responsive to the request for records related to the policies and practices of the recipient (with respect to the acceptance of cash as a means of payment for the purchase of building supplies) were provided. In conversation with building supply companies, Commission counsel were advised that such written policies did not exist.

Conclusions
When it comes to building supply companies, it is worth noting the lack of regulatory coverage and the apparent lack of internal company policies regarding the acceptance of unsourced cash as payment for building supplies. These characteristics may make this sector of the market vulnerable to money laundering. However, the small sample of companies that provided information to the Commission does not indicate a substantial amount of cash transactions at these businesses.

All transactions reported over the $10,000 threshold were in the low tens of thousands of dollars. The large majority of transactions involving such amounts were for $20,000 or less. Across the five building supply companies that supplied records to the Commission, a total of $1,131,550 was paid for in cash between 2015 and 2020.

The Commission did not receive information on source of funds and did not investigate those making the payments. As such, no determination can be made on whether any of these cash payments were used to launder money.

The results of the study suggest that there is little that stands in the way of disposing large amounts of cash through the purchase of building supplies. Making improvements to real property by building or renovating is simply another means of converting cash into equity in real estate. That investment can later be realized on sale of the property, becoming legitimate profit in the hands of the homeowner. In the current real estate market in British Columbia, home improvement is also likely to be a safe investment.
I do not go so far as to recommend that the Province urge the federal government to make building supply companies reporting entities to FINTRAC, with all of the attendant compliance obligations. However, as I outline in considerable detail in Chapter 34, there are significant risks of money laundering arising from businesses that undertake transactions involving over $10,000 in cash.

As such, as I explain in Chapter 34, I have recommended that the Province enact legislation requiring any business accepting $10,000 or more in cash as payment for a good or service in a single transaction (or series of related transactions), with identified exceptions, be required to:

- verify a customer's identification and record their name, address, and date of birth;
- inquire into and record the source of funds used to make the purchase;
- determine whether the purchase is being made on behalf of a third party and, if so, inquire into and record the identity of that their party; and
- report the transaction – including the total amount of cash accepted; the item or service purchased; the source of funds reported by the customer; whether the purchase was made on behalf of a third party and, if so, the identity of that third party; and the name, address, and date of birth of the customer – to the Province.

While the evidence from this small-scale inquiry into the building supply industry was extremely modest, it seems to me that it is nonetheless revealing. Five relatively small-scale suppliers generated over a million dollars in large cash sales (over $10,000) over five years. This suggests that there are real risks, and that money launderers could exploit the lack of oversight and reporting to move significant amounts of illicit money through building suppliers. The recommendation I have made in Chapter 34, repeated above, may well deter many building suppliers from accepting cash over $10,000, and the scrutiny this recommendation provides will reduce the risk of money laundering in this and other sectors of the British Columbia economy.
Chapter 16

Real Estate Professionals and Regulators

My Terms of Reference require that I report on money laundering and the effectiveness of anti-money laundering measures in numerous sectors of the provincial economy. One of the largest sectors – both in terms of value and activity – is, of course, real estate. In this chapter, I describe the professionals involved in real estate transactions and the regulatory regime in which they operate. I pay particular attention to mortgage brokers, because of a noteworthy gap in this area. In addition, I consider how BC’s real estate industry interacts with the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC) within the federal anti-money laundering regime, the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 (PCMLTFA).

I begin with a high-level overview of the history of how real estate has been regulated in British Columbia, and the regulatory framework for those who provide real estate services. This includes people (both licensed and unlicensed) who work as real estate agents, strata and property management agents, and property developers. In the course of that discussion, I address the money laundering vulnerabilities within the existing regulatory framework.

In the second section of this chapter, I examine the relationship between FINTRAC and the BC real estate industry, with a particular focus on how the industry has responded to criticism that it has not met its anti-money laundering obligations.

Finally, in the third section, I focus on mortgage brokers and sub-brokers, with a discussion of the regulatory framework, money laundering vulnerabilities in the industry, and gaps in the regulatory and legislative framework. I include two case studies that provide insight into mortgage brokers.
Part 1: Overview of the Regulation of Real Estate in BC

History of Real Estate Regulation in BC

The jurisdiction now known as British Columbia was populated by Indigenous peoples before contact with European peoples. In 1858, the mainland of British Columbia was established as a British colony, with Vancouver Island having already been provided by the Crown to the Hudson's Bay Company in 1849.1 In 1859, Governor James Douglas passed the Land Proclamation, 1859, affirming Crown ownership of all lands in British Columbia.2 The following decade, the British North America Act, 1867, 30 & 31 Vict, c 3 (UK) (now known as the Constitution Act, 1867), established that jurisdiction for “property and civil rights” fell to the provinces rather than the federal government.3 British Columbia joined Confederation in 1871.

Following the British North America Act, 1867, British Columbia implemented a modified Torrens land title system. A Torrens system of land title registration is based on the principles of indefeasibility, registration, and abolition of notice and assurance.4 In British Columbia, a person who has registered title has an indefeasible right to the subject property, meaning the Province ensures the registered owner, and nobody else, is considered the true owner.5 The land title registry is assured to be conclusive as to ownership of land in British Columbia, backed by the Land Title and Survey Authority Assurance Fund.6 This almost entirely eliminates the need to make inquiries about the validity of someone’s claim of title or interest; a purchaser may rely exclusively on the information registered with the Land Title and Survey Authority. This system also means that any beneficial interests in a property that are not registered are not easily traceable.7 British Columbia is sometimes referred to as a “modified” Torrens system because the indefeasibility of title is subject to certain exceptions set out in the Land Title Act, RSBC 1996, c 250.8

The land title registry and other official records of the land title office are open to inspection and search by any person.9 Open access to real estate records is a mainstay of the British Columbian land titles system.10 In 2005, responsibility for maintaining the land title registry was assumed by the Land Title and Survey Authority.11

When transferring land, the transferor has an obligation to provide the transferee with a registrable instrument\textsuperscript{12} and/or to provide any further description, plan, other instrument, or conveyance, as required by the registrar.\textsuperscript{13} Any person can acquire and dispose of land in British Columbia regardless of citizenship,\textsuperscript{14} and the owner must not be disturbed in their possession of land because of their citizenship status.\textsuperscript{15}

In 1920, the sale of real estate became a regulated industry, discussed in more detail below.\textsuperscript{16} As of August 1, 2021, the body responsible for regulation of those engaged in real estate sales and the management of rental or strata property, is the British Columbia Financial Services Authority (BCFSA).\textsuperscript{17} The BCFSA is also responsible for administering the \textit{Mortgage Brokers Act}, RSBC 1996, c 313. At present, BCFSA does not have an anti–money laundering mandate.\textsuperscript{18}

\textbf{Evolution of the Law Applicable to Real Estate Agents and Property Developers}

The real estate profession was first subject to provincial regulation in 1920, with the enactment of the \textit{Real-Estate Agents' Licensing Act}.\textsuperscript{19} In 1958, the \textit{Real Estate Act}\textsuperscript{20} replaced the \textit{Real-Estate Agents' Licensing Act}. The \textit{Real Estate Act} established the Real Estate Council of British Columbia (RECBC) in 2005, with a majority of industry-elected council members. RECBC was responsible for licensing and educating real estate professionals. The Office of the Superintendent of Real Estate (OSRE) was responsible for enforcing regulatory requirements related to licensing. As of August 1, 2022, both RECBC and OSRE have been incorporated into BCFSA.

The \textit{Real Estate Services Act} (RESA), the successor to the \textit{Real Estate Act}, requires those providing real estate services to have a licence issued by the regulator, and both prohibit unlicensed activity.\textsuperscript{21} The RESA governs the use of trust accounts by licensees;\textsuperscript{22} requires

\end{itemize}
the carrying of errors and omissions and liability insurance;\(^23\) and makes licensees subject to the jurisdiction of the Superintendent of Real Estate (previously RECBC) to investigate misappropriation of trust funds, breaches of the legislation and regulations, and other misconduct.\(^24\) The RESA provides for discipline following a hearing and grants BCFSA powers of compulsion.\(^25\) Penalties available to the regulator include the cancellation of a license, reprimands, suspensions, and mandatory enrollment in training courses.\(^26\) The RESA also makes proof of a license a precondition to recovery in court of any compensation for acts performed as an agent.\(^27\)

### Changes to the Regulator

The evolution in the regulation of the real estate industry from 2005 to 2018 was detailed in the *Real Estate Regulatory Structure Review* by Dan Perrin (Perrin Report),\(^28\) one of the reports referred to expressly in the Terms of Reference for this Inquiry. I describe that evolution in a summary way here. RECBC was created by the *Real Estate Act* and was responsible for licensing and education. Over time, it was given increased regulatory authority. In 2005, the RESA made RECBC a self-regulated agency independent from government. The newly independent RECBC had rule-making authority and was responsible for licensing, education, and regulatory enforcement.\(^29\) OSRE was responsible for regulating unlicensed activity in the sector and for intervening in licensed activity when it was in the public interest, as well as for approving disclosures under *Real Estate Development and Marketing Act*, SBC 2004, c 41.

As housing prices began to rise sharply, so did media scrutiny of, and public concern about, the conduct of real estate professionals. In spring 2016, RECBC commissioned the Independent Advisory Group on Conduct and Practices in the Real Estate Industry in BC, which released its report in June 2016 (the IAG Report). The IAG Report made 28 recommendations, organized under four key areas of concern: transparency and ethics; compliance and consequences; governance and structure; and licensee and public education.\(^30\) The Independent Advisory Group highlighted the following concerns:

- the lack of a clear and easy-to-interpret code of conduct for licensees, maintained by the regulator;

- RECBC’s inconsistent and narrow application of its rules intended to effectively deter misconduct and unethical behaviours, and the failure to take an assertive stand on compliance with regulatory standards such as anti-money laundering requirements;\(^31\)

\(^26\) Ibid, s 43(2).

\(^27\) Ibid, s 4.

\(^29\) Ibid, p 8.

\(^31\) Ibid, p 25.
• the continuing practice of dual agency (acting for both buyer and seller in one transaction);
• a need for more proactive investigation and less reliance on complaints;
• inadequate financial penalties and sanctions for misconduct, in contrast to steadily rising real estate prices and related commissions;
• inadequate public explanation by RECBC for its decisions, consent orders, and penalties;
• a confusing overlapping of roles between the regulator and industry organizations, especially in respect of addressing licensee misconduct;
• the difficulties faced by managing brokers in supervising increasingly independent licensees;
• an inefficient division of regulatory duties between RECBC and OSRE;
• the domination of RECBC by industry participants, creating a perception and a risk that industry views and interests would outweigh those of consumers and the public;
• entry-level education standards that are low compared to other financial professions; and
• a need for revisions to licensing education to include a greater focus on conduct and ethics as foundational elements in both the licensing and the re-licensing process.32

On the heels of the IAG Report, the provincial government restructured the regulatory framework, eliminating the self-governance of real estate professionals by making the RECBC board fully government appointed and refashioning OSRE as a stand-alone body with a broadened mandate and greater statutory authority. From late 2016 to August 1, 2021, OSRE continued to be responsible for regulation of unlicensed activity, but was also responsible for rule-making for licensees and for oversight of RECBC, including discipline licensee conduct that was deemed “seriously detrimental to the public interest.”33

The Perrin Report, which was commissioned by the Ministry of Finance and released in September 2018, concluded that the regulatory structure described above was a significant factor contributing to dysfunction in the relationship between OSRE and RECBC. Mr. Perrin found that the 2016 changes led to significant tension between OSRE and RECBC. Disputes about jurisdiction arose from the lack of clarity on the overlapping roles of OSRE and RECBC, and the lack of industry expertise among the latter’s new government-appointed board members noticeably slowed the processing of complaints.34

32 Ibid, pp 22–34.
33 RESA s 48.
34 Exhibit 607, Perrin Report, p 15.
The report recommended that OSRE and RECBC be amalgamated with the Financial Institutions Commission (FICOM, the predecessor to BCFSA) to allow for regulation from a capital market conduct perspective as opposed to just licensee conduct. Put differently, this recommendation aimed to reorient regulation so that, instead of focusing on misconduct issues, it would address broader concerns involving the real estate market. Bringing RECBC and OSRE functions within FICOM, which already had regulatory responsibility for mortgage brokers and financial institutions, would place real estate regulation into a broader context of financial regulation.35

The Perrin Report also recommended a fundamental review of real estate regulatory policy. This included the question of whether real estate activity currently exempted from licensing requirements should be regulated, and how real estate conduct that is “disruptive to a fair, efficient and trusted market,” or that is illegitimate, could be deterred.36

The Province has acted on some of these recommendations. FICOM’s responsibilities (including administration of the Mortgage Brokers Act) were transferred to a new Crown agency, BCFSA, in November 2019.37 BCFSA is an independent Crown agency that regulates credit unions, insurance and trust companies, pensions, and mortgage brokers. The agency’s mandate is to safeguard confidence and stability in BC’s financial sector by protecting consumers from undue loss and unfair market conduct.38 BCFSA, like FICOM, supervises and regulates financial institutions and pension plans to determine whether they are in sound financial condition and are complying with their governing laws and supervisory standards.

It was also announced in November 2019 that the Province’s real estate regulators, OSRE and RECBC, would be brought within BCFSA.39

BCFSA as the Single Real Estate Regulator
On March 9, 2021, the BC Legislative Assembly approved legislation integrating OSRE and RECBC with the BCFSA.40 The integration occurred on August 1, 2021. BCFSA is now the sole regulator of real estate professionals in the province and has assumed the responsibilities of what was formerly RECBC and OSRE.41

36 Ibid, p. 3.
38 Ibid; see also BC Financial Services Authority, “Mandate and Values,” online: https://www.bcfsa.ca/about-us/what-we-do/mandate-and-values.
The functions once performed by RECBC under the RESA are now performed by the Superintendent of Real Estate, a statutory role that now exists within BCFSA. The chief executive officer of the BCFSA has served as Superintendent of Real Estate since August 1, 2021, as well as filling other statutory roles such as being the Registrar of Mortgage Brokers and the Superintendent of Financial Institutions. For simplicity, and because I do not believe it makes any substantive difference for my purposes, I will simply refer to the appropriate authority as the BCFSA.

BCFSA licenses individuals and brokerages engaged in various aspects of the real estate industry, including real estate sales and rental and strata property management. It sets entry qualifications, investigates complaints against licensees, and imposes disciplinary sanctions available under the RESA.

Most providers of real estate services in British Columbia must be licensed. BCFSA ensures that licensees, among other things, meet educational and professional standards, manage their funds through trust accounts, and carry errors and omissions insurance.

BCFSA is also responsible for the investigation and discipline of unlicensed real estate activity, the development of rules related to the activities of real estate licensees, and the administration of the Real Estate Development Marketing Act, SBC 2004, c 41. These functions were previously performed by OSRE.

### Regulated Persons: Real Estate Service Providers

I now turn to the different types of real estate professionals who are regulated in this province, which first requires a look at the provincial Real Estate Services Act.

#### Types of RESA Licences

In British Columbia, professionals who engage in real estate services generally fall into three licensed categories: managing brokers, associate brokers, and representatives. (There is also a fourth category of licence for real estate brokerages.) All four categories are supervised by BCFSA and are governed by the RESA. Each category of professional has different licensing requirements and different duties under the Real Estate Services Rules.

**Managing brokers** are responsible for exercising the rights and performing the duties of a real estate brokerage. All real estate services must be provided through a brokerage, and every brokerage must have a licensed managing broker. The

---

44 RESA, s 5. See also its subordinate regulation, the Real Estate Services Regulation, BC Reg 506/2004 and the Real Estate Services Rules, BC Reg 209/2021.
45 RESA, s 6.
managing broker acts on behalf of the brokerage for all purposes and is responsible for the brokerage’s real estate business, including supervision of the associate brokers and representatives licensed in relation to the brokerage. The Real Estate Services Rules set out the responsibilities of managing brokers, including their responsibility to ensure that all business is carried out in accordance with the governing legislation. The rules also require that managing brokers ensure that all related licensees and staff, including associate brokers and representatives, have adequate supervision and are familiar with the rules. A managing broker who has knowledge of improper conduct (or conduct unbecoming a licensee on the part of another licensee or a brokerage employee) is required to take reasonable steps to deal with the matter.

**Associate brokers** are licensees who meet the educational and experience requirements to be a managing broker but are providing real estate services under the supervision of a managing broker.

**Representatives**, commonly referred to as real estate agents or realtors when providing trading services, are licensed to provide real estate services under the supervision of a managing broker. The obligations of both licensed associate brokers and representatives are set out in Rule 29. They are required to keep their managing broker informed of the real estate services that they are providing and must respond promptly to any inquiries from the managing broker. Both categories of licensee are responsible for promptly informing their managing broker if they become aware of misconduct or improper conduct, whether their own or that of another person for whom the managing broker has responsibility.

There are three categories of real estate services governed by the Real Estate Services Act and the Real Estate Services Rules: rental property management, strata management, and trading services (real estate sales). Individuals must be licensed for each area in which they practice. Separate licensing and training requirements apply to each category of service.

Following the release of the IAG Report in 2016, RECBC implemented more stringent suitability assessment requirements for prospective licensees. This included publishing more suitability hearing decisions, increasing English language proficiency requirements, and streamlining the assessment process in order to flag suitability issues at an earlier time. In November 2020, RECBC updated its suitability guidelines to move

toward a “fitness to practice” standard, which also allows the regulator some discretion in assessing criteria for entrance to the profession.54

Exceptions to Licensing Requirement

There are exceptions to the requirement for licensing under the RESA, some of which I find problematic.

The first is for employees of developers who engage in sales activities. Those who work for real estate developers are not required to be licensed, even when they are engaging in what would otherwise be trading activities that are restricted to licensed real estate agents. This exemption has attracted much attention, including in the report prepared by Professors Maureen Maloney, Tsur Somerville, and Brigitte Unger55 (Maloney Report) and the Perrin Report. Both reports recommended that the Ministry of Finance take steps to eliminate the exemption on the basis that doing so would both enhance public protection in the sale of residential developments and provide additional regulatory tools useful for anti-money laundering activities.56

This issue was also picked up by the federal-provincial ad hoc working group on real estate (which I describe in more detail in Chapter 18). The group set out “key considerations and challenges,” including that allowing the employees of developers to engage in unregulated sales “decreases oversight and may increase risk of [anti-money laundering] non-compliance, tax evasion, and other misconduct.”57 Ultimately, the working group declined to make a recommendation, concluding only that further analysis and consultation with industry and regulators is required.58

I have less hesitation in urging the Province to end this exemption. The building and sale of new developments is a large and lucrative segment of the BC real estate market. To allow the continuation of a gap in licensing that may, as the working group noted, increase risk of anti-money laundering non-compliance, which is not an option for such a significant segment of the real estate market. Although real estate developers’ employees have PCMLTFA obligations in respect of reporting suspicious transactions, they will not have the same education and training requirements as licensees while they remain outside of the licensing scheme. There are other valid reasons to bring these exempted employees into the scheme, such as making them subject to the conduct requirements of licensees and the oversight of BCFSA. I therefore recommend that the Province amend the Real Estate Services Regulation to bring the employees of developers within RESA’s licensing scheme.

54 Ibid, p 154.
Recommendation 8: I recommend that the Province amend the \textit{Real Estate Services Regulation} to bring the employees of developers within the licensing scheme.

Another gap in the licensing requirements, identified again by the working group and in the evidence of Raheel Humayun, then managing director of investigations for OSRE (and now director of investigations at BCFSA), arises in relation to rental property. The issue arises when the rented property is owned, leased, or rented by a person who is providing what would otherwise be real estate services under the \textit{RESA}.\footnote{Ibid, pp 8–10; Evidence of R. Humayun, Transcript, February 25, 2021, pp 27–32.} Mr. Humayun provided two examples to illustrate the problem: “for lease by owner” and “for sale by owner.”

In the first scenario, a person rents a property from the owner, but instead of occupying it, sublets it to a third party. In doing so, the person advertises the property for rent, enters into agreements with the sub-lessor for a higher amount than what they are paying to the owner, collects rent, and keeps the difference.\footnote{Evidence of R. Humayun, Transcript, February 25, 2021, pp 29–30.} The problem, Mr. Humayun said, is that BCFSA has been seeing individuals or corporations entering into multiple residential tenancy agreements and then subletting them to multiple tenants. Such persons are providing rental management services and receiving remuneration for those services, yet they avoid the licensing requirement (and all of the attendant obligations imposed on licensees) because they fall under the exception for owners.\footnote{Ibid, pp 27–29.}

In the second scenario, a person enters into an agreement to purchase a property directly with the owner. Where that purchase agreement allows for assignment, the buyer can then turn around and sell that purchase agreement to a third party. A person could hold multiple purchase agreements and assign them to multiple third parties, effectively acting at business scale (or to use a different phrase, at an industrial level). These activities, if not conducted in respect of their “own” properties, would amount to trading services and be subject to licensing requirements.\footnote{Ibid, pp 30–32.}

In both situations, the regulatory regime does not capture activity that would otherwise be covered. This creates a gap. The working group wrote, in respect of such activity:

RESA was first drafted in 2004 and does not contemplate the sophisticated volume-based business practices that have emerged to subvert the regulatory framework. [For sale by owner and for lease by owner] activity is being abused by unregulated service providers who are conducting large-scale activities and putting the public at risk. Wholesale business models now exist where entities enter into multiple purchase or tenancy agreements and engage to conduct unlicensed RESA services such as purchase contract assignment or subleasing.
The broader regulatory and law enforcement framework and the AML [anti-money laundering] compliance regime have little to no insight into the activities of even large-scale unregulated entities acting in this manner, who unlike licensed persons, have no AML responsibilities, conduct expectations or consumer protection accountabilities.63

The gap in regulation was found, specifically, to present a money laundering vulnerability:

The work stream further noted that unlicensed entities providing real estate services generally present a greater risk for money laundering and tax evasion than licensees and have no defined regulatory requirement to comply with AML reporting. As all levels of government seek to address AML reporting and misconduct through increased responsibilities and education for regulated real estate professionals, the gap between the regulated and unregulated areas of the market in terms of AML compliance has grown and continues to expand. There is reasonable likelihood that bad actors will favour the unregulated area of the market to escape the lens of law enforcement.64

The exemption for this category of operator means there is limited ability for the regulator to respond to activity that can be detrimental to consumers or to the market. Mr. Humayun testified that investigators are limited, even if they have concerns about the conduct of such operators, to making referrals to tax authorities.65 That leaves consumers vulnerable to such actors.

The exemption also gives rise to a money laundering vulnerability. Real estate brokers and sales representatives are reporting entities to FINTRAC. However, the definition of the term “real estate broker or sales representative” in the Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations is tied to provincial authorization to act as an agent.66 As a result, if someone does not fall within the provincial definition, they fall outside the federal FINTRAC reporting regime. There are no anti-money laundering reporting or record-keeping obligations that apply to people who are not licensed real estate service providers. The exemption therefore creates a gap in anti-money laundering oversight. As such, I recommend that the Province bring business scale “for lease by owner” and “for sale by owner” operations into the licensing scheme for real estate service providers. By “business scale” I mean leasing or sales activity operated as a business for its own sake as distinct from an incidental activity of a person who leases one or even two investment properties or chooses to act for themselves in the sale of their principal residence. I leave it to the Province to define with precision the scale of activity requiring licensing.

64 Ibid.
66 SOR/2002-184, s 1.
Recommendation 9: I recommend that the Province bring business-scale “for lease by owner” and “for sale by owner” operations into the licensing scheme for real estate service providers.

Educational Requirements for Real Estate Licensees

Prospective licensees must complete one of four courses (one for each type of real estate licence) administered by the University of British Columbia’s Sauder School of Business. Prospective trading services licensees must also complete an Applied Practice Course delivered by the BC Real Estate Association (BCREA).

Each real estate license is granted for a two-year period. A licensee must complete a six-hour relicensing education program in order to be eligible for renewal of their license. Additionally, those licensees who are members of a local real estate board must complete 18 professional development program credits administered by BCREA during their license period.

As noted above, in 2016, the IAG Report concluded that the entry requirements for licensees were low, and that both entry-level education and continuing education should be revised to include a greater focus on conduct and ethics.

Both the regulator and industry have responded. Following the publication of the IAG Report, the required passing level for the pre-licensing examination was increased from 65 to 70 percent; English language proficiency requirements were raised; and BCREA’s trading services practice course was redesigned to focus on concepts of agency, disclosure, and contracts. During each two-year license term, real estate licensees are now required to complete a Legal Update course. In October 2020, RECBC instituted a mandatory course for licensees entitled “Ethics for the Real Estate Professional,” which must be completed by all licensees within each license period. The course is now administered by BCFSA.

There has also been education introduced that is aimed specifically at improving licensees’ understanding of money laundering and compliance with anti-money laundering obligations. In January 2020, RECBC instituted an anti-money laundering course for all licensees to complete during their license term, (mandatory after mid-2020

68 Evidence of Erin Seeley, Transcript, February 16, 2021, p 143.
69 Exhibit 618, IAG Report, p 21.
70 Ibid, p 34.
for renewal of a license). BCFSA also offers online resources for anti-money laundering education. On October 5, 2020, BCREA launched its “Mastering Compliance: Anti–Money Laundering Training for Brokers” course for managing brokers.

Regulated Persons: Property Developers

The Real Estate Development and Marketing Act applies to developers who market development property, which is defined as multiple lots or interests in land. The Act is intended to protect the public by ensuring that developers have the necessary approvals and financing. It does not provide for a licensing regime for developers; however, BCFSA is responsible for regulating developers to the extent of ensuring that they provide full information and deposit protection to consumers. The Act regulates those who “market” residential real estate, including requiring developers to ensure title and services will be in place at the time of transfer, and that any deposits be held in trust.

The Act sets out a number of obligations for developers who are marketing a development property, including the provision of disclosure statements to consumers. In 2018, it was amended to introduce requirements for disclosure of any assignment of purchase agreements (a.k.a. presale agreements) to the property tax administrator. This information is maintained in the Condominium and Strata Assignment Integrity Registry. The provisions governing assignments were introduced to create assignment reporting requirements for developers; they are targeted at tax avoidance by those who assign agreements for the purchase of new development units to subsequent purchases at a profit, without reporting the ensuing capital gain. Prior to the amendments to the Act, the rights to a presale development

83 Real Estate Development Marketing Amendment Act, SBC 2018, c 25.
could be transferred multiple times and the collection of comprehensive information about such transfers was not mandated or routine.\(^{84}\)

Not all actors involved in property development are captured by the Act. It is targeted at residential developments of more than five units; developments under this size and commercial or industrial developments are not included within its scope. Also falling outside the scope are the capital-raising activities of developers. These are gaps in the oversight regulation of the real estate industry that BCFSA, and the Ministry of Finance, will have to monitor in order to determine whether action is needed to ensure that the regulator has adequate insight into, and control over, actors in the industry.\(^{85}\) This is an example of an area where the AML Commissioner recommended in Chapter 8 will bring expertise to bear on the money laundering vulnerabilities arising from gaps in the regulatory regime.

**Investigation and Enforcement**

I now consider the investigation of real estate licensees, followed by the enforcement and discipline regimes in place.

**Regulator Investigations**

BCFSA has now combined the investigative teams of BCFSA, OSRE, and RECBC.\(^{86}\)

BCFSA supervises licensees in two key ways: performing regular random audits of brokerages and completing investigations of licensees – either in response to a complaint, or proactively on the initiative of the investigative team. In neither case is the regulator looking for money laundering.\(^{87}\) When asked if auditors or investigators look for money laundering during the course of their work, David Avren, vice-president of legal and compliance at RECBC, testified, “We don’t have an express AML mandate and our resources wouldn't permit us to undertake that [assisting and collaborating in supporting FINTRAC's audit work] at present in any event.”\(^{88}\)

Brokerages are audited by an audit team at least every five to six years. Individuals are also assessed for suitability at the time of their re-licensing, which occurs every two years. Any issues or adverse information that has emerged relating to a licensee during that period may result in conditions on licensing, or transfer to a hearing with a possibility of denial of re-licensing.\(^{89}\)

86 Exhibit 1051, Affidavit of Blair Morrison, sworn September 13, 2021, para 7.
87 Evidence of E. Seeley and D. Avren, Transcript, February 16, 2021, p 188.
88 Evidence of D. Avren, Transcript, February 17, 2021, p 44.
89 Exhibit 603, Overview Report: Legislative and Regulatory Structure of Real Estate in British Columbia, pp 46–47.
Auditors and investigators have taken the anti-money laundering course prepared by RECBC, and three of 17 investigators working specifically for RECBC at the time of our hearings had additional anti-money laundering training. Investigations that disclose an element of unusual flows of funds through a trust account, or other indications that a licensee is involved in money laundering, would be directed to the staff members who have that additional anti-money laundering training.\(^9\)\(^0\)

The investigation team responds to complaints received by the regulator. Complaints are received from real estate clients, agents, an anonymous tip line, and occasionally from managing brokers. Investigators may also initiate examinations based on media reports or court decisions, or as a result of audit findings.

Complaints received, as well as open investigations, have been growing steadily. RECBC says this is due to increasing activity in the real estate industry and the organization’s efforts to raise public awareness of its role as a consumer protection regulator.\(^9\)\(^1\) From 2015 to 2020, the number of complaints received annually doubled from 536 to 1,028.\(^9\)\(^2\)

According to RECBC’s 2020/21–2022/23 Service Plan, the average number of days it took to complete a complaint investigation in 2017–18 was 310 days. By 2019–20, RECBC had decreased that to 245 days and was on track to reduce the length of investigations by more than 5 percent in 2020–21.\(^9\)\(^3\)

RECBC reported to the Commission that one significant issue preventing it from pursuing complaints or complex investigative matters promptly was the difficulty in recruiting and retaining qualified investigators, particularly those with experience in financial crimes or real estate. This is in addition to the challenges arising from its increased volume of complaints.\(^9\)\(^4\) In 2018, RECBC had only 10 investigators. By July 3, 2021, BCFSA reported it had 25 staff and was continuing to hire.\(^9\)\(^5\) In 2020–21, RECBC forecast a $2.2 million increase in staffing costs to support additional full-time employees for compliance, audit, and operations functions (as well as increased employee benefit costs).\(^9\)\(^6\)

RECBC indicated it had been “confronted with a variety of complex and publicly sensitive social issues such as undisclosed conflicts of interest, fraud, fake offers, and allegations of sexual misconduct by licensees.”\(^9\)\(^7\)

95 Ibid, para 13.
96 RECBC Service Plan, p 18.
97 Exhibit 1050, Affidavit of M. Scott, para 7.
In the third part of this chapter, in the context of discussing RECBC’s investigation of licensees who were allegedly involved in or connected with the frauds of one-time mortgage broker Jay Chaudhary, I urge the Province to ensure that BCFSA has adequate investigative resources to ensure that allegations of serious misconduct by licensees are pursued in a thorough and timely manner. This is not limited to the allegations relating to Mr. Chaudhary’s activities, but also includes the serious complaints described by RECBC in its supplementary affidavit.98

**Discipline and Enforcement**

My discussion of discipline and enforcement considers these topics in relation to both those who are licensed and those who are not licensed under the RESA.

**Licensees**

The RESA provides that the superintendent “must” sanction professional misconduct or conduct unbecoming, by ordering one or more remedies from a list of options set out in the statute.99

The available financial penalties have increased over time. Before being repealed by the RESA in 2005, the Real Estate Act provided a maximum fine of $10,000 for corporations, or $5,000 for individuals, for any breach of the Act.100 The RESA originally set maximum fines for professional misconduct or conduct unbecoming,101 unlicensed activity,102 or certain acts considered to be seriously detrimental to the public interest,103 of $20,000 for brokerages and $10,000 for others.

In its June 2016 report, the IAG Report concluded that RECBC needed to respond more forcefully to non-compliance:

The willingness and ability of licensees to comply with all regulatory requirements goes to their suitability to hold a licence. Council needs to send a stronger message to licensees regarding compliance with all regulatory requirements and ethical standards. This will, in turn, reassure the public that licensees are held to a high standard of conduct and ethics.104

In 2016, the RESA fine and disciplinary penalty maximums were increased to $500,000 for brokerages and $250,000 for others.105

---

99 RESA, s 43.
100 Real Estate Act, s 40.
101 RESA, s 43.
102 Ibid, s 49(2).
103 Ibid, s 50 (now repealed).
105 RESA, ss 43(2)(i), 49, 50.
The RESA also creates maximum penalties for the commission of an offence, such as breaches of trust account obligations, interference with an investigation, failure to comply with an order of a regulator, contravening the requirement for a license, or making a false or misleading statement in a compelled record. In 2016, those maximums were increased from $50,000 for a first conviction and $100,000 for a subsequent conviction to $1.25 million and $2.5 million, respectively. Imprisonment for a term of not more than two years is also available.

In February 2021, the regulator expanded the types of contraventions for which administrative penalties are available, creating a scale of penalties according to perceived risk to the public. The change was in response to a perceived gap between letters of advisement, which act as warning letters, and the disciplinary process, which proceeds by way of a resource-heavy and often lengthy hearing process.

Since 2016, the largest discipline penalty issued by RECBC was $20,000, an amount levied on three occasions. The majority of disciplinary fines issued by RECBC since September 2016 were below $5,000. It is worth noting that, in addition to disciplinary fines, those sanctioned often face a requirement to repay high investigation and hearing costs, which are often modest but sometimes total over $50,000.

In evidence before the Commission, Mr. Avren testified that RECBC does make orders for disgorgement of benefits received, but that there have not been many of these types of awards. He explained that, because the penalties available since the 2016 amendments are so high, resort to the specific disgorgement section is unnecessary. The regulator should not be shy to use the tools available to it to ensure that regulated professionals do not profit by way of activity that is contrary to the legislation or the rules. I describe below some significant disgorgement orders that were made against unlicensed persons by OSRE. (I recommend elsewhere in this chapter that the Registrar of Mortgage Brokers be empowered to make disgorgement orders.) I consider disgorgement to be a valuable tool in responding to activity that is extremely profitable and yet is contrary to the legislation and rules governing real estate professionals.

---

106 Ibid, § 119.
107 Ibid.
111 Section 44(1) of RESA allows the regulator the require the licensee to pay the expenses incurred in relation to the investigation and discipline hearing. See, for example, Re Behroyan, 2018 CanLII 50247 (BC REC), where the licensee was ordered to pay enforcement costs of $58,708.85.
Awards issued by RECBC may be appealed to the Financial Services Tribunal.\footnote{RESA, s 54.} Prior to August 1, 2021, section 55(2) of the RESA provided that an appealable decision was stayed by the filing of a notice of appeal.\footnote{Ibid, s 55(2), repealed by 2021 Finance Statutes Amendment Act, SBC 2021, c 2, s 79.} This provision was repealed effective August 1, 2021. As noted by Mr. Avren in his evidence, an automatic stay, permitting a professional to continue to practise despite what might be very serious disciplinary findings, would be contrary to public expectation, and I commend this change.\footnote{Evidence of D. Avren, Transcript February 17, 2021, pp 25–27.} An automatic stay is an unusual feature in professional regulation legislation, though is also present in the Mortgage Brokers Act. I will return to this when I review the scheme applying to mortgage brokers.

**Unlicensed Activity**

If, after a hearing, the superintendent determines a person provided real estate services while unlicensed, the superintendent may issue an order requiring the person do a number of things: cease the activity; carry out remedial actions; repay enforcement expenses; pay a penalty (up to $500,000 for a corporation or partnership, or up to $250,000 for an individual); or require an additional penalty (of up to the amount of remuneration received by the person in the course of their unlicensed activity). If a decision is made to prosecute an individual for unlicensed activity, section 119 of the RESA also allows a fine to be imposed for up to $1.25 million ($2.5 for subsequent offence) and/or up to 2 years in jail.

In December 2021, the superintendent issued its largest penalty yet: a $50,000 penalty coupled with a $50,000 disgorgement order against an individual and his property management company for providing unlicensed rental property management services.\footnote{BC Financial Services Authority “News – BCFSA Issues $100,000 Penalty for Unlicensed Property Management Activity,” online: https://www.bcfsa.ca/about-us/news/news-release/bcfsa-issues-100000-penalty-unlicensed-property-management-activity; In the Matter of the Real Estate Services Act SBC 2004, c 42 as amended and In the Matter of Yiu Keung (Anthony) Ng and Kitsilano Management Ltd., December 3, 2021, online: https://www.bcfsa.ca/media/2714/download.}

**Developers**

BCFSA has enforcement and disciplinary powers under the Real Estate Development and Marketing Act to respond to any non-compliance with that Act. It may investigate the developer, and such an investigation can include inspecting records located on the developer’s business premises or obtaining a court order authorizing the search and seizure of records located elsewhere. BCFSA may also hold a hearing to determine if the developer has been non-compliant with the Act.\footnote{Real Estate Development and Marketing Act, ss 25–27.}

Should BCFSA determine the developer has been non-compliant, it has a number of orders available to it. It may order the developer to stop marketing certain development units, to carry out a specified activity, to comply with the provisions relating to the Condo and Strata Assignment Integrity Registry, or to pay certain fines or sanctions.\footnote{Ibid, s 30.}
BCFSA does not have authority to deal with any taxation issues related to the submission of documentation through the Condo and Strata Assignment Integrity Registry – that responsibility lies with the Property Taxation Branch.119

In the case of non-compliance with the Real Estate Development and Marketing Act by a developer, the maximum administrative penalty available is $500,000 for a corporation and $250,000 for an individual.120 In addition, offences under the Act attract a maximum penalty of $1.25 million for a first conviction, or $2.5 million for a subsequent conviction, or not more than two years’ imprisonment in either case.121 BCFSA may also order a developer to pay enforcement expenses.122

BCFSA also has the power to apply to the BC Supreme Court for an injunction restraining a person from contravening, or requiring a person to comply with, the Act or an order of the superintendent under the Act.123

Data Gaps

In his evidence, Michael Noseworthy, superintendent of real estate, emphasized that, for the effective regulation of market conduct, it is important to have access to data on a systemic basis.124 He accepted that BCFSA has inadequate access to data and data analytical capacity to measure and understand trends for regulating market conduct risk.125 Data he considered would aid his office included the multiple listing service (MLS) maintained by real estate boards. He described a history of mixed success in obtaining MLS data from local real estate boards.126 The benefits of greater access to data would include giving the office a better sense of what is happening in the sectors it regulates, helping to better serve the public, helping to stay up to date, and being more aware of changes that are happening in the market.127

Mr. Humayun also spoke to the information and intelligence needs of BCFSA investigators. He identified the following information sources that would assist the regulator in performing its functions:

- purchase and sale agreements collected by the Property Taxation Branch, which would assist in identifying persons involved in unlicensed trading activity;
- more coordinated access to records of the Residential Tenancy Branch, which would assist in identifying unlicensed property management activity;

120 Real Estate Development and Marketing Act, s 30(1)(d).
121 Ibid, s 30.
122 Ibid, s 31.
123 Ibid, s 35.
126 Evidence of M. Noseworthy, Transcript, February 16, 2021, pp 100–2.
127 Ibid, p 104.
• raw data maintained by the Land Title Survey Authority in order to perform data analysis for the purpose of identifying risks in the market; and

• MLS data maintained by the real estate boards, which are private entities.128

MLS data includes details of listings, sales dates, prices, agency relationships, commissions received, and commission splits. At the moment, the regulator can only obtain this information from a brokerage or licensee on demand, and has to trust that the information is received “honestly and properly.” Direct access to MLS data would, according to Mr. Humayun, allow the regulator to conduct “more market conduct-based enforcement versus responding to complaints.”

To be effective, a regulator needs access to data, in a format amenable to analysis. In determining whether access to the kind of information listed by Mr. Humayun would be attainable, I recognize that there are considerations beyond simply what data would give the regulator the best possible insight into market activities and risk trends. However, I believe the regulator requires the ability to access more data to fulfill its duties. I recommend that the Ministry of Finance consult with BCFSA regarding its data needs and put in place measures to accommodate those needs, in a manner that respects the relevant privacy interests arising in this context.

**Recommendation 10:** I recommend that the Ministry of Finance consult with the British Columbia Financial Services Authority regarding its data needs and put in place measures to accommodate those needs, in a manner that respects the relevant privacy interests arising in this context.

I also see considerable merit in ensuring that BCFSA gains access to MLS data. The industry has an obvious stake in the regulator’s access to information that identifies and intervenes in unlicensed activity, and has a reputational stake in the effective regulation of its members and the investigation of allegations of misconduct by members. I strongly encourage the province’s real estate boards and their members to provide BCFSA direct access to MLS data for the purpose of its anti-money laundering work. If such co-operation proves unworkable, I urge the Ministry of Finance to implement regulation that would require the reporting of such information directly to BCFSA for maintenance in its own database.

Having spent time reviewing the overall regulatory structure (primarily governing real estate licensees) and the changes which have been enacted in this area in the recent past, I turn next to the anti-money laundering obligations of real estate licensees and their interactions with FINTRAC.

---
Part 2: Real Estate Licensees and Anti–Money Laundering Compliance

In this section, I examine the particular vulnerabilities of money laundering in real estate relating to real estate licensees (commonly referred to as “real estate agents”). I also review obligations the PCMLTFA places on real estate licensees and anti–money laundering education available to licensees. I then move on to discuss the industry’s compliance with its obligations under the PCMLTFA and Regulations and the industry’s relationship with the federal anti–money laundering regulator, FINTRAC.

Real estate licensees have a poor track record of anti–money laundering reporting and compliance. Despite progress at higher levels (industry organizations and regulators), some licensees continue to display inadequate understanding of how money laundering may occur in real estate and hold on to misplaced beliefs that impact their ability and willingness to adequately meet their anti–money laundering obligations.

Financial Action Task Force Findings about Real Estate Agents in Canada

The Financial Action Task Force (FATF) completed a mutual evaluation report on Canada in 2016 which highlighted the vulnerability of Canada’s real estate industry to money laundering.129 With respect to real estate agents and FINTRAC, FATF made the following key findings:

- Supervision of real estate sector is not commensurate to the anti–money laundering risks in that sector; more supervision is necessary.130
- Real estate agents are not aware of their anti–money laundering obligations. Real estate agents are not familiar with basic customer due diligence processes, and particularly are non-compliant with the third-party determination rule.131
- Real estate agents “consider that they face a low risk because physical cash is not generally used in real estate transactions ... [and] are overly confident on the low risk posed by ‘local customer[s],’ as well as non-resident customer[s] originating from countries with high levels of corruption.” Further, “detection of suspicious transactions is mainly left to the ‘feeling’ of the individual agents, rather than the result of a structured process assisted by specific red flags.”132

131 Ibid, pp 80–82. The third-party determination rule requires, in brief, that reporting entities take reasonable measures to determine whether a third party is involved when carrying out certain transactions or activities: FINTRAC guidance, “Third Party Determination Requirements,” online: https://fintrac-canafe.canada.ca/guidance-directives/client-clientele/tpdr-eng.
132 Exhibit 601, OR: Real Estate & Industry Response, Appendix 5, pp 80, 85.
• The number of suspicious transaction reports (STRs) made has gradually increased but remains very low.133

• More dialogue is necessary between FINTRAC and the real estate industry. FINTRAC needs to develop its sector-specific expertise and increase the intensity of its scrutiny of designated non-financial businesses and professionals in the real estate sector. FINTRAC should update money laundering / terrorist financing typologies and specific red flags to assist in detection of suspicious transactions. FINTRAC does not provide enough sector-specific compliance guidance and typologies, especially in the real estate sector.134

I have concluded that, although there has been progress in the industry with respect to compliance, it is still a pressing concern, and it is the principal anti-money laundering vulnerability that needs to be addressed with respect to persons and businesses providing real estate services in the province.

FINTRAC Intelligence on BC Real Estate

In Chapter 15, I set out the reasons for the real estate sector’s money laundering vulnerabilities and described the common typologies of money laundering in real estate as identified by the FATF. Here, I describe certain FINTRAC intelligence on money laundering vulnerabilities in Canada and British Columbia in particular.

Overview of FINTRAC’s Intelligence Process

Three representatives of FINTRAC described the centre’s work relating to the real estate sector in Canada.135

There are structures and rules in place that restrict and control the flow of information about real estate (and, for that matter, generally). I begin with a summary of how FINTRAC deals with such information.

FINTRAC deals with both strategic and tactical intelligence. Tactical intelligence relates to a specific individual or entity. In contrast, strategic intelligence identifies behaviours and patterns. The distinction is between the specific (tactical: i.e., Company 123 and Transaction 456) and the general (strategic: i.e., there is a trend involving companies which conduct transactions of this variety).

As I describe in Chapter 7, Canada’s FINTRAC regime designates certain persons and organizations as “reporting entities,” which have an obligation to report certain information to FINTRAC. When FINTRAC obtains tactical information, it is not shared

133 Ibid, pp 7, 41.
134 Ibid, pp 5, 8, 78, 99.
135 Annette Ryan, chief financial officer and deputy director of enterprise policy, research, and programs; Donna Achimov, deputy director and chief compliance officer; and Barry MacKillop, deputy director of intelligence.
with reporting entities. Instead, tactical intelligence is provided to law enforcement by way of information disclosures. There is a standard that must be met before FINTRAC can disclose tactical information to law enforcement. FINTRAC must suspect, on reasonable grounds, that the information would be relevant to the investigation or prosecution of a qualifying offence. FINTRAC can disclose information to law enforcement at its own instigation, but most often it does so in response to a Voluntary Information Record filed by law enforcement. A Voluntary Information Record is a record by which law enforcement communicates information to FINTRAC about an ongoing investigation, in order to allow FINTRAC to assess whether it possesses any intelligence that meets the test for disclosure back to law enforcement. The language used here is not intuitive. The term “Voluntary Information Record” suggests that, for instance, a police department has decided to voluntarily share information with FINTRAC, to help FINTRAC in its work. In reality, what is occurring is that the police department is communicating a request to FINTRAC: “we are sending you this Voluntary Information Record so that you can research your data holdings and then send us information relating to a case we are investigating.” In 2019–20 the three predicate offences which figured most prominently in FINTRAC disclosures to law enforcement were fraud (30%), drug-related offences (31%), and tax evasion (14%).136

Unlike tactical information, strategic (general) information can be shared with reporting entities. FINTRAC shares strategic information with industries through operational alerts, which describe general trends or typologies in order to assist reporting entities in identifying suspicious indicators.137

**Grant Thornton Report**

In 2014, FINTRAC commissioned Grant Thornton LLP to prepare a report evaluating risks in various reporting sectors. The Grant Thornton Report138 rated the real estate sector as having a higher risk for money laundering in comparison to other sectors of the economy.139 The authors attributed this risk to a lack of engagement in anti-money laundering compliance by “significant portions” of the sector, particularly at the smaller end of the market), and an inadequate appreciation by other sectors, such as banking and securities, that real estate transactions carry a higher money laundering risk.140

The Grant Thornton Report also addresses anti-money laundering risks associated with real estate licensees and brokerages. The authors concluded that larger brokerages tended to be more risk averse and had stricter anti-money laundering regimes in

---

139 As a note of caution, I also observe that Grant Thornton in this 2014 report rated the gambling sector as low risk, as “Canada is not viewed as an attractive market for gambling” and the “Canadian casino sector serves mainly local clients”: ibid, Overview, p 10.
140 Ibid, p 7.
place, particularly with respect to customer identification, training, and reporting of suspicious transactions.\textsuperscript{141} But, on the other hand, “at the smaller end of the market there is often no quality and ethics infrastructure in place.”\textsuperscript{142}

The risk of money laundering is intensified because of business pressures:

The competitiveness of the market and sheer number of agents puts pressure on individual agents to secure deals. Agents operating in the sector who are smaller, more independent have less infrastructure to ensure appropriate [know your customer] and support to do any real due diligence. The smaller agent has more incentive to ignore due diligence / [anti–money laundering] requirements, inherent risk.\textsuperscript{143}

High-end residential property and low-end commercial property were found to carry a greater money laundering risk.\textsuperscript{144} The purchase of Canadian real estate assets with offshore money and/or by offshore persons was noted as a significant risk factor.\textsuperscript{145} The report also highlighted purchases by nominees,\textsuperscript{146} noting that “[t]he use of nominees, including professional nominees such as lawyers and accountants, or holding companies,” was not uncommon and made it easy to disguise beneficial ownership.\textsuperscript{147} Finally, the absence of inquiry by real estate agents into their clients’ source of funds was noted as problematic.\textsuperscript{148} I will return to this below.

Grant Thornton concluded that a significant vulnerability of the real estate sector was low anti–money laundering compliance. Failures in this area make an already vulnerable sector more so: “The standards of [anti–money laundering] due diligence and compliance [in real estate] are low and are not an effective barrier, even for notorious criminals.”\textsuperscript{149}

\textbf{Additional FINTRAC Intelligence}

FINTRAC has produced intelligence relating to money laundering risks specific to British Columbia and capital inflows from China.\textsuperscript{150} In 2017, following media attention on the issue,\textsuperscript{151} FINTRAC's Strategic Intelligence and Data Exploitation Lab published a financial intelligence report on the extent to which the purchase of BC real estate by
foreign buyers might represent money laundering.\footnote{152} The version of this report that the Government of Canada produced to the Commission was heavily redacted. One unredacted portion of the report stated: “most of the current media hype surrounding the issue of foreign-owned real estate in the larger metropolitan areas stems from the 20–30% increase in house prices annually.”\footnote{153} However, fragments of unredacted text suggest that FINTRAC has observed the movement of the proceeds of foreign corruption into Canadian real estate.\footnote{154}

The 2017 financial intelligence report concludes that FINTRAC’s operational brief on suspicious indicators for real estate can assist real estate actors in distinguishing between Chinese inflows and real estate-related activity that may be money laundering risks but that “[f]urther guidance is necessary for reporting entities, to assist them in managing their risk related to transactions emanating from China and Hong Kong.”\footnote{155}

Anti–Money Laundering Responsibilities of Real Estate Licensees

PCMLTFA Reporting Entities

The \textit{PCMLTFA} and Regulations provide that the following professionals engaged in real estate transactions in BC are reporting entities: notaries public, real estate agents, real estate developers, and financial institutions.\footnote{156} Real estate developers are reporting entities,\footnote{157} but their employees, acting as salespeople, are not.\footnote{158} Reporting entities are required to designate a compliance officer, conduct a risk assessment of their business and clients, develop a compliance program, and implement the policies and procedures related to that program, including certain baseline requirements such as know-your-client due diligence.\footnote{159}

While most responsibilities under the \textit{PCMLTFA} (for example, record-keeping requirements) apply to real estate brokerages as opposed to individual licensees, both brokerages and individual real estate licensees are responsible for submitting suspicious transaction reports to FINTRAC. This responsibility also falls on employees of developers who are involved in sales.\footnote{160}
Darlene Hyde, CEO of BCREA, described the nature of real estate agents’ connection to the transactions they are involved in, and why they provide valuable insight for anti-money laundering purposes:

[T]hey are charged with understanding the motivations for the client in buying or selling a home, so they are charged with knowing a little bit about the principal character in the whole transaction as to their motivations. They help with the transaction itself, the sale, and they also take a deposit on the property. So, they are a critical part of the transaction.161

**Obligations of Real Estate Reporting Entities**

Each brokerage must designate a compliance officer responsible for conducting a risk assessment of the brokerage’s business. Based on that risk assessment, the compliance officer must establish, and monitor compliance with anti-money laundering policies and procedures. The compliance officer must also develop a training program and, finally, the compliance officer must conduct a review of the program every two years (or hire an independent reviewer to do so).162

While certain anti-money laundering obligations fall on individual licensees or salespeople, the lion’s share of the responsibility falls on the compliance officer. Often, the person acting as compliance officer is also the managing broker, who in addition to acting as the compliance officer and managing the brokerage is actively engaged in managing his or her own listings.163 Many brokerages are small, decentralized organizations. The average brokerage in BC comprises four licensees.164 Given the decentralized nature of many brokerages, the compliance officer often does not have much insight into the day-to-day activities of agents; the documentation the compliance officer sees is often limited to the initial listing agreement and the ultimate contract of purchase and sale once an offer is accepted. The majority of the engagement with the client, which gives a lens into the key information FINTRAC wants, happens outside the view of the compliance officer. The compliance officer usually has little insight into the client’s finances, stated property preferences and objectives, behaviour, and lifestyle.

As of June 1, 2021, both real estate licensees and brokerages are required to take measures to establish the source of a person’s wealth if that person has been determined to be a politically exposed person, or a family member or close associate of a politically exposed person.165 They must also take steps to establish the source of funds if they receive $100,000 or more from a politically exposed person, or a family member or close associate of same.166 In British Columbia, real estate licensees usually only handle

a small part of the transaction price, the deposit. Also, as of June 1, 2021, real estate professionals are now required to verify the beneficial ownership information of their corporate clients as a part of client identification obligations.\textsuperscript{167}

\textbf{Reporting to FINTRAC}

While brokerages are subject to the large cash transaction ($10,000 or more) reporting obligations, most do not accept cash in sufficient quantities to trigger a large cash transaction report (LCTR). That said, FINTRAC does receive some LCTRs from real estate brokerages each year, which suggests that at least some brokerages are still taking cash. Between the 2011–12 fiscal year and early 2021, 84 LCTRs were made by reporting entities in British Columbia with respect to real estate transactions.\textsuperscript{168} Industry representatives gave evidence that it is rare that cash is accepted for a deposit,\textsuperscript{169} and it is not clear whether these LCTRs were made by brokerages, real estate licensees, or other reporting entities involved in a real estate transaction.

While LCTRs are not likely to figure prominently in real estate brokerages, suspicious transaction reports (STR) likely should. Licensees are responsible for evaluating whether a transaction meets the threshold of “reasonable grounds for suspicion” in which case an STR is required to be submitted to FINTRAC.\textsuperscript{170} The compliance officer or managing broker is often involved in the submission of a report to FINTRAC, although a real estate agent may submit a report without assistance.\textsuperscript{171} The compliance officer or managing broker is often involved in the submission of a report to FINTRAC, although a real estate agent may submit a report without assistance.\textsuperscript{172}

As discussed further below, real estate licensees often have difficulty identifying the circumstances in which an STR should be filed, and reporting in this area has been low.

\textbf{Industry Compliance with PCMLTFA Obligations}

\textbf{Overview of Compliance in the Real Estate Sector}

FINTRAC records show widespread and repeated historical failures of the real estate industry in BC to meet its PCMLTFA obligations. The volume of STRs that are submitted is low relative to the risks of money laundering in real estate. This indicates either a lack of understanding as to when the submission of an STR is appropriate, or a simple cultural reluctance to fully engage with anti-money laundering obligations.

\textsuperscript{167} \textit{PCMLTFA Regulations}, s 138: There is a 25 percent ownership or control threshold for the disclosure of beneficial ownership.
\textsuperscript{168} Exhibit 742, Dataset – Financial Transaction Report Counts by Postal Code and Activity Sector (March 3, 2021).
\textsuperscript{169} Evidence of D. Hyde, Transcript, February 17, 2021, p 91.
\textsuperscript{170} Exhibit 626, FINTRAC, AML/TF Real Estate Sector Presentation (September 19, 2018), p 19.
\textsuperscript{171} Evidence of S. Ellis, Transcript, February 26, 2021, p 141.
\textsuperscript{172} Ibid.
FINTRAC monitors reporting entities’ compliance with their PCMLTFA obligations by conducting on-site examinations and desk examinations (where the reporting entity submits records for review). If FINTRAC observes a high number of quality issues with a specific reporting entity during an examination, it may conduct a database examination, which is a review of that entity’s submitted reports to assess their quality and timing.173

The outcomes of an examination may include an enforcement action such as an administrative monetary penalty.174 Half of the administrative monetary penalties issued since June 2019 were issued to real estate reporting entities.175

One problem that FINTRAC identified with the real estate sector is the sheer number of reporting entities. Whereas there are fewer than 15 financial institutions (the source of the vast majority of reports FINTRAC receives) to liaise with in BC, there are 1,300 real estate brokerages and approximately 26,000 licensees in BC.176

Each real estate brokerage is unique in the way it operates: some operate under a team structure, some have employees, and at some, all the agents are contractors. Some brokerages require in-office work, but many now have work environments that are mostly, if not entirely, remote. Some have multiple locations. Many serve a particular clientele or tend to work with a particular type of property. These variations make effective supervision by the 15 staff in FINTRAC’s Vancouver office (which is tasked with overseeing British Columbia, Alberta, Saskatchewan, and Yukon),177 only three of whom are dedicated to the real estate sector, challenging. It also makes it difficult to produce guidance that will be useful to every brokerage.

FINTRAC Compliance Reports

Since at least 2012, real estate has been a priority area for FINTRAC, meaning a large proportion of FINTRAC examinations have been conducted on real estate reporting entities.178 The sector has been prioritized because of its poor compliance with PCMLTFA obligations, low reporting levels, and high vulnerability to money laundering.179 FINTRAC deputy director and chief compliance officer, Donna Achimov, described a

---

173 Exhibit 630, FINTRAC Report to the Minister of Finance on Compliance and Related Activities (September 2017) [FINTRAC Compliance Report September 2017], p 9.
175 FINTRAC, “Public Notice of Administrative Monetary Penalties” (Modified May 12, 2022), online: https://www.fintrac-canafe.gc.ca/pen/4-eng.
nationwide challenge with real estate,\textsuperscript{180} saying, “in general we know that this sector has been lacking the awareness of how money laundering ... relates to them.”\textsuperscript{181}

FINTRAC reports annually to the federal minister of finance annually on each reporting entity sector’s compliance with \textit{PCMLTFA} obligations. These reports have consistently found the real estate sector to be non-compliant on various measures.

For instance, in 2016–17, only 10 percent of the real estate reporting entities who were examined were found to be compliant with the requirement to perform a risk assessment, and less than half were found compliant with verification of client identity requirements. Less than a third of reporting entities were compliant with their obligation to implement policies and procedures, keep records, and conduct a two-year review of their anti-money laundering policies.\textsuperscript{182}

In 2018, FINTRAC reported “a misunderstanding across the sector as to how the real estate sector can be used for [money laundering / terrorist financing]” and stressed the need to engage in education to assist the industry to recognize money laundering indicators and to make high-quality and timely STRs.\textsuperscript{183} The sector was noted to have “one of the lowest reporting levels.”\textsuperscript{184}

In 2019, FINTRAC reported that 64 percent of real estate reporting entities assessed were partially non-compliant with their obligation to risk assess clients, and 31 percent were completely non-compliant.\textsuperscript{185} FINTRAC also reported instances of unreported STRs, although it stated such occurrences were not frequent.\textsuperscript{186}

Some improvement has been recorded. In 2018–19, compliance with client identification requirements improved, with 74 percent of entities examined found compliant with their obligations (as compared to less than half in 2016–17).\textsuperscript{187}

FINTRAC cited challenges in its real estate examinations, stating:

[T]he number of real estate examinations that FINTRAC can feasibly conduct in a given year remains very small, given its examination resources when compared to the thousands of real estate entities that operate across the country.\textsuperscript{188}

\textsuperscript{180} Evidence of D. Achimov, Transcript, March 12, 2021, p 68.
183 Exhibit 448, FINTRAC Report to the Minister of Finance on Compliance and Related Activities (September 2018), pp 9–10.
The 2020 Compliance Report again noted that priority was given to real estate (37 percent of all exams).\textsuperscript{189} Of the entities examined, 40 percent were recommended for follow-up, and 5 percent were recommended for enforcement action. This figure stands in comparison to 3 percent of examinees across all sectors being recommended for enforcement action. The highest level of non-compliance was found in implementation of risk assessments, the use of incomplete or generic policies and procedures, and gaps in client identification and receipt of funds records. The report also recorded concerns about ongoing misunderstanding on the part of some as to how money laundering can occur in a real estate transaction.\textsuperscript{190}

There was some agreement in the evidence before me that the risk in real estate was disproportionately located in small brokerages. Ms. Achimov agreed that smaller entities do not have the same infrastructure as large brokerages to allow them to meet their compliance requirements and pointed to FINTRAC’s efforts to address the issue by way of guidance on its website and a welcome letter to new real estate agents. According to Ms. Achimov, FINTRAC went to “great lengths” to explain what was required.\textsuperscript{191} She was of the view that the situation had improved at the smaller end of the market, and pointed to increases in STRs, and improvements in exam results on deficiencies.\textsuperscript{192}

In its 2020 Compliance Report, FINTRAC expressed an intention to continue a focus on large brokerages for examinations, as they represent a greater share of the market.\textsuperscript{193} If the highest money laundering risk in real estate sector is at the smaller end of the market, FINTRAC’s focus on large brokerages may, in fact, skew toward overrepresenting compliance.

**Summary of Compliance Statistics**

Table 16.1 shows the evolution of the BC real estate sector’s compliance with PCMLTFA obligations from 2015 through early 2021.\textsuperscript{194} It shows the number of entities examined in each fiscal year, and the number of partial (“P”) and complete (“C”) deficiencies found for each of the PCMLTFA obligations. The table supports the conclusion that there are serious failures on the part of real estate brokerages to meet their anti-money laundering obligations. The table also suggests that there has not been significant improvement over time.

**Suspicious Transaction Reporting Rates**

Like compliance, suspicious transaction reporting rates also remain low. FINTRAC has noted that most reporting about the real estate sector comes from larger financial institutions.\(^{195}\) In February 2015, FINTRAC noted that less than 1 percent of STRs came from the real estate sector.\(^{196}\) In terms of absolute values, reporting has been trending upward, but some years have seen dips in reporting (see Table 16.2): \(^{197}\)

Source: Compiled by Cullen Commission.

Note: 2020–21 was a partial year – April to November 2020.

For FINTRAC, Mr. MacKillop agreed that there had been some improvement with respect to STRs, but that there was a “constant need for ongoing awareness and education.” Partly due to the sheer number of people working in the real estate sector, understanding of what constitutes a suspicious transaction is not “deep and profound.”\(^{199}\)

Ms. Achimov acknowledged that even the most recent reporting numbers were very low and said “the bottom line … [is we] need this particular reporting entity to submit more reporting.”\(^{200}\) She explained the low reporting, stating:

> There was a pervasive view – and I would argue that that’s changing now … that that was the role of the banks and the entities that actually touch the money, and for the longest time one of the myths was … if somebody came in with a gym bag of … old $20 bills, that’s money laundering. If I didn’t see that, then I didn’t have to do anything else.

> …

> I think there’s also in some pockets … some cultural hesitancy in terms of it’s not culturally acceptable to ask where your source of money is and how you come by your money, and so, again, that’s where we work with the real estate associations and industry itself to make sure that we find ways of working around some of those cultural barriers as well.\(^{201}\)

\(^{201}\) Ibid, pp 97–98.
Administrative Monetary Penalties Issued to BC Brokerages

Evidence of serious anti-money laundering compliance failures are also found in FINTRAC administrative monetary penalties. FINTRAC has issued administrative monetary penalties against three BC real estate brokerages in recent years.202 These penalties were issued in response to violations found during compliance examinations in 2018 and 2019. The first monetary penalty of $59,235 was issued in January 2021 to a brokerage in Vancouver;203 the second, of $33,371.25, was issued in June 2021 to a brokerage in Chilliwack;204 and the third, of $255,750, was issued in July 2021 to a brokerage in Vancouver.205 In all three instances, the brokerages failed to:

- develop and apply written compliance policies and procedures that are kept up to date and, in the case of an entity, are approved by a senior officer;
- assess and document the risk of a money laundering or terrorist financing offence, taking into consideration prescribed factors;
- develop and maintain a written ongoing compliance training program for those employees, agents or mandataries, or persons;
- institute and document the prescribed review; and
- keep prescribed records.

In the third instance, the brokerage also failed to appoint a compliance officer and failed to submit a suspicious transaction report where there were reasonable grounds to suspect that transactions were related to a money laundering offence.206 These three administrative monetary penalties were of nine issued across all reporting entities in 2021.207

Reasons for Non-Compliance and Under-Reporting

In November 2018, BCREA announced it had commissioned Deloitte to study residential and commercial real estate transactions and to identify money laundering

202 FINTRAC, “Public Notice of Administrative Monetary Penalties” (modified May 12, 2022), online: https://www.fntrac-canafe.gc.ca/pen/4-eng.
206 “FINTRAC Imposes an Administrative Penalty on Pacific Place-Arc Realty Ltd.” (November 4, 2021), online: https://www.fntrac-canafe.gc.ca/pen/amps/pen-2021-11-04-eng. The brokerage filed a lawsuit on November 15, 2021, claiming that the provisions of the PCMLTFA under which the penalty was issued are unconstitutional. See: “Lawsuit of the Week: Vancouver Real Estate Firm Sues FINTRAC and Federal Government,” Business in Vancouver (December 10, 2021). See also the BCFSU Notice of Hearing, online: https://www.bcfsa.ca/media/2825/download.
207 FINTRAC, “Public Notice of Administrative Monetary Penalties” (modified May 12, 2022), online: https://www.fntrac-canafe.gc.ca/pen/4-eng.
vulnerabilities in order to address the apparent difficulties its members were having understanding and meeting their reporting obligations.\textsuperscript{208}

In its report, \textit{Assessing Money Laundering Vulnerabilities in the BC Real Estate Sector} (the Deloitte Study), Deloitte made four key findings:

1. there is more information available to real estate agents during transactions than most agents realize;

2. the absence of cash does not eliminate the risk of money laundering;

3. the decentralization of the real estate industry has weakened the understanding and implementation of client identification and risk assessment requirements; and

4. there is resistance to the expectation that real estate agents have unique insights to offer Canada's anti-money laundering regime and should be expected to take on the burden of complying with it.\textsuperscript{209}

It is apparent to me that some in the industry continue to have misunderstandings and misgivings about the role of real estate professionals in identifying and combating money laundering. This increases the vulnerability of BC’s real estate market to money laundering.

\textbf{Lack of Evidence of Money Laundering or the Utility of STRs}

A significant consequence of the lack of reporting to FINTRAC by real estate reporting entities is that there is no data flowing to FINTRAC to be analyzed, which could then be turned into operational alerts or briefs to help educate industry about when it is appropriate to file STRs.

The result is that industry remains skeptical that STRs are of any value, or that there is in fact under-reporting of suspicious transactions in the real estate sector. Real Estate Brokers’ Association (REBA) representative Stephen Ellis pointed to a lack of feedback from FINTRAC identifying situations in which a real estate agent did not submit an STR where later there was found to be “absolute evidence of money laundering.”\textsuperscript{210} Mr. Ellis stated that he and other managing brokers questioned FINTRAC’s conclusion on under-reporting, because that is not what the community was seeing: “It’s not something that we see as a significant problem within our industry.”\textsuperscript{211}

\begin{thebibliography}{9}
\bibitem{208} Exhibit 601, OR: Real Estate & Industry Response, Appendix 18, BCREA, \textit{Understanding Money Laundering Vulnerabilities} (February 13, 2019); Appendix 15, April van Ert, \textit{BCREA Supports BC Government’s Money Laundering Investigations} (November 27, 2018).

\bibitem{210} Evidence of S. Ellis, Transcript, February 26, 2021, p 101.

\bibitem{211} Ibid, p 107.
\end{thebibliography}
Mr. Ellis described that a lack of evidence of money laundering occurring in real estate has an impact on industry’s engagement with its anti-money laundering obligations:

[I]t’s very hard to find any factual evidence of money laundering in real estate, where it occurs, how it occurs, in fact if it did occur. There’s lots of suspicion, speculation, assumption, but we don’t have any facts. So, when we ask for a specific instance where a real estate representative has been complicit in a money laundering purchase of real estate, at this particular point in time we’re not aware of any of that evidence being presented to us. We’ve certainly asked for it, you know, give us examples, show us specifically how, why, and where, and that has not been demonstrated to us at all at this point.212

I pause here to note one aspect of the above passage: the absence of a specific instance of a real estate representative being complicit in a money laundering transaction. A similar comment was made by the BCREA in its closing submissions. It noted that there was no evidence of widespread money laundering at the real estate licensee level, and that “if there was clear evidence of money laundering-related matters in the real estate industry, it would likely be demonstrated by widespread money laundering convictions, investigations, and reports against real estate licensees.”213

This line of thinking suggests a troubling and fundamental misunderstanding about the money laundering risk in real estate and the purpose of suspicious transaction reporting. While money laundering typologies involving real estate can involve complicit real estate agents, most are not predicated on the knowing involvement of realtors. STRs are not intended as means to report misconduct of licensees with respect to real estate. They are intended as a means of reporting suspicious transactions, whether or not there is complicity or knowing involvement of a licensee. It can, in fact, be anticipated that, in many instances of money laundering through real estate, the licensees will have no knowledge of the nature of the transaction as a money laundering transaction.

Returning to Mr. Ellis’s explanation of how evidence of actual money laundering would assist brokers and licensees in identifying suspicious transactions:

Q: And how would that information assist you in your work as a compliance officer?

A: … [I]f you take a look at the 27 red flags I would say there’s probably ten of them that don’t apply. There might be a large number of them that do apply, but there’s plausible, reasonable explanation for why did that occurrence is part of a transaction. And so, they’re just indicators. They’re not showing proof. They’re just indicators. So, it’s left up to a judgment call of the individual realtor at that point who’s dealing with the client to interpret those red flag indicators and apply

213 Closing submissions, BCREA, paras 13–14.
them to see whether or not a Suspicious Transaction Report should be
generated and submitted.

So if there was more descriptive information on exactly what it is
that we should be looking at and what we should be recording, it would
assist certainly in meeting our obligations for STR obligations.\textsuperscript{214}

Mr. Ellis described what managing brokers/compliance officers would like to see:

Well, evidence that there has been instances where it was not reported
and found that it should have been reported and if we can trace that back
and say there was absolute evidence of money laundering and if you had
gone back to the Suspicious Transaction Report at the outset and followed
that trail, we'd like to be able to see how that works ... [T]he demonstrated
evidence of the lack of a submission to where there was evidence of money
laundering in real estate, if we could see that and track that, that would be
instructive and helpful.\textsuperscript{215}

BCREA echoed this complaint in its closing submissions, contending that there is
no evidence of money laundering occurring in BC real estate, as there have not been
investigations or prosecutions leading to judicial or regulatory findings of that fact.\textsuperscript{216}

On one hand, this highlights the problem posed by the low numbers of money
laundering prosecutions across Canada: it results in a lack of data about concrete
examples of money laundering that can be used to educate the industry. If there needs
to be “absolute” evidence of money laundering, and few cases result in conviction, it
will be rare to have such evidence. And without evidence that the STRs filed by industry
yield productive results, there is a risk that industry will conclude the task is simply
an additional layer of unproductive bureaucratic burden and will be discouraged from
making best efforts to comply with the anti–money laundering obligations. There
needs to be communication between the anti–money laundering regulator and the
industry about the use to which STRs are put, and provisions of examples of instances
(anonymized as necessary) where real estate sector STRs were of use to an investigation.

On the other hand, the above comments from industry indicate a persistent
misunderstanding of how the sector can be used for money laundering. I set out in
Chapter 15 the money laundering vulnerabilities of the real estate sector. It is time for
the industry to accept that money laundering through real estate is happening, even if
individuals on the ground are not recognizing evidence of it. Industry needs to accept
that neither FINTRAC nor law enforcement needs to \textit{prove} that money laundering is
happening in real estate. It is.

\textsuperscript{214} Evidence of S. Ellis, Transcript, February 26, 2021, pp 20, 22–23.
\textsuperscript{215} Ibid, pp 100–101.
\textsuperscript{216} Closing submissions, BCREA, paras 13–14.
Equally damaging is an expectation that an STR is submitted only where money laundering is certain. A suspicious transaction report does not reflect the reporting entity’s certainty that money laundering is occurring – it reflects the fact that the reporting entity has reasonable grounds to suspect that a transaction is related to the commission or attempted commission of a money laundering offence (or a terrorist activity financing offence). STRs are neither complaints to police, nor “tests” of a licensee’s ability to identify actual money laundering. They are pieces of intelligence that are provided to FINTRAC in order to assist it in developing both tactical and strategic intelligence about money laundering in the real estate sector. The hesitation of real estate professionals to submit STRs in the absence of proof of their usefulness or of “actual” money laundering impairs the ability of FINTRAC, and by extension law enforcement agencies conducting investigations, to know what is happening in the sector. Given the amounts of money involved and the varied techniques that can be employed in real estate–based money laundering, it is time for a new attitude.

I say the above while acknowledging FINTRAC’s comments that there has been improvement in the sectors, particularly as a result of co-operation with industry groups like BCREA. Below, I will also describe efforts by BCREA to educate brokers about their reporting responsibilities. I do not mean to discount these efforts, or the extent which many professionals in the industry take their anti–money laundering responsibilities seriously. But it remains evident to me that there remain pockets of resistance, and these must be overcome.

A Persisting Focus on Cash

The perception that money laundering in real estate is linked to cash continues to be a barrier to effective anti–money laundering compliance and reporting. The Deloitte Study observed:

> There continues to be a perception by realtors that because they generally do not handle cash, they are therefore not exposed to money laundering, however, the realtor’s knowledge of the client purchasing or selling real estate is a crucial piece of information to the real estate transactions process, as it is information that is generally not available to other parties to the real estate process.218

The Deloitte Study found that real estate agents, when asked what would constitute high money laundering risk, gave extreme and unlikely examples, such as a client arriving with bags of cash.219

BCREA expressed to me that it is not a victim of the cash fallacy and insisted “that concept has been totally left in the dust.”220 I have no doubt that BCREA has internalized

217 PCMLTFA, ss 7(a), (b).
this, and that the organization is making its best efforts to educate its members of the same (I discuss their education efforts below). Despite these efforts, the mistaken belief that money laundering in real estate means buying houses with bags of cash is one that persists amongst its membership.

In the Commission's interviews with local real estate boards, this theme was repeated. Many interviewees expressed the view that without the presence of physical cash, the transaction could not be money laundering. One board expressed a view that most real estate agents believed their PCMLTFA obligations were in place because deposits were believed to be a main source of money laundering, and only recently had FINTRAC provided education to dispel this myth and spread information about the role of real estate agents in disrupting the wider web of money laundering. Most boards expressed a desire for better understanding of how money laundering might be conducted through the real estate sector in the absence of cash transactions.221

Education can assist in combatting this misunderstanding. Many survey respondents to the UBC Sauder / RECBC (now part of BCFSA) “Anti-Money Laundering in Real Estate” course did express that the course aided them in understanding the use of cash was only one part of money laundering.222 It is my hope that improved education from both industry and regulators will help to dispel any remaining belief that money laundering in real estate is about cash.

Confusion Over How to Comply with PCMLTFA Obligations

From the evidence, drawing on the Commission’s interviews with local real estate boards, a review of BCREA materials including the Deloitte Study, and the testimony of BCREA and REBA representatives, it is clear that some in the industry find their anti-money laundering obligations confusing and cumbersome.

Members of local real estate boards expressed the view that the FINTRAC audit process failed to educate brokerages on how to improve their anti-money laundering system or reporting process beyond “bureaucratic trivia,” such as using the right abbreviations and terms. Several real estate boards commented that there was a discrepancy between (a) FINTRAC’s educational guidance and (b) its auditors’ compliance information; they wanted FINTRAC to provide more education as part of the audit.223

Several boards emphasized that most real estate agents and brokers have no background in compliance or anti-money laundering matters. There was a concern that real estate agents lack the expertise, resources, and time to digest and apply the FINTRAC guidance in its current state.224

221 Exhibit 601, OR: Real Estate & Industry Response, paras 122–123.
223 Exhibit 601, OR: Real Estate & Industry Response, p 45. Ms. Achimov, for FINTRAC, gave evidence that FINTRAC has now started to provide such education and feedback as part of its audit process: Transcript, March 12, 2021, p 69.
224 Exhibit 601, OR: Real Estate & Industry Response, p 42.
All boards expressed a desire for clearer, simpler, more user-friendly guidance from FINTRAC. They said the existing FINTRAC guidance was excessively long, complicated, and theoretical, and that its applicability to the on-the-ground experience of real estate agents and brokers was too opaque. All boards noted significant frustration from members who were struggling to understand their obligations and who did not find the FINTRAC guidance helpful. All boards stressed a need for more accessible content.225

Many boards expressed a desire for better standardized forms or a more user-friendly system, such as a mobile or desktop application. They were frustrated that the Canadian Real Estate Association’s attempt to produce standardized forms did not solve this problem, as FINTRAC had refused to endorse the forms.226

**Concerns for Client Privacy / Distaste for Intrusive Questions**

There is a perception in the real estate industry that the nature of the real estate agent’s role sits uncomfortably with the need to obtain sensitive information about the client, such as financial status or source of funds.

This theme arose frequently in the user feedback survey to the BCFSA anti-money laundering course. One user said they considered the details of financing to be something between the buyer and their lender, and the agent had no way of knowing whether a lender was unregulated. One stated that “I almost feel like it’s not really in a realtor’s place to ask where client’s money is from.”227 Several stated that there were expectations on the real estate agent that he or she should be aware of the client’s banking or lending information, and source of funds; this, they said, was unreasonable, and the information not usually known to real estate agents.228 One licensee stated that “[t]o be asked to investigate such things by the government is unethical.”229

The Deloitte Study noted that licensees often did not ask questions about the beneficial ownership of property, and would inquire into source of funds only to discover the likelihood the client would close the transaction.230 Several commented that, as real estate agents, they did not have any role in the financing of a transaction, so no inquiry was necessary.231

Deloitte commented that “[a] number of interviewees also indicated that there was a difficulty in asking a number of questions they determined were too personal, such

---

225 Ibid, pp 42–43.
228 Ibid, pp 6, 26.
231 Ibid, p 22.
as source of funds/wealth.”

Others cited privacy law as impeding their ability to ask questions about how a client intended to finance a transaction.

BCREA acknowledged the difficulty. Licensees are concerned about the confidentiality they owe their clients and may hold a perception that “they are betraying the trust that their client places in them ... by filing a suspicious transaction report.” Efforts are being made to educate licensees that anti-money laundering reporting is an ethical obligation that cannot be defeated by any obligation of confidentiality to the client.

BCREA is right – a licensee has no professional obligation to keep secret the client’s potential criminal activity. Real estate agents are the point of access for most people to the real estate market. As such, legislatures have imposed legal and professional duties on them to help maintain the integrity of that market, including by making appropriate inquiries and reporting a transaction where they have a reasonable suspicion the transaction is related to the commission or attempted commission of a money laundering offence.

Neither the PCMLFA and associated Regulations nor FINTRAC requires that source-of-funds inquiries be made. FINTRAC currently directs that source-of-funds inquiries may form part of enhanced measures that a brokerage can put into place to manage high-risk clients and business areas. As a result, real estate professionals have to use their judgment to assess the money laundering risk of a particular client or transaction and decide whether enhanced inquiries are required. It seems to me to be intuitive that, given the reluctance expressed by realtors to ask these types of questions, they will often err on the side of not pursuing the issue.

It seems to me that the simplest way to overcome these scruples and to gain insight into source of funds is to make such an inquiry mandatory. Optimally, this would be a requirement imposed by FINTRAC.

Source of funds is not an ancillary or unrelated question; it goes to the heart of the task real estate agents have been given. Mandating source-of-funds inquiries would remove confusion and make clear what is expected. Therefore, I recommend that BCFSA make inquiries with FINTRAC as to whether it will institute such a requirement, and, if the answer is no, then BCFSA should require licensees to ask clients about their source of funds at the outset of the client relationship.

232 Ibid, p 34.
233 Evidence of D. Hyde, Transcript, February 17, 2021, pp 46–47.
**Recommendation 11:** I recommend that the British Columbia Financial Services Authority (BCFSA) make inquiries with the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC) to determine whether it plans to institute a source-of-funds inquiry requirement for licensees. If FINTRAC does not plan to do so, I recommend that the BCFSA require real estate licensees to ask clients about their source of funds at the outset of the client relationship, and record the information provided.

A mandatory requirement will eliminate uncertainty. It also allows real estate professionals to point to the requirement as the reason they are obligated to ask the question. A lack of discretion on the part of the realtor takes some of the discomfort out of asking the question and informs the buyer that they will not receive more favourable treatment at the hands of another professional. Where the client’s answer is vague, unusual, or seems unrealistic, given what is known of the client, it may be an indication that an STR is appropriate.

Such a requirement has been implemented in the United Kingdom, where a client will be asked about their source of funds by their estate agent, mortgage broker, and financial institution.\(^{235}\)

**Perception that the Burden on Real Estate Agents Is Unduly Onerous**

Real estate agents interviewed for the Deloitte Study expressed frustration and a sense of unfairness at being asked to assess money laundering risk when they had a direct sightline into only 5 to 10 percent of the transaction funds.\(^{236}\)

Industry members have pointed to other actors they say are better equipped to take on anti-money laundering reporting obligations. The Deloitte Study, interviews with local real estate boards, and feedback from the joint UBC Sauder / RECBC (now part of BCFSA) “Anti-Money Laundering in Real Estate” course reveal a general sentiment that the onus for anti-money laundering should be on banks and lawyers rather than on real estate agents.\(^{237}\) Some licensees expressed the view that lawyers ought to be responsible for reporting because of the greater role they play in overseeing funds, compared to real estate agents. I address the role of lawyers, who are subject to significant anti-money laundering oversight by the Law Society, in Part VII of this Report.

The Deloitte Study noted discontent at being asked “to do the government’s job,” particularly when no additional compensation was provided for performing anti–

---

\(^{235}\) Home Owners Alliance, “Do Estate Agents Need Proof of Funds?” online: https://hoa.org.uk/advice/guides-for-homeowners/i-am-buying/do-estate-agents-need-proof-of-funds/

money laundering related duties. Deloitte noted that many real estate agents expected financial institutions to vet source of funds.

These objections ignore the insight into a transaction and a client’s motivations that are available to real estate licensees, and in some cases uniquely to them. While financial institutions do have responsibilities under the PCMLTFA, their lens into a transaction is limited. Financial institutions do not have the same amount of face-to-face interaction with clients that real estate licensees do. They are usually not privy to the stated buying preferences of clients, their expressed financial status, or the presence of third parties in a transaction.

**Lack of Clarity on Suspicious Transaction Reporting**

The real estate board representatives the Commission interviewed expressed much confusion over what would constitute a “suspicious” transaction. BCREA acknowledged this continuing confusion in its closing submissions to the Commission.

Despite FINTRAC’s provision of suspicious indicators to assist licensees to identify suspicious transactions, those operating in in the Lower Mainland commented that despite being listed as an indicator of suspicion by FINTRAC, the example of a student purchasing a million-dollar property was not unusual.

Feedback received about the BCFSA anti-money laundering course evidenced continued confusion about the indicators of and threshold for suspicion. One respondent queried whether evasion of capital controls was “always wrong and suspicious”; others requested more emphasis on how to identify suspicious activity, and one contesting whether the indicators listed were actually suspicious. Others, however, stated the course had cleared up much of their confusion.

The Deloitte Study found that some real estate agents appear to be over-reliant on Canadian Real Estate Association forms, employing a “check-the-box” approach without truly understanding the purpose of the documents. The Deloitte Study and FINTRAC’s 2019 Compliance Report noted that brokerages failed to tailor the forms to their business, such that brokerages were not adequately reviewing for and identifying high-risk activity. At the same time, local real estate boards and others expressed

frustration at being told, during FINTRAC assessments, that reliance on Canadian Real Estate Association forms was insufficient.246 These concerns emphasize the need for caution when producing templates or checklists for use by industry. Although templates and other guides designed to assist real estate professionals meet their obligations may be helpful. Caution should be exercised to avoid producing generic forms that are relied upon to the exclusion of the exercise of judgment. Although no doubt greatly appreciated by industry, forms that help a business meet its anti–money laundering obligations cannot stand in the place of quality education and training.

Ms. Hyde pointed to the threshold for filing STRs as an area that could use improvement:

The reasonable grounds to suspect is something – again it’s an abstract concept and I think giving more flesh to that, reasonable grounds to suspect is good thinking in terms of helping the realtor identify those specific red flags that are going to trigger a suspicious transaction report.247

Ms. Hyde expressed a wish for FINTRAC’s suspicious indicator guidance to be more geographically targeted.248 She also suggested that “an app with some drop down menus” would be preferable to the current eight-page document used to make suspicious transaction reports.249 She highlighted the difficulty of reaching the small business sector, and noted the average brokerage has four real estate agents; to this challenge, she emphasized the need for “very concrete, real language as opposed to bureaucratic language.”250 There are no magic bullets for the issues raised above. To a large degree, what is required is continuing education and training to change the mindsets of real estate licensees, and to change the culture to one that recognizes anti–money laundering responsibilities as foundational professional obligations. Both industry and regulators are alive to this and have responded.

Anti–Money Laundering Education Available to Real Estate Agents

Both regulators and industry have responded with education and training aimed at improving anti–money laundering compliance. FINTRAC has published indicators of suspicious transactions in real estate, as well as a risk-based approach workbook for reporting entities in the real estate sector to assist in developing a compliance program.251

RECBC (now part of BCFSA) implemented an anti-money laundering course for real estate licensees in 2020, which is mandatory for all licensees. BCREA also launched an optional anti-money laundering course targeted at managing brokers and compliance officers in 2020.

**FINTRAC Education**

To assist reporting entities in knowing when to submit an STR, FINTRAC issues operational alerts, which are intended to update recipients on indicators of suspicious financial transactions and high-risk factors related to new, re-emerging or particularly topical methods of money laundering.

FINTRAC also issues operational briefs that are intended to provide clarification and guidance on issues that impact the ability of reporting entities to maintain a strong compliance regime.

Both operational alerts and operational briefs are published on FINTRAC’s website. I understand that a number of industry representatives have complained that these reports were not easily accessible, and that accessing such information required “digging” through the FINTRAC website.

In November 2016 FINTRAC published *Operational Brief: Indicators of Money Laundering in Financial Transactions Related to Real Estate*, designed to assist reporting entities to identify and report suspicious transactions. This brief presents 32 indicators and 12 themes that real estate reporting entities should consider in deciding whether to report a suspicious transaction. The brief was updated in 2019 and then again in 2021.

FINTRAC hosts and participates in conferences with industry and provincial regulators. Ms. Hyde described this participation as a good first step but expressed the view that more direct education was needed, and particularly more active collaboration between the industry, the provincial regulator, and FINTRAC.

258 Exhibit 601, OR: Real Estate & Industry Response, Appendix 8, FINTRAC, “Money Laundering and Terrorist Financing Indicators – Real Estate.”
These efforts appear to be paying off. Real estate boards interviewed by the Commission commented that they had noticed an improvement in FINTRAC’s availability, guidance, and presence at conferences in 2019. Some boards mentioned specific presentations they found very useful. The boards that had attended these events stated that, after the event, members expressed a much better understanding of the purpose behind the FINTRAC reporting and real estate agents’ role in monitoring transactions.260

**BCREA Education**

In September 2018, BCREA announced that it had launched an action plan to help licensees and managing brokers better understand and meet their FINTRAC reporting duties.261 BCREA followed this announcement with several publications intended to assist real estate agents with their anti-money laundering obligations.262

In October 2020, BCREA launched a nine-week training program, “Mastering Compliance,” designed to assist managing brokers and compliance officers to improve their compliance programs and meet their anti-money laundering requirements.263 Specifically, the program aims to educate participants on PCMLTFA requirements and on how to assess inherent risks, consider risk tolerance, and understand how to mitigate risks.264

Ms. Hyde stated that, as of February 2021, approximately 160 of 1,300 managing brokers in British Columbia had taken the BCREA course.265

**BCFSA Anti–Money Laundering Course**

As of April 1, 2020, all licensees in the province are required to complete BCFSA’s “Anti–Money Laundering in Real Estate” course in order to renew their licence.266 Since licences are issued for two-year terms, all licensees ought to have taken the course by April 2022.

The course is a response to the Maloney Report and Dr. Peter German’s reports, as well as information received from FINTRAC about the real estate industry’s compliance

problems. Erin Seeley, past chief executive officer of RECBC and now senior vice-president of policy and stakeholder engagement of BCFSA, testified that the Real Estate Council intended, by “putting resources at the earlier stage of education and professional guidance” to “broaden [the] culture of compliance and understanding and address some of those deficiencies.”

The six-module course reviews money laundering typologies and the international anti-money laundering regime. It explains the role of real estate in money laundering in BC, how real estate licensees may unwittingly participate in transactions with a risk for money laundering, and how they can assist in deterring and detecting money laundering. It provides concrete examples of transactions that carry a high risk or may be suspicious. The course also covers obligations of real estate agents under the PCMLTFA in a detailed but simple way and explains why these obligations fall upon real estate agents. An entire module is devoted to suspicious transaction reporting and debunks the “bags of cash” myth.

Ms. Seeley noted that much of the previously existing training targeted managing brokers, and this course was intended, at least in part, to fill a gap by providing licensees with practical tools to identify red flags.

Unfortunately, licensees who have taken the course reported persisting concerns with the reporting regime, including:

- a fear of retaliation from the purchaser/seller for reporting a transaction to FINTRAC;
- lacking the kind of information about a client's source of funds or wealth that would allow an agent to identify who and what are suspicious;
- general confusion over what money laundering is and what it looks like;
- disagreement or confusion over what counts as suspicious;
- what to do when red flags arise and when to report;
- frustration with asking realtors to take on more responsibility to combat money laundering – several suggested this responsibility be shifted to lawyers;
- the view that the content was irrelevant to them; and
- a desire for tools such as template reporting forms, compliance programs, and suspicious indicators.

---

267 Evidence of E. Seeley, Transcript, February 16, 2021, p 145.
268 Exhibit 617, RECBC, “Anti–Money Laundering in Real Estate” online course materials, Module 3, slides 45–72.
269 Exhibit 617, RECBC, “Anti–Money Laundering in Real Estate” online course materials, Module 5, slides 118–64.
I am encouraged by the high quality of BCFSA’s course. Similarly, the BCREA course for managing brokers and compliance officers is a positive step toward educating the industry.271 It is my hope that, as real estate agents become familiar with these resources, compliance with PCMLTFA requirements will improve and reporting will increase. It will be critical for BCFSA – which can compel licensees to take its courses – to continue to provide quality, up-to-date anti-money laundering education and guidance to industry. The AML Commissioner may prove a useful resource to consult with, given that office’s expertise.

**Improving Anti-Money Laundering Compliance and Suspicious Indicator Reporting**

Real estate licensees need more assistance in understanding when to file STRs. Without clear and direct instruction, real estate licensees on the ground will continue to under-report. Real estate licensees have a front-line view into the initial stages of a real estate transaction, including the decision-making and personal attributes of the client, the client’s expressed priorities and intentions for the property, and in some cases, the client’s real estate purchasing behaviour over time. Licensees must be empowered to play a more engaged role in BC’s anti-money laundering framework in order to fill the information gap left by their historic under-reporting.

**Use of Technology to Assist Licensees and Brokerages**

Real estate licensees work in a very different environment than employees of banks. They are largely independent contractors, working outside the traditional office environment, often without direct managerial and administrative supports. This is particularly so at the smaller end of the market. To succeed in meeting their anti-money laundering obligations, real estate licensees need to be supported in the environment in which they work.

Although I have concluded that the primary cure for the industry’s difficulties with respect to compliance is education, assistance could be provided by developing aids that recognize the environment in which realtors operate.

Industry, ideally with assistance from FINTRAC, or even led by FINTRAC, would do well to focus on developing technological aids for realtors, such as a mobile application for meeting anti-money laundering obligations and particularly the submission of STRs. Such an application could remind realtors of what the suspicious indicators in a transaction are, walk them through identifying any indicators in the particular transaction before them, and then assist the user in determining whether a report should be filed. The information submitted by the licensee can be made available to the compliance offer, allowing another level of oversight and an opportunity to identify transactions that should be the subject of an STR.

---

Such an application could also help realtors overcome confusion about the required threshold for making a report. As noted above, some licensees have expressed reluctance to file STRs in the absence of concrete and obvious evidence of money laundering. That, of course, is not the threshold. The threshold is “reasonable suspicion.”

While artificial intelligence cannot (and should not) replace the expertise and judgment of licensees who understand their market and client base, it is clear that for many, more direct guidance is needed.

FATF recently highlighted the success of electronic tools developed for the real estate sector in Belgium and Slovakia. In Belgium, a collaboration between a private technology developer, the financial intelligence unit, and the regulator of real estate agents resulted in an “AML tool” designed to guide and advise real estate agents in fulfilling their anti-money laundering obligations digitally. FATF observed that the tool has been efficient in assessing and mitigating money laundering risks. Critically for the success of the AML tool, it is approved by the regulator, and if the agent or real estate office uses it as intended, the user is determined to be compliant with their anti-money laundering obligations. A “workflow” tool in Slovakia simplifies and digitalizes the workstream of real estate agents, and allows for electronic identification of clients, risk assessment and automatic identification of the level of risk, and an automated indication of next steps, for example, whether additional information about source of funds is required.

In Chapter 18, I recommend that the Ministry of Finance conduct a “red flag” analysis of suspicious indicators in British Columbia real estate, with one purpose being to determine what suspicious indicators are reliably indicative of money laundering or other criminal activity. The results of such research could be useful both in educating industry and in informing the design of a mobile application that appropriately flags suspicious transactions.

In practice, the responsibility for ensuring compliance with the PCMLTFA, including with the obligation to file STRs, generally falls to the compliance officer. The Maloney Report included a recommendation that the onus for compliance with the Act should be placed directly on individual real estate licensees. As I review below, the burden on compliance officers is significant, and I note the logic of the recommendation. It is my hope that making it easier for licensees to fulfill their suspicious transaction reporting obligations with tools like a well-designed mobile application will help to shift anti-money laundering responsibilities back to individual licensees.

272 Exhibit 626, FINTRAC’S AML/TF Real Estate Sector Presentation (September 19, 2018), p 19.
274 Exhibit 330, Maloney Report, p 78.
The Burden on Compliance Officers

The managing broker role is one created by the Real Estate Services Act, separate from the anti-money laundering regime. The compliance officer role is one mandated by the PCMLTFA and associated Regulations. In practical terms, however, because the managing broker carries out the regulatory requirements of oversight and supervision of the brokerages’ day-to-day operations, the managing broker also regularly also takes on the compliance officer role.

Managing brokers are responsible for managing regulatory responsibilities of agents, sometimes upwards of 50 agents, for both federal and provincial regulators, involving multiple pieces of legislation and their regulations, and the regulator's bylaws.

Compliance officer obligations can be a significant part of the managing broker’s responsibilities. These responsibilities include establishing and updating anti-money laundering policies and procedures, developing a brokerage risk assessment, training licensees on their reporting requirements, reviewing the compliance program periodically, and supervising licensees for compliance. Managing brokers and compliance officers, on top of their supervisory and compliance responsibilities, may also be active as licensees engaged in selling real estate.

Some managing brokers manage very large offices – there is no limit on the number of licensees that can be under their supervision. Brokerage sizes in BC vary wildly: the median size is just four licensees, but there are brokerages with hundreds of licensees. It has been the experience of the regulator that larger brokerages generally have more sophisticated systems that provide for oversight and that supervision, and anti-money laundering compliance issues occur more frequently with smaller brokerages, where there is less support through technology and supervision.

The task that falls to managing brokers (and hence compliance officers) has also been rendered more complex by the evolution of the industry. Individual salespeople are far more likely to be independent contractors than employees in the brokerage office.

There may also be an economic disincentive to rigorous supervision and investigation by managing brokers. Licensees (and their brokerages) get paid when sales are made. When sales are slowed or stopped, conversely, remuneration

275 RESA, s 6.
276 PCMLTFA Regulations, s 156(1).
277 Evidence of E. Seeley, Transcript, February 16, 2021, pp 156–58; Evidence of S. Ellis, Transcript February 26, p 16.
281 Evidence of E Seeley, Transcript, February 16, 2021, p 158.
282 Ibid, p 162.
is negatively affected. Supervisory activity that impedes sales, and the earning of
commissions, is contrary to the business (if not the regulatory) model of brokerages.
That a licensee earning commission can potentially make much more than a managing
broker who is compensated by way of salary (which is derived from commission
splits or fees that the licensees pay to the brokerage) also complicates the supervisory
dynamic. Deloitte, in the report commissioned by BCREA, recommended that,
where possible, the roles of managing broker and FINTRAC compliance officer should
be clearly defined and separated. BCREA argued that this recommendation is
“impractical” as it would add cost and complexity for brokerages. REBA agreed that,
in a province where the average brokerage size is only four licensees, hiring a separate
compliance officer is neither practical nor feasible for most brokerages. I tend to
agree that, especially for small brokerages, this may be an impractical solution.

The role of managing brokers was the subject of a review by the Office of the
Superintendent of Real Estate of the role of managing brokers, published in December
2020. That review produced five recommendations for strengthening the role of the
managing broker, including these relevant to the present discussion:

- enhancing education and qualification requirements for managing brokers, including
increasing the minimum experience requirement from two years to three;
- developing enhanced resources for managing brokers to promote compliance,
including providing better regulatory guidance aimed at managing brokers and
supplying templates or frameworks for brokerage policy manuals;
- more rigorous brokerage licensing and ownership requirements, including by
implementing a compliance plan requirement.

I agree with these recommendations and discuss them further below.

Enhance Qualifications for Managing Brokers

The managing broker has a great deal of responsibility for anti-money laundering
compliance (and other regulatory oversight responsibilities) and should have
experience in the industry. Two years, in my view, is insufficient to qualify a licensee
to become a broker. I encourage the Province, in consultation with the industry,
to consider greater prerequisite qualifications for managing brokers, including education and experiential requirements.

**Greater Support Needed for Compliance Officers**

In this environment, compliance officers require resources for both the risk assessment and the policies and procedures requirements that are straightforward and unambiguous, and can be integrated into the brokerage’s systems without undue complexity. One user, in the feedback survey to the RECBC (now BCFSA) Anti–Money Laundering in Real Estate course, asked “[W]here can we get an example of a small / tiny brokerage Compliance Program template, to customize and implement?”

An electronic anti–money laundering tool of the type described above, and used successfully in Belgium and Slovakia, would go a long way to streamlining and simplifying the anti–money laundering obligations of managing brokers.

Absent such a tool – or while one is under development – the creation of templates to assist managing brokers conduct risk assessments and anti–money laundering policies and procedures would be helpful.

Templates that are suited to the BC real estate environment and that are specific to the market in which the brokerage operates, both in terms of geographic location (whether a large urban centre, a vacation hotspot, or a rural area) and market segment (e.g., commercial real estate, expensive residential single family homes, rental / investment property) will go a long way toward this goal. I encourage industry and regulators to work together to create such templates.

The usefulness of any template or technological tool will have maximum impact, and uptake, if FINTRAC is involved and approves of the final product, providing some assurance to the industry that use of such tools is not inconsistent with their compliance obligations.

Of course, the use of templates must not replace the use of independent judgment and professional experience. If templates or technology tools are introduced, they must be presented with commentary that clearly communicates that templates and technology should not be relied on to the exclusion of a managing broker’s own judgment and knowledge of their particular market and the anti–money laundering risks it may present.

**Make the Existence of a PCMLTFA Compliance Program a Prerequisite to Licensing a Brokerage**

A brokerage license is issued by the Superintendent of Real Estate (in effect, BCFSA). Brokerages should not be allowed to begin conducting business without demonstrating to the regulator that they have an anti–money laundering compliance plan in place.

295 RESA, ss 3(1), 5(1)(a), 9(1).
While BCFSA cannot be responsible for ensuring that a given anti-money laundering compliance plan is acceptable to FINTRAC, it can ensure, as a condition of licensing, that a brokerage has a compliance plan in place. Such a plan should contain, at a minimum, the following: anti-money laundering policies and procedures; a risk assessment of the brokerage’s intended business and client/market segment; client verification and identification forms; and a plan for both anti-money laundering training and a two-year review of the brokerage’s anti-money laundering policies.

**Recommendation 12:** I recommend that the British Columbia Financial Services Authority use its rule-making authority to mandate that brokerages demonstrate the existence of an anti-money laundering compliance plan as a condition of licensing.

**Indicators of Suspicion**

In Appendix 16A, located at the end of this chapter, I outline indicators of suspicion that real estate agents and professionals may wish to consider when assessing money laundering risks at different stages of a real estate transaction.

**Part 3: Mortgage Brokers**

**History**

I earlier addressed the prevalence of money laundering in real estate and commented on particular vulnerabilities arising with mortgage lending typologies. I now focus on this risk area because I view it as seriously in need of reform. In the remainder of this chapter, I outline the regulatory regime for mortgage brokers and set out specific reforms that will go a long way to addressing gaps that currently exist. In doing so, I offer two case studies based on evidence before me, which offer important insights about money laundering involving mortgage brokers.

Mortgage lending and origination became a regulated industry in BC in 1972, with the passage of the provincial *Mortgage Brokers Act*, RSBC 1996, c 313 (MBA). The original focus of the Act was consumer protection, in particular protection against unconscionable interest rates and fees.

In 2019, the Expert Panel on Money Laundering in BC Real Estate (Professors Maloney, Somerville, and Unger) described the MBA as antiquated. The panel identified areas where the Act had not kept pace with national and international consumer protection standards, changes in the financial services market, and issues such as money laundering in the real estate market.296 The Expert Panel recommended that

the MBA be replaced with new legislation. In response to this recommendation, in January 2020, the provincial Ministry of Finance began a public consultation process to elicit feedback on the modernization of the MBA.\(^{297}\) While this chapter goes on to describe the current obligations established by the legislation and the structure and function of the regulator, I pause to say that the entire regime is presently in the midst of review. Representatives of BCFSA, in particular, readily acknowledged that the Act as it currently stands is woefully out of date. Because the Act is currently under review, it is an opportune time for reforms. Below I will suggest changes that I consider critical to advancing anti-money laundering objectives.

**Registrar of Mortgage Brokers**

The Registrar of Mortgage Brokers administers the *Mortgage Brokers Act*. The Registrar is located within BCFSA. The Registrar’s office regulates over 5,000 mortgage brokers and brokerages in British Columbia.\(^{298}\) The Registrar has a number of functions, including registration, oversight of registrants (compliance and examination), and enforcement. The Registrar is responsible for keeping a register of every mortgage and submortgage broker registered under the MBA.\(^{299}\)

The Registrar is appointed by the board of directors of BCFSA.\(^{300}\) The duties of the Registrar are mainly carried out by the Deputy Registrar of Mortgage Brokers. The day-to-day functions of the Registrar are carried out by the Director of Mortgage Brokers. The Registrar employs 14 staff members.\(^{301}\) This includes a team responsible for the registration of mortgage and submortgage brokers, as well as a five-person investigative team and a four-person compliance team responsible for examinations.\(^{302}\)

**Registration Requirements**

The MBA defines a mortgage broker as a person who does any of the following:

- **a)** carries on a business of lending money secured in whole or in part by mortgages, whether the money is the mortgage broker’s own or that of another person;

- **b)** holds himself or herself out as, or by an advertisement, notice or sign indicates that he or she is, a mortgage broker;

- **c)** carries on a business of buying and selling mortgages or agreements for sale;

---

297 MBA Review Consultation, p 1.
299 MBA, s 3(1); see also Evidence of C. Carter, Transcript, February 16, 2021, pp 30–31.
300 MBA, s 1.1.
302 Exhibit 606, BCFSA Organizational Chart, p 11.
d) in any one year, receives an amount of $1,000 or more in fees or other consideration, excluding legal fees for arranging mortgages for other persons;

e) during any one year, lends money on the security of 10 or more mortgages;

f) carries on a business of collecting money secured by mortgages.[303]

Surprisingly, the MBA does not require anyone engaging in these activities to register as a mortgage broker. As a result, if a person fits into one of the six descriptions above, they are not always required to register as mortgage broker. What the Act prohibits – unless the person is registered under the Act – is for a person to “carry on business as a mortgage broker or submortgage broker.”[304] As such, there is some misalignment. The activities defined as mortgage brokering in section 1 of the MBA do not match up exactly with the activities that are prohibited without registration. A person is allowed to engage in the activities listed in section 1, unregistered, up to the point that it constitutes “carrying on business.”[305]

Furthermore, the definition of “mortgage broker” is not restricted to those who connect borrowers with lenders (known as “origination”). It also includes lenders who secure their loans by way of mortgages.

Despite the broad range of activity encompassed by the definition of “mortgage broker” in the MBA, only two categories of registration exist: one for individuals (referred to by the Act as submortgage brokers) and one for brokerages (referred to in the Act as mortgage brokers). There are no separate registration categories for lenders and originators, nor are there separate conduct requirements or qualification criteria.[306]

The registration process involves setting qualification criteria, against which staff conduct a suitability review for each applicant. For example, brokers must meet certain education requirements to be eligible for registration.[307] A certified criminal record check is required as part of this suitability review.[308] The office takes a closer look at lender applicants than originator applicants, including the owners and directors of corporate entities.[309]

---

303 MBA, s 1.
304 MBA, s 21(1)(a).
305 Ibid; see discussion at paras 68–85 of AZTA Management Corporation v Crof Agencies Ltd, 2014 BCSC 1462.
The Registrar conducts a suitability review of each applicant for registration by verifying the applicant's credentials, reviewing open-source material, and assessing the individual's past criminal and regulatory history with other regulators. A number of “red flags” may arise on a suitability review, which will lead to a more in-depth review of an applicant.310

Obligations of Mortgage Brokers

The MBA sets out a number of obligations for mortgage brokers and submortgage brokers, including:

• prohibiting a person from withholding, destroying, concealing, or refusing any information or records required by the Registrar for inquiry;311
• prohibiting a mortgage broker or submortgage broker from making any false, misleading, or deceptive statements;312
• requiring the mortgage broker to disclose any conflicts of interest the mortgage broker or any of their associates or related parties may have to investors and lenders,313 and to borrowers;314
• not being party to a mortgage transaction that is harsh and unconscionable or otherwise inequitable;315 and
• not to engage in conduct “prejudicial to the public interest.”316

Financial professionals who give advice or sell financial products, as a general matter, have a number of obligations. Some are commonplace, such as the duty of loyalty to the client or the obligation to conduct “know your client” due diligence. But the MBA does not impose such obligations on mortgage brokers.317 Not does it require mortgage brokers to inquire into the source of funds being used.

Designated Individuals

Each mortgage broker (i.e., a brokerage) that is a corporation, partnership, or sole proprietorship must have a registered submortgage broker who acts as its “designated individual.” The designated individual role involves oversight over those engaged

310 Ibid.
311 MBA, s 6(7.5).
312 Ibid, s 14(1).
313 Ibid, s 17.4.
314 Ibid, s 17.3.
315 Ibid, s 8(1)(g).
316 Ibid, s 8(1)(i).
317 Evidence of C. Carter, Transcript February 16, 2021 pp 43, 76.
in mortgage lending at that firm or office. The designated individual must ensure that employees who are involved in arranging mortgages are properly registered, aware of regulatory obligations, and appropriately supervised. They must ensure that the brokerage’s financial records are accurate and up to date, and that year-end financial filings are provided on time and in the form required. They must make sure that registration information is accurate and timely and that applications submitted through the mortgage broker e-filing system are complete and accurate.318

To qualify as a designated individual, a submortgage broker must have been registered for a minimum of two years and have no prior record of regulatory misconduct under the MBA or otherwise.319

A designated individual – which is analogous to a managing broker in the real estate licensee context – is not a legislated role. It does not involve a separate registration. The obligations of a designated individual arise only from policy as developed by BCFSA.

**Enforcement and Penalties**

The office of the Registrar of Mortgage Brokers includes a team responsible for handling complaints, examinations, and investigations. As of August 1, 2021, RECBC and OSRE have been incorporated within BCFSA. I was informed by Blair Morrison, chief executive officer of BCFSA, that the investigative capacities of each organization – BCFSA, RECBC, and OSRE – are being consolidated with the intention of “prioritizing the development of a common market conduct framework to enable a proactive response to key regulatory risks.”320

The Registrar of Mortgage Brokers investigates contraventions of the MBA and its regulations (including BCFSA policies), for both registered mortgage brokers and unregistered mortgage brokering activity. The Registrar receives complaints from the public and from other industry professionals. When a complaint arrives, it triggers a review process, which includes assessment of the role of individuals involved, including any designated individual responsible for overseeing those named in the complaint.321

The Registrar has the power to investigate mortgage and submortgage brokers who may be in violation of their obligations under the Act or against whom a sworn complaint has been made.322

There are two branches of disciplinary proceedings that the Registrar can pursue when a mortgage or submortgage broker is suspected to have violated their obligations under the MBA. The first is to apply administrative penalties against the broker. The

319 Ibid.
320 Exhibit 1051, Affidavit of Blair Morrison, sworn September 13, 2021 [Affidavit of B. Morrison], paras 7–8.
321 Exhibit 603, Overview Report: Legislative and Regulatory Structure of Real Estate in British Columbia, p 41.
322 MBA, s 5.
second is to pursue a provincial offence. This “provincial offence” option requires a referral to the BC Prosecution Service. The issuance of administrative penalties is much more common than a referral for a provincial offence.323

After giving the registered party an opportunity to be heard, if the Registrar is of the opinion that the mortgage or submortgage broker has violated their obligations under the Act, he or she may (a) suspend the person's registration, (b) cancel the person's registration, (c) order the person to cease a specified activity, or (d) order the person to carry out specified actions that the Registrar considers necessary to remedy the situation.324

If a mortgage broker contravenes any of the obligations listed in the MBA, they have committed an offence under the Act. They are subject to prosecution and, upon conviction, penalties. Depending on which section of the Act the mortgage broker has contravened, the penalties for an offence include fines that range from $2,000325 to $200,000, and/or imprisonment for not more than two years, depending on the severity of the offence.326 The more serious offences, including carrying on business while unlicensed, carry a maximum fine of $100,000 for a first offence, plus the possibility of jail time.327 Less serious offences are punishable with a fine, but no possibility of jail time.328

It is also an offence under the MBA for a person who is not registered as a mortgage or submortgage broker to carry on a business as a mortgage broker.329 The Registrar has the power to investigate such persons. If, in his or her opinion, that person has been carrying on such business without being registered under the Act, the Registrar has the power to order the person to (a) cease a specified activity, (b) carry out specified actions that the Registrar considers necessary to remedy the situation, or (c) pay an administrative penalty of not more than $50,000. If convicted of an offence for the same misconduct, a fine not exceeding $100,000 (for a first offence) and a term of imprisonment of up to two years is available.330

In addition to assessments initiated by complaints, the compliance team also conducts proactive examinations. As of February 2020, approximately 50 percent of mortgage broker case files were proactive examinations.

Where appropriate, examinations and complaints may lead to an investigation. In the 2018–19 fiscal year, the Registrar opened 181 complaints, conducted 83 suitability reviews and 37 examinations, and concluded 61 investigations.331

The largest administrative monetary penalty available to the Registrar is $50,000, an amount that has been issued on four occasions: once in 2004,\textsuperscript{332} twice in 2018,\textsuperscript{333} and once in 2021.\textsuperscript{334}

As of the fall of 2020, two investigations into misconduct by the Registrar had resulted in charges of a provincial offence. Those investigations occurred in 2004 and 2010 and involved allegations of repeated unlicensed activity.\textsuperscript{335}

**Mortgage Brokers and FINTRAC**

Mortgage brokers are not designated as reporting entities under the *PCMLTF Regulations*. Mortgage brokers are therefore not required to submit suspicious transaction reports (or any other reports) to FINTRAC.

---

**Case Study: Jay Chaudhary**

Jay Chaudhary is a former registered mortgage broker who was suspended by the Registrar of Mortgage Brokers in 2008 for conducting business in a manner prejudicial to the public interest. Specifically, Mr. Chaudhary was alleged to have knowingly submitted false information to lenders on behalf of his clients in order to secure financing for them.\textsuperscript{336} In 2019, he was the subject of a cease-and-desist order from the Registrar, in which it was alleged that he carried on these activities after 2008 as an unregistered mortgage broker. Mr. Chaudhary gave evidence before the Commission. He was remarkably forthright. Most of what is set out below was relayed by Mr. Chaudhary himself.

After his 2008 suspension, Mr. Chaudhary did not seek to have his registration reinstated but instead continued with his mortgage brokering activities unregistered. From 2009 through mid-2018, when his activities were disrupted by an investigation, and later a cease-and-desist order by the Registrar, he is alleged to have arranged almost half a billion dollars in residential mortgages and earned approximately $6 million in fees and

\textsuperscript{335} Exhibit 603, *Overview Report: Legislative and Regulatory Structure of Real Estate in British Columbia*, p 43.

commissions. That is a startling amount, both the volume of financing but also the remarkable profits made from this unregistered activity.

While there was no evidence before the Commission that Mr. Chaudhary conducted his activities in furtherance of a money laundering scheme, his story illustrates a very serious money laundering vulnerability in the real estate sector.

When he was a registered mortgage broker, Mr. Chaudhary would alter and submit applications for residential mortgages for his clients. The alterations he made were designed to make the applications acceptable to lenders. Mr. Chaudhary said he did not charge a fee to his clients for making such alterations (at that time); instead, he simply took his share of the commission payable by the lender. The fraudulent alterations would mostly be made to documents demonstrating income and assets, such as job letters, bank statements, and notices of assessment. He used widely available computer software tools to help him make the dishonest changes. These manual falsifications could remain undetected because lenders who receive the applications have no direct access to the Canada Revenue Agency (CRA) for confirmation: they depend on the honesty of mortgage brokers and borrowers. There is no obvious way to detect documents that have been tampered with.

While Mr. Chaudhary said he was not concerned that any of his clients were involved in illegal activities, there was some evidence that applicants who sought Mr. Chaudhary’s services were involved in mortgage fraud schemes that had attracted the attention of law enforcement.

In 2008, a complaint from a bank employee spurred an investigation by the Registrar. As a result, Mr. Chaudhary was suspended in October 2008. Mr. Chaudhary agreed in his evidence before the Commission that he falsified applications to lenders.

When his suspension ended, Mr. Chaudhary did not apply to reinstate his registration. Instead, at some point in 2009, he started processing mortgage loan applications again, this time with the necessary assistance

337 Exhibit 655, In the Matter of the Mortgage Brokers Act and Jay Kanth Chaudhary, Cease and Desist Order, May 23, 2019 [Cease and Desist Order], para 67.
of registered mortgage brokers. He used the same methods to alter applications according to the client's needs.

The changes that he made were sometimes significant. In respect of one mortgage application reviewed, Mr. Chaudhary agreed it was likely that he falsified the applicant's tax documents to show an income of $279,726 instead of the $34,428 reported to CRA, and falsified bank statements to show $810,000 in savings in the same applicant's account, rather than the $250,000 actually available. He agreed he had made changes to other documents that were just as significant.

Compensation to Mr. Chaudhary was provided by a split of the registered mortgage broker's fees paid by the lenders, as well as, by this point, by fees paid by clients directly to Mr. Chaudhary. He charged 1 percent of the mortgage amount directly to the client. The mortgage broker who processed the application for Mr. Chaudhary would receive their commission from the lender and then, typically, pay Mr. Chaudhary his 25–30 percent of that commission, often in cash. Ultimately, Mr. Chaudhary used the services of a number of mortgage brokers to process his falsified applications.

Mr. Chaudhary said that, by 2018, he was using the services of four registered mortgage brokers to process transactions. When asked if the mortgage brokers were aware that he was falsifying supporting documents for loan applications, Mr. Chaudhary responded, “90 percent, yes.” Some of the brokers, he said, would have seen the changes he made to supporting documentation. To Mr. Chaudhary's recollection, none of these brokers ever expressed concern to Mr. Chaudhary about what he was doing. None, to his knowledge, reported him to the Registrar. When asked why he thought that was the case, he responded:

[T]hey were making commissions. And, you know, with hardly ever doing anything because most of the work was done by me[,] they would just be inputting information and getting
approvals. So, the ease of transaction and the amount of money they’re making was good.352

Other professionals besides mortgage brokers were necessary to this scheme, including a referral network of licensed real estate professionals. Real estate licensees referred their own clients to Mr. Chaudhary, who paid them fees in return.353 Mr. Chaudhary believes that these licensees knew what he was doing, and at least two were aware of his suspension, because he had informed them of it himself.354 At the time he gave evidence before the Commission, Mr. Chaudhary believed that one of the two realtors who had been made expressly aware of his status was still licensed in British Columbia. The other is deceased.355

Several realtors, according to Mr. Chaudhary, personally used his services to obtain financing for properties they otherwise could not afford.356 The use of Mr. Chaudhary’s unregistered mortgage broker services by real estate licensees was confirmed by representatives of RECBC.357 The network of professionals referring work to Mr. Chaudhary grew from four or five realtors358 to 15 or 20.359 Mr. Chaudhary thought that, of those 15 to 20 realtors who referred him business, about 80 percent were still licensed at the time he gave evidence before the Commission.360

Real estate licensees, like registered mortgage brokers, had a significant financial incentive to use Mr. Chaudhary’s services: they earned commissions when their client successfully purchased property. Whether they referred clients to Mr. Chaudhary knowing of his practice of falsifying documents, or simply turned a blind eye to what Mr. Chaudhary was doing, this network of financially incentivized professionals gave Mr. Chaudhary access to a client base that kept him in business, very profitably, for over a decade. A cease-and-desist order issued by the Registrar on May 23, 2019, summarizes the staggering number of mortgages he is alleged to have facilitated over this period:

[F]rom 2009 to mid 2018, Mr. Chaudhary worked on 875 files, generated $5,283,347 in client fees and $642,344 [in] referral fees

352 Ibid.
353 Ibid, pp 26, 59.
355 Ibid, p 56.
359 Ibid, p 58.
360 Ibid, p 59.
paid by the registered submortgage brokers who submitted the applications to lenders on his behalf, and arranged $511,558,206 in mortgage loans.\(^{361}\)

To Mr. Chaudhary’s knowledge, none of the real estate licensees in his network reported his activities to their own regulator or to the Registrar.\(^{362}\) This was so even though he recalled some real estate licensees asking him directly if he was a registered mortgage broker – to which he would respond in the negative. Such disclosures never cost him referrals.\(^{363}\) As was the case before he was suspended, Mr. Chaudhary’s clients included licensees who, he believed, were aware of the fraudulent alterations he was making to loan applications.\(^{364}\)

I pause to point out that discovering whether a mortgage broker is appropriately licensed is not at all difficult: the Registrar maintains of list of registrants on its public-facing website. A simple query on that website would have allowed anyone working with Mr. Chaudhary (whether under his own name or one of the pseudonyms he testified that he used) to easily determine that he was not registered.

Mr. Chaudhary’s explanation for why he used pseudonyms helps to explain the apparent complicity of real estate licensees. He said a pseudonym was necessary to protect him from real estate licensees who would consider him “competition”:

[T]he realtors that I work with probably [have] an upper hand ... because the clients would probably end up going to them because they know the realtors have this individual who can get them the mortgage... whereas the realtors that do not have the services of individuals like us will – might have difficulty getting their clients approved.\(^{365}\)

Mr. Chaudhary’s dishonesty gave his clients and associates an unfair competitive advantage. One of the consequences of Mr. Chaudhary’s fraudulent services was keeping honest purchasers out of the market. Such conduct creates an uneven playing field and distorts the market, in the sense that buyers who would not qualify for lending, did. In addition, this resulted in a deception and an appreciable risk for lenders, who were misled as to the truth of the financial wherewithal of the buyer.

---

361 Exhibit 655, Cease and Desist Order, p 12 and para 67.
363 Ibid, pp 74–75.
365 Ibid, p 91.
The type of unregistered – and fraudulent – mortgage brokering activity admitted to by Mr. Chaudhary is evidently not uncommon. In evidence before me were a number of cease-and-desist orders of the Registrar of Mortgage Brokers, setting out allegations of such activity against various individuals, as well as notices of hearing directed at the registered mortgage brokers who allegedly assisted them. A former investigator for the Registrar stated that unregistered mortgage brokering activity, often coupled with falsified documentation, was a top area of investigation for the Registrar in his time there. Mr. Chaudhary gave evidence that he was aware, through his own clients, of a number of unregistered persons offering mortgage brokering services in the Lower Mainland.

Factors that Allowed Mr. Chaudhary to Operate

Mr. Chaudhary provided his views on why he was able to operate undetected for so long.

While he was a registered mortgage broker, Mr. Chaudhary claimed that the brokerage he worked through failed to apply supervision or oversight to his brokering activities. The review of the application packages he submitted to lenders did not go beyond checking that all required documents were present. It would have been apparent, on a review of the documents themselves, that there were suspicious inconsistencies in the applications. For instance, notices of assessment submitted by Mr. Chaudhary were purported to have been issued by the “Canada Customs and Revenue Agency,” not the “Canada Revenue Agency,” as it was then known. As far as Mr. Chaudhary was aware, no one at the brokerages he worked through ever reached out independently to a borrower in order to confirm the accuracy of their information as it appeared on documents. Such inquiries could, he said, have caught some of the falsified applications.

As Mr. Chaudhary recognized, the success of his scheme depended on the fact that all the professionals involved profited:

[T]he clients were happy, the banks [had] no default, they were making their interest ... I don’t think any one of my clients

366 Exhibit 604, Registrar of Mortgage Brokers Discipline Orders Overview Report [OR: Mortgage Brokers Discipline Orders].
368 Evidence of J. Chaudhary, Transcript, February 24, 2021, p 93.
370 Ibid, pp 34–35.
defaulted. I don't remember. I didn't hear [of] any. So, realtors make their commission. Mortgage brokerages make their commission. I make my commission. All the parties involved, the notaries, whole industry.

Q: So nobody’s motivated to stop it?

A: That's right.372

So long as registered mortgage brokers are willing to work with unregistered persons, Mr. Chaudhary is of the view that it will be very difficult to detect and stop the kind of activity he was involved in. The only strategy that he contemplated could be successful would be collaboration between CRA and lenders.373 As noted, lenders do not currently have direct access to CRA information or to confirmation from CRA as to the contents of loan applications. Mr. Chaudhary recommended stronger oversight of submortgage brokers by brokerages, especially of new brokers, and strict consequences – perhaps even loss of license – for real estate licensees who do not report unregistered brokers.374

**Consequences to Mr. Chaudhary**

Mr. Chaudhary was the subject of a cease-and-desist order in May 2019, as described above. In the course of the hearing, his counsel indicated that he was the subject of scrutiny by the CRA,375 presumably as a result of his unregistered mortgage brokering activities. He does not appear to have faced any other legal consequence for his actions.

Mr. McTavish for BCFSA gave evidence that he brought the Chaudhary file to the leadership of the RCMP’s “E” Division, but that the RCMP ultimately declined to take on the matter. To his recollection, the reason given was that the matter did not fall within their mandate.376

373 Ibid, p 106.
375 Ibid, p 54.
The Money Laundering Vulnerability

Despite Mr. Chaudhary's evidence that he falsified approximately 70 percent of the loan applications he processed between 2009 and 2018, he also stated that he was unaware of any of the borrowers having defaulted on their loans. While this may be happy circumstance for the lenders who unknowingly advanced loans to unqualified borrowers and faced the risk of default, it raises the question of how these unqualified borrowers were able to service the loans.

While there was no direct evidence that Mr. Chaudhary's clients were servicing their loans with the proceeds of crime, mortgage fraud such as that carried out by Mr. Chaudhary allows individuals with illicit incomes to obtain mortgages. It allows a criminal (say a profitable drug dealer) to qualify as if he had a $500,000 annual income, even though his tax return would only show an income of $30,000. In turn, this allows the borrower to translate illicit funds into equity in real property by making payments on the loan with dirty money.

Mr. Chaudhary understood that a borrower defaulting on a loan arranged through falsified documents could lead to uncomfortable scrutiny of the borrower’s application and by extension of the mortgage broker involved. He therefore took care to ensure, by other means, that a borrower was able to service the loan. Sometimes this meant taking into account the assistance of the borrower’s family members, and often it meant taking into account income that the client had earned but not declared to tax authorities. Sometimes, he said, he simply took into account what the borrower was currently paying in rent – if it was more than the service payments on the loan, he was confident they wouldn't default. Mr. Chaudhary claimed that he never considered that a borrower's funds came from illegal activity.

The Realtors and Mortgage Brokers Who Assisted Mr. Chaudhary

Mr. Chaudhary could not have carried on his unlicensed activity without the active assistance of a network of professionals, both real estate licensees and mortgage brokers.

The complaints about Mr. Chaudhary’s unregistered activity were made, according to the cease-and-desist order made against him, between July 2017 and March 2018. An investigation followed, culminating in a search of premises controlled by Mr. Chaudhary in February 2019. The cease-and-desist order was issued on May 23, 2019.

Mr. Chaudhary stated in his evidence that each of the mortgage brokers who assisted him had been suspended. Notices of hearing and, in one case, a consent order issued

---

382 Ibid, p 74.
383 Exhibit 655, Cease and Desist Order.
against registered mortgage brokers are in evidence before me. These mortgage brokers are alleged to have engaged, or in some cases have admitted to engaging, in conduct prejudicial to the public interest by “fronting” for Mr. Chaudhary. One broker had her licence revoked and has agreed to never seek reinstatement in British Columbia.\(^{384}\) None are currently registered as mortgage brokers in British Columbia.\(^{384}\)

But the case is different with respect to the real estate licensees in Mr. Chaudhary’s network. I heard evidence from representatives of RECBC who confirmed they had received referrals from the predecessor to BCFSA, FICOM, with respect to 26 licensees who were connected with Mr. Chaudhary, starting in June 2019.\(^{385}\) According to a senior investigator for RECBC, 12 licensees were alleged to have arranged their own personal mortgages through Mr. Chaudhary, which raises the question of whether these licensees used Mr. Chaudhary’s services knowing that he would falsify their financial information. Seven of those 12 real estate licensees are also alleged to have referred Mr. Chaudhary’s services to their own clients.\(^{386}\)

Based on the review of the evidence conducted by RECBC, it appeared that real estate licensees who referred clients to Mr. Chaudhary had received referral fees from him.\(^{387}\)

Of the 26 real estate licensees identified by FICOM, at the time evidence was heard in February 2021, 11 were under investigation, five were awaiting referral for investigation, and 10 were “flagged in the system.” But no investigations were completed, and no disciplinary proceedings had been commenced.\(^{388}\) This is despite the fact that, on review of the referral, RECBC determined that the allegations were credible and that it takes the view that knowing referring clients to an unregistered mortgage broker would be contrary to the rules of conduct governing real estate licensees and a serious matter for discipline.\(^{389}\) In a subsequently tendered affidavit, a representative of BCFSA (into which RECBC was incorporated on August 1, 2021) advised that it had retained an outside investigator to assist in the investigation of the Chaudhary matters.\(^{390}\) To date, no disciplinary action has been taken. In fact, no notices of hearing have been issued against any of the individuals referred for alleged

\(^{385}\) Evidence of D. Avren, Transcript, February 17, 2021, p 9; Evidence of M. Scott, Transcript, February 25, 2021, pp 93–94; Exhibit 661, Letter from FICOM to RECBC, re Real Estate Licensees working with Jay Kanth Chaudhary (June 7, 2019): The referral was in respect of 28 individuals, but according to RECBC, it was determined that two were not licensed.

\(^{387}\) Ibid, p 100.

\(^{390}\) Exhibit 1050, Affidavit of Michael Scott, sworn September 13, 2021 [Affidavit of M. Scott], para 26.
involvement in Mr. Chaudhary’s scheme. With the exception of two individuals who voluntarily withdrew from the industry by not seeking renewal, the real estate licensees referred by FICOM to RECBC (24 real estate licensees) in connection with the Chaudhary matter remain in the industry.

RECBC witnesses explained that referrals were prioritized for investigation based on the alleged conduct of the real estate licensees, in particular, whether the behaviour related to their own personal mortgage activities. Mr. Chaudhary’s evidence was that he made alterations to mortgage applications for real estate licensees, some of whom he stated were aware of what he was doing, because he told them so. In my view, it seems more likely that a real estate licensee who personally obtained a mortgage through Mr. Chaudhary would be better positioned to (a) know Mr. Chaudhary was unregistered, (b) understand that they were financially unqualified to obtain the amount of financing they needed, and (c) know that Mr. Chaudhary had altered their financial documents. This raises serious questions about the ethics and integrity of the real estate licensees involved and their fitness to retain their licences as realtors. It also raises questions about the speed with which these allegations are being addressed.

Following the testimony given by RECBC representatives in February 2021, BCFSA provided, in writing, further context for RECBC’s complaints handling process and investigations. This evidence was provided by BCFSA because, by that time, RECBC had been incorporated into that agency. The responsibility for both real estate licensees and mortgage brokers now rests with BCFSA.

At the time the Chaudhary matters were referred to RECBC, the regulator already had an inventory of 150 matters that it had triaged “as serious and worthy of investigation.” Some of these involved allegations of a very serious nature, including fraud and dishonesty. RECBC was confronted, Mr. Scott attested, with a “variety of complex and publicly sensitive social issues such as undisclosed conflicts of interest, fraud, fake offers, and allegations of sexual misconduct by real estate licensees.”

RECBC also found itself facing a continually increasing number of complaints, caused in part by increased activity in the real estate sector and in part by RECBC’s own efforts to educate the public about its function and to create means, such an anonymous tip line, to make the process of reporting questionable conduct easier. At the same time, RECBC says it had limited resources to manage complaint volumes. Attracting

393 Ibid, pp 95–97.
395 Exhibit 1050, Affidavit of M. Scott; Exhibit 1051, Affidavit of B. Morrison.
396 Exhibit 1050, Affidavit of M. Scott, para 24.
397 Ibid, para 8.
398 Ibid, para 7.
399 Ibid, para 14.
and retaining investigators with experience in financial crimes or real estate is difficult, although from 2018 to July 31, 2021, RECBC was able to increase its staff responsible for investigations from 10 to 25.400

In March 2021, RECBC asked OSRE to conduct a review of the complaints handling processes of comparative administrative bodies.401 That report highlighted the importance of retaining skilled and knowledgeable intake and investigative staff. Doing so is critical to the success of handling complaints. I commend the initiative to undertake comparative research and, more importantly, to implement that research to improve the means by which complaints are handled and resolved.

RECBC urges me to conclude that it managed the complaints it received and allocated scarce resources appropriately, applying its expertise as a regulator of real estate professionals. It states that it was dealing with complaints that it considered to be more serious in nature than those concerning the Chaudhary-affiliated realtors.402

It is difficult, on the limited evidence available to me, to second-guess how RECBC prioritized the complaints it received. I remain concerned, however, by the fact that so many of the professionals who assisted Mr. Chaudhary, at least some of whom must have known what he was doing, even today remain licensed to provide real estate services in British Columbia. The conduct at issue is sufficiently serious that allowing it to go uninvestigated for such a lengthy period of time is unacceptable. If it is the case that RECBC was appropriately prioritizing the complaints it received based on the resources it had available to investigate complaints, then it is clear that the resources allocated were insufficient. The current unified real estate regulator, BCFSA, must be able to move with dispatch when real estate professionals are identified as being involved in fundamentally dishonest activities that create money laundering risks. Accordingly, I recommend that the Province allocate sufficient resources to BCFSA to ensure that it has the capacity to address allegations of serious misconduct in a timely way.

**Recommendation 13:** I recommend that the Province allocate sufficient resources to the British Columbia Financial Services Authority to ensure that it has the capacity to address allegations of serious misconduct in a timely way.

RECBC did not have an express anti–money laundering mandate, although it is apparent from its evidence that it was aware of the issue of money laundering through real estate and had provided education and professional development assistance to its members in this regard. The creation of an anti–money laundering mandate for BCFSA would allow for the prioritization of investigations with a fraud and possible money laundering component. The existence of a clear mandate in this regard would also, I

400 Ibid, para 13.
402 Closing submissions, Real Estate Council of British Columbia, para 14.
expect, allow BCFSA to more readily and rapidly identify matters that justify the use of extraordinary resources – as I understand RECBC had done by assigning the Chaudhary matters to an outside investigator in the summer of 2021. For these and other reasons, I recommend in Chapter 20 that BCFSA be given a clear and enduring anti-money laundering mandate.

As noted, the investigations of the real estate professionals who were alleged to have aided Mr. Chaudhary in his frauds – and to have taken advantage of those frauds financially themselves – did not demonstrate speed or effectiveness. It appears these investigations were impeded by the disjointed regulatory structure in place when the matter arose. The originating complaint about Mr. Chaudhary was made to the Registrar of Mortgage Brokers in the summer of 2017. That investigation culminated in a search of Mr. Chaudhary’s premises in February 2019, followed by a cease-and-desist order against him in May 2019. Notices of hearing against implicated registered mortgage brokers followed in relatively rapid succession. By contrast, a referral of the allegedly implicated realtors to RECBC did not occur until June 2019. Had the regulators of both professions (real estate licensees and mortgage brokers) been operating under one roof, as they are now, it is possible that the investigations could have played out in parallel, at speed. Because the functions of the Registrar, OSRE, and RECBC are now all executed by BCFSA, it is unnecessary for me to offer a recommendation to remedy the historic lack of coordination that arose from the disjointed regulatory landscape. BCFSA has given evidence that it is prioritizing the development of a common market conduct framework to respond to regulatory risks, and the Chaudhary matter is an illustration of why such a coordinated response is a welcome and necessary improvement.

Mr. Chaudhary’s case illustrates the money laundering risk that can arise when an unscrupulous actor engages in mortgage brokering (registered or unregistered). Another instance about which I heard evidence makes a much more direct link between mortgage brokering activity and the laundering of the proceeds of crime.

Case Study: Suspicious Mortgages

The Commission heard evidence from witnesses who had a role in investigating certain transactions involving a registered mortgage broker. I should note that this individual was given notice of the evidence that would be led, and he did not take any position or participate in these proceedings. Out of fairness to him, I will also note at the outset that the investigations and findings described below resulted in neither criminal charges nor professional disciplinary action against him.

403 Exhibit 1050, Affidavit of M. Scott, para 26.
404 Exhibit 1051, Affidavit of B. Morrison, paras 8–10.
This matter came to the attention of the Registrar of Mortgage Brokers in 2012, following a police search of premises in which an acquaintance of Grant Curtis, a registered mortgage broker, resided. The search was in relation to an investigation unrelated to mortgage brokering. At the residence, police found a number of documents about arranging mortgages. Mr. Curtis's name appeared on these documents. The documents were referred to the Registrar (which at the time sat within FICOM) and the matter was assigned to Michael McTavish, then an investigator with the Registrar.405

On review of transactions processed by Mr. Curtis, Mr. McTavish noted recurring and unusual circumstances. For instance, several of the borrowers had connections with criminal activity. The mortgage broker himself was new to the business but was doing a high volume of mortgage transactions. This by itself was not suspicious, but in connection with the apparent criminal associations of many of the borrowers, and other unusual features of the transactions, it raised concerns. Indeed, the concerns were serious enough that the file was referred to the RCMP on the hypothesis that some of the mortgage transactions may have been used to facilitate organized criminal activities.406

The unusual features noted by Mr. McTavish in his review included:

- several borrowers with apparent criminal associations;
- tenancy agreements completed prior to purchase and with unconventional commencing / ending dates or rental periods (e.g., for a year and a day rather than a year);
- tenants with no evident connection to the property (e.g., an ICBC search did not connect the tenant to the property purportedly being rented);
- the property was later sold within a short period of time, with little or no capital gain on the sale;
- self-employed borrowers with vague descriptions of business activities and little to no corroborating presence on the internet or in corporate registries;
- inconsistencies on tax documents provided to support borrowers’ incomes, such as different font sizes and styles;
- very short closing dates;

• reported assets at odds with the ages and reported incomes of the borrowers;
• significant amounts of cash reported to be sitting in savings or chequing accounts;
• borrowers with multiple properties and high property turnover rates;
• the presence of an intermediary referral source on many of the transactions; and
• gifted down payments from sources with no clear relationship to the borrower. 407

The review conducted by Mr. McTavish led him to conclude that it would be difficult to make out misconduct on the part of the mortgage broker within the scope of the regulator’s authority, and that, even if misconduct were made out, it would not be sufficient to revoke the broker’s registration. 408 In Mr. McTavish’s view, there was insufficient adducible evidence on the connections between the broker and the borrowers, and the borrowers’ criminal connections, for the Registrar to take regulatory action. 409 Based on the issues he noted in his review, Mr. McTavish determined that what he was seeing was likely a criminal rather than a regulatory matter. He referred it to the RCMP. 410

The Commission heard from Corporal Karen Best of the RCMP, who was assigned to the investigation of Mr. Curtis and those associated with him in August 2013. At the time, Corporal Best was in the RCMP’s Federal Serious and Organized Crime (FSOC) unit. In September 2014, her unit was merged with two other units and its focus shifted from financial investigations to drug investigations. 411 After the structural change, she was directed to focus on drug-related investigations, but she carried on to summarize her findings of the Curtis matter as and when she could. 412 Corporal Best completed what she characterized as a summation of her findings in the spring of 2016. 413

Corporal Best was able to add to the information available to FICOM with police sources, including background information on connections.

409 Evidence of M. McTavish, Transcript, February 22, 2021, p 144.
410 Ibid, pp 129, 143.
413 Ibid, p 25.
that Mr. Curtis and his referral source had with a self-professed money launderer, Sulaiman Safi. From the RCMP Integrated Market Enforcement Team, she was able to learn that “a significant number” of the properties brokered by Mr. Curtis were suspected or documented marijuana grow operations. Mr. Curtis’s referral source was also discovered to be the subject of a number of criminal fraud investigations.

The intelligence supported the theory that what was being observed was mortgage fraud in furtherance of a money laundering scheme. Two common purposes of mortgage fraud can be identified: that of the fraudster, who simply wants to abscond with the funds once the loan is advanced, and that of the money launderer, whose objective is to make payments on the mortgage and thereby integrate funds that are the proceeds of crime into the legitimate economy. Corporal Best concluded that, while the transactions reviewed displayed indicators of money laundering, it would be difficult to establish the source of funds in order to prove an offence. The report concluded:

The probe conducted by FSOC indicates that organized crime groups in the Lower Mainland may have been using secondary mortgage financing in order to launder funds and that this practice may still be occurring.

The report prepared by Corporal Best was forwarded to her direct supervisor in March 2016, and it was sent on to the head of FSOC’s Financial Integrity Unit some six months later. Shortly thereafter, she was informed that the report was being forwarded to an analyst for intelligence purposes, but that the file was closed. No further investigation of the matter was undertaken.

The subject mortgage broker, it appears from other evidence before me, carried on his activities as a registered mortgage broker until at least May 2019, when he was the subject of a notice of hearing by the Registrar. That notice of hearing, which to my knowledge has not been resolved, alleges that Mr. Curtis engaged in “fronting” for another individual.

419 Ibid, pp 68–69; Exhibit 652, Affidavit #1 of K. Best, exhibit B, p 116.
420 Exhibit 652, Affidavit #1 of K. Best, exhibit B, p 116.
Regulatory Issues and Legislative Gaps

The two case studies above illustrate regulatory and operational issues with real estate professionals, as well as vulnerabilities to fraud and money laundering within that industry. I also heard from witnesses on both the regulatory side and the industry side of mortgage brokering as to their perceptions of the weaknesses in the current regime. They agreed that the current legislation, which is under review, is outdated and fails to address the realities of the industry today. They also identified significant regulatory and legislative gaps preventing effective oversight of the profession. These gaps contribute to the vulnerability of the sector to money laundering. In this section, I consider specific gaps and vulnerabilities in the regulation of mortgage brokering and make recommendations to address these vulnerabilities.

The context for the discussion below is that the regulation of the industry is in a state of transition in British Columbia. The Mortgage Brokers Act, enacted in 1972, is under review. The Ministry of Finance has undertaken a public consultation in that regard. BCFSA has recently undergone structural changes such that it now has oversight of a broader spectrum of actors in the real estate industry. Not only mortgage brokers, but now also real estate licensees and developers, will be regulated by BCFSA. As Mr. Morrison, chief executive officer of BCFSA testified, this integration will allow the regulator to look at the real estate sector at large as a “holistic integrated regulator.” My observations below should be understood in the context of this ongoing change.

Confusion About Activity Requiring Registration

As I noted above, the very definition of “mortgage brokering” in the MBA is confusing. It is not aligned with the activities that give rise to the obligation to be registered. This could lead to unregistered persons unknowingly engaging in activities that are supposed to be performed only by registered persons. Furthermore, the situation leaves open a gap for unregistered persons to engage in activities that ought to be restricted to registered persons. Mr. Carter, Deputy Registrar of Mortgage Brokers, explained:

[T]he Act defines mortgage brokers in a number of different ways, and the definitions can be challenging to administer. I’ll give you just one example of that and it relates to private lending. So there is one section that says essentially you qualify for registration if you are carrying on the business of lending money secured by mortgages. There’s then another section in the same section of the legislation that talks about being required to be registered if you, in any given year, lend on the security of more than ten mortgages. What that creates is a bit of an interpretation challenge, and what I mean by that is it’s conceivable that you’re in the business of lending money on the secured on less than ten mortgages. Carrying on a

---

423 See, for example, Evidence of C. Carter, Transcript, February 16, 2021, p 33.
424 Ibid, pp 41–42.
business depends on a whole range of different legal indicia, and the two requirements, the two triggers, the two aspects of the definition are not helpful when it comes to administering the legislation.427

I agree. I have concluded that mortgage brokering activities are vulnerable to money laundering. To manage this risk, it is critical for the regulator to (a) know who is engaging in mortgage brokering in the province, and (b) ensure that those people are adequately screened, qualified, and overseen by the regulator. I recommend that the Province amend the *Mortgage Brokers Act* definition of “mortgage broker” to harmonize it with the requirement for registration.428 At a minimum, the act of loan origination, and the ability to earn fees from such activity, should be activities that are restricted to registered mortgage brokers.

**Recommendation 14:** I recommend that the Province amend the *Mortgage Brokers Act* definition of “mortgage broker” to harmonize it with the requirement for registration.

**Information Available to the Registrar on Applications for Registration**

The investigative summary prepared by Corporal Best is an exhibit before the Commission.429 The summary includes information that Corporal Best obtained from police sources that were not available to the Registrar when it considered Mr. Curtis’s application for registration. For example, the summary relays details of Mr. Curtis’s association with three police investigations, including a suspected stock market fraud, an extortion matter, and cannabis cultivation.430 The RCMP also had access to a report from FINTRAC detailing certain suspicious transactions Mr. Curtis had been involved with, which led a FINTRAC analyst to conclude that some transactions engaged in by Mr. Curtis (unrelated to his mortgage brokering) were “consistent with money laundering.”431 Some of these matters pre-dated Mr. Curtis’s registration in 2008. Mr. Curtis was not charged in relation to any of these matters.

It seems likely to me that some of the information available to the RCMP, but not available to the Registrar, would have been highly relevant to the Registrar’s consideration of Mr. Curtis’s licensing application. The Registrar requires a prospective registrant to provide a certified criminal record check, which will disclose convictions and outstanding criminal charges. At the very least, the Registrar would benefit from an extended criminal background check that flags connections to organized crime and

---

427 Ibid, pp 40–41.
429 Exhibit 652, Affidavit #1 of K. Best, exhibit B.
charges relating to financial crimes or fraud in making a determination of a person's suitability for registration. Given what I have concluded is the vulnerability of mortgage brokering to fraud, which in turn may enable money laundering, it is important for the Registrar to have access to this type of information. The Registrar already requires that applicants for registration disclose such charges, but the criminal record check that is required discloses only convictions and outstanding charges.\textsuperscript{432} I recommend that the Registrar make a requirement that applicants for registration provide an extended criminal and police background check, showing not only convictions and outstanding charges but also past charges relating to financial misconduct, as well as police database information about the person. To the extent that any changes are required to the \textit{Criminal Records Review Act}, RSBC 1996 c 86, to effect this change, I recommend that the Province undertake those amendments.

\begin{quote}
\textbf{Recommendation 15:} I recommend that the Registrar of Mortgage Brokers make it a requirement that applicants for registration provide an extended criminal and police background check, showing not only convictions and outstanding charges but also past charges relating to financial misconduct, as well as police database information about the person.
\end{quote}

\section*{Information Available in Respect of a Submortgage Broker's Activities}

Mr. McTavish testified that he obtained the files respecting loans originated by Mr. Curtis from one of the lenders under provincial jurisdiction (itself registered under the Act). From Mr. McTavish's written report, it is apparent that this was done in order to avoid alerting those involved about the investigation.\textsuperscript{433} It is understandable that, at times, the Registrar will be concerned about alerting a brokerage or a submortgage broker about an ongoing investigation by demanding documents directly from the brokerage. This could tip someone off and result in the loss of evidence.

The Registrar's access to information about the activities of mortgage brokers and the transactions they have been involved in is limited. I heard, for instance, that the \textit{MBA} does not allow the Registrar to summon documents directly from a federally regulated bank.\textsuperscript{434} The \textit{MBA} currently authorizes the Registrar to summon and enforce the attendance of witnesses and compel them to give evidence on oath, and to produce records or property, similar to the power of a court in the trial of a civil action. Failure to attend or refusal to produce make a person liable for contempt. However, the \textit{MBA} goes on to exempt “a bank or an officer or employee of a bank” from the operation of

\begin{footnotesize}
\textsuperscript{432} Financial Institutions Commission, Information Bulletin MB 11-002, “Individual Registration Applications Suitability Reviews and Criminal Record Checks” (May 2011), online: https://www.bcfsa.ca/media/1535/download.

\textsuperscript{433} Exhibit 650, FICOM Investigative Services: Grant Brian Curtis, Review of Sample of Mortgage Transactions, p 2.

\textsuperscript{434} Evidence of C. Carter, February 16, 2021 p 89.
\end{footnotesize}
these provisions.\textsuperscript{435} It is difficult to reconcile this exemption with the effective regulation of mortgage brokers who conduct business extensively with banks. This carve-out may reflect a cautious approach to jurisdiction, but, if so, it seems to me to be excessively cautious. I urge the provincial government to revisit the carve-out of banks and their employees from the Registrar’s powers of compulsion while the provincial Ministry of Finance conducts its review and modernization of the MBA.

A lack of information was identified by both the regulator and Samantha Gale, chief executive officer of the Canadian Mortgage Brokers Association – British Columbia (CMBA-BC), as a gap in the ability to understand and therefore adequately oversee what is happening in the industry.\textsuperscript{436} In Ontario, Ms. Gale said in her testimony, brokerages submit an annual report to the regulator. That annual report gives the total number and dollar value of mortgages brokered in the prior year.\textsuperscript{437} This is sometimes described as an “annual information return.” The Financial Services Regulatory Authority of Ontario (FSRA) uses such information “to assist FSRA in its risk assessment and oversight of mortgage brokerages and administrators.”\textsuperscript{438} No similar requirement exists in British Columbia. Mr. Carter said that such information would provide the regulator with a window into the systemic risks within the system and in the sector.\textsuperscript{439} Lack of insight into industry trends can hamper the regulator’s ability to understand where risks arise, and then to target resources appropriately. The Province’s Mortgage Brokers Act Review Public Consultation Paper proposes and supports the modernization to be gained with an annual information return.\textsuperscript{440} I agree. I recommend that, in its revision of the MBA, the Province include a requirement that brokerages submit annual information returns to give the Registrar better insight into industry trends and risks.

\textbf{Recommendation 16:} I recommend that, in its revision of the \textit{Mortgage Brokers Act}, the Province include a requirement that brokerages submit annual information returns to give the Registrar of Mortgage Brokers better insight into industry trends and risks.

Another example of an information gap is a lack of a quick and direct means for the Registrar to see all of the transactions that a mortgage broker has facilitated. There is no registry of mortgage brokerage transactions, nor are mortgage brokers noted on mortgage documents filed with the Land Title and Survey Authority. In order to review a sub-broker’s transactions, the Registrar must obtain the transaction information from either the brokerage itself – which might alert the sub-broker of the Registrar’s interest

\textsuperscript{435} MBA, ss 6(3), (4), (5).
\textsuperscript{436} Evidence of S. Gale, Transcript, February 22, 2021, pp 35–36.
\textsuperscript{437} Ibid.
\textsuperscript{438} Financial Services Regulatory Authority of Ontario, “Annual Information Returns,” online: https://www.fsrao.ca/industry/mortgage-brokering/annual-information-returns.
\textsuperscript{440} MBA Review Consultation, p 17.
– or from lenders who fall within the Registrar’s jurisdiction. Discovering the extent of a broker’s origination activity is difficult. This is problematic, because some of the red flags of fraud and money laundering involving mortgage brokers only become apparent or rise to a level of significance when viewed in the context of a number of transactions.

As earlier noted, there is no authority on the part of BCFSA to seek records from banks. Mr. McTavish, speaking from his experience with investigations at the Registrar, identified that type of information as being useful in identifying fronting activities.441

In Chapter 18, I recommend the inclusion of information about the identity of mortgage brokers and other real estate professionals involved in a real estate transaction in Land Title and Survey Authority filings. This information, if organized in data fields and searchable, would provide the Registrar with easily accessible, complete information about a broker’s transactions.

Rule-Making Capacity

Mr. Morrison pointed to a number of changes in the powers and structure of BCFSA that give it an advantage over its predecessor, FICOM. One of those changes is the ability to make rules.442 That power, however, does not yet extend to mortgage brokers. Such a power in respect of mortgage brokers would allow the Registrar to respond more nimbly to issues and market conditions as they arise.443 I recommend that the Province give BCFSA rule-making authority in respect of mortgage brokers.

Recommendation 17: I recommend that the Province give the British Columbia Financial Services Authority rule-making authority in respect of mortgage brokers.

No Managing Broker Role

One feature of modern mortgage broker legislation that is missing from the current British Columbia legislation is the role of a managing broker, described by Mr. Carter as “a locus of accountability for oversight and regulatory compliance within a brokerage.”444 Ms. Gale, for CMBA-BC, identified this as the most significant gap in the legislation.445 At the moment, this role is assumed by a “designated individual,” a policy creation of the Registrar.446 However, there is no separate licensing category in the legislation for such a person, and there is no enhanced educational or training requirement (as contrasted

444 Evidence of C. Carter, Transcript, February 16, 2021, p 34.
446 Exhibit 603, Overview Report: Legislative and Regulatory Structure of Real Estate in British Columbia, pp 40–41.
with the managing broker of a real estate brokerage). Given this observation made by Ms. Gale (which I accept) that effective supervision and oversight of sub-brokers is critical to detecting and preventing mortgage fraud, I conclude that it is important that the managing broker’s responsibilities and training requirements be clearly defined. I recommend that the Province amend the MBA to create a managing broker role with clearly defined responsibilities.

**Recommendation 18:** I recommend that the Province amend the *Mortgage Brokers Act* to create a managing broker role with clearly defined responsibilities.

It is apparent from the case studies above that submortgage brokers are well positioned to observe fraudulent activity and should receive clear guidance from the Registrar about what fraud looks like, as well as when and where to report it. Mortgage brokers should also receive guidance through education from the regulator and industry about when to report suspicious activity to their managing brokers. And managing brokers should receive guidance as to when to report suspicions to an appropriate authority. They should report to BCFSA who can provide access to the AML Commissioner upon request or, in appropriate circumstances, refer the matter to the dedicated provincial money laundering intelligence and investigations unit.

I support the Registrar providing guidance by articulating a threshold of suspicion at which a mortgage broker ought to be withdrawing from a proposed transaction. I recommend that the Registrar require education for both managing brokers and sub-brokers, focusing on the detection and reporting of fraud and money laundering in the industry.

**Recommendation 19:** I recommend that the Registrar of Mortgage Brokers require education for both managing brokers and sub-brokers, focusing on the detection and reporting of fraud and money laundering in the industry.

**Enforcement and Inadequacy of Penalties**

The evidence with respect to Mr. Chaudhary indicated very clearly that unregistered brokers cannot successfully operate without the complicity of other professionals, whether those professionals are the registered brokers “fronting” for the unregistered

---

448 I recommend the creation of the AML Commissioner in Chapter 8 of this Report, and in Chapter 41, I recommend that the Province create a new provincial money laundering intelligence and investigation unit.
449 I understand that CMBA-BC and BCFSA are currently coordinating to create an anti-money laundering course to educate submortgage brokers, which I support. It is likely that such a course can provide a foundation for education to managing brokers: see Evidence of S. Gale, Transcript, February 22, 2021, p 68; Exhibit 647, CMBA-BC Anti-Money Laundering Course Module.
broker or real estate licensees referring clients. Mr. Chaudhary’s evidence also made it clear why these networks are difficult to disrupt: they are very profitable for everyone involved. The risk / reward calculus for professionals who knowingly engage in such schemes must change.

The financial penalties available to the Registrar are a starting point. At present, the maximum penalty available in administrative proceedings against a mortgage broker is $50,000. This is an inadequate deterrent. It fails to match the potential profitability of unregistered or fraudulent activity.\footnote{Evidence of C. Carter, Transcript, February 16, 2021, p 44.} This is stark in the case of Mr. Chaudhary, who, according to the cease-and-desist order made against him, amassed nearly $6 million in fees over the course of nearly a decade of unregistered brokering activities.\footnote{Evidence of M. McTavish, Transcript, February 22, 2021, p 122.} The availability of enhanced financial penalties, and an order of disgorgement of profits, together with the tools to enforce it, would provide a more meaningful consequence and a deterrent to unregistered brokering. Both Ms. Gale and Mr. McTavish expressed the view that the current regulatory scheme provides the Registrar inadequate tools to deal with unregistered brokers. Making available more significant penalties and the disgorgement of illicit profits would start to address that gap.\footnote{Evidence of S. Gale, Transcript, February 22, 2021, pp 63–64; Evidence of M. McTavish, Transcript, February 22, 2021, pp 97–99.} I recommend that the Province amend the \textit{MBA} to allow for larger financial penalties, up to $250,000, to align with penalties available under the \textit{Real Estate Services Act}, SBC 2004, c 42 (\textit{RESA}).

\textbf{Recommendation 20:} I recommend that the Province amend the \textit{Mortgage Brokers Act} to allow for larger financial penalties, up to $250,000, to align with penalties available under the \textit{Real Estate Services Act}.

In addition to providing for larger deterrent penalties, I endorse the use of orders for the disgorgement of profits outlined above. I recommend that the Province amend the \textit{MBA} to give the Registrar the power to make an order of disgorgement of profits for registered mortgage brokers found to have engaged in misconduct and for unregistered persons engaged in mortgage brokering activities.

\textbf{Recommendation 21:} I recommend that the Province amend the \textit{Mortgage Brokers Act} to give the Registrar of Mortgage Brokers the power to make an order of disgorgement of profits for registered mortgage brokers found to have engaged in misconduct and for unregistered persons engaged in mortgage brokering activities.

Witnesses spoke of the need for a cultural shift to a mindset of compliance in the industry. I agree. Part of that shift may be achieved by education and training requirements. However, professionals in the real estate industry should have a positive
obligation, set out in the legislation, to report unregistered mortgage brokering, falsification of documents, and other indicia of suspicious activity to the regulator.\textsuperscript{453} The regulator can impress on the profession the seriousness of failing to report by imposing appropriately serious consequences, including suspension and loss of licence or registration. In an industry where the financial incentives are oriented toward obtaining financing and closing a deal, the risk / reward calculation of participating in or turning a blind eye to abuses must be adjusted by the deterrents available and by diligence on the part of the regulator to use them. My comments in this regard apply equally to registered mortgage brokers and real estate licensees. I recommend that BCFSA impose a positive obligation on real estate licensees to report suspected unregistered mortgage brokering to it.

\textbf{Recommendation 22:} I recommend that the British Columbia Financial Services Authority impose a positive obligation on real estate licensees to report suspected unregistered mortgage brokering to it.

There are other legislative measures that might, incidentally, address some of the fraud and money laundering risks identified in this Report by imposing express conduct requirements on brokers. Those include the imposition of a legislated duty to act in the best interests of a client or investor; to act fairly, honestly and in good faith; and to fulfill “know your client” or client identification obligations.\textsuperscript{454} Such measures would be useful both for setting clear expectations of conduct and for detecting suspicious indicators associated with some forms of money laundering. For instance, the use of a nominee may become apparent when a broker fulfills their client identification obligations. I understand that some of these amendments to the legislation are being considered already\textsuperscript{455} and I urge their adoption.\textsuperscript{456}

I noted earlier in this chapter the recent amendments to RESA that eliminated an automatic stay of a disciplinary order where a licensee files an appeal of an order of the Registrar to the Financial Services Tribunal. I mentioned there that such a stay provision remains in force in the MBA.\textsuperscript{457} In my view, there was good reason to eliminate this provision from RESA, and there is good reason to eliminate it in the MBA and to ensure that it is not recreated in any new legislation replacing the MBA.

\begin{flushright}
453 Evidence of M. McTavish, Transcript, February 22, 2021, p 158. An issue identified with respect to real estate licensees and the obligation to report was that the reporting requirement was limited to advising the managing broker, with no further requirement on that individual to report on to the regulator: see Evidence of E. Seeley, Transcript February 17, 2021, p 3.

454 Evidence of C. Carter, Transcript, February 16, 2021, pp 43–44.

455 MBA Review Consultation, pp 9–10, 11, 15; Exhibit 605, Overview Report: Mortgage Brokers Act Consultation.

456 The review referenced in the footnote above acknowledges that a conflict may arise between the duty of loyalty to a lender and to a borrower. The Ministry of Finance is best positioned to navigate this potential conflict as it proceeds with its review of the MBA and its eventual replacement.

457 MBA, s 9(2).
\end{flushright}
Recommendation 23: I recommend that the Province amend the Mortgage Brokers Act to eliminate the automatic stay pending appeal found in section 9(2) of the Act.

There is an overarching need for professionalization of the mortgage brokers industry. I am hopeful that the reforms I have supported will go a good distance toward accomplishing this.

Engagement of Law Enforcement

The Curtis and Chaudhary matters both highlight a problem of successfully attracting the attention of law enforcement to financial crimes arising in a regulatory setting. As demonstrated in each of these cases, there is a limit to the authority of the Registrar, as well as its capacity and ability, to investigate and address conduct that appeared, on its face, to be criminal in nature. It is acknowledged in the literature, and supported by the evidence before me, that the laundering of proceeds of crime into and through real estate is a prevalent and desired method of money laundering.

Money laundering in real estate cannot be achieved without the assistance – sometimes knowing – of regulated professionals. Regulators in the real estate sector must be armed with the ability to detect money laundering and fraud. Just as important, they must have a law enforcement agency to which they can effectively direct information when they perceive that a matter may involve criminality. A provincial law enforcement agency with a clear anti-money laundering mandate could take up such investigations at the point where regulatory jurisdiction, mandate, and/or capacity ends.

In Chapter 41, I recommend the creation of a provincial law enforcement intelligence and investigation unit with a focus on proceeds of crime and money laundering. The effectiveness of such a body will depend, in part, on strong relationships with provincial regulators in the financial sector, including real estate. The effective sharing of information and insights will permit the identification of money laundering vulnerabilities within each regulator’s area of responsibility. As such, I recommend that BCFSA work with the new dedicated provincial money laundering intelligence and investigation unit to develop an information-sharing partnership.

Recommendation 24: I recommend that the British Columbia Financial Services Authority work with the new dedicated provincial money laundering intelligence and investigation unit to develop an information-sharing partnership.

Incorporating Mortgage Brokers as Reporting Entities in the PCMLTFA

Finally, the Maloney Report and the German report (Dirty Money 2) both recommended that mortgage brokers be made reporting entities pursuant to the
The evidence I have heard regarding the role of mortgage brokers in real estate transactions, their direct knowledge of a client’s financial circumstances, and their ability to observe suspicious behaviours first-hand, compel me to support this recommendation and to repeat it here. Mortgage brokers would be useful reporting entities under the PCMLTFA, both in terms of information that mortgage brokers can provide about suspicious transactions, and with respect to the training, record-keeping, and education that FINTRAC oversight would entail. I recommend that the provincial Minister of Finance urge her federal counterpart to make mortgage brokers reporting entities under the PCMLTFA.

**Recommendation 25:** I recommend that the provincial Minister of Finance urge her federal counterpart to make mortgage brokers reporting entities under the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act.*

### Mortgage Brokers and Indicators of Suspicion for Fraud and Money Laundering

As set out, I heard evidence about actual or suspected fraudulent transactions involving mortgage brokers. I find that transactions of this nature carry with them at least a risk of money laundering. As such, I flag the following indicators of suspicion. I expect this list of indicators may assist relevant industry actors – such as lenders, real estate licensees, and mortgage brokers – in identifying transactions that carry such a risk. This will further their understanding as to when a report ought to be made to the regulator, or when a mortgage broker ought to withdraw from a transaction entirely.

- **Altered documents:** alterations are generally made for the purpose of inflating declared income and assets. Indicators of alteration include inconsistent font types and sizes; typos; the use of incorrect or outdated names for government agencies (e.g., “Canada Customs and Revenue Agency” instead of Canada Revenue Agency”); and mathematical inconsistencies in tax documents.

- **Declared assets and income that are inconsistent with the age and occupation of the borrower:** whereas there may be legitimate instances where a younger borrower has significant assets, this may be an indicator that declared assets have been inflated.

- **Unusual assets for the borrower profile:** there may be legitimate reasons for a younger or lower income borrower to have a luxury asset such as a boat, but this is one factor that may contribute to an overall assessment of suspicion.

- **Assets that are sitting in unproductive accounts:** bank statements showing large amounts of liquid assets sitting in low-interest chequing or savings accounts. This

---

may indicate either a falsified bank balance, or a recent transfer of funds that requires inquiry as to origin.

- **Gifts from unconnected sources**: the gifting of funds from family members may not be unusual to assist borrowers make a down payment, particularly on the purchase of a first home. However, gifts from unrelated persons or business associates are more unusual.

- **Unusual tenancy agreements**: the existence of a tenancy agreement for the subject property between the borrower and a tenant, before closing or before funding has been secured, may indicate a false tenancy agreement drafted in order to show a source of income. Other odd features of the agreement, such as unusual length of term (a year plus a day instead of a year), or renters whose existence cannot be confirmed by internet searches, may give rise to suspicion. After the fact, the inability to connect a supposed tenant with the property at issue (by internet search, ICBC records, etc.) may be an indicator that the tenancy agreement was a sham.

- **Borrower gives vague description of self-employment, or is evasive as to the nature of their business.**

- **Borrower reports being self-employed but the business has little or no footprint**: the business from which the borrower claims to derive income has little or no internet footprint, gives only a PO box as an address, or cannot be located on the BC or Canada companies’ registry.

- **Borrower has known or reported criminal affiliations**: a person with a criminal past may legitimately purchase property and seek financing for such a purchase. However, the existence of criminal affiliations, along with other indicators, may create suspicion.

- **Borrower owns multiple properties with a high turnover rate.**

- **Short closing dates.**

- **Improbable success**: the mortgage broker gives assurances that they can successfully secure financing for the borrower where others have failed.

- **Requesting referral or other fees for assisting a borrower in acquiring financing**: mortgage brokers are typically compensated by lenders when a transaction is successful. Observing compensation made by the borrower may signal something is amiss.
It was apparent from the evidence before me that certain patterns indicative of suspicion may only become apparent on review of a particular broker's practice, or of a number of transactions in which a particular mortgage broker was involved. Such patterns include:

- Sudden or unexplained jumps in income by a submortgage broker, which may be an indication that a broker is “fronting” for an unregistered person.
- Several borrowers have criminal histories or reported criminal affiliations.
- Multiple properties were resold quickly.
- Properties that are the subject of a submortgage broker's transactions are often later found to be grow-ops or otherwise associated with criminal activity.
- Inability to confirm income or asset information by one or more borrowers who obtained a mortgage through the submortgage broker.
- Repetition of one or more of the suspicious indicators listed above in the submortgage broker’s portfolio. Indicators that seem normal or explicable in individual instances may become improbable or suspicious when repeated.
- Unusual referral sources, such as repeated referrals from persons outside the real estate industry or from persons with criminal histories and affiliations.
Appendix 16A: Suspicious Indicators for Real Estate, by Transaction Phase

Below, I have rearranged the indicators in FINTRAC’s 2016 operational brief and 2019 update so that the indicators are organized according to transaction phase. I hope this reorganization is of some practical assistance to real estate licensees in identifying suspicious transactions as they move through the client relationship.

For Property / Strata Managers:

1. Client is known to have paid large remodelling or home improvement invoices with cash, on a property for which property management services are provided.

Initial Contact / Listing Contract

Individuals:

1. When you ask for identification information (e.g. name, address, email, phone number, or birthday), the client:
   a. refuses or tries to avoid providing it;
   b. provides info that is misleading, vague, or incorrect;
   c. provides different information for different transactions;
   d. balks, and alters the transaction;
   e. appears to be collaborating with others to avoid providing ID info; or
   f. provides only a PO box or gatekeeper’s address, or disguises a post office box as a civic address.

2. You receive identification documents from the client, but:
   a. the documents seem incorrect, counterfeited or false; or
   b. you have difficulty authenticating the client’s identity documents.

3. Client appears to be collaborating with others to avoid providing identification.

4. You do not meet the client; your contact is a “gatekeeper” or agent for the client such as a lawyer, notary, accountant, or other.

5. You notice that multiple clients / parties to past transactions use the same mail or email addresses, phone numbers, or other identifiers, even though these parties do not appear to be related.

6. On a Google search, you notice that your client’s name was identified by the media, law enforcement, and/or intelligence agencies as being linked to criminal activities.
7. Client is a citizen of (not just appears ethnically connected to) or currently residing in a country listed on a watchlist (e.g., countries under financial prohibition provisions, including Belarus, Eritrea, Iran, Libya, Nicaragua, North Korea, People’s Republic of China, Russia, South Sudan, Syria, Ukraine (linked to Russia’s ongoing violations of Ukraine’s sovereignty and territorial integrity), Venezuela, Yemen, and Zimbabwe).459

Companies or entities:

1. Company seems to have no business operations (is a shell company).
2. Company has a very complex ownership structure.
3. Company seeks to purchase property unrelated to its business (e.g., a graphic designer company seeking to purchase a warehouse).
4. Company is resident in or operating out of a country on a watchlist (see above).

Reviewing Properties Together

General Information

1. Client seems nervous.
2. Client makes statements about involvement in criminal activities.
3. The client has provided you untrue information on at least one occasion.
4. The client refuses or is reluctant to provide information, gets defensive, or asks questions about avoiding FINTRAC reporting.
5. Transaction is carried out on behalf of persons who don't seem to have the necessary financial resources, including minors or incapacitated persons.

Property Details

1. Client presents confusing details about the transaction or doesn't seem to know why the property is being purchased/sold.
2. Client doesn't seem to care about price, just wants a property in a particular location or wants to complete the transaction in a big rush.

Client’s Financial Means

1. When you ask how the client will be financing the property, the client:
   a. refuses to identify a source of funds;
   b. provides info that is false, misleading, or substantially incorrect;

---

c. provides info that seems unrealistic or that cannot be supported by documents; and/or

d. appears to be living beyond their means.

2. The transaction is inconsistent with the client’s apparent occupation, financial standing, or usual pattern of activity.

3. There is a sudden change in the client’s financial profile, pattern of activity, or transactions.

Submission of Offer

Person Submitting Offer

1. Client appears to be or states they are acting on behalf of someone else.

2. Someone other than the person named on the offer conducts the majority of the transaction activity, which seems unnecessary or excessive.

3. Client uses a different name on the offer than is on the deposit you receive.

4. Client refuses to put own name on documents.

Client Unusually Disinterested

1. Size or type of transaction is atypical of what you expect from this client.

2. You notice suspicious features of the transaction and the client refuses or is unable to answer questions related to the transaction.

3. Client purchases property without viewing it.

4. Client seeks to complete the transaction quickly without good cause.

5. Client puts in offer without expressing interest in:
   a. property characteristics;
   b. property risks;
   c. price; or
   d. commissions.

6. Client offers unusually high bid relative to current value / industry standard.
Transacting Parties

1. Client buys back a property that he or she recently sold.

2. You notice the same property has changed ownership multiple times in a short period of time, especially if transferred between related parties.

3. A property is resold shortly after purchase at a much different price, even though the market values in the area haven't changed that much.

4. On a Google search, you notice that the other party to the sale (not your client) was identified by the media, law enforcement, and/or intelligence agencies as being linked to criminal activities.

Accepting Deposit

1. Client seems to be aware of FINTRAC's requirements for reporting, and seeks to avoid causing you to report.

2. Client asks you how to sell property below market value but with an additional “under the table” payment.

3. Client seeks to pay deposit:
   a. in cash;
   b. using a payment form that is unusual for that client;
   c. with virtual currency like bitcoin;
   d. in multiple transfers of $10,000 or less;
   e. by way of a series of complicated transfers, more complex than necessary;
   f. with a cheque or bank draft from a third party that isn't a spouse or parent; or
   g. of an unusually high amount;

4. Client uses multiple accounts at several financial institutions for no apparent reason.

5. While conducting the transaction, the client is accompanied, overseen, or directed by someone else.

6. You suspect the client is using personal funds for business purposes, or vice-versa.

7. The company that pays the deposit appears to be a shell company (i.e. appears to have no business operations).

8. Funds appear to come from a jurisdiction on a watchlist, or from a person/entity resident in or operating out of a jurisdiction on a watchlist.
Closing of Transaction

1. The client defaults on the transaction shortly after paying the deposit, and/or seems not to care about losing the deposit.

2. At the last minute, the client wishes to switch the name in the contract.

3. The client purchases property in someone else’s name (not their spouse or parent).

4. Transaction involves a person who lives in, or an entity that operates out of, a jurisdiction on a watchlist.

5. When you ask about the financing of the transaction, you learn the buyer has a loan / financing from:
   a. multiple unknown investors;
   b. a private lending institution (i.e. not a financial institution);
   c. a company that has no relationship to the client; or
   d. a company operating outside of Canada.

Post-Closing

1. Buyer of income-generating property shows no interest in generating profit by renting out vacant units or adjusting rent value to match market value.

2. You notice the property that was just sold is listed shortly afterwards, despite no appearance of any renovations.
Chapter 17
Private Lending

Money laundering risks involving mortgage lending are by no means restricted to the mortgage broker industry, the focus of the last chapter. They arise more broadly with other forms of lending involving real estate. The intergovernmental, governmental, and academic commentary are consistent in concluding that mortgages may be used as a tool for laundering money through real estate. In this chapter, I examine how private lending can be used to launder proceeds of crime in British Columbia.

First, I provide relevant background information and describe money laundering typologies involving mortgages. I then outline the regulation and legislation applicable to mortgage lending, and types of mortgage lenders.

Second, I summarize a study, a data analysis performed for the Commission. That study, and a description of its methodology, was received into evidence as Exhibit 729. It sought to (a) estimate the size of the unregulated or unregistered mortgage lending sector in BC; (b) estimate how much capital is invested with mortgage investment corporations (MICs) in BC and the geographic origins of that capital; and (c) identify lenders that meet one of the definitions of a mortgage broker under the Mortgage Brokers Act but yet have not registered with the Registrar of Mortgage Brokers (Registrar). The report also assessed data quality and accessibility, particularly with respect to Land Title and Survey Authority (LTSA) data, and its impacts on a user’s ability to perceive anomalous lending activities, such as patterns of activity associated with money laundering typologies. I draw from that report to make conclusions about where money laundering vulnerabilities exist in the private lending sector.

1 Exhibit 729, Affidavit of Adam Ross, made on March 9, 2021 [Ross Affidavit], exhibit B, White Label Insights, Private Lending in British Columbia (March 9, 2021).
Third, I discuss the private lending activities of Paul Jin, which provide insights into the money laundering vulnerabilities associated with private lending.  

Finally, I conclude with a number of recommendations that will address identified money laundering vulnerabilities.

**Part 1: Background**

**Definitions**

The term “traditional lenders” – also commonly referred to as conventional lenders or financial institutions – is understood to encompass banks, credit unions, caisses populaires, loan and trust companies, and life insurers. Private lenders, on the other hand, are a diverse group encompassing all non-traditional lenders, including individuals, mortgage investment entities, and a variety of businesses, holding companies, and non-profits.

I use the term “unregulated” in this chapter to describe private lenders whose lending activity does not require them to be registered with any regulatory body. I use the term “unregistered” in this chapter for private lenders that are not registered with either the Registrar of Mortgage Brokers or the BC Securities Commission, but who meet at least one of the criteria for registration with those regulators.

**Typologies: Money Laundering Through Mortgages**

The literature – including academic literature, publications by law enforcement and financial intelligence units, and media reports – establishes mortgages as a high-risk typology for the laundering of the proceeds of crime. The typologies identified can be broadly divided into two categories: the borrowing side of the mortgage transaction (borrower typologies) and the lending side (lender typologies).

---

2 Exhibit 1052 (previously marked as EX K), Overview Report: Paul Jin Debt Enforcement Against BC Real Estate (May 13, 2021).

### Borrower Typologies

**Repayment of mortgages with proceeds of crime:** by taking out a mortgage, a criminal borrower can use legitimate (or laundered) funds to finance part of a property purchase and then repay the loan using proceeds of crime. Subsequent mortgages can be taken out using the property as collateral to launder more money. Cash proceeds of crime can be deposited with financial institutions and will not trigger an obligation to make a large cash transaction report if the deposits are under $10,000. Those funds can then be used to make mortgage payments. This typology may also be used during the layering and integration phase of money laundering, without actual cash. Early repayment and large lump sum payments can expedite the laundering process.4

**Leveraging proceeds of crime to purchase property:** in the same way that legitimate buyers can make leveraged purchases, criminal buyers can use mortgages to acquire property that they would otherwise be unable to afford (or which would draw unwanted attention if they were to acquire it outright5). In doing so, money launderers can scale up by acquiring multiple properties or higher value real estate. When properties are sold, the proceeds are used to repay mortgages and launder the deposits and down payments. In the interim, the criminal borrower can increase his equity in a property by making mortgage payments with proceeds of crime (as above), though the main objective is to launder the deposit or down payment by flipping the property.6 A 2004 study of RCMP files found that, out of 83 money laundering cases linked to real estate, 78 percent involved a mortgage that was repaid with proceeds of crime.7 Analysis done for the Dirty Money 2 report found that of 154 properties targeted by the Civil Forfeiture Office since 2006, 92 percent (142) were mortgaged.8 The analysis found that properties targeted by the Civil Forfeiture Office – which Dirty Money 2 used as a proxy for properties through which money has been laundered9 – were more likely to have multiple mortgages registered against them, with lenders repaid more quickly than average.10

---

5 Sean Hundtofte and Ville Rantala. “Anonymous Capital Flows and US Housing Markets” (University of Miami Business School Research Paper No. 18-3, 2018), pp 9–10: All-cash (i.e., unfinanced) purchases of real estate have attracted the attention of regulators and reporting entities as being at high risk for money laundering.
6 British Columbia Real Estate Association, “The Role of REALTORS® in Helping the Government Stop Money Laundering” (December 2018), online: https://www.bcrea.bc.ca/wp-content/uploads/2018-12moneylaunderinginfographic-1.pdf. The deposit for a property needs to have been already placed in the financial system in order to be used for a transaction, as payment in cash (i.e., hard currency) is no longer accepted for real estate purchases. Laundering the deposit falls within the layering / integration stages of the money laundering process.
8 Although this was the proxy employed by the authors of Dirty Money 2, I note here that the Civil Forfeiture Act, SBC 2005 c 29, also authorizes the Civil Forfeiture Office to pursue assets as instruments of crime, and that a Civil Forfeiture Office proceeding does not necessarily indicate that a property was targeted as proceeds of crime.
9 Exhibit 729, Ross Affidavit, exhibit B, pp 11–12.
**Lender Typologies**

**Lending proceeds of crime:** like legitimate capital, proceeds of crime can be loaned and secured by real estate. Loans can be registered on title as mortgages or be secured through promissory notes or contracts. They can be made directly by an individual or through a nominee or legal entity. Payments received on those loans, including any interest earned on the investments, can then be declared as legitimate income. Laundering through mortgage lending either needs to take place after the placement stage (i.e., when the money is already in the financial system) or the funds need to be used for purposes other than acquiring property, as it is difficult to buy real estate with cash in Canada.\(^{11}\) Mortgages do not only finance property purchases but can be advanced in cash to pay for renovations, building work, or expenses unrelated to real estate.\(^{12}\)

**Investing proceeds of crime with third-party lenders:** mortgage investment entities present another opportunity for laundering proceeds of crime through real estate. In this typology, a criminal would place funds with another private lender such as a mortgage investment corporation, which would lend against real estate. In this type of arrangement, the criminal would not be involved in originating loans or collecting on debts. It is a passive investment generating returns that can be reported as legitimate income. Institutional private lenders that raise outside capital are regulated and subject to statutory anti-money laundering obligations such as “know-your-client” due diligence. As such, proceeds of crime would generally need to be placed with a financial institution before being invested with a mortgage investment entity, and the investor would be subject to some scrutiny. Nonetheless, this typology would afford the prospective money launderer with a means of putting illicit income into real estate, while also generating income in apparently legitimate funds.\(^{13}\)

**The Loan-Back Scheme**

Lending and borrowing typologies can be bridged in what is known as a “loan-back” scheme, whereby a criminal borrows and repays his own funds.\(^{14}\) This method typically involves the use of a corporate entity acting as the lender, which is ultimately controlled by the borrower. The corporate entity is usually registered in an opaque jurisdiction – where shareholders and/or directors are not disclosed or where nominees are permitted – in order to conceal the link to the borrower. Less sophisticated loan-back schemes may use individual nominee lenders instead of corporate entities.\(^{15}\)

---

\(^{11}\) Law Society of British Columbia, Discipline Advisory, “Know Your Obligations Before Accepting Cash,” (November 8, 2013), online: https://www.lawsociety.bc.ca/support-and-resources-for-lawyers/discipline-advisories/november-8-2013/: The PCMLTFA and associated Regulations require real estate agents and financial institutions to report suspicious activity and large cash transactions to FINTRAC. Since 2004, the Law Society of has precluded its members from accepting cash payments amounting to more than $7,500 limit for cash payments that can be accepted by its members.

\(^{12}\) Exhibit 729, Ross Affidavit, exhibit B, p 12.

\(^{13}\) Ibid, p 12.

\(^{14}\) Exhibit 601, Appendix 1, FATF 2007, pp 7–8.

\(^{15}\) Exhibit 729, Ross Affidavit, exhibit B, p 13.
Professor Stephen Schneider’s 2004 study of RCMP money laundering cases found that 20 of 83 cases (24%) involved loan-back schemes under which the criminal would set up a “fake” mortgage to lend against a property he owned either directly or indirectly through a company or nominee.\(^\text{16}\)

**Regulatory and Legislative Structure**

**PCMLTFA and Associated Regulations**

The *Proceeds of Crime (Money Laundering) and Terrorist Financing Act*, SC 2000, c 17 (PCMLTFA) and associated Regulations impose obligations on individuals and entities in prescribed sectors with respect to due diligence, anti-money laundering training and reporting to FINTRAC.\(^\text{17}\) In the context of mortgage lenders in Canada, the PCMLTFA and associated Regulations cover banks, credit unions, caisses populaires, trust and loan companies (collectively, “financial entities”), life insurers, and securities dealers. These lenders are “reporting entities” under the PCMLTFA and associated Regulations. This status imposes obligations – including conducting know-your-client due diligence; maintaining anti-money laundering compliance programs; keeping records; and reporting suspicious and large cash transactions to FINTRAC.\(^\text{18}\)

The PCMLTFA and associated Regulations do not apply to individuals, most private companies – including mortgage investment corporations\(^\text{19}\) – and non-profit entities (i.e. charities, foundations, and endowments) that engage in mortgage lending.

**Provincial Legislation and Regulation**

The private mortgage lending industry in BC is regulated under the provincial *Mortgage Brokers Act* (MBA)\(^\text{20}\) and the *Securities Act*.\(^\text{21}\) Though neither of those laws explicitly addresses money laundering, the MBA, Securities Act, and supporting regulations do apply oversight and rules of conduct to those mortgage lenders. Of particular relevance to private lenders:

- **The MBA applies to any person who “carries on a business of lending money secured in whole or in part by mortgages,” who “in any one year, lends money on the security of 10 or more mortgages,” and/or who “carries on a business of buying and selling**

---

\(^{17}\) FINTRAC, “Securities Dealers” (modified July 12, 2021), online: https://www.fintrac-canada.gc.ca/re-ed/sec-eng.

\(^{19}\) FINTRAC, “FINTRAC Policy Interpretations” (accessed March 2, 2021), online: https://www.fintrac-canada.gc.ca/guidance-directives/overview-apercu/FINS/2-eng?sf=2. FINTRAC takes the position that MICS issuing only their own shares to investors are not considered securities dealers and are not reporting entities under the PCMLTFA and associated Regulations.

\(^{20}\) *Mortgage Brokers Act*, RSBC 1996, c 313, s 1.

mortgages or agreements for sale.” The MBA definition therefore captures not only those brokering transactions between borrowers and lenders but also includes an array of lenders themselves, including mortgage investment corporations.

- The Securities Act and associated regulations place know-your-client obligations on mortgage investment entities that are registered with the BC Securities Commission, though those obligations do not include source-of-fund checks or anti-money laundering focused due diligence.

- From August 2010 through February 2020, mortgage investment entities were not required to register with the BC Securities Commission as investment fund managers, advisers and/or exempt market dealers. This was due to a temporary exemption that was renewed repeatedly until 2019, when mortgage investment entities were given a one-year grace period to register with the securities regulator.

- The regulators tasked with enforcing the MBA and the Securities Act – the Registrar / BCFSA and the BC Securities Commission, respectively – do not have an anti-money laundering mandate. The Registrar and BCFSA are concerned with consumer protection and maintaining the stability of BC’s financial services industry. For its part, the BC Securities Commission’s mandate concerns investor protection and preserving the integrity of capital markets.

In addition, the Business Practices and Consumer Protection Act applies to mortgage lending in BC to the extent that the Act covers unfair practices and disclosure of the cost of consumer credit, including interest rate calculations and fees.

22 MBA, s 1.

23 CSA Notice, p 1: MIE is a term used by securities regulators, which encompasses MICs and other lenders “whose purpose is to directly or indirectly invest substantially all of its assets in debts owing to it that are secured by mortgages, hypothecs or in any other manner on real property.”

Types of Private Mortgage Lenders

Background

According to figures published in October 2021 by Canada Mortgage and Housing Corporation (CMHC), 93 percent of the $1.73 trillion in residential mortgages in Canada is financed by banks, credit unions, and caisses populaires – each of which have anti-money laundering reporting and due diligence obligations under the PCMLTFA and associated Regulations.29 Most of the remaining residential mortgages are funded by lenders who are not reporting entities.30

Mortgages provided by private lenders typically involve rates higher than those charged by financial institutions. But they offer more flexibility or more lenient terms, such as relaxed standards for the borrower’s debt load, employment history, or citizenship status. As such, these mortgages are attractive to would-be borrowers who do not qualify for loans with regulated financial institutions.31

Private lending is increasing across Canada, driven in part by mortgage “stress test” regulations rolled out by the federal Office of the Superintendent of Financial Institutions (OSFI) in January 2018 (known as the B-20 rules).32 The B-20 rules apply to lenders regulated by OSFI, and impose a “stress test” requiring borrowers to demonstrate an ability to withstand shocks such as income interruption or rising interest rates. The B-20 guidelines also require rigour in a lender’s verification of a borrower’s income. A private lender who is not subject to the B-20 guidelines, on the other hand, may be satisfied simply by the security of a mortgage registered on title where there is sufficient equity in the property.

For the purposes of this chapter, mortgage lenders are categorized by reference to the extent to which they are regulated.

Lenders with PCMLTFA Obligations

This category of lenders includes traditional lenders that have obligations under the PCMLTFA and associated Regulations, including banks, credit unions, and caisses populaires, which do approximately 93 percent of mortgage lending in Canada.33

29 CMHC, “Residential Mortgage Industry Report” (October 2021) [CMHC 2021], p 3, online: https://assets.cmhc-schl.gc.ca/sites/cmhc/professional/housing-markets-data-and-research/housing-research/research-reports/housing-finance/residential-mortgage-industry-report/2021/residential-mortgage-industry-report-2021-10-en.pdf?rev=e2e9b608-9ebc-4e28-ae28-1629f9a5a674. A further 5 percent of residential mortgages are financed by mortgage finance companies, which comply with OSFI guidelines in order to qualify for securitization programs and funding from banks. However, they are not explicitly covered by anti-money laundering regulations and reporting is voluntary.

33 CMHC 2021, p 3.
Regulated Lenders with no PCMLTFA Obligations

These lenders are not (currently) directly covered by the PCMLTFA and associated Regulations but have other regulatory obligations, either because they voluntarily uphold OSFI standards (in the case of mortgage finance companies) or because they are covered under provincial regulations (registered mortgage brokers, including mortgage investment corporations, and issuers / arrangers of syndicated mortgage investments).

As recently observed by the Financial Action Task Force in a public consultation on a revised guidance document for money laundering through real estate, mortgage lenders are well positioned to observe indicators of suspicion:

While mortgage lenders that are separate from banks may not have the same visibility into account and payment information that banks do, these lenders do have insight into key beneficial ownership and financial details provided by those seeking mortgages. This arrangement makes mortgage lenders a key player in the [anti-money laundering / counterterrorist financing] efforts for the sector as real estate agents and other professionals providing similar services will not be in a position to access this information and evaluate it for any ML/TF [money laundering / terrorist financing] risk. Additionally, mortgage lenders’ ability to approve mortgages puts them in an effective position to immediately address any ML/TF risk by choosing not to approve certain mortgages that may be indicative of ML/TF activity. [Emphasis added.]34

Each of the mortgage lenders described here is, to some degree, vulnerable to facilitating, unwittingly or otherwise, money laundering by way of the typologies described above, either by lending out funds that are the proceeds of crime, or by providing financing to borrowers who are dealing in the proceeds of crime.

Shortly before the release of this report, the federal government released the 2022 budget. The 2022 budget proposes extending anti-money laundering obligations to “all businesses conducting mortgage lending in Canada” within the next year.35 I commend this proposed change and have taken it into account in the recommendations made in this chapter.

The federal budget does not set out precisely how this will take place, and what obligations private mortgage lenders will be subject to. Depending on the specific obligations imposed on private lenders by the federal amendments, the provincial government may well still have a role to play in managing the money laundering risks associated with private lending. In particular, the provincial government will need to be

attentive to whether the anti-money laundering due diligence and reporting obligations of private lenders extends to investors as well as borrowers. Later in this chapter, I make a recommendation that the Province create a new regulator of private mortgage lenders. I recommend that the Province create a positive obligation on mortgage lenders to make source-of-funds inquiries of investors providing capital for the lending business, if such obligations are not included in the federal reforms and specifically in private mortgage lenders' new obligations under the *PCMLTFA* and associated Regulations.

**Recommendation 26:** I recommend that the Province create a positive obligation on mortgage lenders to make source-of-funds inquiries of investors providing capital for the lending business, if such obligations are not included in the federal reforms to the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act* and associated Regulations.

This obligation can be addressed by way of the new legislation addressing private mortgage lending that I recommend later in this chapter.

**Mortgage Investment Corporations**

Mortgage investment corporations are private lenders whose borrower base does not typically qualify for loans from traditional lenders. Mortgage investment corporations issue equity to outside investors and lend out the capital raised as mortgage loans. FINTRAC does not consider mortgage investment corporations to be securities dealers, and most do not meet the criteria for any other type of reporting entity under the *PCMLTFA* and associated Regulations.36

As issuers of securities, mortgage investment corporations are regulated by provincial securities commissions and are expected to comply with relevant securities legislation where they operate (e.g., the *Securities Act*). In BC, mortgage investment corporations must also be registered under the MBA and are regulated by BCFSA.

While mortgage investment corporations are subject to some regulation, neither the BC Securities Commission nor the Registrar of Mortgage Brokers have an anti-money laundering mandate. For its part, the BC Securities Commission regulates capital raising and dealings with investors. The BC Securities Commission's focus is on “protecting investors and the integrity of BC’s capital markets.”37 The Registrar and BCFSA are concerned with consumer protection and the stability of the province’s financial services sector.38

---

36 FINTRAC, “FINTRAC Policy Interpretations” (accessed March 2, 2021) online: https://www.fintrac-canafe.gc.ca/guidance-directives/overview-apercu/FINS/2-eng?s=2. This reflects the situation prior to the implementation of the Budget 2022 commitment to bringing private mortgage lenders into the *PCMLTFA*.

Mortgage investment corporations that are registered with the BC Securities Commission (as well as their registered managers and advisers) have responsibilities with respect to know-your-client due diligence. That know-your-client process is intended to determine “whether trades in securities are suitable for investors ... [to] protect the client, the registrant and the integrity of the capital markets.”\textsuperscript{39} Ascertaining the source of funds and mitigating money laundering risk are not objectives of due diligence under the \textit{Securities Act}.\textsuperscript{39}

Mortgage investment corporations are predominantly active in the residential property market. By law, at least half of their assets must be invested in residential mortgages or insured deposits.\textsuperscript{40} A 2015 study commissioned by CMHC found that 74 to 83 percent of mortgage investment corporation lending was for residential mortgages.\textsuperscript{41} Mortgage investment corporations also lend against other classes of property, however, and are a common source of financing for real estate development.\textsuperscript{42}

For borrowers, MIC-funded mortgages often serve as bridge financing until other more favourable loans can be obtained. Most mortgage investment corporations provide loans for terms of six to 24 months, with the median term for a MIC-funded mortgage being one year, as opposed to five years for banks and credit unions.\textsuperscript{43} Interest rates for MIC-funded mortgages tend to be higher than those of traditional lenders, with average rates of 9 to 10 percent. These higher rates reflect the risk profile of borrowers, who tend to be self-employed, real estate investors, and borrowers with short-term liquidity issues.\textsuperscript{44} There are money laundering risks on the lending side of the operation of mortgage investment corporations, as there is less scrutiny of borrower source of funds and a borrower’s ability to service debt. Mortgage investment corporations are not obligated, for instance, to apply the B-20 “stress test” that applies to lenders regulated by OSFI.

\textsuperscript{42} Ibid.

\end{footnotesize}
Mortgage investment corporation loans tend to have lower loan-to-value ratios\textsuperscript{45} than mortgages issued by banks, credit unions and monoline lenders. According to a CMHC report, the average loan-to-value ratio for mortgage investment corporations was 58.6 percent in the first quarter of 2021.\textsuperscript{46}

According to CMHC, mortgage investment corporations account for 1 percent of total residential mortgages nationwide – around $13 to 14 billion\textsuperscript{47} – and there are approximately 200 to 300 mortgage investment corporations operating in Canada. CMHC estimates that 78 percent of mortgage investment corporation mortgages are in BC and Ontario, with the majority concentrated in the Vancouver and the Toronto areas.\textsuperscript{48}

BC Securities Commission filings for 119 mortgage investment corporations that have filed reports with the regulator since 2011 indicate that these corporations raised approximately $6.7 billion for mortgage lending between 2011 and 2019.\textsuperscript{49} There are money laundering risks on the investment side of mortgage investment corporations, as they do not have source-of-funds obligations requiring them to ascertain the origin of funds they receive as investments.

\textit{Mortgage Finance Companies}

Mortgage finance companies, often referred to as “monoline lenders,” are non-depository financial institutions whose only line of business is underwriting and administering mortgages. Unlike mortgage investment corporations and syndicated lenders, mortgage finance companies securitize their mortgages and sell them to banks (whereas mortgage investment corporations and syndicated lenders keep the loans on their own books). Mortgage finance companies, insurance and trust companies accounted for approximately 5 percent of residential mortgage loans in Canada as of 2021.\textsuperscript{50}

CMHC refers to mortgage finance companies as being “quasi-regulated” because, although they are not directly captured by the \textit{PCMLTFA}, they rely on public mortgage securitization programs and funding methods that require them to comply with regulations\textsuperscript{51} and guidelines such as those published by OSFI on deterring and detecting money laundering.\textsuperscript{52} Money laundering risk related to mortgage finance companies is limited on the lending side, because they obtain most of their funds through public securitization programs and wholesale funding from banks.\textsuperscript{53} In order to qualify for those sources of capital, mortgage finance companies adhere to the same underwriting

\begin{itemize}
\item \textsuperscript{45} Loan-to-value determines the maximum amount of a secured loan, in reference to the market value of the property or asset that is being pledged as collateral.

\end{itemize}
standards as banks and other OSFI-regulated lenders, which reduces money laundering risk from borrowers because there is generally considerable scrutiny of borrowers’ source of funds and creditworthiness. Mortgage finance companies do not have statutory anti-money laundering obligations under the *PCMLTFA* and associated Regulations (though they may nevertheless voluntarily submit information regarding suspicious transactions to FINTRAC).

**Syndicated Mortgage Investments**

Syndicated mortgage investments involve multiple investors pooling funds to finance a real estate project or purchase. Syndicated mortgage investments enable investors to spread risk and finance loans that might otherwise be too large for one party to fund on their own. Unlike investment in a mortgage investment corporation, where investors own shares in the lender, with a syndicated mortgage investment, the lenders take a position on each loan.54

Syndicated mortgage investment lenders include banks, credit unions, and institutional investors, as well as individuals. Syndications can also be used to pool funds from wider groups of retail investors. Syndicated lending can be used as an alternative to bank financing for commercial real estate investments or development projects, with funds often going toward early-stage costs such as permits and planning expenses. Where larger numbers of co-lenders are involved, syndicated mortgage investments are often managed by an administrator, who may also be the lead lender.55

In BC, syndicated mortgage investments are either “qualified” or “non-qualified.”56 Qualified syndicated mortgage investments involve co-lending by institutional investors and/or loans where multiple parties pool funds to finance a specific residential mortgage. Their issuers (i.e., lenders) and arrangers (i.e., administrators and arranging co-lenders) are largely exempt from BC Securities Commission regulations (requiring them to file investment prospectuses and register as securities dealers, respectively), providing they meet certain requirements.57 They may nevertheless be required to register as mortgage brokers under the *MBA*. On the other hand, issuers and arrangers of non-qualified syndicated mortgage investments are regulated by the BC Securities Commission and are required to file offering memoranda and register as dealers, respectively.58

---

54 Exhibit 729, Ross Affidavit, exhibit B, para 44.
55 Ibid, para 45.
Securities administrators have amended the regulatory regime for syndicated mortgages, including enhanced reporting and controls such as mandating independent appraisals of properties prior to issuing syndicated mortgage investments. Amendments to syndicated mortgage rules by the BC Securities Commission (and its counterparts in other provinces) went into effect on March 1, 2021.

Presently, there is no reliable way to identify syndicated mortgage investments through publicly available LTSA records. In some cases, known as direct participation, each syndicated mortgage investment co-lender is identified on the Form B charge registration document and has a direct relationship with the borrower. In other cases, an administrative agent is listed as the charge holder, and co-lenders register their interest through a loan agreement or commitment letter. In those cases of indirect participation, there is often no record with LTSA to indicate that a loan is syndicated.

Information on the identity of mortgage lenders should be available through LTSA. The absence of such information is a barrier to the regulation and oversight of mortgage lenders. An absence of visibility into mortgage lenders may also encourage mortgage lending activity by those wishing to invest illicit funds in the real estate market. I recommend that the Province amend Form B so that all legal owners of mortgage charges are reported, and that this information be available through the land titles registry.

**Recommendation 27**: I recommend that the Province amend Form B (the form for registration of a mortgage under section 225 of the *Land Title Act*) so that all legal owners of mortgage charges are reported, and that this information be available through the land titles registry.

An additional measure to increase the visibility of interests in real property, is to ensure that mortgages fall within the Land Owner Transparency Registry regime. I recommend that Province amend the definition of “interest in land” in the *Land Owner Transparency Act* to include mortgages, in order to ensure that the beneficial owners of a charge cannot obscure their ownership.

---

61 Exhibit 729, Ross Affidavit, exhibit B, p 21.
Recommendation 28: I recommend that Province amend the definition of “interest in land” in the Land Owner Transparency Act to include mortgages, in order to ensure that the beneficial owners of a charge cannot obscure their ownership.

Non-Mortgage Investment Corporation Mortgage Brokers
As I mentioned in Chapter 16, the MBA requires registration not just for those performing loan origination services – what the public typically associates with the term “mortgage brokering” – but also for some mortgage lending activity. This is not intuitive. Several witnesses suggested that the MBA requires amendment to make it clearer who is required to register. I return to this issue below, in the context of discussing the results of Adam Ross’s review of LTSA filings for the purpose of identifying mortgage lenders who are not registered with the Registrar of Mortgage Brokers.

Unregulated and Unregistered Lenders
Unregulated lenders include lenders whose mortgage lending activity does not require them to register with any regulatory body as a lender, as well as those who are specifically exempt from registering. Unregistered lenders are those that appear to meet at least one criterion for registration under the MBA or Securities Act, but who have not registered.

These unregulated or unregistered lenders include:

- **Individuals**: private individuals account for slightly more than half of private mortgage lending, according to figures from Ontario.\(^62\) Individual lenders can be arm’s-length investors or associates of the borrower. One analysis from Ontario estimates that intra-family loans account for 10 percent of mortgage lending by individuals.\(^63\) While individual lenders and borrowers may know one another, in other instances they may be paired by a broker and have no direct interaction. While some individual lenders in BC are registered with BCFSA as mortgage brokers or sub-brokers, the vast majority are not (see the next section of this chapter).

- **Private legal entities**: privately held corporations, societies, and other legal entities also feature as mortgage lenders. Legal entities may be established with the specific purpose of mortgage lending, or they may register mortgages alongside other business activities or investments. They are a diverse group. They include: sellers of properties that issue vendor take-back mortgages;\(^64\) small businesses whose owners

\(^62\) CIBC 2019, p 3.
\(^63\) Ibid.
prefer to lend through their company for tax reasons;65 and a multitude of others. In BC (and much of Canada), private legal entities are not required to publicly identify their shareholders or beneficial owners, so in most cases there is no information about the individuals behind these lenders.66

- **Crowdfunding:** this relatively new real estate investment mechanism allows investors to partially fund individual projects, typically through online platforms. Real estate is a growing application for the financing model.67 There are very few real estate crowdfunders operating in Canada.

In BC, crowdfunding in real estate has been regulated by the BC Securities Commission since May 2015, with a $1,500 cap on each deal per individual investor, a $500,000 annual limit for each fundraiser, and a $250,000 limit on each project.68 Crowdfunders are required to register as exempt market dealers.69 Shortly before the release of this Report, in April 2022, the federal government announced its intention to bring crowdfunding platforms into the scheme of the PCMLTFA.70

**Part 2: Land Title and Survey Authority Data Analysis**

How much private lending occurs in British Columbia? The Commission sought to answer this question. Using charge and title data from the LTSA, BC Assessment Roll data, reports of exempt distribution filed by mortgage investment corporations with the BC Securities Commission, and the names of mortgage brokers and sub-brokers registered with the Registrar/BCFSA, a report prepared for the Commission sought to quantify the extent of private lending in British Columbia. This would assist in understanding how much private lending is unregulated, or conducted by persons

66 Exhibit 729, Ross Affidavit, exhibit B, para 51(b); BC Ministry of Finance, B.C. Consultation on a Public Beneficial Ownership Registry (January 2020) (Chair: Carol James), online: https://engage.gov.bc.ca/app/uploads/sites/121/2020/01/386142-BCABO-Consultation-Document-For-Release.pdf.

69 In February 2022, the federal government invoked the Emergencies Act to address circumstances arising from protests and blockades in respect of COVID-19 vaccination mandates (particularly in Ottawa). Pursuant to its authority under the Emergencies Act, the federal government issued the Emergency Economic Measures Order, SOR/2022-22. That order extended the scope of the PCMLTFA to crowdfunding platforms and the payment processors they use, requiring them to register with FINTRAC and to report suspicious and large value transactions. With the revocation of the Emergencies Act at the end of February 2022, the registration and reporting requirements were lifted.

who ought to be but are not registered with the Registrar. This section summarizes those findings and comments on the implications for money laundering through real estate. The report was authored by Adam Ross, an analyst and investigator specializing in anti-money laundering, corruption, fraud, and white-collar crime.

**Summary of Findings**

The study conducted for the Commission provides insight into the types of lenders registering mortgages in British Columbia. This analysis assists in understanding the scope of unregulated and unregistered private lending in British Columbia, and hence the size of the potential risk for money laundering that may exist.

The study looked at mortgage charges to determine how much mortgage activity can accurately be described as unregulated and unregistered private lending.

The study reviewed active and cancelled mortgage charges registered against active residential property titles in British Columbia between January 1, 1999, and December 31, 2019, as well as mortgage charges registered against titles that were cancelled between January 1, 2014, and December 31, 2019. The data, obtained from LTSA, included the names of mortgagees (lenders) and the dates of registration or discharge. The value of a mortgage is not available from LTSA filings, and so it was not possible to assess how much mortgage funding was provided by different types of lenders.

The review of mortgages found that 96.10 percent of mortgages in the LTSA data set analyzed (2,848,798 out of 2,964,393 mortgages) are issued to registered or regulated lenders. Of those:

- 93.04 percent (2,757,935 mortgages) are with OSFI-regulated lenders;
- 55.54 percent (1,646,511 mortgages) are with issuers, registrants and/or exempt market dealers regulated by the BC Securities Commission; and
- 5.32 percent (157,735 mortgages) are with lenders registered with BCFSA.

As the totals above suggest, many mortgage lenders are regulated by both OSFI and the provincial regulators, while others are registered with both BC Securities Commission and the Registrar/BCFSA.

This figure – over 96 percent – shows that the vast majority of mortgages involve regulated or registered lenders.

---

71 Exhibit 729, Ross Affidavit, exhibit B: A more complete discussion can be found here.
72 Ibid, exhibit B, para 55.
73 Ibid, exhibit B, para 57.
The study found 115,595 mortgages (3.9%) involved lenders not registered with any regulatory body. Of those, 58,438 (50.55%) were individuals. In 22 percent of that subset, the lender and borrower shared a surname, suggesting a loan between family members. 48,168 (41.67%) of lenders in the unregistered/unregulated category were corporate entities (2,706 of which were numbered companies). A small number of these mortgages (10%) were held by institutions such as government agencies and universities. Approximately 12 percent of mortgages had no names in the charge owner field.\textsuperscript{74}

The chart below (Figure 17.1) provides a visual representation of mortgages provided by unregulated or unregistered lenders. There is some double-counting due to mortgages with multiple lenders.\textsuperscript{75}

**Figure 17.1: Mortgages Provided by Unregulated or Unregistered Lenders**

\begin{center}
\includegraphics[width=0.5\textwidth]{mortgagesChart.png}
\end{center}

*Source: Exhibit 729, Affidavit of Adam Ross, exhibit B, para 60.*

Analyzed by lender, those 132,367 mortgages are held by 72,206 lenders: 55,396 individuals, 16,660 companies, and 150 other institutions.\textsuperscript{76}

\textsuperscript{74} Ibid, exhibit B, para 60: This missing lender information would presumably be available in the mortgage documents filed with the LTSA but is unavailable online.

\textsuperscript{75} Ibid: there were 16,772 mortgages with multiple lenders included in this count (132,367), which is why the total does not match the total number of mortgages by unregulated and unregistered lenders (115,595).

\textsuperscript{76} Ibid, exhibit B, para 62.
Among these lenders, the mean number of mortgages for individual lenders is 1.54, while it is 3.15 for corporate entities.\textsuperscript{77}

\textbf{Findings Regarding Mortgage Investment Corporations}

Mortgage investment corporations are a small but quickly growing segment of mortgage lenders in BC, and account for much of the private lending in the province.\textsuperscript{78}

\textbf{Size of the Mortgage Investment Industry}

The mortgage investment industry has seen significant growth in the past decade. There was approximately $230 million invested in BC mortgage investment corporations in 2012. The industry experienced a peak in 2018, with more than $2 billion in disclosed investment.\textsuperscript{79} According to BCFSA, as of May 31, 2020, registered BC mortgage investment corporations had lent $5.5 billion with $3.8 billion secured by mortgages in BC.\textsuperscript{80}

Analysis of BC Securities Commission filings by mortgage investment corporations on an annual basis offers perspective into the growth of the industry during the 2011–2019 period. Over the course of that period, 80 mortgage investment corporations filed reports for the first time. Approximately twice as many mortgage investment corporations filed for the first time as stopped filing during that period. The increase in

\textsuperscript{77} Ibid, exhibit B, para 63.

\textsuperscript{80} Exhibit 729, Ross Affidavit, exhibit B, para 69.
reporting largely aligns with a rise in investment in the industry during that period.\footnote{Ibid, exhibit B, para 70.}

**Figure 17.3: Number of Mortgage Investment Corporation Reports Per Year**

![Graph showing the number of reports filed per year from 2011 to 2019.]

*Source: Exhibit 729, Affidavit of Adam Ross, exhibit B, para 70.*

**Figure 17.4: Total Investment in BC Mortgage Investment Corporations by Origin, 2011–2019**

![Graph showing the total investment in BC mortgage investment corporations from 2011 to 2019.]

*Source: Exhibit 729, Affidavit of Adam Ross, exhibit B, para 71.*

\footnote{Ibid, exhibit B, para 70.}

\footnote{Ibid, exhibit B, para 71.}
In February 2019, a BC Securities Commission notice exempting mortgage investment corporations from registering as investment dealers expired.\(^{83}\) When the registration exemption expired in February 2019, there was an immediate spike in reporting by BC mortgage investment corporations (from 70 reports in January to 101 reports in February).\(^{84}\)

**Domestic and Foreign Investment**

The vast majority of funds invested in BC mortgage investment corporations originate from Canadian sources, according to data filed with the BC Securities Commission. It is important to note that the data do not necessarily capture the origins of capital invested in BC mortgage investment corporations. Rather, they reflect the residency of investors, which may, with caution, be taken as a proxy for the geographic location of funds immediately prior to their investment with those mortgage investment corporations. Capital that has transited into Canada from abroad prior to being invested by Canadian resident investors cannot be measured through the data disclosed in BC Securities Commission filings, the data source for this analysis.

**Figure 17.5: Foreign Investment in BC Mortgage Investment Corporations, 2011–2019**

![Figure 17.5](image)

*Source: Exhibit 729, Affidavit of Adam Ross, exhibit B, para 75.*

From 2011 to 2020, 97.78 percent of all investment was declared to have come from Canadian residents. On an annual basis, Canadian sources have never fallen below 95 percent of the total investment in the data set. Overall, BC sources account for 76.4 percent of total investment in BC, while investment from other provinces amounts to 21.4 percent.\(^{85}\) Annual investment from BC fluctuates between 77 and 91 percent.

---

83 Exhibit 729, Ross Affidavit, exhibit B, para 72: There was a one-year grace period for registering, which expired in February 2020.
84 Ibid, exhibit b, para 73.
85 Ibid, exhibit B, para 75: $1.44 billion in extra-provincial Canadian investment comprises Ontario (42.26%), Alberta (23.77%), Quebec (20.65%), Newfoundland (6.93%), PEI (4.77%), Manitoba (0.86%), Saskatchewan (0.69%), and other provinces and territories (0.07%, collectively).
The data shows that 2018 was an anomalous year, in which total investment more than doubled, from $970 million in 2017 to a little over $2 billion. That increase came entirely from domestic capital: BC investment grew by around 50 percent to $1.25 billion, and investment from other provinces increased nearly nine-fold, from $92 million to $801 million.

Throughout the period analyzed (2011–2020), investment from foreign sources remained below 5 percent of annual mortgage corporation investment. In total, it accounts for just 2.2 percent of total investment, or $150 million.

By far the largest constituent of that foreign investment is China, including Hong Kong, which accounts for around 78 percent of the total. Chinese investment in BC mortgage investment corporations amounts to $116 million since 2013 (no investment from China or Hong Kong was recorded in 2011 or 2012).

The next largest contributor, the United States, makes up just 6 percent of foreign investment. Other substantial contributors are Taiwan (3.1%) and several offshore financial centres (8%, collectively). Iran and Italy each account for around 1 percent of foreign investment, and all other foreign countries are below 1 percent – each of their total cumulative investment is less than $1.5 million.

Foreign investment is concentrated in a small minority of mortgage investment corporations. Around 92 percent of Chinese investment has been made with four mortgage investment corporations, with the remaining 8 percent spread between another four firms. All of the $116 million invested from China and Hong Kong in the past decade has been placed with those eight mortgage investment corporations.

Several mortgage investment corporations have reported investment from offshore financial centres deemed by some to be high-risk jurisdictions for tax evasion and other financial crime. In aggregate, $11.71 million has been invested since 2012 from four offshore centres:

- Bahamas – $7.24 million invested with two mortgage investment corporations since 2016
- Malta – $1.65 million invested in one mortgage investment corporation since 2014
- Marshall Islands – $250,000 invested in one mortgage investment corporation in 2019
- Turks and Caicos – $2.57 million invested in one mortgage investment corporation since 2012

That investment was reported by five BC mortgage investment corporations.

---

Findings: Identifying Unregistered Mortgage Lenders

LTSA data can also be used to identify lenders that meet one of the criteria for registration as mortgage brokers under the MBA. Although the definition of mortgage broker in the MBA is imprecise, one criterion states that a person must register as a mortgage broker under the Act if the person “during any one year, lends money on the security of 10 or more mortgages.” That 10-mortgage threshold can be applied to a review of LTSA data.

The study conducted for the Commission filtered LTSA mortgage data for lenders that have registered 10 or more mortgages in a 365-day period, then cross-referenced those results with a list of all mortgage brokers and sub-brokers registered since 2012 (no electronic mortgage broker list existed prior to 2012). OSFI-regulated financial institutions, which are exempt from the MBA, were filtered out, leaving a list of lenders who appear to meet this definition of mortgage broker, but have not registered with the Registrar.

This analysis only captures lenders that have registered 10 or more mortgages in a 365-day period and whose names appear directly on the LTSA’s title search form. It would not capture a lender who is lending under multiple names or through nominees. The study author advised that lenders using multiple distinct legal personalities (i.e., subsidiaries or companies with shared beneficial ownership) cannot be captured in the absence of publicly available shareholder and beneficial ownership data on BC companies. Some of the unregistered lenders identified through this analysis appear to conduct their lending through a third-party broker that is registered with the BCFSBA. For instance, a company that holds 32 active mortgages was flagged for registering 32 mortgages within a 365-day period. However, its Form B mortgage registration documents all provided a mailing address care of a registered broker. Other unregistered lenders may have similar arrangements with registered brokers, albeit ones that are not reflected on the Form B for their loans. These lenders are still required to register as mortgage brokers if their lending activity crosses the 10-mortgage-per-year threshold. The findings described above may indicate a lack of industry understanding as to the requirement for registration.

The report identified 493 individuals and entities that had registered 10 or more mortgages each within a 365-day period dating back to January 1, 2012, but who were not registered with the Registrar during that period.

A manual review of those lenders found that 16 were likely exempt from registering as mortgage brokers due to their status as financial institutions, trust companies, insurers, or government bodies. The remaining 477 appear to have met the 10-mortgage-per-year registration threshold, but they were not registered.

87 MBA, s 1: As defined, “person” includes an individual, corporation, firm, partnership, association, syndicate, any unincorporated organization and an agent of any of them.
88 Exhibit 729, Ross Affidavit, exhibit B, paras 90–91.
89 Ibid, exhibit B, para 91.
90 Ibid, exhibit B, para 95.
91 Ibid, exhibit B, para 96.
92 Ibid, exhibit B, para 97.
Of the unregistered brokers, 247 are corporations, 220 are individuals, and 10 are non-profit societies or foundations.

The 247 unregistered corporate entities have registered a combined 5,808 mortgages. The individual lenders have registered 4,766 mortgages.93

A selection of nine individuals and entities of the 477 flagged by the report’s author for their lending activity were examined in more detail by a review of the records of mortgage documents pulled from the LTSA. These nine were chosen from the larger group of 477 at random. Of that group of nine, three were individuals or apparent family units, five were corporations, and one was a non-profit society. Available records indicated that, collectively, these nine persons and entities had made at least 590 mortgage loans in a 365-day period. The average number of mortgages registered by each within a 365-day period was 66. The median number was 69. In terms of actively held mortgages, these persons/entities collectively held 250 active mortgages, with a total value of $203,739,420. The average number of active mortgages currently held by these entities was 28, and the average value of all mortgages currently held was $25,467,427. The median number of active mortgages was 23.

Commission counsel wrote to each of the nine lenders set out above to advise them of the results of the analysis and to provide an opportunity for response. Of the six that did respond, three indicated that they were unaware that they were required to register as a mortgage broker, one disputed that it met the definition of a mortgage broker, and one furnished a letter from the Registrar advising the lender that it need not register so long as it conducted all lending through a registered mortgage broker and had no interaction with members of the public.94

One of the lenders, in a response to Commission counsel, described having contacted the Registrar (described in the email as “FICOM”) after receiving the Commission’s letter and reported being advised by an unnamed staff member that “if we [i.e., the lender] are using a mortgage broker then we don’t need any licence to lend money.” This highlights the apparent confusion over the MBA’s application to private lenders – not just among registrants but within the regulator itself.95

Based on the findings of the study described above, and the evidence before me about private lending, I recommend that the Province enact legislation directed at private mortgage lenders providing for registration, oversight, and enforcement. This regime should be separate from the scheme applicable to those engaged in brokering loans. I suggest that this regulatory authority be located within BCSFA.

---

93 Ibid, exhibit B, para 99: Note that some loans would have been double counted in cases where multiple lenders are involved.
95 Ibid, exhibit B, para 102: British Columbia advises that, at various points in time, the Registrar has taken the position that lenders with 10 or more mortgages who have used a registered mortgage broker to complete those transactions need not register themselves as mortgage brokers. This is still the case in some other provinces, such as Ontario. However, it is not the current practice in BC.
Recommendation 29: I recommend that the Province enact legislation directed at private mortgage lenders providing for registration, oversight, and enforcement. This regime should be separate from the scheme applicable to those engaged in brokering loans.

I am of the view that the Province should be able to determine who is engaged in private lending and should be registered with the regulator, and yet is not. To this end, having access to land title information, and particularly new mortgage registrations, is important.

Recommendation 30: I recommend that the Province ensure that the regulator of private mortgage lenders has access to land title data, including new mortgage registrations, in a form that allows it to identify private lenders that ought to be registered with the regulator but are not.

Upon discovering a person or entity engaged in private lending who is not registered, the regulator of private mortgage lenders will, I expect, promptly take action to bring the unregistered mortgage lender within the private lending registration regime as a registrant, or compel them to stop conducting business as a private mortgage lender.

In the meantime, BCFSA must be clear and consistent in its communications with industry as to the requirement to register. As I discussed in Chapter 16, the circumstances in which a person is required to register as a mortgage broker under the MBA are not clear. Internal consistency in messaging from BCFSA will no doubt be improved by a clearer expression of the requirement in the MBA.

Because a mortgage cannot be registered without going through LTSA, the registration process would be an opportune time to alert lenders and their agents as to the requirement to register. The regulator of private mortgage lenders should work with LTSA to increase lenders’ awareness of their obligations. A simple notice of the circumstances under which a mortgage lender must register, attached to a Form B, to be completed by the lender, would accomplish this.
Part 3: Paul Jin Debt Enforcement

The study discussed above provides some insight into the size and scope of the private lending industry in British Columbia. It is important to understand that not all private lending is associated with money laundering. There are many legitimate reasons for borrowers to seek funds from unregulated and unregistered private lenders. At the same time, the private lending industry can be exploited – by organized crime groups, fraudsters, and professional money laundering networks – to launder illicit funds.

An overview report on Paul Jin’s private lending activity\(^{96}\) (which was filed as evidence in the Commission’s public hearings) illustrates the vulnerability of private lending to money laundering through the first lender typology identified above (lending proceeds of crime). It also exposes a number of gaps and vulnerabilities in the courts and land title system, which make them vulnerable to abuse.

In basic terms, the overview report reviews the court actions brought by Mr. Jin and his associates between January 2013 and March 2018 to recover funds that were lent to borrowers and not repaid. It also contains a list of mortgages registered by Mr. Jin in the Land Titles Office, to secure certain loans made to borrowers in the Lower Mainland.

While the amounts claimed on these documents are significant, they are likely a small percentage of the private lending activity carried out by Mr. Jin during this time frame.\(^{97}\)

Table 17.1 provides a list of the court proceedings commenced in British Columbia Supreme Court by Mr. Jin involving private lending activity. In every case but one,\(^{98}\) the plaintiff or petitioner was (or included) Mr. Jin or his spouse, and the defendants were all individuals (and one company), some of whom filed responses asserting that the loans were not related to real estate but were funds borrowed for casino gambling.

\(^{96}\) Exhibit 1052 (previously marked as Exhibit K), Overview Report: Paul Jin Debt Enforcement Against BC Real Estate (May 13, 2021) [OR: Jin]. Under the commission’s Rules of Practice and Procedure, “overview reports” may be prepared by those at the commission, circulated to all participants with an opportunity for input, and then, once finalized, entered into evidence as exhibits during the hearings.

\(^{97}\) A financial analysis conducted by the RCMP in connection with the E-Pirate investigation indicates that Mr. Jin received almost $27 million from Silver International in the four and a half months between June 1, 2015, and October 15, 2015: Exhibit 663, Affidavit of Melvin Chizawsky, made on February 4, 2021 [Chizawsky Affidavit], para 100, and exhibit 53, p 24.

\(^{98}\) Exhibit 1052, OR: Jin, Appendix 7, NOCC 142623: Chunjun Xiang v Paul King Jin, Xiaoqi Wei, Jiexi Zhao (April 4, 2014): the plaintiff was an individual and Mr. Jin was one of three defendants. This claim alleged that a friend of the plaintiff owed Mr. Jin a gambling debt, which Mr. Jin sought to enforce against the plaintiff’s property.

*Source: Exhibit 1052, Overview Report: Paul Jin Debt Enforcement Against BC Real Estate, para 5.*

While there is limited evidence before me concerning the provenance of the funds given to these individuals, and in particular, whether they were derived from profit-oriented criminal activity, the affidavit evidence filed in legal actions provide some insight into that issue. One of the best examples comes from the Affidavit #1 of Sepehr Motevalli, who described himself as a “close family friend” of Mr. Jin and claims to have witnessed a transaction in which Mr. Jin provided two bundles of cash to a customer. Importantly, the affidavit was commissioned by Mr. Jin’s lawyer and filed in support of Mr. Jin’s debt collection claim. Mr. Motevalli states:

Partway through the meeting, the plaintiff handed the defendant a piece of paper. The defendant signed the piece of paper and returned it to the plaintiff.

As I did not have an opportunity to observe the piece of paper closely, I do not know the content of the piece of paper.

\textsuperscript{102} Exhibit 1052, OR: Jin, Appendix 32, BC Company Summary for 1116909 B.C. LTD; Appendix 33, BC Company Summary for 1233543 B.C. LTD.

\textsuperscript{103} Exhibit 766, Affidavit of Jian Wei Liang, made on March 8, 2021.
Prior to the meeting, the plaintiff had kept a plastic grocery bag on the ground next to his chair.

After the defendant returned the piece of paper to the plaintiff, the plaintiff retrieved two bundles of bills from the plastic grocery bag.

The two bundles of cash appeared to consist of twenty-dollar Canadian bills.

Each bundle included five stacks of bills. More particularly, each stack was bound together by a rubberband or rubberbands. Then, five stacks would in turn be bound together by a rubberband or rubberbands.

I believe that the two bundles of bills to be cash in the amount of 20,000 CAD, due to the way the bundles and stacks were put together. However, I did not have the opportunity to count the bundles of bills.

The plaintiff handed the two bundles of bills to the defendant.

... Several days later, I was hanging out at the plaintiff’s office again.

Once again, the defendant attended the plaintiff’s office.

As before, the plaintiff gave a piece of paper to the defendant, and the defendant signed the piece of paper. After the defendant returned the piece of paper to the plaintiff, the plaintiff retrieved one bundle of bills (put together in the same way as described above) from a plastic grocery bag, and gave it to the defendant. Then, the defendant left.\(^{104}\)

Mr. Jin’s own evidence also suggests a significant portion of the loans he made to his customers were in cash. For example, an affidavit sworn by Mr. Jin in one action indicates that he gave the defendant a cash loan of $200,000 on November 16, 2014, and that his wife subsequently provided the defendant with an additional $205,000 in cash. On both occasions, Mr. Jin and his wife were able to provide the cash the same day that the request was made even though the first request was made on a Sunday and the second was made outside of regular banking hours.\(^{105}\) These factors suggest that Mr. Jin had the cash on hand and that lending cash to his customers was a regular part of his business model.

---

\(^{104}\) Exhibit 1052, OR: Jin, Appendix 17, paras 11–23.

\(^{105}\) Exhibit 1052, OR: Jin, Appendix 10(b), pp 2–3. It is also noteworthy that more than $4 million bundled in the manner described by Mr. Motevalli was found in a safe owned or controlled by Mr. Jin when investigators executed a search warrant at his residence on October 15, 2015: Exhibit 663, Chizawsky Affidavit, paras 22–24.
When Mr. Jin was interviewed by the RCMP in connection with the E-Pirate investigation, he confirmed that he often used Silver International to move funds held as Chinese currency (RMB) in China to Canadian currency in Canada:

MC [Corporal Melvin Chizawsky]: Let me get this straight (clears throat) just so I have it in my head.

PJ [Paul Jin]: Yeah,

MC: Um money in China

PJ: Yeah,

MC: – is yours.

PJ: Yeah,

MC: And then instead of going to let's say the Bank of Nova Scotia

PJ: Yeah, yeah,

MC: and – or Calforex

PJ: Yeah.

MC: Silver International was doing the exact same thing

PJ: Yeah.

MC: and then you would uh, do you phone them up and say hey I'll be taking out a hundred thousand dollars

PJ: Yeah.

MC: Canadian from my Chinese account, can you convert it to me please from RMB into Canadian and then they do the math for you?

PJ: Yeah, yeah, yeah. Because they – they all received ... money ... already you know.

MC: Mmhm ...

PJ: after they give me the money you know.

MC: Yeah. So basically what you're doing is when – like what I'm hearing from you is you were just taking money from Silver International money that is already yours?

PJ: Yeah. Yeah. Yeah ...

MC: So you're not borrowing from them?
PJ: No not borrowing,

MC: They’re not loaning money to you?

PJ: No, no, no.

...

MC: But that’s your money that uh comes from your account

PJ: Yeah. –

MC: ... and all they did was covert it from RMB into Yeah, – Canadian dollars for you.

PJ: Yeah, yeah.

MC: And then you take that money and you do whatever you want with it?

PJ: Yeah.

MC: Okay. Now have you ever taken money there for them to deposit so they can go back into RMBs or?

PJ: No. No? They don’t – they don’t do that They don’t, okay. They don’t do that thing, only I give them some RMB ... money for – have some loan there right, loaning me money they want the cheque ... the cheque ... I give it to them, they give some cash.106

Mr. Jin also confirmed that he received the Canadian currency in cash, broke it down into smaller amounts, and provided it to his customers in small bags:

MC: Yeah. Now um our surveillance teams have you going from um Silver to Jones Road

PJ: Yeah.

MC: – and then shortly leaving Jones Road uh with small boutique bags that we know contain cash and then you would hand off the cash to a – a customer who would then go to the casino to

PJ: Yeah.

MC: – spend it any way he wants.

PJ: Yeah.

MC: Is – is that your sort of like methodology for uh distributing your money? Like – like I don't know how else to say it?

106 Exhibit 663, Chizawsky Affidavit, exhibit 50, pp 50–53.
PJ: Yeah ... hard to say ... right.

MC: Yeah so you get money from Silver ... and you take it to Jones Road and then you break it down into smaller amounts for customers because that's what they're going to borrow from you. And then you take the – the money in – in small bags because it's convenient, and you then give it to the customer who's borrowing from you because you – you know that person, it's not like you're giving it to stranger.

PJ: No, no, no, all the time I know the people.

MC: And these people then they use the money for whatever reason. Yeah. Gambling is one reason, uh paying off debts is another reason. For whatever reason –

PJ: Yeah.¹⁰⁷

A forensic accounting analysis conducted by Elise To in connection with that investigation confirms that Mr. Jin received almost $27 million from Silver International in the four and a half months between June 1 and October 15, 2015.¹⁰⁸ Moreover, the police seized a batch of promissory notes recording more than $26 million in loans when they executed search warrants at Mr. Jin's properties.¹⁰⁹

I have previously concluded that most, if not all, of the cash being left at Silver International was derived from profit-oriented criminal activity such as drug trafficking (see Chapter 3). I have no trouble finding that a significant portion of that illicit cash was provided to Mr. Jin to supply his private lending activity.

While Mr. Jin was likely aware of the provenance of that illicit cash, I need not resolve that issue for the purpose of this Report. The important point is that illicit cash generated by profit-oriented criminal activity such as drug trafficking was being used to make private loans to high-stakes gamblers and other individuals who needed access to funds.

When payments were made on those loans, the illicit cash provided to those individuals was effectively substituted for legitimate funds transferred to the lender through traditional means, such as cheques and wire transfers.

Moreover, the existence of legal documentation such as a settlement agreement or a court order has the effect of “legitimizing” the funds that were repaid to Mr. Jin, thereby allowing him to claim that the funds were received for a legitimate purpose (i.e., satisfaction of a legal obligation).

While there is no evidence that Mr. Jin was involved in generating the illicit cash that was provided to his customers (that is, the initial crimes that generated the illicit

¹⁰⁷ Ibid, pp 63–64.
¹⁰⁸ Ibid, para 100, p 24.
¹⁰⁹ Exhibit 663, Chizawsky Affidavit, paras 76, 82, 85, 89.
cash), his private lending activity in effect completed the money laundering cycle by allowing the illicit cash “deposited” at Silver International by organized crime groups to be repurposed and reintroduced into the legitimate economy.

Another feature of Mr. Jin’s debt enforcement claims is that the Notice of Civil Claim and underlying loan documents often indicate that the purpose of the loan is to acquire or renovate real property. For example, an affidavit filed by the defendant in BC Securities Commission File No. 152698 indicates that he expressly advised Mr. Jin that he would be using the money for gambling purposes and not – as stated in the Notice of Civil Claim – for the purpose of renovating his home:

I met the Plaintiff at the Water Cube massage parlour [in Richmond] on November 16, 2014. I was introduced to the Plaintiff by an acquaintance, whom I had met at a casino. The acquaintance knew that I was seeking money with which to gamble. I knew that Mr. Jin was a loan shark and there would be high rates of interest when I borrowed money from him.

The Plaintiff provided me with $200,000 cash on November 16, 2014. In response to paragraph 9 of the Affidavit, I received the money in cash; I did not sign a receipt, though he did take a copy of my identification. I never told Mr. Jin that the money was for household renovations, or anything similar to that. I never told the Plaintiff the money was for the purposes of renovation on our home. I never told the Plaintiff that I was acting as an agent for my ex-wife. I did not say that I would pay the proceeds of the loan from the sale of the residence. The Plaintiff knew that I was going to use the money for gambling purposes as I told him so.110

While the stated purpose of the loan may seem inconsequential, there is a legal and strategic advantage to pleading a connection to real property in civil proceedings. In such cases, the plaintiff can claim an interest in the property and file a certificate of pending litigation in the Land Titles Office. A certificate of pending litigation restrains and encumbers the owner’s ability to deal with real property. It hangs overhead and means, in lay terms, that the owner cannot be said to have clear title for the purpose of selling or borrowing against the property. If the civil claim is successful, the plaintiff may be able to obtain an order compelling the sale of the property. Moreover, a certificate of pending litigation can be extremely difficult to remove, which gives the plaintiff significant leverage in negotiating a favourable settlement with the borrower.

I pause to note that Mr. Jin was assisted in the filing of the actions and mortgages described here by legal professionals. At some point, he also learned of the utility of inserting a reference to the acquisition or improvement of real property in his promissory notes and claims. In Chapter 26, I comment on the role that professional gatekeepers such as lawyers play in some money laundering typologies, including

110 Exhibit 1052, OR: Jin, para 6; Appendix 10(d) (PDF pp 312–13), paras 4–5, and appendices 13(a), 15(b), 18(a), 19(a).
private lending. This is a concrete example of professionals being used to access the mechanisms of the courts and the land registry to further money laundering schemes. Lawyers are responsible for ensuring that they are not used as tools of money laundering, and for safeguarding the courts from such abuse. It is essential that they remain vigilant in circumstances where they are asked to enforce agreements or debts involving funds of uncertain provenance.111

After reviewing the pleadings and affidavits attached to the overview report as well as the evidence of Corporal Chizawsky concerning Mr. Jin’s frequent presence at Lower Mainland casinos, I find it wholly implausible that Mr. Jin was lending money to his clients for the purpose of acquiring or renovating real property. While it may be that some of the funds were used for that purpose, I find that the predominant purpose of these loans was to allow high-stakes gamblers to make large cash buy-ins at Lower Mainland casinos and that Mr. Jin described the loans as relating to the acquisition or renovation of real property to obtain a strategic advantage in the litigation process.112

It would be unsettling to many individuals to have their family home encumbered by a debt claim.

While the creation of a provincial regulator for private mortgage lending will help in addressing money laundering risks in the private lending industry, it is important to note that private lending activity can occur without a mortgage being filed against real property (as was the case for most of Mr. Jin’s private lending activity) and it is essential that the dedicated provincial money laundering intelligence and investigation unit (recommended in Chapter 41 of this Report) develop ways of identifying that activity. One of the lessons that can be drawn from the overview report is that those involved in private lending activity can rely on the court system to enforce debt obligations that are not paid, and a review of court records may allow for the identification of individuals and groups involved in private lending activity.

There may also be specific instances in which private lenders take mortgage security or file a certificate of pending litigation against property within the province, which may allow for the effective identification of individuals and groups involved in private lending activity through LTSA filings, even where they are not required to register with the new provincial regulator.

I note, however, that the use of corporate vehicles to make loans to borrowers who are in need of capital can obscure the individual behind the transaction. For example, a

111 To this effect, lawyers should be mindful of the risk advisories issued by the Law Society of British Columbia and Federation of Law Societies of Canada, as set out in Chapter 26; Exhibit 191, Overview Report: Anti–Money Laundering Initiatives of the LSBC and FLSC, Appendix J, Risk Advisories for the Legal Profession: Advisories to Address the Risks of Money Laundering and Terrorist Financing, pp 8–9; Law Society of British Columbia, “Discipline Advisory - Private Lending” (April 2, 2019), online: https://www.lawsociety.bc.ca/support-and-resources-for-lawyers/discipline-advisories/april-2,2019/.

112 In making these findings, I have not considered or otherwise relied on any information in Part 3 of the Jin overview report, which seeks to connect the borrowers and other defendants named in actions commenced by Mr. Jin to large cash transactions at Lower Mainland casinos. All of the findings made in this chapter are based on evidence available to Mr. Jin.
review of the mortgages set out in Table 17.2 (above) indicates that two mortgages were registered in the name of numbered companies that listed one of Mr. Jin’s adult children as a director. Because the mortgage was registered by the numbered company, it is not apparent on the face of the mortgage documents available from the land titles registry that Mr. Jin had any involvement with this loan. It is only through a review of records maintained by the corporate registry and evidence provided to the Commission that the connection to Mr. Jin becomes apparent.113

While my hope is that the provincial Land Owner Transparency Act will assist in identifying individuals like Mr. Jin who engage in private lending activity through the use of shell companies and nominee owners, it is essential that the dedicated provincial money laundering intelligence and investigation unit be aware of the potential for individuals like Mr. Jin to use corporate vehicles and nominee owners to engage in private lending activity in order to avoid scrutiny by law enforcement bodies and regulators.

I am also highly concerned about the ability of a private lender to make use of the court process to enforce loan agreements in which illicit funds are advanced to the borrower as part of a money laundering scheme. Such use of the legal process tends to undermine public confidence in the courts. I address this in the following section of this chapter.

Part 4: Further Recommendations Regarding Private Lending

Money Laundering Vulnerabilities of Private Lenders

I accept that the private lending secured by mortgages presents a risk of money laundering on both the borrower and lender sides of the transaction, as described in the section above, “Typologies: Money Laundering Through Mortgages.”

I identify the following vulnerabilities to money laundering based on the evidence and the discussion above:

• gaps in lenders’ obligations to make source-of-funds inquiries of investors and borrowers alike;

• gaps in entities currently required to make reports to FINTRAC;

• the ability to avoid (intentionally or otherwise) the requirement to register on the part of mortgage lender, and the consequent lack of regulatory oversight of any kind on a large number of private lenders;

• contradictory messaging from BCFSA employees to lenders as to the requirement to register;

113 See Exhibit 766, Affidavit of Jian Wei Liang, made on March 8, 2021, paras 5–15 for evidence that Mr. Jin was, in fact, involved with this transaction.
• an inability to conclusively determine, from LTSA filings, all of the owners of a registered mortgage charge;

• the ability to conceal personal mortgage lending by way of corporate vehicles;

• a lack of education / understanding within the industry as to the requirement to register;

• the ease with which a private lender can register a certificate of pending litigation against real property (which then encumbers title to the property); and

• the inability of the courts to refuse to enforce debts made with funds of suspicious origin, and to otherwise protect themselves from being used as tools of money laundering.

The recommendations made in this chapter are intended to address these identified vulnerabilities.

In light of the concerns arising with respect to potential abuse of the court system as a tool of money laundering, I recommend that the Province implement a mandatory source-of-funds declaration to be filed with the court in every claim for the recovery of a debt, such that no action in debt or petition in foreclosure can be filed (except by an exempted person or entity) in the absence of such a declaration. Consequently, no certificate of pending litigation will be permitted to be registered on title in respect of such a claim in the absence of showing a filed source-of-funds declaration.

**Recommendation 31:** I recommend that the Province implement a mandatory source-of-funds declaration to be filed with the court in every claim for the recovery of a debt, such that no action in debt or petition in foreclosure can be filed (except by an exempted person or entity) in the absence of such a declaration.

To complement this source-of-funds declaration for debt recovery actions in court, in my view the courts should be afforded the discretion to determine, on a case-by-case basis, when it is appropriate to decline to make an order. I recommend that the Province enact legislation authorizing the court, in its discretion, to refuse to grant the order(s) sought by the plaintiff in a debt action or foreclosure petition if it is not satisfied that the declaration is truthful and accurate, or if it concludes that the funds advanced by the lender were derived from criminal activity.
Recommendation 32: I recommend that the Province enact legislation authorizing the court, in its discretion, to refuse to grant the order(s) sought by the plaintiff in a debt action or foreclosure petition if it is not satisfied that the declaration is truthful and accurate, or if it concludes that the funds advanced by the lender were derived from criminal activity.

While I appreciate that these recommendations may raise concerns about expense and delay in civil proceedings, I tend to think that any added expense or court time required will, in fact, be relatively minimal and can be managed efficiently by the court. For most plaintiffs, the exercise should begin and end with filling out the declaration and filing it. I anticipate that the vast majority of plaintiffs who come to court seeking to enforce a debt will be equipped already with the information and documents that support their claim, and such documents and information will include the source of funds. If counsel or defendants seek to strategically use the requirement to make excessive discovery demands or to tie up the process, the courts are equipped to manage that.

I would add that the scope of this requirement could be curtailed by carving out exceptions for certain lenders such as federally regulated financial institutions, government agencies, and other entities that pose a low money laundering risk.

The Enduring Nature of the Private Lending Vulnerability

As noted by Professors Jonathan Caulkins and Peter Reuter, the drug trade will continue to operate on a cash basis for the foreseeable future and will generate enormous amounts of proceeds of crime that need to be disposed of.\textsuperscript{114} The laundering of the proceeds of crime through real estate is common throughout the world, but I see the British Columbia real estate market as particularly vulnerable, given the substantial rise in residential home values over the past decade.\textsuperscript{115}

A rise in property value on paper does not translate into funds in the hands of the homeowner, unless the owner sells or borrows on the security of their home. For some homeowners with great theoretical wealth in the form of home equity, but insufficient income or domestic credentials to demonstrate an ability to service a loan from a traditional lender, a private loan from an individual operator will be tempting. For the lender, there is little perceived risk. History has shown real estate in the Lower Mainland of BC to be a relatively safe investment. So long as the lender is willing to invest in the legal costs associated with foreclosure, recovery is almost certainly assured. Some such lenders are simply investing their own legitimately earned funds into what they see as a secure investment. But others will see an opportunity to divest themselves of cumbersome and risky cash, and to convert that into something less

\textsuperscript{114} Evidence of J. Caulkins and P. Reuter, Transcript, December 8, 2020, pp 14–16, 118–23.

\textsuperscript{115} Evidence of B. Ogmundson, Transcript, February 17, 2021, p 172.
conspicuous. Still others will see a business opportunity on both sides: bridging the gap between those holding vast amounts of suspect cash and wanting to get rid of it, and those with available home equity and a need for cash or money. So long as real estate values climb, creating equity in the hands of homeowners, and criminal organizations continue to accrue cash that needs to be disposed of, this will be a serious money laundering vulnerability in British Columbia.

In the example of Mr. Jin set out above, tens of millions of dollars, much of it loaned out in the form of cash, was transformed through the use of the legal process into more legitimate forms of wealth. A party seeking repayment of debt will most likely be repaid by traditional means: personal cheques, wire transfers, or cheques issued from the trust account of a law firm. The court may unintentionally end up playing a role in legitimizing such money: by making an order finding a defendant liable in debt, which can then be enforced through the court process, the court process is engaged to obtain payment (by traditional means) or to obtain an order compelling the sale of land.\(^\text{116}\)

That the judicial system can be and likely is being used as an instrument of money laundering is profoundly disturbing. My recommendation – for the implementation of a source-of-funds declaration as a prerequisite to bringing certain types of claims – is directed at giving courts and participants in the judicial process a tool for preventing such abuse.

\(^{116}\) Court Order Enforcement Act, RSBC 1996, c 78, s 96.
In this chapter, I consider how data and information are best used to address money laundering in real estate.

The real estate sector, perhaps more than any of the other sectors examined in the course of the Commission, produces an enormous amount of data. Some of this data is publicly accessible, but some is not. It has historically been more difficult for the public to access data in this area.

Things are not static. The real estate sector has recently been the focus of transparency measures introduced by the provincial government, most notably by way of the Land Owner Transparency Registry (LOTR). This registry contains information about beneficial owners – that is, the persons who actually hold an interest in land (not just the “owner on paper,” but the true owner). I discuss the LOTR below.

During the hearings, I heard evidence about what data is available and to whom, what data is missing but would be useful for anti-money laundering efforts, and efforts to use the large data sets created by the real estate industry to identify money laundering. Such information, of course, may be useful for both government and the private sector. I also heard from participants about privacy concerns relating to the collection and use of such data.
Beneficial Ownership Issues in Real Estate

Commentators such as Transparency International and Transparency International Canada point out that money launderers are attracted to jurisdictions where they can find ways to disguise ownership.¹ One expert called the lack of beneficial ownership transparency the “most important single factor facilitating [money laundering in real estate] in the US.”² On this view, the lack of data collected by corporate and land registries (i.e. the collection of legal titleholder information but not information on beneficial owners) creates impediments to combatting money laundering. It impedes investigation by law enforcement, prevents real estate professionals from conducting due diligence, and obscures insight into the flow of funds into networks that are laundering money.³ In sum, they say, the anonymity afforded by land and corporate registries “make[s] trafficking into real estate a very viable option for laundering significant sums.”⁴

British Columbia Beneficial Ownership Measures

I begin my discussion of measures in this province with British Columbia’s best-known measure to provide transparency around the ownership of real estate in the province: the Land Owner Transparency Registry.

Land Owner Transparency Registry

The British Columbia LOTR was created by the Land Owner Transparency Act, SBC 2019, c 23 (LOTA), enacted in May 2019. The Act came into force on November 30, 2020, some seven months after the pre-pandemic target date of April 30, 2020.

The purpose of the LOTR is to create a registry of indirect ownership of land. The Land Titles Registry records the legal owner (or lessor) of a property, but not the holder of the beneficial interest.⁵ The beneficial owner could be the shareholder of a

³ Ibid.
⁵ Evidence of C. Dawkins, Transcript, June 12, 2020, p 70.
corporation, the beneficiary of a trust, or a partner in a partnership that owns land. The beneficial owner in some instances may be the person behind a nominee – a nominee being a “stand-in” who appears on title in place of the real owner.

The LOTA creates a publicly accessible beneficial ownership registry, the LOTR. The Act requires corporations, trustees, and partners to identify the individuals who have (a) a beneficial interest of 10 percent or more in land;6 (b) a significant interest in a land owning corporation; or (c) an interest in land via a partnership. The LOTA requires this disclosure of beneficial ownership for all land in British Columbia, unless the reporting body is specifically excluded.

There are two types of filings that are made with the LOTR: (a) a transparency declaration, which is filed by anyone making an application to register an interest in land; and (b) a transparency report, which is required to be filed by “reporting bodies.”

A transparency declaration is filed by a person seeking to register an interest in land as defined by the LOTA, for example a transfer of ownership. It requires the transferee (that is, the person to whom the transfer is made) to declare whether they are a reporting body as defined in the LOTA.7 In a simplified way, the requirement is that a corporation, trustee, or partner must identify themselves accordingly when acquiring real property. The Registrar of Land Titles must refuse to accept an application to register an interest in land if the transferee does not submit the transparency declaration with the application.8 It used to be that a company could acquire title, and thus own real estate, without identifying who actually owns and controls that company. The LOTR puts an end to that, and mandates that such a company (or trust or partnership) properly identify itself, thus revealing the “true” owner of the land.

A transparency report is completed and filed by a reporting body. A transparency report must be submitted when a reporting body seeks to register an interest in land (s 12(1)), and by pre-existing owners before a prescribed date (now November 30, 2022)9 (s 15(1)). Transparency reports are also required to be filed when there is a change in interest holders, for example, a change in the composition of shareholders holding or controlling over 10 percent of the issued shares of a corporation (s 16(1)).

A “reporting body” is defined in the LOTA; it includes a corporation, trustee of a trust, and a partner of a partnership that holds an interest in land in British Columbia.10

6 Exhibit 756, LOTR Policy Presentation, p 7.
7 LOTA, ss 1, 10.
8 Ibid, s 11.
9 Land Owner Transparency Regulation, BC Reg 250/2020, s 19.
10 LOTA, s 1.
An “interest in land” is defined in the Act as any of:

a) an estate in fee simple [what most people consider “owning” land];

b) a life estate in land;

c) a right to occupy land under a lease that has a term of more than 10 years;

d) a right under and agreement for sale to
   i) occupy land, or
   ii) require the transfer of an estate in fee simple;

e) A prescribed estate, right or interest.\[.\]\(^{11}\)

Other interests in land can be made registrable by way of regulation. One interest in land notably absent from the definition is a mortgage.

A transparency report must disclose the following information about a reporting body’s “interest holders”: primary identification information;\(^ {12} \) date of birth; last known address; social insurance number, if any; any individual tax number assigned by the Canada Revenue Agency; whether the person is resident in Canada for the purposes of the Income Tax Act;\(^ {13} \) and a description of how the person is an interest holder.\(^ {14} \) The transparency report does as its name suggests: it reports in a transparent way who really owns the real estate. While the purchaser may have been Company X (or Trust X, Nominee X, etc.), by way of the transparency report, one can ascertain that the real owner is John Doe, with a particular date of birth, address, and the like.

There are different definitions for who qualifies as an “interest holder,” depending on the entity involved. For corporations, “interest holders” are those individuals who own or control, directly or indirectly, 10 percent or more of the issued shares or voting rights for the company, or individuals who have the ability to appoint or remove a majority of the company’s directors.\(^ {15} \) For trusts, persons who are “interest holder” are persons with a beneficial interest in the land, and those who have the power to revoke the trust and receive the interest in land (including if the person is a corporate interest holder in a corporation that has these powers). As for partnerships, the term “interest holder” means a partner in the partnership, or a corporate interest holder of a corporation that is a partner.\(^ {16} \)

\(^{11}\) Ibid.
\(^{12}\) Primary identification information is defined in sections 7 (corporations), 8 (individuals), and 9 (partnerships) of the LOTA.
\(^{13}\) Income Tax Act, RSC 1985, c 1 (5th Supp.), s 19.
\(^{14}\) LOTA, s 19.
\(^{15}\) Ibid, s 3.
\(^{16}\) Ibid, s 4.
Failure to file a transparency report or providing false or misleading information in declaration or report can result in a financial penalty of $25,000 for an individual, $50,000 for a corporation, or 5 percent of the assessed value of a property, whichever is greater.\textsuperscript{17}

The LOTR has been operational since November 30, 2020. Transparency disclosures are now required on the registration of an interest in land. Transparency reports must also be made by pre-existing land owners.\textsuperscript{18} Initially, pre-existing interest holders were given one year, until November 30, 2021, to make their transparency reports. On November 2, 2021, the Ministry of Finance extended that deadline to November 30, 2022, citing feedback from legal professionals that more time was needed to gather information about ownership and to file with the registry.\textsuperscript{19}

As of February 22, 2022, LOTR had received 263,373 transparency declarations and 40,967 transparency reports.\textsuperscript{20}

The registry became searchable on April 30, 2021. While the LOTR is accessible to the public, not all of the information recorded is publicly available. For a fee, members of the public can search a limited subset of prescribed primary identification information. Members of the public are able to search for information about associated reporting bodies, interest holders, and settlors of trusts.\textsuperscript{21}

Certain specified entities are entitled to inspect records and reported information. There are five classes of entities that are entitled to access all of the information in the registry searching based on the specific property (the parcel identifier). The five who can have this comprehensive access are:

1. the enforcement officer (a position created by LOTA);
2. Ministry of Finance employees;
3. taxation authority employees;
4. law enforcement officers; and
5. regulators, including the BC Financial Services Authority (BCFSA), the BC Securities Commission, FINTRAC, and the Law Society of BC.\textsuperscript{22}

As can be seen, it is largely members of the public, which includes the media, who have accessed the public registry since April 2020.
The LOTR administrator also provided the Commission information as to the searches of the transparency records that can be done for certain entities (those that have permission to obtain the records). These are known as section 30(1) searches of transparency records; that provision of the LOTA provides that transparency records held in the LOTR database may be made available for inspection and search to the regulators, law enforcement, and tax officers listed earlier. This is the breakdown of searches conducted:

*Source: Land Owner Transparency Registry*

There has been relatively little use of the section 30(1) search power by regulators and law enforcement who might be expected to find this information useful. This could be due to a number of factors, including the fact that the registry is still relatively new. It could also be because, to date, only a small number of historical transparency reports have been filed. As experience with the LOTR is developed, it will be insightful to learn whether enforcement and regulatory bodies begin to use the information available through section 30(1) to improve their own investigations and processes. Later in this chapter, I recommend that there be an assessment of effectiveness of the registry, once there is more experience with the LOTR. During that review and assessment – which I recommend be handled by the new AML Commissioner – the commissioner should engage with the entities that fall under section 30(1). This will enable the commissioner to determine whether these entities are finding the LOTR useful for law enforcement or regulatory functions, and to learn if information or access might be improved.
The search fee for the LOTR is currently set at $5 per search. I pause to note a distinction between information on a database of corporations and other legal persons, and a registry of owners of real estate. There is a compelling rationale for ensuring that a beneficial ownership transparency registry for companies has no search fee. Individuals who contract with or otherwise deal with a company should be able to ascertain the identity of those individuals who own and control it, and they should not have to pay to access this information (as I address in Chapter 24). On the other hand, there is a strong tradition of requiring the payment of a fee to access records about ownership of property, and the business model of the Land Title and Survey Authority (LTSA) relies on such fees to operate. Insisting on free access to the LOTR would, based on the evidence available to me, give rise to financial consequences to LTSA. I therefore have not recommended free access generally, although it is open to government to take that approach if satisfied it is appropriate.

The payment of fees for LOTR access, however, does give rise to a difficulty for law enforcement agencies. The Ministry of Finance does not pay to access this information. But other entities, including law enforcement agencies, are subject to a fee for searching. I heard evidence that this fee-for-search structure is a concern for law enforcement. Beneficial ownership information would be useful to law enforcement conducting investigations into money laundering, and I therefore recommend that the Province remove, by way of amendment to the LOTA and/or its Regulations, the fee requirement for law enforcement and regulators with an anti-money laundering mandate. The Province may also consider removing the fee requirement for others such as academics and non-profits.

**Recommendation 33:** I recommend that the Province remove, by way of amendment to the *Land Owner Transparency Act* and/or its Regulations, the fee requirement for law enforcement and regulators with an anti-money laundering mandate who wish to access the Land Owner Transparency Registry.

Enforcement of the LOTA is a responsibility that falls outside of the land titles system. The Registrar of Land Titles receives the transparency reports and declarations and accompanying fees, and the administrator of the LOTR maintains the registry, but neither has legislative authority to ensure compliance with the Act. The LOTA

---

23 Exhibit 756, LOTR Policy Presentation, slide 18.
24 Evidence of C. MacDonald, Transcript, March 12, 2021, p 139. The Land Title and Survey Authority is discussed later in this chapter. The LTSA was established in 2005, and is a statutory corporation, independent from government. It is responsible for managing the land title and survey systems of British Columbia. Its mandate and responsibilities are set out in the *Land Title and Survey Authority Act*, SBC 2004, c 66, and its operating agreement with the Province.
27 LOTA, s 47; Exhibit 756, LOTR Policy Presentation, slide 11.
creates an enforcement officer, who is to be appointed by the minister of finance. The enforcement officer conducts inspections, can require information to be provided to the enforcement division, and can use the tools available to the enforcement officer under the LOTA to compel compliance, including the imposition of penalties. The enforcement officer is also responsible for providing education and awareness about LOTA.

While the LOTR is relatively new, both the Act and the registry it creates have already been the subject of criticism. In a report to provincial and federal ministers of finance, the federal-provincial ad hoc working group on real estate suggested that British Columbia consider:

• further measures to improve the accuracy of the LOTA registry, such as requiring the collection of tax numbers from foreign entities that do not have a Canadian tax number;

• monitoring the privacy concerns that emerge from the creation of the public-facing LOTR;

• facilitating the sharing of LOTA data with other agencies to allow for data analytics; and

• working with LTSA after the launch of the registry to compile a list of lessons learned in operationalization of the registry.

Implementation of the first suggestion would be subject to the outcomes of the research I will recommend below, but I encourage the Ministry of Finance to take up the last three recommendations, if it has not already done so.

Transparency International, Canadians for Tax Fairness, and Publish What You Pay Canada (together, the Transparency Coalition), a participant in the Inquiry, articulated the following criticisms of the LOTR in their closing submissions:

• There is a lack of verification and validation of information, with no requirement that the LOTR, or any independent third party, verify the information filed. The integrity of the registry depends on the assertion of veracity made by the reporting bodies and their representatives (such as the lawyers or notaries who file the declarations and reports). There is no requirement for reporting entities to provide supporting documentation such as copies of passports. Information is only verified by way of random checks by the enforcement officer.

28 Ibid, s 50.
• There are inadequate penalties for the intentional submission of false information. The Transparency Coalition advocates for the availability of prison terms as an enforcement tool.

• Searches are not free, which will limit the use and effectiveness of the LOTR.

• There are no clear means for whistle-blowers to report false or inaccurate filings.

• There is no unique identifier for individuals, which creates problems for common names that cannot be distinguished.

• There is limited searchability of the LOTR by members of the public.32

On the other side, the British Columbia Civil Liberties Association (BCCLA) expressed reservations about the privacy implications of beneficial ownership registries generally, and the lack of evidence around their effectiveness. BCCLA argues that the LOTR should be accessible only to law enforcement, tax authorities, and perhaps other regulators. It says this approach strikes a more appropriate balance between transparency and privacy. BCCLA also expressed a concern that open access to beneficial ownership information could create risks of fraud, identity theft, and harassment.33

I note that the LOTA already contains provisions allowing an individual submitting a report to apply to the LOTR administrator to omit their information from a public search, on the grounds that the individual has a reasonable belief there is a threat of harm or safety to themselves or a member of their household.34 There is, as a result, already a set of exemptions that prevent public access to personal information when appropriate and necessary. I am not persuaded that there is a compelling justification for providing greater privacy protections to individuals who own real estate through a company or similar vehicle, as compared to the vast majority of British Columbians property owners, who register their property in their own name.

With respect to effectiveness, BCCLA references Professor Jason Sharman’s report to the Commission, in which he states:

Yet despite the current popularity of beneficial ownership registries there is a striking lack of evidence that they do actually help in deterring, detecting or combatting money laundering and related financial crime. The UK government has been the main champion of this policy on the international stage, but it is hard to see either any general decline in financial crime, or even any particular case that has succeeded because of this new level of transparency.35

34 LOTA, s 40(1).
35 Exhibit 959, Jason Sharman, Money Laundering and Foreign Corruption Proceeds in British Columbia: A Comparative International Policy Assessment, p 10; Closing submissions, BCCLA, para 77.
Professor Sharman commented on the effectiveness of beneficial ownership registries inasmuch as they contain low-quality information. Interestingly, Professor Sharman’s criticism relates to his conclusion of ineffectiveness, but from a different perspective (that of proponents of beneficial ownership registries). The Transparency Coalition likewise has concerns about low-quality information. In his report, Professor Sharman writes:

The danger with registries is that they contain a large volume of low-quality information. In particular, the information is unverified, and there is almost no enforcement against false ownership declarations. In Canada, there are something like 2.6 million companies; who, specifically, will verify the information they lodge on beneficial ownership, and how will this requirement be enforced?

In his testimony before the Commission, Professor Sharman repeated his view that beneficial ownership information relating to real property should be available for both law enforcement and non-law enforcement purposes, and that the creation of LOTR is positive. He warned, however, against passing laws that will not be effectively enforced, stating “legislation is good, but enforcement is really the name of the game.”

Both the Transparency Coalition and BCCLA voice valid concerns. The LOTR is in a nascent stage, and there is reason for optimism that the registry will produce positive changes. First, an abundance of specific information about the actual beneficial owners of real estate is already available, with significantly more being added (the historical information). This should prove useful and informative for regulators and law enforcement, as well as journalists and policy organizations working in the area. It is not speculative to say that the ability to access this type of information will make a difference in combatting money laundering. Second, the very existence of the LOTR will have some deterrent effect on sophisticated jurisdiction-shopping money launderers who want to maximize secrecy over their ownership of property. In my view, they will be less likely to purchase real estate in a jurisdiction that requires them to divulge their name and penalizes them for failure to do so. In saying this, I accept Professor Sharman’s point – echoed by the Transparency Coalition – that without verification and enforcement against anyone providing inaccurate information to the LOTR, the effect of the measure will be muted.

I hope it is the case that my optimism proves to be well placed. It is important, whether one adopts an optimistic or cynical view of the LOTR, that research and analysis are conducted on the compliance with, and effectiveness of, the system.

In Chapter 8, I recommend the creation of a new office of the AML Commissioner. This office will be optimally placed to determine the effectiveness and impact of the LOTR, once it is populated with historical data, and to report to the Province on its

36 Closing submissions, Transparency Coalition, paras 100–5.
conclusions (and if appropriate to the public as well). In my view, the following steps would evaluate the effectiveness and the impact of the LOTR:

- engaging and consulting with the regulatory and enforcement bodies permitted to perform Land Owner Transparency Act section 30(1) searches to determine whether they have found LOTR information valuable for their investigations and anti-money laundering efforts;
- analyzing the extent to which reporting bodies:
  - are complying with the requirement to file;
  - are complete and accurate in their filings;
- researching the extent and result of any enforcement measures taken;
- determining what impact, if any, the LOTA has had on the legal ownership of real property by corporations, trusts (including nominees), and partnerships, as opposed to natural persons (a point I return to below); and
- drawing on insights and experience from other jurisdictions around the world.

I therefore conclude that, once there is more experience with the LOTR, there should be an assessment of the effectiveness of the registry. I recommend that, within three years of the Land Owner Transparency Registry being populated with historical data, the AML Commissioner report to the Province with any recommendations for improvement to the registry. These recommendations should be informed by the AML Commissioner's study of the effectiveness of the registry and consultation with entities that are permitted to perform section 30(1) Land Owner Transparency Act searches.

**Recommendation 34:** I recommend that, within three years of the Land Owner Transparency Registry being populated with historical data, the AML Commissioner report to the Province with any recommendations for improvement to the registry. These recommendations should be informed by the AML Commissioner's study of the effectiveness of the registry and consultation with entities that are permitted to perform section 30(1) Land Owner Transparency Act searches.

This assessment of the LOTR by the AML Commissioner should enable the Province to make any improvements required to ensure that information in the registry is accurate and of optimal utility to regulators and enforcement agencies. Such analysis may provide insights of broader relevance to beneficial ownership transparency registries, a topic I discuss in relation to legal persons (such as companies) in Chapter 24.
Collection of Beneficial Ownership Information Pursuant to the Property Transfer Tax Act

In British Columbia, a person, on gaining or purchasing an interest in property, must file a property transfer tax return and, in most cases, pay property transfer tax. Starting in 2016, prior to the enactment of LOTA, the provincial government began using the property transfer tax return as an opportunity to collect information about the beneficial purchasers of real property.

The first set of changes to the Property Transfer Tax Act, RSBC 1996, c 378, implemented in June 2016, required the collection of data on the citizenship of transferees, as well as the identity and citizenship of the directors of corporate transferees and settlors and beneficiaries of bare trusts. In September 2018, further changes were made requiring corporate transferees to identify beneficial owners with ownership or controlling interests of 25 percent or more, and requiring trustees to identify the settlors and beneficiaries of their trusts. Transferees holding a property on behalf of a partnership are also required to disclose that fact.39

The inspiration for the study was similar work performed by two academics, Sean Hundtofe and Ville Rantala, assessing the impact of orders by FinCEN in the United States that required the collection and disclosure of beneficial ownership information in certain circumstances.40 The FinCEN orders, and the study by Professors Hundtofe and Rantala, are described briefly below.

United States Experience with Beneficial Ownership Disclosure

A brief review of the United States’ use of geographic targeting orders is required before turning to the work of Hundtofe and Rantala.

A geographic targeting order (GTO) is, as the name suggests, a measure that focuses on a particular geographic area. A GTO allows FinCEN, the American financial intelligence unit, to direct entities and businesses in a certain geographic area to collect and report information to FinCEN.41 GTOs can be issued for a six-month period and renewed if needed.42

In 2016, FinCEN issued GTOs that required title insurance companies to collect and report information regarding the beneficial ownership of companies that purchased residential real estate.43 (Unlike in Canada, in the United States, real estate agents are not...
subject to due diligence and suspicious activity reporting. FinCEN GTOs require title insurance companies, within 30 days of closing, to report to FinCEN any non-financed residential real estate sales in a number of major US counties, when certain criteria are met: (a) the buyer is not a real person but a legal entity (other than a US public company); (b) the purchase is for $300,000 or more; and (c) the purchase is made in part (or entirely) with currency, money instruments, wire transfers, and/or virtual currency. The reports were required to include beneficial ownership information at a “25% or more” threshold for the purchasing legal entity, and the title insurance companies were required to verify the identity of the beneficial owners and their representatives using documentary means.

Initially, on January 13, 2016, FinCEN issued GTOs that applied to Manhattan and Miami-Dade County. On July 27, 2016, FinCEN expanded the order by issuing GTOs to 12 additional counties in California, Florida, and Texas. These temporary orders have been continually renewed and expanded to different cities.

The GTOs were responsive to FinCEN’s perception that the purchase of high-end real estate in certain cities were being used to launder proceeds of criminal activity from around the world. Professors Hundtofte and Rantala describe the ability to make all-cash purchases of residential real estate by using a limited liability company (LLC) as a loophole in US anti-money laundering regulations. By using an LLC, all-cash (unfinanced) purchasers of real estate could avoid triggering the banking system’s “know your customer” requirements, and could avoid identifying themselves to law enforcement authorities.

FinCEN has stated that “GTOs have provided FinCEN with valuable insight into the ways that illicit actors move money in the US residential real estate market, and help us better understand how actors in markets with relatively fewer anti-money laundering protections respond to new reporting requirements.” As an indication of the usefulness of such reports in identifying potentially suspicious transactions, FinCEN reported in May 2017 that 30 percent of reports made pursuant to the GTOs involved either a beneficial owner or purchaser representative that had been the subject of suspicious activity reports.

Evaluation of the Effectiveness of American GTOs

In an attempt to better understand the influence of anonymity (particularly the use of shell companies) in proceeds of crime entering real estate, Professors Hundtofte and Rantala examined the rate of all-cash purchases of real estate – both before and after the introduction of the GTOs. They found that all-cash purchases by corporate entities comprised 10 percent of the dollar volume of housing purchases prior to the GTOs. This figure fell by 70 percent upon the introduction of a GTO. The authors concluded that the availability of anonymity was a key incentive for all-cash purchases of real estate by LLCs, suggesting that these LLCs were being used as shell corporations: “The evidence on the whole suggests that anonymity-prefering buyers made up the majority of corporate cash purchases in the US prior to the policy change.”

Professors Hundtofte and Rantala also found declines in the luxury home markets in places where the GTO had been implemented; such declines were not observed in comparable jurisdictions in which no GTO applied. After the GTOs were introduced, the prices of high-end houses in targeted counties dropped by 4.2 percent more than prices in other counties.

The results of this study suggest that some buyers in the targeted US jurisdictions were, in fact, using corporate structures for anonymity purposes, and that the implementation of beneficial ownership disclosure requirements has a negative impact on the use of such structures for the purchase of real estate. Removing a tool for obscuring beneficial ownership had the effect of reducing the number of people using the tool, and it reduced the demand for luxury property in those markets. In other words, the GTO had an impact.

The Impact of Beneficial Ownership Disclosure in British Columbia

Returning to this province, the study by Adam Ross, Dr. Tsur Somerville, and Dr. Jake Wetzel sought to evaluate whether a similar impact on corporate ownership could be measured following the implementation of disclosure requirements through British Columbia’s property transfer tax (or PTT) return.

The implementation of disclosure requirements through the property transfer tax return created an opportunity to measure their impact on rates of corporate ownership.

56 Ibid.
57 Ibid, p 19.
58 Ibid, pp 5–6 and 20–21.
59 Ibid, p 20. The authors noted that “even a drop of 4–5% indicates that billions of dollars of market value is wiped out in the GTO counties, which include many of the largest cities in the U.S.”
60 Exhibit 1041, exhibit B, PTT Study.
To this end, the Commission retained Ross, Somerville, and Wetzel to answer the following questions:

- How has the introduction of beneficial ownership disclosure for BC property transactions impacted the ways in which people own real estate?
- Specifically, has the monitoring of identity led to a decline in property ownership through legal entities?\textsuperscript{61}

It is worth noting that at the time the study was commissioned, the LOTR was not yet operational. As outlined earlier in this chapter, I recommend that the new AML Commissioner should, within three years of the LOTR being populated with historical data, study its effectiveness. Because of the ambiguous results (as will be seen) of the BC study performed for the Commission, I recommend above that, in the course of this assessment, the AML Commissioner study and report on the impact of the LOTR on the ownership of real property by non-natural persons.

The specific question addressed by the authors of the PTT Study was “whether the introduction of enhanced ownership reporting and registration in 2016 and in 2018 affected the likelihood that a newly purchased property had at least one owner that was a corporation.”\textsuperscript{62} The study relied on LTSA title information, BC Assessment roll data, and data collected by the Ministry of Finance through property transfer tax returns. Because of gaps in available data for commercial property transactions, the study focused on residential property.\textsuperscript{63} It focused on holdings by corporations because of the difficulty in identifying, through land titles data, bare trusts (i.e., nominee owners) and property held for the benefit of partnerships, making a “before and after” comparison of holdings by such entities impossible.\textsuperscript{64}

The study targeted changes to corporate disclosure to the property transfer tax return occurring at two points in time: June 2016 and September 2018. As mentioned above, in June 2016, corporate transferees (purchasers) were required to report the identity and citizenship of their directors. In September 2018, corporate transferees were required to identify beneficial owners with 25 percent or more equity interest.\textsuperscript{65}

While the Hundtofte and Rantala study showed a clear response in the market to the implementation of the geographic targeting orders by FinCEN, there was no such clear response in the BC market following the implementation of beneficial ownership disclosure requirements through the property transfer tax.\textsuperscript{66} In the year after the implementation of the 2016 changes, LTSA data indicated that the probability that a

\textsuperscript{61} Ibid, p 6.

\textsuperscript{63} Ibid, p 18.
\textsuperscript{64} Ibid.
\textsuperscript{65} Ibid, p 79.
\textsuperscript{66} Ibid, p 19.
residential property in BC would be held through a legal entity increased from a baseline probability of 2.37 percent to 3.01 percent. Following the September 2018 property transfer tax changes (requiring the disclosure of corporate beneficial ownership), the data were mixed. LTSA data indicate that the probability that a residential property in BC would be held through a legal entity increased from 3.52 to 4.15 percent.

Property transfer tax data, on the other hand, indicated that from June 2016 until September 2018, 3.8 to 5.1 percent of residential transactions reportedly involved a corporation. After the September 2018 update to property transfer tax disclosures, the rate of corporate ownership decreased to 3.0 percent from 4.2 percent, amounting to a 12 to 16 percent drop in transfers into corporations. The decrease was most pronounced among single family / duplex properties in metropolitan areas, amounting to a 30 percent drop in transfers into corporations. The authors of the report did have questions about the reliability of the data.

The analyses suggest that “anonymity may not be a primary motivator for most buyers using corporations to hold property in BC.” Alternately, as explained by the study’s authors, the measures may not be deterring anonymity-seeking buyers as they are not perceived as a threat:

It is possible that unlike GTOs in the US, which had a clear and immediate impact on anonymity-seeking buyers of property, the BC Government’s initiatives have not spurred behaviour change due to perceptions that this additional data collection by the government is not a threat. The collection of beneficial ownership information in [property transfer tax] returns has not been coupled with enforcement or independent verification. In contrast, data gathered through the GTO is shared with the enforcement branch of the US Treasury Department, which has a mandate to combat money laundering, and there are unlimited civil and criminal penalties for non-compliance. The relative strength of the GTO policy and the agency enforcing it may have spurred higher rates of compliance and behaviour change among buyers in the US than for their counterparts in BC.

The study also reports on the number of trusts being reported as transferees through property transfer tax returns. From approximately June 2016 to September 2018, 0.3 percent to 0.9 percent of residential property transfers were reported to involve a bare trust. Following the September 2018 update, 1.3 percent to 1.8 percent of transfers disclosed that the purchaser / transferee was a trustee. In September 2018, the property

70 Ibid.
71 Ibid.
72 Ibid.
73 Ibid, pp 20–21.
74 Ibid, p 21.
transfer tax return was changed to require reporting of all trustees, not just bare trusts (the arrangement most often associated with nominee ownership). The authors suggest this change makes it difficult to assess how much of the increase is merely owing to accuracy in reporting (because the data field captures a broader category of trusts), as opposed to an actual increase in purchases by trusts.75

The PTT Study suggests there is an under-reporting of properties held though trusts for several reasons, including a lack of understanding of the meaning of a “bare trust” and difficulties in identifying bare trusts, as they can exist with no formal agreement or documentation of any kind.76 The authors suggest measures to address under-reporting, including requiring titleholders to declare whether they hold property on behalf of a third party, coupled with sanctions for false declarations.77

In considering this suggestion, I note that titleholders of residential property in British Columbia are already required to make an annual declaration as to whether their property is occupied.78 Requiring an additional declaration as to nominee ownership does not seem an undue burden in this context. I stop short of making a recommendation here, because I believe that additional information is required before determining the best course of action. One benefit of a declaration regime would be to provide a data point that could be used by the Ministry of Finance to measure how comprehensively the LOTR is capturing information about nominee ownership of property. And with respect to money laundering specifically, it is not apparent that the creation of a declaration regime in addition to the LOTR will achieve anti–money laundering goals. In my view, those seeking to hide their beneficial ownership behind a nominee for nefarious reasons are unlikely to honestly disclose this on a declaration. Law enforcement tools will likely be required to identify the use of nominees by criminal actors.

Real Estate Information Collection and Use

I heard from a number of witnesses about research projects and project development using available data to identify suspicious transactions and properties, and networks of relationships between individuals. I review some of this evidence below.

Canada Mortgage and Housing Corporation

I heard from two witnesses from Canada Mortgage and Housing Corporation (CMHC), Albertus (“Bert”) Pereboom, senior manager of the housing market policy team, and Wahid Abdallah, a policy analysis specialist with CMHC’s housing market policy team. They described CMHC’s efforts to make use of existing data sets in the real estate sector in order to detect potential fraud and money laundering.

76 Ibid, p 22.
77 Ibid.
78 Speculation and Vacancy Tax Act, SBC 2018, c 46.
CMHC began work on what Mr. Pereboom called a “market integrity index” in 2018, consequent to a direction in CMHC’s mandate letter to develop a mortgage fraud action plan.\footnote{Evidence of B. Pereboom, Transcript, March 11, 2021, pp 5–6.} As part of delivering on that mandate, CMHC consulted with Professor Brigitte Unger (also a witness in these proceedings) with respect to her work on anti-money laundering in the Netherlands.\footnote{Ibid, pp 7–8.}

In order to provide context for CMHC’s undertaking, a summary of the study by Professor Unger and her colleagues is required. Professor Unger and Professor Joras Ferwerda conducted a study of criminal investment in Dutch real estate in 2010. The purpose of the study was to identify indicators of suspicion (“red flags”) in real estate transactions that may indicate money laundering. With access to extensive data from Dutch land registry and tax authorities, Professors Unger and Ferwerda applied a list of 17 indicators of suspicion to identify 200 real estate transactions. Those transactions were analyzed by criminologists on a case-by-case basis to determine which were, in fact, associated with criminal activity. The purpose of the study was to determine which indicators can detect real estate that might be associated with criminal activity, and which do not.\footnote{Exhibit 718, Joras Ferwerda and Brigitte Unger, “Detecting Money Laundering in the Real Estate Sector,” in Brigitte Unger and Daan van der Linde (eds), Research Handbook on Money Laundering (Northampton, UK: Edward Elgar Publishing, 2013), pp 268–82.}

The authors first developed a list of 17 red flags, based on a review of the literature, which included Financial Action Task Force publications.\footnote{Ibid, pp 271–72.} The indicators fell under the following categories: (a) characteristics of the party providing financing; (b) characteristics of the transaction; (c) characteristics of the owner/purchaser; (d) characteristics of the property; and (e) characteristics of the price. The indicators of suspicion are:

1. The financier is from abroad.
2. The financier is a natural person rather than a company (or financial institution).
3. The financing is disproportionately high compared to the value of the property.
4. There is no financing (i.e. no mortgage).
5. Financing is provided by the owner themselves (usually through complex financial arrangements).
6. The owner is from abroad.
7. The owner has an unusual number of properties or performs an unusually high number of transactions.
8. The owner is a company in a business that is associated with criminality or the risk of criminality.
9. The owner is a newly created company.

10. The owner is a “shell” company or company with no employees.

11. The owner is a “world citizen” whose tax jurisdiction is unknown.

12. The property in question is involved in multiple transactions (for example, it is sold several times over a short period).

13. The property is either in a very upscale or in a marginalized and economically depressed neighbourhood.

14. The purchase amount is unusual compared to the assessed value (either much higher or much lower).  

The authors then applied these indicators to a data set consisting of land registry information from two Dutch cities, as well as information on their owners obtained from Dutch tax authorities. They found that many transactions or properties had a couple of red flags, but very few displayed five or more. Criminologists were provided with 150 of the highest “scoring” properties, along with 50 “lower” scoring properties for analysis. The criminologists analyzed the properties and transactions presented to them, and ultimately identified 36 as “conspicuous.” Five were linked with drugs, 27 with fraud, and four with “renting irregularities.” Nine cases were deemed “strongly conspicuous.”

One notable finding of the study was that the red flag analysis identified individuals that were not identified as suspicious or conspicuous by “on the ground” stakeholders, such as law enforcement. The stakeholders were asked to identify subjects that had raised their awareness in the two Dutch cities. This survey identified 356 individuals. When compared with 1,130 individuals associated with the 200 properties analyzed by criminologists, only two matched. The authors note that this could indicate that the red flag analysis was not identifying properties associated with criminal activity, or that it was identifying properties and persons not yet known to local law enforcement.

The study concluded that a property that raised more red flags did, in fact, have an increased chance of being related to money laundering or other criminal investments. Certain indicators – unusual price in comparison to assessed value, ownership by a recently created company, and foreign ownership – were more likely than others to be associated with properties the criminologists concluded were conspicuous.

---

83 Ibid, pp 272–75: There are 17 indicators, but some were collapsed by the authors into single descriptions, and the list is reproduced here as organized by the authors with small grammatical changes for clarity. For instance, while a purchase amount much higher than assessed value is one indicator and a purchase price much lower than assessed value is a separate indicator, they are grouped for the purpose of description.

84 To increase impartiality, 50 properties “with less than five red flags” were added as a control group without signalling the criminologists: ibid, pp 275–76.

86 Ibid, p 277. Two of the matches did concern one of the “strongly suspicious” cases.

87 Ibid, p 277.

88 Ibid, p 277.

89 Ibid, p 279.
Building on the model established by Professors Unger and Ferwerda, CMHC developed a list of 35 indicators, and narrowed that to 17 to reflect the availability of information in Quebec. The indicators identified by CMHC largely mirror those identified by Unger and Ferwerda. Each indicator was assigned a value between 0 and 1 (1 being more suspicious). The data sets available to CMHC were analyzed through the lens of these 17 indicators and properties with a high number of indicators were identified. CMHC then conducted a second step (much like the criminologists in the Dutch study) and, based on open source information, attempted to determine if the identified properties were, in fact, associated with suspicious persons, suspicious activity, or foreign politically exposed persons. Those open sources included the notaries records in Quebec, politically exposed persons databases, commercially available databases for ultimate beneficial ownership, federal and provincial corporate registries, the Canadian Legal Information Institute (CanLII), and the International Consortium of Investigative Journalists (ICIJ) database.

CMHC first conducted this analysis with Quebec real estate, due to the availability of relevant data. Mr. Pereboom explained why Quebec was chosen:

Quebec is unique among registries at least for the data that we're able to receive in reporting buyer and seller names ... To trace money laundering, to have a ghost of a chance at doing it, you need to know who buyers are and what pattern of transactions they have. So without that name, you can associate multiple transactions with the same individual to see their pattern of activity.

CMHC “scored” 1,612,630 Quebec real estate purchases between 2000 and 2018, applying the values assigned to suspicious indicators (the market integrity index). Out of a maximum market integrity index score of 17, the mean score was 3.67. Ninety-four percent of purchasers had a market integrity index score of five or lower. 3,297 purchasers scored eight or higher. The maximum observed score was 11.

The CMHC analysis did more than simply identify transactions with “red flag” characteristics. Of importance for understanding trends in the real estate market and for better comprehending what is “unusual” (and by extension, perhaps suspicious depending on the circumstances), it provides data relating to each of the suspicious indicators used, across all properties in Quebec, over the 2000–2018 period. This

---

90 Exhibit 719, Defining a Housing Market Integrity Index (MII): A Methodology and Application to Quebec’s Housing Market – Draft (February 19, 2021) [Quebec Housing Integrity Index], pp 12–19.
91 Ibid, p 20. An indicator value of one by itself does not suggest a transaction is suspicious. The methodology requires several indicators to be at or near a value of one to reach range of more suspicious transactions (p 12).
93 Exhibit 719, Quebec Housing Integrity Index, pp 21–22.
95 Ibid, p 49.
96 Exhibit 719, Quebec Housing Integrity Index, pp 23–24.
information provides valuable context for what may be considered normal or unusual in the real estate market. For instance, the CMHC study indicates that only 2.4 percent of properties sold in Quebec in this time frame were sold five times, and less than 1 percent were sold six or more times.97 Between 2014 and 2018, only 0.45 percent of real estate transactions were financed by a natural person, 0.01 percent by a foreigner, and 15.33 percent had no associated mortgage record.98

Using the red flag analysis, CMHC, through open-source research, detected a number of properties with connections to suspicious circumstances. However, given a lack of “confirmed cases” of money laundering to test against (reflecting a lack of prosecutions of money laundering offences in Canada), neither Dr. Abdallah nor Mr. Pereboom could conclusively say whether any one indicator is a better or worse indicator of money laundering in real estate.99 In order to determine which indicators were more valuable, Mr. Pereboom said that CMHC would need to collaborate with experts who could identify cases in which money laundering was at least suspected, to allow for the application of regression analysis to identify “true” indicators of suspicion.100 But, as Mr. Pereboom pointed out, CMHC is not part of the formal federal anti–money laundering regime, and does not have access to information – such as suspicious transaction reports filed with FINTRAC – that might inform the assessment of which indicators are most probative in terms of identifying money laundering activity.101

The authors of the study suggest the market integrity index tool could be used in the following ways:

• to identify suspicious transactions in a relatively unbiased way, free of more subjective assessments made of those expected to file suspicious transactions reports;

• to focus information gathering on higher risk transactions, relative to random audits, out of hundreds of thousands of other legitimate transactions – especially when the launderers attempt to camouflage their activities from individual observers (the methods can also be used to evaluate historical transactions, with the potential to indicate whether money laundering risk is rising or falling over time);

• to pull together a history of transactions over times and places, revealing patterns that would not be observable by individual professionals in the existing anti–money laundering regime; and

• to deter money laundering in real estate by identifying potential suspicious transactions.102

97 Ibid, p 25.
98 The time frame for this analysis begins in 2014 when mortgage finance data became available: ibid, p 27.
100 Evidence of B. Pereboom, Transcript, March 11, 2021, p 43.
101 Ibid, pp 44–45.
102 Exhibit 719, Quebec Housing Integrity Index, pp 9–10.
As noted by Mr. Pereboom, use of the market integrity index is supplemental to the obligations of professionals involved in real estate transactions to submit suspicious transaction reports.\(^{103}\) What the market integrity indicator approach avoids, however, is the inherent conflict of interest involved in asking industry actors to report on – and perhaps distance themselves from – transactions in which they have a direct financial interest.\(^{104}\)

CMHC did attempt to complete a similar analysis for British Columbia, but encountered issues with accessing the required data.\(^ {105}\) Part of the issue was that some of the necessary information for the analysis was captured only in PDF format, rather than in captured “fields” that were more readily analyzed.\(^ {106}\) In total, only six indicators were capable of being analyzed in British Columbia, as compared to the 17 in Quebec.\(^ {107}\) A key data gap was the absence of buyer and seller names:

Like the method that we’re doing with Quebec and applying it requires you to know ... what a buyer has paid for and when a transaction has been transacted and to whom they sell it. So you need the pattern of transactions. You can’t just look at a transaction individually. So, again, our mortgage [market integrity index] requires to see a bigger picture rather than a single transaction. So as we’ve shown in the BC thing, you can only evaluate 6 of the 17 indicators that we can do with Quebec if you do not have more information about the buyers, sellers and the other persons associated with that transaction.\(^ {108}\)

In order to perform the required analysis, an enormous amount of work would have to go into data collection and cleaning to make the available data usable.\(^ {109}\) Mr. Pereboom also suspected some of the difficulty in accessing data related to privacy concerns, but said the continued barriers had not been communicated by the BC LTSA.\(^ {110}\) LTSA witnesses indicated there were concerns about violating privacy legislation by providing bulk data sets to CMHC, and that they would need clear direction on their legal authority to share that information. They also adverted to the significant resources that would be required to provide data in the format required by CMHC, as well as concerns that providing data as requested could undermine LTSA’s business model, in that they rely on the ability to charge a fee for access to registry data.\(^ {111}\)

\(^{103}\) Evidence of B. Pereboom, Transcript, March 11, 2021, p 27.
\(^{104}\) Ibid, pp 46–47.
\(^{105}\) Exhibit 717, Bert Pereboom, Scoring and Flagging ML Risks in BC Real Estate (October 2019); Evidence of B. Pereboom, Transcript, March 11, 2021, slides 51–52.
\(^{107}\) Exhibit 717, Bert Pereboom, Scoring and Flagging ML Risks in BC Real Estate, pp 3–4.
\(^{109}\) Ibid, pp 55–56.
\(^{110}\) Ibid, pp 56–57.
Because the British Columbia data allowed for analysis of only six indicators, the maximum possible market integrity index score for BC was six. The maximum score observed of 1,703,866 transactions analyzed was 5.96. The average score was 2.8.\footnote{Exhibit 717, Bert Pereboom, Scoring and Flagging ML Risks in BC Real Estate, p 8.} Because of a lack of data, including, apparently, owner identities, CMHC was unable to complete the secondary step of verifying the scores against open-source information that might confirm a basis for finding the property or transaction suspicious, essentially rendering the exercise of very little utility.\footnote{Ibid, p 11.}

The data used in CMHC’s Quebec study is specific to Quebec and cannot be safely used to contextualize transactions in the British Columbia real estate sector. The point is that the existence of such data seems enormously helpful for understanding what is normal, and what is out of the ordinary, in different real estate markets. For professionals with reporting obligations to FINTRAC, access to such information would help in determining when a transaction might be “suspicious,” as determined by reference to objective criteria. I am recommending that the BC Ministry of Finance, either on its own or in cooperation with CMHC, conduct a similar analysis of the British Columbia real estate market. In addition to assisting reporting entities identify suspicious transactions, I anticipate that access to such information will be of assistance to regulators in detecting and monitoring market trends, and by extension, current behaviours and risks in the market. I see immense value in the type of analysis CMHC undertook with respect to Quebec real estate, and which it attempted to complete in respect of British Columbia. I recommend that the Ministry of Finance – either in conjunction with CMHC or on its own – develop the required data and conduct such an analysis.

\textbf{Recommendation 35:} I recommend that the Ministry of Finance – either in conjunction with Canada Mortgage and Housing Corporation or on its own – develop the required data and conduct a market integrity analysis in order to identify suspicious transactions and activity in real estate.

In addition, I consider that there would be significant benefits to equipping LTSA with a clear basis to factor in anti-money laundering when it conducts its work. This change in mandate will ensure LTSA is alert to money laundering risks and activity and responds to them when identified. It also ensures that LTSA can more easily share information with other agencies involved in the fight against money laundering. I recommend that the Province give LTSA a clear and enduring anti-money laundering mandate, including the ability to more readily share data with other agencies having a complementary anti-money laundering mandate.
Recommendation 36: I recommend that the Province give the Land Title and Survey Authority a clear and enduring anti-money laundering mandate, including the ability to more readily share data with other agencies having a complementary anti-money laundering mandate.

The use of this type of information can be enormously valuable for identifying trends, developing policy and making determinations about the allocation of resources. It will be useful for the AML Commissioner. While it may also prove useful to law enforcement entities, the Province, in developing legislation and policies about access to the information, will have to be alive to privacy and constitutional issues that might impact the ability to use the information for tactical intelligence.

This type of project could benefit significantly from the (contemplated) enhanced anti-money laundering data framework that was a subject of the federal-provincial ad hoc working group on real estate, discussed below.

Financial Real Estate Data Analytics

Following the release of the Maloney Report\textsuperscript{114} in May 2019, the provincial Ministry of Finance established the Financial Real Estate and Data Analytics Unit (FREDA). The Maloney Report recommended the creation of a financial intelligence unit within the Ministry of Finance to address money laundering concerns:

The BC Ministry of Finance should create a specialized, multidisciplinary financial investigations unit that can make effective use of the available information and provide the basis for use of administrative sanctions and prosecution of provincial and criminal offences.\textsuperscript{115}

The Maloney Report contemplated a financial intelligence unit with an investigative and tactical intelligence function.\textsuperscript{116} FREDA is oriented to providing analysis and, perhaps down the road, strategic intelligence that could assist in combatting money laundering in the real estate sector. FREDA is located within the policy and legislative division of the Ministry of Finance. I heard evidence from Dr. Christina Dawkins, executive lead for FREDA within the Ministry of Finance. Without committing to the permanence of the unit, Dr. Dawkins indicated that FREDA was contemplated to be there to help develop real estate policy “as long as they are needed.”\textsuperscript{117}

There are two branches to FREDA. The first is a policy branch, which is tasked with implementing recommendations of the Maloney Report. That branch has been working

\begin{itemize}
  \item \textsuperscript{114} Exhibit 330, Maureen Maloney, Tsur Somerville, and Brigitte Unger, “Combatting Money Laundering in British Columbia Real Estate,” Expert Panel, March 31, 2019 [Maloney Report].
  \item \textsuperscript{115} Ibid, p 8.
  \item \textsuperscript{116} Ibid, pp 92–94.
  \item \textsuperscript{117} Evidence of C. Dawkins, Transcript, March 8, 2021, p 14.
\end{itemize}
on issues such as the regulation of money services businesses, exploring the possibility of unexplained wealth orders, amending the *Real Estate Services Act* to create a single real estate regulator, reviewing and consulting on the *Mortgage Brokers Act*, and creating a registry of corporate beneficial ownership. The policy branch is also exploring giving anti-money laundering mandates to various regulators, as well as regulating developers and home inspectors.

The second FREDA arm is a **data analytics branch**, which has a mandate to build data holdings for the purpose of data analytics within the Ministry of Finance. Those holdings include data relating to land titles, the property transfer tax, income tax, provincial sales tax, speculation and vacancy tax, the Condo and Strata Assignment Integrity Register, corporate registries, and pandemic recovery benefits. The work of the data analytics branch to date has involved assembling data from a number of different sources, and cleaning and documenting that data. Currently, its analytical work has been focused on supporting the work of the tax policy branch. Once the branch has built up more capacity, Dr. Dawkins testified, the ministry will turn its mind to issues like anti-money laundering for strategic intelligence purposes. This refers to the identification of trends and red flags – not the identification of individuals who may be involved in money laundering activities.

According to Dr. Dawkins, the work of the data analytics branch will allow for an analysis of “more granular” data, to better understand what is happening in the BC real estate market.

The provincial Ministry of Finance has been taking steps to make the vast data holdings (tax, land titles, BC Assessment) available for analysis. Jonathan Baron, for FREDA, gave evidence that one of the projects that FREDA is working on is migrating LTSA, BC Assessment, and provincial tax data to FREDA at the Ministry of Finance and “cleaning” it for better and easier use in answering analytical questions. The process has involved a privacy impact assessment within government and ensuring that information is held securely on government servers.

Mr. Baron advised me that FREDA uses the data it holds exclusively for the compilation of statistical information and informing policy decisions, and that the work product does not connect to individuals. Mr. Baron said:

> [T]he work that we do is almost exclusively what I would call the compilation of statistical information ... [W]e have access to the micro data, but what

---

118 Ibid, p 5.
122 Evidence of C. Dawkins, Transcript, March 8, 2021, pp 8–9, 18.
we’re interested in is creating statistics that ... answer important questions for a policy decision or whatever it is ... [O]ur work product is aggregate information and it doesn't connect back to an individual.\(^{127}\)

FREDA does not currently have an anti–money laundering mandate. If it did, Dr. Dawkins predicted that:

[I]t would take the work in a little bit of a different direction. It would be less driven by specific policy questions and would be more of a research type analysis in which we would take the data and look for flags and trends and correlations rather than ... right now being quite responsive to questions from the policy area.\(^{128}\)

Appreciating that FREDA has multiple policy concerns to serve, the types of analysis and research described by Dr. Dawkins are needed to understand and combat money laundering through real estate. I recommend that the Province give FREDA an express anti–money laundering mandate so that it can prioritize data analysis and policy development that will further anti–money laundering objectives.

**Recommendation 37:** I recommend that the Province give the Financial Real Estate and Data Analytics Unit an express anti–money laundering mandate, so that it can prioritize data analysis and policy development that will further anti–money laundering objectives.

**Federal-Provincial Working Group on Real Estate**

Dr. Dawkins described the federal-provincial working group on real estate as “a group of federal and provincial officials who have an interest in or a role related to money laundering in real estate and who have gathered together to explore various issues related to money laundering in real estate and to ... share experience, expertise, and to come up with a series of recommendations for [their] respective ministers.”\(^{129}\)

The working group was formed in August 2018 by the federal and provincial ministers of finance, with a mandate “to enhance communication, information sharing and alignment amongst relevant operational and policy partners to explore and better address issues and risks related to fraud, money laundering and tax evasion through real estate in B.C.”\(^{130}\) The group aimed to identify means of money laundering in British Columbia with respect to real estate, develop a clearer understanding of the challenges government agencies have in carrying out their mandates in the real estate sector, and identify gaps in the provincial and federal regulatory and enforcement

---

127 Ibid, p 92.
129 Ibid, p 84.
130 Exhibit 702, Terms of Reference on Real Estate Working Group, p 1.
frameworks.131 The group produced a final report in December 2020, bringing its formal work to a conclusion.132

Members of the working group included federal and provincial agencies with an interest in money laundering in British Columbia. On the provincial side this included the Ministry of Finance, the Ministry of Attorney General, BCFSA, the Registrar of Mortgage Brokers, the Office of the Superintendent of Financial Institutions, the Office of the Superintendent of Real Estate, LTSA, and the BC Securities Commission. On the federal side, participants included the Department of Finance Canada, the RCMP, FINTRAC, the Canada Revenue Agency, CMHC, Statistics Canada, and the Bank of Canada.133

The working group had three “work streams” or topic areas: (1) data and information sharing, (2) regulatory gaps, and (3) enforcement. Work Streams 2 and 3 are discussed elsewhere in this report. I will focus here on the data workstream and its findings.

Under the first workstream, Statistics Canada was tasked with leading a feasibility study in co-operation with the BC Ministry of Finance. The study aimed to investigate data collection and data sharing options in order to support research, regulatory, and analytical functions relating to anti-money laundering in BC real estate.134 The objective was to assess the feasibility of producing a data framework to facilitate information sharing among relevant government bodies, focused on British Columbia.

Some key findings of the study were:

- Laundering money through the Canadian real estate market uses a diverse array of methods.
- Court records do not reflect the full extent of money laundering efforts in Canada.
- Anti-money laundering efforts would be more effective by enhanced partner collaboration and data sharing.
- Canadian organizations engaged in anti-money laundering initiatives use real estate data for specific investigations and case-based approaches, and have participated in partnerships to facilitate a broader approach.
- Effective anti-money laundering initiatives could benefit from the participation of other relevant organizations, particularly those in the real estate sector.
- An anti-money laundering data framework for real estate can contribute to identifying money laundering in real estate.135

131 Ibid, pp 1–2.
135 Exhibit 703, Work Stream 1 Feasibility Study, pp 7–11.
An anti-money laundering data framework could, as contemplated in the group’s report to the federal and provincial ministers of finance, be applied for both strategic and tactical purposes:

Applying the framework for policy purposes could produce general estimates of money laundering in real estate at the aggregate level, useful for relevant governmental entities and policymakers. An application for strategic purposes could focus on more narrow metrics or trends that inform emerging patterns of illicit activity. An application for tactical purposes would focus on enforcement, analysing information with the intent of identifying and apprehending suspected money launderers.136

The study also concluded, however, that the efficacy of a data framework for anti-money laundering efforts in real estate is dependent on extensive and high quality data coverage.137

The workstream gathered information from federal and provincial agencies on their relevant data holdings – as well as the quality and format in which those data were held. The data holdings of various federal and provincial agencies were assessed, and data gaps identified. Key findings in respect of these data holdings were:

- Some data holdings are not leveraged for the purposes of anti-money laundering because the holder lacks an anti-money laundering mandate.

- Organizations involved in anti-money laundering activities tend to use a case-by-case approach to detect money laundering, rather than a systematic data-driven detection strategy, or use data-driven approaches that are limited by the data they can access.

- Recurring data gaps relate to information on beneficial ownership, property / financing legal arrangements, and mortgage and wealth data, as well as relationship data among those transacting property transfers.

- Several data gaps could be filled with increased sharing of data between public institutions, subject to the Canadian legal framework.138

The provincial data holders reviewed included BC Assessment, LTSA, BCFSA, the BC Ministry of Finance, the BC Real Estate Council, and the BC Securities Commission. Federal agencies whose data holdings were reviewed included CMHC, the RCMP, the Bank of Canada, the Canada Revenue Agency, FINTRAC, and Statistics Canada.139

137 Ibid, pp 125, 133.
138 Exhibit 703, Work Stream 1 Feasibility Study, p 57.
139 Ibid.
Work Stream 1 learned the typologies of money laundering in real estate to gain an understanding of the available data that could be associated with them – in other words, indicators in the data that could point to suspicious circumstances.¹⁴⁰

In reviewing the available data, key gaps were identified, including mortgage data, beneficial ownership data, relationship information, individual wealth data, rental income and rent payments data, and data on non-residents.¹⁴¹ The report further relates each gap to a particular money laundering methodology. For example, Mr. Deschamps-Laporte, for Statistics Canada, explained that one money laundering scheme involves purchasing rental properties and “padding” ostensible rental income with the proceeds of crime, by either declaring rent for unoccupied units or undercharging on rent and making up the difference with the proceeds of crime. While rental income is required to be reported, there is little corresponding reporting from tenants that would allow for the detection of a discrepancy.¹⁴² The report sets out in full the identified data gaps or quality issues, and how each data point relates to a particular money laundering methodology.¹⁴³

“Relationship information” refers the information on connections between individuals, whether familial, business, or professional. The study suggests that through the identification of real estate professionals involved with a transaction, perhaps by assigning them each a unique identifier, clusters of money laundering activity could be revealed and networks better understood.¹⁴⁴ This suggestion is in line with my recommendation elsewhere that there be a record of professionals involved in real estate transactions. As illustrated in the case studies respecting mortgage brokers, incidents of fraud and suspicious transactions are often not isolated but are recurring within a broker’s practice.

(It does not appear that the federal-provincial working group was aware of or coordinated with CMHC in its creation of a market integrity index and its application in Quebec and attempted application in British Columbia. This is unfortunate, because CMHC’s analysis is a real-world application of the kind of intelligence analysis that the working group’s report contemplated. Certainly, there seemed to have been opportunity between CMHC and the working group to share theories and information as to what data points are needed or useful, and where the data are non-existent or falling short.)

---

¹⁴⁴ Ibid, pp 11, 15, 83.
The report concludes with a proposal of three concepts for the models that would govern data sharing:145

- **A distributed model** where data is held by the collecting agency (e.g., BC Assessment or LTSA), and enhanced access is authorized (or data is shared) among regime partners. Aside from the enhanced ability to access and share information across partners, this option represents the status quo.

- **A centralized model** where data is consolidated to be held and managed in one institution and made accessible to the regime partners.

- **A hybrid model** where data is organized by separate custodial and analytical functions undertaken by existing or new partners or units. A data custodian would be responsible for collecting, processing, and housing data. A separate coordinating organization or unit would lead access and analysis of the data for anti-money laundering purposes.

There are disadvantages to the first two concepts. The first has the weaknesses of the current system, in that it limits the ability to share and leverage data to its full potential for anti-money laundering purposes. The second model may unduly remove control over data necessary for the core functioning of a provincial or federal agency whose primary mandate is not related to anti-money laundering.146

The “hybrid” function contemplates data staying with its custodian (e.g., BC Assessment or LTSA), with a separate entity performing a “coordinating role” between agencies “to enable access, linking, and analysis of the data, as well as ensure that consistent data management practices are implemented.”147 The agencies that currently house data would continue to be responsible for maintaining it and ensuring data quality, but the coordinating unit would be largely responsible for the anti-money laundering uses to which this data is put. To quote the report:

The coordinating unit as the locus of AML [anti-money laundering] expertise could be responsible for leading data linkage and access functions, particularly with respect to non-regime partners, as well as supporting analysis being undertaken by regime partners. This unit could also be charged with the responsibility to ensure appropriate scopes and safeguards for any analyses performed. It could lead in the maintenance and development of the typology data framework and for red flag analysis arising with shared data, leading to a better assessment and understanding of ML [money laundering] as practised in Canada. This unit could also lead the development of metrics aiming to measure the effectiveness of Canada’s AML regime and of relevant policy interventions.

145 Ibid, p 98.
The coordinating unit could conduct its analysis of the various custodial databases designated for investigative purposes, and share suspicious transactions with law enforcement, in keeping with data sharing practices currently in use among regime partners.\textsuperscript{148}

There seems to me to be a great deal of merit in providing for improved data consistency and access. Steps must be taken to address the problems identified by the working group relating to data gaps and quality. The provincial Ministry of Finance is well placed to address this, and I appreciate the ministry is working on these issues already. I recommend that the Ministry of Finance develop an action plan for addressing the data gaps and data quality issues identified by the federal-provincial working group on real estate in its reports, focusing on data issues within the Province's jurisdiction.

\textbf{Recommendation 38:} I recommend that the Ministry of Finance develop an action plan for addressing the data gaps and data quality issues identified by the federal-provincial working group on real estate in its reports, focusing on data issues within the Province’s jurisdiction.

Having canvassed the three models for data management above, my view is that a modified “hybrid” model is best suited for this province. In Chapter 8 of this Report, I recommend the creation of a new AML Commissioner. The commissioner would be optimally placed to fulfill the “coordinating unit” role for the purpose of data analysis, as set out in the working group’s report. The Province will need to determine which body is best suited to address data access and management. I recommend that the Province adopt a modified “hybrid” model of data management (as contemplated in the federal-provincial working group on real estate reports) and that the AML Commissioner fulfill the function of analyzing data for anti-money laundering purposes.

\textbf{Recommendation 39:} I recommend that the Province adopt a modified “hybrid” model of data management (as contemplated in the federal-provincial working group on real estate reports) and that the AML Commissioner fulfill the function of analyzing data for anti-money laundering purposes.

I would offer one further comment. A provincial coordinating unit would be a second-best option to a coordinating unit that could access data from \textit{all} anti-money laundering regime partners, whether provincial or federal. My recommendation above should not be considered a barrier to attempts by the two levels of government to create a coordinating

\textsuperscript{148} Ibid, pp 99–100.
unit that straddles the jurisdictions. Given the various repositories of information at the federal and provincial levels, a cross-jurisdictional unit would be preferable.

Private Sector Use of Data for Money Laundering Detection

Having considered how governments and public agencies may make use of real estate data to address money laundering, I turn to the private sector, which generates an enormous volume of information in a very active sector of the economy.

During our hearings I learned about data analysis software that works to detect fraud and money laundering through referencing a number of large data sets. Witnesses referred to the product as an “intelligence hub.” I also had the advantage of watching demonstrations of these systems, which illustrate their potential. Representatives from Deloitte (a large multinational professional services firm) and Quantexa (a “big data” and enterprise intelligence technology provider based in the United Kingdom) appeared before the Commission. They described and ran demonstrations of “entity resolution” software, which collects information on individuals and entities from across different data sources, reconciling them to create a full picture of their connections and networks. It is one example of many different technologies being developed to analyze large data sets for anti-money laundering and other purposes.

The technology already being employed in the private sector to this end illustrates the possibilities for money laundering detection through aggregation of data. It also raises important considerations of privacy that I anticipate both private enterprises and government will have to grapple with.

The premise of the program is the same as that underlying the federal-provincial working group’s proposals for a data-sharing framework. In both cases, the idea is to bring together data from disparate sources, so that it is situated in one place, which allows for the identification of networks between individuals, entities, and transactions. One interesting functionality of such software, as suggested by the witnesses, is to verify information provided to beneficial ownership registries.

As one of the witnesses pointed out, data sets will only continue growing in size and magnitude. When data holdings internationally are considered – for instance, information available on the beneficial ownership of foreign companies – the amount of data available for analysis is enormous. If data holdings are going to be used for the detection and prevention of money laundering, then the data analysis framework must be scalable.

---

149 Evidence of A. Bell, P. Dent, B. Dewitt, and D. Stewart, Transcript, March 2, 2021; Exhibit 667, Presentation – Application of Networks to Detect and Mitigate Organized Crime (March 2, 2021).
Access to large amounts of data, including personal information about individuals, raises privacy concerns, as acknowledged by the witnesses who demonstrated the software. This will be a concern for governments as they determine, moving forward, how and for what purposes to use their available data holdings to combat money laundering. As BCCLA highlighted in its examination of witnesses and its final submissions, the implementation of such an intelligence hub would require an analysis of the legal and privacy implications, including consideration of privacy rights and interests as assured by section 8 of the Canadian Charter of Rights and Freedoms. Essential questions such as what data are included and who has access and for what purposes would need to be answered. The answers would need to be tested against privacy concerns and constitutional constraints before any such intelligence hub can be implemented. Quite properly, the witnesses presenting the technology are alert to these issues.

I decline to make recommendations about specific programs that the Province should employ. The private sector is developing the capability to deal with large sets of data for detecting fraud and money laundering. If governments do not develop their own ability to conduct analyses of this type, they will either fall behind industry and be at a disadvantage when it comes to the investigation of financial crime, or they will find it necessary to purchase or lease such technologies from the private sector to keep pace.

**Land Title and Survey Authority**

I will conclude this chapter with a discussion of the Land Title and Survey Authority (referred to here as LTSA). I heard from a number of witnesses that regulatory and investigative processes could be enhanced by improvement of LTSA data and better access to that data. In short, LTSA finds itself in the position of having created a registry that works extremely well for one purpose – securing the integrity of title to land in British Columbia – but which anti-money laundering stakeholders wish would work better for their purposes.

I have already made some recommendations that impact on LTSA based on evidence heard on various topics in the real estate sector. I will not repeat those here but will make some comments on LTSA’s views of the feasibility of implementation.

LTSA was established in 2005 and is a statutory corporation, independent from government. It is responsible for managing the land title and survey systems of British Columbia. Its mandate and responsibilities are set out in the Land Title and Survey Authority Act, and its operating agreement with the Province. LTSA operates the provincial Land Title Register and the Land Owner Transparency Registry.

---

154 Evidence of A. Bell, Transcript, March 2, 2021, pp 93–95.
157 Exhibit 749, Presentation – The Land Title and Survey Authority of BC (February 26, 2020), p 2.
There are two facts about LTSA that must inform the discussion and any changes to its fee structure or data collection and sharing practices:

1. LTSA does not have an anti-money laundering mandate. It is, as a representative of the authority agreed, a registry of land, not of persons. In order to “repurpose” the LTSA and the registries it operates for anti-money laundering goals, this would have to change.

2. LTSA operates on a self-funded, not-for-profit basis and has an operating agreement with the Province that directs how its revenues are spent. Fifty-five percent of the fees collected goes back to the Province, and it must conduct its operations with the remaining 45 percent.

In order to make some of the changes that I recommend in this Report, LTSA will need access to funds, and to an express legislative mandate to engage in certain activities, particularly information and data sharing for anti-money laundering purposes. I note that this was also the conclusion of the federal-provincial working group, who expressed that “[e]xpanded funding and an expanded mandate would be required to make changes necessary to make the data useable for AML purposes.”

Information Collected by and Accessible from the Land Titles Registry

LTSA currently provides information to the Province for the operation of various programs, including the speculation and vacancy tax, and for supporting BC Assessment functions. While the land registry (and now LOTR) is a fee-for-search service, the Province is largely exempt from fees.

A title in the land registry will contain the following information:

- registered owner’s name;
- registered owner’s occupation;
- an address for delivery of notices;
- legal description;
- parcel identifier (PID);
- a list of charges, including mortgages, rights of way, liens, and certificates of pending litigation;
- the owners of the charges, and the date and time the charge was filed; and/or
- pending applications.

---

159 Evidence of C. MacDonald, Transcript, March 12, 2021, p 143.
161 Exhibit 703, Work Stream 1 Feasibility Study, p 77.
This information is available to a member of the public when they search the registry.

LTSA depends on the filer and legal professional involved in the filing for the accuracy of the information about the owner. Over 95 percent of applications are received electronically, meaning that they are certified digitally by either a lawyer or a notary. LTSA does not verify information provided about an owner – beyond determining that a British Columbia company, in fact, exists and is in good standing. LTSA has access to the corporate registry, which is maintained elsewhere. The two registries are not connected, and users are unable to navigate directly between them to examine beneficial ownership information.

Other documents provide further information. A “Form A freehold transfer” document includes the market value and the consideration (amount) paid for the property. Both figures are reported by the applicant and are not verified by LTSA, which does not have access to the supporting documentation (e.g., purchase of agreement and sale). A “Form B mortgage” document discloses details of a loan, including the principal amount, the rate of interest, and the amount of each payment. Again, this information is self-reported by the applicant and is not independently verified. Also, these details will not always be filled out on Form B, but instead are contained in an attached schedule or not disclosed. The land titles registry will not necessarily disclose the value of a mortgage loan.

A member of the public searching land title information through the registry can search by name, PID or legal description of a parcel, title number, document number, and charge number. A search by name would provide owners of titles and charge holders (which includes mortgagees). A search of a property will also return pending applications (i.e., applications pertaining to a property that have not been processed).

LTSA also confirmed that on receiving an application for a certificate of pending litigation, it checks only that the attached pleading has been filed in the court registry, and that an interest in land is being claimed in the legal proceeding. This screening is performed by deputy registrars, who have experience in the land titles registry but are not lawyers. There is a similar “low bar” for the filing of a claim of builder’s lien: the registry simply ensures that the subject of the claim has added to the value of the land.

These comments are not a preface to a recommendation that LTSA engage in independent verification of this kind of information – to do so is beyond its current mandate and could be cost prohibitive. That said, I find the evidence illustrative of two notable limitations: (a) an information gap, and (b) a reliance on professionals who make filings with LTSA to ensure the information provided is accurate.

165 Evidence of C. MacDonald, Transcript, March 12, 2021, pp 163–64.
166 Ibid, pp 156–57.
168 Ibid, p 175.
The LTSA witnesses identified a gap in the online searchability of the land registry. A person who physically attends the front counter of a registry can perform a historical name search, which will yield information on a person's current and past titles or charges. But the same search cannot be performed online. Mr. MacDonald, the director of land titles, indicated this is one of the gaps in LTSA’s online services they are looking to resolve. It is not clear whether the historical information available from a “front counter” request includes mortgages. What is clear, however, is that historical mortgage information is not available online and, unlike historical title information, LTSA has no plans to address this gap. Mr. MacDonald explained that providing online searchability of historical mortgages is not currently a priority, as it is outside LTSA’s traditional paradigm of tracking ownership of parcels of land.

I consider that the availability of a person’s historical property ownership and mortgage lending to be valuable information for anti-money laundering purposes, as it provides records of the movement of wealth. I recommend that LTSA make both types of information available through an online search.

**Recommendation 40:** I recommend that the Land Title and Survey Authority make information about historical mortgage and property ownership available through an online search.

I noted earlier that the LTSA system does not permit one to track transactions involving a real estate professional. LTSA witnesses confirmed there is currently no ability to identify mortgage broker or real estate licensee’s participation in a transaction. Mr. MacDonald confirmed that the issue was one of lack of a legislative mandate, and not technical capacity.

I have found elsewhere that an ability to track the participation of individual real estate agents and mortgage brokers across transactions would be a useful tool for regulators (see Chapter 16). In certain cases, it would also be useful to law enforcement. I recommend that the Province amend LTSA’s enabling legislation to direct the collection of information on real estate agents and mortgage brokers involved in a property transaction. At a minimum, this information should be available to the Ministry of Finance, BCFSA, law enforcement, and other federal and provincial agencies with an anti-money laundering mandate. This would include the new regulator for private mortgage lending recommended in Chapter 17. I anticipate that this change would be best achieved by the addition of data fields for real estate agents and mortgage brokers in LTSA’s Form A and Form B, but I leave it to those with the relevant systems expertise to implement the recommendation as they see fit.

---

169 Evidence of C. MacDonald, Transcript, March 12, 2021, pp 181–82.
171 He reiterated that the purpose of the LTSA is to track ownership interest in land and that the ability to perform searches for agents or brokers falls outside of this: ibid, p 184.
Recommendation 41: I recommend that the Province amend the Land Title and Survey Authority’s enabling legislation to direct the collection of information on real estate agents and mortgage brokers involved in a property transaction. At a minimum, this information should be available to the Ministry of Finance, the British Columbia Financial Services Authority, law enforcement, and other federal and provincial agencies with an anti–money laundering mandate.

Another area that was canvassed was the possibility of implementing a “unique identifier” for owners into the LTSA database. This would involve assigning an identifying number or other unique signifier to an individual or entity to enable tracking across the land titles system.

The lack of unique identifiers can create ambiguity as to the identity of an owner. As noted in a report produced for this Commission (dealing with private lending):

The LTSA does not assign or collect unique identifiers for titleholders or charge holders, which means it is not possible to discern between people or entities that share names (e.g. 30 properties may be owned by “John Smith”, but it is not possible to determine how many of these properties are owned by the same John Smith).172

This is not a feature of the current LTSA regime in this province. While LTSA has given consideration to using a unique identifier, it was based on the desire to “preserve the integrity of the land title system.” As explained by Mr. MacDonald:

[I]nitially when we were thinking of a unique owner ID it was to preserve the integrity of the land title system. So you’ll have three James Smiths who own 30 different parcels, but you can’t tell which James Smith owns them. You can look at their occupation, you can look at the address, but those aren’t definitive. So the idea is that we would have a unique owner ID ... [This] was about making it more customer centric and with the idea of being able to strengthen the integrity of the land title system.

The implementation of a unique identifier has not been considered for anti–money laundering purposes for similar reasons for the exclusion of the identification of real estate professionals – it is inconsistent with the LTSA’s present mandate.173

I see benefits both for LTSA’s existing mandate of ensuring integrity of title and for anti–money laundering purposes to implement unique identifiers. To put it bluntly, there is little use in LTSA data for anti–money laundering intelligence purposes – strategic or tactical – if the identity of an owner cannot be confirmed even as across

---

LTSA’s own records. For these reasons, I recommend that the Province institute the use of unique identifiers for LTSA records.

**Recommendation 42:** I recommend that the Province institute the use of unique identifiers for Land Title and Survey Authority records.

The LTSA has had complaints from law enforcement that the registry is searchable only for a fee.\(^{174}\) Similar concerns have been expressed about the LOTR. I have seen sufficient evidence about the utility of land title information in the investigation of financial crimes and money laundering that I am persuaded this information should be available to law enforcement *without a fee*.\(^{175}\) Earlier in this chapter I recommended that the provincial government amend the LOTA and/or its regulations to remove the fee presently charged to access the LTSA’s records for law enforcement and regulators with an anti-money laundering mandate. I now extend that recommendation to the land titles registry.

**Recommendation 43:** I recommend that the Province remove the fee requirement presently charged to access the Land Title and Survey Authority’s records for law enforcement and regulators with an anti-money laundering mandate.

BCFSA believes that changes to the data collected and/or presented for LTSA records would assist its staff in assessing money laundering risks. BCFSA suggested that LTSA:

a. collect and disclose identifiers for property owners and beneficial owners, as well as their primary addresses;

b. collect and disclose values of purchase price for transactions, lending value for mortgages, and aggregate that information so that the total claims on each property can be viewed;

c. in cases where mortgages are “re-advanceable” (i.e. mortgages with a line of credit), identify the initial draw or limit on the Form B;

d. create categories of mortgage lender and disclose that information on Form B, such as credit union, bank, MIC [mortgage investment corporation] (a full list of proposed categories was not provided);

---

\(^{174}\) Evidence of C. MacDonald, R. Danakody; Transcript, March 12, 2021, pp 189–90.

\(^{175}\) Although not discussed in detail in this chapter, an instance of this is found in the evidence of Brad Rudnicki, who appeared on behalf of the BC Lottery Corporation to discuss his open-source research for anti-money laundering purposes, which included mapping connections between people, entities, real estate transactions, and court proceedings using, among other sources, land titles data: Transcript, March 2, 2021, pp 119–25.
e. collect identification (e.g. registration numbers) for professionals participating in each transaction, including (where applicable) the mortgage broker, real estate licensee, developer, securities registrant, lawyer and/or notary;

f. create categorization in Form B to indicate the type of mortgage, such as syndications, reverse mortgages and different re-advanceable mortgage types;

g. make the details of Form B machine-readable and improve search functionality;

h. collect and disclose information on the source of funds for purchases and for funds loaned as mortgages, categorized by lender (e.g. Canadian financial institution, foreign financial institution, other) and by form of transfer (e.g. domestic wire transfer, international wire, cash, etc.); and

i. include a disclosure on Form B to select whether a mortgage is income-qualified or non-income qualified (equity).176

Aside from those suggestions that are already addressed by specific recommendations above, I am of the view that these specific issues are best considered in the context of my recommendation above in relation to the data gaps identified across a number of provincial record holders. In its development of an action plan for addressing the data gaps and data quality issues identified by the federal-provincial working group in its final reports, the Ministry of Finance should take into account the data issues identified above by BCFSA in respect of the land titles registry at the same time.

Chapter 19
Real Estate Values, Money Laundering, and Foreign Investment

British Columbia, particularly the Vancouver region, has become notorious for unaffordable housing. The issue has garnered significant attention – from citizens, commentators, and all levels of government. Understandably, when faced with a large imbalance between average earnings and the cost of buying a home, there is an impulse to find a culprit or blame someone. However, as this short chapter outlines, the reasons for increases to housing costs are many, and they are complicated. My intention is not to resolve the vexing and complex question of all the factors that influence housing costs. Instead, I have the more modest aim of focusing on money laundering, which has in various cases been identified as “the” (or “a main”) cause of housing unaffordability. And in addressing this question, I have taken time to consider the role of foreign investment in real estate, especially from China. In some parts of the public discussion, there is a shorthand that “criminal money from China” has flown freely into the province’s real estate market, leading directly to what is often described as an unaffordability crisis. This is overly simplistic and unfounded.

Public interest in the topic of money laundering in this province has been fuelled in part by rising real estate prices and the belief that those prices are the result of money laundering. At the same time – in tandem – public attention has also been captured by the issue of foreign investment into British Columbia real estate. Among various culprits identified as the causes of housing unaffordability, these are the two that I focus on: (a) money laundering, and (b) foreign money moving into housing here. It is clear to me that in many instances, these two issues get conflated in the discussion. This is particularly so with respect to real estate investment originating from China.

---

The purpose of this chapter is to consider, to the extent possible, the connection between housing prices, money laundering, and foreign investment. Because money laundering and foreign investment are often connected in the discourse, this chapter also considers, in a limited way, the connection between foreign investment and housing prices, and the manner in which the issues of money laundering and foreign investment can become conflated. Finally, this chapter ends with a discussion of the discriminatory consequences of the focus on foreign investment, particularly foreign investment from Asia. It is entirely appropriate to examine the causes of huge increases to housing prices in the province. But it is wrong to leap to an unfounded conclusion that “dirty Chinese money” is to blame.

As this chapter explains, I am unable to conclude, based on the evidence before me, that either money laundering or foreign investment (however that is defined) is a primary cause of price increases in British Columbia residential real estate. There are strong reasons to believe that other factors, discussed above, are the drivers of housing unaffordability in this province.

Money Laundering and Housing Prices

At the outset of my Report (in Chapter 1), I described four reports that pre-date this Commission but that speak directly to topics I am tasked with examining. One is the 2019 report of Professors Maureen Maloney, Tsur Somerville, and Brigitte Unger (the “Expert Panel”) entitled “Combatting Money Laundering in BC Real Estate.” Their report offered an estimate of the impact of money laundering activity on the value of real estate in British Columbia, using the “gravity model” of estimating money laundering volumes as the “best available approach at this time.”

The “gravity model” is described in more detail in Chapter 4, where I discuss various methods that attempt to ascribe an annual amount to the funds laundered in the province each year. The Expert Panel explained the gravity model as follows:

In essence, application of a gravity model to money laundering involves estimating how much of the proceeds of crime in a given country are laundered within that country and how much flows to each other country in the model. Those flows depend on an attractiveness index based on characteristics that measure how attractive a given country is to money launderers, including GDP per capita, and a distance index that measures how close each pair of countries is geographically and characteristics that measure distance from a cultural perspective. The money laundering in a country is the sum of domestic proceeds of crime that remain in the country plus the flow into the country of monies for laundering from all other countries.

---

2 Ibid, p 46.
3 Ibid, pp 45–46.
The Expert Panel noted the limitations of the gravity model, including a lack of accurate data respecting money laundering activity and the incomplete nature of crime reporting in both Canada and in countries that have what the model describes as “strong attraction factors” for British Columbia.4

The Expert Panel used a gravity model–derived approach, to reach an estimate that $41.3 billion was laundered in Canada as a whole in 2015, and then $46.7 billion in 2018. (This assumed that money laundering growth matched GDP growth.) With respect to this province, as opposed to the whole country, the Expert Panel estimated that $7.4 billion was laundered in British Columbia in 2018.5

In order to explain the discussion that follows, I wish to draw a distinction between two things. First, the gravity model method of assessing the quantity of money laundered in the province annually, is described in significantly more detail, and with skepticism, in Chapter 4; it is only sketched briefly above. Secondly, taking the gravity model figure as the starting point, the Expert Panel went on to consider a different question: how much of the increase to real estate values in the province could be attributed to money laundering? As will be seen, the Expert Panel determined (somewhat tentatively) that housing prices were 3.7 to 7.5 percent higher than they would be in the absence of money laundering. Put differently, money laundering was responsible for an increase to housing of between 3.7 and 7.5 percent.6

The route taken to move from the gravity model estimate of how much money laundering occurs in British Columbia to its impact on housing prices was a complicated one. I have, at the end of this chapter in an appendix, sought to explain the line of analysis employed by the Expert Panel. For present purposes, setting aside the circuitous path followed to generate the estimated impact on housing costs from money laundering, I turn to where that attempt at measuring impacts leaves us.

This estimate – an impact to housing prices of between 3.7 and 7.5 percent due to money laundering – was accompanied by many caveats from the Expert Panel. The authors emphasized that there were considerable uncertainties surrounding these estimates.7 To similar effect, in his testimony before the Commission, Professor Somerville repeated this caution.8

I have expressed doubt as to the accuracy of the gravity model estimate of money laundering activity. I appreciate that, on top of the gravity model analysis, there is a further extension of reasoning and numerous assumptions are needed to generate an estimate of the increase in housing prices. I cannot confirm the estimate made by the Expert Panel. As a matter of logic, I understand the reasoning that if money laundering

---

6 Ibid, p 57.
7 Ibid.
and criminal activity result in a demand for property purchased with illicit funds, then this additional demand would push up prices. (Though I pause to note that the Expert Panel itself cautioned that this assumption is not necessarily correct.) But in the circumstances, ascribing a percentage value of price increases to money laundering by extrapolating from the gravity model estimate is, to my mind, an exercise in speculation and, ultimately, guesswork.

It is laudable that the Expert Panel sought to give this estimate, and the public debate is informed by such efforts, even if the result is tenuous. But I find myself unable to accept their estimate. Even on their analysis, money laundering activity is not a significant contributing factor to housing unaffordability. It seems that fundamental factors such as supply and demand, population, and interest rates are far more important drivers of prices.

Aside from the estimate provided by the Expert Panel, there is little evidence about the connection between money laundering and housing prices in Canada. In my view, this points to a gap in research that should be addressed. The political discourse – including that of the federal and provincial governments – draws a connection between money laundering and housing affordability. Given this, it is all the more important that this issue be studied and monitored. The AML Commissioner (recommended in Chapter 8) will be well placed to study whether and to what extent money laundering has impacts on housing affordability, which will inform policy decisions.

One means of testing the estimate provided by the Expert Panel is to measure the impact of anti–money laundering measures on real estate prices. If money laundering is pushing up housing prices, then measures taken to stop money laundering should, logically, result in lower housing prices. As described in Chapter 18, in the United States, two researchers were able to measure a 4.2 percent decline in housing prices for American properties affected by a Financial Crimes Enforcement Network (FinCEN) geographic targeting order designed to address money laundering through the purchase of real estate by shell companies. This suggests that the American policy measure – the geographic targeting order – did have a measurable impact on housing, or at least that it was associated to that decline, if not causally linked.

A study undertaken for the Commission, which was modelled on this American research, was conducted by Professor Somerville, Adam Ross and Dr. Jake Wetzel. The authors examined the impact of British Columbia’s new beneficial ownership disclosure requirements. They looked at how these new requirements had an impact on the ways that people own real estate, and specifically on the ownership of real estate by legal entities (that is, not by individual people but by companies and trusts and other “legal persons”). The study’s authors did not examine the impact of the disclosure

---

requirements on prices. I discuss this study in greater detail in Chapter 18, but for present purposes, I point to this as an example of a line of examination that will provide important insights as to the relationship between money laundering and housing prices.

It is possible that anti-money laundering measures will have an impact on housing prices. It is also possible that they will have no discernible impact. To be clear, implementing anti-money laundering measures in the real estate sector should happen because money laundering is a problem (as I address in Chapter 5). The Province should take action, even if there is no proof it will improve housing affordability in the province. Impeding the laundering of illicit funds through real estate is good in its own right. But the Province should understand whether, and to what extent, those actions have an impact on real estate prices.

I would add what may be an obvious comment, that anti-money laundering measures should not be considered a “silver bullet” that will somehow fix housing unaffordability in the province.

Returning for a moment to the Expert Panel’s attempted and tentative estimate of a 3.7 to 7.5 percent impact on housing prices in British Columbia, I note that according to the BC Real Estate Association (BCREA), the average residential price in BC in December 2021 was $1,033,179. I am informed by the BCREA’s chief economist that between 2010 and 2020, home prices in the Lower Mainland rose approximately 80 percent.

Without seeking to diminish the importance of a 3.7 to 7.5 percent inflationary effect on the average British Columbian, it seems to me that the real obstacle to affordability is not in the increase in purchase price that may be caused by money laundering. A price decrease of between $38,000 and $77,000 (3.7 to 7.5 percent of the average December 2021 price) on an average property price of over $1 million will not really bring home ownership within the reach of many more people.

Understanding how and if anti-money laundering measures that are implemented in the real estate sector have an impact on property prices will allow the provincial government to assess the extent to which its anti-money laundering actions, in fact, further its goals regarding housing affordability. It will ensure that action in the one area of concern (money laundering) is not incorrectly conflated with action in another area (housing affordability). If anti-money laundering measures are to be promoted as actions on housing affordability, their actual efficacy as such should be understood. I recommend that, as the Province implements new policies and measures against money laundering in real estate, it analyze the impact of those reforms on housing prices.

---

12 BC Real Estate Association, Brendon Ogmundson, “A Record Year for the BC Housing Market” (January 12, 2022), online: https://www.bcrea.bc.ca/economics/a-record-year-for-the-bc-housing-market/.
Recommendation 44: I recommend that, as the Province implements new policies and measures against money laundering in real estate, it analyze the impact of those reforms on housing prices.

Causes of Real Estate Price Increases and the Role of Foreign Investment

Given the connection in the political discourse between money laundering and housing affordability, I heard evidence addressing the general issue of real estate prices and housing affordability in the province. Five witnesses testified about the causes of real estate price increases in British Columbia. One further witness addressed the harmful impact arising from public discourse focused on foreign investment, specifically Chinese wealth, being a cause of high real estate prices.

Dr. Aled ab Iorwerth, deputy chief economist for the Canadian Mortgage and Housing Corporation (CMHC), appeared before the Commission to speak to the CMHC's 2018 report on the causes of housing price increases in Canadian cities. As with many of the reports and materials relied upon in this Inquiry, I have not attempted to capture the entirety of the CMHC report, but merely to set out the essential findings. The report is an exhibit in the Inquiry, and available as such to the public.

Dr. ab Iorwerth explained that, in 2016, CMHC was asked by the federal minister of families, children and social development to examine the causes of escalating housing prices in Canada's large urban areas from 2010 onward, to a thorough academic standard. The report was requested in the context of sharply escalating housing prices over the prior three years.

The study looked at housing prices in census metropolitan areas (CMAs). In British Columbia this meant the Vancouver CMA, which includes surrounding cities such as Surrey and Coquitlam. In both the Toronto and Vancouver CMAs, the price of single detached homes experienced the most significant price growth. Between 2010 and 2016, the average price of a single detached home in the Vancouver CMA grew approximately 85 percent.

Drawing on data from the previous decades, CMHC developed a model to predict housing prices between 2010 and 2016. Price forecasts were informed principally by average disposable income, population, and interest rates. The model's projections closely matched actual prices in the Vancouver CMA, accounting for 75 percent of the area's price increases. The model predicted the price increases in Vancouver better than in Toronto.

---

15 Exhibit 602, Overview Report: Lower Mainland Housing Prices [OR: Housing Prices], Appendix E, CMHC, Examining Escalating House Prices in Large Canadian Metropolitan Centres (May 24, 2018).
16 Ibid.
Dr. ab Iorwerth explained that, while the price increase itself was not unusual, the persistent upward trend in price increase was. When house prices increase, the market is expected to respond with more supply. The study concluded that supply responses to price increases in both Vancouver and Toronto were weaker than in other cities. The responsiveness of the supply side of housing, CMHC found, was limited when compared to other cities that did not see such large and persistent price increases, such as Calgary, Edmonton, and Montreal.

In a later CMHC publication, published in March 2021, CMHC concluded that between 2016 and 2019 (largely after the period studied in the 2018 report discussed by Dr. ab Iorwerth), rapid price growth was caused by “unresponsive” housing supply.

CMHC did not conclude that foreign investment was a significant driver of prices in the Vancouver CMA, given the low rate of foreign ownership that Statistics Canada data indicated. It was difficult, Dr. ab Iorwerth testified, to conclude that a reported 3 percent foreign ownership of housing stock could be driving the large price increases that were seen between 2010 and 2016.

Asked if he considered it possible that money laundering has played a significant role in the increase in housing prices in the Vancouver area, Dr. ab Iorwerth was skeptical that money laundering would have had a significant role in the price increases seen between 2010 and 2016. But he said it was entirely possible that a hot real estate market could encourage speculation by a number of players, including those looking to invest illicit funds.

Brendon Ogmundson, chief economist for the BCREA, testified before the Commission about the impact of foreign investment on real estate prices. Addressing in particular the period from 2016 through 2020 and the beginning of the pandemic (the period immediately following the CMHC study), Mr. Ogmundson pointed to a number of factors that first created a rapid increase in housing prices, and then somewhat of a cooling afterward.

In 2016, he testified, there was a “perfect storm” in British Columbia real estate. It was created by record low five-year fixed-rate mortgages, a record low number of new listings, a rapidly growing economy, and “runaway price expectations.” Some of the rising prices were fuelled by particularly notable cost increases in the single detached home and luxury markets. To the extent that foreign investment still is a factor in

---

19 Ibid, pp 11–12.
20 Exhibit 602, OR: Housing Prices, Appendix E, CMHC, Examining Escalating House Prices in Large Canadian Metropolitan Centres (May 24, 2018), pp 6–7.
the luxury market (with price points at $3 million and up), his view was that, given the segmented nature of the housing market, such investment would not have much impact on the rest of the housing market.27

The provincial government addressed the situation in part by introducing a foreign buyers’ tax in the summer of 2016. This resulted in a dip in prices in the six to eight months following. But the market had already started to decelerate before the tax was implemented.28 Nor was the effect long lasting: by January 2017, home prices had started to rise again.

As for foreign investment, Mr. Ogmundson testified that BCREA was seeing a decline in the level of foreign investment as a share of transactions after 2017. This was particularly so in respect of investment from China, which had put severe restrictions on the outflow of capital.29 By the end of 2020, following the closure of borders due to the pandemic, the share of foreign investment in residential real estate was down – from 3.3 percent in 2018 to half a percent in 2020.30

A number of cooling measures introduced by both levels of government resulted in a chilling of the market in 2018 and 2019. In 2018, the federal government’s Guideline B-20 “stress test” was implemented for uninsured mortgages issued by federally regulated financial institutions. In simple terms, the stress test requires lenders to confirm that borrowers can continue to repay their loans if faced with a sudden change in financial circumstances. To test resilience, borrowers are qualified for a mortgage at the contract rate of the loan, plus two percentage points.31 According to Mr. Ogmundson, the practical impact of the stress test was to reduce an average borrower’s purchasing power by 25 percent.32 A decline in home sales followed, which was likely partially caused by the stress tests, but more significantly by factors such as rising interest rates, and a slowing economy.33 In Metro Vancouver, the speculation and vacancy tax also slowed the price growth of residential real estate.34

Asked for his views on the causes of rising real estate prices in Vancouver, Mr. Ogmundson pointed to the strong price increases in residential real estate during the pandemic, despite the lack of foreign investment and very little immigration. The

27 Ibid, p 163.
32 Evidence of B. Ogmundson, Transcript, February 17, 2021, p 152.
cause of price increases was, in his view, more likely rooted in a lack of supply (which, he explained, means homes listed for sale) and record low mortgage rates.35

Witnesses disagreed about whether foreign investment plays a significant role in Vancouver’s housing prices. The Commission heard from a panel of academics who have studied the issue extensively. They had different takes on the causes of residential property price increases in the British Columbia, particularly the Lower Mainland area. The panel was comprised of Professor David Ley, professor emeritus at the Department of Geography at UBC, Professor Joshua Gordon of the School of Public Policy at SFU, and Professor Tsur Somerville of the UBC Sauder School of Business. Professor Somerville was also a member of the Expert Panel that authored the Maloney Report.

Professor Gordon has written about a phenomenon of households that declare low domestic (Canadian) income for tax purposes, and yet have substantial global income and own real estate in very expensive neighbourhoods. According to Professor Gordon, this is an indicator that there is a substantial amount of foreign capital flowing into Vancouver’s housing market, exacerbating affordability challenges.36 This would also help to explain how it is that Vancouver can sustain such high housing prices without corresponding high median incomes.

Professor Ley has written on the escalation of housing prices disproportionate to local incomes in Vancouver as well as in other “gateway cities,” including London, New York, Miami, Sydney, Los Angeles, Hong Kong, and San Francisco. These are cities he described as being “closely tied into global flows of migrants, capital, trade and information.”37

Economic fundamentals (average disposable income, population, and interest rates), Professor Ley opined, could not explain surges in prices in the Vancouver region. Such price surges in the Vancouver market, he said, can only be explained by the role of investors, many from outside Canada, rather than “local users” earning income in the Vancouver area. He gave as an example the surge in prices between 2015 and 2017, when “an extraordinary amount” of money left China.38

Some of the literature, Professor Gordon testified, links the influx of foreign capital to money laundering, suggesting that the pathways used to ensure anonymity and/or evade capital export restrictions are relevant to both the movement of offshore capital and to money laundering.39

38 Evidence of D. Ley, Transcript, February 18, 2021, pp 95–97.
Professor Somerville agreed that capital from outside Canada could have an impact on housing values but pointed to supply as being a critical factor to understanding housing prices. Foreign investment in real estate also does not necessarily have a negative impact on housing affordability—it depends on the type of investment. If foreign capital is used to purchase land and develop rental housing, then that would be a positive in terms of housing availability.

It became clear as the evidence developed before me that there is disagreement in the academic community about what should be considered “foreign ownership.” Is it limited to beneficial ownership by persons or entities based or resident outside of Canada? Or does it extend to purchases made largely with funds earned outside of Canada?

There was also debate over how to address the problem: by taking further steps to limit demand (the foreign buyers’ tax being one example) or by aggressively addressing supply by building social housing or addressing regulations that slow the building of new supply.\(^\text{40}\) Professor Somerville emphasized the issue of supply, while Professor Gordon was of the view that an emphasis on supply was exaggerated. Professor Ley agreed that supply needs to be addressed, but that supply must be targeted at affordable housing, not high-priced condos.

Resolving these complex issues is somewhat outside the ambit of my mandate, except insofar as the investment of foreign-originated capital has been connected to and, in fact, conflated with money laundering in the province. As Professor Gordon pointed out, it is difficult to know the source of wealth originating in a foreign jurisdiction and whether it is the product of criminal activity or corruption.\(^\text{41}\) The case study at the conclusion of this chapter illustrates this point. And while the focus in the public discourse around foreign capital flowing into real estate in British Columbia has been on East Asia, particularly China, as this Report was being written, global attention has turned to the vast wealth of the Russian oligarchs, invested in luxury properties in London and the Riviera as well as other assets like super-yachts and professional soccer clubs. Global events can change the definition of what is considered tainted or criminal. What may not have seemed especially suspicious at one time may come to be seen as deeply problematic later. It is not always (in fact, not often) possible to know whether funds originating in a foreign jurisdiction are tainted.

All of this, in my view, reinforces the importance of a robust beneficial ownership registry for real property. To know if capital coming into Canada is tainted by crime or corruption, Canadian authorities (and professionals with anti–money laundering obligations) need to know the ultimate beneficial owner(s) of property, in order to be properly guided by tools such as lists of politically exposed persons.

A discussion of foreign capital investment into British Columbia real estate is not complete without consideration of how the discourse relating to foreign investment, immigration, and housing prices can veer into patterns of stereotypical or racist thinking.

Dr. Henry Yu appeared before me to put this issue into its historical context. He described a long history of racist sentiment toward Chinese immigrants from the late 1800s onward – not just in Canada, but also in the United States, Australia, and New Zealand. These countries had overt policies of white supremacy that deliberately limited and excluded immigrants from Asia.42

After immigration reform in the 1960s, immigrants to Canada came increasingly from Asia, in particular India, China, and the Philippines. After 1986, and up to the transition of power from Britain to China in Hong Kong in 1997, there was a large influx of immigrants from Hong Kong. Dr. Yu reminded the Commission of the anxiety that was felt in some quarters when this wave of immigration occurred, and compared it to the reaction to recent anxiety about immigration from mainland China.43

Dr. Yu also pointed to public resentment or suspicion about the accumulation of wealth by people in or from China, and a heightened sense that such accumulation is illegitimate or corrupt. In British Columbia, this has resulted in focusing on and singling out Chinese buyers as the cause of an unaffordable and speculative real estate market.44 The manner in which “Chinese money” is discussed in various fora is resonant, he says, with a long history of discrimination.45

Asked about the impact of a focus on Chinese people in the public discourse on money laundering, Professor Yu placed the issue in the context of a number of ongoing discussions, like housing affordability and the pandemic, in which people from China, or of Chinese descent, are characterized as “a problem.”46 When this type of discussion becomes normalized, then it becomes easier to treat a subset of people differently from a legal and policy perspective.

I share Professor Yu’s concerns about our public dialogue becoming infused with racist stereotyping. There are legitimate policy questions relating to foreign ownership of real estate in the province. Those questions should be addressed on their merits. They should be decided on the basis of sound policy and evidence. They should not engage “us vs. them” dynamics and must take care not to stray into treating any ethnic community as presumptively dishonest or unlawful. It is important to be aware of and avoid racism, whether it is glaring and obvious, or inadvertent and subconscious.

---

44 Ibid, pp 68–74.
Conclusion on Causes of Real Estate Price Increases

I am unable to conclude that either money laundering or foreign investment (however that is defined) is a primary cause of price increases in British Columbia residential real estate. There are strong reasons to believe that other factors, discussed above, are the drivers of housing unaffordability in this province. I certainly would not urge the provincial government to take up the recommendations in this Report on the basis that addressing money laundering will resolve British Columbia's housing affordability issues. As my recommendations above suggest, this is an area that would benefit from study and attention. Money laundering should be addressed, to be sure, but steps taken to counteract money laundering should not be viewed as a panacea for housing unaffordability.
Appendix 19A: How the Expert Panel Put a Number on Real Estate Price Increases from Money Laundering

As noted in my discussion of the gravity model of estimating money laundering in BC, the Expert Panel sought to estimate what cost increases for real estate could be attributed to money laundering. In the discussion below, I have summarized the route taken to travel from the gravity model estimate of money laundering per year to the price increases said to be attributable to money laundering.

The Expert Panel had concluded that some $7.4 billion per year was being laundered in the province.47 The authors went on to estimate what portion of that money was invested into real estate in the province. They came up with a wide range: between $800 million and $5.3 billion. It is important to understand why there is such a wide range in this estimate, because in the media and in the public discourse, it is often the case that only the upper range is cited.

First the Expert Panel had to determine how much of the $7.4 billion would be available for investing at all – let alone in real estate. As noted by the Expert Panel, illicit funds are not necessarily funds that are available for investment in the hands of a criminal. A person who generates illicit funds in the course of criminal activity will spend a good portion of those funds (as everyone does) on purchasing the necessities of life (food, shelter, transport, clothes). If a person with an illicit income behaves like the average Canadian, he or she will save some, but far from most, of their income. Statistics show that Canadian households save somewhere between 3.6 percent (for the average Canadian household) and 28 percent (for the highest income quintile) of their net disposable income. That saved income is then available for investment. It may be invested in many ways, real estate being just one option. On the other hand, some of the $7.4 billion estimated to be laundered in British Columbia can be expected to be money that was sent to British Columbia specifically for the purpose of investing.

The Expert Panel concluded that “the proportion of monies available for laundering that is invested is very unlikely to be lower than the proportion of income invested by the highest income quintile of the Canadian population.”48 This was so, the authors reasoned, because “invested proceeds of crime will generate laundered returns that, in turn, provide income more suitable for consumption that dirty proceeds of crime.”49 (On this line of reasoning, in determining how much illicit money is available to invest, it is safe to expect that criminals will be more keen to invest because that will help to legitimize their dirty cash so that, in turn, it is easier to spend.) If all of the $7.4 billion in laundered funds was treated as income (the most conservative approach), and 28 percent of that was assumed to be available for investment, that would leave $2.1 billion available for investment in various areas, including real estate.

47 Exhibit 330, Maloney Report, p 1.
49 Ibid, p 51.
At the upper end of its estimate, the Expert Panel assumed 100 percent of the $7.4 billion laundered in British Columbia was available for investing.

In sum, the Expert Panel concluded that the amount of illicit money available for investment ranged from $2.1 to $7.4 billion per year.

Second, the Expert Panel had to estimate how much of those funds available for investment ($2.1 to $7.4 billion) was invested into real estate. Statistics Canada data indicated that 37 to 72 percent of the wealth of property-owning Canadian households with no pension is invested in real estate (including primary residences).50

At the lower end of the range of illicit fund available for investment ($2.1 billion), applying the 37 to 72 percent range, the investment of laundered funds into real estate would be $800 million to $1.5 billion per year.

At the upper end of the spectrum, if all of the $7.4 billion estimated to have been laundered in BC in 2018 was available for investment, applying the 37 to 72 percent range, then $2.7 to 5.3 billion of that would be invested into real estate. In the view of the Expert Panel, the upper boundary of $5.3 billion was felt to be more accurate, because that amount offset what they described as the likely underestimation of overall money laundering, because of under-reporting of crime.51

Third, having come up with a range of investment of laundered funds into real estate ($800 million to $5.3 billion) in 2018, the Expert Panel then turned to estimating the impact of that investment on real estate prices. Flows of such large amounts of money into a market could reasonably be expected to affect the market, pushing prices up. As noted by the panel, estimating the impact of investing from $800 million to $5.3 billion in real estate required making “a large number of assumptions.”52 After making these assumptions, the Expert Panel estimated that the $5.3 billion upper range of illicit funds invested into real estate would result in housing prices that were 3.7 to 7.5 percent higher than they would be in the absence of money laundering.

50 Ibid, p 52.
51 Ibid, p 52.
52 Ibid, p 57.
Financial institutions may be the first entities that come to mind when considering money laundering risks. Most people and companies rely on banks and other financial institutions to handle many of their financial transactions. Financial institutions offer a broad range of financial services, from savings and loans to investments and financing complex corporate transactions. It is not hard to conclude that most money launderers seek to pass their illicit funds through a financial institution at some point, and this results in significant money laundering vulnerabilities.

This Part addresses three kinds of financial institutions. Chapter 20 discusses banks and credit unions – key institutions of interest to money launderers. Chapter 21 addresses money services businesses, which are essentially an alternative to traditional banking and face well-known money laundering vulnerabilities. Finally, in Chapter 22, I examine white-label automated teller machines.
Chapter 20
Banks and Credit Unions

It has long been recognized that banks, credit unions, and other financial institutions face significant money laundering vulnerabilities. As gatekeepers to the financial system, these institutions face inherent risks of being abused by money launderers seeking to introduce illicit funds into their bank accounts and thereby cloak their ill-gotten gains with a façade of legitimacy. Bad actors may also seek to use financial institutions to transfer funds, including abroad and to legal entities such as corporations or trusts.

When the Financial Action Task Force first introduced its 40 recommendations in 1990, the recommendations focused largely on financial institutions (see Chapter 6). Although the recommendations have since expanded to include certain non-financial businesses and professions (including accountants, casinos, real estate professionals, and lawyers), they still have a particular focus on financial institutions. This is understandable given the significant risks arising in this sector and the opportunities that financial institutions have to observe suspicious behaviour. Indeed, in the 2019–20 fiscal year, the five major Canadian banks — the Royal Bank of Canada (RBC), Bank of Montreal (BMO), Canadian Imperial Bank of Commerce (CIBC), Bank of Nova Scotia (Scotiabank) and TD Canada Trust (TD) – were responsible for over 90 percent of all reports received by the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC).1

In this chapter, I begin by setting out some jurisdictional and other limitations applicable to my discussion of this sector. Under the Constitution Act, 1867, banks are federally regulated entities. As a provincial commissioner, I cannot make recommendations to the federal government or federal institutions. As I explain below, this limitation means

---

that my discussion of banks is somewhat general. I then discuss the legal and regulatory framework applicable to banks and credit unions, including their obligations under the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 (PCMLTFA), and regulation undertaken by the British Columbia Financial Services Authority (BCFSA) and the Office of the Superintendent of Financial Institutions (OSFI). I then turn to money laundering risks affecting financial institutions and anti-money laundering measures currently in place at those institutions. I end this chapter with a discussion of the importance of information-sharing initiatives involving financial institutions.

**Constitutional and Other Limitations**

Under the Canadian Constitution, the federal Parliament has jurisdiction over banks.2 As the Supreme Court of Canada has explained, the purpose of putting banks under federal jurisdiction was

> to create an orderly and uniform financial system, subject to exclusive federal jurisdiction and control in contrast to a regionalized banking system which in “[t]he years preceding the Canadian Confederation [was] characterized in the United States by ‘a chaotic era of wild-cat state banking.’” [References omitted.]3

Although banks are subject to federal jurisdiction, the provinces regulate non-bank provincially incorporated financial institutions.4 These include credit unions (and the roughly equivalent caisses populaires operating predominantly in Quebec), trust and loan companies, co-operatives, insurance companies, pension plans, and treasury branches.5

The evidence before me focused on banks and credit unions, the primary financial institutions that accept deposits, facilitate transfers, and conduct other activities attractive to money launderers. Credit unions are co-operative organizations: they are owned by their members, and the members are depositors. Their activities essentially consist of taking deposits from their members and lending money out in retail or residential-type lending, primarily mortgages. Some credit unions have subsidiaries offering services such as wealth management and insurance.6

As banks are federally regulated institutions, jurisdictional issues prevented the Commission from exploring the effectiveness of the major banks’ anti-money

---

3 Canadian Western Bank v Alberta, 2007 SCC 22 at para 83.
5 There is no specific provision in the Constitution Act, 1867, referring to provincial financial institutions. However, the courts have interpreted section 91(15) as referring strictly to “banks” – a name that only federally chartered banks can use — and Parliament has never asserted jurisdiction over all financial institutions. As a result, other financial institutions have been permitted to offer “banking” services so long as they do not call themselves “banks”: MH Ogilvie, Bank and Customer Law in Canada, pp 32–33.
laundering efforts in great detail. I was pleased to hear evidence from the chief anti-
money laundering officers at RBC, Scotiabank, and HSBC, who testified on their own
behalf as well as on behalf of the “big five” national banks (RBC, TD, CIBC, BMO, and
Scotiabank). Their testimony was heard in a rare in camera (non-public) hearing as a
result of Ruling 24. In that ruling, I explained:

[7] In essence the evidence sought to be heard in camera consists of a
panel of witnesses from each of the Bank of Nova Scotia, the Royal Bank
of Canada and HSBC. As I understand it, these witnesses will be testifying
about money laundering typologies as well as countermeasures utilized by
“the most sophisticated and largest financial institutions in the country.”
Commission counsel submits the evidence will be highly sensitive and will
describe typologies and methods of money laundering in detail “including
new and cutting-edge techniques.” The evidence will also detail what the
banks are doing in response and the measures they are taking to identify,
prevent and address money laundering risks and activity.

... 

[22] The prospect of proceeding in camera in a public inquiry is, in general,
undesirable. In the present circumstances the issues being addressed by
the evidence – the methods being used by criminals to launder money
through Canada's major financial institutions and the measures taken to
detect and prevent them – are important ones.

... 

[24] In my view it would imperil the administration of justice if the evidence
were to be made publicly available ... Evidence illustrating well-developed
methods of laundering money may provide information useful for criminals
seeking to launder proceeds of crime through financial institutions that are
not as well-equipped to detect or resist them as are Canada's major banks.
Even more importantly, publicizing advanced strategies and methods used
by the banks to detect and deter money launderers are likely to undermine
the success of those strategies by providing notice to those who are being, or
are otherwise likely to be targeted.

I also noted that there was no practical way of ameliorating the risks short of an
in camera hearing. The evidence would be of significant benefit to the Commission,
and it may not have been heard in the absence of an in camera hearing.7 I did not
take the decision lightly, however. The public has an interest in hearing how money
laundering affects important economic institutions such as banks and knowing how
they respond to money laundering risks. Further, the effect of an in camera hearing
is that the evidence can be referred to in only a very general way in this Report.8

8 Ibid, para 26.
On balance, I determined that it was appropriate to hear the evidence in camera, with all participants but one permitted to be present. My discussion of the in camera hearing is therefore high level and does not reveal any specific information obtained from the panel.

All of this being said, given the similarities between services offered by banks and credit unions, many of the money laundering risks and vulnerabilities are very similar, if not the same. Further, both federal and provincial financial institutions are subject to the PCMLTFA. Therefore, while there are limitations on what I can recommend with respect to banks, this chapter will examine the risks inherent to both banks and credit unions, but my recommendations will be confined to provincial institutions.

Legal and Regulatory Framework

Banks and credit unions are highly regulated entities, subject to both the PCMLTFA and regulation by provincial and federal regulatory bodies. I review these schemes in turn.

The PCMLTFA

The PCMLTFA applies to various financial institutions, which are listed in sections 5(a) to (h.1) of that statute. These include, but are not limited to, banks (including some foreign banks), credit unions and caisses populaires, life insurance companies, trust and loan companies, securities dealers, and domestic and foreign money services businesses. I discuss money services businesses, whose obligations differ slightly from the other institutions I have just listed, in Chapter 21.

Financial institutions have a variety of obligations under the PCMLTFA. First, they must implement a compliance program, which has six aspects. Institutions must:

- appoint a compliance officer responsible for implementing the program;
- develop and apply written compliance policies and procedures that are kept up to date and, in the case of an entity, are approved by a senior officer;
- conduct a risk assessment of the business to assess and document the risk of a money laundering offence or a terrorist activity financing offence occurring in the course of the business's activities;
- develop and maintain a written, ongoing compliance training program for employees, agents, mandataries, or other authorized persons;
- institute and document a plan for the ongoing compliance training program and deliver the training; and

---

9 Ibid, para 28.
• institute and document a plan for a review (at least every two years) of the compliance program for the purpose of testing its effectiveness.\textsuperscript{10}

In line with the first requirement, banks and credit unions appoint a “chief anti-money laundering officer” (often referred to as a “CAMLO”).

Financial institutions have a variety of client identification and verification requirements. They must verify a client’s identity in various situations, including when they:

• receive $10,000 or more in cash;\textsuperscript{11}
• receive virtual currency in an amount equivalent to $10,000 or more;\textsuperscript{12}
• issue or redeem money orders, traveller’s cheques, or other similar negotiable instruments of $3,000 or more;\textsuperscript{13}
• initiate and remit electronic funds transfers of $1,000 or more;\textsuperscript{14}
• transfer and remit virtual currency in an amount equivalent to $1,000 or more;\textsuperscript{15}
• conduct foreign currency exchanges of $3,000 or more;\textsuperscript{16}
• conduct exchanges of virtual currency for funds, funds for virtual currency, or one virtual currency for another in an amount equivalent to $1,000 or more;\textsuperscript{17} and
• open bank accounts or credit card accounts for clients.\textsuperscript{18}

Financial institutions must keep records with respect to the above situations.\textsuperscript{19} In line with how the \textit{PCMLTFA} applies to all reporting entities, these verification measures need not be done when the client is a public body, financial institution, or a very large corporation or trust.\textsuperscript{20} Financial institutions must also take reasonable measures to verify the identity of every person or entity that conducts or attempts to conduct a suspicious transaction before filing a suspicious transaction report.\textsuperscript{21} They are also required to obtain beneficial ownership information when verifying the identity of an entity and to

\end{footnotesize}
take reasonable measures to confirm the accuracy of that information, as well as take reasonable measures to determine if a third party is involved in a transaction. They also have a number of obligations with respect to politically exposed persons.

The PCMLTFA imposes a number of reporting obligations on financial institutions. They must report, to FINTRAC:

- the receipt of $10,000 or more in cash in a single transaction from a person or entity;
- the initiation, at the request of a person or entity, of an international electronic funds transfer of $10,000 or more in a single transaction;
- the receipt of an international electronic funds transfer of $10,000 or more in a single transaction;
- the receipt of an amount of $10,000 or more in virtual currency in a single transaction; and
- every financial transaction for which there are reasonable grounds to suspect that the transaction is related to the commission or suspected commission of a money laundering or terrorist financing offence.

Financial institutions also have obligations to monitor their business relationships with their clients. They must implement a process to review all the information obtained about a client in order to detect suspicious transactions, keep information up to date, re-assess the level of risk associated with the client's transactions and activities, and determine whether the client's transactions and activities are consistent with the information obtained about them and their risk assessment. This monitoring must be done periodically based on the institution's risk assessment of the client, and enhanced monitoring is necessary for high-risk clients. The institution must keep a number of records relating to this ongoing monitoring.

---

22 PCMLTF Regulations, s 138.
23 Ibid, ss 134(1) and 135(1).
24 Ibid, s 116.
25 A “single transaction” includes two or more transactions conducted in a 24-hour period if they are conducted by or on behalf of the same person or entity or for the same beneficiary: ibid, ss 126–129.
26 Ibid, s 7(1)(a).
27 Ibid, s 7(1)(b).
28 Ibid, s 7(1)(c).
29 Ibid, s 7(1)(d).
30 PCMLTF, s 7.
31 Financial institutions enter a business relationship with a client when they open an account for the client or, if the client does not have an account, the second time within a five-year period that the client engages in a financial transaction for which the institution is required to verify their identity (with some exceptions): PCMLTF Regulations, ss 4.1(a), (b); 154(1)(a) to (d); 154(2)(a) to (l) and (p).
32 PCMLTF Regulations, s 123.1.
33 Ibid, ss 123.1, 157(b)(ii).
34 Ibid, s 146(1).
Finally, the PCMLTFA creates a “travel rule.” When engaged in electronic funds or virtual currency transfers, financial institutions must include specified information relating to the originator (the person or entity who requested a transfer) and beneficiary (the person or entity that received it). They must also take reasonable measures to ensure that any transfers received include this information. They are also required to develop and apply written risk-based policies and procedures for determining whether to suspend or reject transfers in the event that the transfer does not include the required information and for any follow-up measures they should take.

**FATF Recommendations**

A number of the Financial Action Task Force’s recommendations relate to financial institutions. Recommendation 10 sets out client due diligence measures, which include: verifying the identity of clients; identifying beneficial owners and taking reasonable steps to verify their identity; understanding and obtaining information about the purpose and intended nature of the business relationship; and conducting ongoing due diligence of the business relationship and scrutiny of transactions. Recommendation 11 sets out record-keeping requirements. Recommendation 12 relates to politically exposed persons. Additional requirements for banks engaged in cross-border correspondent banking are set out in Recommendation 13, and the travel rule referred to above is discussed in Recommendation 16. The obligations to implement programs for anti-money laundering and counterterrorist financing, to report suspicious transactions to the financial intelligence unit, and to ensure adequate regulation and supervision of financial institutions are set out in Recommendations 18, 20, and 26, respectively.

The Financial Action Task Force also published its *Guidance for a Risk-Based Approach: The Banking Sector* in 2014. The report provides detailed guidance on how the recommendations relating to financial institutions should be implemented, including how they should implement a risk-based approach, how to conduct risk assessments, how to mitigate risks effectively, and the internal mechanisms that should be in place. It also provides guidance for supervisors and regulators.

36 PCMLTFA, s 9.5(b); PCMLTF Regulations, 124.1(b).
37 PCMLTF Regulations, ss 124(4) and 124.1(2).
40 Ibid, pp 14–15. Recommendation 16 states that financial institutions should obtain accurate originator and beneficiary information on wire transfers and ensure that the information remains with the wire transfer throughout the payment chain. Financial institutions should also monitor wire transfers for the purpose of detecting transfers that lack the required originator and/or beneficiary information and take appropriate measures: Ibid, p 15.
Regulation by BCFSA

Provincial financial institutions are regulated by the British Columbia Financial Services Authority. BCFSA is empowered by the Financial Services Authority Act, SBC 2019, c 14, and administers several statutes. The core business areas for which it has responsibility are: mortgage brokers; credit unions; insurance and trust companies; pensions; and Credit Union Deposit Insurance (the statutory corporation that guarantees deposits and non-equity shares of credit unions).

BCFSA is the successor to the Financial Institutions Commission, which was more commonly known as FICOM. BCFSA became a Crown corporation on November 1, 2019. Its role and mandate are basically the same as FICOM: to ensure safety and soundness in the financial system. However, FICOM was not a Crown corporation. Christopher Elgar, vice-president and deputy superintendent of financial institutions, prudential supervision, at BCFSA, testified that the shift from FICOM being part of “core government” to BCFSA being a Crown corporation means that BCFSA has more transparency and latitude. For example, it now controls its own operating budget. He expects that BCFSA’s status as a Crown corporation will help address staffing challenges that FICOM experienced in the past. Indeed, in the 18 months prior to his testimony, BCFSA had stabilized its vacancy rate from around 30 percent to 7 or 8 percent.

There are 40 credit unions in BC and two “central credit unions”: Stabilization Central and Central 1. Central unions are co-operatives for the co-operatives; they are owned by credit unions and provide support and services to credit unions, such as treasury services, education, and payment and settlement services. An advantage of this approach is that centrals can assist smaller credit unions that do not have the scale or scope to manage all services themselves. Indeed, centrals provide some anti-money laundering services, including program development, education, and screening for wire transfers. Mr. Elgar estimated that 26 of the 40 credit unions in BC use Central 1’s anti-money laundering services program.

BCFSA has five priorities set out in its provincial government mandate letter: risk-based supervision and consumer protection; engaging with industry; regulatory governance and legislation; deposit insurance; and anti-money laundering. This last priority involves working collaboratively with government to improve the effectiveness of the anti-money laundering regime. It was added to the mandate letter for the 2021 fiscal year. I elaborate on BCFSA’s anti-money laundering activities below.

43 Evidence of C. Elgar, Transcript, January 15, 2021, p 49.
44 Ibid, pp 8–9.
Prudential Risk Regulation

BCFSA is a prudential risk regulator. Prudential risks are “those that can reduce the adequacy of [an entity’s] financial resources, and as a result may adversely affect confidence in the financial system or prejudice customers.” Some of the main types of prudential risks are credit, market, liquidity, operational, insurance, and group risk.\(^\text{51}\) BCFSA accordingly supervises and regulates provincial financial institutions to ensure they are in sound financial condition and are complying with their governing laws and supervisory standards.\(^\text{52}\) It uses a “risk-based supervisory framework to identify imprudent or unsafe business practices” and aims to identify issues or problems early on and to take corrective actions when necessary.\(^\text{53}\)

A guiding principle for BCFSA’s regulation is proportionality. This means that it considers the size of different financial institutions and adjusts its expectations accordingly. Some credit unions in BC have thousands of employees and many branches; others have a single branch and just a few employees. As a result, although BCFSA’s expectations around certain core functions of governance and risk management will be the same for all institutions, the application will vary depending on the scope and scale of the institution.\(^\text{54}\)

BCFSA and OSFI (the regulator of federal financial institutions, discussed below) take very similar approaches to their regulation. Both are prudential risk regulators and have virtually identical supervisory frameworks. They both apply a risk-based approach and consider proportionality.\(^\text{55}\)

Anti–Money Laundering Regulation

BCFSA continues to develop its anti–money laundering regulation. Its 2020/21 to 2022/23 service plan indicates that one of its objectives is to work collaboratively with the Government of British Columbia to improve the provincial anti–money laundering regime.\(^\text{56}\) To strengthen its role within the current regime, BCFSA will:

- amplify its focus on anti–money laundering controls in its supervisory assessment of financial institutions;
- increase scrutiny of mortgage broker applications and activities for potential money laundering risks;
- continue to report suspected money laundering activities to relevant federal partners; and

\(^{53}\) Ibid.

\(^{54}\) Evidence of C. Elgar, Transcript, January 15, 2021, p 16.

\(^{55}\) Ibid, p 21.

\(^{56}\) Exhibit 423, BCFSA 2020/21 – 2022/23 Service Plan (February 2020), objective 5.1.
• increase interactions with anti-money laundering partners on a bilateral and multilateral basis.\(^{57}\)

No single body or group at BCFSA deals with anti-money laundering.\(^{58}\) Rather, it is part of BCFSA’s assessment of regulatory compliance and operational risk, which is the same approach that was taken by FICOM.\(^{59}\) Anti-money laundering and counterterrorist financing are considered in the context of whether an institution has an effective risk management program that is commensurate with its profile. BCFSA considers whether the institution: has anti-money laundering policies in place; provides reports to the board; ensures the independence of its chief anti-money laundering officer; and has policies and processes in place (for example, know-your-client checklists and suspicious transaction reporting mechanisms) to ensure that obligations under the \textit{PCMLTFA} are being met.\(^{60}\)

BCFSA’s “risk matrix,” which represents the approaches and methodology it uses to examine provincial financial institutions, now has an explicit line relating to anti-money laundering. This was added at the beginning of 2020, and BCFSA plans to update its supervisory framework on its website to reflect a focus on anti-money laundering as well.\(^{61}\) The matrix results in a “composite risk rating,” which in turn determines what kinds of intervention by BCFSA are necessary and the level of intensity of its ongoing monitoring.\(^{62}\) This rating may lead to an increase in Credit Union Deposit Insurance premiums as well as increased oversight and review by BCFSA; credit unions are therefore incentivized to maintain a good composite credit risk rating.\(^{63}\)

BCFSA refers to and uses a guideline produced by OSFI called “Guideline B-8: Deterring and Detecting Money Laundering and Terrorist Financing.”\(^{64}\) As I note below, this guideline was rescinded in July 2021 following changes to the anti-money laundering regulation undertaken by OSFI and FINTRAC. BCFSA has not issued its own anti-money laundering guidance. Mr. Elgar testified that if BCFSA receives clear direction on its anti-money laundering mandate, it may develop its own guidance; in the interim, however, it will continue to rely on Guideline B-8.\(^{65}\)

\(^{57}\) Ibid, objective 5.1(b). The “AML partners” in the last bullet essentially refers to FINTRAC, as BCFSA has not worked with law enforcement: Evidence of C. Elgar, Transcript, January 15, 2021, p 90.

\(^{59}\) Ibid, pp 29–30; Exhibit 417, FICOM Letter from Frank Chong to All Provincially Regulated Financial Institutions (May 5, 2016).

\(^{61}\) Ibid, pp 42–43.

\(^{62}\) Ibid, pp 40–41, 45–46.

\(^{63}\) Ibid, pp 105–106.

Some key factors identified in Guideline B-8 for a financial institution’s compliance program are as follows:

• Is there senior manager oversight of an anti-money laundering program and institution? When has an anti-money laundering report last been provided to senior management?

• Have they identified a chief anti-money laundering officer (CAMLO) responsible for implementation of the anti-money laundering / counterterrorist financing program? Is the CAMLO independent?

• Does the institution do a risk assessment of inherent money laundering / terrorist financing risks? Consider clients, products, geographic location of activities, and other relevant factors (including account transaction risk factors).

• Does the institution keep up-to-date anti-money laundering /counterterrorist financing policies? Are there know-your-client checklists and programs to verify source of funds, client identity, etc.?

• Does the institution have a written ongoing training program?

• Is there adequate self-assessment of controls?

• Is there adequate effectiveness testing?66

Although not everything in Guideline B-8 is applicable to credit unions, significant parts are.67 BCFSA (and previously FICOM) also encourages all provincial financial institutions to refer to FINTRAC’s risk-based guide in addition to Guideline B-8.68

While I appreciate that much of the content of Guideline B-8 is applicable to credit unions, I am of the view that BCFSA should develop its own guidance focused specifically on credit unions. This would ensure that credit unions are aware of BCFSA’s specific expectations of them. Further, as Guideline B-8 has technically been repealed by OSFI, it strikes me that it would be useful for BCFSA to develop its own version that it can continue to update as necessary.

**Recommendation 45:** I recommend that the British Columbia Financial Services Authority develop anti-money laundering guidance for credit unions.

---

Mr. Elgar emphasized that BCFSA is making efforts to modernize and become more efficient and effective. He cited the increased focus on anti-money laundering as demonstrated by its inclusion in the risk matrix, the ongoing efforts to update the supervisory framework, and the discussion of anti-money laundering objectives in the service plan. He further noted that BCFSA is working to increase engagement and awareness of the industry about its anti-money laundering activities and expectations. Members of BCFSA are in the process of obtaining the certified anti-money laundering specialist designation, and BCFSA is seeking out candidates with anti-money laundering experience when it hires. When asked how the explicit focus on anti-money laundering will change BCFSA's approach, Mr. Elgar explained:

I think it's going to have a couple of important changes. One, it's going to reinforce BCFSA's view for credit unions or insurance companies, [and] trust companies, that [anti-money laundering] is important. It is part now that we're signalling it as a line item of centralized activities. Our expectations are becoming elevated with the institutions, and it's part of our overall mandate where we're looking to engage with industry and our external stakeholders so there are no surprises. We are communicating through a number of different tools, advisories and in particular on guidelines what are our expectations as BCFSA continues to evolve, become much more modern and effective in its supervision of the financial services industry in British Columbia, [and] largely to ensure the safety and soundness. And again it comes back to the consistency to what the government's overall objectives are ... a sustainable financial services economy in British Columbia. [Anti-money laundering] is one component and we just elevated that to a point where it's not getting buried anywhere in the inherent risks of operational risk.

BCFSA also has a new rule-making power under the Financial Institutions Act, RSBC 1996, c 141. This power enables it to make rules that have the same legal force as an act or regulation. When asked whether BCFSA intends to introduce rules focused on anti-money laundering, Mr. Elgar testified that that would depend on whether BCFSA has a clear anti-money laundering mandate.

Although BCFSA has taken steps toward making anti-money laundering a priority in its regulation, it appears that the organization is waiting for an explicit mandate from the Province before taking further steps, such as developing guidance and rules. Given the clear importance of BCFSA engaging in anti-money laundering regulation, I am of the view that an explicit mandate in this regard would be useful. I therefore recommend that BCFSA be given a clear anti-money laundering mandate.

---

70 Ibid, pp 85–86, 88–89.
71 Ibid, pp 44–45.
72 Ibid, pp 81–82.
**Recommendation 46:** I recommend that the Province provide the British Columbia Financial Services Authority with a clear, enduring anti–money laundering mandate.

In Chapter 21, I recommend that money services businesses in British Columbia be regulated by BCFSA. Given the size of that industry and the significant workload that this expanded mandate will entail, BCFSA will require sufficient resources and support to take on this added responsibility. This is particularly important given that BCFSA has, in the last few years, already undergone significant organizational changes. The Province should therefore provide BCFSA with sufficient resources to create or staff a group focused on anti–money laundering. The group should also be responsible for liaising with law enforcement, public-private partnerships, and other government stakeholders.

**Recommendation 47:** I recommend that the Province provide sufficient resources to the British Columbia Financial Services Authority (BCFSA) to create or staff an anti–money laundering group. This group should serve as a contact point for BCFSA with law enforcement, public-private partnerships, and other government stakeholders.

**Collaboration with FINTRAC**

BCFSA collaborates with FINTRAC through a memorandum of understanding. That agreement states that BCFSA will share the following with FINTRAC:

- the name of each institution that it plans to review for compliance with Part I of the *PCMLTFA*;
- a copy of the notes it uses to assess that compliance;
- the results of its review;
- a copy of correspondence between it and the institution regarding any compliance deficiencies;
- a description of any actions (plus the results of those steps) that BCFSA asks the institution to take to rectify deficiencies; and
- a description of progress by the institution in taking those corrective actions.

---

73 Exhibit 419, Memorandum of Understanding between the Financial Transactions and Reports Analysis Centre of Canada and the Financial Institutions Commission (January 9, 2005). This memorandum of understanding was entered into by FICOM but has been taken over by BCFSA and is still in full effect: ibid, p 5; Evidence of C. Elgar, Transcript, January 15, 2021, p 51.

Mr. Elgar added that BCFSA sometimes shares statistical information as well.\textsuperscript{75} It also provides FINTRAC with its observations relating to the institution's policies and education programs and whether these are updated and working effectively.\textsuperscript{76} Meanwhile, FINTRAC agrees to share the following information with BCFSA:

- compliance-related information, including risk assessment information that BCFSA may use in determining which institution to review for compliance with Part I of the \textit{PCMLTFA};
- the result of FINTRAC's compliance actions with respect to an institution; and
- a copy of correspondence between FINTRAC and the institution regarding compliance deficiencies.\textsuperscript{77}

Mr. Elgar explained that BCFSA uses that information when considering whether an institution has addressed a deficiency and has a mitigation plan to meet it.\textsuperscript{78} He described the relationship between BCFSA and FINTRAC as collaborative and noted that the industry is aware that they work together.\textsuperscript{79}

FINTRAC provides reports to BCFSA on matters such as the number of compliance examinations of credit unions it conducts, the deficiencies it observes, and the numbers of suspicious transaction reports filed.\textsuperscript{80} Mr. Elgar explained that although it is useful for BCFSA to know the number of suspicious transaction reports filed, from a prudential point of view, BCFSA's focus is not so much on the number of reports filed but, rather, ensuring that the financial institution has the tools in place to report large and suspicious transactions.\textsuperscript{81}

FINTRAC conducted 14 examinations of BC-based credit unions in 2017–18 and nine examinations in 2019–20.\textsuperscript{82} In 2015–16, nearly 89 percent of credit unions examined in BC were partially deficient in terms of their policies and procedures. This fell to 67 percent in 2016–17 and 14 percent in 2017–18.\textsuperscript{83} BCFSA conducted 22 prudential reviews in 2019–20 and has seen an improvement and greater awareness among credit unions of the importance of maintaining rigorous governance and risk management in all areas of risk.\textsuperscript{84}

Regulation by OSFI

The Office of the Superintendent of Financial Institutions regulates and supervises over 400 federally regulated institutions and 1,200 pension plans. In a similar way to BCFSA, it seeks to ensure that these institutions are in sound financial condition and are complying with relevant laws. The federal institutions it regulates include all banks, as well as federally incorporated or registered trusts and loan companies, insurance companies, co-operative credit associations, fraternal benefit societies, and private pension plans. It considers matters such as the institution’s financial condition, material risk, and quality of its governance, risk management, and compliance.85

Following a consultation with industry and discussions with FINTRAC around eliminating duplication and redundancy, OSFI rescinded Guideline B-8 on July 26, 2021.86 This change appears to be in response to findings by the Financial Action Task Force’s 2016 mutual evaluation of Canada, which noted duplication in efforts between FINTRAC and OSFI and a need to coordinate resources and expertise more effectively.87

Money Laundering Risks Facing Financial Institutions

As I noted at the beginning of this chapter, the money laundering risks facing financial institutions are in many ways common sense. Financial institutions are gatekeepers to the financial system, and money whose source is or appears to be a financial institution receives a veneer of legitimacy. It can easily be assumed that the goal of many money launderers is to have their funds pass through a financial institution at some stage.

Canada’s 2015 national risk assessment noted that banks hold over 60 percent of the financial sector’s assets, and the six largest domestic banks (BMO, Scotiabank, CIBC, RBC, TD, and National Bank) hold 93 percent of those assets.88 As of November 2014, credit unions and caisses populaires held over $320 billion in assets.89 The assessment rated domestic banks as having a “very high” vulnerability rating, while credit unions, caisses populaires, and foreign bank branches and subsidiaries were rated “high.”90 FINTRAC has similarly identified banks, credit unions, caisses populaires, and money services businesses as high risk.91

89 Ibid, p 35.
90 Ibid, p 32.
Domestic banks were rated the most vulnerable, primarily due to the size of the six largest ones. The national risk assessment explained that those banks have very significant transaction volumes, asset holdings, and scope of operations (both domestic and international). They offer a large number of vulnerable products and services to a large client base, including a significant number of high-risk clients and businesses. Services can be provided both face-to-face and remotely, thereby varying the degree of anonymity and complexity. Further, there were opportunities to use third parties and gatekeepers, including accountants and lawyers, to undertake transactions.  

Similar concerns were raised for credit unions, caisses populaires, foreign bank branches and subsidiaries, and trust and loan companies. The assessment also noted that some credit unions and caisses populaires operate in more remote Canadian locations that may attract high crime and corruption activities, as well as transient workers sending remittances to countries that may have high money laundering or terrorist financing risks.

The national risk assessment identified a number of activities undertaken by deposit-taking financial institutions that are vulnerable to the placement and layering stages of money laundering, including the use of personal and business domestic accounts; domestic and international wire transfers; currency exchanges; and monetary instruments such as bank drafts, money orders, and cheques. The main money laundering techniques used to exploit these products and services were said to include the following:

- Structuring of cash deposits or withdrawals and smurfing (multiple deposits of cash by various individuals and low-value monetary instruments purchased from various banks and [money services businesses]);
- Rapid movement of funds between personal and/or business deposit accounts within the same financial institution or across multiple financial institutions;
- Use of nominees (individuals and businesses);
- Large deposits of cash and monetary instruments followed by the purchase of bank drafts or [electronic funds transfers] to foreign individuals;
- Exchanges of foreign currencies for Canadian currency and vice versa;
- Refining (i.e., converting large cash amounts from smaller to larger bills); and
- Non-face-to-face deposits (i.e., night deposits, armoured cars).  

---

94 Ibid, p 44.
The Financial Action Task Force’s *Guidance for a Risk-Based Approach: The Banking Sector* similarly identifies a number of financial products and services associated with money laundering and terrorist financing risks. First, certain retail banking activities – providing accounts, loans, and savings products – pose risks insofar as they involve the provision of services to cash-intensive businesses, a large volume of transactions, high-value transactions, and diverse services.95 Second, providing wealth management services may entail risks due to a culture of confidentiality, difficulty in identifying beneficial owners, concealment through the use of offshore trusts, banking secrecy, complexity of financial services and products, politically exposed persons, high-value transactions, and involvement of multiple jurisdictions.96 Third, investment banking services may be misused for layering and integration and can raise risks due to the transfer of assets between parties in exchange for cash or other assets and because of the global nature of markets.97 Finally, correspondent banking services may involve high-value transactions, limited information about the remitter or source of funds, and possible involvement of politically exposed persons.98

The Financial Action Task Force’s 2016 mutual evaluation of Canada concluded that financial institutions have a “good understanding of their risks and obligations, and generally apply adequate mitigating measures.”99 While noting a number of positive aspects of financial institutions’ anti–money laundering programs, the evaluation noted some deficiencies relating to the identification of politically exposed persons and beneficial owners.100 Some smaller financial institutions also displayed a weaker understanding of money laundering and terrorist financing measures, had weaker record-keeping measures, and regarded anti–money laundering and counterterrorist financing measures as a burden.101 A “priority action” was to ensure that financial institutions comply with beneficial ownership requirements.102

In the 2018–19 and 2019–20 fiscal years, FINTRAC conducted 92 compliance examinations of financial entities across Canada.103 FINTRAC’s report to the Minister of Finance on the 2019–20 fiscal year notes that examinations of banks require significantly more resources in terms of hours dedicated by regional compliance officers than other sectors.104 Further, FINTRAC and OSFI were in the process of streamlining the

95 Ibid, pp 17–18.

97 Ibid.
98 Ibid.
100 Ibid, pp 7, 78–79, 83.
103 Exhibit 629, FINTRAC Report to the Minister of Finance on Compliance and Related Activities (September 30, 2019), p 17; Exhibit 1021, Overview Report: Miscellaneous Documents, Appendix 15, FINTRAC Report to the Minister of Finance on Compliance and Related Activities (September 30, 2020), p 16.
supervision of the banking sector’s anti-money laundering and counterterrorist financing compliance, with FINTRAC set to become the sole federal regulator in this regard on April 1, 2021. FINTRAC's examinations often identify a lack of awareness or consistent application of anti-money laundering and counterterrorist financing policies, procedures, and training within bank operations. However, the 2019–20 examinations found that financial institutions are investing significant resources into their anti-money laundering and counterterrorist financing programs.

**Anti–Money Laundering Measures in Banks and Credit Unions**

Banks and credit unions recognize the risks inherent in their work and dedicate significant resources to their anti-money laundering programs. In what follows, I discuss those programs and key challenges faced by financial institutions.

**Compliance Programs at Credit Unions**

I heard evidence from the chief anti-money laundering officers at three BC credit unions: Erin Tolfo of Coast Capital Savings, Ezekiel Chhoa of BlueShore Financial, and Lindzee Herring of First West Credit Union. Chief anti-money laundering officers are responsible for overseeing the anti-money laundering programs at financial institutions. They report to the board of directors and other senior management. As Ms. Tolfo put it, they act as “a checkpoint and a challenge point in order to ensure that the right steps are taken to test the controls that we have in place, and to make sure that training and information is cascaded throughout the organization.”

The anti-money laundering teams at the three institutions are set up differently. However, they all essentially involve an independent team looking for specific alerts and escalating issues as necessary. According to the BC credit union witnesses, credit unions recognize their role in helping to support the national and international fight against money laundering and devote considerable efforts to fulfilling their obligations under the PCMLTFA. They indicate that credit unions take care to identify transactions meeting the reporting thresholds and report to FINTRAC, as well as law enforcement, where appropriate. This is described as an “enterprise-wide effort” to ensure that staff at different levels are able to identify suspicious behaviour and ensure that the institution's obligations are fulfilled, although much of the reporting

106 Ibid.
111 Ibid, pp 8–9.
required under the PCMLTFA is done through automated systems. Credit unions also leverage FINTRAC guidance as well as information from industry associations and other financial institutions in order to stay current on key changes and information.

Due to the relative size of some credit unions and other financial institutions, a number of credit unions face challenges in implementing anti-money laundering programs. Certain fixed costs must be borne by a financial institution regardless of its size, such as the cost of anti-money laundering software. Further, smaller credit unions may be unable to have staff dedicated solely to anti-money laundering activities; rather, staff tend to “wear a number of different hats,” unlike larger institutions that can afford to have potentially hundreds of staff members dedicated to anti-money laundering alone. Indeed, at some credit unions, the chief anti-money laundering officer is also the privacy officer, which can pose challenges. As Mr. Chhoa explained:

[W]hen I wear a privacy hat, there are times when ... I simply cannot share a piece of information even though from a money laundering perspective I may say “hey, I want to share that,” but from a privacy perspective, you just cannot. And so it is a delicate balance and it’s something [for which] I think increased clarity in legislation would be very helpful for the credit union system.

Credit unions may also have difficulty training junior staff to focus on anti-money laundering because they need to seek out individuals who have the breadth of knowledge and experience allowing them to handle not only anti-money laundering but other responsibilities.

Other difficulties arise in terms of access to anti-money laundering services. For example, larger financial institutions can avail themselves of offshore services, while smaller ones may be unable to do so. In this regard, the services provided by Central 1 are very helpful for smaller credit unions. However, “even though the smaller credit unions have outsourced the activity, they cannot outsource the responsibility ... the responsibility still rests on a very small credit union to ensure compliance regardless of who performs the activity.” Conversely, one potential advantage for credit unions is that they tend to be more “deeply rooted in [their] communities” than bigger banks, allowing for the kind of “personal connection with their frontline” staff that a bigger bank may not have.

113 Ibid, p 10.
114 Ibid, p 37.
115 Ibid.
116 Ibid, p 30. Sometimes there may be a simple solution, such as asking a client for consent, but not always: ibid, pp 46–47.
117 Ibid, p 38.
Collaboration between credit unions and FINTRAC is largely one way, in the sense that credit unions report to FINTRAC but do not receive follow-up on those reports. However, FINTRAC does provide feedback through compliance exams and dialogue with industry. Credit unions may also find out about reports they have filed if an investigation is started and a production order is sought. Credit unions have a designated western Canada contact at FINTRAC for general questions. They also have a dedicated RCMP email address where they can forward suspicious transaction reports directly; however, there is no dedicated person at the RCMP to whom they can provide concerns, which, it should be noted, is unlike the situation with respect to fraud. Indeed, most of the interactions between credit unions and law enforcement relate to fraud rather than money laundering. Mr. Chhoa explained:

[M]oney laundering … is a very difficult crime to prove … [W]e are not law enforcement … our job is primarily reporting the data and ensuring that the data gets into the hands of the people who are in a position to investigate. So … we don’t communicate with law enforcement saying “hey, look, we believe there’s money laundering,” because … quite frankly, most of the time it’s “suspicion” versus “we truly believe there is a crime here.”

Ms. Herring testified that credit unions are “passionate about information sharing.” They share information with law enforcement, the International Association of Financial Crime Investigators, the Bank Crime Prevention and Investigation Framework, and the Credit Union Office of Crime Prevention and Investigation. She explained:

[T]hese are actually mechanisms for us to communicate between investigators, between credit union to credit union, and it’s in a formal way to actually provide disclosures … [Y]ou have to have evidence, you have to have reasonableness to disclose information, but it is a process and it is something that between banks and credit unions can be a challenge as well. But definitely the avenues are there to be used. I think they’re underutilized. They do not specifically state “just for fraud”; they do say “financial crime.” However, they have been primarily used for fraud. So there are some channels and mechanisms in place for financial institutions to do better.

Ms. Herring continued that it would be useful from her perspective for credit unions to be able to avail themselves of a “safe harbour” provision. As I elaborate later in this chapter, such a provision would essentially create an exception under relevant privacy

legislation, enabling institutions to share information relating to money laundering with one another without fear of civil liability arising from the potential for intrusions on personal privacy.

The panellists identified some areas that are seen as higher risk for credit unions to engage in. Each credit union and financial institution conducts its own assessment of risk against its capabilities to meet its regulatory requirements. Some evolving business areas and risks can therefore be seen as challenging to have as clients. For example, money services businesses have minimal regulation and are complex because they essentially embed one financial institution with another – conducting their own transactions, but relying on credit unions to process them – which raises the question of which institution is responsible for what obligation.129 Similarly, cash-based businesses are inherently high risk. This does not mean that financial institutions will not do business with them; rather, they will apply increased scrutiny, which in turn requires more resources and increases the regulatory burden.130 The risk profile of certain businesses may also change: for example, the cannabis industry has gone from being illicit to regulated, which allows financial institutions to place some reliance on government infrastructure and regulation when determining their risk tolerance.131

Compliance Programs at Banks

As I explained above, I heard from the chief anti-money laundering officers at HSBC, Scotiabank, and RBC in an in camera hearing. Broadly speaking, they discussed the anti-money laundering programs at their banks, risks they have observed, and other topics. In this section I set out some general observations from that panel, without revealing any of the details that were protected by the in camera nature of the testimony. I have relied on the witnesses’ testimony from the in camera panel, along with one sealed exhibit, Exhibit 457, a detailed submission made by the banks to outline a typical Canadian bank’s anti-money laundering and counterterrorist financing program.

Large banks in this country invest a great deal into their anti-money laundering programs. The witnesses on the banks’ CAMLO panel described having robust anti-money laundering programs and practices; ensuring their teams are educated about the risks; and being committed to revisiting their anti-money laundering programs to address new risks and typologies. Their programs involve various client identification mechanisms and methods for the ongoing monitoring of business relationships. They also have good systems in place for investigating suspicious activity and an awareness of the guidance they obtain from FINTRAC, the Financial Action Task Force, and others. They are involved in public-private partnerships (discussed further below) and find them useful.

129 Evidence of E. Chhoa, Transcript, January 19, 2021, p 44.
131 Ibid, pp 41–42.
There are critics who are sharply critical of how banks address money laundering activity, both abroad and in Canada. Given the constraints on this Inquiry process, as well as the federal nature of much of the banking domain, I do not purport to settle those controversies. I can say, based on the evidence I have received, of a general character as noted above, that I have no strong reason to doubt that the large national banks understand their role and responsibility in the anti-money laundering regime.

**Information Sharing**

The need for strong information-sharing pathways was a theme that permeated the Commission’s hearings. I address this subject in detail in Chapter 7, including the differences between the sharing of tactical information (which relates to specific individuals or entities) and of strategic information (which focuses on typologies and general indicators of suspicion).132 In that chapter, I also discuss concerns that have been raised by participants, witnesses, and others about the propriety and constitutionality of sharing specific tactical information, as well as the need for clear frameworks governing information-sharing arrangements. My focus in this section is on information sharing as it affects financial institutions – their ability to share information with government bodies and with each other.

**Public-Private Partnerships**

Public-private information-sharing partnerships are arrangements that allow public and private entities to share information relating to the discovery and detection of money laundering, terrorist financing, and broader economic crime.133 As Nicholas Maxwell, a leading expert on public-private information-sharing partnerships, explained, the Financial Action Task Force considers effective information sharing to be the “cornerstone” of a well-functioning anti-money laundering framework.134 The framework set out by the Financial Action Task Force really puts the private sector as the leading edge of the detection of money laundering. [I]t’s up to the private sector to spot suspicions of money laundering and terrorist financing within their business [and] client base and to report that through to public agencies through to a dedicated financial intelligence unit.135

Because the regime also places emphasis on prevention, another goal of information sharing is to prevent illicit flows from accessing the financial system.136

---

As I expand in Chapter 7, experts generally support increased collaboration between the public and private sector. Mr. Maxwell testified that there had been significant growth in the use of public-private partnerships in the five years preceding his testimony.\textsuperscript{137} He concludes in a report prepared for the Commission that Canada has made insufficient use of public-private financial information sharing to detect money laundering.\textsuperscript{138} However, while public-private information-sharing arrangements are common in other countries, they have posed difficulties in Canada. This is due in part to legal uncertainties and constraints, as participants have concerns about what information can properly be shared in light of Canadian privacy legislation and constitutional requirements.\textsuperscript{139}

Project Athena is an example of a partnership that was in large part successful. It also illustrates, however, that lack of engagement by members of a partnership can slow its progress and even lessen its effectiveness. I describe Project Athena in detail in Chapter 39 and address some concerns about the propriety of the information-sharing arrangement it used in Chapter 7. Here, however, my focus is on the involvement of financial institutions in the initiative. In what follows, I describe the participation of the six major financial institutions and some lessons learned about ensuring future public-private partnerships are successful. In particular, the story of Project Athena offers two main lessons for financial institutions:

- they must be engaged, responsive, and open to creative solutions; and
- they must be represented by individuals who have the authority to implement such solutions in a timely manner.

A precursor to the Counter-Ilicit Finance Alliance of British Columbia, Project Athena was a public-private partnership between the Combined Forces Special Enforcement Unit (CFSEU, a policing unit), financial institutions, the BC Lottery Corporation, and other stakeholders. Following Peter German’s interim recommendation that gaming service providers complete a source-of-funds declaration whenever they received cash deposits or bearer bonds in excess of $10,000,\textsuperscript{140} it became more difficult to launder cash through casinos. As a result, criminals turned to other methods, including bank drafts. CFSEU had concerns about the anonymity and transferability of bank drafts. Most were anonymous in the sense that they did not include the name of the purchaser or the account number from which the funds were sourced. The concern was that the absence of this information made it easier for bank drafts to be given to casino patrons who were not themselves the account holders, which could further a money laundering scheme.\textsuperscript{141}

\textsuperscript{137} Ibid, p 7.
\textsuperscript{140} Exhibit 832, Peter M. German, Dirty Money: An Independent Review of Money Laundering in Lower Mainland Casinos Conducted for the Attorney General of British Columbia (March 31, 2018), p 244.
In March and April 2018, CFSEU analyzed all the bank drafts received at BC casinos in January and February of that year. It contacted the financial institutions that issued those bank drafts to determine whether the person presenting the draft at the casino held an account with that financial institution. That analysis revealed that most casino patrons did have an account at the issuing financial institution; however, it also disclosed a number of discrepancies in the source-of-funds declarations completed by casino patrons when they made buy-ins at BC casinos.\textsuperscript{142}

In May 2018, CFSEU convened a meeting with financial institutions (including HSBC, BMO, Scotiabank, RBC, TD, and CIBC), the BC Lottery Corporation, and the provincial Gaming Policy and Enforcement Branch to convey its concerns about the use of bank drafts. One of the solutions proposed at that meeting was to put the purchaser’s name on the front of the bank draft in order to reduce anonymity.\textsuperscript{143} Reporting entities were also asked to include the words “Project Athena” on certain suspicious transaction reports made to FINTRAC to streamline the process.\textsuperscript{144}

During an October 2018 meeting, participants discussed the exchange of tactical information relating to the exploitation of bank drafts (that is, information about specific customers and drafts). A process was developed by which tactical information could be shared between the BC Lottery Corporation, CFSEU, financial institutions, and FINTRAC. Part of this process involved CFSEU analyzing information it received from the BC Lottery Corporation about the suspicious use of bank drafts at BC casinos and seeking information from financial institutions as to whether the individual in possession of the bank draft held an account with their institution.\textsuperscript{145}

I discuss the benefits of this information-sharing system further in Chapter 39. One notable benefit was the fact that all parties were able to streamline their processes and focus on transactions that were truly suspicious. It also allowed reporting entities to flag reports in a way that ensured that FINTRAC could bring them to the attention of the proper law enforcement agency – when the threshold for disclosure was met under the \textit{PCMLTFA}.

Even before the October 2018 meeting, CFSEU had begun to provide tactical information to financial institutions. A report sent by then-Sergeant Melanie Paddon of CFSEU to TD on August 14, 2018, is illustrative. It sets out the following information for the month of June 2018:

- the total number of bank drafts purchased from all financial institutions that were tendered at BC casinos that month;
- the number of those bank drafts that were issued by TD;

\textsuperscript{142} Ibid, pp 44–46, 50; Exhibit 839, Project Athena and CIF\textsuperscript{A}-BC Presentation, slide 10.
\textsuperscript{143} Evidence of B. Robinson, Transcript, April 14, 2021, pp 51–52; Exhibit 840, Project Athena Stakeholders Meeting October 24, 2018, slide 9.
\textsuperscript{145} Ibid, p 56.
the number of patrons who tendered three or more bank drafts from all financial institutions at BC casinos, and of those patrons, the number using drafts from multiple banks; and

- the number of patrons who bought in at BC casinos with bank drafts purchased from TD, and a list of patrons identified as using drafts from multiple banks or with a high volume of bank drafts solely from TD.146

TD, along with the other participating financial institutions, received this information from CFSEU on a monthly basis. From the email correspondence, it appears that TD began receiving these monthly updates in June 2018 and continued to do so until June 2019 (providing information that, in total, covered a period from March 2018 to April 2019).147

In providing this information to financial institutions, CFSEU asked them to:

- consider the information and, where appropriate, carry out an internal review and file suspicious transaction reports with FINTRAC; and

- implement changes to their internal practices in order to add the purchaser’s name to all bank drafts issued by the financial institution.148

Sergeants Ben Robinson and Paddon emphasized that it was left to the discretion of the financial institution to determine what to do with the information; it was a strictly voluntary process, and CFSEU did not direct financial institutions to investigate the information or to file suspicious transaction reports. Further, any reports filed with FINTRAC would be disclosed to law enforcement only if FINTRAC determined that the threshold to do so under the PCMLTFA was met.149 However, other witnesses appeared to feel that there was more of an expectation that financial institutions would investigate the information and file suspicious transaction reports when warranted.150

While I elaborate on constitutional and privacy law concerns associated with tactical information sharing in Chapter 7, I note for present purposes that the request to make a change to bank drafts – which was separate from the disclosure of patron names – did not involve tactical information sharing. In other words, it did not involve any information sharing about particular clients of financial institutions. Rather, this was purely strategic

146 Exhibit 460, Email from Melanie Paddon re Project Athena June 2018, August 14, 2018 (redacted). See also Exhibit 459, Email from Melanie Paddon to Pierre McConnell re Project Athena, December 3, 2018, p 4; and Exhibit 463, Email from Melanie Paddon re Project Athena, Jan 2019, March 21, 2019 (redacted), p 1.
147 Exhibit 460, Email from Melanie Paddon re Project Athena June 2018, August 14, 2018 (redacted), p 1 (referring to an email sent on June 27, 2018); Evidence of M. Bowman, Transcript, January 20, 2021, p 92; Exhibit 466, Email from Melanie Paddon to Anna Gabriele, June 27, 2019, pp 2–3.
information sharing: law enforcement communicated a money laundering vulnerability to financial institutions and asked for a change in the institution's processes to address the vulnerability. As such, the constitutional and privacy law concerns do not arise in relation to the request to make changes to bank drafts.

As time went on, several banks demonstrated commendable engagement with the initiative. At a January 2019 meeting, a representative of HSBC indicated that the bank had started putting the purchaser’s name on its bank drafts, and representatives of RBC provided an update on their reviews based on the tactical information provided by CFSEU.151 An “action item” following that meeting was for financial institutions to add the purchaser’s name to their bank drafts.152

At a meeting in April 2019, HSBC repeated that its tellers had started to write purchaser information on its drafts and noted that it was looking into a system to embed this information on its drafts. The meeting minutes indicate that this change “took no time to implement[,] all it took was communication to each bank staff.”153 BMO was also looking into a system to embed this information on its drafts. Scotiabank concluded that it did not distribute a high enough volume of drafts to justify the change. RBC tellers had started to write purchaser names on their drafts in May 2019, and the bank was looking into a long-term solution. CIBC’s drafts already had the purchaser information embedded on them. Finally, TD indicated it “was looking to engage their new leadership and get their buy-in.”154

As this discussion shows, most banks were engaged with Project Athena and took proactive actions in response to information being shared by CFSEU. Specifically, they agreed to actively participate in the project, to receive and make use of the information being shared, and to address the systemic vulnerabilities. In short, the initiative provided information to financial institutions that would allow them to identify potentially suspicious activity involving their clients, report it to FINTRAC where warranted, and make changes to their processes intended to address a money laundering vulnerability.

Unfortunately, not all banks were engaged to the same degree. As I expand below, TD did not participate at a level that would be reasonably expected given its particular circumstances. Throughout the project, TD was the largest source of bank drafts flagged as suspicious by CFSEU.155 By May 2019, the executives of TD’s anti–money laundering group were aware of this fact and that TD risked being out of step with its peers if it did not take action to reduce the anonymity of its drafts.156 By July 2019, TD was one of only

two banks\textsuperscript{157} not to have implemented either a manual solution (in which tellers wrote customer names on bank drafts) or an automated solution (in which the information was embedded on the drafts).\textsuperscript{158} Despite the foregoing, TD did not make changes to its bank drafts until September 2020.\textsuperscript{159} The change implemented at that time seems to have been prompted by the March 2020 inquiry by Commission counsel about TD’s participation in Project Athena.\textsuperscript{160}

I find it troubling that TD’s changes to its bank drafts came over a year later than its peers. I emphasize at the outset that TD has put in place a variety of strong anti–money laundering measures and invests a great deal into its anti–money laundering program. The discussion that follows should not be taken as a critique of TD’s anti–money laundering program generally. I also emphasize that Project Athena was a voluntary initiative and that aspects of it – particularly the fact that law enforcement was providing tactical information to banks – had not occurred in previous information-sharing arrangements. It is understandable that some banks, including TD, may have been uncomfortable with the sharing of tactical information in this way (see Chapter 7). However, it is fair to conclude that TD’s delay in addressing the bank draft issue created a significant gap, given that other major banks had implemented changes to reduce anonymity by summer 2019. This in turn raised the possibility that TD could be exploited by criminals to launder significant sums of money through BC casinos.

I also note that Project Athena seems to have had difficulty engaging with others, including OSFI and the Canadian Banking Association, on the issue of bank draft anonymity.\textsuperscript{161} These two institutions could presumably have provided valuable insight and assistance to the initiative, and possibly even required financial institutions to make changes to their drafts.

I heard testimony from two representatives of TD on its involvement in Project Athena: Michael Bowman, the chief anti–money laundering officer at TD, and Anna Gabriele, formerly a manager in TD’s special investigations unit.\textsuperscript{162} The evidence before me also includes transcripts of interviews conducted by Commission counsel with Mr. Bowman and with Caitlin Riddolls, the vice-president and head of anti–money laundering for Canadian bank invasion technology and shared services at TD, which were tendered during the evidentiary hearings.\textsuperscript{163}

\textsuperscript{157} The other bank (Scotiabank) was not a significant source of suspicious bank drafts.

\textsuperscript{162} The special investigations unit is part of TD’s financial intelligence unit. TD has two financial intelligence units (one Canadian and one American). These units (alongside other supporting units) form the global anti–money laundering operations team: Evidence of M. Bowman, Transcript, January 20, 2021, p 86.
\textsuperscript{163} Exhibit 478, Michael Bowman Interview, October 22, 2020; Exhibit 473, Caitlin Riddolls Interview, October 21, 2020.
TD began participating in Project Athena in early 2018. At that time, the bank was represented by a member of its global security and investigations team.164 With time, responsibility for Project Athena shifted from the global security and investigations team to the financial intelligence unit.165

CFSEU began providing monthly reports to TD in June 2018.166 In her August and September 2018 reports, Sergeant Paddon noted that TD had not yet addressed earlier reports on the March to June 2018 period.167

Ms. Riddolls stated that she became aware of Project Athena and the typology identified by it in December 2018 in a meeting with the “big six” banks, FINTRAC, and the RCMP.168 She subsequently sent emails to Aaron Clark, the vice-president of Everyday Banking (the division responsible for deposit products and services including bank drafts), in December 2018 and May 2019. She inquired about TD’s practice about including payor names on drafts and noted the typology identified by Project Athena, the fact that other banks were implementing changes to their drafts, and that “if [TD’s] control frameworks were not similarly updated, there was the potential risk that we could be targeted by money launderers who wanted to leverage this typology.”169

Ms. Riddolls did not receive a response to either email.170 She then engaged with others at TD’s Everyday Banking group to determine TD’s current practice and consider the feasibility of a manual solution or an automated solution.171 It was estimated that the cost of an automated solution would be around $1 million.172 By July 2019, after consulting with her peers at other banks, Ms. Riddolls was aware that all but one of TD’s peers (Scotiabank) had implemented either a manual or automated solution.173

At the April 2019 meeting of Project Athena, CFSEU had reviewed data from the beginning of the initiative in March 2018 until January 2019. Over that 11-month period, the number of drafts sold by each of the banks that were subsequently flagged as suspicious by CFSEU (because the casino patron tendering the draft used three or more
bank drafts in a single month, or used multiple drafts from different banks) ranged from 21 drafts purchased from the bank at the low end to 510 drafts from the bank at the high end.174 Following that meeting, Ms. Gabriele asked a member of her team to compile and analyze the information that had been provided by CFSEU between March 2018 and January 2019. The analysis, which took a couple of days to complete, confirmed that a high volume of bank drafts was coming from TD – it was the bank from which the 510 bank drafts were purchased, and the value of these drafts totalled $26 million.175 This was the first use that TD made of the intelligence it had been receiving every month from CFSEU since mid-2018; however, it was still only a preliminary review and compilation rather than an investigative use of the information.176

On May 13, 2019, Ms. Gabriele met with Amy Hellen, the bank’s global head of anti-money laundering; Kevin Doherty, head of the Canadian financial intelligence unit; and John Hamers, a senior anti-money laundering manager at the financial intelligence unit and Ms. Gabriele’s direct boss.177 Ms. Gabriele prepared a slide deck, which identified the two aspects of Project Athena (the tactical information provided by CFSEU and the request to make changes to bank drafts), presented the findings of her team’s preliminary analysis of the data, and noted the high volumes of TD drafts and the fact that all the big banks were participating. It also noted Ms. Gabriele’s view that “if TD did not participate, I believed that we would have been the only financial institution” not to; however, she understood that “that was never on the table for discussion” because TD was going to participate.178

Ms. Gabriele made two recommendations: to add more resources to the team in order to start acting on the information from CFSEU, and to take action on the bank draft anonymity issue. In relation to the first recommendation, she asked for a team of four investigators and a manager.179 She understood from the meeting that TD would be participating in Project Athena but needed to figure out its approach. She was directed to continue working on current regulatory priorities and demands until further meetings took place at the executive level. Ms. Gabriele did not receive direction to start with the “end-to-end reviews” of the intelligence being provided by CFSEU.180

In June 2019, Ms. Gabriele asked Mr. Doherty whether she should attend the upcoming meeting of Project Athena on July 24, 2019.181 He responded that “no action [was] required on Project Athena at this time,” noting that discussions were occurring among the financial intelligence unit and the Global Senior Executive Team about “the appropriate way to deal with initiatives like [Project] Athena.”182

181 Exhibit 466, Email from Kevin Doherty re Project Athena, June 21, 2019 (redacted), pp 1–4.
On July 11, 2019, Mr. Doherty emailed Ms. Hellen advising that, in line with recent discussions, “I will be asking Anna [Gabriele] to stand down from attending the next session in Vancouver later this month” as they had not yet identified which team should be responsible for the project and nothing was being done with the data outputs. Ms. Hellen agreed with this approach. Mr. Doherty later told Ms. Gabriele that they were “standing down on Athena for now” and would not be attending the July 2019 meeting.

Mr. Bowman testified that he does not recall having any communications with Mr. Doherty about Project Athena, nor was he aware of any “stand down” order. He believes there was a miscommunication that led to this decision, in which an inquiry he made about what his team members were engaged in was misinterpreted as a direction for Ms. Gabriele to stand down. He also noted that the July 2019 Project Athena meeting was the only one that TD did not attend, as TD attended the November 2019 meeting.

The July 2019 meeting minutes of Project Athena note that suspicious bank drafts in descending order of dollar value were coming from TD, BMO, CIBC, RBC, HSBC, and Scotiabank. In 2018, a total of 2,955 bank drafts / certified cheques going to BC casinos were received from 17 different financial institutions, for a total value of $151.9 million. Of those, 98 percent originated from the top six financial institutions, and the top two – TD and BMO – accounted for 66 percent of the dollar value amount or 63 percent of the count volume.

By July 2019, it was clear that all but one of TD’s peers (Scotiabank, which was not a significant source of drafts flagged by Project Athena) had implemented either a manual or automated solution to the bank draft issue. However, TD determined that other regulatory changes and issues should be prioritized at that time and that the bank draft issue would be revisited as part of a larger anti-money laundering project that was set to be delivered in June 2021. Indeed, some documents before me suggest that TD’s involvement in Project Athena was put on hold due to “other operational priorities.”

Mr. Bowman emphasized that the financial intelligence unit was “drained” at the

time and “did not have a person to spare” to focus on Project Athena.\textsuperscript{192} He noted that operational work, generating alerts, name matching, transaction monitoring, and filing of reports are “a huge amount of work with a tremendous focus on us around workforce management and around productivity, and that ... was the number one priority.”\textsuperscript{193} Further, in his view, it would not have been appropriate to bring in contractors to participate on TD’s behalf, as they would not have sufficient knowledge of the bank’s systems, data infrastructure, technology, and the like.\textsuperscript{194}

I fully appreciate that banks have significant mandatory anti–money laundering and other obligations. I accept, as Mr. Bowman noted, that complying with all these obligations requires a significant amount of time and effort. I also appreciate that banks were never obligated (by OSFI or the PCMLTFA) to make changes to their bank drafts. However, it is important to recognize that TD’s peers operate under the same legal frameworks, and they were presumably dealing with similar pressures to comply with mandatory obligations while also participating in Project Athena. It is significant, in my view, that despite these pressures, TD’s peers were able to implement a change to their bank drafts over a year before TD did so.

It appears that TD Bank did not make any investigative use of the information from CFSEU until December 2019.\textsuperscript{195} Ms. Gabriele testified that “end-to-end reviews” of the data provided by Project Athena ultimately occurred between December 2019 and March 2020.\textsuperscript{196}

In March 2020, Commission counsel contacted TD to learn about its participation in Project Athena. Following a request for information from the Commission, TD advised in June 2020 that “[w]hile there is no legal or regulatory requirement for TD to add purchaser identifying information on bank drafts, TD has determined that there are likewise no legal or regulatory restrictions against doing so.” TD indicated that, given the potential practical benefits identified by Project Athena, it would be proceeding with the change and was “exploring a technology solution to print the name of the purchaser on each draft, which it would target to be deployed nationally.” TD’s letter indicates that, given other operational changes and challenges related to the COVID-19 pandemic, the plan was to deploy the new solution no later than June 2021.\textsuperscript{197}

Mr. Bowman agreed that the Commission’s contact with TD in March 2020 prompted renewed focus and attention on the bank draft issue.\textsuperscript{198} TD subsequently confirmed that the request to initiate a change to TD’s bank drafts was submitted in April 2020.

\end{footnotes}
In September 2020, TD implemented a change in all BC branches under which a customer's name would be manually written on a bank draft.\textsuperscript{199} A national, automated solution was rolled out in September 2021.

Mr. Bowman and Ms. Riddolls emphasized that making a change to bank drafts — even a manual one — was not simple, as it required consultation with many departments.\textsuperscript{200} They also explained that TD's general preference was for an automated solution on a national basis to reduce the risk of human error.\textsuperscript{201} While I appreciate that TD had a preference for an automated solution, and that there are indeed benefits of adopting such a solution rather than a manual one, one does not preclude the other. Indeed, some of TD's peers chose to implement a temporary manual solution while they developed an automated solution. This approach seems to be a practical way of addressing a vulnerability promptly while developing a more long-term solution.

Mr. Bowman also expressed the view that the channels used at TD to become involved in Project Athena were not particularly effective. In particular, it was not ideal or typical that the anti–money laundering team at TD got involved through informal requests by the global security and investigations team.\textsuperscript{202} He emphasized that Project Athena was a novel type of public-private partnership in that law enforcement provided actual intelligence to banks, and his impression from fellow chief anti–money laundering officers at other banks was that their corporate security and investigations units, rather than their anti–money laundering units, may have been involved.\textsuperscript{203} He also expects that there were concerns at some levels of TD relating to the propriety of sharing information with the RCMP without a production order and the implications of privacy legislation.\textsuperscript{204}

I accept that TD may have been uncertain about the propriety of the information sharing in Project Athena and indeed that others had similar concerns (see Chapter 7). However, I am troubled by TD's delay in implementing a change to its bank drafts (which did not involve tactical information sharing) to address a money laundering vulnerability

\textsuperscript{199} Evidence of M. Bowman, Transcript, January 20, 2021, pp 138–139.
\textsuperscript{200} They explained that such changes involve considerations including: how to respond to customer questions; how to escalate situations where a customer refuses to have their name on the draft; how to provide information to the financial intelligence unit; how to communicate information to employees who are students or part-time; and how to ensure proper oversight and controls exist to verify that the change is being made: Evidence of M. Bowman, Transcript, January 20, 2021, pp 140–42; Exhibit 478, Michael Bowman Interview, October 22, 2020, pp 65–66; Exhibit 473, Caitlin Riddolls Interview, October 21, 2020, pp 26, 54–55.

\textsuperscript{202} Exhibit 478, Michael Bowman Interview, October 22, 2020, pp 32–33; Evidence of M. Bowman, Transcript, January 20, 2021, p 105.
\textsuperscript{204} Evidence of M. Bowman, Transcript, January 20, 2021, pp 122–23, 148–49. Indeed, at the October 2018 meeting, it appears that TD expressed some concerns early on about the implications of the Privacy Act and information sharing with police in the absence of a production order: Exhibit 476, Project Athena Stakeholders Meeting Minutes, October 24, 2018, p 1.
flagged by law enforcement. It appears that, as early as December 2018, the vice-president of Everyday Banking was advised of the Project Athena typology, the actions that other banks had taken to change their bank drafts, the potential for TD to be the sole bank among its peers not to do so, and the fact that failing to do so could make TD vulnerable for money laundering. Yet, no change was made to its bank drafts until September 2020. Further, this action appears to have been prompted by inquiries by Commission counsel, raising the question of whether it would have occurred otherwise.

This delay is surprising given that senior management in TD’s anti-money laundering unit were aware by at least May 2019 that their bank was the single largest source of suspicious bank drafts being tendered at BC casinos, representing a sum of $26 million from March 2018 to January 2019 alone. Despite this information, a request for a five-person investigation team was declined, and it appears that TD determined it did not have a single person it could spare to analyze the data being provided by Project Athena. Instead, Ms. Gabriele was told to stand down from the initiative. Although this may have involved some miscommunication, I find it concerning that one of Canada’s largest financial institutions was so delayed in addressing a vulnerability to bank drafts that had been identified by law enforcement. There were costs to these decisions, with millions of dollars of potentially suspicious funds entering BC casinos through TD bank drafts in the meantime.205

The story of Project Athena illustrates the need for all participants in public-private partnerships to be engaged, responsive, and willing to take concrete measures to address money laundering threats. Failing to do so can hinder the effectiveness of such partnerships and possibly enable continued criminal activity — this occurs when bad actors identify and then target institutions that are slower to implement changes. Further, it appears that the situation at TD was due, in part, to a failure to ensure that the correct department had carriage of the project. It is crucial that financial and other institutions have processes in place to allow the appropriate people to be advised of and involved in anti-money laundering initiatives.

**Private-Private Information Sharing**

A second category of information sharing relates to collaboration between financial institutions themselves, referred to as “private-private information sharing.” Nicholas Maxwell, one of the world’s leading experts on public-private financial information-sharing partnerships, expresses the view that there has been inadequate private-private information sharing to detect money laundering in Canada.206 In particular, in recent years, there has been a push to implement a “safe harbour”

---

205 Sgt. Paddon agreed there was reason to think that money launderers began to target banks that did not have measures to address bank draft anonymity, although she noted there were also other reasons for that shift: Transcript, April 14, 2021, pp 70–71.
provision for money laundering. In a report prepared for the Commission, Barbara McIsaac, a lawyer with expertise in privacy law, described the concept as a provision in a statute or in a regulation or rule that specifies that certain conduct will not create liability if certain conditions are met. Generally, such a provision would exempt the entity that has shared the information from liability or censure by a regulator if it acted in good faith in doing so.207

Ms. McIsaac notes that a number of organizations, including the Canadian Bankers Association, have recommended that a safe harbour provision be adopted with respect to money laundering.208 An example of a safe harbour provision can be found in section 314(b) of the US Patriot Act, which states that American financial institutions may share information with one another regarding individuals, entities, organizations, and countries suspected of possible terrorist or money laundering activities. A financial institution or association that transmits, receives, or shares such information for the purposes of identifying and reporting activities that may involve terrorist acts or money laundering activities shall not be liable to any person under any law or regulation of the United States. [Emphasis added.]209

Mr. Maxwell’s report explains that section 314(b) creates a voluntary program allowing reporting entities to share information for purposes of identifying and, where appropriate, reporting activities that may involve money laundering or terrorist financing.210 According to the report, the number of institutions using the process in section 314(b) has nearly doubled between 2014 and 2018, and it has enabled US banks to “develop a more effective network intelligence picture of financial crime threats across participating entities.”211

In Canada, the federal Personal Information Protection and Electronic Documents Act, SC 2000, c 5 (known as “PIPEDA”) contains a kind of safe harbour provision in relation to fraud. Section 7(3)(d.2) states that an organization may disclose personal information with another organization where it is “reasonable for the purpose of detecting or suppressing fraud or of preventing fraud that is likely to be committed and it is reasonable to expect that the disclosure with the knowledge or consent of the individual would compromise the ability to prevent, detect or suppress the fraud.” Notably, it refers

208 Ibid.
211 Ibid. He has observed that US banks now work together to flag transactions that will impact another bank, resolve certain risks, and ultimately report more efficiently to the financial intelligence unit: Evidence of N. Maxwell, Transcript, January 14, 2021, pp 102–103.
only to fraud; it does not encompass money laundering.\footnote{Interestingly, the \textit{Patriot Act} appears to have the opposite effect, providing an exception for money laundering and terrorist financing but not for fraud: Evidence of N. Maxwell, Transcript, January 14, 2021, p 102.} As a result, Mr. Maxwell took the view that there is “no legal gateway to share information between financial institutions for the prevention and suppression of money laundering and to support collaborative analytics between multiple financial institutions as there is for fraud.”\footnote{Evidence of N. Maxwell, Transcript, January 14, 2021, pp 100–101.}

The issue may not be that straightforward, however. Ms. McIsaac expresses the view that, properly understood, provincial and federal privacy laws do not prevent the disclosure of personal information for the purposes of combating money laundering. Rather, there is a strong \textit{assumption} that they do. She concludes that “the principal way in which Canadian privacy laws may be detrimental to combatting money laundering is in their perception,” noting that in the absence of clear guidance as to when information sharing is permitted, “potential information sharers will be more likely to err on the side of caution and default to the position of non-disclosure.”\footnote{Exhibit 319, Barbara McIsaac Law, Report for the Cullen Commission on Privacy Laws and Information Sharing (November 17, 2020), pp 6, 109.}

The problem is that, under provincial and federal legislation, the sharing of personal information is left to the discretion of the public or private entity (unless there is a legal requirement to provide it), and they can be penalized – through reputational harm or potential civil liability – if they are found to have shared information in a manner that does not comply with the legislation.\footnote{Ibid, p 109; Evidence of B. McIsaac, Transcript, December 3, 2020, p 81.} Ms. McIsaac believes that public and private entities must have a better understanding — and regulators and privacy commissioners must give clearer direction — of when information can be shared for the purposes of combating money laundering.\footnote{Evidence of B. McIsaac, Transcript, December 3, 2020, pp 30–31.}

Despite the foregoing, Ms. McIsaac notes that a safe harbour provision would likely provide “more confidence” to public and private bodies that they will be protected from liability or censure by a regulator if they disclose personal information in good faith for the purposes of combatting money laundering.\footnote{Exhibit 319, Barbara McIsaac Law, Report for the Cullen Commission on Privacy Laws and Information Sharing (November 17, 2020), p 7.} She does not, however, express a view as to whether such a provision \textit{should} be implemented.\footnote{Evidence of B. McIsaac, Transcript, December 3, 2020, p 115.}

The chief anti-money laundering officers at the credit unions I heard from supported the development of a safe harbour provision. Ms. Herring testified that a provision similar to section 314(b) of the \textit{Patriot Act} “would be ideal” in ensuring that credit unions have protection when sharing information in the context of complex investigations.\footnote{Evidence of L. Herring, Transcript, January 19, 2021, pp 25–26.} I also heard from Ms. Tolfo that there is a certain “conservatism” among credit unions given their heavy regulation:
[T]he challenge that [financial institutions] have is we are so heavily regulated, it’s complex. There are a lot of laws and regulations that often conflict with one another ... I think that often tends to end up with individuals and institutions taking a really conservative approach around things ... [For example, when] choosing to no longer work with a business or a consumer because you’ve decided that the risk is too high [that is, de-risking] ... we are challenged in terms of not being able to share those details, specific details because of privacy law challenges ... [T]here’s a lot of validity to the privacy law area, but it also makes it is very challenging in that each institution is ... on their own in the sense that they have to separately catch indicators around why someone may be coming to open up a new bank account having no idea that a financial institution down the street has just chosen to no longer do business with that person. So it’s a fine balance in terms of not wanting to supply information that is going to enable the people who want to launder money to get smarter to be able to improve their ability versus making sure that we can freely share the information to try and support ultimately FINTRAC and law enforcement in using the data we provide.220

To similar effect, in evidence from the national bank CAMLOs, I heard that the lack of a safe harbour provision in Canada was a significant concern. The bank CAMLOs were supportive of such a provision, which would provide protection for banks that decide to share information while also ensuring a proper balance with privacy rights.

Mr. Maxwell noted that it is a common technique for money launderers to spread their accounts and money laundering activity across multiple institutions and that it can be difficult for individual institutions to understand what is occurring because they have only a small window into the criminal activity.221 He opined that in the absence of a safe harbour provision, when one financial institution de-risks a client, that individual can enter the financial system at another point, learning along the way what tipped off the previous institution.222 In his view, a safe harbour provision would “allo[w] a network to defeat a network”:

There [are] networks of organized crime who are fantastic at collaborating. They’re fantastic at sharing information and they absolutely spread their risk across multiple reporting entities. [E]stablishing a clear legal basis for private/private sharing to detect money laundering between reporting entities ... [would] support reporting entities and identify unknown threats to law enforcement, the criminality they are not already tracking, the suspects they don’t already know about ... It also should support a more effective preventive function, which is a huge pillar of what the system should be achieving.223

From Mr. Maxwell’s interviews with reporting entities, he observed that many were interested in safe harbour provisions and that, despite raising the issue with the federal government, “the response has so far been very negative towards that proposal. So interviewees were sceptical it would happen.”224

The BC Civil Liberties Association strongly disagrees that a safe harbour provision is necessary. It submits that privacy legislation already allows for information sharing for the purposes of combating money laundering in appropriate cases, referring to Ms. McIsaac’s view that I noted above. It also points to findings by the Office of the Privacy Commissioner of Canada that entities already report excessive information to FINTRAC. In the BC Civil Liberties Association’s view, any hesitancy about engaging in legal information sharing for the purposes of combatting money laundering can be addressed through education and clear direction from regulators. It further submits that any provisions that are adopted should be very carefully worded and tightly constrained to avoid undermining privacy rights any more than is absolutely necessary.225

I am persuaded that a safe harbour provision could have a meaningful impact on anti-money laundering activity in this province. The evidence before me suggests that both provincial and federal financial institutions are supportive of a safe harbour provision and consider the lack of such a provision to be problematic, particularly because a similar one exists for fraud-related information. It is also notable the Canadian Bankers Association expressed support for a safe harbour provision (with appropriate balances for privacy considerations) before the House of Commons’ Standing Committee on Finance. The committee subsequently recommended in its 2018 report that the Government of Canada consider tabling legislation to introduce a safe harbour provision.226 A response from the Government of Canada dated February 21, 2019, indicates that it agreed substantively with the recommendation to create a safe harbour provision and that it was “reviewing the Recommendations to enhance public-private and private-private information sharing options.”227

It may be, as Ms. McIsaac and the BC Civil Liberties Association suggest, that a safe harbour provision for money laundering is not technically necessary because existing privacy legislation already permits sharing between financial institutions to combat money laundering. However, I am satisfied that financial institutions do not currently believe they are able to do so without facing liability in the absence of a specific safe harbour provision relating to money laundering. I am also satisfied that a formal safe harbour provision would provide needed comfort and clarity for financial institutions

---

225 Closing submissions, BC Civil Liberties Association, paras 73–75; see also Evidence of B. McIsaac, Transcript, December 3, 2020, pp 117–18.
when deciding to share information relating to money laundering and that a legislated measure would ensure that sufficient protections for privacy have been considered.

For a safe harbour provision to be most effective, it would need to apply to both provincially and federally regulated financial institutions. Ideally, the provision would be located in PIPEDA alongside the provision relating to fraud. As PIPEDA is a federal statute, I cannot make recommendations to the federal government on this point directly. However, given the importance of such a provision for British Columbia, I am of the view that the provincial government should urge the federal government to implement a safe harbour provision allowing financial institutions to share information related to potential money laundering activity.

**Recommendation 48:** I recommend that the Attorney General of British Columbia urge the appropriate federal minister to introduce amendments to the federal *Personal Information Protection and Electronic Documents Act*, providing for a “safe harbour provision” allowing financial institutions to share information related to potential money laundering activity.

Although a federal provision is important to enable federally regulated financial institutions to engage in this type of information sharing, the Province can equally make changes to allow provincially regulated financial institutions (notably credit unions) to do so. The Province should begin the process of introducing such a provision. This should be done in consultation with the Office of the Information and Privacy Commissioner to ensure that the proper protections for privacy are put in place. There should also be consultation with the appropriate federal minister to ensure that the safe harbour provisions are compatible.

**Recommendation 49:** I recommend that the Province introduce, in consultation with the Office of the Information and Privacy Commissioner, a safe harbour provision allowing provincially regulated financial institutions to share information related to potential money laundering activity.

Before concluding on safe harbour provisions, I note that a related issue is the concept of “keep open” requests. As Mr. Maxwell explained, keep open requests are a formal process whereby law enforcement can request an account be kept open and that’s basically saying to the reporting entity, “keep open this account; we understand that you’ve identified suspicion, but we are interested in receiving the reports and we don’t want you to close the account because it would harm our investigation.”

---

228 Evidence of N. Maxwell, Transcript, January 14, 2021, p 110.
Mr. Maxwell’s interviews with stakeholders revealed that some believed FINTRAC would support financial institutions keeping an account open in such an instance, while others were concerned about a lack of clarity and the potential for civil action and other penalties if they complied with the request from law enforcement. Mr. Maxwell’s report to the Commission notes that currently, in the absence of a formal framework for “keep open” requests, a reporting entity may simply close an account when it receives information from law enforcement (such as a production order), which could undermine or disrupt the law enforcement investigation (closing an account prematurely or inexplicably tipping off a bad actor). Mr. Maxwell concluded that the law of a legal framework for “keep open” requests and clear regulatory guidance is a challenge in Canada.

Mr. Maxwell’s report notes that FinCEN (the US equivalent to FINTRAC) has made guidance available since 2007 about keep open requests. The guidance states, among other things, that law enforcement agency requests to keep an account open must be in written form, last no longer than six months, and be recorded by the financial institution for five years. The process is voluntary, with the decision to maintain or close an account ultimately left to the financial institution. However, Mr. Maxwell notes that it “remains possible that current US keep open letters also do not protect regulated entities from all supervisory, criminal or reputational risks in maintaining an account suspected of links to financial crime or terrorist activity.”

It appears there may be room for improvement in the American regime in terms of ensuring sufficient legal and reputational protection for financial institutions assisting with keep open requests. Nonetheless, on the evidence before me, I am persuaded that a formal keep open regime similar to that in effect in the United States would be beneficial in British Columbia. It appears that such a regime would require federal legislative change. I therefore recommend that the BC Attorney General engage with his federal counterpart and other stakeholders to implement a formal keep open regime for financial institutions.

**Recommendation 50:** I recommend that the Attorney General of British Columbia engage with his federal counterpart and other stakeholders to implement a formal “keep open” regime for financial institutions in which they can, at the request of law enforcement, keep an account suspected of involvement in money laundering open in order to further a law enforcement investigation.

---

231 Evidence of N. Maxwell, Transcript, January 14, 2021, p 111.
Conclusion

In this chapter, I have reviewed the money laundering risks facing financial institutions, both provincial and federal. Financial institutions play a key role in the anti-money laundering regime: as gatekeepers to the financial system, they likely encounter suspicious activity far more often than other reporting entities, and they are also well placed to observe suspicious activity involving those other entities when they are on the other side of transactions. Financial institutions are therefore important partners for law enforcement and FINTRAC alike.

Based on the evidence before me, financial institutions in this province are aware of the important role they play in combatting money laundering. The credit unions and banks I heard from have cogent anti-money laundering programs in place, although I cannot go the next step to evaluate the effectiveness in particular of federally regulated banks’ programs. I am also of the view that the new BCFSA takes anti-money laundering seriously, though I have made recommendations above that will enhance its focus on the issue. Finally, I have outlined in this chapter the vital importance of information sharing, both between financial institutions and public authorities, as well as among financial institutions themselves. Information sharing certainly presents unique legal and constitutional difficulties that need to be addressed; however, it is clear that a constitutional information-sharing regime is key to the fight against money laundering.
Money services businesses, often referred to as MSBs, provide services that are similar, but not identical, to those offered by banks and credit unions. They are commonly known to handle money transfers and foreign currency exchange. Many tend to be much smaller than banks or credit unions, and their business structures less formal.

It is widely recognized that there are significant money laundering vulnerabilities associated with MSBs. They are frequently associated with professional money launderers and informal value transfer systems, which I discuss in more detail in Chapters 2, 3, and 37. Although MSBs are required to register with FINTRAC, many remain unregistered. This leaves FINTRAC and law enforcement in the dark about their activities. Further, given the risks inherent to MSBs, financial institutions often “de-risk” them – in other words, refuse to provide banking services to them – forcing some MSBs to operate underground and further hiding their activities from the authorities.

In this chapter, I begin by explaining what MSBs are and the regulatory framework applicable to them. I then examine the money laundering risks arising in this sector, which include risks associated with the business model as well as the consequences of de-risking and the existence of unregistered MSBs. I then discuss investigation challenges associated with MSBs. Finally, I consider the desirability of a provincial regulator for MSBs.

**What are MSBs?**

MSBs are non-bank persons or entities that provide transfer and exchange services. Clients use MSBs to exchange or transfer value and to purchase or redeem negotiable instruments. MSBs do not, however, accept deposits or make loans in the same way as
banks, credit unions, or trusts. Under the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act*, SC 2000, c 17 (*PCMLTFA*), MSBs include persons or entities that have a place of business in Canada and are engaged in the business of providing at least one of the following services:

- foreign exchange dealing (for example, converting USD into CAD);
- remitting funds or transmitting funds by any means or through any person, entity, or electronic funds transfer network;
- issuing or redeeming money orders, traveller's cheques, or other similar negotiable instruments except for cheques payable to a named person or entity; or
- dealing in virtual currencies.

This definition includes alternative money remittance systems, such as the *hawala*, *hundi*, *chitti*, and *undiyal* systems (discussed further in Chapter 37). The *PCMLTFA* also covers foreign MSBs, which are defined as persons or entities that do not have a place of business in Canada but provide one of the above services to persons or entities in Canada.

A report prepared by FINTRAC in 2010 notes that many kinds of MSBs operate in Canada. These include large multinational companies with thousands of employees, branches, and franchised agents, as well as very small independent businesses with no employees and engaged in very low volumes of transactions. Donna Achimov, deputy director and chief compliance officer at FINTRAC, testified that the vast majority of MSBs are “mom and pop” organizations located in a residence, convenience store, or the like.

Although much of this chapter focuses on ways in which MSBs can be misused, it is important to emphasize that they have legitimate uses as well. Many MSBs provide convenient and affordable services to disadvantaged and vulnerable groups, including low-income, rural, and undocumented migrants. They also help individuals remit funds to family and friends in low- and middle-income countries. Further, many new financial

---

4 *PCMLTF Regulations*, s 1(2), “foreign money services business”; *PCMLTFA*, s 5(h.1).
technology firms (sometimes referred to as “FinTech”) are considered MSBs because they develop and apply new technologies to existing bank infrastructure. The MSB definition in the PCMLTFA has also been expanded recently to encompass virtual asset service providers, which play an important role in the virtual asset space (see Chapter 35).

I heard evidence from Michael Cox, chief compliance officer and director of finance and risk management at the Vancouver Bullion and Currency Exchange, a large registered MSB in Greater Vancouver. The exchange provides services including transfers to individual and corporate clients, as well as currency exchange. It is also registered with FINTRAC as a dealer in precious metals and stones, which is not a common service provided by most MSBs. The exchange does not, however, provide cryptocurrency services. Mr. Cox testified that the exchange’s main competitors are the big five Canadian banks. Significantly, at the request of its banking partners, the exchange does not provide services to other MSBs – a point I return to later in this chapter.

The Canadian Money Services Business Association

The Canadian Money Services Business Association (CMSBA) was founded to provide advocacy, training, networking, and education for its members. Importantly, it is not a regulator. Members of CMSBA include registered MSBs as well as partial and full associate members. The latter are not MSBs but offer services to them, such as consulting firms, law firms, and corporate entities. CMSBA verifies an MSB’s registration with FINTRAC when the MSB signs up for membership.

Joseph Iuso, executive director of CMSBA, testified that the association had between 80 and 100 registered members at the time of the hearing. Most are small and medium-sized MSBs, with the exception of the Vancouver Bullion and Currency Exchange, Ria Money Transfer (one of the world’s largest money transfer services), and Canada Post. Mr. Iuso’s experience is that larger MSBs are less inclined to join CMSBA than smaller ones, which, he believes, stems from a disinclination for larger MSBs to engage with smaller ones.

Regulation of MSBs

At the time of writing, MSBs are not subject to provincial regulation in British Columbia. They do, however, have a variety of obligations under the PCMLTFA, and they are addressed by the Financial Action Task Force’s 40 recommendations.

---

8 Ibid, p 5.
11 Ibid, pp 10–11, 68–69, 73.
Requirements under the *PCMLTFA*

MSBs are subject to a number of requirements under the *PCMLTFA*. My discussion in this section focuses largely on domestic MSBs; however, foreign MSBs operating in Canada have similar obligations.

MSBs must implement a compliance program, which has six aspects. They must:

- appoint a compliance officer responsible for implementing the program;
- develop and apply written compliance policies and procedures that are kept up to date;
- conduct a risk assessment of the business to assess and document the risk of a money laundering offence or a terrorist activity financing offence occurring in the course of the business’s activities;
- develop and maintain a written, ongoing compliance training program for employees, agents, mandataries, or other authorized persons;
- institute and document a plan for the ongoing compliance training program and deliver the training; and
- institute and document a plan for a review (at least every two years) of the compliance program for the purpose of testing its effectiveness.\(^\text{13}\)

MSBs must also verify their clients’ identities in a variety of situations, including when they:

- receive $10,000 or more in cash;\(^\text{14}\)
- receive the equivalent of $10,000 or more in virtual currency;\(^\text{15}\)
- issue or redeem $3,000 or more in traveller’s cheques, money orders, or similar negotiable instruments;\(^\text{16}\)
- initiate an electronic funds transfer of $1,000 or more;\(^\text{17}\)
- transfer virtual currency in an amount equivalent to $1,000 or more;\(^\text{18}\) and
- exchange virtual currency for funds, funds for virtual currency, or one virtual currency for another in an amount equivalent to $1,000 or more.\(^\text{19}\)

\(^\text{13}\) *PCMLTFA*, s 9.6(1); *PCMLTF Regulations*, s 156(1).

\(^\text{14}\) *PCMLTF Regulations*, ss 84(a), 105(7)(a), 109(4)(a), and 112(3)(a).

\(^\text{15}\) Ibid, ss 84(b), 105(7)(a), 109(4)(a), and 112(3)(a).

\(^\text{16}\) Ibid, ss 95(1)(a) and 105(7)(a).

\(^\text{17}\) Ibid, ss 95(1)(b) and 105(7)(a).

\(^\text{18}\) Ibid, ss 95(1)(d) and 105(7)(a).

\(^\text{19}\) Ibid, ss 95(1)(e) and 105(7)(a).
MSBs have a variety of record-keeping obligations relating to the above situations. They must also take reasonable measures to verify the identity of every person or entity that conducts or attempts to conduct a suspicious transaction. MSBs are also required to verify the identity of beneficiaries of remittances and electronic funds transfers of $1,000 or more, and of corporations or other entities 30 days after beginning a service agreement with them. Further, they must obtain beneficial ownership information when verifying the identity of a legal entity and take reasonable measures to verify the accuracy of that information. MSBs are also required to take reasonable measures to determine if a third party is involved in a transaction, and they have obligations with respect to politically exposed persons.

The PCMLTFA imposes a number of reporting obligations on MSBs. These include reporting to FINTRAC:

- the receipt of $10,000 or more in cash in a single transaction from a person or entity;
- the initiation or receipt of an international electronic funds transfer of $10,000 or more in a single transaction;
- the receipt of the equivalent of $10,000 or more in virtual currency in a single transaction; and
- every financial transaction that occurs or is attempted in the course of the MSB’s activities and in respect of which there are reasonable grounds to suspect that the transaction is related to the commission or attempted commission of a money laundering or terrorist activity financing offence.

Mr. Cox testified that the Vancouver Bullion and Currency Exchange has implemented a compliance program that is, in some respects, more stringent than the FINTRAC requirements. For example, it conducts an annual external compliance review and verifies its clients’ identities for transactions at a lower threshold than is required by the PCMLTFA. It also has a policy that clients who attempt to alter a transaction to avoid showing identification (for example, if a client wanted to change a transaction

amount from $2,000 to $1,950 to come within a threshold) are not permitted to conduct a transaction until they are identified. The exchange also runs transaction monitoring scenarios, which identify scenarios having the potential for money laundering based on the exchange’s observations, feedback from banking partners or FINTRAC, external compliance reviews, or elsewhere. Further, it has a policy (which is not required by FINTRAC) of waiting 48 hours before paying out precious metals on transactions that raise concerns, such as concerns about fraudulent bank drafts.

MSBs must also conduct ongoing monitoring of their business relationships with clients. This involves implementing a process to review all the information obtained about a client in order to detect suspicious transactions, keeping information up to date, re-assessing the level of risk associated with the client’s transactions and activities, and determining whether the client’s transactions and activities are consistent with the information obtained about them and their risk assessment. This monitoring must be done periodically based on the MSB’s risk assessment of the client, and enhanced monitoring is necessary for high-risk clients. The MSB must keep a number of records relating to this ongoing monitoring.

MSBs are required to register with FINTRAC. The registry of MSBs is available online, meaning anyone who wishes to look at the registry can do so through the FINTRAC website. According to figures provided by FINTRAC to CMSBA, there were 1,903 MSBs registered with FINTRAC at the time of hearing. Of these, 1,569 provided money transmission and remission services, 1,430 provided foreign exchange services, 226 issued and redeemed negotiable instruments, and 471 were dealers in virtual currency. There were 65 registered foreign MSBs, which have been required to register with FINTRAC since June 1, 2020.

Ms. Achimov testified that a record-high number of MSBs are registered nationally. In the few weeks prior to her testimony, FINTRAC had registered 1,923 MSBs, 398 of which were in BC and 115 of which offered virtual currencies. Ms. Achimov explained that, prior to registering an MSB, FINTRAC checks to ensure that an applicant is

35 PCMLTF Regulations, s 123.1. An MSB enters a business relationship with a client the second time it is required to verify the client’s identity within a five-year period or when entering a service agreement: PCMLTF Regulations, ss 4.1(b), (d), and (e).
36 PCMLTF Regulations, s 123.1.
37 Ibid, ss 123.1, 157(b)(ii).
38 Ibid, s 146(1).
39 PCMLTFA, s 11.1.
42 Ibid. Mr. Iuso noted that it is unclear how many MSBs provided multiple services: ibid, p 9.
a registered Canadian business. It also does criminal record checks of applicants
(including of the directors, owners, and president of applicants that are corporations)
and other checks such as consulting terrorist listings and media mentions. In the
absence of effective beneficial ownership registry data, FINTRAC does not have access
to that sort of information about MSBs. Although there are currently no restrictions on
where an MSB might operate, FINTRAC considers the place of operation (for example,
MSBs that operate from a residence).

Section 11.11 of the PCMLTFA lists persons and entities that are not eligible for
registration. These include (but are not limited to) persons or entities who:

- are subject to sanctions;
- are listed as terrorist entities under the Criminal Code;
- have been convicted of a money laundering or terrorist financing offence; or
- have been convicted of other listed offences.

Ms. Achimov testified that FINTRAC can only refuse registration if an applicant
has been convicted of specified offences. It is insufficient if there has been only an
investigation or a charge. However, FINTRAC may consider ongoing investigations to
inform its compliance activities and risk rating. FINTRAC keeps track of MSBs that are
refused registration.

I appreciate that section 11.11 of the PCMLTFA provides that certain listed
persons and entities are ineligible for registration, and that the focus is on convictions.
Notably, however, the section does not state that only people or entities who have been
convicted of such offences are ineligible. It may be (but I do not resolve the point) that
certain individuals or entities could, or should, be found ineligible for registration on
other bases.

In this regard, the situation of Silver International Investment Ltd. (Silver
International) is illustrative. As I discuss in more detail in Chapter 3, Silver
International was investigated by the RCMP as part of Project E-Pirate, the only
major money laundering investigation in British Columbia to result in criminal
charges between 2015 and 2020. The RCMP was investigating an alleged money
laundering scheme involving informal value transfer, cash facilitation at BC casinos,

---

48 Ibid, pp 133, 161, 194.
49 Ibid, pp 133–34.
50 Ibid, p 177.
51 Note, however, that the Crown entered a stay of proceedings on November 22, 2018, with the result that
the matter did not proceed to trial: Exhibit 663, Affidavit of Cpl. Melvin Chizawksy, February 4, 2021,
Exhibit A, para 125.
and an unlicensed gaming house. Between April 2015 and February 2016, the RCMP conducted 40 days of surveillance on an individual named Paul Jin and his associates. The surveillance revealed that Mr. Jin was frequently attending the offices of Silver International, and police came to believe that he was moving cash from Silver International to another property for repackaging and that he was running an unlicensed gaming house.

On October 15, 2015, the RCMP executed search warrants at Silver International and several other locations, which resulted in the seizure of large sums of cash as well as financial ledgers and daily transaction logs. An analysis conducted by a financial analyst at the RCMP concluded that Silver International had conducted 474 debit transactions totalling $83,075,330 and 1,031 credit transactions totalling $81,462,730 for the 137-day period between June 1, 2015, and October 15, 2015, which corresponded on an annual basis to approximately $221 million in debit transactions and $217 million in credit transactions.

Surprisingly, despite the lengthy investigation by the RCMP culminating in several search warrants in October 2015, Silver International was registered with FINTRAC as a money services business three months later in December 2015. When asked about this, Ms. Achimov stated that she was not at liberty to discuss specific cases. However, she testified that suspected criminality in isolation would not qualify as a reason for FINTRAC to refuse registration of an MSB, noting that a criminal conviction would be required.

I recommend later in this chapter that the Province subject money services businesses to regulation by BCFSA. In my view, the anomalous result that an applicant for registration as an MSB could be the subject of a major and active money laundering investigation by law enforcement that had revealed significant evidence of criminality and still be registered by FINTRAC calls for added scrutiny, which could be achieved through regulation by BCFSA.

MSBs must re-register with FINTRAC every two years. Ms. Achimov testified that this is where FINTRAC does the “deeper dive.” It also does a periodic review of MSBs to verify whether they have any convictions. As I expand below, although a more detailed analysis of an MSB’s eligibility after two years is a good start, I do not believe it is sufficient and am recommending that BCFSA conduct compliance examinations prior to the two-year mark.

Money Laundering Risks

There are a number of money laundering risks associated with MSBs. This section addresses the risks relating to more traditional MSBs. I discuss virtual asset service providers (which are now deemed to be MSBs) in Chapter 35 and informal value transfer services (which are also considered MSBs) in Chapters 3 and 37.

Although there are particular risks associated with MSBs, as outlined below, it is important to note that many of the risks apply equally to credit unions, banks, and other financial institutions. Barry MacKillop, deputy director of intelligence at FINTRAC, testified that, in terms of the quantity of money being moved, much more is moved through the formal financial system using banks than through MSBs. However, he acknowledged that there may be higher risks relating to certain aspects of MSBs, for example, unregistered ones.

Risk Assessments

Canada’s 2015 national risk assessment and the Financial Action Task Force’s 2016 mutual evaluation of Canada both addressed the risks relating to MSBs. In the national risk assessment, MSBs were rated as having a “medium” to “very high” risk. The assessment notes that “[a]lthough the MSB sector is broadly vulnerable, the degree of vulnerability is not uniform largely because of the variations in terms of size and business models.” It adds that the MSB sector handles billions of dollars in transactions every year and estimates that MSBs registered with FINTRAC handle approximately $39 billion per year.

National full-service MSBs and small independent MSBs were rated as having a “very high” vulnerability rating. The former conduct a large amount of transactional business of products and services that have been found vulnerable to money laundering and terrorist financing, and these products and services are accessible to clientele in vulnerable businesses or locations. Meanwhile, small independent MSBs, which are predominantly family owned, provide wire transfer services largely through informal networks. They can be used by high-risk clients to wire funds to high-risk jurisdictions, and because they tend to be small and low profile, they are vulnerable to exploitation.

The products and services that were said to be used for money laundering and terrorist financing most frequently were international electronic funds transfers, currency exchanges, negotiable instruments, and cash transactions. The assessment report also identifies five main money laundering methods or techniques involving MSBs:

62 Ibid.
64 Ibid, p 38.
65 Ibid, p 35
66 Ibid, p 32.
67 Ibid.
• structuring or attempting to circumvent record-keeping requirements;
• attempting to circumvent client identification requirements;
• smurfing, using nominees and/or other proxies;
• exploiting negotiable instruments; and
• refining.68

The 2016 mutual evaluation similarly found that full-service MSBs are vulnerable to money laundering because they are widely accessible, are exposed to clients in vulnerable businesses or are conducting activities in locations of concern, and may attract clientele such as drug traffickers.69 The evaluation found that MSBs that operated globally were aware of the risks they face and had developed criteria to evaluate risks and determine controls. However, smaller MSBs seemed “far less aware” of their obligations and vulnerabilities.70

Typologies

Many of the money laundering risks associated with MSBs arise due to the involvement of professional money launderers and informal value transfer systems.71 Indeed, both FINTRAC and the Criminal Intelligence Service British Columbia / Yukon Territory consider that the use of MSBs by professional money launderers poses a high threat in this province.72 They have observed that organized crime groups use professional money launderers who own MSBs operating in BC to launder funds.73 The use of MSBs by professional money launderers is said to be high threat because it involves complex, long-term money laundering operations, manipulation of the money transfer system, and transnational organized crime groups. Further, the professional money launderer is often detached from the predicate offence, posing difficulties for law enforcement seeking to investigate and prosecute them.74

---

71 I discuss informal value transfer systems and the involvement of professional money launderers further in Chapters 2, 3, and 37.
Money laundering using MSBs owned by professional money launderers often feature a variety of complex transactions. A diagram\textsuperscript{75} in a 2019 FINTRAC report is illustrative (Figure 21.1):

![Figure 21.1: Typical Professional Money Laundering Services Through MSBs](image)

Figure 21.1: Typical Professional Money Laundering Services Through MSBs

This diagram depicts a variety of transactions being made between foreign trading and exchange companies; transfers between an MSB owner's personal and business accounts; and transfers of cash, cheques, and drafts to associates of the MSB, trading and exchange companies, and unrelated third parties.\textsuperscript{76} When foreign trading or exchange companies are involved, the scheme may involve trade-based money laundering in which goods may be undervalued, overvalued, or non-existent.\textsuperscript{77}

Mr. MacKillop testified that these kinds of schemes occur in BC, noting that once the money is in Canada, it can be further laundered through casinos and real estate. He explained that the money is not truly being transferred: rather, money is deposited into a bank account in another country, withdrawn in Canada, and provided to individuals who can then use it in casinos or in real estate.\textsuperscript{78} He noted that financial institutions are effectively intermediaries in these scenarios because all MSBs would need a bank account to move the money; FINTRAC can therefore see reports from these institutions.\textsuperscript{79} Indeed, given the value of the information coming in from the financial

\textsuperscript{76} Ibid.
\textsuperscript{77} Evidence of B. MacKillop, Transcript, January 18, 2021, p 111.
\textsuperscript{78} Evidence of B. MacKillop, Transcript, January 18, 2021, pp 115–16.
\textsuperscript{79} Ibid, pp 111–12.
institution in these scenarios, de-risking is unpalatable: if the financial institution de-risks an MSB, FINTRAC will no longer have a lens into the activity.80

Megan Nettleton, acting supervisor at the RCMP’s Financial Crime Analysis Unit, described a typical scheme involving a foreign national and criminally controlled MSB as follows. The scheme is essentially one of informal value transfer. It begins with a foreign national seeking to transfer funds to Canada from a country that has restrictions on capital flight. A deposit is made in that foreign country through a bank account that is controlled by someone associated with an MSB in Canada. A cash courier working for organized crime drops off cash at the MSB, which lends the money to the foreign national (who may or may not realize the funds are illicit in Canada). The money is loaned at a commission and then paid back to the MSB or professional money launderer who owns it. The foreign national then uses the money to gamble or for other purposes, thereby laundering it on behalf of the organization. The MSB may also provide loans as a private mortgage lender to the foreign national for the purpose of buying a house, or might set up, with the assistance of lawyers, registered numbered companies that can purchase real estate with minimal detection. Ms. Nettleton noted that these kinds of schemes can involve millions of dollars.81

A 2018 report by the Criminal Intelligence Service BC/Yukon describes the various techniques that may be used by professional money launderers who own or control MSBs, including:

• structuring transactions between various MSBs;
• using nominees to manage and move millions of dollars through various accounts;
• collaborating worldwide with other money launderers;
• using informal value transfer systems to assist organized crime clientele;
• using structuring or smurfing methods to break down large transactions so they fall below the $10,000 reporting threshold;
• layering transactions using other MSBs to facilitate electronic funds transfers;
• creating false bookkeeping to conceal the “real” books from FINTRAC; and
• using underground banking channels such that goods of value or money are moved while the money remains in the original country.82

A 2010 FINTRAC report on typologies and trends for Canadian MSBs contains a similar list of techniques, including structuring (which is the most prevalent technique observed

82 Exhibit 438, Criminal Intelligence Service BC/Yukon, “Professional Money Launderers Who Own/Control Money Services Businesses” (November 2018), pp 1, 3–4.
by FINTRAC); attempting to circumvent client identification and verification measures; smurfing and using nominees and/or other proxies; exploiting negotiable instruments; and refining. It also highlights that an emerging issue at the time was the convergence and combination of new payment methods (including prepaid cards, internet payment services, and mobile payment services), sometimes alongside traditional payment methods. The risks that arise in this regard include that prepaid payment methods can be funded anonymously or by a third party, meaning that customer due diligence will not be done; withdrawals and conversion of funds can be done more quickly than with traditional channels, rendering it more difficult to follow the money trail; and the payment systems are distributed through the internet, making the establishment of a customer relationship on a non-face-to-face basis difficult, if not impossible.

I note that many MSBs are aware of the risks in their sector and comply with the PCMLTFA. Mr. MacKillop noted that many suspicious transaction reports submitted by MSBs flag conduct such as very quick movement of funds, the use of different agents during a 24- or 36-hour period, and movement of money that is inconsistent with one’s level of employment or status. He added that some larger MSBs are uniquely positioned to report to FINTRAC, as they can identify transactions involving individuals in other countries. However, FINTRAC tends to receive many more reports from banks, trust loans, credit unions, and caisses populaires than from MSBs, which Mr. MacKillop stated “speaks to the percentage of the financial transactions that actually occur,” as well as changes to the reporting system of caisses populaires that have led to higher quality reports being submitted.

**De-risking**

Most MSBs need accounts at mainstream financial institutions to process transfers and settle accounts. An issue arises, however, because some financial institutions avoid doing business with MSBs, perceiving them as high risk in terms of their anti-money laundering and counterterrorist financing obligations (or sometimes as competitors). The practice of declining a customer (or sometimes a market segment) because of such concerns is known as “de-risking.”

---

86 Ibid, pp 118–19.

De-risking has caused serious issues for some MSBs, as well as for virtual asset service providers (see Chapter 35). Some MSBs have trouble maintaining accounts with financial institutions, which has a serious impact on their business model: it limits their ability to transmit remittances and may cause them to conduct transactions through less transparent informal channels.90 Further, existing MSB-banking relationships may be very restrictive and costly, and there is always a concern that the bank will close the account.91

Between 2009 and 2015, the number of MSBs shrunk from over 2,400 to approximately 800. CMSBA heard from its members that this was because of de-risking.92 Indeed, de-risking has been a significant concern at meetings of CMSBA. Mr. Cox testified that being de-risked can be the difference between an MSB staying open or closing.93 Similarly, Mr. Iuso described banking services as being like a utility, like a telco providing the phone line service or an internet provider providing the internet service. It’s necessary for us to operate. Otherwise, the MSBs end up going further underground or further obfuscating their business practices, which leads to, we believe, more activity that isn’t caught or isn’t reported.94

A further issue arises because some larger MSBs, at the request of their financial partners, do not offer services to other MSBs. For example, the Vancouver Bullion and Currency Exchange does not provide services to other MSBs at the request of its banking partners.95 As Mr. Cox explained:

MSBs are an inherently high-risk industry ... [T]he potential for money laundering is well known ... [O]ur banking partners seem to be comfortable with vetting [the Vancouver Bullion and Currency Exchange]. They have reviewed our system and are comfortable that we are handling our clients and transactions appropriately. I believe their concern is that although they have vetted our company, they are not able to vet our customer’s customers, the clients of another MSB that we might have onboarded. So [it is] just one level removed from what they are comfortable with.96

From March 6 to April 30, 2020, the Province sought input from the MSB industry on the potential for provincial regulation of the sector.97 During the consultation, it

90 Ibid.
97 See Exhibit 311, BC Ministry of Finance, Briefing Document: Money Services Businesses Consultation – Summary (June 8, 2020); and Exhibit 440, BC Ministry of Finance, Money Services Businesses Public Consultation Paper (March 2020).
heard suggestions that banks and credit unions should be required to provide reasons for declining to provide banking services to MSBs and that MSBs should have redress or an appeal process if they were unable to obtain a bank account. 98 Indeed, Mr. Iuso and Mr. Cox were both supportive of a requirement that financial institutions provide banking services to MSBs that meet certain requirements. 99 Mr. Cox added that it would be ideal for MSBs to have access to services offered by banks, although services from credit unions may also assist. 100 Relatedly, CMSBA suggested that BC financial institutions should be required to remove registered MSBs from their “high-risk” anti-money laundering category if they have no history of non-compliance. 101

While I understand the difficulties that arise for MSBs who are unable to secure reliable banking services, I do not see it as tenable to require that financial institutions accept a certain category or group of clients. Financial institutions have numerous requirements under the PCMLTFA and other legislation, leading to risk assessments that can be quite complex. They should not be forced to accept clients that do not meet their risk tolerance. However, given the clear difficulties that de-risking poses for MSBs, I urge CMSBA and financial institutions to discuss this issue and understand each other’s respective concerns in the hope of expanding the availability of financial services for MSBs. It seems that it would be best to have an agreed-upon protocol that facilitates MSBs securing the services of financial institutions. Such a protocol will, I hope, be considered and developed collaboratively by financial institutions and MSBs.

Unregistered MSBs

As I noted above, MSBs are required to register with FINTRAC every two years. However, some MSBs do not register. As unregistered MSBs do not report to FINTRAC, the latter lacks visibility into their activities. 102 Unregistered MSBs may seek to use registered MSBs to wire funds or settle transactions, which in turn presents risks for registered MSBs. This leads to opportunities for anonymity (given the lack of reporting) and can create investigative obstacles and reputational risk for registered MSBs who could be unwittingly facilitating illegal activity. 103 Indeed, the Province’s consultation revealed that CMSBA and mid-sized MSBs in BC had significant concerns around unregistered MSBs operating without oversight. 104

---

100 Evidence of M. Cox, Transcript, January 18, 2021, p 63.
103 Exhibit 441, FINTRAC, Money Laundering and Terrorist Financing (ML/TF) Typologies and Trends for Canadian Money Services Businesses (MSBs), July 2010, pp 15–16.
The main way that FINTRAC can become aware of unregistered MSBs is when another reporting entity, such as a bank, identifies an individual or entity acting as an MSB, realizes the individual or entity is not on the public registry, and files a suspicious transaction report.105 If someone other than a reporting entity comes across an unregistered MSB, they can submit a voluntary information record, which FINTRAC can then analyze and disclose to law enforcement if the threshold for disclosure is met.106 Through its annual review of MSBs, FINTRAC also considers whether all registered MSBs are still operating, their registration has expired or ceased, they have been denied registration, or they are no longer operating.107 Although unregistered MSBs may be uncovered through such steps, identifying unregistered MSBs remains one of the “constant challenges” in this sector.108

Ms. Nettleton testified that the RCMP had recently carried out a project (known as the Money Services Businesses Compliance Project) to examine unregistered MSBs. It found that most are difficult to find because they do not readily advertise themselves.109 The project examined over 529 MSBs that were unregistered or had their registration revoked or lapsed. It did not find significant criminality among the 529 MSBs; however, the RCMP used its own data banks rather than doing door knocks or conducting surveillance on specific entities. Further, the fact that an MSB is registered and compliant does not necessarily eliminate the money laundering risk.110 For example, sometimes an MSB is subject to regulatory action and simply re-registers with a different address. Such a simple step may permit it to continue its illegal activity despite being registered.111 Indeed, the fact that Silver International was able to obtain registration despite being actively investigated by law enforcement suggests that both registered and unregistered MSBs may be able to conduct criminal or suspicious activity for some time without detection, or, even if detected, without action that interrupts their operation.

It appears that some MSBs are unregistered due to language barriers and a resulting lack of awareness in some cultural and linguistic groups.112 Ms. Achimov testified that FINTRAC is aware of these barriers and tries to reach those MSBs through professional associations. She added that some regional offices have multiple linguistic capabilities and that FINTRAC has produced some basic information about compliance in several languages.113 It also attempts to create awareness with unregistered MSBs, including through social media, and works with different communities in an effort to reach MSBs that may not be members of professional associations.114

108 Exhibit 448, FINTRAC, Report to the Minister of Finance on Compliance and Related Activities (September 2018), pp 8–9; see also Evidence of D. Achimov, Transcript, January 18, 2021, pp 140–41.
110 Ibid, pp 53–54, 75–76.
111 Ibid, p 52.
A 2016 FINTRAC report notes that one way of identifying unregistered MSBs is by enhancing the reporting it receives from financial institutions. Mr. MacKillop testified that this continues to be the case, noting that FINTRAC consistently does outreach with financial institutions and other reporting entities.

**Compliance Examinations by FINTRAC**

FINTRAC conducts relatively few compliance examinations of MSBs. Canada helpfully provided tables setting out the number of MSBs examined nationally and in BC between 2015 and 2020. Table 21.1 indicates, in relation to MSBs located in this province:

<table>
<thead>

Source: Exhibit 446, FINTRAC Statistics Letter (January 15, 2021), p 1

It is notable that the number of MSBs nearly doubled between the 2015–16 and 2019–20 fiscal years, growing from 164 to 317. During that time, the number of onsite examinations, however, dropped from 33 to 13. Similarly, the number of desk examinations fell from 14 to three. When asked why FINTRAC conducted fewer examinations in 2019–20 when the number of MSBs in BC had almost doubled since 2015–16, Ms. Achimov explained that there are a number of factors that inform FINTRAC’s examinations. The main one is risk scoring, but others include FINTRAC’s capacity, difficulties relating to the COVID-19 pandemic, and the situation of the MSB (for example, a desk examination may be more suitable than an onsite one for an MSB that is operating virtually).

On the subject of FINTRAC’s capacity, I was advised that the BC office has approximately 15 people who examine all the reporting entities in this province.

---

118 An onsite examination involves FINTRAC compliance evaluators visiting the MSB’s premises, whereas a “desk examination” is conducted over the phone: Evidence of D. Achimov, Transcript, January 18, 2021, pp 136–37.
FINTRAC’s report to the federal Minister of Finance in 2018 explains that a decrease in the number of examinations was due in part to a “higher than expected employee turnover in the regional offices” as well as “regional restructuring to ensure sufficient coverage of the higher-risk areas, including major financial entities.”\(^{121}\) Ms. Achimov explained that there was a high turnover in the Toronto regional office at that time, which led to a reallocation of some resources and a need to train new employees.\(^{122}\)

I also note that these figures do not take account of MSBs whose status had expired or that were not registered at the end of the fiscal year.\(^{123}\) I understand from that caveat that the figures would not take account of applicants who, for example, were found ineligible on the basis of a prior criminal conviction or had their status revoked for that reason. It is therefore unclear how many non-successful applicants there were and if any had links to criminality.

Canada also provided statistics on the number of examinations done in the first two years of an MSB’s existence (see Table 21.2).\(^{124}\) This is of interest given that MSBs must re-register every two years. Further, as Ms. Achimov noted, many MSBs are by their existence very short-lived. She explained that many MSBs are “small mom and pop organizations” and are very volatile.\(^{125}\)

\(^{121}\) Exhibit 448, FINTRAC, Report to the Minister of Finance on Compliance and Related Activities (September 2018), p 8.

\(^{122}\) Evidence of D. Achimov, Transcript, January 18, 2021, p 159.

\(^{125}\) Evidence of D. Achimov, Transcript, January 18, 2021, pp 142, 151.

\(^{126}\) This includes registrations that are ceased, expired, cancelled, or revoked: Exhibit 446, FINTRAC Statistics Letter (January 15, 2021), p 3.

\(^{127}\) The marked increase from 65 to 124 MSBs can be attributed to the pre-registration of MSBs dealing in virtual currency and of foreign MSBs. A similar increase occurred nationally, from 321 to 532: Exhibit 446, FINTRAC Statistics Letter (January 15, 2021), pp 2–3.
It is notable that of the 59 new MSBs registered in 2017–18, only four were examined in the first two years, and only one after that. The figures in 2018–19 (65 new registrations, three examined within the first two years, and zero after that) and 2019–20 (124, one, and zero, respectively) are striking as well (although I am mindful that these figures were provided in January 2021, meaning those relating to the 2019–20 registrations may have since changed). I also note that the figures do not include (a) situations where FINTRAC attempted to conduct an examination but was not able to because the MSB was no longer operating, or (b) any follow-up examinations of MSBs with deficiencies.\textsuperscript{128}

Ms. Achimov testified that FINTRAC’s methodology looks at a cross-section of both established MSBs and those that are just starting up.\textsuperscript{129} Indeed, FINTRAC’s report to the Minister from 2020 indicates that it conducts annual MSB validations to identify those that may be operating with expired, ceased, revoked, or denied registrations; those that may no longer be operating; and those that are suspected of operating but are not registered.\textsuperscript{130} Examinations of MSBs operating for under two years might be triggered by intelligence, regional knowledge, media coverage, or themed examinations (for example, requirements in a ministerial directive).\textsuperscript{131} Ms. Achimov explained that, as with any business, MSBs must “have the opportunity to have a bit of a track record. They have to have the ability to file their reports, to have something that we can review.” She continued that FINTRAC tends to look six to eight months in the past but may decide to look at very new organizations within six months if there is media coverage, they are alerted to suspicious activity, or other reasons warrant moving up an examination.\textsuperscript{132}

It strikes me that it would be useful for there to be more scrutiny of MSBs in the first two years of registration. Early examinations would presumably deter those seeking to use MSBs for criminal purposes and would seem to encourage better practices among MSBs from the beginning. Given the low numbers of examinations done by FINTRAC in the first two years of an MSB’s existence, the Province should fill this gap. As I discuss below, I am of the view that BCFSA, acting as a regulator for MSBs, would be well placed to examine MSBs in their early years.

Annette Ryan, chief financial officer and deputy director of the enterprise policy research and program sector at FINTRAC, noted that FINTRAC’s fall 2020 policy snapshot had an increased focus on penalties and administration relating to registration. It speaks of tightening the registration process and adjusting penalties.\textsuperscript{133} She also noted that FINTRAC released an operational alert\textsuperscript{134} relating to MSBs in July 2018, flagging certain

\textsuperscript{128} Exhibit 446, FINTRAC Statistics Letter (January 15, 2021), p 2.

\textsuperscript{130} Exhibit 1021, Overview Report: Miscellaneous Documents, Appendix 15, FINTRAC Report to the Minister of Finance on Compliance and Related Activities (September 30, 2020), pp 21–22.
\textsuperscript{131} Exhibit 446, FINTRAC Statistics Letter (January 15, 2021), p 2.
\textsuperscript{132} Evidence of D. Achimov, Transcript, January 18, 2021, p 147.
\textsuperscript{133} Evidence of A. Ryan, Transcript, January 18, 2021, pp 107, 162.
\textsuperscript{134} An operational alert is a public document intended to inform reporting entities about emerging trends that constitute suspicious activity. It is meant to help the community flag certain transactions, adjust their reporting process, etc.: Evidence of A. Ryan, Transcript, January 18, 2021, p 109.
kinds of MSBs of concern. That alert referred to MSBs engaged in legitimate activities that allow some money laundering as part of their business (knowingly or unwittingly), as well the potential for MSBs to be owned or operated by illicit actors.¹³⁵

Mr. MacKillop testified that FINTRAC’s compliance department cannot share information with the intelligence group. This is because compliance examinations do not require warrants.¹³⁶ However, the intelligence group can share limited information with the compliance group. For example, it could share reports indicating suspicious activity flagged by an MSB or by another reporting entity relating to a potential unregistered MSB.¹³⁷ Mr. MacKillop stated that FINTRAC does not often come across entities that are acting as MSBs, however. More commonly, it encounters a lack of reporting or insufficient information in a report, in which case it would communicate this to the compliance department so that they can provide some awareness and understanding to the MSB about what reports require.

**Investigative Challenges**

MSBs present unique investigative challenges for both law enforcement and FINTRAC. A key challenge is that the use of MSBs by organized crime and professional money launderers is almost certainly underreported.¹³⁸ Ms. Nettleton testified that this intelligence gap still exists.¹³⁹ She explained that there are several reasons for this, including that:

- FINTRAC reporting does not capture all the relevant activity (such as bulk cash smuggling or domestic transfers);
- the RCMP’s intelligence group focuses not only on money laundering but other offences;
- uncovering such activity often requires use of tools such as phone data, human sources, and intercepts, which the RCMP typically considers as “last resorts” given how intrusive they are;
- reports from FINTRAC are not sources of “live” intelligence (they are necessarily after the fact);
- under the *PCMLTFA*, FINTRAC can only disclose information that meets its threshold and is related to money laundering (that is, not with respect to other offences that may be of interest to law enforcement); and

¹³⁷ Ibid.
¹³⁹ Evidence of M. Nettleton, Transcript, January 18, 2021, p 33.
law enforcement lacks capacity (both in terms of experienced investigators and civilian staff such as translators and analysts) to effectively investigate MSBs.\footnote{Ibid, pp 26–31, 33–34.}

In its 2017 report to the Minister of Finance, FINTRAC notes that it made one “non-compliance disclosure” to law enforcement relating to an MSB.\footnote{Exhibit 447, FINTRAC Report to the Minister of Finance on Compliance and Related Activities (September 30, 2017), p 15.} Non-compliance disclosures are made “where there is extensive non-compliance with the \textit{PCMLTFA} or little expectation of immediate or future compliance by the reporting entity.”\footnote{Ibid.} FINTRAC’s 2020 report indicates it made seven non-compliance disclosures in relation to the 114 MSBs it examined.\footnote{Exhibit 1021, Overview Report: Miscellaneous Documents, Appendix 15, FINTRAC Report to the Minister of Finance on Compliance and Related Activities (September 30, 2020), pp 20–21.} Ms. Achimov testified that, in the four years prior to her testimony, FINTRAC had made 27 non-compliance disclosures in relation to all reporting entities (that is, not specifically relating to MSBs).\footnote{Evidence of D. Achimov, Transcript, January 18, 2021, pp 156–57.} While I appreciate that FINTRAC must comply with its disclosure threshold in the \textit{PCMLTFA}, these numbers strike me as low. I assume, though I am unable to determine on the evidence before me, that they are low in part because of the recognized underreporting by MSBs, the fact that some MSBs do not register with FINTRAC, and the relatively low number of compliance examinations done by FINTRAC.

Mr. Iuso testified that CMSBA does not receive any information relating to anti-money laundering from the RCMP or FINTRAC. It does, however, receive annual reports from FINTRAC on the number of suspicious transactions and other reports by MSBs and the number of MSBs that have been examined. CMSBA does not currently have a memorandum of understanding with FINTRAC.\footnote{Evidence of J. Iuso, Transcript, January 18, 2021, pp 60–61.} It does, however, participate in working groups with FINTRAC about updates to legislation, policy interpretations, and guidance, and FINTRAC has an outreach employee dedicated to dealing with CMSBA.\footnote{Ibid pp 64–65.} FINTRAC engaged with MSB associations (including CMSBA and virtual currencies dealers) multiple times between 2019 and 2020,\footnote{Exhibit 449, List of FINTRAC Engagement Activities with Different Stakeholders, April 1, 2017 to December 4, 2020, pp 1, 2, 7, 8, 11, 14, 15, 17, 18, 20, 22.} and it provides notices and alerts to CMSBA to forward to its members.\footnote{Evidence of J. Iuso, Transcript, January 18, 2021, pp 65–66.}

Mr. Cox testified that the Vancouver Bullion and Currency Exchange receives regular requests for information from the RCMP and the Canada Revenue Agency. While it does receive many requests from FINTRAC, they are also in contact about future guidelines and rules.\footnote{Evidence of M. Cox, Transcript, January 18, 2021, p 63.} Mr. Cox explained that his experience with FINTRAC was that it was initially adversarial to the Vancouver Bullion and Currency Exchange – focused
on finding out what it had done wrong – but that FINTRAC had shifted toward a more collaborative approach. However, he finds that FINTRAC can be slow to respond to requests to clarify policy interpretations or rules.150

In Chapter 41, I recommend the creation of a provincial law enforcement unit dedicated to anti-money laundering. My hope is that this new unit will be able to avoid some of the pitfalls I have just described. In particular, as I expand in that chapter, I recommend that the new unit have a dedicated intelligence division and access to surveillance teams. The unit should also be responsible for developing tactical information-sharing initiatives with the private sector, which should include entities such as CMSBA and individual MSBs. Indeed, as I discuss next, I am recommending that BCFSA serve as a regulator for MSBs in this province, which will be well placed to engage with the new anti-money laundering unit.

A Provincial MSB Regulator

As I have noted throughout this chapter, the Province has been contemplating a potential provincial MSB regulator. This step was recommended by both Dr. Peter German and Professors Maloney, Unger, and Somerville.151 The latter suggested that it would make sense for FICOM (now the British Columbia Financial Services Authority or BCFSA152) to operate the regulatory regime, noting that this solution would give BCFSA visibility over all the activities in the financial sector and would be less disruptive and costly than creating a new regulator.153

At the time of writing, Quebec is the only province that regulates MSBs. Under the Quebec Money Services Businesses Act,154 MSBs are defined as businesses engaged in currency exchange; funds transfer; the issue or redemption of traveller’s cheques, money orders, or bank drafts; cheque cashing; and the operation of ATMs.155 All MSBs must hold a licence for the particular activities they are engaged in.156 The Quebec Minister of Finance maintains a registry of all registered MSBs.157

When applying for a licence, an applicant must provide a variety of documents disclosing information about its legal structure, its agents, the financial institutions and lenders it deals with, a business plan, and government-issued identification for

150 Ibid, p 67. Mr. Iuso added that depending on the kind of question, FINTRAC can take 30 to 90 days to respond to requests by CMSBA: Transcript, January 18, 2021, pp 67–68.
152 I discuss BCFSA in more detail in Chapter 20.
153 Exhibit 330, Maloney Report, p 80.
154 Money Services Businesses Act, CQLR c E-12.000001.
155 Ibid, s 1.
156 Ibid, ss 3, 4.
157 Ibid, s 58.
key individuals. Notably, these documents must include the name, date of birth, address, and phone number of each of the applicant’s officers, directors or partners, and branch managers; any person or entity who directly or indirectly owns or controls the money services business; and each of the applicant’s employees working in Quebec. Applicants must also provide the same kind of information for any of their mandataries (the civil law equivalent of agents). These requirements, which I will refer to as “business relationship” requirements, are essential in order to identify “straw” applicants and to prevent criminals from using “clean” operators to hold the MSB licence when they would not be eligible themselves.

Applications are sent to the provincial police force, the Sûreté du Québec, to conduct police checks. MSBs can be refused registration for several reasons, including that they are “not of good moral character,” are insolvent or bankrupt, have specified convictions, or have demonstrated a lack of compliance with the Act or other statutes.

I pause here to note the significance of the “good moral character” provision, which states:

A lack of good moral character is determined in light of such factors as the connections the persons or entities referred to in the first paragraph maintain with a criminal organization within the meaning of subsection 1 of section 467.1 of the *Criminal Code* (R.S.C. 1985, c. C-46) or with any other person or entity who engages in money laundering for criminal activities or in trafficking in a substance included in any of Schedules I to IV to the *Controlled Drugs and Substances Act* (S.C. 1996, c. 19). It is also determined in light of any other event of such a nature as to affect the validity of the licence or give the Minister cause to act under any of sections 11 to 17.

It seems likely that such a provision would have led Silver International to be denied registration, or at least be further scrutinized prior to being registered. As noted above, applications in Quebec are sent to the Sûreté du Québec for police checks. I expect that law enforcement would have serious concerns about registering an applicant at the centre of a large financial crime investigation and whose premises had recently been the target of search warrants that revealed large amounts of suspicious cash. I am not suggesting that any applicant that is being investigated should be denied registration as a matter of course. However, the Quebec approach allows for consideration of suspicious activity by an applicant that falls short of a criminal conviction, which differs from FINTRAC’s current practice.

158 Ibid, s 6.
159 Ibid, s 6(1).
160 Ibid, s 6(2).
161 Ibid, ss 7–9.
162 Ibid, ss 11, 12, 14, 15, 23.
163 Ibid, s 23.
An applicant can also be refused registration under the Quebec regime if its business activities are not commensurate with its legal sources of financing, if a reasonable person would conclude that it is lending money to a business that would be unable to obtain a licence, or if its structure enables it to evade the Act or another fiscal law.\textsuperscript{164}

Other aspects of the Quebec regime include that MSBs must verify the identity of their customers,\textsuperscript{165} hold a bank account with a financial institution, keep specified records, and report transactions for which they have reasonable grounds to believe may constitute an offence under the Act.\textsuperscript{166}

The Quebec Minister of Finance is authorized to enter into agreements with other governments and international organizations for the purpose of facilitating the administration or enforcement of the Act. Under such an agreement, the Minister may share personal information without the consent of the MSB if there are reasonable grounds to believe that the MSB (or an individual associated with it) has committed or is about to commit a criminal or penal offence.\textsuperscript{167} The Minister can also apply to the provincial court for authorization to share information with the police for similar reasons.\textsuperscript{168} The Act provides for monetary administrative penalties and penal provisions.\textsuperscript{169}

The Government of British Columbia’s consultation relating to MSB regulation revealed that CMSBA and medium-sized MSBs based in BC are generally not opposed to a provincial licensing regime for MSBs. However, they are concerned about increasing regulatory burdens on existing MSBs.\textsuperscript{170} Mr. Iuso testified that he has heard from Quebec MSBs that some feel they are “put under a microscope” more than they need to be through, for example, mystery shoppers.\textsuperscript{171} Mr. Cox noted that the Vancouver Bullion and Currency Exchange has decided not to operate in Quebec in part because of the licensing regime; however, he added that the extra regulatory burden could be lessened by aligning the provincial requirements with the \textit{PCMLTFA} as much as possible.\textsuperscript{172}

The consultation paper notes that FINTRAC provided seven “lessons learned” from working with the Quebec regime to address overlap:

\begin{itemize}
\item \textsuperscript{164} Ibid, s 12.1.
\item \textsuperscript{165} The regulations explain the circumstances in which MSBs must verify a customer’s identity, which are very similar to the situations set out in the \textit{PCMLTFA}: \textit{see Regulation under the Money-Services Businesses Act}, c E-12.000001, r 1, ss 7–12.
\item \textsuperscript{166} \textit{Money Services Businesses Act}, ss 28–31. The Act explicitly says that an MSB will not incur civil liability as a result of reporting a suspicious transaction: ibid, s 31.
\item \textsuperscript{167} Ibid, ss 37–38.
\item \textsuperscript{168} Ibid, s 39.
\item \textsuperscript{169} Ibid, ss 65.1, 66–69.
\item \textsuperscript{170} Exhibit 311, BC Ministry of Finance, Briefing Document: Money Services Businesses Consultation – Summary (June 8, 2020), p 2; Evidence of J. Primeau, Transcript, December 1, 2020, p 137.
\item \textsuperscript{171} Evidence of J. Iuso, Transcript, January 18, 2021, pp 48–49.
\item \textsuperscript{172} Evidence of M. Cox, Transcript, January 18, 2021, pp 49–50.
\end{itemize}
1. Align a provincial MSB definition with FINTRAC's definition to reduce confusion/complexity.

2. Have similar timelines for same business processes ([e.g.,] licensing renewals).

3. Align eligibility criteria ([e.g.,] criminal/police records).

4. Licensing costs – FINTRAC does not charge fees (keep this in mind).

5. Have [a memorandum of understanding] for sharing information (the existing FINTRAC-[Financial Services Authority memorandum of understanding] would need to be expanded to include MSBs).

6. Registry should be similar and publicly available/searchable.

7. Avoid duplication of compliance activities/timing.173

The consultation also heard from Revenu Québec, which administers the Quebec regulatory regime. Notably, Revenu Québec stated that the regime’s impact on the involvement of criminals in MSBs is likely small and that the identification and record-keeping requirements do not act as a disincentive to money laundering. Indeed, it has reason to suspect that MSBs continue to operate using nominees and the principal-agent model, despite the business relationship requirements. It has also found that the “good moral” principle is difficult to apply and can be challenged by MSBs. Further, obtaining a licence may actually facilitate money laundering or terrorist financing by giving MSBs an appearance of legitimacy. Revenu Québec also noted that the resources needed to investigate violations of the Act have so far been disproportionate to the results obtained, that ignorance of the law (for example, due to language barriers) has been an issue, and that law enforcement has so far made little use of the avenues available to it.174

CMSBA and mid-sized MSBs based in BC support the creation of a local specialized unit, possibly as part of the new regulator, that could effectively investigate, prosecute, and shut down unlicensed MSBs.175 CMSBA noted during the consultation that MSBs that are newly registered with FINTRAC may operate for two years or more without a FINTRAC examination,176 which is consistent with my discussion above. Accordingly, CMSBA strongly encouraged future provincial legislation to establish a way to confirm MSB compliance as soon as it becomes registered, noting that the Quebec regime has been successful in doing so.177 Mr. Iuso has heard that although some MSBs have been displeased with random spot checks, “it seems like it’s working [in] the sense that it’s

---

175 Ibid, p 3.
176 Ibid; see also Evidence of J. Primeau, Transcript, December 1, 2020, p 130.
Revenu Québec and FINTRAC have a memorandum of understanding, pursuant to which FINTRAC shares the same kind of information with Revenu Québec that it does with BCFSA (see Chapter 20). It also works to reduce duplication and administrative burden by, for example, not examining MSBs that Revenu Québec is in the process of examining. 

Ms. Achimov testified that this agreement with Revenu Québec has given FINTRAC some insight into unregistered MSBs. It is “a reliable source; it feeds our risk score and it allows us to do a cross-reference in terms of making sure that we’re not missing any that are identified.” She added that the Quebec regime has an anti-money laundering “checklist” that is “also very instructive for us” and noted that the licensing regimes are different in the sense that Quebec’s licensing requirements have additional requirements beyond checking for criminal convictions.

Joseph Primeau, acting executive director of the policy branch of the finance, real estate, and data analytics unit at the BC Ministry of Finance, testified that although the Ministry of Finance has not been able to measure or estimate the number of unregistered MSBs in this province, it has heard from law enforcement that unregistered activity presents risks. He stated that a provincial regulatory regime would assist in understanding the size and composition of the sector. The Ministry of Finance is considering the issue of MSBs operating out of locations such as private residences or post offices, which, Mr. Primeau noted, ties in to the difficulty of understanding the size and nature of the industry. The Province would like to have a better understanding of the size and nature of the industry before imposing new requirements, in order to ensure that it understands the impact they will have on the industry. The Province is also considering the potential for MSBs to be operating through nominees.

In my view, the Province should regulate MSBs, and this regulation should be undertaken by BCFSA. This chapter has demonstrated that there are significant vulnerabilities associated with MSBs. Although MSBs are subject to the PCMLTFA, FINTRAC conducts relatively few compliance examinations in this sector. In my view, further scrutiny in this high-risk area is required. This is especially so with respect to new MSBs, given that FINTRAC conducts very few compliance examinations of

---

178 Evidence of J. Iuso, Transcript, January 18, 2021, p 47.

184 Ibid, p 126.
185 Ibid, pp 132–33.
186 Ibid, p 134.
MSBs in their first two years of existence. This leads to a real vulnerability in which individuals or entities can use MSBs for criminal purposes and stop operating (or re-register with different information) before the two-year mark, thereby evading a compliance examination. Further, as FINTRAC has taken the view that it can only deny registration when an individual or entity has a prior conviction, it remains possible – and has occurred, as demonstrated by the situation of Silver International – that an applicant who is currently under investigation (or even charged) but not convicted of an offence related to financial crime can nonetheless be registered. This is not to say that such circumstances should lead to a denial as a matter of course, but it strikes me that denial should be possible where appropriate.

As I discuss in Chapter 20, BCFSA is responsible for regulating various provincial institutions, including credit unions, insurance and trust companies, mortgages, pensions, and the Credit Union Deposit Insurance. BCFSA’s supervision over these various sectors demonstrates that it has broad expertise in financial matters and would be well suited to adding MSBs to its purview. Further, expanding BCFSA’s mandate in this way avoids the necessity to create another regulator and leverages BCFSA’s experience in regulating financial entities. I am, however, mindful of the significance of expanding BCFSA’s mandate in this way: the authority has already undergone various changes in its organizational structure in the past few years, and it will need to grapple with a sector that includes various unregistered and unknown actors. For this reason, I have recommended in Chapter 20 that the Province provide BCFSA with sufficient resources to create or staff a group focused on anti-money laundering specifically. It will be crucial that BCFSA have capacity – in terms of both financial and staff resources – to fulfill this new aspect of its mandate.

In extending BCFSA’s mandate to cover MSBs, the Province will need to continue its consultations with Revenu Québec and FINTRAC. Consultations with the former will ensure that the Province is aware of hurdles that Revenu Québec – the sole MSB regulator in Canada at the time of writing – has encountered and to learn from its experiences. It will be particularly important to learn from Revenu Québec’s difficulties regarding the “good moral character” provision and the business relationships requirements. These requirements strike me as sound in principle and should be included in British Columbia’s regime; however, it will be important for the Province to learn from the challenges that Revenu Québec has had in enforcing these requirements in order to avoid such difficulties in British Columbia. Meanwhile, consultations with FINTRAC will help minimize duplication and burden for MSBs, which will need to comply with both the PCMLTFA and rules set out by BCFSA. A memorandum of understanding with FINTRAC (similar to that in place between FINTRAC and Revenu Québec) will be essential in this regard and should, among other things, set out how and when the two agencies will conduct their respective compliance examinations.

While the Province is best placed to determine all the functions that BCFSA will need for its regulation of MSBs, the regulatory scheme should include, at minimum:
• a definition of “MSB” that aligns with the definition in the PCMLTFA, except that virtual asset service providers should not be included at this stage;

• a capacity to identify unregistered MSBs and sanction them;

• a registration process in which the suitability of applicants is assessed in a broader manner than is done under the PCMLTFA (in particular, there should be an ability to deny registration for reasons apart from a criminal conviction and to require disclosure of business relationships in the same way as the Quebec regime);

• a compliance examination process that applies in the early years of an MSB’s existence (that is, prior to the two-year mark);

• the ability to enter information-sharing arrangements with FINTRAC and other relevant entities; and

• administrative and monetary penalties.

As I explain in Chapter 35, I am not prepared to recommend, at this stage, that virtual asset service providers be brought under BCFSA’s regulatory authority. Although I consider it essential that virtual asset service providers be subject to provincial regulation, I have recommended in Chapter 35 that the Province engage with the AML Commissioner proposed in Chapter 8, BCFSA, the British Columbia Securities Commission, industry members, and other stakeholders to determine which regulatory authority would be best suited to become the regulator of virtual asset service providers. If the Province determines that BCFSA is the appropriate regulator, it should ensure that BCFSA has sufficient resources and education to regulate a sector whose activities likely differ significantly from the financial institutions it currently oversees.

The registry of MSBs should be publicly accessible and similarly designed to the FINTRAC registry to ensure ease of use by the public, MSBs, and other reporting entities. The registration process should also be aligned as much as possible with the PCMLTFA regime, although it will, as noted, be important that ineligibility not be limited to criminal convictions.

I do not recommend at this stage that the regulatory scheme involve customer due diligence, record-keeping, and reporting measures in the same way as the Quebec regime for two reasons. First, as noted above, it appears that Revenu Québec expressed doubts in the Province’s consultation on MSBs that these requirements were having any effect on deterring money laundering. Second, MSBs have these obligations already under the PCMLTFA, and I see no need to duplicate those measures at present. It may become apparent to BCFSA that such measures are desirable or necessary, in which case it should have a mechanism of communicating that view to the Province and obtaining the necessary regulatory authority.
Recommendation 51: I recommend that the Province expand the mandate of the British Columbia Financial Services Authority to encompass regulation of money services businesses. The regulatory scheme should include (but not be limited to) the following:

- a definition of “money services business” that aligns with the definition in the Proceeds of Crime (Money Laundering) and Terrorist Financing Act (PCMLTFA), except that virtual asset service providers should not be included at this stage;

- a capacity to identify unregistered money services businesses and sanction them;

- a registration process in which the suitability of applicants is assessed in a broader manner than is done under the PCMLTFA to include consideration of whether a money services business has been investigated or charged with criminal activity, whether or not this has resulted in a conviction, as well as a requirement to disclose business relationships in the same way as the Quebec regime;

- a compliance examination process that applies in the early years of a money services business’s existence;

- the ability to enter information-sharing arrangements with the Financial Transactions and Reports Analysis Centre of Canada and other relevant entities; and

- the availability of administrative and monetary penalties.

Mr. Primeau testified that the Province is considering the possibility of a whistle-blower line. This is in response to suggestions by CMSBA and mid-sized MSBs during the Province’s consultation that there should be a dedicated “whistle-blower” line that could be used to anonymously report unregistered MSBs. As these discussions appear to be in their early stages, I am not prepared to make a recommendation that such a line should be created at present. However, in the course of expanding BCFSA’s mandate, the Province should consult with BCFSA about how it can best become alerted to non-compliant MSBs.

Conclusion

In this chapter, I have outlined the significant money laundering risks that arise in the MSB sector, while also noting that there are many legitimate uses and users of these

188 Evidence of J. Primeau, Transcript, December 1, 2020, pp 139–41.
services. In my view, the risks in this sector are such that the Province should regulate MSBs and that this responsibility should fall to BCFSA. It will be essential for BCFSA to have the resources it needs to engage in this activity, which will increase its workload substantially. It will also be important for the AML Commissioner to monitor the implementation and progress of this regulation.
Chapter 22
White-Label Automated Teller Machines

I have just discussed the risks inherent to banks and credit unions, and the well-known risks in the money services business sector. A lesser-known sector is that of white-label automated teller machines (white-label ATMs). Simply put, these are ATMs that are not owned by banks, and indeed are sometimes called “non-bank ATMs.” They can be found in locations such as bars, restaurants, convenience stores, gas stations, and grocery stores.

There was debate in the evidence before me on the question of whether white-label ATMs pose a money laundering risk. They are not subject to the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 (PCMLTFA) and therefore have no reporting or other obligations under that regime. However, white-label ATMs depend on accessing the Interac network to operate and are subject to Interac’s rules, many of which resemble obligations under the PCMLTFA. I heard from industry members that white-label ATMs are an ineffective method of laundering money and that the Interac rules are sufficient to guard against any risks. Conversely, I heard from RCMP witnesses that white-label ATMs pose significant money laundering risks.

In this chapter, I first discuss in more detail what white-label ATMs are and how they operate. I then describe the Interac network and how white-label ATMs use that network to conduct their business. I then turn to the more contentious aspect of this chapter: the question of whether white-label ATMs pose a money laundering risk. Finally, I consider whether additional regulation in this sector is desirable.

2 Ibid, p 118.
What Are White-Label ATMs?

White-label ATMs are cash machines that are not owned by traditional financial institutions. The industry started around 1996 following challenges before the federal Competition Bureau to the banks’ use of the ATM network. In two decisions, the Competition Bureau found that major financial institutions’ practices with respect to ATMs were monopolistic and exclusive, and allowed a surcharge to be made on ATM transactions. Following those decisions, the number of ATMs in Canada grew significantly – from an estimated 18,426 in 1996 to 55,562 in 2007 (a 202 percent increase). Much of this growth was due to the new white-label ATM industry.

Any individual can own or operate a white-label ATM. Christopher Chandler, president of the ATM Industry Association, testified that there are around 50,000 ATMs in Canada, of which approximately two-thirds are white-label ATMs. He highlighted that whereas many bank ATMs are grouped together at a bank branch, white-label ATMs are often not; he estimates that there are approximately 34,000 white-label ATM cash access points compared to 7,000 bank access points. As a result, white-label ATMs make up around 80 percent of all cash access points in Canada.

In 2020, there were 4,912 white-label ATMs in British Columbia on the Interac network. Mr. Chandler testified that we can safely assume that all or almost all of those white-label ATMs are connected to the Interac network, given that it is the leading ATM network in Canada.

White-label ATMs are essentially products for merchants. Merchants can own their white-label ATMs or use the services of an independent sales organization to run the machines. Depending on the arrangement, a white-label ATM can be loaded with cash by the merchant itself, by an independent sales organization, or by a cash-loading business.

White-label ATMs can serve three purposes for a merchant:

• They can draw customers into the store.
• They can give cash in hand to customers while they are in the store, which they will hopefully spend.
• Merchants can generate revenue from the ATM because they typically receive a share of the fees charged to the customer.

---

7 Ibid, pp 119, 121.
8 Exhibit 429, RCMP Project Scot Report, p 18.
10 Ibid, pp 118–119.
Indeed, fees are the primary source of income for white-label ATM owners. Fees associated with these machines include regular transaction fees, which are charged by the customer’s financial institution; network access fees, which are paid when accessing an ATM other than one owned by the customer’s financial institution; and convenience fees, which are charged by the white-label ATM operator and can be charged by other financial institutions to non-customers.11

The Interac Network

Interac is the organization responsible for the development and operation of “shared cash dispensing” at ATMs and for Interac Payment Direct, the leading debit service in Canada.12 Interac’s “Inter-Member Network” links financial institutions and “direct” and “indirect connectors.”13 Direct connectors – almost all of which are deposit-taking financial institutions – can connect directly to the network to provide ATM and debit services.14 Indirect connectors access the network through a direct connector.15

White-label ATMs connect to the network through an “acquirer” (a third-party processor and/or indirect connector) and a financial institution (a direct connector).16 Acquirers have direct relationships with Interac and maintain responsibility for satisfying Interac’s rules. Kirkland Morris, vice-president of enterprise initiatives and external affairs at Interac, testified that the idea is to “apply scrutiny up the chain.”17 Settlement agents clear financial obligations of other members through the Canadian Payments Association’s Automated Clearing Settlement System.18 Independent sales organizations have contractual relationships with acquirers to market or sell services on their behalf.19 Finally, sub-independent sales organizations may be involved: they maintain contractual relationships with independent sales organizations to market or provide services on their behalf.20

To understand how a white-label ATM operates, it is useful to consider how a typical ATM transaction works (that is, a customer using an ATM belonging to the customer’s bank), and then to compare it to transactions using ATMs owned by other financial institutions and white-label ATMs.

11 Exhibit 429, RCMP Project Scot Report, p 19.
12 Exhibit 430, WLTM Brief – Department of Finance (March 5, 2020), p 1.
16 Exhibit 430, WLTM Brief – Department of Finance (March 5, 2020), p 2.
18 Exhibit 429, RCMP Project Scot Report, p 7.
19 Ibid, p 16. Mr. Chandler explained that independent sales organizations find merchant locations, install the ATMs, service them, and gather information such as know-your-client information and source-of-funds declarations: Evidence of C. Chandler, Transcript, January 15, 2021, pp 128–29.
20 Exhibit 429, RCMP Project Scot Report, p 17.
Beginning with a typical ATM transaction, we can imagine a customer who banks with the Royal Bank of Canada (RBC) and uses an RBC ATM. The customer places their card in the ATM and makes a request for withdrawal. RBC verifies that the funds requested are available in the customer’s bank account. The transaction is validated and approved, and the approval is sent to the ATM. The cash is then dispensed. In this scenario, Interac’s Inter-Member Network has not come into the mix because the customer is using their own bank. Depending on the account, there may be no fee or a small service fee to RBC in this example.

Let us assume now that the RBC customer uses an ATM owned by the National Bank of Canada (National Bank). The customer places their card into a National Bank ATM and makes a request for withdrawal. A request for approval is made through Interac’s Inter-Member Network to RBC, which then verifies that the funds are available in the customer’s account. Once RBC verifies and approves the transaction, that approval is sent through the Inter-Member Network back to the ATM. The transaction is then settled through the Canadian Payment Association’s Automated Clearing Settlement System, and the funds are credited to National Bank’s account. A debit memo is then posted to the customer’s account, and the customer receives the cash. The customer often faces an additional charge for this sort of transaction on a different bank’s ATM.

Finally, let us assume that the RBC customer uses a white-label ATM. The customer puts their card into the ATM. This time, the request for approval must go through an independent sales organization and the indirect connector to the Inter-Member Network. There may also be other actors involved, such as a sub-independent sales organization. Once the transaction enters the Inter-Member Network, the process proceeds as above: RBC approves the transaction and communicates the approval to the white-label ATM through the Inter-Member Network. The transaction is settled, debited to the customer’s account, and credited to the white-label ATM owner’s account. The customer will pay a fee that goes to the white-label ATM operator for this transaction.

“Regulation” of White-Label ATMs

Mr. Chandler testified that white-label ATMs are subject to two forms of “regulation”: they must settle to a single bank account, and they must comply with Interac’s rules. Indeed, witnesses before me frequently referred to the “regulation” done by Interac. In my view, it is more accurate to speak of Interac’s rules, as Interac is not a regulator;

---

21 See ibid, p 14, for a diagram of this scenario.
24 See ibid, p 16, for a diagram of this scenario.
rather, it is a private, for-profit (though highly regarded) body that services a network. In any event, Interac’s rules are relevant and worth reviewing.

Interac’s Rules for White-Label ATMs

Interac’s rules – called the “Requirements for White Label ABM Cash Owners” – were adopted in March 2009 at the request of the federal Department of Finance. This in turn followed commentary in the Financial Action Task Force’s third mutual evaluation of Canada in 2008, which identified the white-label ATM sector as a potential source of money laundering risk and recommended strengthening controls. The mutual evaluation noted that white-label ATMs were a high-risk area not covered by the PCMLTFA, that the RCMP had observed their use by organized crime groups, and that a 2007 FINTRAC report had highlighted the vulnerability of these ATMs to money laundering. The fourth mutual evaluation report similarly found that white-label ATMs were a high-risk area not covered by the regime and recommended that Canada “[s]trengthen policies and strategies to address emerging [money laundering] risks (in particular white-label ATMs and online casinos).”

Mr. Morris testified that the federal government appeared to favour an industry-led solution rather than a public policy or regulatory response. It appears, however, that the RCMP would have preferred white-label ATMs to be subject to the PCMLTFA and required to register as money services businesses. The rules were finalized following discussions between Interac, Visa, Mastercard, the ATM Industry Association, the RCMP, the Ontario Provincial Police, the Department of Finance, FINTRAC, and industry.

The rules address four areas:

- customer due diligence (know-your-client requirements);
- source of funds;
- criminal background checks; and
- annual reviews to monitor compliance.

---

28 Exhibit 434, Interac – Overview WLCO Regs (2020). Note that white-label ATMs are sometimes referred to as white-label ABMs, short for “automated banking machines” rather than “automated teller machines.”

33 Exhibit 429, RCMP Project Scot Report, p 12.

Acquirers are responsible for verifying the identity of white-label ATM cash owners and obtaining source-of-funds documents for any white-label ATM they connect to the network.\textsuperscript{36} “Cash owners” are defined as those persons or entities that own or possess the cash that is loaded into the ATM or own the account through which the ATM funds are settled.\textsuperscript{37} The source-of-funds declaration must be maintained with each white-label ATM cash owner’s documentation and must be updated when changes occur.\textsuperscript{38} Interac verifies the identity of each prospective acquirer and conducts background checks on key personnel, including directors and officers.\textsuperscript{39}

The rules classify cash owners as low risk or high risk. Cash owners are considered low risk if they:

- supply cash to a single ATM;
- supply cash to between two and four ATMs with a daily average settlement not exceeding $5,000 in the aggregate;
- are a publicly traded company;
- have a provincial or federal gaming certificate; or
- are a public body.\textsuperscript{40}

Cash owners that do not qualify as one of the above are considered high risk. Criminal record checks are required for all high-risk cash owners. If the cash owner is not an individual, a criminal record check must be obtained for all individuals who own or control over 25 percent of the entity, or for individuals with signing authority.\textsuperscript{41} At the time of the Commission’s hearings, there were 84 high-risk cash owners in BC.\textsuperscript{42}

Mr. Morris agreed that a cash owner could still be considered low risk even if they supply substantial amounts of cash to one ATM. Similarly, an entity or individual could have a combined settlement value of just under $5,000 a day for up to four ATMs, totalling around $1.8 million per year, and still be considered low risk.\textsuperscript{43}

Acquirers are responsible for ensuring that reviews by a qualified auditor are conducted for each cash owner they connect to the Interac network.\textsuperscript{44} The auditor ensures that the proper documentation is being collected and the rules are being followed. They must also report non-compliance or suspicions of criminal activity to Interac, so that the

\textsuperscript{44} Exhibit 434, Interac – Overview WLCO Regs (2020), p 9.
latter can take steps to refer the matter to authorities where appropriate. Mr. Morris is not aware, however, of an auditor uncovering any criminal activity since Interac’s rules have been in effect or of any referrals relating to money laundering.45

The most extreme “sanction” that Interac can impose for failure to comply with its rules is disconnecting the ATM from the network. Mr. Morris testified that Interac would disconnect a user if it was aware of any money laundering or suspected money laundering activity or other criminal activity. However, he is not aware of any white-label ATM being disconnected for non-compliance or of any referrals being made to law enforcement.46

**Interac’s Investigation Unit**

In addition to its rules, Interac has an investigation unit that deals with payment fraud and financial crime. This unit is meant to act as a liaison between Interac and stakeholders such as financial institutions and law enforcement.47 It was implemented to enhance the flow of information between Interac and law enforcement and to provide a point of contact for the latter for assistance in its investigations.48

Mr. Morris believes that the unit has existed since approximately 2008.49 Its primary activities relate to the prevention, detection, management, and ongoing investigation of payment card fraud.50 It supports law enforcement directly and through the fulfillment of court orders, and also works with financial institutions and law enforcement to prevent, detect, and manage fraud and related activity.51 Interac also provides education to the law enforcement community on the means of identifying and detecting criminal activity in the payment space and works with law enforcement on community messaging.52

To Mr. Morris’s knowledge, the investigation unit has never received a request for information from Interac relating to potential money laundering or proceeds-of-crime investigations involving white-label ATMs.53 It is unclear whether the lack of referrals by Interac, or inquiries from law enforcement, stems from a lack of money laundering activity through white-label ATMs or from other factors such as the generally low numbers of investigations into money laundering in this province and the difficulties in obtaining convictions (see Part XI). Whatever the reason for the low referral numbers, I elaborate on the risks in this sector below.

48 Exhibit 430, WLTM Brief – Department of Finance (March 5, 2020), p 2.

50 Ibid, p 186.
51 Ibid, pp 186–87. Mr. Morris explained that Interac typically requires a production order to share information with law enforcement, though it has some participation agreements that address information sharing with law enforcement, government, and regulatory authorities: ibid, p 193.
52 Ibid, p 187.
53 Ibid, p 188.
Other Codes and Standards

White-label ATMs are subject to other codes and standards apart from the Interac rules. The Standards Council of Canada has a voluntary code of standards applying to ATMs, which covers the construction and security performance and seeks to provide protection against the unauthorized removal of currency.\(^{54}\) The Office of Consumer Affairs also has a voluntary code of practice for consumer debit card services, which outlines industry practices and consumer and industry responsibilities.\(^{55}\) Finally, the Canadian Payments Association’s rules address information protection and verification requirements during the encryption and decryption of PINs.\(^{56}\) Although it is good that white-label ATMs are subject to these standards, I note that none of them appear to address anti-money laundering.

Money Laundering Risks

There was dispute in the evidence before me on the question of whether white-label ATMs pose money laundering risks and, if so, how significant they are.

The RCMP takes the view that there are significant risks. An RCMP project known as “Criminal Intelligence Project Scot”\(^ {57}\) focused on white-label ATMs and resulted in a November 2008 intelligence report.\(^ {58}\) Melanie Paddon, a former sergeant at the RCMP and an investigator with the Joint Illegal Gaming Investigation Team, testified that this is the most recent RCMP report on white-label ATMs of which she is aware.\(^ {59}\) I note that this report precedes the adoption of Interac’s rules in 2009.\(^ {60}\)

Some key conclusions from the report include the following:

- Lack of government regulation in the white-label ATM industry has “allowed it to grow at unprecedented levels and be used by organized crime to launder proceeds of crime and commit other crimes.”\(^ {61}\)

- Organized crime groups including the Hells Angels Motorcycle Club have infiltrated the white-label ATM industry at levels close to 5 percent of the sector (or possibly higher). This could grow to 20 percent of all white-label ATMs.\(^ {62}\)

• Outlaw motorcycle gangs have laundered money through white-label ATMs since the late 1990s in several provinces, including British Columbia.63

• There are reports of proceeds of crime from drug trafficking, loan sharking, illegal gaming operations, prostitution, and other crimes being laundered through white-label ATMs.64

• “The potential amount that could be laundered through the ‘white label’ ATM industry is approximately $315 million and could easily reach $1 billion annually.”65

The report calls for a registry and monitoring system to address the fact that white-label ATMs are not subject to the PCMLTFA.66 It also lists the following major concerns relating to white-label ATMs:

• Anyone can own or operate a white-label ATM.

• There are few due diligence requirements.

• Owners can load cash into the machine themselves.

• Owners are asked on a one-time basis to identify the source of their funds.

• White-label ATMs are not subject to any government regulation.67

The report further notes that white-label ATMs are not subject to the federal Bank Act and are therefore not regulated by the Office of the Superintendent of Financial Institutions.68

As I understand it, the concerns about money laundering through white-label ATMs are as follows. The white-label ATM can be loaded with illicit cash, in whole or in part. When customers withdraw cash from the white-label ATM, they may or may not be aware that some or all of the cash is illicit. As the white-label ATM facilitates a withdrawal from a financial institution, that transaction is later settled and the money that was withdrawn is ultimately sent to the bank account associated with the white-label ATM. In this way, the white-label ATM has provided illicit cash to customers and the cash owner receives “clean” money from the financial institution through the settling process.69

The RCMP’s 2008 report notes that using a white-label ATM can skip the “placement” stage of money laundering because money loaded into the machine is electronically

64 Ibid, p 1.
65 Ibid. These figures were arrived at by considering institutions known to be used by organized crime groups to launder money and assumes that they would be making monthly withdrawals of $15,000 and monthly disbursements of $60,000 to $80,000: ibid, p 29.
67 Ibid, pp 2, 5.

69 Ibid, p 27.
deposited into the bank account associated with it. Further, use of a white-label ATM avoids face-to-face contact with employees of the financial sector who could detect suspected activities and fulfill know-your-client requirements. Sergeant Paddon explained that illicit and legitimate funds can be intermingled, thereby complicating police investigations. She added that, because of the lack of government regulation or oversight, criminal organizations can continue their activity without having to report to FINTRAC or elsewhere. The RCMP report further notes that use of white-label ATMs can circumvent cross-border currency and electronic funds transfer requirements because:

- funds can be wired to offshore accounts and then sent back as a cheque, which can then be deposited in Canada;
- white-label ATMs can be linked to a foreign bank account and avoid the $10,000 reporting threshold, given that the activity is usually less than that;
- use of a white-label ATM can avoid the involvement of cash couriers; and
- cash deposited in Canada can be accessed anywhere in the world through ATM networks, which essentially allows for international transfer of money into local currency and circumvention of currency import and export restrictions.

Other issues involve the possibility of counterfeit bills being loaded into machines, skimming operations (in which a white-label ATM skims information from a credit card or a person’s bank account information), tax evasion, and fraud. Sergeant Paddon added that because white-label ATMs are not regulated, law enforcement relies on its partners (including FINTRAC and financial institutions) to flag issues for it.

A briefing note from the federal Department of Finance dated March 5, 2020, discusses money laundering and terrorist financing risks relating to white-label ATMs. It notes that some observed money laundering and terrorist financing risks include:

- that an ATM can be loaded with illicit cash without the owner’s knowledge;
- that a business owner involved in criminal activity or with connections to organized crime can load an ATM with illicit cash; and
- that a company can be created that purportedly owns or operates white-label ATMs, but can be used as a cover for criminal activities, given that these are cash-based businesses.

76 Exhibit 430, WLTM Brief – Department of Finance (March 5, 2020).
77 Ibid, pp 2–3.
The briefing note concludes that there are money laundering vulnerabilities in the white-label ATM sector. It also expresses concerns about the ownership structure, in the sense that Interac may not be aware of owners and operators, who rely on and interface with direct and indirect connectors.  It emphasizes, however, that the risks do not relate to withdrawals by clients:

The money laundering vulnerability does not lie with the clients withdrawing funds from the WLATMs [white-label ATMs]. Authorized third parties, independent of the ATM cash owner, record and retain information about every dollar that passes through a WLATM in Canada. The information recorded by third parties includes a transaction record number, the amount withdrawn, the date and time of the withdrawal and the Canadian bank account to which the funds withdrawn are electronically settled. There are no WLATM withdrawals and settlements of any amount, at any time, that are anonymous. Independent third parties clearly record and retain the details of the money flow. The WLATM vulnerability lies in the loading of the machines, which can be done anonymously. Companies owning and loading WLATMs for themselves or other legitimate businesses may be criminally controlled. Criminals can offer ATM services within different legitimate businesses or set them up in their own businesses, and load those ATMs with illicit cash. [Emphasis added.]

Like the RCMP report, the briefing note highlights the unregulated nature of the industry and the lack of oversight, which can “provide organized crime a favourable environment to use ATMs to conduct various illegal activities, including money laundering, fraud and distribution of counterfeit money.”

I heard a very different account of the money laundering risks in this sector from industry witnesses. Mr. Chandler emphasized that there is no evidence that people are actually laundering money through white-label ATMs. He notes that there have been only a handful of cases since 1996, which does not line up with the RCMP report’s estimate of the activity reaching $300 million to $1 billion per year. He added that white-label ATMs need to comply not only with Interac’s rules but also with BC Gaming Commission regulations (where the ATM is located in a casino).

Mr. Chandler argues that there has been undue focus on white-label ATMs. He testified that business owners can get cash into a bank account by depositing it through:

- a bank deposit-taking ATM;
- a bank night depository;

---

78 Ibid, p 3.
82 Ibid, p 161.
• a bank teller; or
• a white-label ATM.83

In Mr. Chandler’s view, the first two options are just as anonymous as a white-label ATM.84 Further, while the first three options accept any quality and denomination of cash, white-label ATMs accept only “ATM-quality” cash – flat, undamaged $20 bills.85 He added that the first three options could involve deposits into multiple bank accounts; in contrast, white-label ATMs can be associated with only one account and must satisfy that bank’s know-your-client requirements.86 Another distinction is that the first three options require large cash transaction reports and source-of-funds declarations for transactions of $10,000 or more; in contrast, white-label ATMs must fill out source-of-funds declarations for transactions of $5,000 or more, as well as provide a background check if they operate multiple white-label ATMs.87 Finally, Mr. Chandler pointed out that transactions through an ATM are tracked and recorded by third-party processors, whose records are provided to the Interac Association, audited annually, and made available to law enforcement upon request.88

A position paper prepared by the ATM Industry Association expresses the view that exaggerating the risks in the white-label ATM sector is harmful to small businesses and causes unnecessary doubts for customers about the safe, reliable, and convenient access to cash that white-label ATMs provide.89 It opines that media stories about the risks associated with these ATMs are based on anecdotal evidence only, and notes that the one case where a conviction was obtained – the Banayos case, reviewed below – is the only one since 1996 that has involved a conviction.90 On this point, Sergeant Paddon testified that she is aware of investigations involving white-label ATMs that have not resulted in a charge or conviction, noting that it is difficult to obtain money laundering convictions.91 Mr. Chandler responded that this singles out the white-label ATM industry when other industries also involve investigations that do not result in charges.92

I was referred to one case in which the owner of a white-label ATM was found to be involved in money laundering: the Banayos case.93 I note at the outset that my discussion of this case is reliant on the findings of the Manitoba courts, and I make no findings of my own. The case was the culmination of a Winnipeg Police Service

93 R v Banayos and Banayos, 2017 MBQB 114, aff’d 2018 MBCA 86, leave to SCC denied 38296.
investigation called “Project Sideshow” that took place from early 2012 until February 2014.\footnote{R v Banayos and Banayos, 2017 MBQB 114 at para 1.} It involved a sister and brother who were charged with money laundering (among other things). The trial judge found that Mr. Banayos was operating a drug trafficking business and an ATM business involving several ATMs.\footnote{R v Banayos and Banayos, 2018 MBCA 86 at para 10.} Although Mr. Banayos operated the ATM business, Ms. Banayos was listed as the owner and operator because of the requirement to obtain a criminal record check.\footnote{Ibid, para 17(b).} She indicated on her source-of-funds declaration that the cash used to load the ATM would come from her RBC bank account. However, the trial judge determined that in at least two instances – when the sister's account balance was $0 and when the account was frozen – the cash could not have come from the RBC account.\footnote{Ibid, paras 17(b) 35–37.} Given those circumstances, as well as others, the trial judge concluded that the cash used to load the ATM had come from the brother's drug trafficking business, which was done in furtherance of a money laundering scheme.

Mr. Chandler expressed the view that the Banayos case shows that money laundering through ATMs is not an effective method:

[T]his case kind of supports what we’ve been saying … [M]y understanding of this case is they started money laundering and within six months and about $100,000 if that recollection is correct, they were caught and the documentation was there to convict them. And that has been our premise from the beginning. This is not a smart place to money launder because you will get caught, likely quickly and you will certainly have a high chance of being convicted. So this [case] supported that.\footnote{Evidence of C. Chandler, Transcript, January 15, 2021, p 213.}

Conversely, Sergeant Paddon testified that she has come across a number of files that involved white-label ATMs. Although the ATM may not have been the main focus of the cases, “often organized crime groups would use white-label ATMs to launder their funds.”\footnote{Evidence of M. Paddon, Transcript, January 15, 2021, p 158.} She added that money laundering convictions are very difficult to obtain; therefore, while many cases involve white-label ATMs, they do not all result in charges.\footnote{Ibid pp 169–70.}

On the evidence before me, I am unable to arrive at conclusions on how frequently white-label ATMs are used to launder money. Clearly, it is possible to do so, as illustrated by the Banayos case. It also appears, from Sergeant Paddon’s testimony, that the potential for using white-label ATMs to launder money is on law enforcement’s radar, though it is less clear how often the ATMs are a main focus of such investigations. While I accept that there is a risk of white-label ATMs being used to launder money, I am unable to determine whether that risk is significant or greater.
than that attaching to various other forms of money laundering, or whether white-label ATMs have actually been exploited to a significant degree. In fact, the various rules applying to white-label ATMs – including that cash owners must settle with a single bank account, are subject to audits, are required to comply with various know-your-client obligations, and must load machines with ATM-quality cash – would seem to lessen the risks significantly. Indeed, the fact that cash owners are required to settle with a single bank account suggests that FINTRAC has at least some visibility into the activities of white-label ATMs, as financial institutions have obligations under the PCMLTFA in respect of those accounts.

It is also striking that despite the RCMP estimating, in 2008, that money laundering through white-label ATMs could “easily reach $1 billion annually,” it appears that only one case has resulted in convictions for money laundering. Moreover, given that law enforcement has never made use of Interac’s investigation unit in relation to potential money laundering or proceeds-of-crime investigations, it is impossible to know if inquiries by law enforcement would have established some suspicious activity, significant amounts, or none. I expect that, in future, law enforcement will make use of the unit when it has suspicions involving white-label ATMs.

The foregoing is not a conclusion that no money laundering is occurring through white-label ATMs in this province. Rather, there has been insufficient use of investigative avenues to determine if such activity is occurring. In the absence of such investigative activity, I am unable to draw conclusions about the extent to which white-label ATMs have been used to launder money in British Columbia. Below, I discuss the role that the AML Commissioner recommended in Chapter 8 and new intelligence and investigation unit recommended in Chapter 41 might play in gaining further insight into money laundering risks and activity in this area.

**Should White-Label ATMs Be Subject to Provincial Regulation?**

In line with the debate surrounding money laundering risks associated with white-label ATMs, I heard differing views about whether white-label ATMs should be subject to regulation under the PCMLTFA, a provincial scheme, or both. As I explained above, white-label ATMs are not currently subject to the PCMLTFA, nor are they caught by the federal Bank Act. As a result, the only “regulation” to which they are subject is Interac’s rules and the requirement that they be associated with only one bank account. They therefore have no reporting obligations, nor are cash owners required to implement a compliance program as they would be under the PCMLTFA regime. While the Interac regime does involve periodic audits of white-label ATM owners, it is not clear that these are equivalent to compliance exams conducted by FINTRAC, nor the kind of regulation that a provincial regulator could undertake. Further, the only “sanctions” to which white-label ATMs can be subject under the Interac regime

101 Exhibit 429, RCMP Project Scot Report, p 1.
is a loss of their ability to access the network. This is in contrast to penalties available under regulatory regimes, which typically include fines and loss of a licence.

The exception in this country is Quebec. As I discuss in Chapter 21, white-label ATMs are deemed to be money services businesses in that province and are therefore captured by the Quebec Money Services Businesses Act, CLQR c E-12.000001. I will not repeat all the aspects of that regime here (discussed in detail in Chapter 21), except to note that it involves provincial licensing; police checks; and requirements relating to customer identification, record-keeping, and reporting. The scheme also provides for administrative monetary fines and penal provisions.

The Financial Action Task Force’s third mutual evaluation of Canada in 2008 concluded that the measures in place at that time (which pre-dated the Interac rules) did not adequately address the risks in the white-label ATM sector. It suggested that Canada consider a registration and monitoring system for owners of white-label ATMs. Similarly, the fourth mutual evaluation in 2016 noted that all high-risk areas were covered by the PCMLTFA regime “with the notable exception of ... white-label ATMs.” In the evaluators’ opinion, white-label ATMs were vulnerable to money laundering and terrorist financing, referencing the RCMP’s view that they are used by organized crime to launder proceeds of crime. The report recommended that Canada “[s]trengthen policies and strategies to address emerging [money laundering] risks (in particular white label ATMs ... ).”

Canada’s 2015 national risk assessment noted that although white-label ATMs were excluded from the PCMLTFA, Canada would continue to assess the money laundering and terrorist financing risks associated with them. A 2018 report of the House of Commons Standing Committee on Finance recommended that the white-label ATM sector be included in the PCMLTFA regime.

British Columbia is considering the possibility of regulating white-label ATMs. Joseph Primeau, acting executive director of the policy branch of the finance, real estate, and data analytics unit at the BC Ministry of Finance, testified that the Province is considering engaging an external expert to assess the money laundering risk associated with white-label ATMs. He hopes that such a consultation would shed some light on the question of whether it is efficient to launder money through white-label ATMs, and added that the Province would like to clarify what happens in networks other than Interac.

---

104 Ibid, p 16, para 53.
109 Evidence of J. Primeau, Transcript, December 1, 2020, pp 142–43.
110 Ibid, pp 144–45.
Sergeant Paddon testified that, in her view, a registry of white-label ATM owners would be helpful in gathering intelligence and uncovering beneficial owners, overseas corporations, real estate assets, and bank accounts. It would also be useful for sharing information with partners, such as FINTRAC and the Canada Revenue Agency. However, she opined that it would likely be more effective for FINTRAC to be the central monitoring system rather than a provincial regulator.111 The BC Ministry of Finance consultation on money services businesses (see Chapter 21) noted that the RCMP considers white-label ATMs to be vulnerable to money laundering because of the little or no oversight; believes that reporting by banks about white-label ATMs can be avoided by cash owners; is aware of money laundering activities through white-label ATMs based on specific cases and intelligence research; and considers that a regulatory regime would assist with investigations, which are challenging.112

According to the consultation paper, Revenu Québec expressed the view that “it is unclear whether the regime is working, although it certainly makes it more difficult to launder money; however, [white-label ATM] regulation does pose [a] volume problem with sprawling investigations with complex structures.”113

The consultation paper equally notes, however, that the ATM Industry Association emphasized the rigour of Interac’s rules, that white-label ATMs are an inefficient way to launder money, and that Quebec’s regime is onerous on businesses.114 Indeed, Mr. Chandler and the ATM Industry Association are strongly opposed to additional regulation. In Mr. Chandler’s view, the Quebec regime is “wholly redundant with the Interac regulations” and in some ways, Interac’s rules are more extensive than the PCMLTFA.115 He testified that the Quebec regulator has had “extreme difficulties” implementing the legislation, noting that the regulator’s difficulties locating ATM operators have led to “scandalous headlines” accusing operators of being untoward when there was no wrongdoing.116 Further, he considers that operators are “persecut[ed] by association” when they may be associated with bad actors but are not bad actors themselves.117

Mr. Chandler believes that white-label ATMs were brought into the Quebec regime based on the RCMP’s 2008 report, which he emphasized he had never seen before the Commission’s hearing despite making requests.118 The ATM Industry Association has unsuccessfully tried to persuade the Quebec government to remove white-label ATMs from the regime.119 Mr. Chandler opined that further regulation would lead to half of all white-label ATMs leaving the marketplace because of the increased burden.120 Overall,

113 Ibid.
114 Ibid, p 5.
119 Ibid.
he says that white-label ATMs are meeting a high standard through the Interac rules, that there is already a significant burden on small business owners, and that further regulation is not justified given the little evidence of money laundering in this sector.\textsuperscript{121}

In my view, there are enough uncertainties with respect to white-label ATMs that the Province should not, as this time, subject them to regulation. Instead, the AML Commissioner proposed in Chapter 8 should study the money laundering risks attaching to white-label ATMs.

I arrive at this conclusion for several reasons. First, as I discussed above, the money laundering risks associated with white-label ATMs are not especially clear. While I accept that it can happen (and has, as demonstrated by the \textit{Banayos} case), it is not obvious how widespread the problem is. Second, there are suggestions in the evidence that the Quebec regime is not seen as particularly effective as it relates to white-label ATMs. Before beginning what could be a costly process of identifying all white-label ATMs in the province and ensuring they are licensed, I believe it would be useful to first study the problem further. In this regard, the Province should continue to engage with Quebec to learn from its experiences. Third, it is striking that law enforcement has never made use of Interac’s investigative unit to request documents or other information about suspected money laundering involving white-label ATMs. Before implementing a likely costly regulatory solution, the avenues that are currently available should be used. I would encourage the designated provincial money laundering intelligence and investigation unit recommended in Chapter 41 to explore and make use of information and intelligence available from Interac. Finally, it may be that regulation of white-label ATMs would be more appropriate at the federal level by subjecting them to the \textit{PCMLTFA}, as Sergeant Paddon suggested. The Province should engage with the federal government to determine if this possibility is being explored.

\section*{Conclusion}

This chapter has examined the white-label ATM sector and the money laundering risks that arise within it. Although one can intuitively describe risks that arise with white-label ATMs, the state of the evidence and the level of investigation by law enforcement are such that I am unable to draw firm conclusions about the extent of money laundering that is actually occurring through white-label ATMs. It will be important for the AML Commissioner to study this area and report to the Province on his or her findings. I also encourage the designated provincial money laundering intelligence and investigation unit recommended in Chapter 41 to be alive to the money laundering risks associated with white-label ATMs and to leverage intelligence available through Interac to further investigations in this area where appropriate. While I do not propose, at this time, that white-label ATMs be subject to provincial regulation, it may be that the AML Commissioner’s further study reveals that such regulation would be desirable.

\textsuperscript{121} Ibid, pp 199–201.
Section 4(1)(iv) of my Terms of Reference requires me to make findings on the extent, growth, evolution, and methods of money laundering in the corporate sector, in particular, “the use of shell companies, trusts, securities and financial instruments for the purposes of money laundering.”

In Chapter 23, I review the well-known money laundering risks associated with corporate and other legal arrangements, as well as first steps that have been taken toward greater beneficial ownership transparency in Canada. As I discuss below, there is a near consensus that a beneficial ownership registry is needed in British Columbia; the question is no longer whether the Province should implement such a registry, but how it should be done. The federal government has recently given a strong push to a national beneficial ownership transparency registry, even committing to its speedy implementation. In light of this pan-Canadian approach, which I strongly support, my focus in Chapter 24 is to describe the federal initiative and identify how the Province can best support a national beneficial ownership transparency registry.
Chapter 23
Money Laundering Risks Associated with Corporate and Other Legal Arrangements

There are well-accepted money laundering risks associated with corporations and other legal arrangements. These risks stem principally from the anonymity that such arrangements provide, in that they allow individuals to conduct transactions under the guise of a legal person and make it difficult or impossible to trace the activity back to the individual(s) behind the legal person. This kind of anonymity has clear benefits to criminals seeking to conceal their ill-gotten gains and introduce them into the formal financial system.

In this chapter, I discuss how money launderers use corporate structures to facilitate their laundering activities, how they can hide their involvement through anonymous shell companies, and how anonymizing their ownership presents challenges for law enforcement. I note that there are parallels to be drawn with the problems of anonymity and the resultant trend towards transparency in the real estate sector, which I address in Part IV of this Report. Given the unique and critical role that corporations and other legal arrangements play in a vast number of money laundering schemes, I feel it important to address these issues separately in this chapter.

I am encouraged that many countries are moving toward beneficial ownership registries, in which the true identities of beneficial owners must be disclosed and made accessible to competent authorities and, in many cases, the public. As I expand later in this chapter, both the federal government and several provinces have taken steps toward developing a beneficial ownership regime. In Chapter 24, I focus on the new federal initiative, which will permit a national registry, and offer my suggestions on what steps British Columbia might take as part of a pan-Canadian effort to require transparent corporate ownership.
When it comes to the development of a beneficial ownership regime, any one province can only do so much. While these types of registries have the potential to make it easier for law enforcement to trace the movement of suspect funds across provinces and internationally, these efforts will be much more effective if there is coordination at federal, provincial, and territorial levels, as well as coordination with foreign countries. For this reason, the federal government’s announcement on March 22, 2022, that it would implement “a publicly accessible beneficial ownership registry by the end of 2023” presents a real opportunity for the Province to participate in effective reform. While details of the federal registry remain to be determined, my emphasis in Part VI will be to position British Columbia to advocate for a pan-Canadian registry that is as effective as possible.

**The Issue: Misuse of Legal Entities to Facilitate Money Laundering**

Over the course of the Commission’s hearings, I heard considerable evidence about how corporate and other legal arrangements are misused to facilitate criminal activity, including money laundering. It is important to recognize at the outset that corporate and other legal arrangements play an important and overwhelmingly legitimate role in the provincial and global economies. However, it is also important to recognize that such legal arrangements are essential to many money-laundering schemes. They are used to facilitate the movement of illicit proceeds into and out of the financial system, while concealing the owners of the proceeds and their criminal origins. They also serve to minimize the risk of detection, investigation, and prosecution for criminals. The fundamental policy challenge this presents is how to reduce the ease with which criminals exploit these legal structures and obtain benefit from them – which is largely a function of the anonymity they can afford – while safeguarding their legitimate functions and the rights of Canadians.

A key concept when considering the risks associated with corporations and other legal entities is that of “beneficial ownership.” Put simply, a beneficial owner refers to the natural person who ultimately owns or controls a legal entity. A beneficial owner can be contrasted with a legal owner, which refers to the person – natural or legal – who holds legal title to an asset. The beneficial and legal owner can be the same person, but are not always. Indeed, as I elaborate below, the legal owner of an entity such as a corporation is frequently not a natural person, and the beneficial owner may be difficult to determine due to multiple layers of legal title, nominees, or other legal artifices. It is

---

3 A nominee shareholder is “the registered owner of shares held for the benefit of another person.” Legally, the nominee is responsible for the operation of the company and accepts legal obligations associated with the company directorship or ownership. However, nominees sometimes hold the position of a director or shareholder in name only, on behalf of someone else: Exhibit 4, Appendix U, FATF/Egmont Beneficial Ownership Report, pp 36–37, para 84.
this very phenomenon that causes much of the money laundering concern in relation to corporations and legal entities— not knowing who is ultimately directing or controlling a legal entity. Corporations and other legal arrangements such as trusts can be used to facilitate money laundering in numerous ways that span the full gamut of money laundering schemes and economic sectors. As Professor Stephen Schneider explained, the range of money laundering techniques and methods that corporate and other legal arrangements are used to facilitate is “almost unlimited” and implicated in every phase of the money laundering process, from placement through to layering and extraction.4 This sentiment is echoed in studies by international bodies such as the Financial Action Task Force (FATF), which has concluded that legal persons are a “key feature” in schemes by criminals to obscure their true ownership and control of illicitly obtained assets.5

During the placement phase of money laundering, criminally controlled corporations—which are often “shell” or “shelf” companies,” but may also involve otherwise legitimately operating “front businesses”6– can be used to claim illicit proceeds as legitimate revenue, sometimes commingled with legitimate income, which are then introduced into the financial system.7 Robert Gilchrist, director general of Criminal Intelligence Service Canada, testified that, of 176 organized crime groups identified as being involved in money laundering in Canada, 28 percent were suspected of using private-sector businesses in this manner to hide and facilitate the laundering of their proceeds of crime— including by commingling legitimate and criminal proceeds, falsifying receipts and invoices, and using corporate accounts to purchase assets like real estate—and “further obscure the origin in ownership.”8 Similarly, a study by the World Bank that reviewed over 200 cases of large-scale corruption and other crimes (such as tax evasion, sanctions-busting, terrorist financing, and money laundering) between 1980 and 2010 found that anonymous shell companies were used in 70 percent of such crimes.9

During the layering stage of money laundering, illicit funds can be cycled between different entities and accounts that, while appearing to be unrelated and legitimate, are all controlled by the same individual or criminal network. Beneficial ownership can be further obfuscated through the use of complex legal ownership structures,
bearer shares,10 nominees, trusts, financing and loans, or other legal arrangements. These complex structures can be contrived to span multiple jurisdictions, further adding to the challenge for law enforcement of tracing ownership and assets and connecting them back to the predicate offence and offender. Journalist Oliver Bullough described how, once these structures are in place, dirty money can be bounced through “multiple bank accounts in multiple jurisdictions, each of them owned by a different corporate structure or registered again in different jurisdictions,” thereby confusing “the picture so hugely that it becomes very, very hard to follow what’s going on.”11 There is a fundamental asymmetry to this cat-and-mouse game, insofar as the cost to criminals to establish and maintain these legal contrivances is minimal, whereas the challenge to law enforcement in unravelling them is considerable.

This misuse of corporate and other legal arrangements is by no means a theoretical problem or one confined to other jurisdictions viewed as traditional secrecy havens. According to analysis by the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC),12 roughly 70 percent of all money laundering cases in Canada involved the misuse of corporate legal entities, both to channel foreign proceeds of crime into or through Canada, as well as to launder domestically generated proceeds.13 Typologies identified in FINTRAC’s analysis included:

- foreign politically exposed persons14 creating legal entities in Canada to facilitate the purchase of real estate and other assets with the proceeds of corruption;
- laundering criminal proceeds through shell companies in Canada and then wiring the funds to offshore jurisdictions; and
- using Canadian front companies to layer and legitimate unexplained sources of income and to commingle them with or mask them as profits of legitimate businesses.15

---

10 Bearer shares are “company shares that exist in certificate form and are legally owned by the person that has physical possession of the bearer share certificate at any given time. Ownership and control of bearer shares can be exchanged anonymously between parties by way of physical exchange alone, as no record of the exchange needs to be documented or reported”: Exhibit 4, Appendix U, FATF/Egmont Beneficial Ownership Report, p 36, para 81.

11 Evidence of O. Bullough, Transcript, June 1, 2020, p 56.

14 See Chapter 3 for a more detailed discussion of politically exposed persons. Briefly, the term refers to persons who are or have been entrusted with a prominent public function, including heads of state, senior politicians, senior government staff, judicial or military officials, senior executives of state-owned corporations, and important political officials. Due to the nature of their positions, they are considered to be at a higher risk of becoming involved in bribery and corruption offences, which in turn gives rise to the need to launder the unlawful profits they receive.

Canada’s 2015 national risk assessment\textsuperscript{16} assessed the inherent money laundering vulnerability of legal entities in Canada (including corporations and trusts) to be “very high,” as a direct consequence of the ease with which they can be created and used to conceal beneficial ownership and thus facilitate the disguise and conversion of illicit proceeds.\textsuperscript{17} Graham Barrow, a specialist in identifying corporate ownership structures used in laundromat schemes, testified that he was able to identify, using the UK’s publicly accessible beneficial ownership registry, a considerable number of Canadian legal entities – alongside those from Dominica, Seychelles, Marshall Islands, Nevis, and other traditional “secrecy” jurisdictions – combining to form highly complex and opaque control structures directly associated with global money laundering schemes.\textsuperscript{18}

In its own extensive studies of the issue, the Financial Action Task Force categorizes the techniques used by criminals to obscure beneficial ownership into three broad methods:

1. **generating complex ownership and control structures** through the use of legal persons and legal arrangements, particularly when established across multiple jurisdictions;

2. **using individuals and financial instruments to obscure the relationship between the beneficial owner and the asset**, including bearer shares, nominees, and professional intermediaries; and

3. **falsifying activities** through the use of false loans, false invoices, and misleading naming conventions.\textsuperscript{19}

Despite the diversity of these methods and techniques, they are all enabled by and largely dependent on one thing: anonymity. It is the ease with which criminals can conceal their true ownership control behind a web of corporate and other legal contrivances – which otherwise exist in “plain sight” – that is the root of the problem. It is for this reason that the former deputy director of FINTRAC, Denis Meunier, has described corporate anonymity as the money launderer’s “secret sauce.”\textsuperscript{20} Were this anonymity removed, the façade of legitimacy could be peeled back to reveal the real-

\textsuperscript{16} Exhibit 3, Overview Report: Documents Created by Canada, Appendix B, Department of Finance, Assessment of Inherent Risks of Money Laundering and Terrorist Financing in Canada 2015 (Ottawa: 2015).

\textsuperscript{17} Ibid, p 32.

\textsuperscript{20} See Denis Meunier, Hidden Beneficial Ownership and Control: Canada as a Pawn in the Global Game of Money Laundering (Toronto: CD Howe Institute, 2018), cited in Exhibit 6, p 95, footnote 291, and available online: https://www.cdhowe.org/sites/default/files/2021-12/Final%20for%20advance%20release%20Commentary_519_0.pdf.
world criminal ownership and control present throughout the money laundering process. As it stands now, law enforcement is often frustrated in attempts to unravel the true identities behind corporate and other legal entities, particularly those that have complex, multilayered ownership and control structures spanning multiple jurisdictions. The consequence is that vast, often impenetrable shadows are cast across our economies – shadows in which criminals are able to hide and thrive.

There has been some debate in the evidence and submissions before me as to whether anonymity is a legitimate feature of corporate personhood. For example, Mr. Bullough opined that corporations are essentially a form of insurance through which society communicates to businesspeople that if they make an investment that will grow the economy to the benefit of all, society will insur the risk through limited liability. For that reason, Mr. Bullough's view was that it was “absurd that a company can be anonymous.” Similarly, Mora Johnson, an Ottawa-based lawyer with expertise in responsible business practice, testified that there is no principled justification for the anonymity of companies; “it’s a fundamental policy choice to displace risks and to alter risks in the free market.” Chris Taggart, executive director of Transparency International Canada, described the benefits that individuals receive from incorporation and the resultant anonymity as follows:

[W]hat’s happening is when somebody creates one of these legal constructs, they create a legal person ... who can act on their behalf ... [T]hat person can hold assets; it can owe money; it can employ people; it can enter into contracts on their behalf; it can even break the law. So, the owners get the benefit from this proxy person, but they don't get any of the downsides ... [T]hey get the money, they get the activities, they get the influence, but they ... don't get hit by losses and they don't go to jail if the company has broken the law in most cases.

And so ... this proxy for the owner, which is ... almost like an avatar or someone they can control by remote control ... it doesn't just do this in the jurisdiction where the owner's based and where the company's incorporated. It can do this anywhere in the world. So you have this sort of ... remote-control person that can go off and do all sorts of things, can get the benefits and even if it's caught functionally, mostly ... the recourse is the assets of that local company and not to the people that are behind them.

And so this is a tremendously powerful thing ... [and you] can have companies controlling companies controlling companies. You can have them diverting their control. You can ... make this incredibly complex. ...

22 Evidence of O. Bullough, Transcript, June 1, 2020, pp 59-60; see also Exhibit 55, BC Ministry of Finance, BC Consultation on a Public Ownership Registry (January 2020), p 7; Exhibit 283, Submission to the Cullen Commission of Mora Johnson (November 2020), p 3.
23 Evidence of M. Johnson, Transcript, November 30, 2020, p 27.
[For example, a] Russian hacker or something controlling a computer in the Seychelles that controls a computer in the Cayman Islands that controls a computer in Nevada that controls a computer in British Columbia and then hacks somebody’s bank account ... and they’re using all of these to obfuscate it. And of course ... by the time ... that crime becomes visible, the network’s gone or functionally it’s gone. The money’s gone. You can’t get back at that person.24

On the other side, the British Columbia Civil Liberties Association highlighted the impact on privacy that abolition of anonymity would entail. These privacy impacts would be felt by both the corporation itself and the individual beneficial owners. In respect of the latter, the impact would be felt on privacy interests in respect of financial information, and also in respect of sensitive personal information that might be made public such as names, aliases, birth dates, citizenship, addresses, and status as a politically exposed person. The BC Civil Liberties Association raised a further concern that making such information public gives rise to a risk of identity theft, fraud, and harassment.25

Having considered all of the evidence and submissions before me, I have concluded that there are strong and compelling reasons to require disclosure of corporate beneficial ownership, and little in the way of legitimate rationale for general corporate anonymity. I do accept that there are legitimate concerns about privacy that may flow from abolishing anonymity. However, as I explain in Chapter 24, these risks and impacts can and should be addressed by targeted exemptions from openness, rather than a general rule of anonymity.

For decades, there have been efforts internationally that focused on reducing the anonymity of corporate and other legal vehicles by identifying those behind them. Those efforts initially focused on the disclosure of beneficial ownership information, with the goal of making that information ultimately available to law enforcement and other authorities. More recently, there has been a growing view that such efforts have had limited success in preventing the misuse of legal entities and that something more is required – beneficial ownership transparency – through some form of government-maintained centralized registry. This shift is reflected in the increasing number of jurisdictions that either have adopted such transparency measures or are moving to do so.

I describe the evolution and current state of these efforts to tackle corporate anonymity, both internationally and in Canada, below. In light of these developments, I am of the opinion that there is no longer a credible question as to whether or not British Columbia should move forward toward implementing or participating in a beneficial ownership transparency registry. Instead, the key policy questions that I see as now front and centre are the following:

• Given the strong federal steps that are being developed now, how can the Province of British Columbia best facilitate and support an effective beneficial ownership registry?

24 Evidence of C. Taggart, Transcript, November 30, 2020, pp 29–32.
The Province’s efforts must be coordinated and harmonized with the approach being taken federally, as well as by other provincial and territorial partners.

- What features should such a regime incorporate to be most effective, while balancing important privacy and other rights?

British Columbia, as a jurisdiction that is starting to address corporate ownership transparency later than some other jurisdictions globally, should learn and take guidance from the experiences of jurisdictions such as the United Kingdom, which were more proactive in this area. That said, the first question, which is focused on coordination within Canada, raises challenges that are largely unique to Canada’s federated system.

**International Efforts to Improve Beneficial Ownership Disclosure**

In 1989, Canada joined the other members of the G7 in establishing the Financial Action Task Force, the international community’s response to the growing problems of money laundering and terrorist financing. The next year, FATF published its 40 recommendations, which laid out the measures that participating countries should implement.

The recommendations have been revised several times over the years, as more was learned about money laundering techniques and effective measures to combat money laundering. In 2003, FATF added two recommendations specifically directed at addressing the need for the disclosure of beneficial ownership information of corporations and trusts, and making that information available to law enforcement and other competent authorities.

Recommendation 24, which addressed corporations, read, in relevant part (from its introduction in 2003, until its revision in March 2022):

*Transparency and beneficial ownership of legal persons*

... Countries should ensure that there is adequate, accurate and timely information on the beneficial ownership and control of legal persons that can be obtained or accessed in a timely fashion by competent authorities ...

---

26 See Chapter 6 for a more detailed discussion of FATF and its recommendations.
29 Trusts and similar arrangements are referred to as “legal arrangements” by the FATF. When first introduced in 2003, this was Recommendation 34: ibid.
Recommendation 25 created a parallel expectation for the “adequate, accurate, and timely” disclosure of beneficial ownership information relating to trusts. Other recommendations set out expectations that financial institutions and other regulated entities identify and take reasonable steps to verify the beneficial ownership of their corporate clients as part of their customer due diligence obligations.\(^\text{30}\)

FATF defined a “beneficial owner” as follows:

Beneficial owners refers to the natural person(s) who ultimately own or controls a legal entity and/or the natural person on whose behalf a transaction is conducted. It also includes those persons who exercise ultimate effective control over a legal person or arrangement.

Reference to “ultimately owns or controls” and “ultimate effective control” refer to situations in which ownership control is exercised through a chain of ownership or by means of control other than direct control.\(^\text{31}\)

Compliance with Recommendations 24 and 25 (collectively, the “FATF Standards”) is part of FATF’s peer-based mutual evaluation process. Starting in 2014, FATF added to these evaluations an assessment of the overall effectiveness of a country’s compliance with the recommendations (graded at either a “low,” “moderate,” or “substantial” level).\(^\text{32}\)

Significantly, until the revisions to Recommendation 24 were approved in March 2022, the long-standing FATF Standards did not require beneficial ownership information to be stored or made accessible through any form of government-maintained registry, whether publicly accessible or otherwise. Instead, the FATF Standards could be satisfied in a variety of ways, including by companies collecting and holding up-to-date beneficial ownership information in their own records, which would then be theoretically accessible by law enforcement and other “competent authorities.”\(^\text{33}\) This approach, which effectively requires authorities to attend at a corporation’s records office to access the information, is generally referred to as beneficial ownership disclosure. Such disclosure is to be contrasted with more recent efforts to require that beneficial ownership and control information be posted on a government-maintained registry, with varying degrees of public access – a model generally referred to as beneficial ownership transparency.\(^\text{34}\)

---

30 See FATF Recommendations 10 and 22.
33 Ibid.
34 Evidence of T. Law, Transcript, November 27, 2020, p 17.
The original FATF Standards served as a reference point for the establishment of other regional bodies’ standards and approaches, which have focused on disclosure as opposed to transparency. In 2014, the G20 added political impetus to beneficial ownership disclosure by incorporating the FATF Standards into a set of “High Level Principles on Beneficial Ownership Transparency” aimed at tackling international tax evasion and corruption.35

As the Financial Action Task Force has itself acknowledged, most jurisdictions have found it “challenging” to implement the FATF Standards to achieve a satisfactory level of transparency around the beneficial ownership of legal persons.36 Further, even when a jurisdiction has technically complied with the standards, that has not guaranteed effectiveness in terms of actually preventing the misuse of legal structures and arrangements. As of January 2019, of the 68 countries that had been evaluated in FATF’s fourth-round mutual evaluations, only eight had achieved “substantial levels” of effectiveness, requiring moderate improvements; 32 had achieved “moderate levels,” requiring major improvements; and 28 – including Canada – were assessed to have “low levels” of effectiveness, requiring fundamental improvements. No country has yet received a “high level” rating.37

I heard considerable evidence about Canada’s poor record in relation to beneficial ownership transparency. Canada is one of those jurisdictions that has consistently struggled to achieve either technical compliance with the FATF Standards or a satisfactory level of effectiveness in preventing the misuse of legal persons and arrangements. As noted, in its most recent mutual evaluation of Canada in 2016, FATF assessed Canada as having only a “low level” of overall effectiveness in preventing the misuse of corporate vehicles, requiring fundamental improvements.38 The evaluators also rated Canada as only “partially compliant” with Recommendation 24 and “non-compliant” with Recommendation 25.39 Other key findings were that Canadian legal entities were at “high risk of misuse” for money laundering, that mitigating measures were “insufficient,” and that it was difficult for law enforcement to obtain beneficial ownership information on corporations and even more difficult with respect to trusts.40 There was no improvement in any of the above assessments as of FATF’s most recent follow-up report in October 2021.41

See also FATF’s Consolidated Assessment Ratings for numbers updated to March 2022, online: https://www.fatf-gafi.org/media/fatf/documents/4th-Round-Ratings.pdf. Of note, no country has yet received a “high level” rating, and Canada maintains a “low level” of effectiveness.
39 Ibid, pp 168–70.
As a result of two Transparency International Canada reviews in 2015 and 2017, James Cohen, executive director of Transparency International Canada, testified that “while some of our peers [i.e., other countries] had managed to move up the ladder to a better framework, Canada was left in the back as a laggard with South Korea, maintaining a weak framework for beneficial ownership transparency.”42 He shared with me his view that the misuse of corporate legal structures is a pretty serious problem in Canada, and I think this has come to a head through the term “snow-washing” ... Intermediaries overseas were essentially advertising Canada as an easy place to hide dirty money ... The really critical factor is our weak beneficial ownership regime in Canada ... Intermediaries would say to their clients, bring your dirty money to Canada; it will be cleaned like the pure white snow, hence “snow-washing.”43

He added that “[a]s we become the laggards internationally, we become the easy targets ... for the crooks who want to place their funds.”44

Despite this, I recognize that there have been important steps taken since 2016, both federally and provincially. I discuss those actions below, in the context of the current state of beneficial ownership transparency in Canada and British Columbia.

The Global Shift Toward Corporate Transparency

There has been a global shift toward beneficial ownership transparency, driven by the recognition that mere technical compliance with the FATF Standards is ineffective. As if to underline that point, the FATF updated Recommendation 24 in early March 2022 to require some form of government-maintained registry or “alternative mechanism”.

Although the FATF Standards introduced in 2003 have set the global norm for beneficial ownership disclosure for almost two decades, I heard that recognition of the limited progress on effectiveness – and revelations including the Panama Papers, global laundromats, and other notable examples of financial wrongdoing facilitated by corporate secrecy – have driven a growing number of jurisdictions to move beyond those minimum standards and toward implementing beneficial ownership transparency systems.45

Michael Barron and Timothy Law, two UK-based consultants specializing in beneficial ownership transparency, and co-authors along with Justine Davila of a study on the topic for the United Kingdom government, testified about this growing global shift towards beneficial ownership transparency. In their testimony and written report, Messrs. Barron and Law detailed how an increasing cohort of countries and

42 Evidence of J. Cohen, Transcript, November 30, 2020, p 11.
international bodies have been moving beyond beneficial ownership disclosure, and either establishing publicly accessible beneficial ownership registries or laying the groundwork to do so.46

While it is beyond the scope of this Report to summarize all of the jurisdictions and international bodies that have moved in this direction, I highlight some of the most significant developments below:

• **United Kingdom:** in 2016, the United Kingdom became the first country to establish a publicly accessible beneficial ownership transparency registry through the creation of its register of Persons of Significant Control (PSC), which is housed within the Companies House, the government agency in which all corporate records are maintained.47 There is also a registry for partnerships,48 and a new register for foreign beneficial ownership of real estate is planned.49

• **European Union:** the European Union’s Fifth Anti–Money Laundering Directive, which came into force in July 2018, introduced a requirement that all member states create publicly accessible and interconnected registries of corporate beneficial ownership by 2020. Although all European Union members have since established central registries, only a small number have satisfied their commitment to make those registries public.50

• **United States:** on January 1, 2021, the United States Congress passed the *Corporate Transparency Act*, creating beneficial ownership disclosure requirements for most corporate entities formed or operating in the United States, which is then reported to the Financial Crimes Enforcement Network (FinCEN) and accessible by government authorities (but not the public).51

• **Extractive Industries Transparency Initiative:** in 2016, the Extractive Industries Transparency Initiative adopted a standard requiring that its 51 implementing countries request, by 2020, that companies bidding for and operating licences in the extractive sector collect and publish beneficial ownership information through a central public registry.52

46 Evidence of M. Barron and T. Law, Transcript, November 27, 2020; Exhibit 272, Beneficial Ownership Scoping Study.
48 Evidence of M. Barron, Transcript November 27 2020, p 135.
50 Exhibit 272, Beneficial Ownership Scoping Study, pp 17–18.
52 Exhibit 272, Beneficial Ownership Scoping Study, p 14.
• **London Anti-Corruption Summit:** in 2016, eight countries (Afghanistan, France, Ghana, Kenya, the Netherlands, Nigeria, Tanzania, and Ukraine) made explicit commitments to establish public central beneficial ownership registries.53

• **Open Government Partnership:** as of March 2022, 45 countries have, through the Open Government Partnership (a multilateral initiative comprised of national and sub-national governments and civil society organizations), committed to implement or explore beneficial ownership transparency in their Open Government Partnership Action Plans.54 As part of its own 2018–2020 Open Government Partnership Action Plan, Canada committed to requiring that federal corporations hold beneficial ownership information and to engaging with provincial, territorial, and other key stakeholders to improve access to beneficial ownership information.55

Messrs. Barron and Law observed, that by the time their report was published in 2019, even FATF officials had acknowledged that the “debate ha[d] moved on” and that the next periodic update to the FATF Standards in 2022 would provide “an important opportunity to align the ... Standards with emerging international practice on greater transparency.”56

Indeed, as Messrs. Barron and Law predicted, on March 4, 2022, following a two-year review and public consultation, FATF announced new amendments to Recommendation 24 and its accompanying interpretive note to “significantly strengthen the requirements for beneficial ownership transparency globally, while retaining a degree of flexibility for individual countries to go further in refining individual regimes.”57 FATF adds that it expects “all countries to take concrete steps to implement these new standards promptly, and to determine the appropriate sequence and timeframe for implementation at national level.”58

The revised recommendation now states, in key part:

Countries should ensure that there is adequate, accurate and up-to-date information on the beneficial ownership and control of legal persons that can be obtained or accessed **rapidly and efficiently** by competent authorities, **through either a register of beneficial ownership or an alternative mechanism.** [Emphasis added.]59

---

53 Exhibit 272, Beneficial Ownership Scoping Study, p 14.
56 Exhibit 55, BC Ministry of Finance, BC Consultation on a Public Ownership Registry (January 2020).
58 Ibid.
FATF has not elaborated on what “alternative mechanism” might meet the new standard of rapid and efficient access aside from a centrally maintained registry. I am not aware of any alternative models that have done so. In any event, it is clear to me that beneficial ownership disclosure has proven ineffective, and the goalposts have shifted to now require some form of beneficial ownership transparency.

I turn now to consider the current state of beneficial ownership transparency in Canada, including recent steps toward greater transparency.

Current State of Beneficial Ownership Transparency in Canada

At present, there is little transparency in the ownership of corporations, trusts, and limited partnerships. In what follows, I describe the current measures in place, before turning to recent steps to improve this transparency.

Corporations

Canada’s federated nature means that corporations can be created and regulated federally under the Canada Business Corporations Act, RSC 1985, c C-44, or in any one of Canada’s provinces or territories, each with its own corporate laws and registries. All Canadian jurisdictions require that privately held companies be registered and that they record basic shareholder and director information in their own corporate records (some of which is generally available online or by request through that jurisdiction’s corporate registry); however, until very recently, no Canadian jurisdiction has required corporations to collect, maintain, or report their beneficial ownership information. Notwithstanding significant steps taken by the federal government and certain provinces to begin requiring companies to obtain and hold up-to-date beneficial ownership information in their own records, to which I return below, no jurisdiction in Canada has yet established a beneficial ownership registry, publicly accessible or otherwise.

In the absence of either a central registry, or even an obligation for corporations to hold beneficial ownership information in their own records, Canada has generally relied on what FATF calls “existing information” to determine a legal entity’s beneficial ownership “if and as needed.” “Existing information” is a reference to the information that is collected by financial institutions and other designated entities as a part of their know-your-client obligations under the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 (PCMLTFA), which include an obligation to collect and take steps to confirm the beneficial ownership information of their corporate and

60 In British Columbia, the applicable statute is the Business Corporations Act, SBC 2002, c 57.
61 For a fuller discussion of how things currently operate in Canada, see the detailed discussion in Exhibit 4, Appendix N, FATF Fourth Mutual Evaluation, pp 162–168.
trust clients. Once collected, this information is then theoretically available to law enforcement through production orders. Prior to June 2021, these obligations applied only to specific regulated entities, including banks, securities dealers, and money services businesses; however, they have now been expanded to other designated non-financial services businesses and professions. As I explain in Chapter 28, lawyers also collect this information in some cases, although they do so pursuant to regulation by the Law Society of British Columbia.

Even with the newly expanded scope of these know-your-customer obligations, each entity must attempt to obtain and verify the ownership information on its own, and the information is not verified, centrally reported, cross-referenced, or readily accessible. This presents a challenge for law enforcement, which must first link a specific financial institution to an individual corporation under investigation, issue a production order, and then trust that the information that has been collected regarding the ultimate control or ownership of the entity is accurate. This is a slow and inefficient process. Moreover, relying on such a system means there is no ability to search effectively for common ownership and control by the same beneficial owners across multiple corporations, identify the red flags often associated with criminally controlled corporate structures, or otherwise identify the complex webs of indirect ownership and control employed by even moderately sophisticated money launderers. As Mr. Barrow testified, it is often the corporate structures themselves revealed through interrogation of the registry that will lead to suspicion of particular entities rather than the reverse.

As FATF evaluators concluded in their 2016 mutual evaluation of Canada, “deficiencies with regards to the collection and availability of full and updated beneficial ownership information remain and timely access by law enforcement authorities to such information is not guaranteed in all cases.” The evaluators specifically noted the challenge this has posed to Canadian law enforcement agencies, which are either incapable of, or dissuaded from, unravelling complex ownership structures despite the significant risk they pose:

[Law enforcement agencies] have successfully identified the beneficial owners in limited instances only. Despite corporate vehicles and trusts posing a major [money laundering] and [terrorist financing] risk in Canada, [law enforcement agencies] do not investigate many cases in which legal entities or trusts played a prominent role or that involved complex corporate elements or foreign ownership or control aspects.

---

63 Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations, SOR/2002-184, s 138.
64 Evidence of P. Dent, Transcript, November 30, 2020, pp 47, 50–51.
65 Evidence of J. Primeau, Transcript, December 1, 2020, pp 76–77.
66 Evidence of G. Barrow, Transcript, December 2, 2020, p 77.
67 Exhibit 4, Appendix N, FATF Fourth Mutual Evaluation, p 165.
68 Ibid, pp 8, 105.
Given what I understand to be the prevalence of complex ownership and control structures in money laundering schemes, I see the inability of law enforcement to effectively and efficiently investigate them to be a serious problem that must be remedied. This may be partly a problem of insufficient law enforcement capacity, discussed at greater length in Chapters 39 and 40. However, it is also a consequence of the ease with which criminals are able to establish anonymity through legal contrivances when compared to the considerable challenge to law enforcement in unravelling them. That asymmetry can only be addressed by the sorts of systemic improvements that fundamentally address that imbalance.

**Trusts**

In many ways, trusts in Canada are even more opaque than corporations. There is no general requirement for trusts to be registered in Canada, although certain trusts are required to be registered in Quebec, and Canadian resident trusts and certain foreign-resident trusts are required to file information with the Canada Revenue Agency (CRA). Canadian trusts also have “global reach,” in that both Canadians and non-residents can establish Canadian trusts from within Canada or abroad.

There are only two mechanisms by which information about non-registered trusts is available. First, there is the information obtained by financial institutions and other reporting entities when providing services to trust clients, which is collected pursuant to the same know-your-customer obligations under the PCMLTFA that apply when dealing with corporations. However, the adequacy and availability of that information suffers from flaws. It is not comprehensive, independently verified, or centrally collected, and – according to FATF evaluators – it is even more difficult to obtain for law enforcement than in the case of corporations.

Second, there is the information that is collected by CRA about certain trusts. However, that information has limited coverage. As noted by FATF, the total number of trusts in Canada is “estimated in the millions,” but at least as of 2007, only 210,000 trusts filed tax returns with CRA.

Trusts are useful to criminals for many of the same reasons as corporations. They are another means to separate legal and beneficial ownership, creating an additional layer of complexity that can prevent law enforcement from “exerting authority to unravel the true

---

69 This is supported by the feedback from police forces and prosecutors that was in Canada’s fourth-round mutual evaluation, that “legal persons are hardly ever prosecuted for [money laundering] offenses, mainly because of a shortage of adequate resources and expertise (emphasis added)” see Exhibit 4, Appendix N, FATF Fourth Mutual Evaluation Report, p 53.

71 Exhibit 4, Appendix N, FATF Fourth Mutual Evaluation, p 16.

ownership structure.”74 However, because trusts are generally more expensive and complex
to set up and maintain than corporations, they may be less attractive in less sophisticated
and profitable laundering operations.75 In one study, FATF identified trusts being used
in approximately one-quarter of the money laundering cases it examined, most often in
combination with corporate structures.76 However, the authors note the true prevalence
of schemes involving trusts may be higher, as the use of trusts increases the difficulty in
identifying beneficial owners to the point where they may remain undetected.77

The 2018 federal budget proposed significantly expanding trust reporting
requirements to require all non-resident trusts that are currently required to file tax
returns, as well as all express trusts resident in Canada (with some limited exceptions), to
report beneficial ownership information to CRA on an annual basis, including the identity
of all trustees, beneficiaries, and settlors of the trust, as well as individuals with the ability
to exert control over trustee decisions. Although these new rules were expected to come
into force in December 2021, CRA announced in January 2022 that implementation would
be delayed pending the supporting legislation receiving Royal Assent.78 Similarly, Quebec
had intended to introduce its own requirements for trusts to report beneficial ownership
information to Revenu Québec, but announced that it would delay those new rules until
the parallel federal requirements came into force.79 Notably, Quebec already required
trusts created in that province to register if “operating a commercial enterprise,” which
means carrying on some form of economic activity in order to make a profit.80

**Limited Partnerships**

Limited partnerships do not seem to be a significant focus for FATF. However, I
heard evidence that they have been involved in laundromat schemes81 in the United

81 A laundromat in this context is “effectively a collection of entities that are utilized to clean money.” A
laundromat scheme uses “potentially thousands of these entities that are highly multi-jurisdictional that
are operated normally by the same people or very few number of persons to enable the obfuscation of the
sources of the money so that when eventually it emerges back into the real economy, it is impossible to
connect that money to its origins. And the reason why it’s a laundromat and not just not entity is that part of
that process is... commingling... the mixing together of funds from lots of different sources so it’s impossible
to tell where each came from through that process, so that when it comes out the other side, there is no direct
line of sight back to its source”: Evidence of G. Barrow, Transcript, December 2, 2020, pp 12–13.
Kingdom.82 In a report prepared for the Commission, Mr. Barrow notes that limited liability partnerships involved in such schemes had the following characteristics:

- Large numbers registered at the same, virtual address
- The use of corporate “designated members”83 resident in offshore or secrecy locations
- Failing to declare a “person with significant control” or, when they do, it is either another legal entity or an anonymous individual, based often in a Central or Eastern European jurisdiction with no obvious internet presence and no previous experience of owning and running a business
- Filing either dormant accounts or very low levels of activity utilising templates that are consistent across a wide variety of similar [limited liability partnerships] and with commonalities of account signatories
- Little or no corporate internet presence84

Indeed, Mr. Barrow observed the use of Canadian limited partnerships in UK laundromat schemes. His report notes that with the introduction of the UK’s “person of significant control” registry, corporate service providers “had to become more creative in circumventing the transparency requirements whilst maintaining the use of UK entities which were, clearly, seen as being advantageous to money laundering operations” and turned to limited partnerships in Canada (and elsewhere).85

Transparency International similarly considers limited partnerships to pose risks in Canada:

[Limited partnerships (LPs)] have fewer reporting and disclosure requirements than most other entities in Canada, and unless they do business in Canada they need not engage with the tax authorities. They can also be established cheaply without any need for their owners or administrators to set foot in Canada or be represented by a Canadian. And crucially, although LPs are not considered legal persons in Canada, they can nevertheless be used to open bank accounts and conduct business transactions. These characteristics, and the cover of Canada’s international reputation, might present “unique business opportunities,” to anyone engaging in such jurisdictional arbitrage, as the advertisement

---

82 Ibid, pp 74–75.
83 A “designated member” is the UK equivalent of a director: ibid, p 23.
84 Exhibit 314, Graham Barrow, “Canadian Entities Involved in Global Laundromat Style Formations 2020,” p 1.
below ambiguously suggests, but it also makes Canadian LPs particularly vulnerable to exploitation for transnational financial crime.\footnote{Transparency International Canada, \textit{Snow-washing, Inc.: How Canada is Marketed Abroad as a Secrecy Jurisdiction} (2022), p 12, online: https://www.taxfairness.ca/sites/default/files/resource/2022-03-16_report_-_snow-washing-inc.pdf.}

Based on the foregoing, I am satisfied that limited partnerships are useful to criminals for many of the same reasons as corporations.

\section*{The Need for Transparency for Trusts and Limited Partnerships}

Although much of the recent attention and initiatives have focused on improving beneficial ownership transparency for corporations, it is important not to lose sight of the largely unmitigated money laundering risks associated with trusts and limited partnerships. This is particularly so given the tendency of money launderers to respond to increased vigilance in one area by shifting to another that is less guarded. I expect that if Canada and the provinces and territories focus their efforts only on improving the transparency of corporations, without eventually addressing the opacity of trusts and limited partnerships, there is a risk we will see their criminal exploitation expand.

With that in mind, I am in favour of the Province’s approach, which involves obtaining public feedback on a potential government-maintained registry of trusts and limited partnerships,\footnote{Exhibit 55, BC Ministry of Finance, BC Consultation on a Public Ownership Registry (January 2020), p 19.} drawing lessons from the Quebec experience and looking ahead to a future registry for trusts and limited partnerships (though I have not recommended that this step be taken immediately). If such a registry is implemented in British Columbia, it will require adequate consequences for non-compliance as well as careful consideration of appropriate exceptions for trusts that may pose little risk for misuse and involve greater expectations of privacy. Because of the unique privacy considerations associated with trusts in particular – especially those with a personal (often family) as opposed to commercial purpose – it may be preferable that any registry of trusts not be made publicly accessible; this question will require study and consultation.

\section*{First Steps Toward Greater Transparency In Canada}

After a long period in which it is fair to say Canada earned a deserved reputation as a laggard in beneficial ownership transparency, a number of significant steps have been undertaken over the past five years that, taken together, suggest a shared commitment on the part of federal, provincial, and territorial governments to begin to catch up on this issue.

In September 2016, shortly after the release of FATF’s fourth mutual evaluation of Canada, the federal government convened the first meeting of the Federal, Provincial, Territorial Working Group on Improving Beneficial Ownership Transparency in
Canada (FPT Working Group). In December 2017, the FPT Working Group produced its Agreement to Strengthen Beneficial Ownership Transparency, which expressed the agreement in principle of all of the federal, provincial, and territorial ministers of finance to:

- seek to amend their respective corporate statutes to require corporations to hold up-to-date beneficial ownership information; and
- eliminate the use of bearer shares, with the aim to bring the necessary laws into force by July 1, 2019.

Ministers also agreed to “continue existing work assessing potential mechanisms to enhance timely access by competent authorities to beneficial ownership information.”

The federal discussion paper that accompanied the Agreement to Strengthen Beneficial Ownership Transparency proposed that action to improve beneficial ownership transparency in Canada be taken through a “phased approach.” The first of these phases would involve “short term” actions by provinces, territories, and the federal government to require corporations to maintain beneficial ownership information in their own records, as well as the prohibition of bearer shares. If implemented, these first-phase measures would establish a minimum standard more consistent with FATF Recommendation 24 (at least as it stood before March 2022) but were acknowledged to fall significantly short of the beneficial transparency measures implemented by leading jurisdictions (and now effectively required by Recommendation 24). Longer term, the FPT Working Group proposed to explore more robust options, such as the centralized collection and potential publication of beneficial ownership information in corporate registries.

**Action by the Federal Government**

At the federal level, Bill C-25, which received Royal Assent on May 1, 2018, amended the *Canada Business Corporations Act* to prohibit the issuance of new bearer shares, warrants, options, or rights, and required corporations presented with bearer instruments to convert them into registered form.

---

88 Exhibit 304, Department of Finance Canada, Agreement to Strengthen Beneficial Ownership Transparency (July 2019).
89 Ibid.
91 I note that Exhibit 303, BC Ministry of Finance Briefing Document re Federal Proposal for Improving Beneficial Ownership Transparency in Canada (November 2017), indicates the “phased approach” was proposed in response to concerns raised by more reluctant provinces, which illustrates some of the challenge Canada faces in taking strong, concerted action in areas of shared jurisdiction.
In fall 2018, the federal government passed Bill C-86, which amended the Canada Business Corporations Act, effective June 13, 2019, to require almost all federally incorporated companies – which make up roughly 10 percent of all Canadian companies – to obtain and hold beneficial ownership information of “individuals with significant control” in their own records, available on request by relevant authorities.94 I discuss the requirements of the federal regime in greater length in Chapter 24.

In November 2018, the House of Commons Standing Committee on Finance recommended that Canada work with the provinces and territories to create a pan-Canadian beneficial ownership registry for all legal persons and entities.95 By 2019, the federal government had taken preliminary steps to examine a potential beneficial ownership transparency regime. Mandate letters to the minister of finance and several other ministers directed them to look into a potential beneficial ownership registry, and in 2020, the federal government held public consultations to examine a publicly accessible registry and the need for harmonization across Canada.96 Notably, the report on the feedback from the consultation stated that public access was “not considered by the majority of stakeholders as essential to achieving the policy objectives of combatting the misuse of corporations [emphasis added].”97 However, as indicated below, despite that feedback, the federal government did commit to a publicly accessible registry.

On June 14, 2019, following a meeting in Vancouver to consider a national response to money laundering and terrorist financing, federal, provincial, and territorial governments issued a joint statement that reaffirmed their commitment to improving beneficial ownership transparency. The joint statement included an agreement “to cooperate on initiating consultations on making beneficial ownership information more transparent through initiatives such as aligning access through public registries, while respecting jurisdictional responsibilities with respect to corporations.”98

In April 2021, the federal government’s budget included an announcement of $2.1 million over two years to build and implement a publicly accessible beneficial ownership registry by 2025 in order to better “catch those who attempt

to launder money, evade taxes, or commit other complex financial crimes.”

This was the first specific commitment to a publicly accessible registry made by any Canadian jurisdiction.

Regulatory amendments that came into force on June 1, 2021, expanded the application of beneficial ownership measures to cover all PCMLTFA reporting entities, including casinos, real estate professionals, and other non-financial businesses and professions. Bill C-97, which received Royal Assent on June 21, 2019, requires a corporation to provide a copy of its Significant Control Register to investigative bodies, if the investigative body can establish reasonable grounds to suspect that certain offences have been committed by the corporation, by individuals with significant control over the corporation, or by related entities.

On March 22, 2022, the federal government announced that it would implement “a publicly accessible beneficial ownership registry by the end of 2023,” accelerating its original timeline by two years.

In combination with the expansion of know-your-customer obligations under the PCMLTFA to require all regulated entities to obtain and take steps to confirm beneficial ownership information, these steps toward transparency indicate an encouraging level of commitment and action on the part of the federal government to meaningfully address the issue of corporate anonymity. However, in order for these efforts to be ultimately effective, federal action must be sustained and, critically, matched by and harmonized with similar actions on the part of provincial and territorial counterparts.

**Action in British Columbia**

In May 2019, two months before the deadline agreed to in the joint statement by the federal, provincial, and territorial governments, the Government of British Columbia delivered on its commitment under the Agreement to Strengthen Beneficial Ownership Transparency by passing Bill 24, the *Business Corporations Amendment Act, 2019*. In doing so, it became the first province to require corporations to keep records of their beneficial owners in their corporate records office, to be accessible by law enforcement, tax authorities, and designated regulators. (The amendments also fully eliminated bearer shares.)

---

100 PCMLTF Regulations, s 138, as amended by Regulations Amending the Regulations Amending Certain Regulations Made Under the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, 2019, SOR/2020-112, s 5.
101 Budget Implementation Act 2019, No 1, SC 2019, c 29, s 103; Canada Business Corporations Act, RSC 1985, c C-44, s 21.31, Schedule, ss 1(z.052)–1(z.054) and 1(z.095).
The amendments make companies liable for knowingly authorizing, permitting, or acquiescing to:

- identifying an individual as a significant individual when they are not;
- excluding an individual who is a significant individual; and
- including or omitting information about a significant individual that makes the information provided false or misleading of any material fact.\(^{103}\)

It is also an offence for a company to:

- fail to maintain and update the register, and
- fail to notify individuals who have been added or removed from the register.\(^{104}\)

Any director or officer of a corporation who authorizes, permits, or acquiesces to the commission of such offences or any shareholder who provides false or misleading information to a corporation may be held personally liable. Companies may be fined up to $100,000 and individuals up to $50,000.\(^{105}\)

In the same year, the British Columbia Legislature passed the *Land Owner Transparency Act*, which the minister of finance described would be “the world’s first public registry of beneficial ownership in real estate.”\(^{106}\) To date, the new Land Owner Transparency Registry has been created, but not yet populated with historic information (meaning that it shows beneficial ownership of real property for new transactions, but not for purchases or transactions before the registry was created). I note that legislating on beneficial ownership transparency in real estate matters was simpler than in corporate matters because registration of real estate is, constitutionally, a matter within exclusive provincial jurisdiction. Developing a transparency regime for corporations is more complex because of the need for interprovincial, national, and international consistency.

In early 2020, the Province initiated public consultations on beneficial ownership transparency supported by a consultation paper,\(^{107}\) which generated the following feedback:

- overall support for a government registry of company beneficial ownership;
- low support for giving the public access to the registry;
- a desire by financial institution stakeholders to be able to access the registry to assist them in meeting their due diligence obligations under the *PCMTLFA*;

\(^{103}\) *Business Corporations Act*, ss 426(4.1), 427.
\(^{104}\) Ibid, s 426(4.1).
\(^{105}\) Ibid, s 428(2.1).
\(^{106}\) Exhibit 55, BC Ministry of Finance, BC Consultation on a Public Ownership Registry (January 2020), p 2.
\(^{107}\) Ibid.
opposition to imposing a filing fee for the beneficial ownership information, as yet another cost of compliance;

- support for the integration of beneficial ownership filings with the current corporate registry filings such as annual reports;

- support for harmonizing all registries across Canada with one-stop shopping;

- support for providing comprehensive guidance for filers in gathering required information; and

- acknowledgment that government has a responsibility to ensure that the beneficial ownership information in the registry is accurate and that, of all the groups involved in anti-money laundering activities, government is in the best position to ensure accuracy.\(^\text{108}\)

### Action by Other Provinces

The majority of other Canadian jurisdictions have likewise amended their provincial corporations legislation and implemented requirements that corporations maintain a register of individuals with significant control over the corporation.\(^\text{109}\) In January 2022, Ontario passed similar amendments, although these will not come into force until 2023.\(^\text{110}\) Likewise, in March 2022, the New Brunswick government introduced a bill that, if passed, will introduce similar amendments.\(^\text{111}\) I discuss these various legislative schemes in greater detail in Chapter 24. For now, I observe that Quebec's legislation is notable for going beyond its commitments under the 2017 Agreement to Strengthen Beneficial Ownership Transparency and going further than any other province towards transparency. Conversely, Alberta is notable for lack of action in furtherance of beneficial ownership transparency. If anything, Alberta appears to be moving in the opposite direction.\(^\text{112}\)

\(^{110}\) Business Corporations Act, RSO 1990, c B.16, ss 140.2–140.4.

Conclusion

The global trend away from disclosure and towards transparency is reflected most clearly by FATF’s March 2022 revision to its standards, making a central beneficial ownership registry all but mandatory. Furthermore, five years ago, this Province – along with all of its federal, provincial, and territorial counterparts – committed to moving toward greater corporate transparency. Action has commenced on that commitment by the Province, the federal government, and some (but not all) provincial partners. The federal government and Quebec have signalled an intention to make their beneficial ownership registries public, which may result in other jurisdictions doing the same.

There is encouraging progress underway. There is support for beneficial corporate ownership transparency – both in this province and federally. I applaud and encourage this ongoing work. The key question for this province, in my view, is how it can best support the new national registry. In the next chapter, I draw on the evidence led before me and offer my views on key features the Province should advocate for in the new regime.
In this chapter I discuss a reform that holds great promise in the fight against money laundering, not just in British Columbia, but across Canada. The federal government has very recently taken encouraging steps toward a national and publicly accessible registry of corporate beneficial ownership. I urge the Province to do all it can to support this step and ensure the registry is designed and launched without delay.

The federal initiative offers the Province a unique opportunity to take the strong work it has already started, and transpose it to a national level. In light of the federal registry that is being created soon – by the end of 2023¹ – the key question for British Columbia is how best to support and promote an effective national beneficial ownership registry. To succeed, this registry should include corporate ownership information for federally incorporated companies and for those incorporated at the provincial or territorial level. Although British Columbia has already implemented and commenced consultations on a provincial registry,² given the recent federal commitment to launch a federal registry in a timely way, it now makes sense to dedicate energy to the federal initiative. The Province should not focus on a separate provincial registry; it should work with the federal government, and with other provinces and territories, to ensure that a truly effective registry is created. Such a registry will draw on research on best practices, and ultimately become a federally led (but pan-Canadian) database. Drawing on the evidence before me, I emphasize particular features that I believe should figure prominently in the design of the new registry, and that the Province should promote.

² Exhibit 55, BC Consultation on a Public Beneficial Ownership Registry, pp 1–2, 21.
The Need for the National Corporate Beneficial Ownership Registry

In Chapter 23, I discussed the rationale for corporate beneficial ownership transparency, and I outlined the federal government’s commitment, announced in Ottawa’s 2021 budget, to establish a publicly accessibly registry that would disclose the beneficial owners of companies. That initiative was initially on a longer timeline; Budget 2021 indicated it was to be in place by the end of 2025. But recently – in the context of public concern about the misuse of nominee and corporate ownership by Russian oligarchs amidst the Russian invasion of Ukraine3 – the federal government has accelerated its commitment. It announced in March 2022 that the federal registry will now be in place before the end of 2023.4

At this point, the details as to the design of the federally led registry are not yet settled. They are under development. My expectation is that the registry will be pan-Canadian – meaning that it will be federally led, but will incorporate and include information about companies from across the nation. The Province of British Columbia should assert itself as an early and active proponent of the pan-Canadian registry. It can lead by example and inspire other provinces and territories to follow suit.

There is a growing international consensus among nations, and experts who focus on money laundering, in support of corporate beneficial ownership transparency. As I outlined in Chapter 23, the reasons for this are clear and compelling. Corporations have become a tool for obscurity, permitting criminals to hide behind corporate secrecy. The original historic raison d’être for companies was to limit liability, so that entrepreneurs could take business risks without wiping out their entire savings; instead the company would assume the risk and would be treated as a “legal person.” This “limited liability” rationale for companies remains a valid and legitimate principle. Canada (as with most countries) has made a policy choice that companies can engage in business, sign contracts, raise funds through investors and the stock market, hire people, and sell things. Equally, they can merge with other companies, get taken over, or go bankrupt. This is the nature of the legal personhood and limited liability that companies enjoy.

But in modern times, corporations and other legal persons have come to be widely used not merely to transact and limit liability, but for a very different purpose: to hide the real owners. Shielded from visibility – both to the public and to law enforcement and regulators – shady people can and do conduct shady transactions in anonymity. They can carry on in secrecy, using company names rather than the actual names of the people involved.

---

This feature of companies has proven itself open to exploitation and misuse, as I noted in Chapter 23. Revelations have emerged through various leaks—such as the Panama Papers, Paradise Papers, and Pandora Papers—that illustrate how corporate vehicles have been employed to hold property and wealth, and conduct transactions, while obscuring who really owns or controls the company. The academic literature and the evidence before me establish in an unambiguous way, that this feature of companies and corporate legal vehicles is present in innumerable money laundering typologies.

To combat money laundering, it is vital that criminals, and those facilitating their conduct, cannot be permitted to exploit corporate vehicles to hide their identities. The time for corporate beneficial ownership transparency has come.

That being the case, the federal government’s announcement of a publicly accessible beneficial ownership registry is very good news. It signals an important development of particular relevance to the fight against money laundering.

In Chapter 23, I outlined steps being taken in this province to achieve openness with respect to beneficial ownership, most obviously in the Land Owner Transparency Registry, but also to work toward a provincial corporate beneficial ownership registry. Those efforts are to be commended, and indeed they have shown British Columbia to be a leader (within Canada) in this area.

Given the accelerated timeline of the federal initiative (and its endorsement of a public registry), it is my view that the best course for the Province at this stage is to focus its efforts on the pan-Canadian registry. I recommend that the Province do all it can to ensure that, before the end of 2023, a publicly accessible corporate beneficial ownership registry is in place. The Province should share its expertise and work co-operatively with the federal, provincial, and territorial governments to that end. The registry should be publicly accessible.

**Recommendation 52:** I recommend that the Province work with its federal, provincial, and territorial partners to ensure that, before the end of 2023, a publicly accessible pan-Canadian corporate beneficial ownership registry is in place.

I say this because, although there remains some logic behind a provincial registry (on its own), there is much greater logic in ensuring that the pan-Canadian registry is harmonized, effective, and national.

The Province of British Columbia has already put work into a corporate beneficial ownership registry. As noted, the Province has implemented a requirement that a BC private company must provide information about its beneficial owners, with that information held at the company’s records office (rather than a central registry). It has

---

5 Exhibit 55, BC Consultation on a Public Beneficial Ownership Registry, pp 1–2, 21.
developed expertise and experience – especially with respect to real estate ownership, with the Land Owner Transparency Registry (even though that initiative remains at a nascent stage). The Province has been a leader within Canada. As such, it can and should play a leadership role in the development of the national corporate beneficial ownership registry. The Province can draw on that expertise, and may rely on the analysis in this Report to advocate for the best design features for the registry.

The Need for Coordination

I have emphasized the need for a strong, nationwide registry. Although there are different ways to accomplish it, in my view the registry should encompass beneficial ownership information from Canada, British Columbia, and ultimately all the provinces and territories. As is often the case in our confederation, compromise will be necessary. No province should get so hung up on a particular feature that it loses sight of the big picture: an operational pan-Canadian registry will be far more effective. Such a registry will permit users and the public a “one-stop shop” to obtain comprehensive information about who really owns or controls particular corporate vehicles.

There is a strong case for coordination as between the federal, provincial, and territorial governments. Canada’s federated system presents challenges to addressing beneficial ownership transparency for corporate and other legal structures. Each of the federal government, the provinces, and the territories has jurisdiction to regulate legal entities. Uniformity in such regulation is not constitutionally required. These challenges must be overcome. If any jurisdiction lags behind the others in its transparency efforts, it may be perceived as the weak link and become a target for criminality.

The Province will need to undertake additional work in order to support and improve the implementation of the new pan-Canadian registry. There will be an ongoing need for the Province to address details, design, and issues that arise as the federal initiative comes into being.

I turn now to the particular design features that the Province should advocate for in support of the federal registry.

Key Design Features for a Corporate Beneficial Ownership Registry

From the evidence before me, I consider that there are certain components of an effective beneficial ownership registry that are vital to its success. In the remainder of this chapter, I examine design features for a public corporate beneficial ownership registry, in this sequence:

- what information the registry should contain;
- ensuring accurate and updated information;
• accuracy through strong enforcement and compliance;
• how much information is collected, and how much is shared;
• what types of entities should be included in the registry;
• what level of control or ownership is needed to be on the registry;
• the architecture of the new registry;
• costs and fees for the registry; and
• a commitment to ongoing review and improvement of the regime.

Of these features, I would emphasize the need for a strong compliance and enforcement regime to ensure the accuracy and comprehensiveness of the information in the registry.

**What Information Should the Registry Hold?**

There is enormous variability when it comes to the kinds of information that can be held in the registry. Does it simply list names of people, or does it contain much more information about the person, his or her or their interest, their identifying information, and the like?

The federal statute, the *Canada Business Corporations Act*, RSC 1985, c C-44, requires that a federal company’s records are to be held at its registered office (or another designated place) “a register of individuals with significant control over the corporation” (section 21.1(1)). The Act mandates the collection of information for each “individual with significant control” (the meaning of which I discuss below), such as:

• their name, date of birth, and last known address;
• their jurisdiction of residence for tax purposes;
• when they became or stopped being an individual with significant control; and
• how it is that they are an individual with significant control (i.e., a description of their interests and rights in relation to the corporation);

The Act also requires the corporation to update this information to ensure accuracy and completeness, once a year (section 21.1(2)).

This sort of approach has been used in a number of provincial legislative schemes.\(^7\)

---

\(^6\) *Canada Business Corporations Act*, s 21.1(1).

\(^7\) See, for example, *The Business Corporations Act*, 2021, SS 2021, c 6, s 4-4; *The Corporations Act*, CCSM c C225, s 21.1; *Corporations Act*, RSNL 1990, c C-36, s 45.2; *Business Corporations Act*, RSPEI 1988, c B-6.01, s 28.1; see also *Business Corporations Act*, RSO 1990, c B.16, s 140.2 (not yet in force).
The British Columbia Business Corporations Act, SBC 2002, c 57, is worded slightly differently. Instead of recording the “the jurisdiction of residence for tax purposes of each individual with significant control,” the BC Act requires corporations to record whether they are a Canadian citizen or permanent resident (and if not, where they hold citizenship), and whether or not the person is considered “resident in Canada” for the purpose of Canadian tax law.8

These categories of information are all highly useful. A number of witnesses offered views as to other types of information that should be included in the register:

• a unique personal identifier: a randomly issued number, not based on any other identification number, to be publicly disclosed, in order to allow searchers to know quickly if they are dealing with the same person;9

• occupation;

• politically exposed person status (and/or head of international organization standard),10 and

• nominee shareholders and directors must be required to identify their nominators.11

In my view there is an important distinction between the information that the registry collects, and what it makes publicly available. There is a need to constrain what can be made public. But as for the collection of information, it is my view that the registry should contain as much of the information noted above as it can, to ensure maximum effectiveness.

Ensuring Accurate and Updated Information
A beneficial ownership registry is only as good as the quality of the information it contains. But some corporate registries, and even some beneficial ownership registries, accept the information the applicant offers, without any vetting or verification. For example, the United Kingdom's People with Significant Control registry has been criticized for relying on self-reporting and not verifying the information submitted by companies. To illustrate how a lack of vetting can undermine the integrity of a beneficial ownership registry scheme, in February 2017

---

8 Business Corporations Act, s 119.2(2).
9 Exhibit 283, Submission to the Cullen Commission of Mora Johnson (November 2020), p 13. The merits of this sort of unique identifier avoid the problem of familiar names (e.g., John Smith, Ryan Li) and also overcome different usages of the same name (Jon Smith, Jonathan Smith, J.E. Smith, etc.).
11 Exhibit 283, Submission to the Cullen Commission of Mora Johnson (November 2020), p 7.
the United Kingdom’s Companies House identified 4,500 companies that had reported a company located in a tax haven as their beneficial owner.\(^\text{12}\)

The UK Companies House registry has also achieved some notoriety for the lack of verification of the information submitted. Oliver Bullough emphasized this, pointing to directors such as “Xxx Stalin ... Kwan Xxx ... Xxx Raven ... Tracy Dean Xxx ... Jet Xxx; and finally Mr. Xxxx Xxx.”\(^\text{13}\)

As noted, the \textit{Canada Business Corporations Act} requires that the information be updated at least once during each financial year of the corporation and that the corporation take “reasonable steps” to ensure “the information in the register is accurate, complete, and up-to-date.”\(^\text{14}\) Most jurisdictions in Canada have followed suit.\(^\text{15}\)

Conventional corporate registries typically require corporations to file annual reports and to ensure accuracy at that time. But for those who regularly use public beneficial ownership registries (such as law enforcement, anti-money laundering agencies, businesses, and investigative journalists), they will need much more than an annual updating if the database is to be current. Most legislation in Canada requires that if the corporation becomes aware of any information that it is required to maintain in the register, it must record that information in the register within 15 days of becoming aware of it.\(^\text{16}\) British Columbia’s legislation allows for 30 days to update the register.\(^\text{17}\)

Most Canadian jurisdictions require that when the corporation requests the information to complete the register, the shareholders have an obligation to provide accurate and complete information and to respond as soon as possible.\(^\text{18}\) Ontario’s legislation – which is yet to be brought into force – similarly requires that shareholders “shall, promptly and to the best of their knowledge, reply accurately and completely.”\(^\text{19}\) Again, British Columbia’s legislation is worded slightly differently, requiring the shareholder to take “reasonable steps to compile the requested information” and to “promptly send to the private company the information that the shareholder was able to

\(^{12}\) Exhibit 277, \textit{Global Witness, Learning the Lessons from the UK’s Public Beneficial Ownership Register} (October 2017), pp 8–9.

\(^{19}\) \textit{Business Corporations Act}, RSO 1990, c B.16, s 140.2(5) (not yet in force).
compile.” Likewise, Saskatchewan requires only that the shareholder “shall, to the best of the shareholder's knowledge, provide that information to the corporation.”

As I look ahead to a new pan-Canadian registry, it seems evident that these differences in approach as to the updating of information will need to be reconciled, either by being harmonized on a single standard or accounting for different rules for the provision of accurate and timely information about those who have significant control over the corporate vehicle.

But there are important steps that the registry would do well to emphasize in order to ensure the accuracy of beneficial ownership information. In the evidence before me, they were often discussed under two different but related concepts: validation and verification.

**Validation** of data refers to measures that prevent obvious errors, such as birthdates in 1668 or 40 different spellings for one citizenship (UK, English, Cornish, Breton, etc.). Equally, listing another company as the beneficial owner would not be possible with validated data. There are design features that go a good distance to permitting validation, and any person familiar with internet transactions will recognize them: drop-down menus for categories of information such as birth dates, addresses, countries, and the like.

**Verification** of data refers to the kinds of measures that ensure the real-life accuracy of information in the database. There are several measures that a registry can adopt in order to identify potential inaccuracies or irregularities in the data, such as:

- making it easy for users to report suspected inaccurate data in registry;
- requiring employees of the beneficial ownership registry to follow up on every report; and
- requiring “reporting entities” that have due diligence obligations under Canada's FINTRAC scheme to report to the beneficial ownership registry discrepancies between what is shown on the registry and what they have learned about their customers. This is a requirement under the European Union scheme.

Meanwhile, **authentication** of information is a further important feature. This describes the kinds of steps that the new beneficial ownership registry may take to ensure that the information disclosed by the corporation is accurate:

- requiring that the person making the disclosure provide documentary proof of the facts disclosed (for instance, government photographic identification or proof of their ownership or control); and
- imposing a duty on the registry itself to vet the information disclosed by, for example, cross-checking the data against other government databases.

---

20 *Business Corporations Act*, SBC 2002, c 57, s 119.21(2).
23 Ibid, pp 8–9.
As the Province supports the federal corporate beneficial ownership registry, there are important resources that provide insights on the best practices. In particular, the United Kingdom has devoted much attention to this.24

Ensuring Accuracy: Strong Enforcement and Compliance

Having emphasized the need for accurate information in terms of validation, verification and authentication, I turn to a closely related issue. How can the registry ensure that it does not become a “garbage in, garbage out” database? If criminals or bad actors are dishonest, what can be done to stop them from simply lying in the information they submit to the registry? In my view, the answer lies in having powerful sanctions and a rigorous approach to ensuring that beneficial ownership information is correct.

As noted earlier, the great majority of beneficial owners and directors are law-abiding; they will do their best to comply with disclosure requirements. To the extent there are minor failures in their submission of information, and no deliberate intent to deceive, the approach should be a corrective and supportive one. But when it comes to unscrupulous individuals exploiting (indeed, choosing) corporate entities to facilitate crime and money laundering, a very different approach is required. Such bad actors will be reluctant participants in this new registry scheme. They may well deliberately try to misrepresent the true state of affairs. As with many public registries, the innocent majority are inconvenienced in order to catch the dishonest minority.

There must be sanctions to compel compliance, and those sanctions must be effective, proportionate, and dissuasive.

The federal legislation presently contains offences for contraventions of the duty to maintain an accurate register of beneficial owners.25 The penalties available may, in more serious cases, go up to fines of $200,000 or imprisonment of up to six months in duration.26 Most Canadian jurisdictions have analogous offences and penalties,27 though there is some variation in BC,28 Saskatchewan,29 and Quebec.30

---

26 Canada Business Corporations Act, s 21.4(5).
27 See, for example, The Business Corporations Act, 2021, SS 2021, c 6, ss 4-9(2)-(4); Business Corporations Act, RSO 1990, c B.16, ss 140.4(4)–(7); The Corporations Act, CCSM c C225, ss 21.4(2)–(5); Corporations Act, RSNL 1990, c C-36, ss 503.1(2)–(5); Business Corporations Act, RSPEI 1988, c B-6.01, ss 28.5(2)–(5).
28 British Columbia has analogous offences but larger penalties for corporations (a fine of not more than $100,000) and lesser penalties for individuals (fines of between $10,000 and $50,000): Business Corporations Act, SBC 2002, c 57, ss 427, 427.1(2)–(6), 428(2)–(2.1).
29 Analogous offences but lesser penalties (a fine of $10,000, a term of imprisonment of not more than 6 months, or both): The Business Corporations Act, 2021, SS 2021, c 6, ss 22–21(1).
30 A lesser penalty of $25,000, and also the potential for companies to lose their ability to claim assets if their structures are inaccurately reported. Business Corporations Act, SQ c S-31.
As the federal government builds the new pan-Canadian registry, it will need to account for differences in the penalties for non-compliance. There is no constitutional requirement that each province adopt the same penalties as the others, although this seems advisable. In addition, the federal government, in creating the registry, may wish to consider whether a penalty provision that applies nationally is viable. To the extent that the new registry is launched with different penalties in different provinces, and if British Columbia proves to have lesser penalties, this is a problem. Lower penalties would make a jurisdiction more appealing to criminal operators. In my opinion, it would be desirable for British Columbia to bring its penalties in line with its federal and provincial counterparts. As British Columbia supports the new pan-Canadian corporate beneficial ownership registry, it should ensure it has a strong compliance regime with effective enforcement and serious, dissuasive penalties for those who provide inaccurate information to the registry.

How Much Information Is Collected, and How Much Is Shared?

I adverted earlier to the fact that while the new pan-Canadian registry will collect significant personal information about those individuals who are beneficial owners, that does not mean it should all be published. On any view of it, there will be categories of information that are not made public. This is sometimes referred to as tiered access, because there are different people or bodies that can access different levels of information.

As I have discussed, initial steps taken toward beneficial ownership disclosure involved the records maintained by the companies themselves and held by corporate records offices, with access restricted to law enforcement and government agencies. Under the federal legislation, this approach changed to one that required that information as to the individual of significant control (beneficial owner) would be made available to shareholders and creditors of the corporation or their personal representatives for particular uses, and on request to investigative bodies including police and taxation authorities. A number of beneficial owner schemes implemented by provinces have substantially similar categories of access. Access to full beneficial ownership information under the BC scheme is more limited; it extends only to directors of the company, or inspecting officials for tax, law enforcement, or regulatory purposes. Ontario’s scheme, when brought into force, will be limited to prescribed members of a police force and prescribed government officials requesting disclosure for law enforcement, tax, or regulatory purposes. Under Manitoba’s scheme, access to beneficial ownership information is limited to the director and shareholders and creditors for prescribed uses.

31 A useful illustration of this appears at p 13 of the Province’s consultation paper on corporate beneficial ownership: Exhibit 55, BC Consultation on a Public Beneficial Ownership Registry.
33 The Business Corporations Act, 2021, SS 2021, c 6, ss 4-6-4-7; Corporations Act, RSNI 1990, c C-36, ss 45.4–45.5; Business Corporations Act, RSPEI 1988, c B-6.01, ss 28.3–28.4.
35 Business Corporations Act, RSO 1990, c B.16, s 140.3.
36 The Corporations Act, CCSM c C225, s 21.3.
The more recent shift internationally to beneficial ownership transparency has prioritized much wider access to civil society; it has involved access well beyond merely law enforcement–type bodies. This has led to the need to balance public access with privacy interests, as I will discuss later in this section. Quebec’s provincial budget for 2020–21 included a specific proposal for a public beneficial ownership registry.37 On June 8, 2021, the National Assembly of Quebec passed An Act Mainly to Improve the Transparency of Enterprises, providing for a publicly accessible registry of beneficial ownership within its existing corporate registry.38 And of course, there is the federal government’s 2022 commitment to “a publicly accessible beneficial ownership registry by the end of 2023.”39

In examining these competing interests, a good place to begin is with a consideration of the value of beneficial ownership registries. Although the impetus for such registries grew out of the frustration experienced by law enforcement and anti–money laundering agencies in breaking through the ambiguous ownership of shell companies, there are numerous other sectors of society that can benefit from widely accessible registries.

**Beneficiaries and Benefits of Access**

There are many potential beneficiaries of registry information, such as:

- law enforcement agencies investigating revenue-generating criminal offences;
- law enforcement and anti–money laundering agencies tracing the proceeds of crime;
- tax authorities, who need access to beneficial ownership in order to cross-check tax declarations against corporate disclosures of beneficial ownership;
- regulatory authorities that administer and enforce other laws;
- civil forfeiture authorities that trace the movement of funds and assets;
- financial “reporting entities” under Canada’s FINTRAC scheme that have statutory due diligence obligations to collect beneficial ownership information under the *Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations*, SOR/2002-184, s 138 (currently, it is difficult and expensive for banks to get this information);
- other designated non-financial business sectors such as accountants, notaries, and realtors;
- corporate registries that need access to beneficial ownership in order to implement and enforce corporate law statutes;

---

38 An Act Mainly to Improve the Transparency of Enterprises, SLQ 2021, c 19.
• civil society (e.g., journalists, non-governmental organizations, etc.) who may examine publicly accessible data in order to research alleged incidents of corruption and government patronage, assist law enforcement and company registries in identifying data anomalies, and thereby contribute to preserving trust in the integrity of business transactions and of the financial system;  

• companies, creditors, and professionals – all of whom do know-your-customer research, and/or may evaluate competitors or companies with whom they may do business. This is a point that was raised in the submissions of BMW and the CPA Canada.  

Some additional benefits of increased transparency include:

• Visibility into the actual ownership or control of a company removes a significant hurdle to the investigation and enforcement of money laundering and other offences. At a basic level, this reform means the end of the notion that companies can be used as a convenient smokescreen behind which nobody can peer.

• Allowing anyone across Canada and worldwide to have easy access to the registry allows law enforcement, taxation, and regulatory authorities in other jurisdictions to enforce the laws entrusted to them.

• In government procurement, transparency may prevent individuals who have been banned from bidding on government contracts from disguising a disbarred corporation and/or beneficial owners and bidding again.

• Where political campaign financing laws restrict totals that individuals and corporations can donate to a political party, beneficial ownership information would help in determining whether individuals are breaking laws by donating through multiple legal entities.

• Increased transparency improves the business environment and benefits economic growth.

• When “many eyes” see disclosed information on a registry, it increases feedback about inaccurate filings, which ultimately yields more reliable information.

Privacy Concerns

I accept that, as a general principle, the more beneficial ownership registries fulfill these goals, the greater the public access to them.

---

40 Evidence of M. Barron and T. Law, Transcript, November 27, 2020, pp 92–93; Exhibit 272, Beneficial Ownership Scoping Study, p 18.

41 Evidence of M. Barron and T. Law, Transcript, November 27, 2020, pp 98–101; Closing submissions, BMW Canada and BMW Financial Services, p 8; Closing submissions, CPA Canada, pp 27–29.

Having said that, I also accept that corporate shareholders may have privacy interests and that putting more information about a company’s principals or its beneficial owners into the public sphere impacts the privacy interests of those individuals. In its closing submissions, the BC Civil Liberties Association adverted to concerns about identity theft, scams, solicitation, and risks to personal safety.43

One scoping study placed before me in evidence suggested that three questions should be asked in balancing the benefits and risks of transparency:

- Is it **lawful** to disclose the personal details of the beneficial owner?
- If so, is disclosing beneficial ownership data **necessary** to achieve a legitimate aim?
- If so, how can a registry be structured so that benefits are **balanced** against potential harms?44

In supporting the development of the new pan-Canadian registry, the Province will have important insights to offer, and experience to draw on (in particular with its Land Owner Transparency Registry). There may be sensitivities and even prohibitions over certain personal information, the publication of which could unduly interfere with individual privacy interests. That would be the case, I expect, were a registry to publish full names, dates of birth, and social insurance numbers. On the other hand, a registry publishing names, cities or regions of residence, and unique identifiers may be an example of a balancing that achieves both the need for an effective database and respect for personal privacy.

There are two different ways that the design of the corporate beneficial ownership registry can ensure that the right balance is struck between effectiveness and privacy. They are not “either/or” and indeed, both should be engaged in order to have the right balance.

First, **tiered access** is a method of structuring who gets access to what information. Realistically, it is not tenable that every piece of information obtained (or obtainable) by the registry would simply be published on an online database. On the other hand, it need not be that, other than the public information, **no** information is available to law enforcement and government agencies, absent some form of court order requiring the registry to hand it over. By using tiered access, the registry can establish gradations of transparency. At a general level, this would involve a spectrum of access, under which some groups would get broad access, others a mid-level of access, and the public would get the least (but still a meaningful amount) of access to beneficial ownership information. Under that approach, the tiers may be along these lines:

- law enforcement only;
- law enforcement and authorized government agencies;

---

43 Closing submissions, BC Civil Liberties Association, p 3; Evidence of M. Barron and T. Law, Transcript, November 27, 2020, p 105.
44 Exhibit 272, Beneficial Ownership Scoping Study, p 61.
• law enforcement, authorized government agencies, and “reporting entities” under the FINTRAC scheme that have due diligence obligations; and

• anyone.45

Second, exemptions allow for information that the registry obtains, which would otherwise be publicly available, to not to be made public in a particular instance, upon application or request by the affected individual. The premise for exemptions is a presumption that a person’s name and some limited personal information (such as city of residence) will be available on the public registry. However, this presumption of openness can be overcome where a person establishes that if they are identified, there is a meaningful prospect of unfair consequences or risks for them. In the United Kingdom’s scheme, beneficial owners can request the redaction of some information in order to prevent a threat to personal safety or intimidation; this sort of exemption could be especially relevant for people such as celebrities and defence contractors.46 In the UK, the test for exemption has been interpreted restrictively. A Global Witness report found that, of 270 applications for exemptions, only five were granted.47

Having considered all of the evidence and submissions before me, the question for British Columbia is how to engage in and support the new pan-Canadian registry by advocating for the best design features. Both tiered access and exemptions should be employed in the registry, in my view. Making use of both permits an optimal balance between effectiveness and individual privacy. This sort of approach ensures that serious and well-founded risks to individuals are accounted for in order to safeguard against unacceptable harassment, targeting, identity theft, or extortion-type conduct. On the other hand, the default of public access brings to an end the traditional opacity that is automatically available by incorporating. I would add that, although the United Kingdom’s registry has faced criticism, its model provides a sound, real-world example of how exemptions can be used.48 While it may not lend itself to wholesale adoption in British Columbia and Canada, no doubt the experiences in that jurisdiction will provide valuable insights in crafting solutions in this one. The approach taken here will, of course, need to be sensitive to the unique constitutional and legislative frameworks that apply, including the constitutional and legislative protection of privacy rights.

46 Evidence of M. Barron, Transcript, November 27, 2020, p 107.
47 Evidence of M. Barron and T. Law, Transcript, November 27, 2020, p 125.
What Types of Entities Should Be Included in the Registry?

The question of what entities should be included in a beneficial ownership registry is complicated, as I have described in Chapter 23. In the present context, the decision falls to be made both federally and provincially. I view it is problematic if, at the very start of the new registry, one jurisdiction is counting apples and another is trying to include all fruit. It is, in my view, preferable that there be a harmonized and consistent approach to the entities included in the beneficial ownership registry, as it gets underway. I take it as a given that companies will be included at the outset, as the very premise is to focus on corporate entities. Over time, however, the registry should be designed in a manner that allows for it to be expanded to other “legal persons” that present significant money laundering vulnerabilities – such as trusts and partnerships.

When the expansion of the registry is considered, after it is up and on its feet, in my view, two guiding principles should drive the Province’s approach:

- identifying which corporate structures money launderers find most attractive for their criminal purposes; and
- where possible, erring on the side of including more types of corporate structures than fewer and including an ability to add new structures easily, so that money launderers will be left with fewer unregulated corporate structures to choose from and, as new risks emerge, government will have the ability to keep pace.

Various “legal persons” could, conceivably, be included in a beneficial ownership registry:

- **Private companies**: witnesses universally told me that this is the most important category to include in the registry. My understanding of the federal initiative is that it is focused on private companies. This is the right focus as the pan-Canadian registry is commenced.

  - **Public companies**: reputable stock exchanges already have their own reporting requirements, and public companies fall under the supervision of securities commissions and other regulatory bodies. There are certainly money laundering risks in this area, but they are of a character that does not point to the use of a beneficial ownership registry as the key solution, because such a registry will have a minimal ownership requirement (likely 25 percent, as discussed below) that will be inapplicable to most public companies. Moreover, beneficial ownership information is already generally available about public companies.

  - **State-owned companies**: the entire population are shareholders in such companies. While state-owned companies may be included in the registry, no shareholders

---

49 Exhibit 283, Submission to the Cullen Commission of Mora Johnson (November 2020), p 7.
50 See, for instance, the System for Electronic Document Analysis and Retrieval (SEDAR), a filing system developed for the Canadian Securities Administrators, online: http://www.sedar.com/.
will hold substantial ownership or control, so the Province will need to focus on transparency of directors, with a clear understanding of who appoints directors. 51 Having said this, based on the evidence before me, I do not understand state-owned companies to be associated to appreciable money laundering risks, and their inclusion does not seem integral to the registry.

- **Partnerships:** in a widely held partnership, it is unlikely that any partner's interest would exceed even a 10 percent ownership threshold such that these are less important to include in the registry. 52 However, smaller partnerships give rise to bigger risks. Based on the discussion of partnerships in Chapter 23, I do not recommend, at this stage, that the registry must include partnerships. But I encourage the Province and other participants in the pan-Canadian registry to keep their eye on this and to move toward adding partnerships into the registry, if and when that is viable.

- **Limited partnerships:** the United Kingdom recently added a new registry for limited partnerships. 53 Companies House had found that, after including Scottish limited partnerships in the beneficial ownership register, new registrations in Scottish limited partnerships decreased by 80 percent in the first year, suggesting that money launderers found these types of partnerships suitable for their criminal purposes. 54 Although limited partnerships have not been a significant focus for the Financial Action Task Force, they are useful to criminals for many of the same reasons as corporations and have been involved in laundromat schemes. I would include limited partnerships in the same category as partnerships as discussed above: not necessarily included in the new registry at the outset, but under consideration for inclusion in the registry once it is up and running properly.

- **Trusts:** as noted, the Financial Action Task Force has created, with amendments to Recommendation 25, an expectation for adequate, accurate, and timely disclosure of beneficial ownership information relating to trusts. Trusts are useful to criminals for many of the same reasons as corporations are and have been identified as being used in laundromat schemes. Nevertheless, trusts give rise to unique privacy considerations. I encourage the Province to study the inclusion of trusts in a beneficial ownership registry and whether additional limits on access to information are needed for this particular type of legal person. There is reason to believe that at least some categories of trusts will soon be required to report beneficial ownership information to federal and Quebec tax authorities. The Province should, first and foremost, aim for consistency in what types of structures are required to report beneficial ownership information and in who can access that information through the registry.

---

51 Evidence of M. Barron, Transcript, November 27, 2020, pp 77–78.
52 Evidence of P. Dent, Transcript, November 30, 2020, p 185.
53 Evidence of M. Barron and T. Law, Transcript, November 27, 2020, p 79.
54 Exhibit 283, Submission to the Cullen Commission of Mora Johnson (November 2020), p 6.
• **Unlimited liability companies and charities:** several witnesses made passing reference to these two types of corporate structures that money launderers may find attractive, but told me that both require more analysis.

In respect of partnerships, limited partnerships, and trusts, I do not recommend that these be included at the outset as the pan-Canadian registry commences. I encourage the Province to study and to consult with federal, provincial, and territorial partners as to the viability of including these three types of legal persons in the registry.

I would add that I take it as obvious that, as a starting point, all federally incorporated private companies – as well as private companies from participating provinces and territories – will be included in the registry.

**What Level of Control or Ownership Is Needed To Be on the Register?**

A registry of beneficial ownership does not mean that the true identity of all shareholders must be disclosed. Instead, the idea is to identify who is actually directing or owning the company, in substance. The United Kingdom articulately captured the focus of its scheme through the name “Persons of Significant Control Registry.”

To date, as noted above, most of the legislative amendments in Canada have likewise coalesced around the idea of “significance.” For example, the *Canada Business Corporations Act* uses the concept of an “individual with significant control,” and various provinces have replicated this approach. In simple terms, the federal legislation defines, an “individual with significant control” as being (a) the registered holder, beneficial owner, or person controlling 25 percent or more of the company’s shares; or (b) someone who can, in fact, control the company.

The BC *Business Corporations Act* is worded slightly differently but largely tracks the same legal concepts.

The benefits of these definitions are that they capture a variety of owners and controllers. They are also flexible in that the legislation includes the ability to prescribe additional individuals to whom the definition applies. The definitions capture both shareholder ownership and indirect control.

Although the legislative definitions in Canada capture individuals who hold 25 percent or more of voting rights attached to a corporation’s outstanding voting shares, or 25 percent or more of all of the corporations outstanding shares measured by fair market value, various commentators argue for different thresholds.

---

55 *Canada Business Corporations Act*, SC 1985, c C-44, s 2.1.
56 See, for example, *The Business Corporations Act*, 2021, SS 2021, c 6, ss 1–3; *The Corporations Act*, CCSM c C225, s 2.1; *Corporations Act*, RSNL 1990, c C-36, s 45.1; *Business Corporations Act*, RSPEI 1988, c B-6.01, s 2.1; *Business Corporations Act*, RSO 1990, c B.16, s 1.1 (not yet in force).
57 *Canada Business Corporations Act*, SC 1985, c C-44, s 2.1.
In the United Kingdom, corporations are required to disclose the level of shareholder ownership in “bands”; for example, 25–50 percent, 50–75 percent, or more than 75 percent. Some commentators argue that this is too imprecise, and it would be no additional burden to require the corporation to report exact percentage ownership, as is required in Sweden.59 Others argue that the shareholder ownership threshold should be reduced to 10 percent,60 or even lower thresholds for higher-risk business sectors.61 Those in favour of a lower threshold argue that shareholder ownership between 11 and 24 percent could still allow control by a criminal element, and that there will be few or no negative consequences with a lower threshold. I was told that it is a very small percentage of corporations in which the number of beneficial owners is a concern. A UK study found that in 80 percent of corporations there were only one or two beneficial owners, and that in only 2 percent there more than five beneficial owners.62

Differing thresholds and reporting requirements will be a valid subject of consultation and debate moving forward. My concern with a 25 percent threshold is that those seeking to avoid the obligation to divulge beneficial ownership information may be able to do so merely by having five, rather than four, owners. A 10 percent threshold makes this much harder. However, to echo a point made earlier, what I view as most critical is that the pan-Canadian registry be initiated with a consistent and harmonized scheme. The Province will need to determine if it should advocate for a 10 percent threshold, or to hold to the existing 25 percent standard that appears in the provincial transparency registry and the current federal legislation (as well as in many provinces).

The Architecture of the New Registry

The Province (and Canada) would do well to analyze and build upon the work done by Transparency International Canada, setting out two alternative models for a pan-Canadian beneficial ownership registry scheme.63 I acknowledge with thanks the considerable thought and effort that went into preparation of its report.

The first model involves a federated, distributed architecture. Under this model, provinces and territories would independently collect beneficial ownership data, and then provide that data to a central Canadian repository. Each jurisdiction would use an open and international data standard. There would be a centralized beneficial ownership registry database and portal for access and compliance management,

60 Evidence of M. Barron, Transcript, November 27, 2020, p 69.
61 Evidence of M. Barron and T. Law, Transcript, November 27, 2020, p 70.
enabling authorized federal, provincial, and territorial public servants to manage their data. An application programming interface (API) would enable provinces and territories to upload beneficial ownership data to a central repository.

The second model is a **centralized architecture**, under which businesses in all jurisdictions would directly report beneficial ownership data to a central registry through a single portal. Each jurisdiction would be able to control their level of participation and data sharing. Provinces and territories would be able to access beneficial ownership data via a cloud-based central registry, to add this information to their own registries using an API.

Key considerations in choosing the model for the new registry will include:

- who controls what data goes into the registry;
- who decides *when* beneficial ownership information is collected (i.e., during incorporation or annual filings);
- uniform data quality;
- the developmental and data infrastructure costs;
- the potential for what is termed “legislative arbitrage,” in which some corporations would shop around for the jurisdiction with the least onerous disclosure requirements; and
- security and cyber threats.

I do not purport to wade into the minutiae of design questions, which fall to be resolved by way of co-operative hard work involving the Province, the federal government, and others joining the new registry from the outset. What is key, to my mind, is that interoperability across provinces is an important objective that should be built into the architecture of any registry.64

Data users need to be able to trace corporate ownership across all participating provincial and territorial governments, and the federal government. This means that a user should be able to search all jurisdictions’ beneficial ownership registries at once, which also means that all Canadian registries (if there are multiple) must “speak the same language.”

Maximum interoperability of data is also important among law enforcement, tax officials, financial intelligence officers, and other regulators locally, and across provincial and international boundaries.65 For example, I heard that the United Kingdom is putting in place legislative gateways to permit cross-referencing registry

---

64 Evidence of T. Law and M. Barron, Transcript, November 27, 2020, pp 44, 45.
65 Exhibit 283, Submission to the Cullen Commission of Mora Johnson (November 2020), p 13.
data against other data sets. If this same approach were adopted in British Columbia, this could include, for example, the Land Owner Transparency Registry, tax authorities, and others.

A great deal of work has been done internationally on the issue of data standards. Open Ownership has developed the Beneficial Ownership Data Standard, which enables the publication of structured, linkable beneficial ownership data. It will be important to ensure that data standards are selected that plan for the future, and allow for linked data with other countries.

If a federated, distributed architecture is adopted, then each jurisdiction will need to establish its own beneficial ownership registry, into which corporations that are registered in that jurisdiction must make their beneficial ownership disclosures.

Each jurisdiction would have to decide whether to roll the new beneficial ownership registry into the existing corporate registry or to establish a stand-alone new registry. Since the existing corporate registry already holds data about every corporate entity registered in that jurisdiction, there is some logic to rolling the two registries together, effectively generating a more complete and current record of the corporation and its ownership and control.

If it is accepted that the new beneficial ownership registry will be in an open data standard, then rolling the two registries together will require that the corporate records of all existing corporations be converted to a compatible open data standard. Although this would be a major undertaking, it would achieve a valuable modernization of the corporate registry with much wider public accessibility than exists today.

In a report entitled Towards a Global Norm of Beneficial Ownership Transparency: A Scoping Study on a Strategic Approach to Achieving a Global Norm, the point is made succinctly:

Where countries have existing corporate registers, they may require substantial modernisation to change their roles, for example to provide new responsibilities for data collection, manage the collection and/or publication of beneficial ownership data, oversee any verification and sanctions regime and ensure compliance with legislation and international standards such as those set by [the Financial Action Task Force]. These roles require specific technical expertise, human and financial resourcing.

---

66 Exhibit 313, Exhibit 313, UK Department for Business, Energy and Industry Strategy, Corporate Transparency and Register Reform (September 18, 2020), para 38.
68 Evidence of M. Barron, Transcript, November 27, 2020, p 41; Exhibit 272, Beneficial Ownership Scoping Study, p 57.
69 Exhibit 272, Beneficial Ownership Scoping Study, p 55.
If a **centralized architecture** is adopted, in which BC-based corporations make their beneficial ownership disclosures directly to a central registry operated either by the federal government or by participating jurisdictions collectively, then the BC government and public and private users of the new registry could access it directly, and British Columbia would not need to establish its own beneficial ownership registry. It would presumably want to ensure that it retains control over the data disclosed by BC-based corporations.

The result would be that BC’s existing corporate registry and the new beneficial ownership records applicable to BC-registered corporations would be found in separate registries, requiring separate searches. Although the new beneficial ownership information would be available in an open data standard, British Columbia could, but would not be required to, modernize its existing corporate registry or improve public and private accessibility to it.

In my view, given the imminent arrival of the new registry, a centralized architecture appears preferable and I would encourage the Province to advocate for this approach. It maximizes interoperability between provinces, which will be of critical importance to the effectiveness of the registry nationally. It also minimizes development and maintenance costs and may deter forum shopping as an enforcement avoidance technique.

**Costs and Fees for the Registry**

I turn now to the costs involved in creating and then running the pan-Canadian registry of beneficial ownership.

**Development and Ongoing Operational Costs**

It is only after the federal government, and participating provinces and territories, settle on the architecture for the pan-Canadian scheme that precise costing will be possible. However, even at this stage, some general observations can be made.

There will be cost consequences involved with a beneficial ownership registry, in terms of development and maintenance, increased costs of verification and monitoring, and potentially the loss of search revenue to the provincial registry, to name only a few.

Some provinces and territories that want to participate may not have the financial resources or expertise to develop or operate their registries, let alone enforce compliance.\(^{70}\) I was told that there is little publicly available data on the costs associated with establishing and operating a beneficial ownership registry. Legal costs for producing definitions, reviewing existing legislation, and drafting legislation to establish the registry can be significant. Then there is the need to design the mechanisms for collecting, verifying, and publishing the information, including the scope of information to be collected, plus the cost of implementing the information technology solutions, and public consultations.\(^{71}\)

---

\(^{70}\) Evidence of J. Cohen, Transcript, November 30, 2020, p 143.

\(^{71}\) Exhibit 272, Beneficial Ownership Scoping Study, p 56.
Currently, the cost of determining beneficial ownership is borne by the private sector. That is, a bank or a regulated entity under the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act*, SC 2000, c 17, must take steps to determine beneficial ownership each time it commences a new client relationship. This is inefficient and unnecessarily costly, because numerous companies devote vast resources to research the same companies,72 and because the same inquiries can be repeated many times but with the costs borne separately each time, by the private sector.

A U4 report claims that the UK Treasury Department found that implementing beneficial ownership registries resulted in significant savings internal to the government. In particular, it claims that cost in police time saved was twice as large as the combined cost to the public sector of running the database and the cost to the private sector of submitting the data.73

On the issue of costing, it is important to take into account offsetting increased tax revenue, reduced Canada Revenue Agency and police costs, FINTRAC investigations, and business due diligence costs.74

In my view, beneficial ownership registries should be seen as an integral part of Canada’s anti-money laundering regime. If my view is accepted that a centralized architecture is preferable, and more importantly, given that Canada is leading the new pan-Canadian registry initiative, it follows that that the costs arising will primarily be a federal responsibility, with provinces and territories playing supportive roles within their jurisdiction. Nevertheless, and as I discuss in greater detail below, I agree with witnesses like Mr. Barrow and others that, ultimately, those who incorporate companies and benefit from corporate structures, as opposed to users of the registry, should pay costs associated with the beneficial ownership registry. In the United Kingdom, this cost is recovered through higher incorporation fees. That model would not work as easily in Canada due to the federated nature of incorporation statutes. A topic that will need to be resolved through federal, territorial, and provincial negotiation is whether and how to recoup the costs of running the beneficial ownership registry from those who incorporate companies and benefit from corporate structures.

**Access Fees for the Registry**

Having discussed the costs involved in developing and operating the pan-Canadian registry, I turn finally to the question of whether users of the registry should bear some of the costs involved.

In my view, the top priority should be maximum usage of the beneficial ownership registry. Any user fee will deter usage. As I noted earlier, the United Kingdom’s experience is instructive. During the time period when it charged users of the registry

---

72 Exhibit 283, Submission to the Cullen Commission of Mora Johnson (November 2020), p 21.
73 Ibid.
an access fee, there were 6 million searches annually, but when the user fee was abolished, usage increased to 2 billion per year, and there are currently more than 9 billion searches annually. The lesson to be learned is clear: the fewer impediments to usage, the more use will be made of the registry.

To the extent that some suggest that a paywall is justified as an indirect privacy protection,75 I disagree with such an approach. In my view privacy should be protected directly, through tiered access and UK-style exemptions, as I have outlined above. It should not be accomplished indirectly, and unevenly, by relying on fees to dissuade use.

I agree with witness Graham Barrow, who convincingly explained why even a nominal user fee will fundamentally diminish the utility and effectiveness of a registry.76

**Ongoing Review and Improvement of the Regime**

The nature of the registry is such that it cannot be designed and built and then left alone. It will benefit from ongoing scrutiny and review over time, to assess how the registry is operating, what the weaknesses and problems are, and how it can be improved. The United Kingdom experience is one to draw from, as it has engaged in a serious review process that has afforded important insights to permit the improvement of the registry model.77 The Province would do well to revisit and examine how the pan-Canadian registry is being implemented and how it operates, in order to address any weaknesses that are being exploited.

**Conclusion**

In this chapter, I have taken time to draw on the evidence as to the optimal features that a beneficial ownership registry should have. I have also taken pains to emphasize that rather than fixating on any one design feature, the Province should be flexible and embrace the opportunity presented by the federal government’s strong initiative to launch a publicly accessible pan-Canadian registry.

---

75 Evidence of G. Barrow, Transcript, December 2, 2020, pp 91–92.
Section 4(1)(a)(vi) of my Terms of Reference requires me to make findings of fact in relation to the “extent, growth, evolution and methods of money laundering” with respect to professional services, including the legal and accounting sectors.

This Part discusses the money laundering risks faced by legal professionals – lawyers and notaries. The first four chapters focus on lawyers and set out the legal and regulatory framework applicable to them, the money laundering risks they face, the feasibility of a reporting regime for lawyers, and anti-money laundering measures in place by the Law Society of British Columbia. The fifth chapter discusses British Columbia notaries, whose profession is related to but distinct from that of lawyers in British Columbia and notaries in other provinces.
Lawyers are often described as “gatekeepers” in money laundering schemes. They possess the necessary knowledge and skills to carry out many tasks that are useful to money launderers. These tasks include facilitating financial and real estate transactions, incorporating companies, establishing trusts and other legal entities, and providing advice on these matters. Some of the tasks that money launderers require can be carried out only by lawyers. Also appealing to money launderers are the perceived advantages that come with a lawyer-client relationship, including the overall façade of legitimacy, the secrecy provided by solicitor-client privilege, and the ability to use a lawyer’s trust account in the hope of cloaking transactions with that privilege.

While it is easy to identify the benefits, in the eyes of criminals, of making use of a lawyer’s services, the nature of the lawyer-client relationship leads to significant and unique challenges in crafting the appropriate regulatory and law enforcement response in this sector. Unlike other professionals, lawyers owe duties to their clients that have received constitutional protection. This protection has been afforded in recognition of the fact that lawyers are instrumental in ensuring that every person can understand their legal rights and obligations, obtain legal advice and representation that furthers their interests, and have access to the courts. Lawyers are not simply functionaries or agents who conduct transactions for others, and the courts have gone to considerable lengths to protect the confidentiality and trust that are inherent in the lawyer-client relationship.

The constitutional dimension to the lawyer-client relationship means that anti-money laundering regulation in this sector must account for the client’s rights and the lawyer’s duties under the Canadian Constitution. I emphasize the Canadian Constitution to make the point that some anti-money laundering measures in other countries may be unworkable here, given differing constitutional frameworks.
This is not to say that lawyers must not or cannot be regulated for anti-money laundering purposes. Anti-money laundering regulation in this sector is crucial, and it occurs already. There is, however, room for improvement. My point is that particular considerations and constraints arise when considering the regulation of lawyers that do not arise in other sectors. I elaborate on these points throughout the following chapters.

My discussion of the legal profession is structured as follows. In this chapter, I review the legal and regulatory framework applicable to lawyers in British Columbia. In particular, I consider the role of the Law Society of British Columbia (Law Society) as the regulator and the harmonizing role played by the Federation of Law Societies of Canada (Federation). I also review some key ethical duties owed by lawyers that pose challenges when considering anti-money laundering measures.

In Chapter 26, I discuss the main areas of risk inherent in lawyers’ work. Given the nature of lawyers’ practice, significant risks arise in this sector. It is crucial that the provincial anti-money laundering regime guard against these risks.

In Chapter 27, I consider a 2015 decision of the Supreme Court of Canada1 (Federation decision) that concluded that the application of the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 (PCMLTFA) (as it then stood) to lawyers was unconstitutional. Concerns relating to the Federation decision – and the resultant effect that lawyers are not subject to the PCMLTFA regime – have figured prominently in reports by the Financial Action Task Force (FATF), expert reports commissioned by the Province, and in testimony before me. I therefore dedicate a chapter to that decision, its aftermath, and the question of whether provincial measures are needed to address the exclusion of lawyers from the PCMLTFA framework.

As I explain further in that chapter, there are significant constitutional difficulties associated with crafting a reporting regime for lawyers. This Report is not the proper forum in which to make findings on the constitutionality of such a regime. However, given the significant challenges that would be involved in designing a reporting regime for lawyers, I am of the view that the province should not attempt to do so. Instead, the approach to the anti-money laundering regulation of lawyers in British Columbia should be focused on five points:

- continuing to revisit and expand existing anti-money laundering regulation by the Law Society, including a particular focus on limiting the circumstances in which a client’s funds can enter a trust account;
- strengthening and making better use of information-sharing arrangements between the Law Society and other stakeholders;
- increasing use by the Law Society of its ability to refer matters to law enforcement when there is evidence of a potential offence;

---

1 Canada (Attorney General) v Federation of Law Societies of Canada, 2015 SCC 7 [Federation].
• encouraging law enforcement to make better use of existing mechanisms by which it can access the information it needs from lawyers during investigations; and

• increasing public awareness about these measures to counter any perception that transactions conducted through a lawyer in furtherance of an unlawful aim are immune from detection.

Finally, Chapter 28 expands on this preferred approach. I review measures currently in place by the Law Society and the Federation and recommend improvements. I also discuss information sharing and other pathways by which the Law Society, law enforcement, and other stakeholders can work together to investigate money laundering in the legal sector effectively.

Self-Regulation of Lawyers

Lawyers in Canada have a long history of self-regulation. Under our Constitution, legislative authority over the “licensing and regulation of lawyers, including reviews of alleged breaches of ethics,” falls to the provinces and territories rather than the federal government. Consequently, each province and territory has its own law society that is responsible, among other things, for setting standards for admission into the profession, providing education and support, auditing and monitoring the use of trust accounts, investigating complaints about its members, and disciplining members who violate standards of conduct.

As the Supreme Court of Canada has explained, the tradition of allowing lawyers to regulate themselves is meant to maintain the independence of the bar:

An independent bar composed of lawyers who are free of influence by public authorities is an important component of the fundamental legal framework of Canadian society. In Canada, our tradition of allowing the legal profession to regulate itself can largely be attributed to a concern for protecting that independence and to lawyers’ own staunch defence of their autonomy.

In exchange for this autonomy, law societies are obliged to ensure that their members deal with the public competently and honestly. Importantly, however, self-regulation is a privilege rather than a right, and the legal profession must exercise this privilege in the public interest.

---

4 Ibid.
5 Ryan v Law Society (New Brunswick), 2003 SCC 20 at para 36. In Federation, the Supreme Court of Canada noted that “self-regulation is certainly the means by which legislatures have chosen in this country to protect the independence of the bar ... But we do not have to decide here whether that legislative choice is in any respect constitutionally required”: para 86 [emphasis in original].
The Law Society of British Columbia

The practice of law in British Columbia is largely governed by the *Legal Profession Act*. The Law Society is empowered by that statute to “uphold and protect the public interest in the administration of justice.” Craig Ferris, president of the Law Society, described this responsibility in his testimony:

> [T]he motto of the [Law Society] is that everything we do is about the public interest. Our section 3 jurisdiction, our mandate is all about protecting the public interest and the administration of justice and that informs every decision that we make, and the Benchers are reminded of it every time we meet. And we actually make an oath at the bencher table to uphold the public interest in what we do. And so, when you look at that strictly with respect to AML [anti-money laundering] ... you sometimes read that we are here to protect lawyers or we are here to do something other than that, and that is just completely and utterly false. Our sole goal is to ensure that we have protection of the public interest in everything we do, including AML.

The Law Society’s board of governors, known as the Benchers, has broad statutory authority including, but not limited to:

- setting standards of practice for lawyers and permitting an investigation into a lawyer’s competence to practise law;
- rule making over various matters such as admission, standing of members, regulation of trust accounts, and discipline; and
- establishing and maintaining legal education programs.

The Law Society’s funding comes mainly from annual levies on its members, as well as other fees charged to lawyers. The Law Society receives no government funding. In 2020, there were approximately 13,000 practising lawyers in British Columbia, with most practising in larger urban centres such as Metro Vancouver, Greater Victoria, and Kelowna.

In recent years, the Law Society has increased its spending with respect to regulation of the profession. Don Avison, the Law Society’s executive director and chief executive

11 Ibid, s 28.
officer, testified that some of these increases have been associated with anti-money laundering initiatives – increases in the budgets for the Law Society’s investigations program and discipline group, for example, as well as for the operation of the Trust Assurance Program. I return to this subject in Chapter 28.

Law Society Rules and Standards of Conduct

The Benchers are empowered to make rules governing lawyers, law firms, articled students, and applicants for membership. The resulting rules are known as the Law Society Rules (Rules). These rules are binding on legal professionals, and a breach of them amounts to a discipline violation.

In addition to adhering to the Rules, lawyers must also maintain the standards of conduct set out in the Code of Professional Conduct for British Columbia (BC Code). The BC Code is not part of the Rules; rather, it is an expression of the Benchers’ views on the standards of conduct lawyers must meet in fulfilling their professional obligations. It contains rules, commentaries, and appendices, each of which has mandatory and advisory statements. It covers ethical questions on a range of topics, including competence, integrity, confidentiality, and conflicts of interest. In contrast to the Rules, however, a breach of the BC Code may or may not form the basis of disciplinary action.

As I discuss further below, the Law Society is a member of the Federation – the overarching body that aims to foster consistency among law societies across Canada. The Federation has produced model rules of professional conduct (the Model Rules) that individual law societies can use as inspiration in developing their own rules. The Law Society has been actively involved in developing these model rules and has adopted many of them. However, through committees, it also develops rules on its own, particularly those that are specific to British Columbia.

In Chapter 28, I review the provisions of the Rules, the BC Code, and the Federation’s Model Rules that relate specifically to anti-money laundering.

The Law Society’s Powers to Investigate and Discipline Members

The Law Society has significant powers to regulate its members. In my view, some of the critiques that have been levelled at the Canadian anti-money laundering regime with respect to lawyers (discussed in Chapter 28) have failed to fully appreciate the extent of these powers and the degree to which the Law Society engages in anti-money laundering regulation and oversight.

The Law Society can initiate investigations into its members based on complaints, referrals from internal departments, as well as on its own initiative.24 When investigating its members, the Law Society has many powerful tools at its disposal, including the ability to:

- require production of, and review, documents and information that are otherwise confidential or privileged, without destroying solicitor-client privilege;25
- compel lawyers to answer questions on oath and to produce records, and suspend them if they refuse;26
- require lawyers to make their staff (such as paralegals, non-lawyers, and bookkeepers) available to speak to the Law Society;27
- attend a law office to conduct its investigation;28
- impose interim measures on lawyers while they are under investigation;29 and
- require any person to produce information or answer questions that are necessary for an investigation and, if the person refuses, apply to a court to direct compliance or find the person in contempt.30

24 *Legal Profession Act*, s 26(1); Rule 3-2.
25 *Legal Profession Act*, s 88. In *Skogstad v Law Society of British Columbia*, 2007 BCCA 310, the Court of Appeal confirmed that, as a result of section 88 of the *Legal Profession Act*, a lawyer does not violate solicitor-client privilege by disclosing privileged documents to the Law Society.
26 *Legal Profession Act*, s 26(4); Rules 3-5, 3-6.
27 Rule 3-5.
28 Ibid.
29 These measures can include voluntary or imposed restrictions on a lawyer’s practice, such as a requirement that a lawyer no longer operate a trust account or practise only under the direct supervision of another lawyer. In extreme cases, the Law Society may suspend a lawyer pending the outcome of the investigation: Exhibit 223, Law Society of British Columbia, Investigations and Discipline Programs Summary, paras 22–23. See also Evidence of G. Bains, Transcript, November 19, 2020, pp 106–8. These undertakings are posted on the Law Society website and are linked to the lawyer’s profile on the directory, unless they involve medical issues: Evidence of G. Bains, Transcript, November 19, 2020, pp 107–8. If a lawyer is not prepared to give a voluntary undertaking, but the Law Society is concerned that the public is at risk, it can seek approval from a panel to impose extraordinary measures, such as a suspension or limitations on a lawyer’s practice: Evidence of G. Bains, Transcript, November 19, 2020, p 108.
30 *Legal Profession Act*, ss 26(4)–(6).
It can readily be seen that the Law Society has the power to see everything in a lawyer’s practice. Its ability to view otherwise privileged information is particularly significant because others, such as law enforcement, are generally unable to do so. As Gurprit Bains, the Law Society’s deputy chief legal officer, explained:

There is a requirement to produce documents that are in the lawyer’s possession or control, and this extends to client files, accounting records, [and] email communications that might be relevant to the investigation. Now with text messaging and WeChat messages and all these different forms of communication, it extends to all of that. Lawyers cannot refuse to produce documents to us on the basis of privilege. We have and are entitled to review everything in the lawyer’s file. And I think that is a significant point because it means that we have full visibility to not only the accounting side of the practice, but to the client communication, so that we can really understand what was happening on these transactions and make an assessment on the conduct issues that are before us.31

In a similar vein, the Law Society has been able to obtain information from financial institutions, corporate entities, and others through its ability, under section 26 of the Legal Profession Act, to require any person to produce information or documents relevant to an investigation.32 Rule 4-55 also authorizes investigators to conduct a forensic investigation of a lawyer’s books, records, and accounts. It also allows the Law Society to mirror image the lawyer’s hard drives and other electronic storage devices, such as tablets or cell phones.33 Such investigations are usually done without notice to the subject lawyer, and the lawyer can be suspended for failing to co-operate.34

When an investigation leads to a discipline hearing, a committee can find that the lawyer committed professional misconduct,35 conduct unbecoming to the profession,36 a breach of the Legal Profession Act or the Rules, or incompetent performance of duties undertaken in the capacity of a lawyer. The committee can impose a range of disciplinary actions, including a reprimand, a fine, conditions or limitations on a lawyer’s practice, a requirement to take remedial programs or steps, suspension from the practice of law or from a particular practice area, and disbarment.37

As I discuss further in Chapter 28, the Law Society conducts investigations into various matters, including:

31 Transcript, November 19, 2020, pp 103–4.
34 Ibid.
35 Professional misconduct refers to a “marked departure from that conduct the Law Society expects of its members”: The Law Society of British Columbia v Martin, 2005 LSBC 16 at para 171.
36 “Conduct unbecoming the profession” is defined as conduct that is considered (a) contrary to the best interest of the public or legal profession, or (b) to harm the standing of the legal profession: Legal Profession Act, s 1.
37 Legal Profession Act, s 38(5).
• contraventions of trust accounting rules;
• engaging in activity that the lawyer knew or ought to have known assisted in or encouraged any dishonesty, crime, or fraud;
• failing to make reasonable inquiries before conducting a transaction where suspicious circumstances are present; and
• failing to comply with the cash transactions rule, and client identification and verification rules.

**Ethical Obligations**

As officers of the court, lawyers owe legal and ethical obligations to the state, courts and tribunals, clients, and other lawyers. Breaches of these ethical obligations can lead to serious consequences. A few ethical obligations are worth highlighting here.

First, lawyers owe a duty of confidentiality to their clients. Subject to limited exceptions, they must hold in strict confidence, at all times, all information concerning the affairs of a client acquired during the professional relationship. This duty applies to every client without exception and indefinitely.

A second key ethical principle is solicitor-client privilege. It arises from “communication between a lawyer and the client where the latter seeks lawful legal advice.” Importantly, the privilege belongs to the client, not the lawyer. As a result, privileged information cannot be disclosed to anyone unless the client consents (known as “waiving” the privilege) or an exception to privilege applies.

Exceptions to privilege are rare. The Supreme Court of Canada has explained that privilege must remain “as close to absolute as possible to ensure public confidence and retain relevance.” Accordingly, exceptions must be limited, and any disclosure must be as limited as possible. Privilege will be set aside where a client communicates with a
lawyer for the purpose of facilitating a crime (the “crime exception”)\(^\text{47}\) (discussed further in Chapter 28); where it prevents an accused person from establishing their innocence (the “innocence at stake exception”);\(^\text{48}\) and in circumstances where there is an imminent risk of serious bodily harm or death to an identifiable person or group, and disclosure of privileged information could prevent the harm (the “future harm or public safety exception”).\(^\text{49}\)

Solicitor-client privilege is a constitutionally protected right.\(^\text{50}\) The Supreme Court of Canada has repeatedly emphasized the importance of this privilege and the need for it to be stringently protected. Solicitor-client privilege dates back at least to the reign of Elizabeth I, “stemm[ing] from the respect for the ‘oath and honour’ of the lawyer, dutybound to guard closely the secrets of his client.”\(^\text{51}\) It exists to facilitate the administration of justice by encouraging clients to speak freely; ensuring that lawyers know all the facts of a client’s case means they can advise the client to the best of their ability.\(^\text{52}\)

The stringent protections for solicitor-client privilege are often raised as a concern in the context of money laundering. Privilege also poses particular challenges when contemplating a reporting regime by lawyers. I discuss these points in Chapters 26 and 27, respectively.

Another key ethical obligation is the duty of loyalty. Lawyers and law firms owe a duty of loyalty to their clients, which has three dimensions: a duty to avoid conflicting interests, a duty of commitment to the client’s cause, and a duty of candour.\(^\text{53}\) As the Supreme Court of Canada has explained, “[u]nless a litigant is assured of the undivided loyalty of the lawyer, neither the public nor the litigant will have confidence that the legal system, which may appear to them to be a hostile and hideously complicated environment, is a reliable and trustworthy means of resolving their disputes and controversies.”\(^\text{54}\)

As I elaborate in Chapter 27, the duty of commitment to the client’s cause was a key reason that the application of the PCMLTFA to lawyers was found to be unconstitutional in the Federation decision.

**Paralegals and Notaries**

Lawyers are not the only professionals who provide legal services in British Columbia. Paralegals and notaries are authorized to provide certain services. The Law Society

---

\(^{47}\) *Canada (Privacy Commissioner) v Blood Tribe Department of Health*, 2008 SCC 44 at para 10. I discuss this exception further in Chapter 28.

\(^{48}\) *R v Brown*, 2002 SCC 32 at paras 1, 3.

\(^{49}\) *Smith v Jones*, [1999] 1 SCR 455 at para 78.

\(^{50}\) Lavallee at para 49; *Chambre* at para 28.

\(^{51}\) Solosky *v The Queen*, [1980] 1 SCR 821 at 834.

\(^{52}\) McClure at para 33.

\(^{54}\) *R v Neil*, 2002 SCC 70 at para 12.
defines “paralegal” as a “non-lawyer employee who is competent to carry out legal work that, in the paralegal’s absence, would need to be done by the lawyer” and as a “non-lawyer who is a trained professional working under the supervision of a lawyer.”

The Law Society regulates the supervising lawyer in the event of misconduct or a breach of the Legal Profession Act or the Rules committed by the paralegal. This approach contrasts with that taken in Ontario, where paralegals are regulated by the Law Society of Ontario. As paralegals in British Columbia work under the supervision of lawyers who maintain ultimate responsibility for their work, my focus in the chapters that follow is on lawyers, and I will not discuss paralegals in any detail.

Notaries in British Columbia are a unique profession in Canada, distinct from notaries in other common law provinces and in Quebec. They handle many residential property transactions and small commercial transactions. I discuss this profession and the risks facing it in Chapter 29.

**Federation of Law Societies of Canada**

The Federation is an “umbrella” organization that brings together the provincial and territorial law societies across Canada. While membership is voluntary, each of the provincial and territorial law societies is a member. As noted above, the Federation develops model rules and practices with the goal of ensuring a consistent level of competence and ethical standards by lawyers across Canada.

Importantly, the Federation is not a regulator. Law societies are the regulators of the professions in their respective provinces, and they remain free to implement their own rules and initiatives as they see fit. That said, each law society has adopted the Model Rules in substance, resulting in significant consistency nationwide.

In testimony before me, Mr. Avison emphasized the close association between the Federation and the law societies:

> I’ve had the benefit of working on a number of pan-Canadian initiatives in other contexts in education and healthcare. I have not seen them operating as effectively as the pan-Canadian approach that’s utilized by the Federation. So I think it’s important for the Commission to understand that the effectiveness of the relationship that operates between law societies

59 Evidence of F. Wilson, Transcript, November 16, 2020, p 111.
60 Ibid, p 152.
and the Federation is very high. In fact, they are us. The Federation – the council members – the 14 council members are selected from each of the law societies from across the country.\footnote{Transcript, November 18, 2020, pp 23–24.}

In developing its Model Rules, the Federation generally forms working groups or committees to address specific issues through research and consultation with law societies.\footnote{Evidence of F. Wilson, Transcript, November 16, 2020, pp 107–8.} It also commonly looks to practices in other common law jurisdictions and by international regulators.\footnote{Ibid, pp 112–13.} I discuss the Federation’s Model Rules and associated BC Rules relating to anti-money laundering in Chapter 28.

**FATF Recommendations Relating to Lawyers**

As I explained in Chapter 6, FATF maintains a list of 40 recommendations for member countries with respect to anti-money laundering and counter-terrorism financing initiatives. These recommendations have evolved over the years from a focus on financial institutions to one that encompasses other businesses and professionals, including lawyers. Recommendations 22 and 23 urge the imposition of customer due diligence and reporting requirements on lawyers.

Dr. Katie Benson, a professor of criminology at the University of Lancaster who specializes in the involvement of lawyers in money laundering, explains that “[t]he role of legal professionals in the laundering of criminal proceeds generated by others has become a priority concern for intergovernmental bodies, law enforcement authorities and policy makers at both the national and international level.”\footnote{Exhibit 220, Katie Benson, *Lawyers and the Proceeds of Crime: The Facilitation of Money Laundering and Its Control* (London and New York: Routledge, 2020), p 2.}

Despite being framed as a priority, the inclusion of legal professionals in the FATF regime has not been without criticism. Early on, academics expressed concerns about what that would mean for privacy and confidentiality, the right to a legal defence and due process, and potential risks to professionals who come into contact with “dirty” money.\footnote{Exhibit 219, Katie Benson, “Money Laundering, Anti-Money Laundering and the Legal Profession” in Colin King, Clive Walker, and Jimmy Gurulé (eds), *The Palgrave Handbook of Criminal and Terrorism Financing Law* (Cham, Switzerland: Palgrave Macmillan, 2018), p 116.} More significantly, legal professionals in several jurisdictions had serious concerns about the impact it would have on the independence of lawyers, solicitor-client privilege, and the duties of confidentiality and loyalty.\footnote{Ibid, pp 116–17.}

It was these very concerns that led the Federation and the Law Society to challenge the *PCMLTFA* provisions that purported to apply to lawyers. I discuss that challenge, which proved to be successful, and its implications in Chapter 27.

Chapter 26
Money Laundering Risks in the Legal Profession

There is little doubt that lawyers, owing to the nature of their work, face an inherent risk of being used, knowingly or unwittingly, to facilitate money laundering. The evidence before me demonstrated a consensus on this point. Given the strategies employed by sophisticated money launderers, including the use of shell companies and real estate transactions, the need for such actors to involve lawyers at some level seems inevitable.

As I elaborate below, there is, unfortunately, a lack of evidence on which to draw firm conclusions about the precise nature and extent of lawyer involvement in money laundering in British Columbia. This deficiency is problematic and leaves government, regulators, and law enforcement without firm data to inform their decisions. However, this lack of data should not be equated with an absence of risk. As I discuss below, there is substantial inherent risk of lawyers in this province being used to facilitate money laundering. The provincial anti-money laundering regime must recognize this risk and put in place sufficient oversight and safeguards to protect against it.

A “Common Sense” Approach to Risk

At one level, the money laundering risks faced by lawyers seem to be common sense: if a goal of money laundering is to make criminally derived property appear legitimate, a lawyer will be needed at some point to move funds, assist in a real estate purchase, or create a corporate structure. Frederica Wilson, executive director of policy and public affairs and deputy chief executive officer of the Federation, explained in her testimony:

I think it's obvious that the nature of legal practice, all of the various things that lawyers do, assisting in real estate transactions, assisting in incorporations, assisting in all kinds of transactions, mergers and
acquisitions, et cetera ... means that there is a possibility that ... the criminally minded in the public might seek to launder money through those types of services, through those types of things. The purchase of real estate, the acquisition of businesses, et cetera. And that in that sense yes, members of the legal profession are exposed to those risks.¹

Similarly, Professor Michael Levi of Cardiff University summarizes the “utility” of lawyers in money laundering as follows:

Lawyers’ involvement arises from their utility (a) as legitimators of schemes by enhancing their credibility, (b) as the sole persons licensed to transfer property in some jurisdictions, (c) as persons able to establish corporations and other vehicles of ownership concealment and funds transfer, and (d) as assistants to launderers by introducing criminals to financial institutions as their clients and by lending their accounts to criminals for cash deposits that otherwise would be regarded as suspicious (or over the reporting threshold in those jurisdictions that have such roles).²

Dr. Benson explains that the fundamental difficulty in detecting lawyers’ involvement in money laundering is that the transactions lawyers may do to facilitate money laundering can be identical in appearance to “normal” transactions done for clients with legitimate funds. As such, the non-legitimate transactions are mixed in with legitimate ones, making it difficult, if not impossible, to identify which is which.³

Underlying these views is the idea that lawyers lend an appearance of legitimacy to the services they provide. And that respectability is often exactly what criminals are looking for.

**Limitations on Data**

Given the inherent risk in the legal sector, it is unfortunate and somewhat surprising that there is a lack of data on the extent to which lawyers are involved in money laundering. In Dr. Benson’s view, this lack of data is problematic and has led to an unquestioning acceptance of what she terms the “official discourse” or “official narrative”:

> [T]he construction of professional facilitation of money laundering in official discourse and much of the academic literature – which sees professionals as playing a critical, and increasing, role in the laundering of criminal proceeds – has weak empirical foundations. Despite this, far-reaching legislative and

¹ Transcript, November 16, 2020, pp 137–38.
policy measures aimed at preventing professionals becoming involved in money laundering have been implemented ...\(^4\)

Dr. Benson's study, which I review below, seeks to address a void she saw in the literature on the involvement of professionals in money laundering. Having reviewed the existing work in the United Kingdom and elsewhere, she concludes that it largely deals with professionals' involvement in organized crime more generally or on lawyer wrongdoing in various forms, rather than with money laundering specifically. Furthermore, Dr. Benson asserts the work that does focus on money laundering — including Professor Stephen Schneider's study, reviewed below — is largely quantitative and "provide[s] little analysis of the nature of this involvement, consideration of the contexts in which it occurs, or engagement with theory."\(^5\) She concludes that the existing literature shows "there is little understanding of the nature of the involvement of professionals in money laundering, and limited empirical evidence to support or challenge the official narrative."\(^6\)

On a more practical level, Dr. Benson notes that data with respect to the involvement of professionals in money laundering "is not routinely collected in a systematic way by either law enforcement, the criminal justice system, or the professional or regulatory bodies" in the United Kingdom.\(^7\) It appears that a similar situation may be happening in Canada: as I elaborate in Chapter 27, Ms. Wilson acknowledged that the Federation of Law Societies of Canada has difficulties in collecting data in a systematic way from law societies.

The scarcity of data on the involvement of lawyers and other professionals in money laundering is problematic. Given the lack of recent money laundering investigations and prosecutions in British Columbia, little meaningful insight into the involvement of lawyers can be gleaned from law enforcement or criminal justice sources. In the absence of strong evidence that accurately depicts the problem, policy makers and regulators are left in the dark and must use their best judgment in determining how to respond.

Elsewhere in this Report, I recommend the creation of an AML Commissioner whose mandate would include the ability to conduct research on issues relating to anti-money laundering. It is my hope that the creation of such an office, alongside further research by academics and others, will shed further light on the involvement of professionals in money laundering and assist government, regulators, and law enforcement in crafting the appropriate responses. Moreover, increased enforcement should provide further data sources for analysis and consideration.

\(^6\) Ibid.

Differentiating Among Lawyers’ Roles

When considering the risks faced by lawyers, it is important to distinguish between them acting as private citizens versus in their professional capacities. To that end, Professor Levi describes three types of risk facing lawyers:

- **lawyers as primary offenders**: lawyers can commit fraud or money laundering on their own or with co-offenders;
- **lawyers as crime facilitators**: lawyers can provide legal services that, with varying degrees of awareness of purpose, assist a criminal scheme; and
- **lawyers as victims or neutral intermediaries who are hacked**: scammers may imitate lawyers to attempt, for example, to have funds for a house purchase fraudulently directed to them.⁸

This division highlights that the capacity in which a lawyer is acting will dictate the required response. For instance, if a lawyer is a primary offender and acts unlawfully without engaging in the provision of legal services, the lawyer is acting like any other citizen, and the primary “responder” would be law enforcement (though law societies would also have an interest in addressing the unethical conduct). Meanwhile, lawyers who use aspects of the lawyer-client relationship (including solicitor-client privilege and trust accounts) to engage in or facilitate money laundering are properly subject to regulation by law societies, as well as to possible criminal sanctions. Finally, regulators can use tools such as education to help minimize the risk of lawyers being unwittingly used to facilitate money laundering, and can also use their audit and oversight functions to identify such involvement if it does occur.

Studies on the Involvement of Lawyers in Money Laundering

Having set the above caveats, I now turn to some studies on the involvement of lawyers in money laundering. I heard evidence about four studies, three of which took a quantitative approach, and one a qualitative approach. After describing the studies in general terms below, I consider their findings along with guidance documents and other evidence in a thematic discussion of money laundering risks.

Professor Schneider’s 2004 Study

In 2004, Stephen Schneider, a professor of criminology at St. Mary’s University in Halifax, conducted a study with the objective of “analyz[ing] how the financial

---

⁸ Exhibit 244, M. Levi, Lawyers, Their AML Regulation and Suspicious Transaction Reporting, p 1; see also Transcript, November 20, 2020, pp 10–12.
proceeds of criminal activity are ‘laundered’ through Canada’s legitimate economy.” 9 In it, he examines 149 cases based on RCMP proceeds-of-crime case files. Although his research yields some interesting results, I note that the cases he examined were concluded predominantly between 1993 and 199810 and therefore pre-date the specific rules implemented by the Law Society relating to anti–money laundering. As such, it is important to tread carefully before applying his findings to the present day.

Professor Schneider’s study concludes that an overwhelming majority (92.6%) of the cases he examined involved the use of at least one sector of the legitimate economy, thus making it inevitable that the accused came in contact with a professional, such as a lawyer, insurance broker, or real estate agent.11 He identifies lawyers as being involved in almost half of the cases,12 but goes on to explain:

[T]he nature of the transactions they conducted suggest … they were not expressly sought out by offenders to facilitate money laundering. Instead, most lawyers came into contact with illegally-generated funds because the transaction conducted by the offender – most notably, the purchase or sale of real estate – commonly requires the service of a lawyer.13

Indeed, in most of the cases he examined, lawyers were innocently implicated; in other words, they appeared to have no knowledge of the source of funds and there were no overtly suspicious circumstances.14 In a small number of cases, however, the transactions were clearly suspicious. For example, they involved using large amounts of cash to buy big-ticket items, purchasing bank drafts from multiple banks, having lawyers purchase assets on behalf of a client through trust accounts, or incorporating numerous companies with no legitimate businesses but significant amounts of cash.15

I discuss more specific findings from Professor Schneider’s study below.

**FINTRAC 2015 Study**

I also heard evidence from Gabriel Ngo, a senior advisor on financial crimes policy at the Department of Finance, about a 2015 study conducted by the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC) entitled “Review of Money Laundering Court Cases in Canada.”16 This study was undertaken with the goal of “look[ing] at the extent to which [FINTRAC] could identify any patterns or trends

in terms of the charges that have been brought forward under the Criminal Code with regard to money laundering.”

The study analyzes 40 sample cases between 2000 and 2014 relating to the Criminal Code provisions on money laundering. Of the 40 sample cases, 33 resulted in convictions (the “convicted cases”). Unfortunately, there is no evidence before me on the overall number of cases from which the samples were drawn.

The study revealed that proceeds of crime in the convicted cases were generated almost entirely from drug-related and fraud offences. Mr. Ngo testified that this is consistent with the general patterns and trends FINTRAC continues to see. The report further identifies the most frequently used methods for money laundering as electronic funds transfers, companies, and foreign exchange transactions. Although Mr. Ngo was unable to say definitively whether these trends continue today, he said electronic funds transfers and foreign exchange transactions continue to figure prominently in the information FINTRAC receives.

Of the convicted cases examined, five came from British Columbia. Those five cases appear to represent almost half of the total laundered funds, accounting for $200 million. However, the bulk of that sum came from one case related to currency exchange.

The study also found that lawyers constituted the second largest demographic by occupation, accounting for 15 percent of the individuals charged. The report concluded that “lawyers convicted of money laundering were willing to exploit reporting exemptions in order to launder funds.” In support, it cites a case from 2005 where a lawyer encouraged an undercover officer to conduct money laundering in Canada because there was “little police oversight,” and also used solicitor-client privilege to enhance his money laundering services. Although this case provides support for the study’s broad conclusion, the report offers little insight into how widespread such cases truly are. I also note the misconduct that occurred in the case cited happened before the implementation of most of the Law Society’s anti-money laundering measures.

A further limitation of this study is the fact it is based upon an examination of court cases between 2000 and 2014. Unfortunately, FINTRAC does not have statistics on the

number of money laundering prosecutions that have been commenced in British Columbia since that time.27

**FINTRAC Study on Lawyers**

FINTRAC has also conducted what Bruce Wallace, manager of strategic policy and reviews at FINTRAC, described as a “small-scale project [done] in part to assess our ability to identify financial activities associated with legal professionals and their data holdings.”28 The study was carried out around 2016 or 2017.29 Mr. Wallace testified that it did not go beyond a draft report and was never peer reviewed; the information was gathered for the benefit of having a discussion with the Federation of Law Societies of Canada.30

The study had the following goals:

- to examine the financial activity associated with legal professionals in Canada;
- to assess whether legal professionals are prevalent in money laundering schemes; and
- to identify the types of legal professionals involved and how funds are moved.31

Given that lawyers are not reporting entities under the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act* (PCMLTFA) regime, the study attempts to identify lawyer involvement through two sources of data: disclosures and large cash transaction reports (LCTRs).

**Disclosures**

The first set of data comprises FINTRAC disclosures to law enforcement and national security agencies from April 2013 to December 2016.32 The study identifies 289 disclosures meeting the criteria.33 Such disclosures are made when FINTRAC has reasonable grounds to suspect that the information may be relevant to a prosecution or investigation of money laundering or terrorist activity financing.34 Mr. Wallace explained, however, that the fact that FINTRAC makes a disclosure does not mean it views the transaction as suspicious: it simply means the information may be “relevant” to an investigation or prosecution.35

28 Transcript, November 16, 2020, p 45.
30 Ibid.
32 Ibid, slide 13. Mr. Wallace explained that this period was chosen in an effort to obtain fairly recent data and to ensure the amount of data was manageable: Transcript, November 16, 2020, pp 48–49.
35 Ibid, p 57. He further explained that, as there is no determination of suspicion, the information disclosed may be exculpatory or inculpatory.
The study identifies 304 individual law firms and legal counsel within the 289 disclosures. Using publicly available information, it determines that the primary areas of law being practised at the subject firms are corporate (67%), real estate (64%), commercial (38%), immigration (35%), and family (32%). It is important to note that the study does not examine the lawyer’s role in the transaction, nor does it attempt to determine if the lawyer’s involvement was in any way suspicious.

In addition, the study looks at the kinds of financial instruments used by legal professionals. The highest proportion (80%) involved negotiable instruments – bank drafts, certified cheques, and personal or business cheques. The next highest were electronic funds transfers and trust transactions (47% and 44%, respectively). Of note, cash transactions only accounted for 6 percent of the instruments used.

Large Cash Transaction Reports
The second set of data comprises LCTRs filed between April 2013 and December 2016. A reporting entity must file an LCTR when it receives an amount of $10,000 or more in cash in a single transaction (or cumulatively over a 24-hour period). Because lawyers are not reporting entities, the study uses LCTRs from other sectors, such as financial institutions and casinos. Lawyers are identified when either the conductor’s occupation was identified as being a lawyer or the transaction was conducted by or on behalf of a law firm. Notably, the study did not differentiate between lawyers acting in their personal versus professional capacities.

The data indicates there were over 5,400 LCTRs, totalling approximately $89.5 million in cash, transacted by lawyers in Canada during the relevant period. Deposits into personal bank accounts feature predominantly in the transactions (58%), followed by purchase of casino chips (15%) and deposits to a business account, which includes general and trust deposits (10%). Mr. Wallace explained the percentages are based on the number of LCTRs in each category, as opposed to the dollar value.

43 Ibid, p 53. Mr. Wallace explained that at least some of the reports would have included personal transactions made by lawyers.

46 Evidence of B. Wallace, Transcript, November 16, 2020, p 52.
Part VII: Lawyers and Notaries • Chapter 26 | Money Laundering Risks in the Legal Profession

It is important to note that FINTRAC did not determine the percentage of LCTRs that were also reported as suspicious transactions.47 Reporting entities must file suspicious transaction reports (STRs) when they have reasonable grounds to suspect a transaction is related to the commission or attempted commission of a money laundering or terrorist financing offence. Given that the study considers LCTRs only, Mr. Wallace agreed that a good number of the transactions could be perfectly legitimate.48

This analysis of LCTRs also has other limitations. First, by definition, it only deals with transactions over $10,000. As such, it does not consider the scope or use of cash by lawyers more generally.49 Second, the study is based on a very small sample size compared to the overall number of reports.50 Finally, it is worth noting the study focuses only on lawyers, not the individuals who seek to exploit them.51

Conclusions

Overall, Mr. Wallace characterized the study as illustrative but cautioned against drawing conclusions from it.52 While it validates that large cash transactions associated to lawyers are being reported on and disclosed, the study provides no insight into the nature of lawyers’ involvement in the transactions.53

Although the study provides some guidance as to which legal practices are particularly susceptible to money laundering risks and methods of lawyer involvement, given the significant limitations on the study, I am not able to draw any firm conclusions from it. In light of the value of such information to law enforcement, regulators, and policy makers, it is my hope that FINTRAC will continue to develop approaches to studying the involvement of lawyers in money laundering and share its findings with the Federation of Law Societies of Canada and the provincial law societies.

Dr. Benson’s Qualitative Study

Dr. Benson’s study took a qualitative approach to assessing lawyers’ facilitation of money laundering54 in an attempt to fill a research void. She decided early on not to assess the scale of the problem, noting that “[d]ata is not routinely collected on legal or accountancy professionals involved in money laundering in any meaningful

52 Transcript, November 16, 2020, p 60.
54 As Dr. Benson explained in her testimony, “I would conceptualise the facilitation of money laundering as a term that encompasses the various ways by which someone in a legitimate occupational position plays a role in how another person uses, moves or conceals the origins of the proceeds of crime”: Transcript, November 17, 2020 (Session 1), p 132.
or analysable way ...”55 Instead, she sought to understand the nature of lawyers’ involvement in facilitating money laundering and its control through regulation and the criminal justice system.56

Dr. Benson identified 20 cases in which solicitors had been convicted of offences under the United Kingdom’s proceeds of crime legislation between 2002 and 2013. To avoid subjective assessments of what might constitute money laundering in the absence of a conviction, she relies only on cases where convictions were obtained; the sample therefore does not include lawyers who went undetected, were not prosecuted, or received only a regulatory sanction.57

The study also focuses only on instances where lawyers acted in their professional role and facilitated the laundering of the proceeds of crimes committed by others (i.e., their clients). As Dr. Benson explains, “[t]his was because the research was interested in the role that professionals played in the facilitation of laundering by their clients, rather than the self-laundering of proceeds from criminal activity they had carried out themselves.”58

In addition to examining cases, Dr. Benson interviewed members of law enforcement and criminal justice bodies, members of supervisory bodies, and practising professionals. Despite her best efforts, she was unable to interview convicted lawyers.59

Before turning to the findings, it is important to note some legislative differences between the United Kingdom and Canada. In addition to similar offences to those set out in sections 354 (possession of property obtained by crime) and 462.31 (laundering proceeds of crime) of the Canadian Criminal Code, it is a crime in the United Kingdom to “fail to disclose.” This offence obligates reporting entities, including lawyers, to report transactions in circumstances where they suspect someone may be involved in money laundering. The fact that lawyers in the United Kingdom are subject to reporting obligations is distinct from Canadian lawyers, who are exempt from the PCMLTFA regime. Second, the offence is very broad, as lawyers can be found guilty even if they lack actual knowledge. These differences are important to keep in mind when making comparisons between Dr. Benson’s case studies and the Canadian context.

Although recognizing the difficulties in doing so,60 Dr. Benson allocates cases into four categories: buying or selling property, misuse of trust accounts, corporate vehicles

---

56 Transcript, November 17, 2020 (Session 1), pp 105–6.
60 Among other concerns, Dr. Benson notes that boundaries between categories are blurred and that “[c]ategorising the cases in this way does not take into account the underlying purpose of the transactions – that is, what the predicate offender is trying to achieve through the transaction.” See Exhibit 218, K. Benson, “The Facilitation of Money Laundering by Legal and Financial Professionals,” pp 121–22.
and offshore companies, and other legal and/or financial services. I begin by reviewing some of her general findings and return to a consideration of the categories she identifies below.

First, Dr. Benson finds considerable variation among the cases with respect to several factors:

- **The lawyer’s actions and behaviours:** activities ranged from involvement in property and trust account transactions (the most common situations) to persuading a bank to unfreeze an account to paying bail for a client using proceeds of crime.

- **Financial benefit:** some lawyers appeared to benefit financially from their involvement, while others appeared to acquire no direct financial gain apart from the normal fees they would have received.

- **Knowingness or intent:** while lawyers in four cases seemed to be knowingly and intentionally involved in the laundering, the majority of lawyers appeared to have no intent or active involvement.

- **Purpose of the transaction:** it was not always clear whether the transaction was an end point in itself or a means to an end. For example, where a predicate offender conducts a real estate transaction with a lawyer’s assistance, the purpose could be to legitimately buy property to live in, or the transaction could be used as a means to launder illicit funds.

- **Nature of the relationship with the predicate offender:** most lawyers in the study had a solicitor-client relationship with the predicate offender. However, some had personal relationships (e.g., family or romantic), and some situations involved “brokers” (i.e., someone trusted by the lawyer who introduced the lawyer to the predicate offender).

Second, predicate offences related to the lawyers’ activities mostly involve drug trafficking and various forms of fraud. Notably, only one case involves “white collar” or “corporate” crime, contrary to what Dr. Benson expected. In her view, this result likely has to do with the kinds of cases being investigated and prosecuted:

So apart from the one case of corruption, none of the cases involved what we might classify as white collar or corporate crime. So, none of the cases, for example, involved corporate bribery or insider trading or corporate fraud or the offences by corporations or financial institutions. And this ...

---

63 Ibid.
raises questions about what gets investigated and what gets prosecuted, what gets convicted and what doesn’t. So, it seems highly unlikely that those kinds of offences don’t require the involvement of professionals, especially with the amounts of money that would be involved. And so, again, does this mean that either this kind of professional enabler or this kind of predicate criminality is less likely to be investigated, prosecuted or convicted? Are they perhaps more likely to be addressed through regulatory mechanism or are they able to slip through the net completely?\textsuperscript{67}

Third, and to similar effect, Dr. Benson finds that contrary to the “official discourse” that paints financial transactions related to money laundering as increasingly complex, the cases she reviews tend to involve relatively unsophisticated transactions.\textsuperscript{68} This result might suggest that lawyers involved in complex cases are often not convicted (and thus not captured by the cases she reviewed), or it may be that most transactions related to money laundering are essentially the same transactions that lawyers carry out for “legitimate” clients. As Dr. Benson explains:

Most of the transactions in the cases examined are the same transactions that legal professionals will carry out on behalf of clients, for legitimate reasons, on a regular basis, as part of their occupational role ... So, this means that non-legitimate transactions (or transactions with non-legitimate funds) will be ‘hidden’ amongst legitimate transactions ... This has implications, therefore, for the identification and prevention of transactions involving criminal funds.\textsuperscript{69}

Based on her work, Dr. Benson concludes that facilitation of money laundering by lawyers is a complex and diverse phenomenon that defies neat categories or blanket descriptions:

We should avoid the temptation ... to see “the facilitation of money laundering” as a singular phenomenon and ask what “it” looks like, or “lump together” all the ways in which professionals are involved in the management of the proceeds of crimes committed by others. Terms such as “gatekeepers” or “professional enablers” suggest a homogeneity of actors, actions and relations that does not exist. We should also be wary of relying on simple categorisations to describe and delineate different measures of “facilitation” ... While this is useful for identifying services provided by professionals that are – or can be – used by those in possession of criminal proceeds, and highlighting areas of vulnerability for certain professions, it tends to decontextualize the behaviours and decision-making involved. Many of the cases identified in this research involve individual, possibly one-off actions that emerge

\textsuperscript{67} Transcript, November 17, 2020 (Session 1), pp 144–45.

\textsuperscript{68} Exhibit 218, K. Benson, “The Facilitation of Money Laundering by Legal and Financial Professionals,” p 123.

\textsuperscript{69} Ibid, pp 123–24; Transcript, November 17, 2020 (Session 1), pp 145–47; Exhibit 220, K. Benson, Lawyers and the Proceeds of Crime, pp 68–69.
out of particular circumstances at a particular point in time, and cannot be easily grouped with others. We need to move beyond descriptions of actions and processes, therefore, to understand the contexts of these actions and the decisions they involve, and the factors that shape the individual lawyers’ roles in the facilitation of money laundering. [Emphasis in original.]70

I review other findings from Dr. Benson’s study below. Although the study has some limitations, and certain aspects may not be applicable in the Canadian context, it is useful in demonstrating the limitations to categorization, as well as the challenges faced in identifying and preventing money laundering in the legal profession.

**FATF Guidance for a Risk-Based Approach for Legal Professionals**

As I note in Chapter 6, the Financial Action Task Force (FATF) makes recommendations for member countries with respect to anti-money laundering and counterterrorism financing initiatives. In *Guidance for a Risk-Based Approach: Legal Professionals*, FATF explains how they relate to lawyers:71

> The basic intent behind the FATF Recommendations as it relates to legal professionals is to ensure that their operations and services are not abused for facilitating criminal activities and [money laundering / terrorist financing]. This is consistent with the role of legal professionals, as guardians of justice and the rule of law[,] namely to avoid knowingly assisting criminals or facilitating criminal activity.72

The guidance further specifies that the FATF recommendations apply when lawyers engage in the following activities:

- buying and selling real estate;
- managing client money, securities, or other assets;
- managing bank, savings, or securities accounts;
- organizing contributions for the creation, operation, or management of companies; and
- creating, operating, or managing legal persons or arrangements, and buying and selling business entities.73

---

72 Ibid, para 59.
Among other things, the guidance explains how to implement the risk-based approach in the legal context. The key elements are risk identification, risk management and mitigation, ongoing monitoring, and documentation. For example, it identifies measures and policies to assist in the assessment of potential risks posed by clients and transactions. It also provides guidance on completing the client due diligence and reporting outlined in the recommendations.

**Thematic Review of Risks Faced by Lawyers**

In what follows, I set out a number of the risks facing lawyers as identified by FATF, national risk assessments, academics, and other sources. In seeking to describe the nature of these risks, I am mindful of Dr. Benson’s concerns that relatively little evidence exists concerning the nature and extent of lawyers’ involvements in money laundering, as well as the limitations of viewing the risks in strict categories. Nonetheless, I consider it useful conceptually to examine the key areas that give rise to risks among lawyers.

I am also mindful of the Law Society’s submission that the existence of a risk is not the same as a risk actually occurring:

> The existence of a ML [money laundering] risk does not, of course, equate to ML’s actual occurrence. Discussions of “inherent” risk refer to the level of risk that exists without consideration of any mitigating measures, such as Law Society regulation. With such mitigating measures, the risk may not come to fruition at all, or at least not as often as it otherwise might.

This observation is sound. However, to the extent that money launderers are operating in a jurisdiction and are, as part of their schemes, using vehicles such as shell companies or real estate transactions, it would be naive not to acknowledge the inevitable involvement, even if only unwittingly, of lawyers in money laundering.

In my discussion below, I address the following risk areas: solicitor-client privilege and the lawyer-client relationship; the purchase and sale of property; misuse of trust accounts; use of corporate vehicles and offshore accounts; provision of other legal and financial services; and litigation and private lending.

**Solicitor-Client Privilege and the Lawyer-Client Relationship**

A frequently cited risk associated with lawyers is the concern that criminal activity goes undetected or is difficult to investigate because of solicitor-client privilege and the lawyer’s duty of confidentiality.
As I discuss throughout these chapters, there are stringent protections for privilege in Canada. In general, privileged communications cannot be revealed to anyone unless the client consents or one of the few exceptions applies. These strict protections mean that some information will simply be beyond the reach of law enforcement. As Professor Jason Sharman from the University of Cambridge explains, they may also cause law enforcement to be overly cautious:

[T]he idea of legal professional privilege ... may create an extra layer of secrecy that makes it more difficult for law enforcement to find out what's going on and can often kind of warn off or deter law enforcement from even looking at things because law enforcement says well, there's lawyers involved; there's legal professional privilege; if we put enough time and effort, we might be able to overcome this, but we have a lot of crime to investigate and maybe we'll just leave this one alone and go on and do something easier.\(^76\)

The FATF guidance accepts that solicitor-client privilege (and the civil law concept of professional secrecy) is “founded on the nearly universal principle of the right of access to justice and the rationale that the rule of law is protected where clients are encouraged to communicate freely with their legal advisors without fear of disclosure or retribution.”\(^77\) Accordingly, the FATF recommendations exempt lawyers from reporting privileged information.\(^78\)

Solicitor-client privilege, as a matter of common sense, is attractive for criminals. It provides a curtain behind which certain activities and information will be sheltered from view. It is clear that, in some circumstances, the existence of privilege can impede investigations by law enforcement. However, as I discuss further in Chapter 28, law enforcement should not shy away from cases involving lawyers simply because lawyers are involved. Search warrants and production orders can be obtained for information and documents held by lawyers, and the Law Society has implemented guidelines for searching law offices in a manner that respects privilege. Further, privilege does not apply where a client seeks to use a lawyer’s services to facilitate a crime. The Law Society’s Rules also allow it to refer matters to law enforcement when it comes across evidence of a possible offence. It is crucial that the Law Society and law enforcement make use of these pathways, which can help narrow the gap resulting from lawyers’ exclusion from the PCMLTFA (see Chapter 28).

Nor should the Law Society’s role in regulating lawyers be underestimated. The Law Society is empowered to review all material possessed by lawyers, including privileged information. It is therefore uniquely placed to examine all aspects of a lawyer’s practice, and it has powerful sanctions at its disposal. In some ways, Law Society regulation is

\(^{76}\) Transcript, May 6, 2021, p 74.

\(^{78}\) Exhibit 4, Appendix E, FATF Recommendations, p 85, Interpretive note to Recommendation 23, para 1.
able to target lawyer misconduct more effectively than the criminal justice system. Therefore, both regulation and law enforcement have a role to play in addressing the misuse of lawyers’ services.

I return to these points in Chapter 28.

Purchase and Sale of Property

There is no dispute in the evidence before me that lawyers’ involvement in real estate transactions presents inherent risks. In an advisory to the profession, the Federation’s Anti–Money Laundering and Terrorist Financing Working Group (FLSC Anti–Money Laundering Working Group)\(^79\) explains the risk as follows:

Real estate is a popular vehicle for those engaged in fraud and money laundering. It is generally an appreciating asset and its sale can lend legitimacy to the appearance of funds.

Consequently, the purchase of real estate is a common outlet for criminal proceeds. Fraudsters and other criminals often go to great lengths to ensure that real estate transactions used to launder funds look legitimate, masking the true intent of the transaction, which could be a purchase, sale or refinancing.\(^80\)

In a similar vein, Dr. Benson explains that real estate offers two methods of legitimizing funds:

The purchase of commercial or residential property provides an ideal method of laundering criminal funds, offering two points at which the funds can be legitimised: firstly, as deposits are moved through a law firm’s client account and, secondly, as the funds are exchanged for the ownership of property. Furthermore ... rental income or profit made by the sale of the property also provide legitimate income from initially illegitimate funds.\(^81\)

Risks relating to real estate have likewise been identified by FATF, Canada’s 2015 national risk assessment, the United Kingdom’s national risk assessments, and FINTRAC.\(^82\)

\(^79\) I discuss this working group in Chapter 27.
\(^81\) Exhibit 220, K. Benson, Lawyers and the Proceeds of Crime, p 73.
The majority of cases Dr. Benson reviews in her study involve real estate or the use of trust accounts to facilitate transactions derived from criminal activity or to move funds.83 She testified that it is “inevitable” that some legal professionals will be involved in property transactions involving illicit funds, given the likelihood that criminals will buy or invest in property and the necessary role of lawyers in this area.84

Similarly, Professor Schneider’s study finds that lawyers encounter proceeds of crime mainly through their role in facilitating real property transactions by individuals engaged in drug trafficking or with accomplices.85 He describes the kinds of services that lawyers provide as follows:

The services provided to those clients investing illegal revenues into real estate were typical of what a lawyer offers to any client in a real property transaction: conducting lien searches, obtaining property tax information, calculating property tax payments for the buyer and seller, obtaining information on insurance requirements, preparing title transfer and mortgage documents, registering the transfer of title, and receiving and disbursing funds through the law firm’s bank account as part of the real estate deal (including deposits, down payments, “cash-to-close,” and mortgage financing).86

Professor Sharman notes that banks in other jurisdictions have not been able to tackle the risk of money laundering in the real estate sector because they see only the trust account of the lawyer (or realtor) rather than the underlying customer’s account. He also notes the problem of real estate purchases being made through shell companies or corporate vehicles, which can render the beneficial (or true) owner difficult to identify.87

There is consensus on the point that real estate transactions pose a risk to lawyers. In my view, the rules adopted by the Law Society with respect to limitations on accepting cash, customer identification and verification, and trust account regulation go a long way to mitigating those risks. I discuss these rules, along with areas where they might be improved, in Chapter 28.

**Misuse of Trust Accounts**

Closely related to concerns about real estate transactions are fears about the misuse of trust accounts to launder illicit proceeds. The traditional concerns in this respect are that a client could give large amounts of cash to a lawyer and later receive a

---

83 Evidence of K. Benson, Transcript, November 17, 2020 (Session 1), p 133.
84 Ibid, p 135.
refund by cheque, or that the client could allow the cash to accumulate and use it later to conduct a transaction or purchase real estate. It is important to note at the outset that regulation by the Law Society has essentially eliminated these risks. As I discuss in Chapter 28, lawyers must abide by stringent trust regulation rules and face regular audits; they are prohibited from accepting more than $7,500 in cash (with some exceptions); and when lawyers receive cash from clients, they must also make any refunds in cash. I am satisfied that these measures have addressed the traditional money laundering risks associated with trust accounts.

In this regard, it is interesting to note that FINTRAC’s study on legal professionals found that cash deposits to trust accounts (as opposed to personal accounts) were “of minimal representation in FINTRAC reporting.”88 Mr. Wallace testified that this finding was significant, given that many typologies and methodologies, particularly historical ones, contain “assertions that trust accounts are frequently used” for large cash transactions.89 However, it is important to recall that trusts transactions were used by legal professionals in almost half of the disclosures.90 Mr. Wallace acknowledged that “because of the limitations of the study and by virtue of the fact we don’t get reports from legal professional[s], it’s really hard to say what’s going on with trust accounts.”91 For these reasons, the FINTRAC study must not be taken as suggesting there is no risk associated with trust accounts. I am satisfied that, given their very nature, they continue to pose significant concerns.

One particular concern is the potential for solicitor-client privilege to attach to transactions that go through trust accounts. As privileged information cannot be disclosed unless the client consents or an exception applies, the potential for transactions going through trust accounts to elude law enforcement is considerable. In Dirty Money 2, Dr. Peter German went so far as to describe lawyers as the “‘black hole’ of real estate and of money movement generally,” noting that law enforcement’s inability to know what enters and leaves a lawyer’s trust account stymies investigations.92

As I discuss in Chapter 27, recent case law from the Supreme Court of Canada suggests that trust account records may be considered presumptively privileged. However, this is only a presumption – not an across-the-board rule. Such records will not always be privileged, and it may be possible to obtain redacted records that omit the privileged information. For this reason, as I discuss further in Chapter 28, law enforcement should not take the view that everything related to a trust account will necessarily be privileged. It must use the tools at its disposal (including warrants, production orders, and the crime exception to privilege) to follow leads that involve trust accounts and attempt to gain access to the information it needs.

91 Transcript, November 16, 2020, p 59.
A related concern with respect to trust accounts is that the involvement of lawyers may provide an appearance of legitimacy, causing law enforcement, financial institutions, and others to ask fewer questions. Dr. Benson articulates this concern as follows:

Law firms’ [trust accounts] can play an important role for those wanting to launder criminal proceeds. They provide a “façade of legitimacy” to funds that pass through them, and transactions that originate from them. As well as funds being used as the deposit in a property purchase, this includes money that is being transferred to other bank accounts or being used to make large-scale purchases ... Furthermore, because of the principle of lawyer-client confidentiality, banks are unaware of the identity of the client whose funds are being moved through the client account, and so their use can help to circumvent banks’ anti-money laundering procedures.\(^{93}\)

FATF’s guidance and other commentators share the concern that banks do not or cannot ask probing questions about the underlying customer when funds are in a lawyer's trust account.\(^{94}\)

It is apparent that trust accounts cause significant concern among commentators and are frequently cited as a money laundering risk. In seven of the 20 cases analyzed by Dr. Benson, passing criminal proceeds through a trust account was identified as the primary means of facilitating money laundering.\(^{95}\) Similarly, Professor Schneider concludes that trust accounts are “regularly used and abused for [money laundering] purposes.”\(^{96}\) On the evidence before me, I am unable to make any findings about the extent of misuse of trust accounts by lawyers in British Columbia. I accept, however, that there is a very real risk of them being misused. Indeed, there are several examples of misuse in Law Society discipline cases.\(^{97}\)

Two discipline cases are illustrative. I emphasize that my discussion of these cases is entirely reliant on the Law Society's public decisions, and I make no findings of my own with respect to the lawyers’ conduct.

The first case is the well-known one of *Re Gurney*. It is broken up into two parts – the first dealing with the basis of the misconduct and the second with the appropriate sanctions and penalties.\(^{98}\) The hearing panel found that Mr. Gurney had used his trust

\(^{97}\) In addition to the cases I review below, see also Law Society of British Columbia v Hsu, 2019 LSBC 29; Law Society of British Columbia v Daignault, 2020 LSBC 18; and Law Society of British Columbia v Hammond, 2020 LSBC 30.
\(^{98}\) See *Re Gurney*, 2017 LSBC 15, and *Re Gurney*, 2017 LSBC 32.
account to receive and disburse approximately $25.8 million on behalf of a client without making reasonable inquiries about the circumstances, and without providing substantial legal services in connection with the matters. It held that he had committed professional misconduct, but made no finding of fraud or money laundering in relation to the funds. He received a six-month suspension from the practice of law, was ordered to disgorge his fees, and was subject to additional conditions on the use of a trust account. The panel noted:

[A] lawyer’s trust account cannot be used only for the purpose of facilitating the completion of a transaction, but the lawyer must also play a role as a legal advisor with regard to the transaction. This is the requirement to provide legal services. [Emphasis added.]

As I discuss further in Chapter 28, this statement led to a formal codification in the Rules that trust accounts can be used only in direct connection with legal services.

A more recent case of interest is The Law Society of British Columbia v Yen. The hearing panel found that over a two-year period, Ms. Yen received over $10 million in trust from a variety of sources, including Panama, Singapore, and Luxembourg. In that same time period, Ms. Yen paid the equivalent amount out of her trust account in 45 transactions. The panel further found that only about $1.5 million of the funds were directly related to legal services.

Ms. Yen was found to have committed professional misconduct by depositing and disbursing significant amounts of money through her trust account without making sufficient inquiries or providing legal services in relation to most of the funds. As the panel explained:

[I]t is not enough that a lawyer does legal work, even substantial legal work, for a client who deposits money into the lawyer’s trust account. These legal services must be “in connection with the trust matter.”

The hearing panel on disciplinary action notably considered that Ms. Yen’s actions may have contributed to money laundering:

[Ms. Yen] was at best wilfully blind in allowing her firm’s trust accounts to be used and manipulated in this manner. This Panel cannot definitively conclude that money laundering occurred, but it is not our role to make that determination.

Nevertheless, if money laundering did in fact occur, it could not have happened without the participation and assistance of [Ms. Yen], however inadvertent such assistance may have been.

99 2017 LSBC 15 at para 79.
100 See Rule 3:58.1.
102 Ibid, para 40.
103 Re Yen, 2021 LSBC 30 at paras 24–25.
The panel also reiterated the principle from Re Gurney that trust accounts must only be used for purposes directly related to legal services:

> It is well established that lawyers are gatekeepers of their trust accounts. In Law Society of BC v. Gurney, 2017 LSBC 15, the panel explained that lawyers’ trust accounts are not to be used as a conduit; rather, they are only to be used for legitimate purposes and transactions. The reason for this is that lawyers are granted the privilege of operating trust accounts without scrutiny or interference by government authorities such as FINTRAC. This exemption from government scrutiny arises from the principle that trust funds are protected by solicitor-client privilege. This privilege carries with it the weighty obligation of ensuring that trust accounts are not misused or that rules governing their use skirted or outright circumvented.104

Ms. Yen was suspended from legal practice for three months.105

As I discuss in Chapter 28, the Law Society and the Federation are aware of the risks posed by trust accounts. The Law Society has a robust trust audit program and has increased the number of audits it conducts for high-risk practice areas. Audits are not a perfect solution; they will not catch every wrongful use of a trust account. Nonetheless, I find that they are a strong deterrent. Indeed, as Jeanette McPhee, chief financial officer and director of trust regulation at the Law Society, noted in her testimony, Mr. Gurney’s case was detected through a compliance audit.106

Even so, given the inherent risks associated with the use of a trust account and the fact that lawyers in Canada are currently exempt from a reporting regime, it is crucial that funds enter a lawyer’s trust account only when necessary. This restriction avoids having solicitor-client privilege apply too broadly, covering transactions that would not be privileged if conducted by another professional. As I expand in Chapter 28, further limitations are warranted in this regard.

### Use of Corporate Vehicles and Offshore Accounts

Another commonly cited risk in relation to lawyers is their role in creating corporate structures and trusts, and the use of offshore bank accounts. As Dr. Benson explains:

> Concern about the role of legal professionals in the facilitation of money laundering often focuses on the assistance they can provide through the creation and management of companies and other corporate vehicles, such as trusts and foundations, and the use of bank accounts in off-shore locations. Corporate vehicles can be used as a means of confusing or disguising the links between offenders and the proceeds of their crimes,

---

104 Ibid at para 26.
105 Ibid at para 60.
106 Transcript, November 18, 2020, p 122.
and off-shore bank accounts provide a level of secrecy that can be used to hide illicit funds (i.e. the proceeds of crime, money on which tax is being evaded, or funds being used in the commission of crime). Of course, such financial constructions are not illegal in themselves and are used for legitimate reasons; for example, for the purposes of privacy, security and financial planning. However, there are increasing concerns over the use of corporate vehicles such as ‘shell companies’ to hide their ‘beneficial owners’ (i.e. the person[s] who ultimately owns, controls or benefits from the company or other asset) for illegitimate reasons.107

The FLSC Anti–Money Laundering Working Group similarly notes that criminals are increasingly turning to shell companies and trusts to facilitate money laundering because these vehicles make it possible to conceal the true ownership of funds.108 These concerns are repeated in the FATF guidance, a presentation given by FINTRAC to the FLSC Anti–Money Laundering Working Group, and the United Kingdom’s national risk assessments.109

In Dr. Benson’s study, two cases fall into this category. One of them involves proceeds of corruption being transferred by a solicitor into offshore trusts and shell companies, and the other involves a solicitor transferring ownership of hotels while the owner was under a criminal investigation.110 Dr. Benson testified that this low number of cases did not reflect the concerns about the use of corporate vehicles she expected. She suspects this is owing to difficulties with investigation and prosecution:

[T]hat might be because it doesn't happen, but I think it's more likely that it reflects the nature of the cases that are investigated and prosecuted and convicted. So, I think that raises a number of questions that need to be considered further, for example [whether] more complex cases involving corporate vehicles and offshore accounts and complex transactions are less likely to result in prosecution or in conviction and if so, is this due to their complexity and the challenges of investigating transactions hidden behind financial constructions whose purpose is to provide secrecy and conceal ownership. So, I think the risk of money laundering through corporate vehicles should be taken seriously and the lack of convictions that I saw in the sample ... gives us a lot of questions to think about.111

110 Evidence of K. Benson, Transcript, November 17, 2020 (Session 1), pp 140–41.
111 Ibid, pp 141–42.
Professor Schneider notes in his review that “truly sophisticated” money laundering operations are “often characterized by the international movement of funds, including the use of financial haven countries, which often necessitate the use of legal professionals.”

He explains that lawyers are retained to incorporate companies, set up bank accounts, establish trusteeship, and sometimes help funnel illicit money to laundering vehicles.

Clearly, lawyers’ involvement in creating corporations, trusts, and other legal entities brings associated risks. Law Society oversight of lawyers’ anti-money laundering obligations, such as source-of-funds inquiries and client identification requirements, can assist in combatting this risk. So, too, can limiting the use of a lawyer’s trust account to those circumstances where it is necessary. A beneficial ownership registry would also go some way toward addressing this risk. I return to these topics in Chapters 24 and 28.

Other Legal and Financial Services

FATF’s guidance notes that legal professionals may sometimes undertake “management” activities for clients pursuant to a court order or power of attorney. Although such services are generally legitimate, it warns criminals might seek to use them “to minimize the number of advisors and third parties who have access to the client’s financial and organizational details.” The guidance recommends that lawyers carefully scrutinize requests for assistance beyond their primary services.

The guidance highlights additional specialized legal skills that may be used to transfer illicit proceeds and obscure ownership, namely, creating financial instruments and arrangements, drafting contractual arrangements, creating powers of attorney, and being involved in probate, insolvency, or bankruptcy.

FINTRAC’s presentation to the Federation of Law Societies of Canada and the Government of Canada Working Group on Money Laundering and Terrorist Financing (FSLC–Canada Working Group) similarly noted that lawyers can be called on to manage client money, securities, or other assets; manage bank, savings, and securities accounts; buy and sell business entities; and set up and manage charities.

Professor Schneider repeats many of these concerns. He adds that lawyers may be asked to act as directors, officers, trustees, or even as owners or shareholders of a company, and that law offices may be used as the corporate addresses for companies controlled by criminal entrepreneurs.

113 Ibid.
115 Ibid, para 53.
116 I discuss this working group further in Chapter 27.
119 Exhibit 7, S. Schneider, Money Laundering in Canada: An Analysis of RCMP Cases, p 69.
Private Lending and Litigation

I discuss the risks associated with private lending in more detail in Chapter 17. Briefly, there are two main ways in which lawyers can be exposed to these risks. First, they may be involved in structuring private lending (e.g., drafting and reviewing loan documents). Second, they may be involved in enforcing private lending arrangements through litigation or otherwise.

The Law Society has issued a discipline advisory on private lending. It cautions that lawyers “who are retained to draft loan or security documents, to register the same, or to assist with the advance or recovery of funds should take additional steps to protect themselves and maintain public trust in the profession.” Those steps include asking additional questions and ensuring they know their clients and the subject matter of their retainers. It notes that, although most private loans are legitimate, “there is an increased risk of illegal activity with them.” The advisory lists a number of red flags of which lawyers should be mindful:

- there is no clear or plausible reason why the borrower is not borrowing from a commercial lender;
- the amount or fact of the loan seems inconsistent with the client’s circumstances;
- third parties are involved without apparent good reason;
- the funds advanced are in cash, and the parties are unwilling or unable to provide basic details or documentation concerning the loan, including its source;
- the funds come from, go to, or are to be repaid offshore or to a jurisdiction that is known to be secretive or restrictive;
- there is no security for a large loan or the security is a subsequent mortgage or charge on a fully or near-fully encumbered property;
- the actual or agreed-to repayment period is unusually short;
- the interest rate exceeds the criminal rate or is above market;
- the lawyer is retained after the funds have been advanced;
- the lawyer is not experienced in the relevant area of law, or the client has been refused counsel or changed counsel recently or several times without apparent good reason;
- any party to the transaction has an alleged or known history of drug trafficking, money laundering, civil forfeiture, loan-sharking, fraud, high-stakes gambling or similar activity; and
- the client is unusually familiar with or resistant to client identification and verification requirements.

120 https://www.lawsociety.bc.ca/support-and-resources-for-lawyers/discipline-advisories/april-2-2019/.
The FLSC Anti–Money Laundering Working Group has issued a similar risk advisory on private lending.121

It has also issued risk advisories addressing money laundering risks in litigation.122 I agree that lawyers must also be cognizant of this risk in connection with litigation, and I endorse the extension of its risk advisory to that activity.123

The FSLC risk advisory notes that some forms of litigation, particularly debt recovery actions, may pose risks:

Criminals may attempt to launder proceeds of crime by filing and recovering on civil claims. This could, for example, involve using fabricated documents to misrepresent transactions or claim an interest in property. A lawyer should not assist a client in enforcing a contract that may be based on criminal activity.124

The advisory explains that lawyers should be alert to risks when retained to assist with private loan recovery, builders’ lien claims, claims for recovery of capital investment, as well as claims for defective goods and unpaid commercial invoices.125 It sets out a number of risk factors in line with those identified in the preceding advisories.

**Conclusion**

In this chapter, I have reviewed some of the key risk areas in which lawyers may be used to facilitate money laundering. In doing so, I do not purport to identify all the risks that arise in the legal profession. I have also noted a lack of data generally when it comes to the extent and nature of lawyers’ involvement in money laundering. My hope is that research by the proposed AML Commissioner, academics, and others will shed further light on this issue. I also expect that the enhanced investigation and prosecution of money laundering will supply further insight into the nature and extent of lawyers’ involvement in these schemes. Given the inherent risks associated with the activities in which lawyers engage for clients, it is crucial that regulators, law enforcement, and policy makers stay alert to these risks and to new forms of money laundering that continue to develop.

123 I mention this because the recommendations set out in the FATF guidance do not apply to lawyers representing clients in litigation unless they also engage in a specified activity: Exhibit 193, Overview Report: Legal Professionals and Accountants Publications, Appendix A, FATF, Guidance for a Risk-Based Approach for Legal Professionals, para 17.
125 Ibid.
Chapter 27

The *Federation* Decision and the Feasibility of a Reporting Regime for Lawyers

Unlike a variety of other professionals in Canada, lawyers are currently not subject to the requirements of the *PCMLTFA* and its regulations. The exclusion of lawyers from the federal regime has a complicated history that culminated in the 2015 *Federation* decision,¹ which held that the application of the regime to lawyers as it then stood was unconstitutional.

Following the *Federation* decision, there have been strong critiques levelled at Canada for its failure to bring lawyers into the *PCMLTFA* regime in a constitutionally compliant way. Critics have called the exclusion of lawyers from the regime a gap in Canada’s anti-money laundering framework, maintaining the view that lawyers are not subject to anti-money laundering regulation in this country.

As I explain below, it is too simplistic to say that lawyers are not subject to anti-money laundering oversight. It is certainly true that FINTRAC does not receive reports from lawyers and thus does not have the same lens into lawyers’ and their clients’ activities as it does into other professions subject to the *PCMLTFA*. This fact is significant and does constitute a gap in terms of intelligence gathering. Further, there are certainly unique and important challenges for law enforcement when it comes to investigating money laundering activity when lawyers are involved.

However, it is inaccurate to say lawyers in British Columbia² are not regulated for anti-money laundering purposes: they are, in fact, subject to extensive anti-money

---

¹ *Canada (Attorney General) v Federation of Law Societies of Canada, 2015 SCC 7 (Federation).*
² As my mandate is limited to considering British Columbia, I have not arrived at conclusions about the regimes in other provinces. However, there are sound reasons to believe that the regimes in other provinces are similar to that in British Columbia, given the harmonizing role played by the Federation of Law Societies of Canada.
laundering regulation by the Law Society of British Columbia. In my opinion, this regulation has gone a long way to addressing many of the money laundering risks in this sector, and critics have given it too short shrift.

Law Society regulation does not duplicate the PCMLTFA measures. In some ways – particularly the fact that FINTRAC does not receive reports on suspicious activity from lawyers – this is a disadvantage and prevents FINTRAC and law enforcement from obtaining important intelligence. Significantly, however, there are also benefits to be gained from dealing with anti-money laundering issues from a regulatory perspective. One such advantage is that the Law Society is entitled to see all aspects of a lawyer’s practice, including confidential and privileged information. On the whole, the issue of anti-money laundering regulation of lawyers in British Columbia is much more nuanced than some critiques have appreciated.

In this chapter, I describe the scheme that Parliament attempted to apply to lawyers. I then discuss the successful constitutional challenge to that regime; actions taken by the Law Society and the Federation of Law Societies of Canada following the Federation decision; and the critiques that have been levelled at Canada for failing to bring lawyers into the PCMLTFA regime.

At the end of this chapter, I consider the possibility of a provincial reporting regime for lawyers. Although such a regime would likely be beneficial in the fight against money laundering, there are significant constitutional difficulties inherent in crafting such a regime. In my view, these challenges are so considerable that the Province of British Columbia should not attempt to legislate a reporting regime for lawyers. Instead, as I set out below and in Chapter 28, the Law Society must continue to strengthen its anti-money laundering regulation, particularly with respect to trust accounts, and it must prioritize information sharing and other collaborative measures with law enforcement and other stakeholders. While pathways already exist for information sharing and collaboration, it is crucial that the Law Society, law enforcement, and other bodies make better use of them.

**Lead-up to the Constitutional Challenge**

The PCMLTFA was enacted in 2000. I explain the regime in detail in Chapter 7. Essentially, it requires specified entities (including, but not limited to, financial institutions, accountants, insurance brokers, casinos, and BC notaries3) to collect information about the identities of their clients; keep records of transactions; report suspicious, large cash, and large virtual currency transactions to FINTRAC; and establish internal programs to ensure compliance with the scheme.

---

3 See Chapter 29 for a discussion of the notarial profession in British Columbia and the risks specific to it. Given the differences between the BC notarial profession and that in other common law provinces and in Quebec, BC notaries are the only legal professionals in Canada who are subject to the PCMLTFA. Notably, solicitor-client privilege does not attach to their dealings with clients.
Lawyers became subject to the PCMLTFA in 2001, when they were required to report suspicious transactions involving their clients to FINTRAC. The Federation and several provincial law societies promptly launched constitutional challenges and obtained injunctions relieving legal counsel of the reporting requirements. The litigation was adjourned, and the parties entered into an agreement precluding the federal government from applying new regulations to lawyers and Quebec notaries without the Federation’s consent.

In 2004, the Federation (and, shortly afterward, the Law Society) adopted a Model Rule on cash transactions preventing lawyers from accepting more than $7,500 in cash (with some exceptions). Ms. Wilson testified that the federal government at the time viewed this rule as an appropriate alternative to the large cash–transaction reporting requirement under the PCMLTFA. I discuss the cash transactions rule in Chapter 28.

In 2006, the PCMLTFA was amended to exempt lawyers and Quebec notaries from the reporting requirements. Significantly, lawyers have not been subject to reporting requirements under the PCMLTFA since this amendment – well before the Federation decision in 2015.

In 2007, the federal government pre-published regulations that would make the legal profession subject to the client identification and verification (CIV) requirements under the PCMLTFA. This led to discussions between the Federation, the federal Department of Finance, and FINTRAC.

Key aspects of the proposed scheme included:

- **Identification and verification:**
  - Lawyers would be required to identify the persons and entities on whose behalf they acted as financial intermediaries.
  - Lawyers would be required to verify the identity of persons or entities on whose behalf the lawyer receives or pays funds, with some exceptions.
  - Lawyers would be required to collect information on the client such as the names of directors and shareholders of corporations and information about trustees and beneficiaries.

---

4 Law Society of British Columbia v Canada (Attorney General), 2001 BCSC 1593, aff’d 2002 BCCA 49, leave to appeal to the Supreme Court of Canada discontinued, SCC file number 29048.

5 The Quebec notarial profession is distinct from both the British Columbia profession and that in other provinces. The Supreme Court of Canada has explained that Quebec notaries play a similar role to solicitors in common law provinces, and their work is notably covered by professional secrecy (the civil law equivalent to solicitor-client privilege): see Canada (Attorney General) v Chambre des notaires du Québec, 2016 SCC 20 [Chambre] at para 42; and Notaries Act, CQLR, c N-3, ss 10, 14.1.

7 PCMLTFA, s 10.1.

• **Record keeping:**

  - Lawyers would be required to create a “receipt of funds record” when they received $3,000 or more in a transaction, which would document the personal details of the individual from whom the funds were received, account information, details about the transaction, and more.

  - The records had to be kept for at least five years following the completion of the transaction and produced to FINTRAC on request.

• **Search and seizure:**

  - FINTRAC was authorized to “examine the records and inquire into the business and affairs” of any lawyer. This authorization included the power to search through computers and to print or copy records. Lawyers were required to comply with FINTRAC’s requests for information.

  - FINTRAC had the ability to disclose to law enforcement certain information it came across during a search and equivalent foreign state agencies.

  - There were some protections for solicitor-client privilege, principally a specification that lawyers were not required to disclose privileged information and a procedure for protecting privileged information during a search.  

    The Federation considered the new provisions but ultimately refused consent. Litigation restarted in 2007.  

    In 2008, the Federation adopted model rules for client identification and verification (discussed in Chapter 28) that closely tracked the provisions the federal government sought to impose on lawyers through the *PCMLTFA*. The model rules were adopted by all Federation members. In explaining why the Federation adopted the CIV Model Rules at that time, Ms. Wilson testified that the law societies, while taking the view that the federal regulations were unconstitutional, believed that regulation of lawyers to reduce the risk of money laundering and terrorist financing was undoubtedly part of their public interest mandate.

    In 2013, when the BC Code came into effect, it reiterated an existing rule that “[a] lawyer must not engage in any activity that the lawyer knows or ought to know assists in or encourages any dishonesty, crime or fraud.” As I discuss further in Chapter 28, this broad rule – in combination with specific anti-money laundering rules – is an important part of the Law Society’s anti-money laundering regulation.

---

9 *Federation* at paras 14–19.
13 Transcript, November 16, 2020, p 126.
14 *Code of Professional Conduct for British Columbia* [BC Code], Rule 3.2-7.
The litigation regarding the PCMLTFA’s provisions for lawyers lasted from 2009 to 2015. Ms. Wilson and Mr. Avison testified that, during that time, there was virtually no engagement between the federal government, the Federation, and individual law societies on anti-money laundering issues. Nor were any significant new anti-money laundering initiatives or model rules implemented by the Federation. Mr. Avison described this as “lost time when the parties could have been working effectively together to develop collective approaches around how they could engage the issues more directly and more effectively.”

A Successful Constitutional Challenge

In a constitutional challenge that made its way to the Supreme Court of Canada, the Federation – along with the Law Society and other legal advocates – argued that the federal scheme violated solicitor-client privilege and threatened fundamental constitutional principles related to lawyers’ duties to their clients. All three levels of court agreed that the scheme was unconstitutional.

It is important to keep in mind that, at the time of this constitutional challenge, the provisions relating to suspicious transaction and other reporting requirements no longer applied to lawyers, owing to the amendment to the PCMLTFA in 2006 (as noted above). The challenge therefore focused solely on the client identification and verification and search and seizure provisions.

Unreasonable Searches and Seizures

The Supreme Court of Canada held that parts of the proposed legislation authorizing FINTRAC to conduct searches of lawyers’ offices and copy records violated section 8 of the Canadian Charter of Rights and Freedoms (Charter) – the right to be free from unreasonable search and seizure.

The Court held that the “regime authorizes sweeping law office searches which inherently risk breaching solicitor-client privilege.” It emphasized that searches of law offices will be unreasonable unless they provide a “high level of protection for material subject to solicitor-client privilege.” The Court reiterated that this privilege “must remain as close to absolute as possible if it is to retain relevance.” On the whole, there was insufficient protection for solicitor-client privilege and a substantial risk that privilege would be lost.

18 Federation at para 35.
19 Ibid at para 36.
20 Ibid at para 44.
21 Ibid at paras 40, 48–52.
Despite the importance of the objectives of combatting money laundering and terrorist financing, the Court concluded that there were less drastic means of pursuing the same objectives. Therefore, the provisions applying to lawyers were found to be unconstitutional.\(^{22}\)

Significantly, the Court did not firmly close the door on a scheme that included searches of lawyers’ offices; it left open the possibility that Parliament could craft a constitutionally compliant scheme without the requirement of a warrant.\(^ {23}\) The Court added that different considerations would apply to professional regulatory schemes:

The issues that would arise in the event of a challenge to professional regulatory schemes are not before us in this case. Different considerations would come into play in relation to regulatory audits of lawyers conducted on behalf of lawyers’ professional governing bodies. The regulatory schemes in which the professional governing bodies operate in Canada serve a different purpose from the Act and Regulations and generally contain much stricter measures to protect solicitor-client privilege.\(^ {24}\)

**Breach of Lawyers’ Right to Liberty**

In addition to authorizing unreasonable searches and seizures, the federal scheme was held to breach lawyers’ right to liberty under section 7 of the *Charter*. This right was engaged because lawyers were liable to prosecution and imprisonment if they failed to comply with the scheme.\(^ {25}\)

The Court went so far as to recognize as a principle of fundamental justice that “the state cannot impose duties on lawyers that undermine their duty of commitment to their clients’ causes.”\(^ {26}\) I pause here to note the significance of this holding. Section 7 of the *Charter* states that “[e]veryone has the right to life, liberty and security of the person and the right not to be deprived thereof except in accordance with the principles of fundamental justice [emphasis added].” A “principle of fundamental justice” is therefore a constitutional concept. Principles of fundamental justice do not exist in the ether; to achieve constitutional status, they must be recognized by the courts. Once this recognition happens, the effect is significant: if a law affects someone’s life, liberty, or security of the person and is inconsistent with a principle of fundamental justice, it will almost certainly be unconstitutional. The Supreme Court’s holding therefore lends constitutional protection to the lawyer’s duty of commitment to the client’s cause.

The Court also noted that it was significant, though not determinative, that the federal scheme went beyond what the Federation and provincial law societies

\(^{26}\) Ibid at para 84.
considered necessary for effective and ethical representation of clients. Moreover, it concluded that clients would reasonably consider that lawyers were acting on behalf of the state in complying with the scheme and that privileged information could be disclosed without their consent. The Court found this “would reduce confidence to an unacceptable degree in the lawyer’s ability to provide committed representation.”

The Court emphasized, however, that the duty of commitment “must not be confused with being the client’s dupe or accomplice ... [and] does not countenance a lawyer's involvement in, or facilitation of, a client's illegal activities.”

The Court concluded by noting that Parliament might be able to design a constitutionally compliant scheme, provided there were sufficient protections for solicitor-client privilege and meaningful immunity for clients if they were later prosecuted:

[T]he scheme requires significant modification in order to comply with the requirements of the right to be free from unreasonable searches and seizures. Given that there are a number of ways in which the scheme could be made compliant with s. 8, I do not want to venture into speculation about how a modified scheme could appropriately respond to the requirements of s. 7. However, it seems to me that if, for example, the scheme were to provide the required constitutional protections for solicitor-client privilege as well as meaningful derivative use immunity of the required records for the purposes of prosecuting clients, it would be much harder to see how it would interfere with the lawyer's duty of commitment to the client's cause.

The information gathering and record retention provisions of this scheme serve important public purposes. They help to ensure that lawyers take significant steps so that when they act as financial intermediaries, they are not assisting money laundering or terrorist financing. The scheme also serves the purpose of requiring lawyers to be able to demonstrate to the competent authorities that this is the case. In order to pursue these objectives, Parliament is entitled, within proper limits which I have outlined, to impose obligations beyond those which the legal profession considers essential to effective and ethical representation. Lawyers have a duty to give and clients are entitled to receive committed legal representation as well as to have their privileged communications with their lawyer protected. Clients are not, however, entitled to make unwitting accomplices of their lawyers let alone enlist them in the service of their unlawful ends. [Emphasis added.]

27 Ibid at paras 107–8. The Court recognized that professional ethical standards “cannot dictate to Parliament what the public interest requires or set the constitutional parameters for legislation. But these ethical standards do provide evidence of a strong consensus in the profession as to what ethical practice in relation to these issues requires.”

28 Ibid at para 109.

29 Ibid.

30 Ibid at para 93.

31 Ibid at paras 112–13.
Unfortunately, in the years following this invitation by the Supreme Court to revisit the PCMLTFA, many remained focused on how lawyers could be brought into that regime in a constitutionally compliant way to the exclusion of considering whether alternative measures, including law society regulation, could fill the gap resulting from lawyers’ exclusion. This is not to say that revisiting the federal legislation is not desirable; my point is that there was insufficient focus during this period on what law societies were doing to address the fact that lawyers were not subject to the PCMLTFA regime.

**Aftermath of the Decision**

For some time following the Federation decision, it appeared that the federal government would attempt to legislate lawyers back into the PCMLTFA regime in a constitutionally compliant way.32 By 2018, however, the Federation understood the government was abandoning this idea.33 Since then, the Federation has not heard any indication of an intention to legislate lawyers back into the PCMLTFA regime. Ms. Wilson testified that she believes that the federal government “is not currently looking at regulating the legal profession” and has “embraced the opportunity to work with [the Federation] collaboratively.”34

To understand this shift in the federal government’s thinking, it is necessary to review some of the immediate aftermath of the Supreme Court’s decision, in particular the measures taken by the Law Society and the Federation and the criticism levelled at Canada for its failure to bring lawyers into the PCMLTFA regime.

**Actions by the Law Society and the Federation Following the Federation Decision**

Following the Federation decision, three working groups focused on anti-money laundering were established involving the Federation, the Law Society, and the federal government. I review each in turn.

---

32 The 2015 national risk assessment noted that the federal government was “revisiting” the PCMLTFA provisions and “intends to bring forward new provisions for the legal profession that would be constitutionally compliant”; see Exhibit 192: Overview Report on the Regulation of Legal Professionals in British Columbia, Appendix N, Department of Finance, *Assessment of Inherent Risks of Money Laundering and Terrorist Financing in Canada, 2015* (Ottawa: Department of Finance, 2015), p 32, footnote 31. This was also alluded to at a June 2016 meeting between federal officials and the FLSC: Exhibit 204, Federation of Law Societies of Canada – Memorandum from Frederica Wilson to CEO, Re FATF Mutual Evaluation Report – September 21, 2016, para 11; Evidence of F. Wilson, Transcript, November 16, 2020, pp 174–75.

34 Transcript, November 16, 2020, pp 185–86.
The FLSC Anti-Money Laundering Working Group

A key step by the Federation following the Federation decision was the creation of the FLSC Anti-Money Laundering and Terrorist Financing Working Group. The working group is made up of senior staff from law societies across Canada, including two from British Columbia. It was created with a mandate to “undertake a review of the Model No Cash and Client Identification and Verification Rules and to consider issues related to their enforcement.” It was approved by the Federation’s Council in 2016 and formed in 2017.

From October 2017 to March 2018, the working group held consultation on several proposed amendments to the Federation’s Model Rules – namely, the cash transaction and client identification and verification rules – and the introduction of a trust account model rule. This review of the Rules led to updates to the Model Rules for cash transactions, client identification and verification, and trust regulation in 2018. Corresponding updates to the Law Society’s Rules were made between July 2019 and January 2020. I discuss specific results from this review in Chapter 28.

To complete this review, the working group divided into two subgroups: one focused on the review of the Rules, and the other focused on compliance and enforcement.

The rules subgroup discussed experiences with the Rules; examined federal regulations and amendments; looked at the Financial Action Task Force’s mutual evaluation report; and considered guidance from the task force, the International Bar Association, and others. Ms. Wilson described the working group’s approach to the Rules review as follows:

The other thing to note is that we took the position at the outset that the goal was to assess whether or not the rules were as effective and robust as they should be to manage the risks that they were intended to address. So nothing was off the table ... Sometimes when you are looking at regulations you’re really only looking at has anything changed, do we need to tweak here and there. We stood right back from both rules, and we had an early conversation in that regard about risk-based approaches and whether we should be stepping completely back and looking at a different approach. There were lots of reasons why we didn’t do that at the time, but that’s still very much on the table.

39 Evidence of F. Wilson, Transcript, November 17, 2020 (Session 1), pp 6–7.
40 See Chapter 6 for an explanation of the mutual evaluation regime.
41 Transcript, November 17, 2020 (Session 1), p 13.
Meanwhile, the enforcement subgroup conducted a survey of law societies to understand the tools they had for monitoring compliance and enforcing the rules. This survey was in response to an issue that arose during the 2016 mutual evaluation conducted by the Financial Action Task Force, when the Federation did not have statistics available to address some of the evaluators’ questions. I suspect this lack of data may have contributed to the evaluators’ failure to fully appreciate the efforts already being undertaken by law societies and to their perception that lawyers are not regulated for anti-money laundering purposes. As a contemporary internal memo explained:

The Federation representatives provided the assessors with information on the law society rules and regulations in place across Canada. Using the material put before the courts in the Federation’s case against the federal government, they also gave a general outline of the range of methods used by law societies to monitor compliance by members of the legal profession. The FATF assessors asked a number of questions about enforcement, including whether law societies take account of the relative risks that may be posed in different contexts. *The assessors also enquired about statistics on enforcement, prosecutions and sanctions. They were informed that we do not currently collect such statistics.* [Emphasis added.]

Ms. Wilson explained that the difficulty in collecting specific anti-money laundering statistics as follows:

One of the challenges in terms of getting information on enforcement and it remains a challenge today and something that we’re quite focused on at the moment is that [the Model] Rules find their expression in law society rules in different ways. Some of them are part of the accounting rules. Some are part of the general rules and regulations of [the] law society. And how a particular matter is referred for investigation or how it’s referred to prosecution does not necessarily reference anything to do with anti-money laundering rules.

So you may find, for example, that somebody is cited for a breach of the trust accounting rules. It doesn’t tell you, without digging further, exactly what was behind it. That’s something that existed at the time of this evaluation, something that we are still working ... with the law societies to get to a place where we can produce more specific data that looks more specifically at ... this suite of rules that are relevant to the anti-money laundering efforts.

---

42 Ibid, p 7.
44 Evidence of F. Wilson, Transcript, November 16, 2020, p 157.
The enforcement subgroup's study showed that all law societies except one had comprehensive spot audit programs in place, which were supplemented by risk-based audits. It also showed that some law societies were starting to use data analytics, which is now a more entrenched practice.47

The survey also revealed discrepancies in the treatment of breaches of the cash transaction rule. For example, some law societies would refer all breaches for investigation, while others exercised some discretion as to whether to refer the matter for investigation or adopt a remedial approach.48

Ms. Wilson described the study as an illustration of the “difficulty in extracting consistent and comparable data across the law societies because of the way that they classify investigations and disciplinary matters.”49 Moreover, because of similar challenges, the study did not collect statistical data about the numbers of investigations, breaches, and the like. Ms. Wilson testified that the Federation is working with law societies to develop more consistent ways of recording data.50

This study is a good first step toward gathering consistent and useful data about law society practices across Canada. I consider it very important for the law societies and the Federation to strive for more consistent and effective data collection, particularly given the lack of evidence on the involvement of lawyers in money laundering (see Chapter 26).

**Recommendation 53:** I recommend that the Law Society of British Columbia work with the Federation of Law Societies of Canada to develop uniform metrics to track, at a minimum:

- the nature and frequency of breaches of rules that are relevant to anti-money laundering regulation;
- the number of breaches that are referred for investigation or into a remedial stream;
- the outcome of the referrals, including the nature and frequency of sanctions that are imposed;
- the rules, policies, and processes law societies have regarding information sharing with and referrals to law enforcement;
- the frequency, nature, and circumstances of the information sharing or referrals, including whether this includes sharing of non-public or compelled information and the stage of a proceeding or investigation at which occurs; and
- the use of data analytics by law societies.

---

47 Evidence of F. Wilson, Transcript, November 17, 2020 (Session 1), pp 6–7.
48 Ibid, pp 7–8.
50 Ibid, pp 9–11.
The working group is currently undergoing a second review of the Model Rules. I discuss that review in Chapter 28.

Aside from this review, the working group also conducts other anti-money laundering-related activities, such as issuing “risk advisories” to the profession. I review one of these risk advisories relating to private lending and litigation in Chapter 26. In my view, these risk advisories are very useful, particularly as they can address new and evolving money laundering risks. I encourage the working group and the Law Society to continue issuing such advisories to their members.

**The Law Society’s Anti–Money Laundering Working Group**

The Law Society has also developed an anti-money laundering working group that “monitors and advises the Benchers on key matters relating to the state of anti-money laundering strategies and initiatives in British Columbia.” The working group also ensures continuing liaison between the Benchers and the provincial government on money laundering; monitors and advises the Benchers on the Federation’s work on anti-money laundering issues; liaises with various committees at the Law Society; develops and recommends model anti-money laundering policies; and works with the Law Society’s Communications Department.

The Law Society also provided the Commission with its strategic and operational anti-money laundering plans. The strategic plan highlights areas of priority where the society should direct its anti-money laundering efforts. The operational plan “provides details of specific anti-money laundering initiatives, status, timelines and next steps.”

**The FLSC–Canada Working Group**

A third development following the *Federation* decision was the creation of the FLSC–Government of Canada Working Group on Money Laundering and Terrorist Financing. The working group’s mandate is “to explore issues related to money laundering and terrorist financing in the legal profession and to strengthen information sharing between the law societies and the Government of Canada.”

---

52 Exhibit 222, Law Society of British Columbia, *Introduction to the Law Society,* para 22. For example, it advises the Benchers on actions the Law Society is taking in terms of anti-money laundering initiatives, money laundering trends in British Columbia and other provinces, the progress of this Commission, and the nature and adequacy of Law Society resources being dedicated to anti-money laundering.

53 Ibid.

54 Ibid, Appendices B and C.

55 Ibid, para 23.

56 Ibid. See also Evidence of D. Avison, Transcript, November 18, 2020, pp 27–28.

A presentation prepared for the Commission by the federal Department of Finance explains the rationale for the working group’s creation:

- The legal profession presents a high money laundering and terrorist financing risk.
- The *Federation* decision left the regulation of lawyers’ conduct to law societies, which can play an important role in mitigating those risks.
- The group aims to share information and explore ways of addressing the inherent risks of money laundering and other illicit activity that can arise in the practice of law.58

The working group has various objectives set out in its terms of reference. These relate in broad strokes to strengthening communication between law societies and the federal government; sharing information about money laundering risks; discussing improvements to existing systems; and developing new practices.59

The working group is co-chaired by the Federation and the Department of Finance. Its standing members include representatives from Justice Canada, the Department of Finance, and law societies. It also invites representatives from other departments (such as the RCMP, FINTRAC, and the Canada Revenue Agency) to attend on an ad hoc basis.60

The working group was created in June 2019 following a special ministerial meeting on money laundering in Vancouver and had met three times as of the Commission’s hearings.61 Mr. Ngo testified that these meetings focused on information sharing and best practices, with FINTRAC, various law societies, and the Department of Finance making presentations.62 He stated that a key takeaway from the Law Society’s presentation centred on its significant regulatory powers and ability to refer cases to law enforcement.63

Ms. Wilson testified that the Federation has plans for subsequent meetings of the working group. For example, it plans to update the group on its continued review of the Model Rules and to introduce some new guidance documents. It also aims to present a new online educational tool about the risks of money laundering in the practice of law.64

Although it took several years for this working group to be established following the *Federation* decision, I consider it an important step. I encourage the Law Society, the Federation, and the federal government to make full use of this forum to share best practices, engage in meaningful information sharing, and assist one another in identifying evolving money laundering risks in the legal sector.

Critiques of Canada’s Anti–Money Laundering Regime

In Chapter 6, I describe Canada’s fourth mutual evaluation conducted by the Financial Action Task Force in 2016, about a year after the Federation decision. The report was highly critical of a perceived gap in the anti-money laundering framework with respect to lawyers. It concluded:

The legal profession is not currently subject to AML/CFT [anti-money laundering / combatting the financing of terrorism] supervision due to a successful constitutional challenge that makes the PCMLTFA inoperative in respect of legal counsels, legal firms, and Quebec notaries. There is therefore no incentive for the profession to apply AML/CFT measures and participate in the detection of potential [money laundering / terrorist financing] activities. The exclusion of the legal profession from AML/CFT supervision is a significant concern considering the high-risk rating of the sector and its involvement in other high-risk areas such as the real estate transactions as well as company and trust formation. This exclusion also has a negative impact on the effectiveness of the supervisory regime as a whole because it creates an imbalance amongst the various sectors, especially for [reporting entities] that perform similar functions to lawyers.66

Elsewhere, the report described the fact that lawyers are not subject to the PCMLTFA regime as a “significant loophole” in Canada’s anti-money laundering framework,67 a “significant concern,”68 and a “serious impediment” to Canada’s efforts to fight money laundering.69 A “priority action” was to “[e]nsure that legal counsels, legal firms, and Quebec notaries engaged in the activities listed in the standard are subject to AML/CFT obligations and supervision.”70 The report was also critical of the Federation, which had participated in the evaluation process on behalf of Canadian law societies:71

[T]he Federation of Law Societies, although aware of the findings of the [2015 national risk assessment], did not demonstrate a proper understanding of [money laundering / terrorist financing] risks of the legal profession. In particular, they appeared overly confident that the mitigation measures adopted by provincial and territorial law societies (i.e. the prohibition of conducting large cash transactions and the identification and record-keeping requirements for certain financial transactions performed on behalf of the clients) mitigate the risks. While monitoring measures are applied by the provincial and territorial law societies, they are limited in

66 Ibid, p 95.
69 Ibid, p 7.
71 Evidence of F. Wilson, Transcript, November 16, 2020, pp 146–47.
scope and vary from one province to the other. The on-site visit interviews suggested that the fact that [anti-money laundering / counter-terrorist financing] requirements do not extend to legal counsels, legal firms and Quebec notaries also undermines, to some extent, the commitment of [reporting entities] performing related functions (i.e. real estate agents and accountants).72

In October 2021, the Financial Action Task Force conducted its first regular follow-up report and technical compliance re-rating of Canada since the 2016 mutual evaluation.73 Although Canada's ratings improved in several categories, the follow-up report indicates that the continued non-inclusion of legal professionals “affects the overall outcome.”74

While the 2016 mutual evaluation is arguably the most significant critique of Canada’s regime following the Supreme Court’s decision, other commentators have shared the concern that a gap exists in Canada’s anti-money laundering framework.

In Dirty Money 2, Dr. Peter German notes that lawyers are “at high risk of being targeted by money launderers” given their exemption from reporting and the inherent risks in their work.75 In Dr. German’s view, the lack of financial reporting by lawyers makes Canada an “outlier” compared to other common law jurisdictions that have found workarounds to address issues such as privilege.76 Professors Maureen Maloney, Tsur Somerville, and Brigitte Unger similarly note that, despite the Law Society’s regulation of lawyers, “legal professionals will still not have a positive obligation to report suspicious transactions to anyone.”77

Finally, in testimony before me, Mr. Wallace expressed the view that non-reporting by lawyers constitutes a gap in the intelligence FINTRAC receives.78 He described this gap as an advantage for someone looking to launder funds in the sense that, unlike countries where lawyers are required to report suspicious transactions, FINTRAC does not have “a line of sight into transactions conducted by lawyers on behalf of clients.”79

In my view, the above critiques blend two related, but distinct, issues. The first is the perception that lawyers are not subject to anti-money laundering regulation and that there is therefore no incentive for lawyers and law firms to adopt anti-money

---

74 Ibid, p 3.
76 Ibid, p 124.
78 Transcript, November 16, 2020, p 13.
laundering measures. I respectfully disagree with these views, given the significant anti-money laundering regulation undertaken by the Law Society. The second is the concern that non-reporting by lawyers to FINTRAC or another body creates an intelligence gap. I share this concern. I deal with these two issues in turn.

First, critiques to the effect that lawyers are not subject to anti-money laundering regulation and have no incentive to adopt preventive measures are not accurate. These criticisms appear to assume that, because lawyers are not subject to the PCMLTFA regime, they are not regulated for anti-money laundering purposes. This is simply not the case. As I elaborate in Chapter 28, the Law Society has implemented a number of anti-money laundering rules aimed at preventing lawyers from being involved in money laundering. These include the cash transactions rule and client identification and verification rules, which parallel, and in some ways go further than, similar rules under the PCMLTFA. They also include extensive trust-accounting rules intended to prevent and detect the misuse of trust accounts. This trust regulation includes periodic, mandatory audits of law firm trust accounts. The Law Society’s ability to investigate lawyers, to view all aspects of a lawyer’s practice (including confidential and privileged information), and to impose sanctions – up to and including disbarment – provide a strong incentive to comply with these rules. For these reasons, I disagree with the argument that lawyers are not subject to anti-money laundering regulation and have no incentive to comply.

Relatedly, I find that the criticism of the Federation (and, by implication, the Law Society) to the effect it does not understand the money laundering risks facing the legal profession unfair. The evidence before me demonstrates that the Law Society and the Federation have worked to gain a strong understanding of the money laundering risks in this sector and have implemented measures focused on anti-money laundering since at least 2004. They also continue to revisit their anti-money laundering rules to address new and evolving risks. While there is always room for improvement in every sector – including the legal profession – it is not accurate to say the Federation and the Law Society do not understand the risks faced by their members. I return to the measures in place by the Law Society and the Federation in Chapter 28.

The analysis and critiques in the Financial Action Task Force’s 2016 mutual evaluation seem to employ a standard that adheres rigidly to the model of reporting to a country’s financial intelligence unit (in this country, FINTRAC). Such reporting is indeed an important part of anti-money laundering efforts; however, it is by no means the only solution that can be effective. (And, indeed, to the extent that reporting to FINTRAC has proven ineffective at addressing money laundering activity, there may be sound reasons that it should not be seen as a silver bullet solution.) A regime in which lawyers reported to FINTRAC would, if properly and constitutionally implemented, resolve an inequity in relation to other sectors of activity. But such reporting on its own would not seem to offer a comprehensive solution. In my view, the existence of a robust regulatory model seems to be a more important and effective aspect of anti-money laundering regulation in the legal sector.
I turn now to the second criticism: the concern that FINTRAC lacks a lens into the suspicious activities of lawyers and their clients. I agree that such a gap exists. In Chapter 26, I discuss a study conducted by FINTRAC that attempted to analyze lawyer involvement in money laundering based on reports from other reporting entities and disclosures from FINTRAC to law enforcement. Mr. Wallace testified that, in the absence of reporting by lawyers themselves, the study was unable to come to any conclusions about the nature of lawyer involvement in money laundering. He further testified that FINTRAC generally lacks a lens into activities in the legal sector. The absence of lawyers from the regime means that Canada’s financial intelligence unit lacks information about the legal sector. Further, law enforcement will, in some cases, be compromised in its ability to trace funds or “follow the money” when it passes through a lawyer’s trust account.

The lack of lawyer reporting also means that lawyers may unwittingly be involved in illegitimate transactions. Whereas a single transaction may, in the absence of further context, appear legitimate to a lawyer, law enforcement or an entity such as FINTRAC may be able to piece together that transaction with other intelligence to determine that it is part of a series of transactions that are, collectively, suspicious (or that the context and intelligence surrounding a transaction change its character).

I am also concerned that the lack of reporting to FINTRAC by lawyers and the very public criticisms of this gap may lead prospective money launderers to perceive this jurisdiction as a “safer” one in which to move or hold their illicit proceeds. As I discuss further in Chapter 28, lawyers in British Columbia are subject to significant anti-money laundering regulation, and there are methods by which information about suspicious transactions can be communicated to or pursued by law enforcement. To dispel the myth that the lack of reporting by lawyers to FINTRAC has created a safe haven for money launderers, it is important that information about regulation, detection, and enforcement avenues be communicated publicly.

Whether lawyers should be required to report suspicious activity to FINTRAC, the Law Society, or some other body is, however, a highly complex issue. As I discuss further below, lawyers have constitutional duties to protect privileged information and to be committed to their clients’ causes. Unfortunately, these important duties pose significant difficulties when contemplating a reporting regime by lawyers.

I do not express an opinion as to whether the federal government could bring lawyers into the PCMLTFA regime in a constitutionally compliant way. This Report is not the proper forum to do so, since any proposed legislation would need to be put before a court, with submissions from affected parties and a ruling by the judge. However, it has been suggested that the Province of British Columbia should design its own reporting regime for lawyers, which is a policy question properly before me. In my opinion, the difficulties that would be involved in designing such a regime are so great that the Province should not attempt to do so. Indeed, it is apparent that, despite the Supreme Court of Canada leaving open the possibility of some incorporation of lawyers into

---

80 Transcript, November 16, 2020, pp 61–63.
the PCMLTFA regime, the federal government has not found a way to do so and does not appear to have any plans to attempt to do so in the foreseeable future. Further, for British Columbia to legislate a reporting regime for lawyers without parallel regimes in other provinces would lead to inequality of reporting among provinces and would clearly be less desirable than a reporting regime that applied across Canada.

In what follows, I expand on the difficulties inherent in designing a provincial reporting regime for lawyers. Then, in Chapter 28, I outline what I consider to be a more attainable and effective method of regulating lawyers in British Columbia for anti-money laundering purposes.

**Calls for a Provincial Reporting Regime for Lawyers**

The concept of a provincial reporting regime for lawyers was suggested in the reports of both Dr. German and Professors Maloney, Somerville, and Unger.

In *Dirty Money 2*, Dr. German suggested that lawyers might report to a separate body administered by law societies or the Federation, or that a “blind” could be established that would allow for transmitting financial data without violating solicitor-client privilege.81 This recommendation was grounded in his conclusion that there is “no blanket privilege that shields all such records from disclosure” and that British Columbia case law “recognizes that information relating to financial transactions in trust account records will in general not be privileged.”82

Professors Maloney, Somerville, and Unger similarly recommended that lawyers be required to report suspicious activity to their law societies. They suggest that limitations could be placed on the Law Society’s ability to use that information in investigations:

Where a lawyer properly reports a suspicious transaction and withdraws from representing the client, as required by law society rules, the law society would not be able to take action or share the information. But where the suspicious transaction report (STR) provides reasonable grounds to investigate another lawyer who did not report or withdraw, it could become clear that solicitor-client privilege does not apply, in which case there could be further investigation and information sharing by the law society. If implemented, law societies should be required to report statistical information about STRs to FINTRAC, to combine with information about STRs submitted by reporting entities.83

The French model of lawyer reporting arguably provides support for these proposals. As Professor Levi explained, the French system involves reporting to a third party called the *bâtonnier*, who assesses issues of privilege before forwarding reports to the financial intelligence unit.84

83 Maloney Report, p 84.
84 Transcript, November 20, 2020, pp 38–40.
With respect, I am not persuaded by the proposal by Professors Maloney, Somerville, and Unger. As I understand it, the aim would be to potentially identify situations in which a lawyer or an individual (other than the reporting lawyer or the lawyer’s client) was engaged in suspicious activity in situations where no solicitor-client privilege attached. It is not clear to me how often such reporting would produce intelligence that the Law Society could use, nor am I confident that the lawyer would be able to report such information in a way that does not breach solicitor-client privilege or the duty of confidentiality. Further, the proposal may be seen as countenancing the lawyer’s ability to engage in a suspicious transaction so long as the suspicions are reported, contrary to ethical and professional obligations. In this regard, I agree with the concerns raised by Ms. Wilson:

I’m going to be candid and tell you that I have really struggled to understand what [this proposal] would accomplish. So, as I understand the proposal ... lawyers would, if there was a suspicious transaction, report that suspicious transaction to the law society and then withdraw. So what is not clear is whether the lawyer is going to conduct the transaction or not under that proposal, and if the idea is that they could conduct the transaction, we say that is absolutely antithetical to the role of lawyers in our society and to the duty they owe to the administration of justice. It is out of the question to imagine a scheme that would permit lawyers to facilitate something that they think is probably illegal and then get off the record. So perhaps that is not what is suggested. Perhaps upon further examination we would see the idea is ... they wouldn't engage in the transaction, so the transaction doesn't happen as far as that lawyer is concerned. They report their suspicions to the law society, which, according to the recommendation, the law society then does nothing with. They don't do anything with it with regards to that lawyer ... But perhaps if there is information about another lawyer they could ... investigate and go to the law enforcement. There are a lot of things that are assumed in that recommendation. The assumption is that there is another lawyer and they haven't reported and they haven't got off the record, [and so] they are inevitably as a result involved in the commission of assistance with or facilitation of a criminal act or something illegal. That's not evident ... We don't know that without investigation. It may very well be that upon further investigation we discover that that lawyer just isn't as far along in the process. They are perhaps further down the chain in the transaction. They haven't done anything yet and they are still trying to figure out what is going on trying to do their risk assessment.  \textsuperscript{85}

Meanwhile, Dr. German's proposal focuses on reporting of purely financial data, which he concludes is not covered by a blanket privilege. On its face, this proposal has a certain appeal. However, with respect, it seems me that the issue of trust accounts and privilege is not as straightforward as Dr. German sets out. Further, the duty of commitment to the client's cause would seem to pose significant difficulties in this regard, whether or not the privilege issues could be resolved.

\textsuperscript{85} Transcript, November 17, 2020 (Session 1), pp 77–79.
Solicitor-Client Privilege

There is extensive Supreme Court of Canada case law on solicitor-client privilege, which is itself a principle of fundamental justice. There are various rationales for it, including that the law is complicated and cannot be realistically navigated without a lawyer’s expert advice; that lawyers must know all the facts of their client’s case to give accurate and useful advice; and that clients will not divulge everything without an assurance of confidentiality. The Supreme Court has stated that, as a general rule, all privileged information is immune from disclosure, and all communications between a lawyer and client are presumed to be confidential.

Clients reasonably expect that all documents held by their lawyer will remain private, an expectation that is “invariably high” when the information is privileged, regardless of the circumstances of the legal advice. Importantly, privilege belongs to the client, not the lawyer. This means that only the client may waive it; the lawyer is the “gatekeeper, ethically bound to protect the privileged information.”

As I outline in Chapter 25, some narrow exceptions to privilege have been recognized, namely the crime exception, the innocence at stake exception, and the future harm / public safety exception. However, in recognition of the principle that privilege must remain “as close to absolute as possible to ensure public confidence and retain relevance,” these exceptions have been strictly defined.

If the state seeks to narrow the scope of privilege, a court will consider whether the limitation is “absolutely necessary.” This test is “as restrictive a test as may be formulated short of an absolute prohibition in every case.” It has led to stringent requirements when law enforcement seeks to search a lawyer’s office. Legislation has also been found unconstitutional where the information sought could have been obtained from another source, showing that resort to the lawyer was not “absolutely necessary.”

In a series of cases in which the Supreme Court has found legislation unconstitutional for interfering with privilege, some common constitutional defects have emerged. In general, notice must be given to the client that privilege may be

threatened. Since privilege belongs to the client, it is insufficient to notify the lawyer and assume the lawyer will protect it.\textsuperscript{95} Similarly, legislation that does not allow a judge to determine privilege issues in the absence of a specific assertion of privilege has also been found unconstitutional.\textsuperscript{96} Finally, a failure to limit the future use of privileged information can lead to an unacceptable risk that it could be used in other circumstances that are not absolutely necessary.\textsuperscript{97}

It can readily be seen that protections for solicitor-client privilege in Canadian law are very strong. Again, the Supreme Court has repeatedly affirmed that solicitor-client privilege must remain “as close to absolute as possible.” In the context of the \textit{PCMLTFA} specifically, the Supreme Court held that the \textit{risk} of privileged information being disclosed during a search by FINTRAC was unacceptable:

\begin{quote}
The \textit{Lavallee} analysis does not assume, of course, that all records found in the possession of a lawyer are subject to privilege and I do not approach this case on the basis that all the materials that lawyers are required to obtain and retain by the Act are privileged. The \textit{Lavallee} standard aims to prevent the significant risk that some privileged material will be among the records in a lawyer’s office examined and seized pursuant to a search warrant. Similarly, in this case, \textit{there is a significant risk that at least some privileged material will be found among the documents} that are the subject of the search powers in the Act. [Emphasis added.]\textsuperscript{98}
\end{quote}

Any reporting obligation would therefore need to be very narrowly tailored to avoid even the risk of privileged information being disclosed or, at least, would require an arbiter to determine privilege issues before information gets passed on to law enforcement. This point brings me to Dr. German’s proposal to require reporting of non-privileged financial data to the Law Society, the Federation, or some other body. He arrived at this proposal following an analysis of British Columbia case law that he interpreted as establishing that trust account records are generally not privileged. This conclusion is worth exploring in some detail.

\section*{Trust Accounts and Privilege}

Dr. German’s analysis relies on various BC cases. I focus my analysis on \textit{Donell} and \textit{Luu},\textsuperscript{99} two leading decisions of this province’s Court of Appeal.

In \textit{Donell}, the British Columbia Court of Appeal considered whether solicitor-client privilege attached to a lawyer’s trust account ledgers. The court stated that the “general rule” is that privilege attaches to “communications for the purpose of obtaining legal

\end{itemize}
advice.” It then referred to the “distinction between communications, which are privileged, and facts, which are not.” In this regard, it referred to a 1983 decision of the Ontario Divisional Court, Greymac, which held:

Evidence as to whether a solicitor holds or has paid or received moneys on behalf of a client is evidence of an act or transaction, whereas the privilege applies only to communications. Oral evidence regarding such matters, and the solicitor’s books of account and other records pertaining thereto (with advice and communications from the client relating to advice expunged) are not privileged, and the solicitor may be compelled to answer the questions and produce the material. [Emphasis added.]

The British Columbia Court of Appeal noted that Greymac had been cited with approval by the Supreme Court of Canada in its 2003 Maranda decision. The latter case held that a lawyer’s legal bills are presumed to be privileged.

Although Maranda had rejected a firm fact / communication distinction when considering whether privilege attached to a lawyer’s bill, the Court of Appeal concluded that Maranda had not abolished the distinction between facts and communications in general. The Court of Appeal held that a lawyer’s trust account ledgers were not presumptively privileged in the same way as a lawyer’s bill of account. In the court’s view, trust ledgers “[g]enerally … record facts, not communications, and are not subject to solicitor-client privilege.” However, such records should not automatically be produced; a court would have to “ensure that entries on a trust ledger do not contain information that is ancillary to the provision of legal advice.”

A few years later, in Luu, the British Columbia Court of Appeal affirmed Donell, noting that, whereas a lawyer’s bills are ordinarily descriptive and may divulge a client’s instructions, this is not the case with trust account ledgers:

The privilege extends to administrative facts tending to reveal the nature or extent of legal assistance sought and received. However, there is good reason not to extend the presumed privilege to the trust ledger. The entries in a trust account record the possession of and movement of funds which the client may be compelled to disclose. Insofar as the entries record the payment of funds to parties who do not owe a duty of confidence to the client, the client cannot have expected the fact of payment to remain confidential as between himself and his counsel.

The above cases lend some support to Dr. German’s conclusion that trust account records are not presumptively privileged. However, it is not clear whether they continue to be valid in light of two 2016 decisions of the Supreme Court of Canada: *Chambre* and *Thompson*.108

*Chambre* and *Thompson* dealt with provisions of the *Income Tax Act* that allowed the Canada Revenue Agency to obtain “accounting records” of lawyers and Quebec notaries. The *Income Tax Act* defined solicitor-client privilege to specifically exclude “accounting records of a lawyer” from its ambit but did not define an “accounting record.”

The Supreme Court held that the scheme was unconstitutional for several reasons relating to the process of obtaining “accounting records” from lawyers and Quebec notaries. It further held that the definition of solicitor-client privilege was itself unconstitutional.

In *Chambre*, the Court addressed the fact / communication distinction as follows:

> [I]t is not appropriate to establish a strict demarcation between communications that are protected by professional secrecy109 and facts that are not so protected ... The line between facts and communications may be difficult to draw ... The Court has found that “[c]ertain facts, if disclosed, can sometimes speak volumes about a communication”

... 

It follows that we must reject the argument ... that some information, particularly information found in accounting records, constitutes facts rather than communications and is therefore always excluded from the protection of solicitor-client privilege as defined in s. 232(1) of the *[Income Tax Act]*.110

In *Thompson*, it appeared to reject the distinction in even stronger terms:

> [T]his Court has since rejected a category-based approach to solicitor-client privilege that distinguishes between a fact and a communication for the purpose of establishing what is covered by the privilege ... While it is true that not everything that happens in a solicitor-client relationship will be a privileged communication, facts connected with that relationship (such as the bills of account at issue in Maranda) must be presumed to be privileged absent evidence to the contrary.111

The Court further explained that “even where accounting information includes no description of work, it may in itself, if disclosed, reveal confidential and privileged information.”112 The focus should not be on the *type* of document but, rather, its content:

108 *Chambre*; Canada (National Revenue) v *Thompson*, 2016 SCC 21 [*Thompson*].

109 Professional secrecy is the civil law equivalent of solicitor-client privilege. In *Chambre*, the Supreme Court explained that there are “strong similarities” between the two concepts and that cases nationwide with respect to these duties have been consistent: *Chambre* at para 42.

110 *Chambre* at paras 40, 42.

111 *Thompson* at para 19.

112 *Chambre* at para 72.
Whether a document or the information it contains is privileged depends not on the type of document it is but, rather, on its content and on what it might reveal about the relationship and communications between a client and his or her notary or lawyer. If lawyers’ fees can reveal privileged information, it is difficult to see why this could not also be the case for accounting records. Such records will not always contain privileged information, of course, but the fact remains that they may contain some, so their disclosure could involve a breach of professional secrecy. This is sufficient for the purpose of our analysis.\textsuperscript{113}

The Court also noted that accounting records could contain clients’ names (which can in themselves be privileged in some situations\textsuperscript{114}), as well as a description of the mandate, particulars about work performed, and other information that could reveal aspects of litigation strategy.\textsuperscript{115} On the whole, the “outright exclusion” of accounting records from the definition of privilege was problematic, particularly because the term “accounting record” was not defined and could be open to multiple interpretations.\textsuperscript{116} The Court also found that the term could prove to be overly broad and allow the Canada Revenue Agency to obtain a far wider range of documents than was absolutely necessary to achieve its objectives.\textsuperscript{117}

As the above discussion demonstrates, the law with respect to trust account records and privilege is complex, and it is not clear how the approaches by the British Columbia Court of Appeal and the Supreme Court of Canada intersect. Given these uncertainties, it would, in my view, be risky to develop a reporting regime for lawyers based on the law articulated in the decisions of the Court of Appeal. It seems to me that a reporting regime in which lawyers were required to report trust account transactions as a matter of course would likely require, at the very least, some kind of arbiter to determine whether a given record includes privileged information. Dr. German suggests that the Law Society, the Federation, or some other body could play that role. Although this proposal is certainly a possibility, it raises a number of significant difficulties.

First, the determination of whether a record contains privileged information will not always be straightforward. As the above cases reveal, the question of whether a particular record is privileged may, in some cases, require resolution by a court. This means that any privilege arbiter other than a court may not be able to resolve the issue personally. This raises the question of whether recourse to a court would need to be available, thereby unduly complicating the reporting scheme.

Second, as noted above, the Supreme Court has held that it is not sufficient to rely on a lawyer to protect a client’s privileged information.\textsuperscript{118} Legislative schemes have been

\textsuperscript{113} Ibid at para 73.

\textsuperscript{115} Chambre at para 74.
\textsuperscript{116} Ibid at paras 75–76.
\textsuperscript{117} Ibid at para 84.
\textsuperscript{118} Chambre at paras 6, 48–57; Lavallee at paras 39–40.
struck down where there was no mechanism by which the client could be informed of a potential loss of privilege.119 Informing the client about suspicions would likely defeat the purpose of a reporting regime. Although the Supreme Court has noted that it might be sufficient to inform a member of the Law Society rather than the client of a potential loss of privilege “where it would not be feasible to notify the potential privilege holders,”120 it is not obvious to me that an automatic reporting obligation where the client was not informed would survive constitutional scrutiny.

Third, if the reporting obligation were based on a threshold amount of money, the arbiter could be inundated with trust-accounting reports, most of which might be perfectly legitimate. While I did not have direct evidence on this point, it seems to me unlikely that the Law Society or the Federation would be equipped to deal with such a volume of reporting. Further, the cost would no doubt be significant, whether handled by one of these entities or another body established to deal with such reports. Moreover, given the privilege issues, the reports could not go directly to law enforcement or a financial intelligence unit, resulting in an extra layer of cost and complexity.

Finally, if reporting were based on suspicion by the lawyer, there is a substantial likelihood that it would implicate the constitutionally protected duty of the lawyer’s commitment to the client’s cause. This issue is perhaps the most significant: even assuming privilege issues could be accommodated, it is not obvious to me that barriers stemming from the lawyer’s duty of commitment could be overcome. I turn to this issue now.

The Duty of Commitment to the Client’s Cause

Lawyers owe a duty of loyalty to their clients, which has three dimensions: a duty to avoid conflicting interests; a duty of commitment to the client’s cause; and a duty of candour.121 As I note above, the Supreme Court of Canada gave constitutional protection to the second of these duties – the duty of commitment to the client’s cause – in the Federation case. It is now a principle of fundamental justice that “the state cannot impose duties on lawyers that undermine their duty of commitment to their clients’ causes.”122

Lawyers must be “zealous advocate[s] for the interests of [their] client[s],”123 A client “must be able to place ‘unrestricted and unbounded confidence’ in his or her lawyer”; this confidence is “at the core of the solicitor-client relationship.”124 The duty of commitment is “fundamental to how the state and the citizen interact in legal matters.”125 In giving constitutional protection to this duty in the Federation case, the Supreme Court explained:

119 Chambre at para 51; Federation at para 48; Lavallee at para 40.
120 Lavallee at para 41.
122 Federation at para 84.
123 McKercher at para 25.
124 Federation at para 83.
125 Ibid at para 95.
Clients – and the broader public – must justifiably feel confident that lawyers are committed to serving their clients’ legitimate interests free of other obligations that might interfere with that duty. Otherwise, the lawyer’s ability to do so may be compromised and the trust and confidence necessary for the solicitor-client relationship may be undermined. This duty of commitment to the client’s cause is an enduring principle that is essential to the integrity of the administration of justice.126

It appears from the Federation case that reporting on one’s client would implicate the duty of commitment. A lawyer who reports suspicions about a client’s activities would seem to be in an inherent conflict of interest: on the one hand, potentially assisting law enforcement with an investigation of the client, and on the other, seeking to give the client the best possible legal advice and represent the client’s interests zealously.

In the Federation case, the Supreme Court stated that the duty of commitment “does not countenance a lawyer’s involvement in, or facilitation of, a client’s illegal activities.”127 The Court continued:

Committed representation does not … permit let alone require a lawyer to assert claims that he or she knows are unfounded or to present evidence that he or she knows to be false or to help the client to commit a crime. The duty is perfectly consistent with the lawyer taking appropriate steps with a view to ensuring that his or her services are not being used for improper ends.128

This point raises the question of whether reporting would be an “appropriate step” to ensure that legal services are not being misused.

In related contexts, lawyers who come across potentially unlawful activity by their clients are required to withdraw, but not report the client or disclose the reason for withdrawal. For example, if a client persists in instructing a lawyer to act contrary to professional ethics, the lawyer must withdraw.129 The lawyer cannot, however, disclose the reasons behind the withdrawal if it results from confidential communications between the lawyer and client.130 Indeed, the Supreme Court of Canada has said that if a lawyer seeks to withdraw based on “ethical reasons” – which include situations where a client requests a lawyer to act contrary to professional obligations – a court must “accept counsel’s answer [that the withdrawal is for ethical reasons] at face value and not enquire further so as to avoid trenching on potential issues of solicitor-client privilege.”131

Similarly, complex ethical issues arise where a lawyer knows or suspects a client may commit perjury (a criminal offence) on the stand. The lawyer is confronted by

---

126 Ibid at para 96.
127 Ibid at para 93.
128 Ibid.
129 BC Code, s 3.7-7.
130 Ibid, s 3.7-9.1.
the duty of loyalty on the one hand, which militates against exposing secrets that may undermine the client’s defence, and, on the other, his or her duties not to mislead the court or be involved in criminal activity. The lawyer is also bound not to disclose privileged information.132 Accordingly, most codes of conduct require the lawyer to withdraw (assuming the lawyer cannot persuade the client against perjury).133 Again, there is no requirement to report the potential criminal activity.134 On the contrary, the lawyer would likely be duty bound to not report.

Withdrawal as a response in the anti-money laundering context is certainly not a perfect solution, and it has been the subject of some criticism. The client could, after all, simply move from lawyer to lawyer in the hope that one will eventually assist in the illegal activity. Yet, it is notable that law society codes of conduct are largely consistent in mandating withdrawal in the face of illegal activity, rather than going further and, for example, requiring a lawyer to report illegal conduct to the police. The Supreme Court has made clear that although law society codes are not binding on legislators, they nonetheless demonstrate consensus in the profession as to what ethical practice requires and are an important statement of public policy.135 The consistency of Canadian law societies on this point suggests that those charged with regulating the profession consider it to be the best way (even if imperfect) of balancing a lawyer’s duties to a client with duties to the court and the administration of justice.

133 Ibid, pp 332–34, 339–40, 343–44. In British Columbia, several rules in the BC Code are relevant to perjury, including:

- Rule 5.1-1, which requires a lawyer to “represent the client resolutely and honourably within the limits of the law, while treating the tribunal with candour, fairness, courtesy, and respect” and specifies in the commentary the limits on a lawyer’s ability to raise certain defences in the face of admissions by the client;
- Rule 5.1-2, which prohibits the lawyer from, among other things, knowingly assisting or permitting a client to do anything dishonest or dishonourable, as well as from knowingly attempting to “deceive a tribunal or influence the course of justice by offering false evidence, misstating facts or law, presenting or relying upon a false or deceptive affidavit, suppressing what ought to be disclosed or otherwise assisting in any fraud, crime or illegal conduct”;
- Rule 5.1-4, which requires a lawyer to disclose and attempt to correct errors or omissions, subject to the duty of confidentiality, and withdraw if the client persists in instructing the lawyer to breach that rule; and
- Rule 3.2-7, which forbids a lawyer from “engaging in any activity that the lawyer knows or ought to know assists in or encourages any dishonesty, crime or fraud.”

If a client persistently instructs a lawyer to act contrary to those rules, the lawyer must withdraw: Rule 3.3-7.

134 Some codes do provide an option to go further, but still appear to struggle with balancing an obligation to take action in the face of illegal activity with the duties of loyalty and confidentiality. For example, the Manitoba and Saskatchewan law societies permit (but do not require) lawyers to disclose confidential information “if the lawyer has reasonable grounds for believing that a crime is likely to be committed and believes that disclosure could prevent the crime”: see Rule 3.3-3B of the Manitoba and Saskatchewan codes. Even then, however, the provisions set out a number of factors for the lawyer to balance, including the effect on the client, thereby leaving the ultimate ethical decision to the lawyer.

135 Federation at paras 107, 108; Cunningham at para 38.
In view of the above, obliging a lawyer to report on a client’s suspicious activity would be a dramatic departure from the long-standing practice of requiring lawyers to withdraw when faced with illegal or unethical conduct by a client. It would also raise serious questions about whether such mandated reporting would impermissibly undermine the lawyer’s commitment to his or her client’s cause and to the lawyer-client relationship generally.

The ethical and constitutional issues associated with reporting would not appear to be lessened if reports were made to a law society or another entity. Having such an intermediary may assist in determining privilege issues (as discussed above), but it is not obvious that the solution would avoid contravening the duty of commitment. Although the reports would not be passed directly to a financial intelligence unit or law enforcement, the lawyer would nonetheless be starting a process in which information that is harmful to the client could ultimately be disclosed to law enforcement.

Should Lawyers Have a Reporting Obligation of Some Kind?

The above discussion reveals significant difficulties in crafting a reporting obligation for lawyers. First, given the stringent protections for solicitor-client privilege, the obligation would need to be so narrowly tailored to avoid the risk of catching potentially privileged information that it would likely be of minimal utility to the recipient. Second, the state of the law on privilege and trust accounts casts doubt on whether even a narrowly tailored approach that involved reporting only “purely” financial information would avoid trenching on privilege. Finally, even assuming the privilege issues are addressed, the lawyer’s duty of commitment poses particular difficulties that would seem to arise even if there were a privilege arbiter.

In light of these difficulties, it is worth taking a critical look at reporting and its potential use in the context of the legal profession. As I comment on in other parts of this Report, some critics maintain that FINTRAC receives a high volume of low-quality reports and say that FINTRAC is a “black box” that collects this information and is unable, largely because of its enabling legislation, to share it with the agencies that need it. To the extent such criticisms hold water, it should not be assumed that more reporting will lead to better outcomes.

Indeed, Professor Levi noted that the Financial Action Task Force has not been able to successfully determine how effective lawyer performance in reporting has been in jurisdictions where it occurs, or how many reports are “enough”:

[E]ven if you are making a lot of reports, are you making reports on trivial stuff but not on big stuff that is more socially important? Are you reporting on local drug dealers buying small houses but not on kleptocrats buying large mansions?

So, for that we need some qualitative insight into the process, and the data don’t speak for themselves in terms of numbers. We need to look
qualitatively at the kind of reports that are made, if we’re legally allowed to, and assess whether that indicates that people are doing their job in all the spheres that they should be doing their job.\textsuperscript{136}

Similarly, based on his knowledge of the experience in the United Kingdom, where lawyers are required to report suspicious transactions to the financial intelligence unit, Professor Sharman noted that the “conventional wisdom” that more reporting by lawyers will result in substantially less money laundering vulnerability “actually has very little evidence to support it.”\textsuperscript{137} He explained that the prevailing view in the United Kingdom is, in fact, that lawyer reporting is ineffective:

Both those who submit and those who receive lawyers’ Suspicious Activity Reports in the UK regard a large majority of these reports as a waste of everyone’s time. The most commonly mentioned offences are asbestos in clients’ buildings and failure to preserve trees. The idea that regulating lawyers is “better than nothing” ignores the fact that regulation does not come for free, even or particularly where the cost is borne by the community rather than the government. In this sense, regulation may well be worse than nothing.\textsuperscript{138}

In a similar vein, Nicholas Maxwell, head of the Future of Financial Intelligence Sharing Programme of the United Kingdom’s Royal United Services Institute Centre for Financial Crime and Security Studies, testified that the “most tragic element of the Canadian regime” is that FINTRAC, despite receiving far more reports than equivalent agencies in the United States and the United Kingdom, is constrained by various limitations in the PCMLTFA that were motivated by concerns about privacy and information sharing. As a result, less than 1 percent of suspicious transaction reports are disclosed to law enforcement.\textsuperscript{139}

It is also significant that Canada is not alone in excluding lawyers from reporting obligations.

In a report prepared for the Commission that examines lawyer regulation regimes around the world, Professor Levi explained that there is currently no requirement in Australia for lawyers to report suspicious transactions to the country’s financial intelligence unit (AUSTRAC) or any other body, and the Law Council considers its professional standards to be adequate. Moreover, lawyers are largely not subject to Australia’s Anti–Money Laundering and Counter-Terrorism Financing Act 2006.\textsuperscript{140}

\textsuperscript{137} Exhibit 959, Jason Sharman, Money Laundering and Foreign Corruption Proceeds in British Columbia: A Comparative International Policy Assessment, pp 11–12.

\textsuperscript{138} Ibid, p 12; see also Transcript, May 6, 2021, pp 74–76.

\textsuperscript{139} Transcript, January 14, 2021, pp 70–75.

\textsuperscript{140} However, changes have been “long promised,” and lawyers in Australia must report transactions involving AUD$10,000 or more in cash. Moreover, this apparent exclusion has been criticized. See Exhibit 244, M. Levi, Lawyers, Their AML Regulation and Suspicious Transaction Reporting, pp 44–45.
US lawyers are also not subject to the general anti-money laundering responsibilities, including suspicious activity reporting, customer due diligence, or record keeping. The approach to lawyer regulation in the United States appears similar to Canada’s in that the 50 state bars work with the American Bar Association, which, in turn, produces benchmark standards of professional conduct. The association has issued an opinion stating that lawyers in the United States are required to inquire into suspicious requests by clients and withdraw if necessary, which parallels Canadian rules.

Although not determinative, it is significant that similarly situated countries with a strong emphasis on the sanctity of the lawyer-client relationship have struck balances comparable to Canada’s and have not obliged lawyers to report to their financial intelligence unit.

In a context where designing a constitutionally compliant reporting regime for lawyers is highly complex and subject to substantial constitutional constraints and risks, it is important to think critically about whether reporting by lawyers will be of sufficient utility to justify the accompanying cost and legal risk. As I develop in the next chapter, I believe it is ultimately more efficient and effective to focus on other anti-money laundering efforts, rather than devoting great efforts to pursuing a constitutionally compliant reporting regime. Specifically, I see five overarching ways in which to address anti-money laundering risks in the legal sector:

- continuing to revisit and expand existing anti-money laundering regulation by the Law Society, including limiting the circumstances in which a client’s funds can enter a trust account;
- strengthening and making better use of information-sharing arrangements between the Law Society and other stakeholders;
- increasing use by the Law Society of its ability to refer matters to law enforcement when there is evidence of a potential offence;
- encouraging law enforcement to make better use of existing mechanisms by which it can access the information it needs from lawyers during investigations; and
- increasing public awareness about these measures to counter any perception that transactions conducted through a lawyer in furtherance of an unlawful aim are immune from detection.

141 However, US lawyers, must not retain a fee received from illicit funds; receive currency of USD$10,000 or more unless they file a currency transaction report; or transact, facilitate, or advise with respect to a transaction with “Specially Designated” or “blocked persons.” See Exhibit 244, p 45.
143 Ibid, p 46.
Conclusion

In this chapter, I reviewed the *Federation* decision and its implications on anti-money laundering regulation of lawyers in British Columbia. As I have explained, because of constitutional aspects of the lawyer-client relationship, this sector poses unique problems in the fight against money laundering. These problems do not mean that robust anti-money laundering regulation of lawyers is not possible or should not be pursued. It is crucial that such regulation be in place and that alternative pathways are used to ensure that criminals cannot make use of lawyers’ services with impunity. In my final chapter on lawyers, I discuss the regulation that is in place, areas of improvement, and ways in which the Law Society, law enforcement, and others can ensure that anti-money laundering activity involving lawyers is properly scrutinized and investigated while also respecting constitutional principles.
As I have noted throughout these chapters, lawyers in British Columbia are subject to extensive regulation by the province’s Law Society. The Law Society has long taken the view that regulation for money laundering is part of its public interest mandate. It also works closely with the Federation of Law Societies of Canada (Federation) to try to harmonize standards across Canada.

In this chapter, I review the various measures put in place by the Law Society and the Federation’s Model Rules. This review demonstrates that British Columbia has a relatively strong anti-money laundering regime in place with respect to lawyers. As is the case in any sector of the economy, there can never be a “perfect” regime, in the sense that money laundering is a constantly moving target. I accordingly include in my discussion potential areas of improvement. I find that the Law Society and the Federation are committed to regularly reviewing measures in place and to identifying and addressing deficiencies. I trust they will consider my recommendations seriously.

At the end of this chapter, I discuss the Law Society’s information-sharing arrangements with law enforcement and others, the Law Society’s power to refer matters to law enforcement, and the pathways that law enforcement can use when investigating lawyers. Although not a perfect substitute for subjecting lawyers to the PCMLTFA or another reporting regime, it is my view that robust regulation combined with increased reliance on these avenues is a reasonable alternative that respects constitutional limitations.
A Preference for a Pan-Canadian Approach to Money Laundering

Law Society witnesses testified that their preference is to ensure a pan-Canadian approach to anti-money laundering regulation whenever possible. As Mr. Avison explained:

The work that we do with the Federation is much more focused in relation to those areas where we would look to have consistency across the country. [Anti-money laundering] is a perfect example of that.

...

I think there is a high degree of collaboration and cooperation across the country, and the benefit that we get from that is the pooling of the intellectual resources, if I can put it that way, from all the law societies to ensure that those resources are harnessed as effectively as possible in developing the most appropriate rules to deal with current and emerging situations.

I’ll reference the benefit that we get in British Columbia of the work not only of the Federation but colleagues like Jim Varro from the Law Society of Ontario. And I think for a number of the smaller jurisdictions the benefit of having that work that is done collectively with the Federation is extremely helpful in relation to matters where they might not have the resources to be able to deal with that independently.1

Mr. Ferris added that a pan-Canadian approach is “sensible because it recognizes the flow of funds and flow of capital and flow of ideas and thoughts of how to do these things is a national issue and an international issue”2 and makes particular sense when dealing with lawyers who practise in multiple jurisdictions.3 He further explained that the Federation plays a key role in communicating with the federal government, describing it as “really our branch office in Ottawa.”4

Law Society witnesses did, however, emphasize that the Benchers ultimately determine what rules are appropriate for British Columbia. As Mr. Ferris put it, while they greatly value collaboration with the Federation,

we don’t just sort of take what the Federation gives us and rubber stamp it ... [T]he Federation will take a look at rules, will send them to our ethics committee, we’ll send comments back and ultimately there’s a recommendation that comes from the Federation which we may take to the benchers as is or we may revise or the benchers may revise. So it’s a very

1 Transcript, November 18, 2020, pp 19–21. See also Evidence of C. Ferris, Transcript, November 18, 2020, pp 21–22.
2 Transcript, November 19, 2020, p 81.
3 Transcript, November 18, 2020, p 21.
iterative process, and so even where we’re adopting Federation common
rules, it’s hard to say that those are Federation rules because there’s been
an independent review of those by the benchers in BC.5

Although it is clear that the Law Society and the Federation prefer to develop
pan-Canadian approaches to anti-money laundering regulation, it is not clear to me
that the kind of collaboration described by Mr. Avison – one that recognizes the flow
of funds, capital, and ideas across boundaries, particularly where lawyers work in
multiple jurisdictions – is occurring. In other words, it appears that the law societies
and Federation share strategic, but not tactical, information6 that would facilitate
investigations across jurisdictions. I have recommended in Chapter 27 that the Law
Society and the Federation work to develop uniform metrics to track anti-money
laundering breaches and disciplinary responses. I further recommend that they develop
systems to facilitate the more effective sharing of tactical information and coordination
on investigations that involve other jurisdictions.

**Recommendation 54:** I recommend that the Law Society of British Columbia and
the Federation of Law Societies of Canada develop systems to facilitate the more
effective sharing of tactical information and coordination on investigations that
affect multiple jurisdictions or involve lawyers who practise in multiple jurisdictions.

### A Risk-Based Approach

In their testimony, Law Society and Federation witnesses emphasized their support
for a risk-based approach. Ms. Wilson testifed that this approach focuses “the greatest
regulatory efforts in areas of greatest risk” rather than recommending strict rules that
apply across the board.7 With respect to lawyers specifcally, she gave the example
of a labour lawyer who does purely arbitration with little or no engagement with
individuals (rather than organizations) as clients, compared with a lawyer involved in
real estate or corporate practice. The former would likely be lower risk than the latter,
where more regulatory efforts would be focused.8

Ms. Wilson does not consider that either the law societies or the federal government
currently take a fully risk-based approach to anti-money laundering regulation.9
However, the Federation is actively considering how best to make the framework risk-

7 Transcript, November 17, 2020 (Session 1), p 14.
8 Ibid, p 15.
9 Ibid, p 16. Ms. Wilson highlighted, however, that the risk-based approach is part of their approach on the
educational side, as well as within the customer identification and verifcation rules. Her point is that
both the law society and federal government frameworks as a whole are not risk based: see ibid, pp 15–16.
based. Ms. Wilson explained that moving to a completely different form of regulation is a “big project and … would involve a much more comprehensive overhaul of the approach.” As such, law societies have begun to implement it by focusing on educational materials.10

The Prohibition Against Facilitating Illegal Conduct

Although some law society rules were designed specifically for anti-money laundering purposes, Law Society witnesses emphasized that a lot of activity that could facilitate or assist money laundering is captured by the overarching rule that lawyers must not participate in dishonest transactions or facilitate illegal activity. In British Columbia, this rule has existed in various forms since 1921.11 It can currently be found in the BC Code at Canon 2.1-1(a)12 and in Rule 3.2-7, which states:

A lawyer must not engage in any activity that the lawyer knows or ought to know assists in or encourages any dishonesty, crime or fraud.

Rule 3.2-7 contains various commentaries, of which I highlight a few:

- Commentaries 1 and 2 explain that lawyers must be “on guard against becoming the tool or dupe of an unscrupulous client or others” and must be especially careful about becoming unwittingly involved in criminal activities like mortgage fraud and money laundering.
- Commentary 2 calls for particular vigilance in activities such as establishing, buying, or selling business entities; financing such transactions; and purchasing and selling real estate.
- Commentary 3 states that lawyers must make reasonable inquiries of clients when they have suspicions or doubts that they could be assisting in dishonest or illegal conduct.13

A number of other provisions relating to the general rule in 3.2-7 demonstrate its breadth. For example, Rule 3-109 of the Law Society Rules states that if a lawyer becomes aware, while complying with the client identification and verification rules or at any other time while retained, that they would be assisting a client in fraud or illegal conduct, the lawyer must withdraw. Similarly, Rule 3.7-7(b) of the BC Code requires a lawyer to withdraw where “a client persists in instructing the lawyer to act contrary to professional ethics.”

11 Exhibit 224, Law Society of British Columbia, Regulation of the Practice of Law, para 7 [Regulation of the Practice of Law].
12 “Lawyers owe a duty to the state ... and should not aid, counsel or assist any person to act in any way contrary to the law.”
13 Interestingly, this may be a higher standard than the counterpart model rule from the American Bar Association. A recent opinion seems to suggest that a lawyer cannot counsel a client to engage in or assist a client in conduct that the lawyer knows is criminal or fraudulent, whereas the BC equivalent focuses on circumstances that objectively raise suspicion: Evidence of G. Bains, Transcript, November 19, 2020, pp 142–43.
Professor Levi offered his perspective that a requirement to withdraw is insufficient to address money laundering, as criminals will simply go elsewhere.\textsuperscript{14} I agree with him that withdrawal, without more, leaves open the very real possibility that the unscrupulous client will simply look elsewhere for a less diligent lawyer to do his or her bidding. I also acknowledge that withdrawal, absent any reporting, leaves law enforcement and regulators no further ahead in addressing the illegal conduct. However, as I discussed in Chapter 27, in Canada we have decided that protecting the sanctity of the lawyer-client relationship is of the utmost importance. In this context, the balance that has been struck and long applied in this country is an obligation for the lawyer to withdraw, but not report. This avoids the potential of lawyers being involved in criminality, while maintaining solicitor-client privilege.

I would encourage the Law Society to continue to carefully monitor the activities of its members and to ensure strict adherence to the lawyer’s requirement to scrutinize and withdraw in the face of indicators of criminality. The more uniform this diligence and commitment to ethics is applied by the BC bar, the more difficult it will be for bad actors to find lawyers in this province to do their unscrupulous bidding.

Law Society witnesses stressed that, in their view, rules like 3.2-7 are crucial to the anti-money laundering effort and can even be more effective than a prescriptive “checklist” rule. For example, Mr. Ferris explained:

[Y]our question really highlights why the rule, and I know you said it’s an old rule, about lawyers not participating in dishonest transactions with their client, but why that rule is so important and why it’s so fundamental is because of exactly this issue, which is the typologies change. And if you create prescriptive rules which are sort of checklists, you don’t really get lawyers engaged as well with respect to ensuring that what they’re doing is correct. And as soon as you create a rule, there’s something new and some new other area.

So that’s why that overarching rule about lawyers not participating in something that’s dishonest with their clients, it really focuses the lawyer’s mind on identifying risks, … whether they should be taking on this transaction and making sure they’re complying with their ethical duties.\textsuperscript{15}

Ms. Bains similarly described the rule as “the foundation to practising ethically and complying with all these other obligations.”\textsuperscript{16} She and Mr. Avison added that lawyers must take the barrister’s oath “right out of the gate,” which includes a commitment to practise honourably and to discharge all one’s professional obligations with honour and integrity. Even before the oath, significant parts of the professional legal training program in British Columbia and some law school courses focus on the obligation to act ethically.\textsuperscript{17}

\textsuperscript{14} Transcript, November 20, 2020, pp 49–51.
\textsuperscript{15} Transcript, November 18, 2020, p 56.
\textsuperscript{16} Transcript, November 19, 2020, p 25.
\textsuperscript{17} Evidence of G. Bains, Transcript, November 19, 2020, p 26; Evidence of D. Avison, Transcript, November 19, 2020, pp 27–28.
I agree that these overarching rules are a key component of Law Society regulation for money laundering, particularly when combined with diligent oversight on the part of the Law Society and the more specific anti-money laundering rules that I review next.

The Cash Transactions Rule

As I noted in Chapter 25, the Federation introduced a model cash transactions rule\(^\text{18}\) in September 2004. The Law Society of British Columbia was the first law society to adopt this model rule in 2004.\(^\text{19}\) In British Columbia, Rule 3-59 of the Law Society Rules states in part:

\[
3-59(3) \text{ While engaged in an activity referred to in subrule (1), a lawyer or law firm must not receive or accept cash in an aggregate amount greater than $7,500 in respect of any one client matter.}
\]

Ms. Wilson explained the purpose of the rule as follows:

[T]he purpose of the rule is to restrict the amount of cash that lawyers can accept from clients. The goal of that is to mitigate the possibility of criminally minded clients trying to place large amounts of cash with lawyers for the purposes of laundering money or financing terrorism. It was a direct response to the suspicious transaction reporting requirements, which ... we believed and we were in fact found to be correct that they were unconstitutional.

And it's a different approach. We took a different approach to this by restricting the amount of cash ... lawyers could accept. When we refer to it being on a client matter, of course it's an aggregate; it doesn't matter whether ... the matter stretches over a week or four years. If it's a single client matter, the total cash that can be accepted, subject to certain exceptions in the rule, is $7,500.\(^\text{20}\)

Subrule 3-59(1) specifies that the rule applies when a lawyer or firm (a) receives or pays funds; (b) purchases or sells securities, real property, or business assets or entities; or (c) transfers funds or securities by any means.\(^\text{21}\)

The rule therefore covers all cash that flows through a lawyer’s trust account that relates to client work.\(^\text{22}\) Moreover, as Ms. Wilson noted, it is an aggregate: it applies to a single client matter, however long the work lasts. The rule contains some exceptions

---

\(^{18}\) This rule is often referred to colloquially as the “no-cash” rule. However, Ms. Wilson highlighted that this is not entirely accurate, as the rule limits the amount of cash that can be accepted rather than prohibiting acceptance of any cash. She accordingly prefers to call it the “cash transactions rule”. Transcript, November 16, 2020, p 114. I agree that the “cash transactions rule” is a more accurate descriptor.

\(^{19}\) Evidence of D. Avison, November 18, 2020, pp 28–30.

\(^{21}\) The rule equally applies when the lawyer or law firm gives instructions on behalf of a client in respect of these activities.

\(^{22}\) Evidence of F. Wilson, Transcript, November 17, 2020 (Session 1), p 86.
whereby lawyers are permitted to accept more than $7,500 in cash. The most controversial is Subrule 3-59(4):

[A] lawyer or law firm may receive or accept cash in an aggregate amount greater than $7,500 in respect of a client matter for professional fees, disbursements or expenses in connection with the provision of legal services by the lawyer or law firm.

The rule likewise does not apply when a lawyer or law firm receives or accepts cash in the following situations:

- from a peace officer, law enforcement agency, or other agent of the Crown acting in an official capacity (Rule 3-59(2)(b));
- pursuant to a court or tribunal order for the release of client funds that have been seized by a peace officer, law enforcement agency, or other agent of the Crown acting in an official capacity (Rule 3-59(2)(c));
- to pay a fine, penalty, or bail (Rule 3-59(2)(d)); or
- from a financial institution or public body (Rule 3-59(2)(e)).

These exceptions all contain the condition that the cash accepted must be “in connection with the provision of legal services by the lawyer or law firm.” I return to this qualifier below.

Rule 3-59(5) specifies that a lawyer or law firm that accepts cash of over $7,500 in any of the permissible circumstances must make any refund of such money in cash. Rule 3-70 further requires lawyers to maintain a cash receipt book for receiving and refunding cash and to document specified information.23

Finally, unless permitted under the cash transactions rule, a lawyer or law firm that receives cash must:

1. Make no use of the cash;
2. Return the cash, or if that is not possible, the same amount in cash, to the payer immediately;
3. Make a written report of the details of the transaction to the Executive Director [of the Law Society] within seven days of the receipt of the cash; and
4. Comply with all other rules pertaining to the receipt of trust funds.24

---

23 Lawyers must record the date, amount of cash, file number, client’s name, payer’s name, payer’s and lawyer’s signatures, and any dates on which the receipt was modified.
24 Rule 3-59(6).
The model cash transactions rule was reviewed in detail by the Federation of Law Societies of Canada Anti–Money Laundering and Terrorist Financing Working Group (FLSC Anti–Money Laundering Working Group) during its 2018 review. In what follows, I examine some key discussion points that arose during that process.

**Whether to Remove or Alter Exceptions to the Cash Transactions Rule**

An important part of the review consisted in looking at the exceptions to the cash transactions rule to determine if they were still appropriate. Ms. Wilson testified that the group analyzed each exception in detail and did a risk / utility assessment to determine if it should stay in.\(^{25}\)

**Exception for Professional Fees, Disbursements, and Expenses**

The working group began by considering whether the exception for professional fees, disbursements, and expenses continued to be justified in an increasingly cashless society. It consulted target groups of lawyers, mainly criminal defence lawyers. This consultation revealed that cash payments remained an “important, though not necessarily common” method of payment used by certain types of clients, for example, those in rural communities. The group was surprised to discover, however, that the practice among criminal defence lawyers varies, with some accepting cash for fees and others refusing it.\(^{26}\)

Mr. Ferris explained that a key concern in removing the exception is the balance between a person’s fundamental right to have a defence lawyer and concerns about the source of funds:

> So just from an overall perspective when we're looking at rules, while we do have a very high anti–money laundering focus, we also have to balance in other factors as well, which is access to justice, and in this particular concern most of the cash retainers, as I understand, are received by criminal lawyers. And so the right to a full answer and defence of people is a fundamental right in the country.

> And so if you were to restrict that exemption or to force somebody to go open a bank account before they can retain a lawyer, you're starting to put up impediments in the way of people getting that defence and retaining that lawyer. And so there's many circumstances where people don't have proper ID, where they -- you know, they're disadvantaged people, homeless people, don't have ID, may have some cash, and other circumstances.\(^{27}\)

In his view, the best way to balance these issues is to ensure that the exemption is not abused. Lawyers must be aware of red flags and ensure that there is no conversion of

---

\(^{25}\) Transcript, November 17, 2020 (Session 1), p 23.

\(^{27}\) Transcript, November 18, 2020, p 69.
the money in the trust account. This result can be achieved in part by requiring excess cash to be returned in the same form.\textsuperscript{28}

Relatedly, Ms. Bains underscored that lawyers are not exempt from the \textit{Criminal Code} provisions on money laundering. For example, if a client came in with $10,000 in $20 bills to pay legal fees, the lawyer would have to ensure that accepting the cash would not facilitate the laundering of proceeds of crime.\textsuperscript{29} Otherwise, they could be charged with a criminal offence.

Interestingly, the cash exception for legal fees and disbursements has its origins in the initial provisions of the \textit{PCMLTFA} that targeted lawyers.\textsuperscript{30} While not determinative of the question of whether the exception should remain or be modified, its inclusion in the \textit{PCMLTFA} suggests the federal government also considered it problematic to adopt a blanket ban on lawyers accepting large amounts of cash. It is also notable that the limit chosen by the Law Society ($7,500) is less than the requirement for reporting large cash transactions under the \textit{PCMLTFA} ($10,000).

The working group also considered whether a cap could be imposed on the amount of cash that can be accepted under the professional fees exception. It determined, however, that more consultation with the bar was needed to understand what lawyers were charging in fees, what kinds of disbursements they were incurring, and the like.\textsuperscript{31} As Ms. Wilson explained, although a cap may be desirable, determining the right figure presents challenges:

\textquote{[I]t’s really just a matter of trying to identify a number that is meaningful that isn’t simply arbitrary. One could say well, let’s say it’s $10,000. Let’s just say it’s $5,000. Let’s just say it’s $25,000. It will or will not be a meaningful amount depending on the nature of the legal services being sought. If you are undertaking a trial in a superior court in the country, $25,000 is nothing. If on the other hand you’re asking somebody to review an agreement of purchase and sale, it’s excessive. So that is why in our current considerations we are looking at whether the exemption should exist at all. It’s difficult ... for two reasons. One is that the assessment of whether it serves a useful function [and] that it does not interfere with the purpose of the rule, with the goal of the rule, and of course that is partly an examination of whether it’s used and who uses it and so forth. But it’s also an examination of a potential risk that the exemption creates. In this case in the absence of a limit, I think we would say there are some risks associated with it which might not be justifiable in light of the goal of the

\textsuperscript{28} Ibid, p 70.
\textsuperscript{29} Transcript, November 18, 2020, p 90.
\textsuperscript{30} Evidence of G. Bains, Transcript, November 18, 2020, pp 102–3.
\textsuperscript{31} Evidence of F. Wilson, Transcript, November 17, 2020 (Session 1), p 22; Exhibit 207, Federation of Law Societies of Canada – Memorandum from No Cash Model Rule Sub-group to Anti–Money Laundering and Terrorist Financing Working Group, Re Review of No Cash Rule – April 9, 2017 [Federation ‘No Cash Rule’ Memorandum], paras 8–9.
rule, and the options are place a cap or do away with it really, maintain it, place a cap or do away with it. And the difficulty with the cap is, as I said, finding a meaningful dollar figure and we haven't landed anywhere yet but that makes the notion of doing away with it a more straightforward alternative that’s consistent with the goal of the rule and doesn't get us into sort of mental gymnastics of trying to ascertain, you know, is it $2,000, $5,000, $25,000, what’s an appropriate cap in the circumstances.32

Ms. Bains testified that the Law Society has investigated lawyers who received large amounts of cash even when an exception is invoked. She gave the example of a 2017 case in which a lawyer was found to have deliberately breached the part of the rule requiring refunds to be made in cash.33 However, in her experience, the vast majority of cases in which a lawyer is alleged to have contravened the rule have been because of inadvertent errors, such as not appreciating that the limit applied throughout the duration of the retainer or failing to refund amounts in cash. Regardless of whether an error is inadvertent or deliberate, all such cases are referred to a discipline committee.34

The Law Society can become aware of breaches of the cash transactions rule through the compliance audit process and annual self-reports. The normal compliance audit process requires looking at all books, records, and accounts, which can reveal breaches of the rule.35 Meanwhile, lawyers must also self-report when they receive over $7,500 in cash outside the exceptions36 or inadvertently breach the Rules.37 These reports are referred to the Law Society’s investigations department.38 As a result of these processes, therefore, the Law Society does have data on how often cash over $7,500 is accepted.39

Other Exceptions
The FLSC Anti–Money Laundering Working Group also considered whether the other exceptions under which lawyers may receive over $7,500 in cash remained appropriate. It determined that one exception – for moneys paid or received pursuant to a court order – was no longer needed. In its view, this exception could result in “sham litigation,” meaning that a person could bring a claim that is deliberately uncontested, with the result that a court order for repayment is made on fraudulent pretenses – all without the lawyer knowing.40 The exception was accordingly removed in 2018.

36 See Rule 3-59(c), which requires a lawyer who receives cash when not permitted by the rule or exceptions to submit a mandatory report to the Law Society's executive director.
38 Evidence of G. Bains, Transcript, November 18, 2020, p 86.
39 Evidence of J. McPhee, Transcript, November 18, 2020, p 95.
40 Evidence of F. Wilson, Transcript, November 17, 2020 (Session 1), pp 23–24.
The working group initially recommended removing the exception for money received by a peace officer. Upon consulting with stakeholders, however, it determined that the exception was sometimes useful and posed a low risk. Accordingly, it was left in.

**Cash Must Be “In Connection with the Provision of Legal Services”**

As noted above, the cash transactions rule specifies that all cash received pursuant to an exception must be “in connection with the provision of legal services.” This qualifier was added as a result of the 2018 review. This change was recommended because it was revealed “that lawyers sometimes rely on the exceptions to justify accepting large amounts of cash even though it is not related to the provision of legal services.” This was, in the working group’s view, “inconsistent with the letter and spirit of the rule.”

**The Requirement to Refund in Cash**

A lawyer who receives cash over $7,500 under the professional fees exception must make any refunds with respect to those funds in cash. As Ms. McPhee testified, this requirement is meant to ensure that cash received is commensurate with the fees. Ms. Bains added that the Law Society has issued various publications to the profession explaining that cash received must be commensurate with the amount required for a retainer or fees. She explained:

> If a lawyer asks a client for a $5,000 retainer, and the client brings the lawyer $50,000 in cash, in my view, that’s a clear red flag and that is a suspicious circumstance and that lawyer ought to be stopping, making inquiries, and satisfying themselves of the appropriateness of continuing.

The requirement that cash received must be commensurate with the amount required for the retainer or fees strikes me as a sound rule. Although the Law Society has included this guidance in publications to the profession, it would be preferable, in my view, that it be made explicit in the rule itself.

**Recommendation 55:** I recommend that the Law Society of British Columbia amend Rule 3-59 of the Law Society Rules to make explicit that any cash received under the professional fees exception to the cash transactions rule must be commensurate with the amount required for a retainer or reasonably anticipated fees.

---

41 Exhibit 207, Federation ‘No Cash Rule’ Memorandum, para 7.
42 Evidence of F. Wilson, Transcript, November 17, 2020 (Session 1), p 23.
43 Exhibit 208, Federation of Law Societies of Canada, Consultation Report – Anti-Money Laundering and Terrorist Financing Working Group (October 2, 2017), para 12. Ms. Wilson testified that the purpose of including exceptions is to provide exceptions that are useful and not unduly risky, in the sense of providing a backdoor way for people to use a lawyer's trust account for improper purposes: Transcript, November 17, 2020 (Session 1), p 36.
44 Rule 3-59(5).
Importantly, a refund to a client who has paid a cash retainer must actually be in cash. The use of a trust cheque payable to cash is not acceptable; the lawyer must physically make a cash withdrawal, issue a cash receipt for the refund, and have the client sign for receipt. In this fashion, the process prevents an unscrupulous client from turning cash into a cheque and thereby legitimizing and/or laundering cash.

In my view, the requirement that refunds be in cash is a crucial part of the cash transactions rule, and the Law Society must diligently monitor its members’ adherence to it. This rule is central to addressing the risk of lawyers being used to directly launder cash, as it prevents cash from entering a lawyer’s trust account and being converted into another form.

Conclusions on the Cash Transactions Rule

In my view, the cash transactions rule is a crucial part of anti-money laundering regulation of lawyers. In some ways, it is more restrictive than the rules under the PCMLTFA, which require those subject to the regime to report – but not necessarily to refuse – cash transactions of more than $10,000.

The issue of whether an exception to the cash transactions rule should exist for professional fees, disbursements, or expenses is complex. Clearly, the current exception without a cap means that lawyers could potentially be receiving large amounts of cash of unknown origin. This possibility raises ethical issues that are worth exploring, as the Federation and the Law Society are doing. Whether the exception raises a money laundering risk, however, is a different matter.

It is not obvious to me that the exception poses a money laundering risk. To the extent that funds are retained by the lawyer to pay fees and disbursements, there has not been a conversion. The requirement that a lawyer make any refund in cash when a client pays for legal fees in cash would seem to adequately address the money laundering risk. An explicit requirement that any cash received be commensurate with the legal fees and disbursements would help ensure that lawyers do not receive excessive amounts of cash in the first place. There may well be sound reasons for the Law Society to continue to review and consider the professional fees exception to the cash transactions rule, but I am not persuaded that money laundering considerations support my making a recommendation respecting the rule.

47 Exhibit 224, Regulation of the Practice of Law, para 32.
48 I also note that the Federation is studying a rule adopted by the Barreau du Québec that requires members who accept more than $7,500 in cash pursuant to an exception to submit a copy of the cash transaction record within 30 days of the receipt of cash with a notation indicating the exception under which it is received: Evidence of F. Wilson, Transcript, November 17, 2020 (Session 1), p 26. Mr. Avison testified that the Quebec rule is “one of the elements that I think [the Law Society is] going to want to discuss as part of the working group with the Federation”: Transcript, November 18, 2020, p 76.
Client Identification and Verification Rules

As I noted in Chapter 27, the Federation adopted model client identification and verification rules in 2008, with the Law Society adopting the model rules shortly after. These rules parallel in many ways the requirements under the PCMLTFA. Given that lawyers in British Columbia are not reporting entities under this Act, I applaud the Law Society for filling this void by requiring lawyers to comply with the strict client identification and verification rules it has put in place. While not a complete substitute for PCMLTFA reporting (which would have the information available to FINTRAC), given the current landscape within which the Law Society operates, the client identification and verification rules are a reasonable substitute and go some way to filling the void.

In British Columbia, these rules are found in Part 3, Division 11, of the Law Society Rules. Lawyers must fulfill six main requirements:

- identify the client and record basic identification about the client upon being retained (Rule 3-100);
- verify the client's identity if there is a financial transaction (Rules 3-102 to 3-106);
- obtain from the client and record information about the source of money if there is a financial transaction (Rules 3-102(1)(a), 3-103(4)(b)(ii), 3-110(1)(a)(ii));
- maintain and retain records of documents and information used in identification, verification, and monitoring (Rule 3-107);
- withdraw if the lawyer knows or ought to know that they are assisting in fraud or other illegal conduct (Rule 3-109); and
- monitor the lawyer-client professional business relationship to ensure consistency between the client's activities, source of money and instructions (Rule 3-110).

Ms. Bains explained the purpose of the client identification and verification rules as follows:

---

49 Evidence of D. Avison, Transcript, November 18, 2020, p 30.
50 Distinct rules apply when identifying and verifying the identity of individuals compared to organizations, corporations, trusts, and the like.
51 There are three methods of verifying an individual client's identity: using government-issued identification; using a credit file in existence in Canada for at least three years; or a dual-process method involving two different and reliable sources. For a client that is an organization, trust, partnership, or the like, the identity can be verified in several ways, including a certificate of corporate status, articles of incorporation, or a trust or partnership agreement. See Exhibit 224, para 43; Rule 3-102(2)–(4).
52 Rule 3-98 defines “financial transaction” as meaning the receipt, payment, or transfer of money on behalf of a client, or giving instructions for these things on behalf of a client. That rule further defines “money” as including “cash, currency, securities, negotiable instruments or other financial instruments, in any form, that indicate a person's title or right to or interest in them, and electronic transfer of deposits at financial institutions.”
The purpose of these rules is ... the very important obligations to know your client, to verify that your client is who the client says they are, with “client” having quite a broad definition including the instructing individual and what I'll call the beneficial client for whose benefit the work is being done, understanding the purpose of your retainer, understanding the source of money that is involved in the legal services that you are providing. It's all a part of that, which really goes to understanding the risks in providing those legal services and being able to mitigate against those risks so that you're not furthering any inappropriate illegal, dishonest fraudulent conduct.53

The client identification and verification rules can be triggered even if no funds flow through the lawyer's trust account.54 However, there are some instances in which a lawyer must identify the client but not verify their identity, including (a) when the client is a financial institution, public body, or reporting issuer, and (b) when the lawyer pays or receives money to pay a fine, penalty, or bail, or for professional fees, disbursements, or expenses.55

Mr. Avison expressed the view that much of the value of the client identification and verification rules comes from identifying red flags rather than the recording of information itself.56 Ms. Bains agreed but noted that recording is also important on a number of levels: it allows many lawyers at the firm to understand what has happened in a file, assists with the obligation to monitor the relationship periodically, and is useful for after-the-fact investigations and audits.57

As I expand on below, compliance with the client identification and verification rules is assessed as part of compliance audits. Any breaches are referred to investigations. Further, the annual trust report asks about the client identification and verification systems in place.58

2018 Review of the Client Identification and Verification Rules

The FLSC Anti–Money Laundering Working Group did a comprehensive review of the client identification and verification rules in 2018, which resulted in several amendments. The Law Society implemented these amendments in January 2020.

First, the amendments made verification requirements ongoing. Under Rule 3-110, a lawyer must, while retained for a financial transaction, periodically assess whether

53 Transcript, November 19, 2020, pp 3–4. See also The Law Society of British Columbia v Christopher James Wilson, 2019 LSBC 25 at para 21: “The Law Society rules about client identification and verification are complex and important. The goal is to ensure that the legal profession does not become an inadvertent participant in the improper processing of laundered money and that the fraud of identity theft is not aided and abetted by lawyers.”
54 Evidence of G. Bains, Transcript, November 19, 2020, p 5.
55 Rule 3-101.
56 Transcript, November 19, 2020, p 29.
(a) the client's information about their activities, source of money, and instructions are consistent with the purpose of the retainer, and (b) there is a risk that the lawyer may be assisting in or encouraging dishonesty, fraud, crime, or other illegal conduct.

Ms. Wilson testified that this was one of the most significant changes to the client identification and verification rules:

That is significant for us because this was a sort of tie-in to, a sort of reminder that complying with the rules isn't only a matter of complying with the specific requirements of this rule. This rule exists in the context of a broad suite of rules which are already in place such as the rules of professional conduct that speak in quite a lot of detail to ethical obligations that include ... the obligation not to facilitate or assist with the commission of any illegal act.59

Second, in line with the amendments to the cash transactions rule, the exception to the client identification and verification rules for money received pursuant to a court order was removed. Further, the rules previously contained an exception for moneys received in settlement of any legal or administrative proceeding, which was also removed.60

Third, the obligation to “take reasonable steps to verify” a client’s identity was changed to a more stringent requirement “to verify.” Ms. Wilson noted that the Federation and the provincial law societies adopted this change despite negative feedback from the profession.61

In the case of beneficial ownership, amendments were made to impose a “reasonable efforts to verify” requirement. Ms. Wilson explained that in the absence of a beneficial ownership registry – which both the Federation and the Law Society support62 – it would be unrealistic to require lawyers “to verify” beneficial ownership. She emphasized, however, that the Federation is “ready and willing to move to a mandatory requirement when there is a comprehensive way across the country to verify beneficial ownership information.”63

As I discuss further in Chapters 23 and 24, I am of the view that a beneficial ownership registry is desirable for many reasons. One of these reasons, which is demonstrated here, is the fact that a beneficial ownership registry would simplify the client identification and verification obligations of gatekeepers – including both reporting entities under the PCMLTFA and lawyers under their professional rules.

Fourth, other changes were made to track amendments to the federal client identification and verification obligations. These notably include a requirement to

inquire into the client's “source of money.” The Law Society is aware that there is ambiguity about this requirement. For example, an internal memo noted that lawyers do not always consider the economic origin of the funds and instead refer to the “form of funds” (e.g., cheque, bank draft), the person who provided the funds (e.g., client, John Doe), or the financial institution that issued the cheque or electronic funds transfer. The memo notes that a Law Society Benchers' Bulletin in fall 2019 explained that lawyers should, at a minimum, record:

• information obtained from the client about the activity or action that generated the client's money (e.g., salary, bank loan, inheritance, court order, sale agreement, settlement funds);
• the economic origin of the money (e.g., credit union account, bank account, Canada Post money order, credit card charge, cash);
• the date the money was received; and
• the source from whom the money was received (i.e., the payer: the client or name and relationship of the source to the client).

The memo further states that some have interpreted the requirement to “obtain and record the source of money” literally and have done only that, without considering whether the source of money is reasonable and proportionate to the client's profile. It also suggests there should be clarification of the various terms that can be used, given that “source of funds” is sometimes used interchangeably with “source of money” and “source of wealth.”

Ms. Bains testified that, although there are guidance documents and other materials on these issues, the Law Society recognizes that including this information in the Rules themselves would be ideal. She noted that the FLSC Anti–Money Laundering Working Group is considering whether the Rules should be amended. Ms. Bains further explained that, even without these requirements being spelled out in the Rules, hearing panels ultimately ask whether conduct is a “marked departure” from what the Law Society expects. To that end, the Law Society expects lawyers to look at the Rules, BC Code, guidance documents, Benchers’ Bulletins, FAQs, discipline advisories, risk advisories, and the like.

64 Ibid, p 41; Rule 3-102.
65 Exhibit 235, Law Society of British Columbia – Memorandum from Jeanette McPhee to Federation of Law Societies of Canada Working Group, Re Source of Funds (or Money) and Wealth – October 25, 2019, p 2.
68 Ibid, p 2.
69 Mr. Avison added that practice advisors are also available to address questions by members in this regard: Transcript, November 19, 2020, p 17.
70 Transcript, November 19, 2020, pp 15–16.
71 Evidence of G. Bains, Transcript, November 19, 2020, pp 20–21.
Although there is guidance for lawyers with respect to the “source of money” requirement, it would be preferable, in my view, that the Rules themselves explain what is needed in more detail. The internal memo referenced above indicates there is ambiguity in the Rules and that the profession is not clear on the requirements.

**Recommendation 56:** I recommend that the Law Society of British Columbia amend its client identification and verification rules to explain what is required when inquiring into a client’s source of money. The rules should make clear, at a minimum:

- that the client identification and verification rules require the lawyer to record the information specified in the fall 2019 *Benchers’ Bulletin*;
- the meaning of the term “source of money”; and
- that lawyers must consider whether the source of money is reasonable and proportionate to the client’s profile.

**The Limitation of a “Financial Transaction”**

Currently, verification requirements are triggered only when lawyers are involved in a “financial transaction.” Ms. Wilson testified that there was no discussion of expanding the ambit of the rule during the 2018 review; however, if the Federation moves to a more truly risk-based approach, this might be revisited.72

On the issue of non-financial transactions, Ms. Bains pointed to the more general rules against being involved in illegality:

> So when lawyers are providing other services that may not get captured by a financial transaction, they still have to comply with the code provisions. And so in particular rule 3.2-7 and its commentary, they have to be alive to the risks, so for example, if they are incorporating a company or establishing a trust, they need to be aware of those risks and if there are suspicious, objectively suspicious circumstances they have a duty to make reasonable inquiries, very similar to the type of inquiries that the monitoring and these client identification and verification rules require.73

She also expressed the view that part of practising competently is understanding how a company that a lawyer incorporates will be used.74

---

72 Transcript, November 17, 2020 (Session 1), p 43.
73 Transcript, November 19, 2020, pp 6–7.
74 Ibid, pp 7–8.
Again, although lawyers may be obligated to make these inquiries by virtue of other rules, I am of the view that the anti-money laundering rules should be explicit to ensure that members are aware of their obligations.

**Recommendation 57:** I recommend that the Law Society of British Columbia extend the ambit of its client identification and verification rules to include the situations in which a lawyer is truly acting as a gatekeeper. The rules should be extended to include, at a minimum:

- the formation of corporations, trusts, and other legal entities;
- real estate transactions that may not involve the transfer of funds, such as assisting with the transfer of title; and
- litigation involving enforcement of private loans.

**Fiduciary Property**

Fiduciary property refers to “funds, other than trust funds, and valuables for which a lawyer is responsible in a representative capacity or as a trustee, if the lawyer’s appointment is derived from a solicitor-client relationship.” I discuss the rules pertaining to fiduciary property, in particular the use of trust accounts to hold such property, below. For present purposes, however, I note that lawyers who hold such property must identify but not necessarily verify the identity of the client. As Ms. Bains explained:

So if a lawyer is holding fiduciary property, it has to arise from a solicitor / client relationship, and so the triggering event for identification under the client identification and verification rules is that a lawyer is providing legal services to a client. And so there would have been an obligation to identify the client at the time that those legal services were provided that makes the thing fiduciary property. So that part of the rule certainly would apply.

Whether the verification part of the rule and the other portions of the client identification and verification rules apply would depend on whether there was a financial transaction at that time prior to the lawyer accepting fiduciary property, and that would vary from matter to matter. So ... it all hinges on fiduciary – the holding of fiduciary property is not the provision of legal services.

In my view, the client identification and verification rules should apply when lawyers are handling fiduciary property, regardless of whether there is a financial transaction.

---

75 *Law Society Rules*, Rule 1, “fiduciary property.”
76 Transcript, November 18, 2020, p 168.
There would seem to be no downside in requiring the lawyer to verify a client’s identity in these circumstances, and such a requirement would prevent the lawyer from holding a client’s property that may have links to criminality. I accordingly recommend that the Law Society amend its Rules to require lawyers to verify their clients’ identity when handling fiduciary property.

**Recommendation 58:** I recommend that the Law Society of British Columbia amend the *Law Society Rules* to require lawyers to verify a client’s identity when holding fiduciary property on the client’s behalf.

**Trust Regulation**

The evidence before me revealed concerns about the potential misuse of trust accounts for money laundering purposes. These concerns are echoed in the literature. It is clear that the use of trust accounts, coupled with the strong protection of solicitor-client privilege in Canada, presents an inherent risk that such accounts could be used to facilitate money laundering in a manner that might be difficult to detect. However, in my view, the Law Society’s extensive trust regulation and auditing powers, and its diligent application of those powers, significantly mitigate that risk in British Columbia.

**Trust Funds Must Be “Directly Related to Legal Services”**

The overarching obligation with respect to trusts, which was made explicit in the Rules in July 2019 but existed beforehand, states:

3-58.1(1) Except as permitted by the Act or these rules or otherwise required by law, a lawyer or law firm must not permit funds to be deposited to or withdrawn from a trust account unless the funds are *directly related to legal services provided by the lawyer or law firm*. [Emphasis added.]

On completion of the legal services to which the funds relate, the lawyer or law firm must take reasonable steps to obtain instructions to pay out the funds as soon as practicable.

Ms. Bains explained the rationale behind the rule as follows:

[T]he impetus and rationale for the rule is to preserve the importance of a trust account being used truly for funds that are trust funds that are directly related to legal services so that the trust account is not used as

---

77 Transcript, November 18, 2020, pp 105, 107–8, 119–20. This rule codifies a principle expressed in *The Law Society of British Columbia v Gurney*, 2017 LSBC 15 at para 79: “[T]rust accounts are to be used for legitimate commercial purposes for which they are established, the completion of a transaction, where the lawyer plays the role of legal advisor and facilitator. They are not to be used as a convenient conduit [emphasis in original].”

78 Rule 3-58.1(2).
a flow through account, as a bank account. Lawyers ought not [to] be providing banking services for clients. Those aren’t proper legal services and that’s not a proper use of a trust account.

So it’s in recognition that there is vulnerability in non-trust funds being placed into a trust account because of the potential privilege that may apply to those transactions. So in order to ensure that it’s very tight and that only matters that properly ought to be in the trust account are placed in the trust account, this rule was put into place.\textsuperscript{79}

Although the rule does not explicitly say that the funds must be \textit{necessary} for legal services, Ms. McPhee testified that “directly related” effectively says as much. She further noted that this is set out in guidance and educational materials.\textsuperscript{80}

Although the amendment stating that funds must be “directly related to legal services provided by the lawyer or law firm” is a good step, I am not persuaded it is sufficient. As I discussed in Chapter 27, the Supreme Court of Canada’s recent case law suggests that trust account records may be presumed to be privileged unless evidence is introduced to show otherwise. Given that funds entering a trust account may well be shielded by privilege, it is crucial that limits be placed on what can enter a trust account in the first place.

Ms. McPhee’s testimony suggests the Law Society is of the view that funds must be \textit{necessary} for legal services before they enter a trust account. Although that may be the Law Society’s view, it is not explicitly stated in the Rules. Rather, the official rule requires only that funds be “directly related to legal services.” It is not obvious what this somewhat vague phrase means, and it strikes me that it could be invoked to justify any number of transactions moving through a trust account, so long as there is some connection or relationship to legal services.

Because this issue was not canvassed before me in detail, I am not prepared to recommend particular wording for the Law Society to adopt. However, it strikes me that, if a transaction is one that can occur without the use of a lawyer’s trust account (for example, if it could occur through ordinary banking channels), the lawyer’s trust account should not be used. There is no principled reason why a transaction that need not go through a lawyer’s trust account nonetheless does so and thereby potentially acquires the protections of solicitor-client privilege.

I accept that there will be situations in which a trust account is necessary for a transaction. I am not suggesting, for example, that lawyers cannot use their trust accounts for payment of their fees and disbursements. There may also be certain kinds of transactions that require undertakings for which the lawyer’s trust account may be necessary. However, to the extent trust accounts are being used for transactions that do not truly require their use, this must be avoided.

\textsuperscript{79} Transcript, November 18, 2020, p 104.

\textsuperscript{80} Evidence of J. McPhee, Transcript, November 18, 2020, p 123.
The possible application of privilege to trust accounts has great potential to attract those who do not seek a lawyer’s services for legitimate ends and instead wish to keep illicit transactions or funds out of the reach of law enforcement. While the Law Society has taken steps to fill the gap left by lawyers not being subject to the *PCMLTFA*, the trust regulation rules are not a perfect substitute. Limiting the kinds of funds that can enter a lawyer’s trust account to begin with is a way of further mitigating the risk that criminals will seek to misuse such accounts.

**Recommendation 59:** I recommend that the Law Society of British Columbia amend Rule 3-58.1 of the *Law Society Rules* to clarify, at a minimum, what is meant by “directly related to legal services” and to consider how to further limit the use of trust accounts so that they are used only when necessary.

Notably, the BC Code specifies in Rule 3.2-7, Commentary [3.1](a), that a lawyer “should” also “make inquiries” of a client who “may be seeking ... the use of the lawyer’s trust account without requiring any substantial legal services from the lawyer in connection with the trust matter.” Mr. Ferris explained that this is likely a remnant of earlier times where such conduct was sometimes acceptable but is now clearly prohibited in view of Rule 3-58.1.81 Ms. Bains added that there was some disagreement among members of the Law Society as to what the commentary meant, but in any event they have decided to raise the matter with the policy group and clarify it.82 I find Commentary [3.1](a) to be confusing and to have the potential to mislead lawyers about the permissible uses of their trust account. I recommend that the Law Society remove this paragraph promptly.

**Recommendation 60:** I recommend that the Law Society of British Columbia promptly remove Commentary [3.1](a) from the *Code of Professional Conduct for British Columbia*.

**Trust Accounting Rules**

Division 7 of the Law Society Rules sets out extensive requirements with respect to the use of trust accounts. Some key requirements that lawyers must follow are:

- They must keep detailed records of their trust and general accounts (Rules 3-54, 3-55, 3-68, 3-69).

- They must adhere to the detailed rules regarding opening and managing a pooled or separate trust account (Rules 3-60, 3-61).

• They must follow the detailed rules governing when and how funds may be withdrawn from a trust account (Rule 3-64).

• They must maintain a cash transactions record for every transaction made in cash (Rule 3-70).

• They must keep detailed records of bills and trust transactions (Rules 3-71, 3-72).

• They must prepare monthly trust reconciliations (Rule 3-73).

• They must immediately rectify trust shortages and report same to the executive director of the Law Society (Rule 3-74).

• They must deliver annual trust reports to the Law Society (Rule 3-79).

It can readily be seen that the operation of a trust account is a highly regulated endeavour. As I explain next, lawyers who operate trust accounts are also subject to regular compliance audits.

The Trust Assurance Program

The Law Society describes the Trust Assurance Program as a program “designed to support high standards of professionalism and responsibility among lawyers, and to allow the public, clients and lawyers to have confidence that lawyers are handling client trust funds and trust accounts in a careful and appropriate manner.” It has four main objectives:

Compliance: encourage, educate and assist lawyers in complying with trust accounting standards and the Code of Professional Conduct for British Columbia

Deterrence: help deter mishandling of trust funds and trust accounts

Detection: help detect serious trust breaches as early as possible

Credibility: protect the public interest, and increase the confidence of clients, lawyers and the public

The program has four “pillars”: trust reports, lawyer self-reports, compliance audits, and education. I review each in turn.

The program is funded through the collection of a trust administration fee. Its operating expenses increased from approximately $2.1 million in 2015 to $3.6 million in

---

2020, which includes an increase of over 30 percent in its staffing budget.\textsuperscript{87} Ms. McPhee testified that the program has increased the scope of its audits, added additional audit procedures, changed some audit cycles to focus on higher risk practice areas, and overall enhanced the coverage of the program.\textsuperscript{88}

The program consists of 22 staff, including 14 auditors.\textsuperscript{89} The director, deputy director, both team leaders, and all auditors are chartered professional accountants. The management team obtained their certified anti-money laundering specialist certification in 2017, and, since then, it has effectively become mandatory. At the time of the Commission's hearings, there were seven certified specialists and nine in the process of obtaining the certification.\textsuperscript{90} Mr. Avison also noted that retention rates at the Law Society are very high, such that there is a high degree of institutional knowledge and an environment where information is shared effectively.\textsuperscript{91} The program's staff members regularly participate in programs offered by the Association of Certified Anti–Money Laundering Specialists, the Association of Certified Fraud Examiners, the Canadian Anti–Money Laundering Institute, the Chartered Professional Accountants of British Columbia and of Canada, FINTRAC, and various other entities.\textsuperscript{92}

\textbf{Trust Reports}

Every practising lawyer in British Columbia must file an annual trust report, either individually or as part of a law firm, with limited exceptions.\textsuperscript{93} The Trust Assurance Program receives and reviews approximately 3,600 trust reports every year.\textsuperscript{94} For firms that have a trust account, the report includes information such as a description of the firm’s financial profile, the volume of its trust deposits, areas of law practised, information on internal controls, the receipt of cash in an amount greater than $7,500, and the firm’s accounting procedures and activities.\textsuperscript{95}

Trust reports take the form of either a “self-report” completed by the law firm or an “accountant’s report” completed in part by the law firm and in part by an external, independent chartered professional accountant. The external report is required for the first two years of a new law firm’s practice, when a lawyer begins using a trust account, when a law practice is terminated, or when a previous audit has identified areas of low compliance.\textsuperscript{96}

\end{itemize}
Failure to file a completed trust report on time can lead to suspension and fines.97 Further, an unsatisfactory report may result in a referral to the Investigations Group or an elevated risk rating for the law firm, which in turn results in an earlier compliance audit or a future requirement to file an accountant’s report.98 The accuracy and completeness of the trust reports are audited as part of the compliance audit program discussed above.

**Lawyer Self-Reports**

Lawyers must report certain breaches of the Rules to the executive director of the Law Society. These breaches include discovering a trust shortage greater than $2,500 or being unable to deliver trust funds when due, as well as receiving cash outside the permitted circumstances.99 Such a self-report may result in a referral to the Investigations Group, an earlier compliance audit, or a future requirement to file an accountant’s report.100

**Compliance Audit Program**

The compliance audit program is “a proactive process designed to support compliance with the trust accounting rules.”101 A “compliance audit” is defined in Rule 3-53 as an examination of a lawyer’s books, records, and accounts, as well as the answering of questions by the lawyer being audited. The goal of a compliance audit is to:

- help law firms recognize and correct minor problems with their trust accounting and recordkeeping before they lead to serious issues of non-compliance and possible professional conduct issues;
- answer questions the lawyer and law firm staff may have and to develop or improve proper accounting systems, record-keeping practices and trust fund handling procedures; and
- conduct a review of the lawyer’s existing accounting records and perform a sample check of transactions and client files to review whether trust funds have been handled properly.102

Ms. McPhee testified that compliance audits are the primary way of detecting breaches of the trust accounting rules.103 She explained the process in the following terms:

And so ... we get all the books, records and accounts for the law firm for trust accounts. And during the audit the auditor will select certain client

files to look at, and through the review of the client file they will look at the retainer agreement, the legal services provided, any of the information in the client file as we have the entire client file. Deposits, withdrawals, anything associated with the file.

So ... the primary purpose of reviewing the client file is to look at that rule and ensure that legal services were provided and also that the funds have been paid out as soon as possible out of the trust account at the end of the legal retainer.104

The Law Society has instituted a system in which every law firm in the province that operates a trust account will be audited once every six years. Some will be audited more often depending on the firm's size, primary practice areas, compliance history, and risk rating.105 The Law Society also audits a sample of firms that report having no trust account to ensure this is the case.106 The executive director can also order a compliance audit of a lawyer or firm at any time.107

Law firms are selected for audits at random. However, audits can also be prompted by an indicator such as failure to file a trust report, information on a trust report that indicates non-compliance with the rules and procedures, referrals from other departments at the Law Society (e.g., the Investigations Group), inadequacies identified in a previous compliance audit, or a compliance level that raises concerns about the lawyer’s trust accounting practices.108

A variety of documents need to be produced to auditors, including a listing of accounts, signatories, and sample signatures; bank statements; deposit receipts; bank reconciliations; client ledgers; cash receipt books; and billing records.109 Lawyers are required to comply with audits and to produce all books, records, accounts, and any other information, even if privileged or confidential.110 Failure to comply can result in suspension or other consequences.111

Between 2016 and 2019, the number of compliance audits increased from 457 to 675 per year.112 Ms. McPhee testified that the Law Society’s goal is to do over 600 audits per year.113

105 Exhibit 225, Trust Assurance Program Summary, para 10. For example, firms that practise primarily (over 50 percent) in the areas of wills and estates and real estate will be audited once every four years, and new firms will be audited within three years.

113 Transcript, November 19, 2020, p 84.
As the foregoing demonstrates, the Law Society has developed, implemented, and maintained a robust compliance audit program. I applaud its commitment to ensuring that the auditors administering the program have specific anti-money laundering training and that the number and frequency of audits has increased. Although the audits allow the Law Society to identify non-compliance, even the prospect of an audit is itself a deterrent.\textsuperscript{114} The Law Society’s Trust Assurance Program, while not foolproof, has significant potential to deter the use of trust accounts in connection with money laundering and to identify such a transgression should it occur. I encourage the Law Society to continue its diligent oversight in this regard.

\textit{Education and Outreach}

The final component of the Trust Assurance Program consists of educational programs, materials, and advice given to lawyers. The Law Society has produced various resources for lawyers explaining the trust accounting rules and procedures. It also offers free online programs covering the basics of trust accounting, the self-reporting and compliance audit process, and a webinar on anti-money laundering.\textsuperscript{115}

\textbf{Lawyers’ General Accounts}

As a final note with respect to lawyers’ trust accounts, it is important not to confuse them with general accounts. A general account is a “non-trust account and one from which payments for the day to day operating expenses of the practice are made.”\textsuperscript{116} Like trust accounts, general accounts are subject to compliance audits.\textsuperscript{117}

Mr. Ferris testified that the only funds that are exempt from FINTRAC reporting are “[t]rue trust accounts,” noting that when funds enter a general account, they should be treated the same as any other account.\textsuperscript{118} As such, a financial institution’s due diligence obligations notably apply with respect to lawyers’ general accounts.

\textbf{Referrals to the Investigations Group}

Throughout this part of the Report, I have mentioned at various points that breaches of the Rules and other circumstances can be referred to the Law Society’s Investigations Group. Referrals are made concerning suspected breaches of the cash transactions rule; misuse of a trust account; failure to make reasonable inquiries in suspicious circumstances; conduct that appears to have facilitated any dishonesty, fraud, or crime; and breaches of client identification and verification rules.\textsuperscript{119}

\textsuperscript{114} Evidence of J. McPhee, Transcript, November 19, 2020, p 92.
\textsuperscript{115} Exhibit 225, Trust Assurance Program Summary, paras 33–34.

\textsuperscript{117} Evidence of J. McPhee, Transcript, November 18, 2020, p 143.
\textsuperscript{118} Transcript, November 18, 2020, pp 141–42.
\textsuperscript{119} Ibid, para 39.
The Law Society helpfully provided the Commission with tables detailing trends in referrals to the Investigations Group.120 Ms. McPhee explained that a significant rise in referrals in 2017 was because of an increased focus on the client identification and verification rules and related initiatives.121

The Law Society also provided the Commission with information identifying which referrals to the Investigations Group related to specific anti-money laundering rules (the cash transactions rule, client identification and verification rules, and trust accounting rules).122 Of the 109 referrals made to the Investigations Group in 2019, over half (67) related to the possible transgression of the Law Society's anti-money laundering rules. Ms. McPhee attributed this pattern to the audit program's increased focus on anti-money laundering.123

Mr. Avison testified that Law Society investigations in matters related to anti-money laundering are “inherently more complex given the amount of work that is required in relation to the financial components.”124 However, Ms. Bains expressed the view that it depends on the investigation. She explained that investigations of breaches of the cash transactions rule are often straightforward, whereas those in which the lawyer knew or ought to have known they were facilitating dishonesty, crime, or fraud are often more complex.125

As of September 30, 2020, the Investigations Group had 230 open files, of which 92 pertained to the client identification and verification rules, the cash transactions rule, or potential misuse of a trust account and/or failure to make inquiries in suspicious circumstances.126

As I noted above, members of the Law Society’s Investigations Group, Discipline Group, and Forensic Accounting Group have anti-money laundering qualifications including the certified anti-money laundering specialist certification, certified fraud examiner status, and chartered professional accountant designation.127 In my view, it is crucial that those charged with implementing, overseeing, and enforcing the Law Society’s anti-money laundering and Trust Assurance programs have training focused on anti-money laundering. I endorse the Law Society’s focus on specific anti-money laundering training and recommend that the Law Society make it a requirement for those investigating possible transgressions of the trust accounting rules.

Recommendation 61: I recommend that the Law Society of British Columbia require that all trust auditors and investigators charged with investigating possible transgressions of the trust accounting rules receive anti-money laundering training.

Ongoing Review of Law Society and Federation Rules

As of the Commission’s hearings in 2020, the FLSC Anti–Money Laundering Working Group was in the middle of another review of the Model Rules. This second review is focused on source of funds, source of wealth, risk assessments, compliance measures, virtual currencies, the cash exceptions, politically exposed persons, trustees of widely held or publicly traded trusts, electronic funds transfers and exceptions, and the proposed 2019 amendments to the PCMLTFA regulations.129

As noted above, the Law Society has identified ambiguities in its Rules, including with respect to source of money, and is studying possible solutions. The Law Society also recognizes the need for stronger fines130 and penalties for serious breaches of the trust accounting rules. It is looking into ways in which to increase capacity for investigations and other matters, some of which may require legislative changes.131

In addition, the Law Society is considering whether to require law firms to have an “anti–money laundering compliance officer” and a firm risk policy, as is done in the United Kingdom.132 As Dr. Benson explained, legal professionals in the United Kingdom must carry out and maintain a risk assessment to identify and assess money laundering and terrorist financing risks faced by their firms. They must also establish and maintain appropriate written policies, controls, and procedures,133 and appoint a compliance officer responsible for ensuring the firm complies with its anti–money laundering requirements.134

Education

Another important aspect of Law Society and Federation activities involves educating lawyers about their obligations and risks. Ms. Wilson testified that, in the Federation's
experience, it is a minority of lawyers who deliberately breach the rules. Accordingly, it is crucial to focus on educating “the great majority of lawyers who want to comply, who want to do the right thing, who want to understand a risk when it’s in front of them, who want to know what it looks like, what the indicia are and how to avoid it and how to respond.” Thus, discipline and education are both important tools.\(^{135}\)

UK money laundering expert Simon Lord similarly expressed the view that education is a useful tool in the fight against money laundering. He noted that, following a lecture he gave to a law society in the United Kingdom, he has had “non-stop questions” from lawyers asking about situations that might be suspicious.\(^{136}\)

As I have noted throughout these chapters, the Federation has produced a number of educational materials. In addition to the 2019 Risk Advisory produced by the FLSC Anti–Money Laundering Working Group (discussed in Chapter 26), it has produced other guidance documents on specific anti–money laundering topics.\(^{137}\)

The Law Society has also been prolific in this regard. It added an anti–money laundering component to its Professional Legal Training Course in 2004.\(^{138}\) It has also produced a number of guidance documents, ranging from materials on the website\(^{139}\) to *Benchers’ Bulletins*\(^{140}\) to discipline advisories to specific anti–money laundering programs.\(^{141}\) Members can also phone a Bencher or practice advisor with questions about an ethical issue.\(^{142}\)

Although these educational materials are available, there is currently no requirement that lawyers in British Columbia receive any specific anti–money laundering education. Notably, the Financial Action Task Force Guidance states that legal professionals should be required to complete periodic continuing legal education in customer due diligence and money laundering / terrorist financing topics.\(^{143}\)

142 Evidence of C. Ferris, Transcript, November 19, 2020, pp 35–36.
As noted, the Law Society does offer programs related to anti-money laundering and has produced a variety of educational materials. However, the average recorded attendance in courses relating to anti-money laundering between 2009 and 2017 was under 1 percent of practising lawyers, with a modest increase to 6 percent in 2019.\textsuperscript{144} 

Mr. Ferris doubted that it would be prudent to make such training mandatory for lawyers. He noted the duty on lawyers to be competent in the areas in which they practise and said he has seen no evidence that lawyers are not educating themselves about the rules when they are operating in high-risk areas. In his view, making such education mandatory for all BC lawyers would be too sweeping, and making it mandatory for specific practice areas would be challenging given that the Law Society does not currently regulate lawyers according to their area of specialization. He was also concerned that imposing such a requirement could lead to a “checkbox” approach where lawyers feel they are in the clear if they have done the education.\textsuperscript{145} Ms. Bains similarly had doubts that mandatory anti-money laundering education would be the best approach, noting that the Law Society has found measures such as risk advisories to be effective.\textsuperscript{146} Ms. McPhee added that the compliance audit program is intended to be educational as well.\textsuperscript{147} 

The above concerns are well taken. I agree that imposing a mandatory anti-money laundering education requirement on all members of the profession would be too sweeping. I also appreciate the potential difficulties of imposing it only on lawyers practising in particular areas. Nonetheless, I am of the view that those lawyers who are most at risk of facing money laundering threats should be subject to mandatory anti-money laundering training. This requirement should include, but need not be limited to, lawyers who engage in the following activities: the formation of corporations, trusts, and other legal entities; transactional work, including real estate transactions; some transactions that do not involve the transfer of funds (such as transfer of title); and litigation involving private lending. As I noted above, over half the referrals to the Law Society Investigations Group in 2019 related to potential breaches of the anti-money laundering rules. Further, the percentage of practising lawyers who have attended the specific anti-money laundering courses is very low, ranging from 1 to 6 percent between 2009 and 2019. 

It is in keeping with a risk-based approach, in my opinion, to impose a mandatory education requirement on those lawyers who are most at risk of facing money
laundering threats. As I discuss throughout this Report, money laundering is, by its nature, often difficult to detect; a proactive approach based on risk has great potential to at least deter the conduct. Moreover, the nature of money laundering means that it is constantly evolving, requiring professionals working in risky areas to continuously update their knowledge.

Overall, there is no dispute that lawyers are gatekeepers when it comes to money laundering, particularly in much solicitors' work, and I consider it essential for lawyers who practise in high-risk areas to be properly educated on the risks they face. This is not to doubt the sincerity of the concerns expressed by the Law Society witnesses or to suggest that their current measures are inadequate; rather, a mandatory education requirement appears to me to be the surest way that all or most lawyers who face the greatest money laundering risks are properly educated about them. I am therefore recommending that the Law Society implement mandatory anti-money laundering training for lawyers whose work puts them most at risk of facing money laundering threats. This training need not be an annual requirement, but it should be required before lawyers start engaging in such activities and at regular intervals thereafter.

**Recommendation 62:** I recommend that the Law Society of British Columbia implement mandatory anti-money laundering training for lawyers who are most at risk of facing money laundering threats. The education should be required, at a minimum, for lawyers engaged in the following activities:

- the formation of corporations, trusts, and other legal entities;
- transactional work, including real estate transactions;
- some transactions that do not involve the transfer of funds (such as transfer of title); and
- litigation involving private lending.

**Law Society and Federation Engagement with Government**

Before leaving the topic of anti-money laundering measures by the Law Society and the Federation, I note that both bodies have been active in engaging with government about areas affecting the legal profession. The Law Society has provided comments on initiatives including the *Land Owner Transparency Act White Paper*.148 Similarly, the Federation has made submissions to Senate committees, the House of Commons Standing Committee on Finance, the Department of Finance, and the Department of Innovation, Science and Economic Development.149 I encourage the Law Society

and the Federation to continue bringing forward their perspectives when legislative measures are contemplated to ensure these measures do not have unintended consequences on affected populations.

**Law Society Collaboration with Law Enforcement and Other Stakeholders**

I discussed in Chapter 27 how subjecting lawyers to a reporting regime would be challenging from a constitutional perspective. However, this does not mean that all information possessed by lawyers or the Law Society is automatically out of reach for law enforcement and other stakeholders. Other pathways to accessing that information exist, and it is crucial that they be used. First, the Law Society must continue its efforts to enter into and maintain information-sharing agreements with law enforcement and other regulators and stakeholders. Second, the Law Society must make better use of its ability to refer cases to law enforcement in appropriate circumstances. Third, law enforcement must appreciate that, although there are unique difficulties (such as privilege) when investigating lawyers, there are nonetheless ways for them to access the information they seek. Finally, information about the foregoing measures must be publicly disseminated to counter the perception that transactions conducted through a lawyer in furtherance of an unlawful aim are immune from detection.

Overall, all stakeholders must understand the roles played by each other and collaborate effectively. The Law Society has unparalleled access to its members’ activities and must share that information as much as it is permitted. Meanwhile, law enforcement and other regulators and stakeholders must appreciate the role played by the Law Society and refer cases to it wherever appropriate.

**The Need for a Shared Response**

It is easy to reason that, because money laundering is a crime, the best response is a law enforcement response. Law enforcement is undoubtedly crucial to the fight against money laundering. However, we must not assume that regulators do not materially contribute to the fight as well. This is especially true in the case of lawyers, given that the Law Society is uniquely placed to investigate lawyers while avoiding the difficulties of privilege and confidentiality.

Dr. Benson’s research points out numerous advantages of a regulator response. These include the regulator’s specialist knowledge and expertise, understanding of the profession, access to material that may not be available to law enforcement, and ability to impose a broad range of sanctions.150 Blair Morrison, chief executive officer of the BC Financial Services Authority, testified that regulators can also adapt to changing threats

---

150 Evidence of K. Benson, Transcript, November 17, 2020 (Session 1), pp 156–57.
more quickly than government because their rule-making power allows them to be “more agile” in responding to new developments.\footnote{151}

Further, a broad range of regulatory sanctions can be imposed, including fines, conditions on practice such as supervision, suspension, and even disbarment. This range may allow a regulator to “more accurately target the problem identified and provide a more tailored and appropriate response.” Further, sanctions can be imposed to address professional misconduct falling short of criminal activity and can be imposed more quickly and cost efficiently than criminal sanctions.\footnote{152}

Dr. Benson concludes that a shared response is ideal, with regulatory and criminal justice responses addressing different kinds of conduct:

In certain cases, criminal prosecution and robust sanctions are appropriate; for example, cases where lawyers (or firms) have participated in “high-end” money laundering, involving the proceeds of serious economic crimes such as corruption or tax evasion, or provide services for multiple individuals or groups engaged in criminal activity. However, for those whose role in facilitating money laundering is less active or intentional, or is considered to be unwitting or based on poor judgment, a regulatory response would be both more practicable and proportionate. Regulatory action should not be the answer in all cases as it does not provide the same moral condemnation or signal the gravity of the offending in the same [way] as criminal prosecution and sanctions. Therefore, a shared and cooperative response to the suspected facilitation of money laundering is suggested, involving law enforcement and regulators working together when a legal professional is identified during the course of a financial investigation, for example, or potential involvement in money laundering is identified through the course of routine monitoring by the professional or regulatory bodies. An effective shared response would require, firstly, greater prioritisation of suspected “professional enablers” in criminal and financial investigations at the “ground level” of policing, not just in high-level rhetoric, and, secondly, effective communication and collaboration between regulators, police and prosecuting authorities.\footnote{153}

I agree with Dr. Benson that a shared response is desirable and necessary. In what follows, I highlight areas in which the Law Society, law enforcement, and other regulators collaborate already and how that collaboration can be more effective.

\footnote{151 Evidence of B. Morrison, Transcript, February 16, 2021, pp 28–29.}
\footnote{152 Exhibit 218, Katie Benson, “The Facilitation of Money Laundering by Legal and Financial Professionals: Roles, Relationships and Response” (DPhil, University of Manchester, School of Law, 2016) [unpublished], p 190.}
Information-Sharing Arrangements

The Law Society and the Federation consider information sharing to be essential. Ms. Bains testified that information sharing is “critical” to the Law Society’s investigations and that she spends a lot of time building relationships with other entities. She explained that the sharing of both general information (e.g., about new typologies) and more specific information (about particular files) is important. Similarly, Ms. Wilson testified that law societies are “very interested” in information sharing, particularly with law enforcement “about specific circumstances that law societies might be able to do something about.” Indeed, “even a name gives a law society something to go on. Even the suggestion or the question, have you looked at lawyer X, without any of the details is helpful because ... the power of law societies to go in and look at what lawyers are doing are extensive.”

Various formal information-sharing arrangements exist in British Columbia. Since the early 2000s, the Law Society has had memoranda of understanding with all 11 municipal police forces and the RCMP “E” Division. These memoranda establish procedures for the Law Society to request information from police where it believes that law enforcement may have information relevant to an investigation, as well as terms and conditions for use of that information. Ms. Bains testified that the Law Society has “very good relationships with law enforcement and the cooperation and communication and dialogue that we have with them is very helpful on our investigations.” The Law Society notes that, in recent years, it has met with members of “the RCMP ‘E’ Division’s Financial Integrity Unit, the Vancouver Police Department’s Financial Integrity Unit, and with other law enforcement personnel, both directly and through ... meetings of the Association of Certified Fraud Examiners and the Association of Certified Anti-Money Laundering Specialists.”

The Law Society has not tracked the number of requests it has made under its memoranda of understanding with law enforcement. However, a review of its records revealed that at least nine written requests have been made since 2018, and that these requests were made when an investigation had already been initiated by the Law Society. As of September 2020, the Law Society and the RCMP were working to update their memorandum of understanding.

The Law Society has also established protocols to obtain information from the Criminal Justice Branch at the BC Ministry of the Attorney General. Since 2016,

the Law Society has delivered at least 27 written requests for information during an investigation.\(^\text{163}\) Although the Law Society has no formal information-sharing agreement with the Public Prosecution Service of Canada, the Law Society engages with it on a case-by-case basis when a lawyer is charged with a federal offence.\(^\text{164}\)

The Law Society has informal arrangements with other regulatory bodies including the BC Securities Commission and the US Securities and Exchange Commission.\(^\text{165}\) Since 2018, the Law Society has delivered seven written requests for information to the BC Securities Commission, and the latter has referred six matters to the Law Society.\(^\text{166}\) The Law Society also discussed information requests with the US Securities and Exchange Commission in a June 2019 meeting and encouraged the latter to refer matters to the Law Society.\(^\text{167}\)

The Law Society is also an associate member of Counter Illicit Finance Alliance of British Columbia, which I discuss further in Chapter 39.\(^\text{168}\)

### Referrals to the Law Society

The testimony before me made clear that the Law Society finds the referrals it receives from other agencies to be important and useful. Ms. Bains testified that she frequently encourages other agencies to refer matters involving lawyers to the Law Society and to provide as much information as possible. She noted that “at the end of the day we want to serve our public interest mandate and we want to uncover concerns about lawyer misconduct that otherwise may not come to our attention.”\(^\text{169}\) Similarly, Mr. Avison noted that the Law Society has been engaging with other entities including the Ministry of the Solicitor General, the Ministry of the Attorney General, and the RCMP to explain its role and encourage referrals of matters involving lawyers.\(^\text{170}\)

The Law Society has not tracked how many referrals it has received from government agencies. However, it notes that it has received referrals from Crown corporations, the Ministry of Justice Corrections Branch, the courts, and the Criminal Justice Branch when lawyers have been charged with criminal offences.\(^\text{171}\) A review of the Law Society’s records from 2020 revealed 14 referrals from law enforcement.\(^\text{172}\)

171 Exhibit 243, Information Sharing with Law Enforcement #2, p 2.
172 Ibid.
In its closing submissions, the Law Society noted that it “recognizes the unique regulatory responsibility it carries by virtue of its ability to audit and investigate lawyers in a manner unhindered by client confidentiality or privilege.”

I agree that the Law Society has a heightened responsibility to conduct stringent money laundering regulation and investigation given the lack of lawyer reporting and the difficulties posed by client confidentiality and privilege. It is crucial that potential lawyer wrongdoing be referred to the Law Society. I therefore recommend that the British Columbia Solicitor General direct law enforcement to refer matters involving lawyers to the Law Society where appropriate. I further recommend that the Law Society continue its advocacy with government, regulators, and other stakeholders in order to clarify its role and when matters should be referred to it.

**Recommendation 63:** I recommend that the British Columbia Solicitor General direct law enforcement to refer matters involving lawyers to the Law Society of British Columbia where appropriate, and that the Law Society continue its advocacy with government, regulators, and other stakeholders about its role and when referrals to the Law Society should be made.

**Law Society Referrals to Law Enforcement**

Under the *Legal Profession Act*, the Law Society is not permitted to disclose information, files, or records that are confidential or privileged except as permitted by that statute or the Rules. The Rules permit the Law Society’s executive director, with the consent of the Discipline Committee, to deliver to a law enforcement agency any information or documents that may be evidence of an offence. In March 2020, the Law Society developed guidelines to assist the Discipline Committee when considering such a request by the executive director. They include the following considerations:

- The Committee should be satisfied that there are reasonable grounds to believe the information or documents in the Law Society’s possession are likely evidence of an offence.
- Absent exceptional circumstances, it will be in the public interest for the Executive Director to disclose information about a criminal offence to law enforcement.
- Disclosure to law enforcement will not be necessary if the conduct is already known to them.

---

175 Rules 2-53(4), 3-3(5), 3-23(3), 3-46(5)(c), 4-8(5); Exhibit 241, Information Sharing with Law Enforcement.
If there are reasonable grounds to believe that disclosure to law enforcement is necessary to prevent an imminent risk of death or serious bodily harm, which may include serious psychological harm, to any person then disclosure to law enforcement will generally be in the public interest.\(^{176}\)

If the committee consents to disclosure, the executive director may prepare a summary or an outline to provide to law enforcement. The summary or outline cannot contain information subject to privilege unless it has been waived by the client.\(^{177}\)

Since 1998, there have been four incidents in which the executive director sought to disclose information to law enforcement, and in each case, the Discipline Committee consented.\(^{178}\) Four referrals in the span of 23 years is a very low number. It is not clear on the evidence before me why this number was so low. However, Mr. Avison testified that there had previously been processes that contemplated three different committees playing a role in these decisions. Given the role is now centralized to a single entity – the Discipline Committee – Mr. Avison expects it will be “somewhat easier to be able to accommodate” such requests.\(^{179}\)

Mr. Avison also testified that “regular information sessions ... take place with entities like the RCMP and the financial integrity unit.” However, in his view, there is a “strain on the resources ... available to the RCMP to be able to engage in those kinds of exchanges to the extent that I think they would like to. That is an issue that comes up pretty consistently.”\(^{180}\)

Whatever the reason, four referrals since 1998 is far too low a number. It is highly implausible that in 23 years the Law Society came across only four instances that warranted a referral to law enforcement. I recommend that the Law Society review and assess its approach to determining whether it is in possession of information or documents that may be evidence of an offence and, if so, whether the executive director should seek approval from the Discipline Committee to provide it to law enforcement.

Recommendation 64: I recommend that the Law Society of British Columbia review and assess its approach to determining whether it possesses information or documents that may be evidence of an offence, and, if so, whether the executive director should seek approval from the Discipline Committee to deliver the information or documents to law enforcement.

Tools Available to Law Enforcement

Law enforcement agencies certainly face challenges when investigating matters that involve lawyers, most notably the effects of solicitor-client privilege. However, they should not simply assume that, because a lawyer is involved, there is no way of getting the information sought. Below are some avenues that law enforcement should make use of in appropriate circumstances.

First, law enforcement can obtain a search warrant or production order for a lawyer’s office in certain circumstances. To facilitate such searches while ensuring protection for solicitor-client privilege, the Law Society published guidelines for law office search warrants and procedures in 2013. These were developed in consultation with the Public Prosecution Service of Canada, the Ministry of Justice (Criminal Justice Branch), and the British Columbia Association of Chiefs of Police. The process set out includes appointing a “referee” to execute the search warrant and maintain confidentiality, advising the Law Society of the search before carrying it out, and ensuring that reasonable efforts are taken to advise the lawyer of the search. The referee is tasked with obtaining the documents sought in the warrant, sealing them, and delivering them to the court so privilege claims can be resolved.

Second, law enforcement should keep in mind the crime exception to privilege. Under this exception, “no privilege attaches to communications criminal in themselves or intended to further criminal purposes.” In other words, if a client seeks to use a lawyer to facilitate a crime, including money laundering, no privilege will attach to those communications. It does not matter if the lawyer is knowingly assisting in the facilitation of a crime or not.

I am not suggesting that the crime exception will always be easy to establish. To rely on it, law enforcement needs more than a mere allegation that advice was sought to facilitate a crime and more than simply proof that a crime occurred and that the criminal consulted a lawyer beforehand. Nonetheless, when it can be established, it is clearly a powerful investigative tool. When law enforcement has a reasonable basis to show that the exception should apply, it should seek to invoke the exception and gain access to that information.

Third, law enforcement can, in appropriate circumstances, seek the production of trust accounting records. In Chapter 27, I discuss difficulties in designing a reporting regime based on trust account records, as they would appear to be presumptively privileged. However, although disclosing such records as a matter of course poses complex constitutional issues, this does not mean that law enforcement is precluded

---

184 Campbell at para 62.
from seeking access to trust account records on a case-by-case basis. Indeed, British Columbia courts have ordered production of redacted records, and the Supreme Court of Canada's case law would seem to allow for a process for judges to resolve claims of privilege. Indeed, the procedures I outlined above for law office searches would seem to be equally useful for trust account records, in that the materials could be sealed, privilege claims resolved, and the records passed on to law enforcement as appropriate.

**Public Awareness**

As I have noted throughout the chapters on lawyers, it is important that the public be aware of measures available to the Law Society and law enforcement when investigating lawyers. Such awareness is crucial to countering any perception that transactions conducted through a lawyer in furtherance of an unlawful aim are immune from detection. Although aspects of the lawyer-client relationship – particularly solicitor-client privilege – pose complications when investigating lawyers, the challenges are not insurmountable. I therefore recommend that the Law Society and the provincial government work to increase public awareness of the measures I have just described.

**Recommendation 65:** I recommend that the Law Society of British Columbia and the Province work to increase public awareness of measures available to investigate wrongdoing involving lawyers, including:

- the limitations on the use of a lawyer's trust account;
- the information-sharing agreements that exist between the Law Society and government agencies;
- the ability of the Law Society to refer matters to law enforcement when there is evidence of a potential offence; and
- the pathways that exist for law enforcement to obtain information about lawyers during investigations.

**Conclusion**

The involvement of lawyers in money laundering is a complex area. Clearly, lawyers possess the knowledge, skill, and scope of practice that would be of interest to criminals, and the practice of law inherently involves numerous money laundering risks. In this section of the Report, I have sought to outline the key areas of risk facing lawyers, without doing so exhaustively, and to recommend areas in which measures can be improved. I have also noted that research in this area is unfortunately relatively limited and expressed my hope that the AML Commissioner, academics, and
others will continue the research into lawyer involvement in and facilitation of money laundering. This would enable the Law Society, government, and law enforcement to apply their resources effectively to address key areas of risk.

In my view, the exclusion of lawyers from the PCMLTFA regime does not, contrary to dominant discourse, leave lawyers in British Columbia free of anti-money laundering regulation. The evidence before me suggests that lawyers will continue to be exempt from the PCMLTFA, and as I have explained, even a regime in which lawyers reported to the Law Society or another entity involves complex and challenging constitutional issues. Given this reality, it is imperative that the Law Society continue to maintain and enforce a robust anti-money laundering regime in British Columbia.

Although lawyers and indeed the Law Society are constrained in the extent to which they can disclose privileged information, it is important to recognize that this impediment does not constrain the Law Society in supervising and enforcing against lawyers. In fact, the Law Society has an advantage in that it does not face the same barriers as law enforcement: its officers can see everything in a lawyer's file, including privileged materials, and can use this information to inform their investigative and disciplinary powers.

It is clear to me that the Law Society, with the support of the Federation, has taken its role as the public interest regulator seriously. I find that it is engaged with anti-money laundering issues and continues to revisit its Rules to address emerging issues and risks. I trust that the Law Society will seriously consider my recommendations for ways in which the regime can be strengthened.
Chapter 29
British Columbia Notaries

British Columbia notaries are a unique profession in Canada. They are unlike both Quebec notaries, whose work under the civil law resembles that done by solicitors in other provinces and is subject to solicitor-client privilege, and notaries in other common law provinces, who have a narrower scope of practice.\(^1\) Given their unique scope of practice and the effects of the Supreme Court of Canada's 2015 *Federation* decision,\(^2\) BC notaries are, at the time of writing, the only legal service providers in Canada who are subject to the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act*, SC 2000, c 17 (PCMLTFA).

In this chapter, I describe the scope of practice of British Columbia notaries, the regulation undertaken by the Society of Notaries Public of British Columbia (Society), and the application of the PCMLTFA to British Columbia notaries and notary corporations. I then discuss the money laundering risks involved in this sector, which relate primarily to BC notaries’ role in real estate transactions. Finally, I consider how information sharing between the Society and others can be strengthened.

---

1. As I understand it, the role of notaries in other provinces is largely limited to witnessing or certifying and attesting the execution of a document; certifying and attesting true copies of documents; and exercising the powers of a commissioner for taking affidavits: see, for example, *Notaries Act*, RSO 1990, c 6, s 3 (Ontario); *Notaries and Commissioners Act*, SA 2013, c N-5.5, s 4 (Alberta). However, the Quebec profession is distinct from the common law profession. It is governed by the *Notaries Act*, CQLR, c N-3, which specifies that a notary is a legal advisor and that professional secrecy (the civil law equivalent of solicitor-client privilege) attaches to their activities (ss 10, 14.1). The Supreme Court of Canada has noted that the role of Quebec notaries is very similar to that of solicitors in common law provinces: *Canada (Attorney General) v Chambre des notaires du Québec*, 2016 SCC 20 at para 42.

2. *Canada (Attorney General) v Federation of Law Societies of Canada*, 2015 SCC 7 [*Federation*]. I discuss that decision in detail in Chapter 27. Briefly, it concluded that the application of the PCMLTFA to lawyers was unconstitutional because it interfered with constitutionally protected duties that lawyers and Quebec notaries owe to their clients.
British Columbia Notarial Profession

The role of BC notaries can be traced back to the practice of notaries in England in the mid-1800s. Indeed, the oath taken by BC notaries is taken directly from the English Public Notaries Act of 1843. The profession is governed by the Notaries Act, RSBC 1996, c 334. It refers to two categories of notary: members of the Society, and non-member notaries appointed by cabinet.

Members of the Society

Members of the Society can carry out the functions set out in section 18 of the Notaries Act. These include, but are not limited to:

- drawing instruments related to property that can be registered, recorded, or filed in a registry or public office;
- drawing and supervising the execution of certain kinds of wills;
- attesting or protesting commercial or other instruments; and
- drawing affidavits, affirmations, and statutory declarations.

John Mayr, chief executive officer of the Society, testified that, although the list in section 18 is long, most services provided by BC notaries are in real estate, personal planning, and notarizing documents and contracts. As Mr. Mayr put it, BC notaries’ scope of practice is essentially “areas of non-contentious law.” Marny Morin, secretary of the Society, explained that, if a matter becomes contentious, it is referred to a lawyer or accountant.

Mr. Mayr testified that BC notaries are legal service providers and that courts have determined they must meet the same standard of service as lawyers. For example, like lawyers, notaries owe fiduciary duties to their clients. Importantly, however, solicitor-client privilege does not attach to their work. Although BC notaries do owe a duty of confidentiality under the Personal Information Protection Act, they can be obliged to produce materials to the RCMP, local police, and government agencies.

11 SBC 2003, c 63.
Members of the Society can practise on their own or through notary corporations. Mr. Mayr testified that, as of March 2021, there were 404 members and that, although notary corporations exist, the vast majority of members are sole practitioners with zero to four staff members.

Becoming a member of the Society involves applying to the British Columbia Supreme Court, passing examinations, and satisfying other requirements set by the Society. The Society requires applicants to have a master’s degree in applied legal studies. The registrar of the BC Supreme Court maintains the Roll of Notaries Public.

Cabinet-Appointed Notaries

The second category of notaries contemplated in the Notaries Act are those appointed by cabinet for limited functions. Such notaries can only administer oaths; take affidavits, declarations, and acknowledgements; attest instruments; and give notarial certificates (section 15(2)). They are not members of the Society and cannot carry out the other roles that members can (sections 15(4), (18)).

The title “Notary Public in and for the Province of British Columbia” can be used only by members of the Society, cabinet-appointed notaries, and lawyers. Section 17 of the Notaries Act sets out when a person is considered to act as a notary public, and section 48 states that a person must not act as or hold oneself out as a notary public unless authorized by the statute.

The remainder of this chapter will focus on notaries public who are members of the Society. For simplicity, I will refer to them as “notaries” or “members.”

Regulation by the Society

The Society’s powers to regulate its members are set out in the Notaries Act and the Notaries Regulation. The Society has passed the Rules of the Society of Notaries Public of British Columbia (Rules), which regulate the conduct of its members. I review some key powers of the Society and rules applying to members below.

13 Notaries Act, ss 57–65.

17 Notaries Act, s 13.
18 Notaries Act, s 16; Legal Profession Act, SBC 1998, c 9, s 14(3).
General Duties of Notaries

Rule 2.01 specifies that every notary “shall in the public interest actively and independently pursue [their] profession.” Notaries have a general duty to their clients to “represent that client competently and with undivided loyalty to the client” (Rule 11.01). In this regard, various rules address conflicts of interest and dealings with unrepresented parties (Rules 11.02–11.06).

Notaries can give undertakings, defined in Rule 10.01 as “a written or implied absolute and irrevocable covenant and commitment to act without fail upon certain circumstances, facts, deeds, or evidence.” Notaries are personally responsible for undertakings, which can be released or altered only by the recipient (Rule 10.02). As I discuss below, undertakings frequently come into play during real estate transactions.

Practice Inspections, Investigations, and Discipline

Notaries are subject to practice inspections. Mr. Mayr testified that a practice inspection involves a team of senior notaries (practice inspectors) that engage with the notary and conduct a comprehensive review of the notary’s practice, ranging from consideration of employment or partnership arrangements to a detailed examination of the member’s files.21 Ms. Morin testified that practice inspectors receive annual training and use a standardized checklist that covers all areas of practice.22

Compliance with practice inspections is mandatory. Notaries must answer the inspectors’ questions, provide necessary information, and provide printed or electronic copies of documents (Rule 18.04). These inspections can identify deficiencies, lead to a requirement for re-inspection, require a member to enrol in a suitable education plan, or result in a referral to the Discipline Committee (Rule 18.05). Ms. Morin testified that all new notaries are inspected in their first year of practice. Following that, inspections occur randomly on a rotating four-year basis, targeting 25 percent of the membership (approximately 100 members).23

The Notaries Act empowers the Society to conduct audits of a member’s or former member’s books and accounts at any time. Ms. Morin testified that practice inspections and audits are separate processes, with trust account regulation largely addressed through audits.24 If the audit discloses a contravention of the Notaries Act, Notaries Regulation, or the Rules, the directors may suspend the notary and direct an inquiry by the Discipline Committee.25

The Society also investigates complaints against notaries. Mr. Mayr testified that most complaints come from members of the public, but that they also come from

23 Transcript, March 5, 2021, p 15.
24 Ibid, pp 15–16.
25 Notaries Act, s 25.
lawyers, real estate agents, and other notaries. The Society prepared a chart for the Commission categorizing complaints it has received since 2017, showing that the numbers ranged from 17 to 26 per year.

Mr. Mayr is the lead investigator. He does a preliminary investigation of all complaints before presenting them to the Discipline Committee. The committee can direct further investigation and determine how to advance the complaint. It is composed of five notaries and one member of the public. Mr. Mayr testified that all notaries on staff have undertaken the anti-money laundering training I describe below, but none are certified anti-money laundering specialists.

As noted above, matters can be referred to the Discipline Committee based on practice inspections, audits, or complaints. The committee can inquire into whether a member or former member has been guilty of the following:

- misappropriation or wrongful conversion of money or other property entrusted to them;
- incompetence;
- other professional misconduct;
- a breach of the Notaries Act, the Notaries Regulation, the Rules, or the Society’s bylaws; or
- conduct that is “contrary to the best interest of the public or the notarial profession or tends to harm the standing of the notarial profession.”

The Discipline Committee reports to the directors of the Society, who make the ultimate determination of whether a notary is guilty of one of the above. The directors may impose the following sanctions:

- a reprimand and fine of up to $5,000;
- a suspension of a member’s practice or conditions on a member’s practice, as well as a fine of up to $5,000; or
- termination of membership.

31 Notaries Act, ss 27, 28.
32 Notaries Act, ss 33, 35(1).
33 Notaries Act, ss 35(2)(b) and (c).
Mr. Mayr testified that the Notaries Act is “fairly dated legislation,” noting that the maximum fine of $5,000 is low and that there are no provisions for other sanctions.\(^{34}\) Given the possibility of notaries’ being used to facilitate money laundering through, for example, the transfer of real property, I agree that the maximum fine should be raised to provide a meaningful deterrent for such misconduct. I recommend that the provincial government, in consultation with the Society, raise that maximum fine.

**Recommendation 66:** I recommend that the Province, in consultation with the Society of Notaries Public of British Columbia, raise the maximum fine that can be imposed when a member of the Society is guilty of misconduct as set out in the Notaries Act.

On petition by the Attorney General of British Columbia, the Society, or an aggrieved person, the BC Supreme Court may inquire into alleged breaches of the Notaries Act, Notaries Regulation, or Rules, or into the professional conduct or alleged incompetence, negligence, or fraud of a notary. Following an inquiry, the court may suspend or terminate the notary’s membership.\(^{35}\)

The Society can apply to court to appoint a custodian of a notary’s property and to manage, arrange for the conduct of, or wind up a member’s practice in various circumstances, including if a notary’s membership has been suspended or terminated or “other sufficient grounds exist.” Mr. Mayr testified that the Society moves very quickly to determine if there is validity to complaints relating to conversion, fraud, or theft, and that a representative of the Society can be in court within a day or two seeking an order of custodianship.\(^{36}\)

Notaries must immediately notify the Society of any judgment or determinations made by a discipline panel against them. They must also advise the Society if they are subject to: a summons, writ, or statement of claim; an investigation by another regulatory body or agency; or any proceeding, event, or development that might result in a claim against the notary’s professional liability insurance or the Society’s special fund.\(^{37}\)

**Regulation of Trust Accounts**

Like lawyers, notaries are permitted to operate trust accounts. However, because solicitor-client privilege does not apply to notaries’ work, the constitutional issues I outlined in Chapter 27 concerning privilege and trust accounts for lawyers do not arise, and notaries have reporting obligations under the PCMLTFA.

34 Transcript, March 5, 2021, pp 97–98.
35 Notaries Act, s 38.
36 Transcript, March 5, 2021, pp 98–99.
37 Rules 2.16–2.17.
The Notaries Act provides that money received by a notary on someone’s behalf is trust money and must be held in an accredited financial institution. The account must bear interest, and the notary must instruct the financial institution to pay that interest to the Notary Foundation.

Notaries are required to inform the Society within one month of opening a trust account (Rule 4.02(a)). They must, at all times, keep sufficient funds in the account to meet the gross trust liability and must report shortages to the Society within five days (Rule 4.13). They must reconcile their trust accounts every month and correct errors promptly (Rule 4.14). A notary cannot deposit more than $2,500 into their trust account in the course of a single transaction unless such money consists of guaranteed institutional draft(s), electronic transfer of funds by the financial institution, or sent or received pursuant to these rules, cheque(s) certified by Members themselves; or trust cheque(s) issued by a notary, solicitor or licensed real estate agent. [Rule 4.03]

There are also detailed rules governing online wire transfers (Rule 4.03(1)).

Notaries must pay funds into their trust account no later than the next banking day following receipt, with the exception of mortgage funds that cannot be deposited until after completion (Rule 4.05). They must record trust transactions no later than one week after the transaction date (Rule 4.06). They must also keep up-to-date records showing and readily distinguishing funds belonging to clients and to the notary.

Trust funds cannot be withdrawn unless they are paid to or on behalf of the client, used for payment of the notary’s fees or disbursements, or paid into the account by mistake. They cannot be withdrawn in connection with registration in a land title register before the registration is completed (Rule 4.11).

Notaries must complete self-audit reports and deliver completed “trust administration fee remittance forms” every month to the secretary of the Society, declaring the total number of trust transactions involving the receipt or disbursement of funds (Rules 4.22, 4.26). A trust transaction includes, but is not limited to, a conveyance transaction acting for a buyer or a seller, a conveyance transaction involving a mortgage refinance, or any other transaction requiring funds to be held in trust (Rule 4.26).

The directors of the Society can audit a member’s or former member’s accounts or require an investigation by a chartered professional accountant at any time.

39 Notaries Act, s 54; Rule 4.02(b).
40 Rule 4.03.1.
41 Notaries Act, s 23(1); Rule 4.01.
42 Ibid, s 23(3); Rule 4.09.
43 Notaries Act, s 24(1); Rule 4.20.
The Society audits approximately 25 percent of its membership every year.\(^\text{44}\) As I noted above, audits can lead to referrals to the Discipline Committee and to re-inspection.

**Insurance and the Society’s Special Fund**

Every member of the Society must participate in the Society’s liability (errors and omissions) group insurance plan (Rule 7.01). Ms. Morin explained that all members must have $16 million in insurance covering errors and omissions and that an excess insurance package worth $23 million is available. The insurance provider, BC Notaries Captive Insurance Company, also offers a fidelity insurance program covering malfeasance, theft, and the like.\(^\text{45}\) She testified that there are typically around 25 to 35 claims per year. In her experience, the Society has never needed to go into excess coverage with respect to errors and omissions. As for fidelity claims, she is aware of only a few over the course of 30 or so years.\(^\text{46}\) However, she is aware of one large fidelity claim where a member was running her trust accounting improperly. The member was found to have been taking money from her clients and then left the country.\(^\text{47}\)

The Society is required under the *Notaries Act* to maintain a special fund to reimburse losses that are caused by misappropriation or wrongful conversion by a member or former member of money that was entrusted to them. If a person makes a complaint for such a loss, the directors can conduct an inquiry and pay the claim out of the special fund.\(^\text{48}\) Notably, Rule 6.12 provides that when a payment is made out of the special fund, the Secretary shall “turn information in the case over to the local police authorities or Crown counsel in the area where the offence occurred” and, unless the board otherwise directs, take steps toward having charges laid against the member.

**The Society’s Anti–Money Laundering Activities**

Notaries are required to take 12 credits of continuing education every year. The Society approves the notary’s chosen content and assigns it a credit value.\(^\text{49}\) The Society has worked with a consultant, ABC Solutions, to develop an optional, modular anti–money laundering online training course\(^\text{50}\) for notaries and notary staff. It is provided to members through a subscription.\(^\text{51}\) The training satisfies the obligations under the *PCMLTFA*. The training is not mandatory, but is accredited for continuing education.\(^\text{52}\)

\(^{52}\) Ibid, pp 76, 85.
Ms. Morin testified that the Society used to hold the subscription and that approximately 300 to 350 members took the course annually. The subscription has since been taken over by the Notary Association, and Ms. Morin understands that around 200 members have taken the course since then. She noted that 200 is “quite a significant number given the size of our organization”\(^{53}\) (around 400 members).

The Society also offers seminars on fraud generally, and it has invited auditors from the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC) to attend seminars and conferences to discuss the audit process, common deficiencies, and related topics.\(^{54}\) The Society has also worked with ABC Solutions to create a risk assessment workbook that can aid members in assessing the risk potential for their practice and in implementing mitigation tools.\(^{55}\)

Mr. Mayr testified that every complaint the Society receives is evaluated to consider whether it might have a money laundering aspect. However, the Society has not received any complaints that would bear on money laundering or terrorist financing.\(^{56}\) Ms. Morin indicated that the Society has not come across any money laundering indicators through practice inspections.\(^{57}\)

**Application of the *PCMLTFA***

British Columbia notaries are reporting entities under the *PCMLTFA*. Ms. Morin testified that they are the “only 400 people in the country that are legal service providers that are reporting entities” under that regime.\(^{58}\) The *PCMLTFA* regime applies to BC notaries public (defined to mean members of the Society) and BC notary corporations (defined to mean “an entity that carries on the business of providing notary services to the public in British Columbia in accordance with the *Notaries Act*”).\(^{59}\) In particular, it applies to notaries and notary corporations when they:

- receive or pay funds or virtual currency, other than in respect of professional fees, disbursements, expenses, or bail;
- purchase or sell securities, real property or immovables, or business assets or entities;
- transfer funds, virtual currency, or securities by any means; or
- give instructions with respect to the above.\(^{60}\)

\(^{59}\) *Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations, SOR/2002-184 [PCMLTF Regulations]*, s 1(2).
\(^{60}\) Ibid, s 38(1).
It does not apply when the notary or notary corporation engages in those activities as an employee.61

Notaries and notary corporations must also keep a receipt of funds record when they receive $3,000 or more in respect of the above activities,62 as well as large cash and large virtual currency transaction records when they receive $10,000 or more in connection with these activities.63 Ms. Morin testified that the Society’s requirements for retaining records are longer than the periods required under the PCMLTFA.64 For example, the Rules require notaries to retain documents relating to residential conveyances for 10 years after the state of title certificate is received (Rule 17).

British Columbia notaries and notary corporations are subject to the same reporting requirements as other reporting entities, namely:

- reporting large cash and large virtual currency transactions of over $10,000 in respect of the above activities;65 and
- reporting suspicious transactions where they have reasonable grounds to suspect that the transaction is related to the commission or attempted commission of a money laundering or terrorist financing offence.66

Notaries and notary corporations must also verify the identity of persons or entities involved in a large cash or large virtual currency transaction, or when they receive $3,000 or more.67 They must also take reasonable measures to verify the identity of every person or entity that conducts or attempts to conduct a suspicious transaction.68 Ms. Morin testified that notaries have always been required to identify their clients because of conflict of interest rules. She noted that the Society’s best practices require using government-issued identification even when the PCMLTFA offers other methods.69 As of June 2021, notaries and notary corporations must also obtain information about beneficial ownership when verifying the identity of an entity.70

Notaries and notary corporations must implement a compliance program, which has five aspects:

- appointing a designated compliance officer responsible for implementing the program;

• producing written policies and procedures that are kept up to date and, in the case of firms, approved by a senior officer;

• developing and applying policies and procedures to assess and document the risk of a money laundering or terrorist financing offence, taking into consideration organization-specific factors;\(^{71}\)

• maintaining an ongoing compliance training program for employees and agents; and

• having an internal or external auditor carry out an effectiveness review of the policies and procedures, risk assessment, and training program every two years.\(^{72}\)

Finally, notaries and notary corporations must monitor their business relationships with clients on an ongoing basis.\(^{73}\)

The Financial Action Task Force’s 2016 mutual evaluation of Canada\(^{74}\) noted that British Columbia notaries had filed very few reports of suspicious transactions at the time of the assessment. One such report had been filed in 2011–12 and another in 2014–15.\(^{75}\) The mutual evaluation noted that the low reporting “raise[s] concern” and described the number as “very low,” while also observing that “FINTRAC is of the view that the quality of [suspicious transaction reports] is generally good and improving.”\(^{76}\) The report also notes that notaries were examined 23 times between 2009 and 2015.\(^{77}\) The mutual evaluation concluded that BC notaries are “not fully aware of the risk and their gatekeeper role in relation to real estate transactions. Like real estate agents, they consider that all risks have been mitigated by the bank whose account the funds originated from.”\(^{78}\) It noted that FINTRAC had “identified several deficiencies in record-keeping procedures of BC notaries as well, especially with respect to the conveyancing of real estate.”\(^{79}\)

The 2021 follow-up to the mutual evaluation\(^{80}\) did not discuss notaries in particular, but noted that with respect to suspicious transaction reporting, the “deficiencies identified in the [mutual evaluation report] in relation to the scope of the PCMLTFA

Mr. Mayr also expressed the view that the numbers of large cash transaction reports are concerning:

The large cash transaction reports do raise some concern because we have very strict cash acceptance rules ... [O]ur sense is that people [who] are trying to launder money, they know that notaries are subject to ... FINTRAC reporting and therefore don't necessarily go to a notary with a large cash transaction. Of course, lawyers have rules against accepting large cash amounts as well.

So it would be interesting to try to find out more about those circumstances and really whether it's confusion by notaries as to ... what is a large cash transaction report and when it's appropriate to submit one.84

Ms. Morin added that these may be attempted large cash transactions, but noted, “I can't really wrap my head around whether there would be any large cash transaction reports from our members.”85

Involvement of Notaries in Real Estate Transactions

The evidence before me largely centred on notaries' involvement in real estate transactions, which is a key area of their practice and one in which money laundering risks can certainly arise. Moreover, in a similar manner to other “gatekeeper” professionals, such as lawyers and accountants, a notary's involvement in a transaction can provide an air of legitimacy that is attractive to criminals.86

86 An example of how an air of legitimacy may attach to a notary's work is the case of Rashida Samji. As explained in court cases and in testimony before me, Ms. Samji was a notary public who was found to have operated a Ponzi scheme over a period of nine years, which put approximately $100 million from more than 200 investors at risk. She was found to have promoted false investments in an international wine distributor and told investors that their money would be held in her trust account, would not be at risk, and would not leave her account without their consent and instructions. She apparently told investors that they would receive a return of 6 percent every six months. However, according to published decisions, Ms. Samji did not in fact operate a trust account. The circumstances resulted in class actions, proceedings before the British Columbia Securities Commission, and criminal proceedings: Evidence of M. Morin, Transcript, March 5, 2021, pp 105–6; Jer v Society of Notaries Public of British Columbia, 2015 BCCA 257 at paras 6–9; R v Samji, 2017 BCCA 415 at paras 3, 8.
As noted above, Ms. Morin testified that notaries deal with non-contentious transactions. She explained that registration with the Land Title Office is the “ultimate goal.”87 The Society provided a document setting out the various steps in a real estate transaction and the notary’s involvement,88 which Ms. Morin thoroughly explained in her testimony. She testified that a notary usually becomes involved a few weeks before closing, when the realtor transfers funds to the notary to be held in trust as part of the closing funds.89 The notary then advises the buyer how much money will be needed to complete the transaction, taking into account adjustments, such as expenses to be apportioned between buyer and seller, tax adjustments, mortgage funds, et cetera.90 The remaining money is usually received into the notary’s trust account up to two days before closing, though mortgage funds typically come the day of.91

Ms. Morin explained that the notary receives a “mortgage advice” or “instructions” from the financial institution outlining the terms of the mortgage, which the client signs.92 The mortgage funds are typically received by bank draft, as the Rules limit what kinds of funds can enter a notary’s trust account (see above).93

At closing, the notary uploads the necessary forms onto the Land Title and Survey Authority website, and the authority registers the mortgage on title.94 After closing, the seller’s notary pays out the seller’s mortgages and any other charges or debts that were agreed upon. The notary pays their own account and then transfers the net sale proceeds to the client.95 Within five days of closing, the seller’s notary must provide the buyer’s notary with proof of payment of the mortgage. Banks must provide a discharge of the mortgage within 30 days under the Business Practices and Consumer Protection Act, SBC 2004 c 2. If this is not done within 60 days, the notary must report to the Society’s Mortgage Discharge Centre.96

Ms. Morin testified that it can take up to six weeks after closing for title documents to show that the seller’s mortgage has been paid out. As a result, it might appear for some time that the seller still has a debt when in fact they do not. Both parties are relying on undertakings that the mortgage will be paid off.97

Use of Trust Accounts

As the above demonstrates, notaries are heavily involved in real estate transactions and frequently have closing funds pass through their trust accounts. Handling large sums of money on behalf of clients clearly poses money laundering risks. These risks are lessened somewhat in comparison to lawyers’ trust accounts because solicitor-client privilege does not attach to notaries’ work and because notaries are reporting entities under the PCMLTFA. Nonetheless, although the Society’s regulation of trust accounts is relatively strong, there remain ways in which it can be improved.

Mr. Mayr testified that notaries are not required under the PCMLTFA to determine the source of a client’s funds. As the lender is almost always a financial institution, the notary relies on the bank to do its due diligence before forwarding the funds.98 Indeed, Ms. Morin testified that the notary will only see what is on the face of the bank draft – the name of the account holder or client, the financial institution, and the amount. They would, of course, also have information about the terms of the mortgage.99

Ms. Morin testified that, although there is no obligation under the PCMLTFA to make inquiries into the source of funds, the notary would likely make inquiries, such as asking about a client’s occupation, in certain situations, including where a client: provides bank drafts from multiple financial institutions;100 demonstrates any resistance to providing documentation or responding to questions; or lacks knowledge about the transactions. Further, as notaries are now required to make inquiries as a result of the Land Owner Transparency Act,101 it would be clear if a client did not have adequate knowledge of the property.102 Notaries would also see discrepancies between identification documents and what is recorded on mortgage applications. Ms. Morin testified that any such discrepancies would need to be investigated.103

Although I appreciate that a notary should, as a matter of best practice, make the inquiries Ms. Morin described, it strikes me that a rule in this regard would be beneficial. A rule would move beyond mere hope to require that, in all cases, a notary must make such inquiries. Having such a requirement would more effectively address the risks arising. As noted above, the Financial Action Task Force’s mutual evaluation stated that notaries appeared to rely on due diligence undertaken by the financial institution and were insufficiently aware of their gatekeeper obligations. In the absence of an obligation under the PCMLTFA to inquire into the source of funds, I recommend that the Society fill that void and require its members to obtain, record, verify, and maintain that information. Although the Society is best placed to determine all the situations in which inquiries into source of funds should be required, these should include at least the situations where a lawyer is obliged to inquire into source of funds (see Chapter 28).

**Recommendation 67:** I recommend that the Society of Notaries Public of British Columbia require its members to obtain, record, and keep records of the source of funds from their clients when those members engage in or give instructions with respect to financial transactions.

**Private Lending**

I discuss private lending in more detail in Chapters 17 and 26. The risks inherent in private lending apply equally to notaries, although it appears that not many notaries are involved in transactions with private lenders. Ms. Morin testified that private lending is a “niche” area for notaries. Those who are involved in such transactions usually have a relationship with only one or two lenders. Further, whereas notaries can act for both a buyer and lender in a residential mortgage with a recognized financial institution, they cannot act for both a private lender and a buyer.104

Ms. Morin testified that the Society considers private lending to pose risks for clients, given that interest rates are substantially higher and the lender and buyer do not necessarily have the same interests:

And these are the reasons why notaries can’t act for both borrower and lender in a private situation because the interests are a little different, whereas with a financial institution everybody ... wants the same thing. The buyer wants a house and the bank wants ... to lend the money, that they can pay back ... [Further,] the lending risks are lower with financial institutions than they are with private lenders. And that's just the nature of the beast when it comes to private lending.105

Ms. Morin noted that the consequences for missing a payment or an NSF cheque can be “quite high” with a private loan. Similarly, penalties for paying out a mortgage early are often much higher than they would be with a mainstream financial institution.106 However, Mr. Mayr testified that the Society has not taken a position on whether private lending poses a money laundering risk:

[W]e have certainly not taken a position on it. Part of the rationale would be the funds that come to the notary are coming from a financial institution even if it’s through a private lender. A client couldn't show up with a personal cheque or a bag full of cash and say ... here, I borrowed this money; I want you to put this ... into the transaction.107

The Society has not issued advisories, training modules, or other education to members on private lending specifically (though there are regular education seminars

---

105 Ibid, p 60.
on mortgage transactions). Ms. Morin testified that there are few claims concerning private lending and that not many members are engaged in this work. She noted that practice inspections of notaries who engage in private lending would consider whether the notary is paying close attention to the risks and obligations and has specific procedures in place that are dependent on who the lender is.\(^{108}\)

Although it appears that not many notaries are involved in private lending transactions, there are nevertheless money laundering risks inherent in such transactions (as outlined in Chapters 17 and 26), and it is important that notaries who are involved in such transactions are alive to those risks. While the Society’s representatives, in their evidence, focused on private lending by registered lenders, the ambit of private lending extends to unregistered entities and individuals who are operating outside the purview of regulators such as the Registrar of Mortgage Brokers. The potential for money laundering through mortgages exists equally where a mortgage is registered by a notary, and notaries should be aware of the vulnerabilities in this area.

Given the risks associated with private lending and the potential for notaries to be involved, I consider it important for the Society to be educating its members on the risks arising. As I discussed in Chapter 26, the Law Society of British Columbia and the Federation of Law Societies of Canada have both issued risk advisories to the profession regarding private lending. I recommend that the Society develop similar materials for its members.

**Recommendation 68:** I recommend that the Society of Notaries Public of British Columbia educate its members on the money laundering risks relating to private lending through educational materials or other means.

---

**Possible Indicators of Money Laundering in Real Estate Transactions**

The testimony before me outlined some possible indicators of money laundering that notaries may come across in their practice. Ms. Morin testified that the training she provides for notary students involves discussing what money laundering is, what it looks like, indicators of suspicion, the notary’s obligations, and risk assessment.\(^{109}\) One possibly suspicious circumstance is a short closing period, when a client wants to close in a day or two and will pay high fees to do so. Ms. Morin testified that a notary would need to investigate such a situation.\(^{110}\) Another possibly suspicious circumstance is the involvement of third parties, such as someone acting under a power of attorney or a realtor who is interpreting for the client. Ms. Morin testified that these could be perfectly legitimate scenarios but would “require some additional scrutiny” by the notary.\(^{111}\)

---

109 Ibid, pp 78–79.
111 Ibid, pp 88–89.
Ms. Morin testified that the Society sometimes receives complaints when a client has prepared their own forms and wants the notary to sign them, but the notary refuses:

And that’s one of the areas in which we get complaints from time to time, it’s members of the public saying well, I prepared my own, and they refuse to sign it, and all they want is ... a fee. Well, that’s not all they want. They can’t provide a service if they haven’t done the due diligence necessary to ensure that the party before them that is giving up that interest as a seller is getting what they’re supposed to get. So, it’s very difficult for a person to do their own real estate transaction documents and then just go out and try and get somebody to sign them for them.112

Such a situation, Mr. Mayr added, could lead to a requirement to file a suspicious transaction report. Further, with the introduction of the *Land Owner Transparency Act*, SBC 2019, c 23, there “has to be now a much deeper discussion about beneficial ownership.”113

In Ms. Morin’s view, notaries are familiar with the circumstances that may indicate money laundering. This is because of their duty to know their clients and gather information in order to effect the transaction. She testified that she emphasizes to her students that “it’s not people that are suspicious; it’s their behaviour. And so you have to look at behaviour of the person in front of you and see if it adds up to the context of the transaction that they’re involved in.”114

**Referrals and Information Sharing**

The evidence before me demonstrated that the Society is eager to engage with other regulators and law enforcement in order to further its public interest mandate. Mr. Mayr expressed the view that the Society has a good relationship with the Vancouver Police and the RCMP and works closely with them in respect of complaints and allegations. He noted some complexity in terms of collaboration with other regulators:

When it comes to regulatory bodies, that tends to be a little more difficult to work around. We have a very good relationship with the Law Society, but their complaints and investigation do tend to be fairly siloed and segmented, and we generally find out when there’s a complaint that involves a lawyer where there’s a notary involved after they have completed discipline.

And certainly we are actually just in the process of developing a framework for lawyers and notaries, not only to work together, but hopefully get to a point where we can either share information more freely about different members and ... ideally I think combined investigations where you’ve got notary involvement with a lawyer would be an ultimate goal for us.115

112 Ibid, pp 84–85.
113 Evidence of J. Mayr, Transcript, March 5, 2021, p 85.
114 Evidence of M. Morin, Transcript, March 5, 2021, pp 93–94.
Ms. Morin testified that she would like to see more communication between sectors. This is particularly so in real estate transactions given the various actors who are involved before the notary comes into the picture.\footnote{116 Transcript, March 5, 2021, pp 101–2.}

As I have discussed throughout this Report, information sharing and collaboration are key to the fight against money laundering, given its clandestine nature and the evolving methods by which it is done. I encourage the Society to develop approaches to sharing information and collaborating with other regulators, such as through memorandums of understanding.

**Conclusion**

In this chapter, I have reviewed the work of BC notaries, their regulation by the Society, and the application of the *PCMLTFA*, and the key money laundering risks that arise in this sector. Although the Society has fairly strong regulation in place, I have identified areas in which it can strengthen its anti-money laundering measures. Finally, I have highlighted ways in which information sharing and collaboration can be improved between the Society and other agencies.
Part VIII

Accountants

Section 4(1)(a)(vi) of my Terms of Reference requires me to make findings of fact regarding the “extent, growth, evolution and methods of laundering” in professional services, including the accounting sector.

This Part contains my findings in relation to the accounting sector and is divided into four chapters. Chapter 30 provides an overview of the applicable legal and regulatory framework. It also highlights the distinction between chartered professional accountants and non-regulated accountants, as well as the services offered by both in this province. Chapter 31 considers the nature and extent of money laundering risks facing accountants. In Chapter 32, I examine the regulation of chartered professional accountants undertaken by the Chartered Professional Accountants of British Columbia (CPABC) and how CPABC can supplement federal anti-money laundering measures applicable to accountants. Finally, Chapter 33 discusses anti-money laundering activities currently undertaken by CPABC and the Chartered Professional Accountants of Canada, as well as the potential for a “whistle-blower” regime that would permit reporting by chartered professional accountants without compromising their duty of confidentiality.
Accountants, like lawyers, are often described as “gatekeepers” to the financial system, possessing the knowledge and skill necessary to structure a client’s finances in a tax-efficient manner. The nature of accountants’ work provides them with opportunities to assist criminals – knowingly or unwittingly – in their money laundering activities. In recent years, there have been growing concerns about the involvement of accountants as facilitators in money laundering schemes.

There is, unfortunately, a lack of evidence on the precise nature and extent of accountants’ involvement in money laundering in British Columbia. Witnesses from the Chartered Professional Accountants of British Columbia (CPABC) and the Chartered Professional Accountants of Canada (CPA Canada) repeatedly expressed the view that this dearth of evidence suggests there is no money laundering problem with respect to chartered professional accountants (CPAs) in this province.

With respect, I do not interpret the lack of data in the same manner. I agree that the dearth of evidence is problematic and leaves government, regulators, and law enforcement without sufficient data to inform their decisions when implementing anti-money laundering regulation. My hope is that more research will be undertaken in this area. However, the lack of data should not be equated with an absence of risk. The nature of accountants’ work renders them vulnerable to being sought out by criminals to assist in money laundering activity. It is crucial that strong preventive anti-money laundering measures be in place to guard against this risk.

In my opinion, anti-money laundering regulation of accountants in British Columbia is currently inadequate in three key ways. First, a large proportion of accountants are not regulated. Only CPAs, who represent approximately one-third of the accounting profession, are regulated. Further, only CPAs are subject to the Proceeds

---

1234
Part VIII: Accountants • Chapter 30  |  Legal and Regulatory Framework

of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 (PCMLTFA); unregulated accountants are not. It is problematic that approximately two-thirds of the accountants in British Columbia can carry out many of the same activities as CPAs but are not regulated or subject to the PCMLTFA. This disparity raises the question of whether unregulated accountants should be subject to some form of regulation.

Second, while CPAs are subject to extensive regulation by CPABC for accounting purposes, CPABC maintains that its mandate does not, and should not, extend to anti-money laundering regulation. It considers that all such responsibility currently rests, and should continue to rest, with the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC). As I develop throughout these chapters, I respectfully disagree with CPABC’s position. In my view, both FINTRAC and CPABC have responsibility for anti-money laundering regulation, and CPABC must begin to fulfill this aspect of its public interest mandate.

Finally, the PCMLTFA captures only limited activities undertaken by CPAs. Combined with CPABC’s position that its mandate does not extend to anti-money laundering regulation, this restriction leaves several activities that pose money laundering risks without any anti-money laundering regulation. Further, compliance with the PCMLTFA appears to be low, and FINTRAC conducts few compliance examinations. These issues underscore the importance of CPABC conducting anti-money laundering regulation in parallel with FINTRAC.

The Accounting Profession in British Columbia

The term “accountant” is not protected in British Columbia in the same way as the term “lawyer” or “doctor.” In this province,1 accountants include CPAs, a regulated profession with a protected title, and other persons who identify as accountants but are not CPAs.

Non-CPAs are not regulated or subject to any form of statutory oversight. Under the Chartered Professional Accountants Act, SBC 2015 c 1 (CPA Act), CPABC is tasked with regulating the CPA profession in British Columbia. Subject to certain activities that can be performed only by CPAs (discussed below), the CPA Act expressly preserves the right of unregulated accountants to practise accounting in this province.2

According to the 2016 Census, approximately 89,000 individuals worked in British Columbia as accountants across all industries in that year. Of these, approximately two-thirds (around 58,000) were unregulated accountants.3

---

1 As my mandate is limited to British Columbia, I have not made findings on the accounting profession in Canada more broadly. However, given the harmonizing role played by CPA Canada, there are sound reasons to believe that accountant regulation occurs similarly across Canada.

2 Section 46 of the CPA Act states that “[s]ubject to section 47, this Act does not affect the right of a person who is not a member to practice as an accountant or auditor in British Columbia.”

As of March 31, 2020, CPABC had 37,317 members and admitted 1,326 new members in the 2019–20 fiscal year. Lisa Liu, vice-president of public practice regulation at CPABC, testified that approximately 20 percent of CPABC’s members are in public practice, while the rest work in industry, academia, and government.

**Accounting Services**

The common understanding of accountants’ work involves finance-related tasks such as preparing and maintaining financial records, preparing tax returns and advising on tax matters, and performing audits or reviews of a company’s financial statements.

As I develop below, the **PCMLTFA** applies to “accountants” (defined essentially to mean CPAs) and “accounting firms.” An accounting firm is defined as “an entity that is engaged in the business of providing accounting services to the public and has at least one partner, employee or administrator that is an accountant.”

The Financial Action Task Force’s (FATF) accounting guidance states that accounting services include the following tasks:

- a) Audit and assurance services (including reporting accountant work in initial public offerings);
- b) Book-keeping and the preparation of annual and periodic accounts;
- c) Tax compliance work;
- d) Tax advice;
- e) Trust and company services;
- f) Internal audit (as a professional service), and advice on internal control and risk management;
- g) Regulatory and compliance services, including outsourced regulatory examinations and remediation services;
- h) Company liquidation / insolvency / receiver-managers / bankruptcy related services;
- i) Advice on the structuring of transactions;
- j) Due diligence in relation to mergers and acquisitions;

---

6 Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations, SOR/2002-184 [PCMLTF Regulations], s 1, “accountant” and “accounting firm.”
k) Succession advice;
l) Advice on investments and custody of client money; and
m) Forensic accounting.  

Section 47 of the CPA Act states that certain accounting services in British Columbia can be provided only by CPAs:

• performing an audit engagement and issuing an auditor's report in accordance with the standards of professional practice published by CPA Canada;
• performing any other assurance engagement and issuing an assurance report in accordance with the standards of professional practice published by CPA Canada; and
• issuing any form of certification, declaration, or opinion with respect to information related to a financial statement, and performing specified auditing procedures, in accordance with standards published by CPA Canada.

FATF's accounting guidance identifies the following areas of vulnerability for money laundering in accountants' work:

• financial and tax advice;
• company and trust formation;
• buying or selling property;
• performing financial transactions;
• gaining introductions to financial institutions;
• maintenance of incomplete records by clients; and
• preparation, review, and auditing of financial statements.

CPABC submits that “many” of the above services cannot be performed by CPAs in British Columbia. In particular, CPABC and CPA Canada state that CPAs are prohibited from setting up legal structures such as companies and trusts and from providing real estate services. I discuss these activities in turn.
incorporate companies, establish trusts and partnerships, or prepare and maintain corporate records because these tasks are considered the practice of law.13 I agree that these activities constitute the practice of law and are therefore not performed by accountants in this province.14

That said, while accountants do not take the final step of creating corporations, trusts, and other similar legal entities, there is no doubt that they routinely provide advice about structuring a client’s finances, including through the use of such legal entities. As I elaborate in Chapters 31 and 32, by providing advice about and preparing for the creation of legal entities, accountants are exposed to significant risks of being used to facilitate money laundering, and they are well placed to observe activity on the part of their clients that could qualify as suspicious. Therefore, a singular focus on whether accountants incorporate companies or establish trusts themselves misses the bigger picture and risks failing to recognize a money laundering vulnerability.

CPABC also notes that CPAs are restricted in their ability to provide real estate services by the Real Estate Services Act.15 There are limited circumstances under that statute that would permit an accountant to provide real estate services,16 and the PCMLTFA includes, as triggering activities, the “purchase or [sale of] securities, real property or immovables or business assets or entities” and giving instructions with respect to these activities.17 I accept that it is relatively uncommon in British Columbia for accountants to be involved in these activities.18 However, to the extent they are, these activities certainly pose money laundering risks.

On the whole, I disagree with CPABC that “many” of the accounting services identified by the Financial Action Task Force are not performed by CPAs in British Columbia. With respect, this submission is an overstatement and unfairly minimizes the involvement of accountants in activities that carry a money laundering risk. Although there is some nuance regarding the creation of legal entities and real estate transactions, accountants in this province engage in the remaining activities identified by FATF. I do, however, agree with CPABC that many of these services can be performed by both CPAs and unregulated accountants,19 as the latter can perform all accounting

15 Closing submissions, CPABC, para 43.
16 Subsection 3(3) of the Real Estate Services Act, SBC 2004, c 42, allows certain individuals to provide real estate services without a licence, including individuals acting under the authority of a court or as a trustee in bankruptcy. A guidance document from FINTRAC recognizes that accountants can act as receivers, trustees in bankruptcy, and other similar roles: FINTRAC, Interpretation Notices, No 7, online: https://www.fintrac-canafe.gc.ca/guidance-directives/overview-apercu/FINS/2011-02-17-eng. Therefore, accountants are authorized to provide real estate services when acting in these roles.
17 PCMLTFA Regulations, ss 47(b) and (d).
19 Exhibit 403, CPABC McGuire Review, pp 3–4; Closing submissions, CPABC, para 40.
services except those identified in section 47 of the CPA Act (essentially audit and assurance engagements).

CPABC further submits that it is relatively rare for its members to engage in triggering activities under the PCMLTFA. It notes that only about 20 percent of its members work in public practice and points to an informal survey suggesting that more than 85 percent of the respondents did not engage in triggering activities.\(^\text{20}\) As I discuss further in Chapter 33, there are several significant limitations with that survey. These limitations prevent me from concluding that it is rare for members to engage in triggering activities or that it is rare enough to justify the almost non-existent PCMLTFA reporting by accountants (see Chapter 32).

Overall, I am not persuaded that accounting services in British Columbia, and the associated money laundering risks, are as limited as CPABC suggests. I elaborate on the risks facing accountants in this province in Chapter 31.

**CPA Regulation in British Columbia**

CPABC was created in 2015 following the amalgamation of the professional accounting profession.\(^\text{21}\) Its mandate is set out in section 3 of the CPA Act and is worth reproducing in full, given that the scope of CPABC’s mandate is at issue:

3 The CPABC has the following objects:

(a) to promote and maintain the knowledge, skill and proficiency of members and students in the practice of accounting;

(b) to establish qualifications and requirements for admission as a member and continuation of membership, and for enrolment and continuation of enrolment of students;

(c) to regulate all matters, including competency, fitness and professional conduct, relating to the practice of accounting by members, students, professional accounting corporations and registered firms;

(d) to establish and enforce professional standards;

(e) to represent the interests of members and students.

In Chapter 32, I discuss the scope of CPABC’s mandate and whether it does, or should, include anti-money laundering regulation. For present purposes, I highlight that

---

\(^{20}\) Closing submissions, CPABC, paras 40, 47.

\(^{21}\) Section 2(1) of the CPA Act explains that three previous bodies are amalgamated and continued as CPABC: the Certified General Accountants Association of British Columbia, the Certified Management Accountants Society of British Columbia, and the Institute of Chartered Accountants of British Columbia. As I understand it, a similar amalgamation occurred in the profession across Canada.
section 3(c) refers to the regulation of all matters relating to members’ practice, including competency, fitness, and professional conduct.

CPABC is overseen by a board of directors that must have at least nine members and up to three non-members.22 The board is empowered to pass bylaws on various matters, including admission, classes of members, membership requirements, designations, practice reviews, investigations, hearings, and extraordinary suspensions.23 CPABC has accordingly passed the Chartered Professional Accountants of BC Bylaws, the Chartered Professional Accountants of BC Bylaw Regulations, and the Chartered Professional Accountants Code of Professional Conduct (CPA Code),24 with which all members and firms must comply. CPABC has various committees that include, but are not limited to, the executive, membership, public practice, investigation, and disciplinary committees.25

Part 7 of the bylaws sets out various licences that are available to CPAs. Bylaw 700(2) explains that members may not provide services included in public practice unless they hold a current licence or are exempted from licensing under the regulations. Bylaw 703(1) sets out four categories of licences, which are defined in Regulation 706/1. An audit licence is the broadest, with the review licence, compilation licence, and other regulated services licence being progressively more restricted in scope.

Bylaw 100 defines “public accounting services” as any services included in an audit, review, or other assurance engagement; a certification, declaration, opinion, or report with respect to standards published by CPA Canada or the equivalent; or a compilation engagement. Meanwhile, “other regulated services” are defined as any services not constituting public accounting services that involve summarization, analysis, advice, counsel, or interpretation; forensic accounting and financial litigation support services; tax returns; or other services.

**CPABC’s Code of Professional Conduct**

The CPA Code sets out the principles that guide CPABC’s members, firms, students, and applicants. It applies to all members, students, and firms irrespective of the services provided.26 CPABC’s rules are to be read and applied in light of the CPA Code, CPA Act, and bylaws; therefore, compliance with the CPA Code is mandatory.27

---

22 CPA Act, s 4.
23 Ibid, Division 2; Bylaws 200–10.
24 The bylaws, regulations, and CPA Code can be found in full in Exhibit 391, Overview Report on the Accounting Sector in British Columbia, Appendices C [CPABC Bylaws], D [CPABC Regulations], and E [CPA Code], respectively.
25 CPABC Bylaws, Part 3.
26 CPA Code, Preamble, “Application of the Code.” Mr. Tanaka testified that the rules apply regardless of the kind of work a CPA is doing. Some provisions relate to specific activities, but otherwise the Code applies broadly. It even applies to some conduct that is not specifically related to work; for example, if a CPA is convicted of any offence, it is still a professional conduct matter: Transcript, January 12, 2021, pp 18–19.
27 CPA Code, Preamble, “Application of the Code.”
The CPA Code is comprehensive in scope, practical in application, and illustrative of high ethical standards. It is a “guide not only to the profession” but also “a source of assurance of the profession’s concern to serve the public interest.” Members of CPABC have “a fundamental responsibility to act in the public interest.”

The CPA Code is structured around five “fundamental principles of ethics”:

- **Professional behaviour**: CPAs “conduct themselves at all times in a manner which will maintain the good reputation of the profession and serve the public interest,” including avoiding action that would discredit the profession.

- **Integrity and due care**: CPAs “perform professional services with integrity and due care,” which includes being straightforward, honest, and fair in their professional relationships and acting diligently and in accordance with technical and professional standards.

- **Objectivity**: CPAs “do not allow their professional or business judgment to be compromised by bias, conflict of interest or the undue influence of others.” This principle is meant to ensure public confidence in the objectivity and integrity of members.

- **Professional competence**: CPAs “maintain their professional skills and competence by keeping informed of, and complying with, developments in their area of professional service.”

- **Confidentiality**: CPAs “protect confidential information acquired as a result of professional, employment and business relationships and do not disclose it without proper and specific authority, nor do they exploit such information for their personal advantage or the advantage of a third party.”

Like individual members, accounting firms are bound by the CPA Code. Depending on the circumstances, individual members of a firm may share responsibility for a firm’s failure to comply with the CPA Code.

The above provisions are relevant to the question of CPABC’s mandate. In my view, the CPA Code’s broad principles relating to members acting in the public interest, avoiding conduct that would discredit the profession, and maintaining competence in their practice areas support a conclusion that CPABC’s mandate is broad enough to encompass anti-money laundering regulation and oversight. I return to this subject in Chapter 32.

Rule 102.1 of the CPA Code, entitled “Illegal activities,” requires members to notify CPABC of any conviction, violations of securities legislation, or violations of tax laws.

---

29 Ibid, “Fundamental Principles Governing Conduct.”
30 Ibid.
31 Ibid, Preamble, “Principles Governing the Responsibilities of Firms.”
legislation involving dishonesty. Subsection (a) notably refers to convictions for a variety of finance-related offences, including money laundering.

Under Rules 102.2, 102.3, and 102.4, members must promptly notify CPABC in relation to adverse findings in a disciplinary or similar process with any other provincial CPA body or other regulatory bodies. A “professional regulatory body” is defined as follows:

A “professional regulatory body” is a body that sets and maintains standards of qualification, attests to the competence of the individual practitioner, develops skills and standards of the profession, sets a code of ethical standards and enforces its professional and ethical standards. Examples of professional regulatory bodies include, but are not limited to, bodies that regulate the accounting, legal, actuarial, investment, real estate, engineering and financial planning professions.

Meanwhile, a “regulatory body” is defined as follows:

A “regulatory body” is a body that has the power to compel a person to appear and answer to charges relating to compliance with its requirements. In this context, such a regulatory body’s requirements include legislation that it is empowered to enforce, whether against its own members or the public generally, codes of ethics, bylaws, regulations, professional or practice requirements and similar standards. Examples of regulatory bodies include, but are not limited to, bodies that regulate competition, elections, gaming, human rights, environmental protection and health and occupational safety.

Edward Tanaka, CPABC’s vice-president of professional conduct, testified that members would be required, under Rule 102, to report a finding by FINTRAC that a member has not complied with the PCMLTFA. This conclusion is not obvious to me. FINTRAC seems unlikely to constitute a “professional regulatory body” according to the definition above, given that it does not attest to the competence of practitioners or set professional and ethical standards. It could potentially qualify as a “regulatory body”; however, that term is also a poor fit given that FINTRAC cannot compel individuals to appear before it and answer charges.

I consider it important that CPAs be required to report findings of non-compliance by FINTRAC (including that a CPA has not complied with the PCMLTFA and/or has been sanctioned under that regime) to CPABC. The obligation to report is unclear and has the

---

32 These rules refer to findings of “guilt” or being found “guilty.” These terms are defined broadly to include findings by a regulatory body of a contravention, breach, violation, or infringement in relation to failures to comply with requirements: CPA Code, Guidance 8 to Rule 102.

33 Ibid, Guidance 5 to Rule 102.

34 Ibid, Guidance 7 to Rule 102.

potential to confuse members.\textsuperscript{36} I accordingly recommend that CPABC amend the CPA Code to specify that FINTRAC is captured by Rule 102.

**Recommendation 69:** I recommend that the Chartered Professional Accountants of British Columbia (CPABC) amend its Code of Professional Conduct to specify that members must report to CPABC a finding by the Financial Transactions and Reports Analysis Centre of Canada that a member has not complied with the Proceeds of Crime (Money Laundering) and Terrorist Financing Act.

Rule 201 deals with the maintenance of the profession's reputation. Guidance 1 notes that provincial and federal legislation often requires licensing and may govern activities. Guidance 2 specifies that members “should be cognizant of and comply with the provisions of any legislative requirements pertaining to any of the registrant's professional services.”\textsuperscript{37} This guidance would appear to capture compliance with the PCMLTFA.

Guidance 10 to Rule 201 notes that an auditor should not voluntarily cease to act on behalf of a client after starting an audit engagement except for good and sufficient reason. One such reason is the “inducement by a client to perform illegal, unjust or fraudulent acts.” The CPA Code also contains extensive rules ensuring independence for audits and assurances.\textsuperscript{38}

Rule 205, entitled “False or misleading documents and oral representations,” states that a member shall not

a) sign or associate with any letter, report, statement, representation or financial statement which the registrant knows, or should know, is false or misleading, whether or not the signing or association is subject to a disclaimer of responsibility, nor

b) make or associate with any oral report, statement or representation which the registrant knows, or should know, is false or misleading.

Relatedly, Rule 213, “Unlawful activity,” states that members must not associate with activity that they know or should know is unlawful.

These rules and the associated guidance are consistent with CPABC having a role to play in ensuring that its members do not become associated with or facilitate unlawful activity, including money laundering.

In Chapter 33, I review concerns raised by CPABC and CPA Canada witnesses relating to the duty of confidentiality. They emphasize that it is a strict duty with few exceptions and that it may prevent members from reporting suspicious activity that they come

\textsuperscript{36} Evidence of M. McGuire, Transcript, January 11, 2021, pp 96–97.

\textsuperscript{37} Guidance 1 and 2 to Rule 201.

\textsuperscript{38} Rule 204.
across in their practice. Accordingly, it is worth reviewing the CPA Code’s provisions on confidentiality in some detail.

Rule 208.1 sets out the general rule and circumstances where confidential information can be disclosed:

208.1 A registrant shall not disclose any confidential information concerning the affairs of any client, former client, employer or former employer except when:

a) properly acting in the course of carrying out professional duties;

b) such information should properly be disclosed for purposes of Rules 101, 211 or 302\(^{39}\) or under the Act or bylaws;

c) such information is required to be disclosed by order of lawful authority or, in the proper exercise of their duties, by the Board, or a committee, officer or other agent of CPABC;

d) justified in order to defend the registrant or any associates or employees of the registrant against any lawsuit or other legal proceeding or against alleged professional misconduct or in any legal proceeding for recovery of unpaid professional fees and disbursements, but only to the extent necessary for such purpose; or

e) the client, former client, employer or former employer, as the case may be, has provided consent to such disclosure.

The CPA Code defines “confidential information” as follows:

Information acquired in the course of a professional services relationship with a party. Such information is confidential to the party regardless of the nature or source of the information or the fact that others may share the knowledge. Such information remains confidential until the party expressly or impliedly authorizes it to be divulged.\(^{40}\)

Guidance 2 to Rule 208 notably states that the duty of confidentiality does not excuse a member from complying with a legal requirement to disclose information. However, it advises members to bring the duty to the attention of the courts and to seek legal advice when there is doubt as to the legitimacy or scope of a claim for disclosure. Subject to certain exceptions, members and firms have a duty to report any information concerning an apparent breach of the CPA Code or any information raising doubt as to the competence, integrity, or capacity of another member or applicant.\(^{41}\)

\(^{39}\) Rule 101 refers to non-compliance with the CPA Act, bylaws, regulations, CPA Code, and orders and resolutions of the board and requires CPAs to report breaches to CPABC in some circumstances.

\(^{40}\) CPA Code, Definitions, “Confidential Information.”

\(^{41}\) Ibid, Rule 211.
Finally, Rule 212 speaks to the handling of property belonging to others – for example, as a trustee, receiver, guardian, or administrator. A member who receives, handles, or holds money or other property in such a capacity must do so in accordance with the terms of the engagement and maintain records to account for it. Further, money held in trust must be held in a separate trust account.42 The guidance to Rule 212 specifies, among other things, that trust relationships should be documented in writing; that withdrawals or disbursements from the trust account should be limited to funds properly required for payment to or on behalf of the client or required for payments of the CPA’s fees or disbursements; and that CPAs should be able to account at all times for the trust funds or property together with any income, dividends, or gains generated to any person who is entitled to such accounting.43 It also states that CPAs may hold property rather than funds in trust, in which case “[a]ppropriate safeguards and controls should be established over these properties including, if applicable, the safekeeping of securities or other negotiable instruments.”44

Investigations and Enforcement by CPABC

CPABC has two main avenues of investigation and enforcement: practice reviews and investigations.

Practice Reviews

A “practice review” is a review of a CPA’s professional practice for the purpose of identifying deficiencies, fitness, or professional conduct, and taking appropriate follow-up or remedial action.45 Practice reviews consider whether an office complies with generally accepted accounting principles and audit/review standards as well as the CPA Code; whether it is maintained at a sufficiently high standard; and whether it should be pre-approved for the training of CPA students. The applicable standards include those set out in the CPA Code and the CPA Canada Handbook, the International Financial Reporting Standards, and accounting standards for private enterprises and not-for-profit organizations.46

Ms. Liu testified that practice reviews are concerned with “reviewable” services – assurance services, audit reviews, compilation services, and tax services.47 Bylaw 1000(3) specifies that members who hold a licence under Part 7 (reviewed above) are subject to practice reviews. During the 2019–20 fiscal year, CPABC conducted 810 practice reviews, with an overall pass rate of 94 percent.48

46 Evidence of L. Liu, Transcript, January 12, 2021, p 129; Bylaw 1003.
48 Exhibit 391, Appendix I, CPA Inspection.
Practice reviewers have important powers at their disposal. These include the ability to make requests of members, students, and firms; to interview members or students; to enter a practising office; and to copy documents.\(^49\) Members are required to co-operate with CPABC’s regulatory processes.\(^50\) They must comply with requests for information or documents and, should they fail to do so, CPABC can apply for a court order requiring compliance.\(^51\)

The \textit{CPA Act} specifies that a member or a student cannot refuse to comply with a request for information or for documents based on the duty of confidentiality.\(^52\) However, section 69 states that any facts, information, and records obtained under the \textit{CPA Act} must remain confidential, with limited exceptions. The ability of CPABC to see all aspects of a member’s practice, including confidential material, is significant and renders CPABC well placed to conduct robust anti-money laundering regulation of its members.

The practice review group has three associate directors and 12 contractors, all of whom are CPAs with extensive experience in the areas they inspect.\(^53\) Ms. Liu testified that reviewers receive extensive training on how to conduct practice reviews and assess firms for compliance with the standards, as well as on the kinds of remedial consequences that may be recommended. This training is ongoing to ensure that reviewers maintain technical knowledge of the standards.\(^54\)

Accounting offices are typically reviewed on a three-year risk-adjusted cycle. Priority is given to offices with newly licensed members, those requesting pre-approval to train CPA students, and those that received a “non-comply” in their last review and require a follow-up review.\(^55\) Risk factors that may result in a more frequent inspection include:

\begin{itemize}
  \item registration with the Canadian Public Accountability Board or US equivalent;
  \item a change in the profile of a firm (for example, new partners or a merger);
  \item disciplinary decisions by CPABC or another regulator;
  \item a weak history of practice review results; and
  \item other negative information coming to CPABC’s attention.\(^56\)
\end{itemize}

Michele Wood-Tweel, vice-president of regulatory affairs at CPA Canada, testified that practice reviews do not include any anti-money laundering review. Their focus is on professional standards – generally accepted accounting and audit assurance

\(^{49}\) Bylaw 1002(2).
\(^{50}\) CPA Code, Rule 104.
\(^{51}\) CPA Act, ss 51(5) and (6).
\(^{52}\) Ibid, s 51(9).
\(^{56}\) Exhibit 391, Overview Report on the Accounting Sector in British Columbia, para 50.
standards.\textsuperscript{57} Accordingly, practice reviews do not consider, for example, whether members or firms provide services that bring them within the scope of the \textit{PCMLTFA} or whether they have complied with their obligations under that regime.\textsuperscript{58}

Ms. Liu testified that anti-money laundering compliance issues could arise in the context of a client's compliance with laws and regulations, noting that auditors are expected to ask their clients whether they comply with all laws and regulations.\textsuperscript{59} I review some CPA Canada auditing standards that address anti-money laundering below.

\textbf{Investigations}

The \textit{CPA Act} states that an investigation can be done into a member's conduct to determine if grounds exist for disciplinary action.\textsuperscript{60} A practice review can lead to a report to the investigations committee.\textsuperscript{61} Investigations can also be started based on complaints from a client, employer, member of the public, or another regulatory body. In addition, matters can be referred for investigation from another CPABC department or initiated on the investigation committee’s own initiative following, for example, a media report.\textsuperscript{62} When CPABC becomes aware of people who are not actually CPAs but are using the protected CPA designation, it investigates such matters.\textsuperscript{63}

The investigations department has five full-time members: currently, Mr. Tanaka, two other CPAs, and two non-CPAs. The department also engages six contract investigators, who are all CPAs.\textsuperscript{64} Mr. Tanaka testified that he is not aware of any of the team members being a certified anti-money laundering specialist, although one is a certified fraud examiner.\textsuperscript{65}

Mr. Tanaka testified that investigators have considerable powers. He noted that Rule 104 of the CPA Code requires members to co-operate with the investigations team. Further, investigators have the same powers as practice reviewers under the \textit{CPA Act} with respect to requiring information and documents (as outlined above).\textsuperscript{66}

An investigator’s report is presented to the investigations committee, which decides whether grounds exist for disciplinary action.\textsuperscript{67} The investigations committee must make a recommendation of disciplinary action (such as a reprimand, a requirement to take courses, or a fine) or issue a statement of complaint stating the grounds for

\item \textsuperscript{67} Bylaw 1106.
\end{itemize}
disciplinary action. The member can accept the recommendation, refuse it, or request referral to a discipline committee.

Mr. Tanaka testified that CPABC has never received a complaint about a member or a firm related to money laundering issues and that, as a result, there has never been a discipline case relating to money laundering. CPABC and CPA Canada submit that this shows there is no money laundering problem among CPAs. With respect, I do not agree that the fact of there being no complaints means there is no money laundering concern. Money laundering by its nature is clandestine, and if a client seeks the assistance of a CPA to launder funds, they can hardly be expected to make a complaint. Given what we know about the nature of modern mid- and high-level money laundering, it would be naïve not to acknowledge the obvious risk of accountants becoming involved in or being used to facilitate transactions in furtherance of money laundering.

When asked about the extent to which investigators look for indicators of money laundering during their investigations, Mr. Tanaka testified that it depends on the nature of the complaint. As for what investigators would do if they came across indicators of illegality, he testified that, because of the CPABC’s obligation of confidentiality under the CPA Act, they would “very rarely” refer the matter to law enforcement. I return to this matter in Chapter 33.

In 2019–20, CPABC closed 53 investigations, including 15 referrals made to the discipline committee, and received 103 new complaints.

**Discipline**

As noted above, a discipline committee can be convened on receipt of a statement of complaint issued by an investigation committee. Such proceedings can end in a resolution by agreement or may require a hearing.

A discipline committee decides whether to dismiss or confirm a statement of complaint in whole or in part and must give reasons. If it confirms the statement of complaint, it can make a variety of orders, including a reprimand, suspension with or without conditions, cancellation of membership, imposing conditions on membership, a fine, and/or costs.

Continuing Professional Development

Ms. Liu testified that becoming a CPA requires a rigorous education program, a final exam, and a 30-month practical experience term. Bylaw 600(1) states that the CPABC board of directors must establish a program prescribing compulsory continuing education requirements for members. In turn, members must deliver an annual compliance report certifying their compliance with the mandatory professional development. Failure to comply can result in suspension.

Since 2017, CPABC has offered some professional development courses relating in whole or in part to money laundering, though training in this area is not mandatory. I review these courses further in Chapter 33.

CPA Canada

CPA Canada is the national “umbrella” organization of the CPA profession in Canada. Membership is mandatory for provincially regulated CPAs, and the organization represents around 220,000 members across Canada.

CPA Canada collaborates with provincial CPA regulatory bodies to harmonize ethical requirements, practice standards, and investigative and disciplinary processes. It also monitors and responds to international developments in rules of ethics and standards, and provides guidance to the provincial bodies about accounting standards and the impact of business issues on the profession.

CPA Canada maintains a model Code of Conduct for the CPA profession, which the provincial regulators develop together. Each provincial regulator can adjust provisions of the model code to suit its unique needs and regulatory framework. However, the model code is largely harmonized across Canada, as are the practice review programs. Provincial and territorial CPA regulators co-ordinate through the public trust committee, which “provides leadership and oversight in establishing policies, strategies and processes to assist in maintaining the integrity of the profession and the confidence and trust of the public.”

Importantly, CPA Canada is not a regulator; rather, the provincial CPA bodies regulate their respective members. Nor does CPA Canada have any governance or oversight role over the provincial CPA bodies. Their relationship is collaborative.

77 Transcript, January 12, 2021, p 7.
78 Bylaws 600(2), 602(1).
80 Ibid.
83 Closing submissions, CPA Canada, para 13.
CPA Canada is a member of the International Federation of Accountants (IFAC). Ms. Wood-Tweel testified that IFAC “brings together the global profession to look at the issues associated with the profession” and “supports the independent standard-setting boards that establish the accounting standards and the audit and assurance standards and ethical standards that evolve internationally.” Each member country of IFAC then tries to adopt harmonized standards.\(^85\)

CPA Canada also participates in the International Ethics Standards Board for Accountants (IESBA), an independent standard-setting board supported by IFAC. CPA Canada participates as the national standards setter for Canada.\(^86\) As I discuss in Chapter 33, CPA Canada participated in issuing an IESBA alert to the profession in 2020 relating to COVID-19 and money laundering risks.

IFAC member bodies are required to comply with the Statements of Membership Obligations (SMOs). SMO 4 requires the CPA profession to maintain codes of ethics that are at least as stringent as the *IESBA Code* unless there are legal, regulatory, or public interest reasons to differ in members’ respective countries.\(^87\)

The *IESBA Code* notably states that, in the course of carrying out their professional activities, professional accountants might encounter or be made aware of non-compliance or suspected non-compliance with laws and regulations that are “recognized to have a direct effect on the determination of material amounts and disclosures in the employing organization’s financial statements.”\(^88\) They may also encounter or become aware of non-compliance or suspected non-compliance that does not have such a direct effect but “compliance with which might be fundamental to the operating aspects of the employing organization’s business, to its ability to continue its business, or to avoid material penalties.”\(^89\) Examples of laws and regulations that are captured include (but are not limited to) those relating to money laundering, terrorist financing, and proceeds of crime.\(^90\)

In the words of the *IESBA Code*, a “distinguishing mark of the accountancy profession is its acceptance of the responsibility to act in the public interest.”\(^91\) The objectives of a professional accountant, when confronted by non-compliance or suspected non-compliance, are to comply with the principles of integrity and professional behaviour, alert management of the employing organization where appropriate to address or deter non-compliance, and to “take such further action as appropriate in the public interest.”\(^92\) The *IESBA Code* also notes that non-compliance can result not only in fines, litigation,

\(^{86}\) Ibid, pp 14–15.

\(^{89}\) Ibid, s 260.3(b).

\(^{90}\) Ibid, s 260.5 A2.

\(^{91}\) Ibid, s 260.4

\(^{92}\) Ibid.
or other consequences for the employing organization, but also in wider public interest implications such as potentially substantial harm to investors, creditors, employees, or the general public. The IESBA Code also speaks to situations in which professional accountants may hold client money or assets, directing them to make inquiries about the source of the assets and to consider related legal and regulatory obligations. It notes that inquiries about client assets might reveal they were derived from illegal activities, such as money laundering, and that, in such a case, the provisions I reviewed above relating to non-compliance with laws and regulations apply.

CPA Canada’s Canadian Standard on Quality Control requires audit firms to establish policies and procedures “for the acceptance and continuance of client relationships and specific engagements, designed to provide the firm with reasonable assurance that it will only undertake or continue relationships and engagements where the firm ... has considered the integrity of the client, and does not have information that would lead it to conclude that the client lacks integrity.” The explanatory note lists various things that a firm should consider, including indications that the client might be involved in money laundering or other criminal activities.

Three of CPA Canada’s Canadian Auditing Standards (CAS) contain references to money laundering: CAS 240, “The auditor’s responsibilities relating to fraud in an audit of financial statements”; CAS 260, “Communication with those charged with governance”; and CAS 250, “Consideration of laws and regulations in an audit of financial statements.” For example, CAS 250 states that if the auditor has identified or suspects non-compliance with laws and regulations, the auditor shall determine whether law, regulation, or relevant ethical requirements:

a) require the auditor to report to an appropriate authority outside the entity;

b) establish responsibilities under which reporting to an appropriate authority outside the entity may be appropriate in the circumstances.

96 Ibid, s 350.4A.1.
98 Exhibit 394, McGuire Report, para 71.
99 Ibid.
The *PCMLTFA*

The *PCMLTFA* applies to accountants and accounting firms. However, it does not apply to *all* accountants or *all* their activities. As I discuss in Chapter 31, witnesses before me expressed concern about the limited scope of accountants’ obligations under the *PCMLTFA*.

**Application of the *PCMLTFA* Regime to CPAs and Accounting Firms**

Accountants and accounting firms are reporting entities under the *PCMLTFA*. The regulations define “accountant” as a “chartered accountant, a certified general accountant, a certified management accountant or, if applicable, a chartered professional accountant.”\(^{100}\) Essentially, since the various accounting professions were united into one, the term refers to CPAs.\(^ {101}\) Importantly, that definition does *not* include unregulated accountants. An “accounting firm,” meanwhile, is defined as “an entity that is engaged in the business of providing accounting services to the public and has at least one partner, employee or administrator that is an accountant.”\(^{102}\)

CPABC has no prescribed role, duties, or functions under the *PCMLTFA*. Nor does CPA Canada, although it does participate in the federal government’s Federal Advisory Committee on Money Laundering and Terrorist Financing (see Chapter 33).

**Activities Captured by the Regime**

The *PCMLTFA* regime applies to CPAs and accounting firms only when they conduct certain activities, often referred to as “triggering activities.” Specifically, the regime applies only when CPAs or firms carry out or give instructions with respect to the following activities:

- receiving or paying funds or virtual currency;
- purchasing or selling securities, real property or immovables, or business assets or entities; or
- transferring funds, virtual currency, or securities by any means.\(^ {103}\)

FINTRAC has issued guidance specifying that CPAs or firms are subject to these requirements regardless of whether they receive fees or have a formal letter of engagement to do so.\(^ {104}\)

---

\(^{100}\) *PCMLTFA Regulations*, s 1(2), “accountant.”
\(^{102}\) *PCMLTFA Regulations*, s 1(2), “accounting firm.”
\(^{103}\) Ibid, s 47(1).
\(^{104}\) FINTRAC, Guidance and Resources for Businesses (reporting entities), “Accountants” (July 12, 2021), online: https://www.fintrac-canafe.gc.ca/re-ed/accts-eng.
It is clear from the limited list of triggering activities that the PCMLTFA regime does not apply to many services that CPAs and firms provide, including services that could associate them with money laundering or expose them to a money laundering risk (see Chapters 31 and 32). Further, even when a CPA or a firm is engaged in triggering activities, there are circumstances where the reporting is not required.

First, a CPA or a firm that engages in triggering activities in the following contexts is not subject to the regime: on behalf of an employer; in the course of an audit, review, or compilation agreement; or when acting solely as a trustee in bankruptcy.105

Second, the obligations under the PCMLTFA do not apply when a CPA or a firm is providing only advice with respect to triggering activities, rather than “giving instructions” with respect to them. FINTRAC’s guidance explains that “giving instructions” means directing the movement of funds, while providing advice (making recommendations or suggestions) is not giving instructions.106

Finally, FINTRAC does not consider the following services to be “providing accounting services to the public”:

- acting as a receiver pursuant to a court order or by way of a private letter appointment pursuant to the terms of a security interest;
- acting as a trustee in bankruptcy; and
- acting as a monitor under the provisions of the Companies’ Creditors Arrangement Act, RSC 1985 c C-36, or any other proceeding that results in the dissolution or restructuring of an enterprise or individual and to which the firm, individual, or insolvency practitioner serves as an officer of the court or an agent to a creditor (or creditors) or the debtor.107

**CPAs’ and Firms’ Obligations Under the Regime**

If a CPA or a firm is performing a triggering activity and does not otherwise fall under an exception, it is subject to various requirements. These include, but are not limited to, client identification and verification measures, suspicious and large cash transaction reporting, and implementation of a compliance program. As with other reporting entities, these requirements do not apply where the client is a financial entity or a public body.

CPAs or firms that receive $3,000 or more in a single transaction in connection with a triggering activity must keep a “receipt of funds record.” They must also ascertain the identity of the person conducting the transaction and confirm information about every

105 PCMLTFA Regulations, ss 47(2) and (3).
person, corporation, or other entity on whose behalf it is conducted.\textsuperscript{108} As of June 1, 2021, they must also take reasonable steps to verify the beneficial ownership of entities involved in the transaction.\textsuperscript{109} Where there is a “business relationship,”\textsuperscript{110} CPAs and firms must also conduct ongoing monitoring of the relationship to detect suspicious transactions, keep client information up to date, reassess the level of risk associated with the client's transactions and activities, and determine whether transactions and activities are consistent with the information obtained about the client, including a risk assessment.\textsuperscript{111}

CPAs and firms must report large cash transactions of $10,000 or more in a single transaction or, in relation to a triggering activity, within a 24-hour period.\textsuperscript{112} They must also ascertain the identity of the person conducting the transaction.\textsuperscript{113} Further, they are required to keep large cash transaction records in respect of these activities.\textsuperscript{114}

Suspicious transaction reporting requirements also apply to CPAs and firms. Specifically, they must file a suspicious transaction report for every financial transaction that is attempted in the course of a triggering activity where there are reasonable grounds to suspect that the transaction is related to the commission or attempted commission of a money laundering or terrorist financing offence.\textsuperscript{115} They must also take reasonable measures to verify the identity of every person or entity that conducts or attempts to conduct a suspicious transaction.\textsuperscript{116}

Finally, CPAs and firms must implement a compliance program. This program must include the development and application of policies and procedures for assessing the risk of money laundering or terrorist financing in their activities.\textsuperscript{117} There are five aspects of the compliance program:

- appointing a designated compliance officer responsible for implementing the program;
- producing written policies and procedures that are kept up to date and, in the case of firms, approved by a senior officer;
- developing and applying policies and procedures to assess and document the risk of a money laundering or terrorist financing offence, taking into consideration organization-specific factors;\textsuperscript{118}

• maintaining an ongoing compliance training program for employees and agents; and
• having an internal or external auditor carry out an effectiveness review of the policies and procedures, risk assessment, and training program every two years.119

FINTRAC is empowered to conduct “compliance examinations” of reporting entities, which are reviews in which it examines the entity’s records and inquires into its affairs for the purpose of ensuring compliance. For this purpose, FINTRAC can enter premises, access computer records, and reproduce records.120

**Financial Action Task Force Recommendations**

As I discuss further in Chapter 6, the Financial Action Task Force maintains a list of 40 recommendations121 for its member countries to combat money laundering and terrorist financing. It is instructive to review the recommendations that relate to accountants. As I discuss further in Chapter 32, there was some debate before me as to whether Canada is compliant with the recommendations.

Recommendation 22 urges the imposition of customer due diligence and record-keeping obligations on accountants when they prepare for or carry out the following activities:

• buying and selling real estate;
• managing client money, securities, or other assets;
• managing bank, savings, or securities accounts;
• organizing contributions for the creation, operation, or management of companies; and
• creating, operating, or managing legal persons or arrangements, and buying and selling business entities.

Recommendation 23 states that accountants should be required to report suspicious transactions when, on behalf of or for a client, they engage in a financial transaction in relation to those activities. It further states that “[c]ountries are strongly encouraged to extend the reporting requirement to the rest of the professional activities of accountants, including auditing.”

Recommendation 28 states that accountants should be subject to effective systems for monitoring and ensuring compliance with their money laundering and terrorist

---

119 *PCMLTF Regulations*, s 156(3).
120 *PCMLTF*, s 62.
financing obligations. The monitoring should be done on a risk-sensitive basis and may be performed by “a supervisor” or “an appropriate self-regulatory body, provided that such a body can ensure that its members comply with their obligations to combat money laundering and terrorist financing.” The supervisor or self-regulatory body must also take measures “to prevent criminals or their associates from being professionally accredited, or holding or being the beneficial owner of a significant or controlling interest or holding a management function” and have “effective, proportionate, and dissuasive sanctions.”

A “supervisor” is defined as the “designated competent authorities or non-public bodies with responsibilities aimed at ensuring compliance” with anti-money laundering and counterterrorist financing measures. They should “have the power to supervise and sanction” those they supervise. The FATF fourth mutual evaluation notes that FINTRAC is the primary supervisor for all reporting entities in Canada, while noting that provincial regulators nonetheless have a role to play:

FINTRAC is the primary anti-money laundering / counter terrorist financing (AML/CFT) supervisor for all [reporting entities] in Canada and is relied upon by provincial regulators to understand [money laundering / terrorist financing] risks within their population and to carry out AML/CFT specific supervision. Provincial supervisors integrate [money laundering / terrorist financing] risks into their wider risk assessment models and leverage off FINTRAC for their assessment of [money laundering / terrorist financing] risks as FINTRAC has responsibility for AML/CFT compliance supervision in Canada.

... The regulatory regime involves both federal and provincial supervisors. FINTRAC is responsible for supervising all [financial institutions] and [designated non-financial businesses and professions] for compliance with their AML/CFT obligations under the PCMLTFA. Other supervisors may incorporate AML/CFT aspects within their wider supervisory responsibilities although the assessment team found that in instances where an AML/CFT issue arose, the primary regulator would refer the issue to FINTRAC. [Emphasis added.]

Although the FATF mutual evaluation suggests that FINTRAC is the primary anti-money laundering supervisor for reporting entities, the above passages show that

122 Exhibit 4, Appendix E, FATF Recommendations, p 124.
124 FATF often uses the terms “counter-terrorist financing” (CTF) and “combating the financing of terrorism” (CFT) interchangeably.
125 Exhibit 4, Appendix N, FATF Fourth Mutual Evaluation, paras 248, 252.
its supervisory role is limited to ensuring compliance with the *PCMLTFA* and that provincial supervisors should also be involved in anti–money laundering supervision “within their wider supervisory responsibilities.” In my view, this involvement lends support to the idea that CPABC does or should have an anti–money laundering mandate.

**Conclusion**

This chapter has reviewed the legal and regulatory framework applicable to accountants in British Columbia and shown that a significant number are unregulated altogether. Although professional accountants are heavily regulated, there was significant debate before me about the role of CPABC in regulating its members for anti–money laundering purposes. The discussion above has highlighted some reasons why I believe CPABC does have this responsibility, and I return to this subject in Chapter 32. Before addressing this subject, however, I turn to the money laundering vulnerabilities in the accounting profession.
Chapter 31
Money Laundering Risks in the Accounting Profession

Accountants are frequently referred to as “gatekeepers” to the financial system. They have expertise in often complex financial matters and lend an air of legitimacy to the activities they undertake. There is certainly a risk that criminals will seek out accountants to assist them, knowingly or unwittingly, in their money laundering activities. Indeed, those looking to conceal proceeds of crime may seek assistance with bookkeeping or advice about how to use corporations or other legal entities.

While it is not difficult to see the inherent risks in this sector, there is unfortunately a lack of evidence on which I can determine the precise nature and extent of accountant involvement in money laundering in this province. This dearth of evidence must not, however, be confused with an absence of risk. In this regard, I am unable to accept submissions by CPABC and CPA Canada that the lack of evidence about CPA involvement in money laundering means it is not occurring in the accounting sector. In keeping with the risk-based approach, the Province and CPABC (which represents only chartered professional accountants and therefore about a third of the accountants in the province) must ensure that adequate preventive measures are in place to address the inherent risks facing accountants.

In this chapter, I consider key areas of risk facing accountants in British Columbia. In the next chapter, I turn to various issues with the PCMLTF regime that were canvassed before me, including its narrow scope, apparently low compliance by CPAs and firms, and few compliance examinations by FINTRAC. Although these issues also play into the risks facing accountants, I have dedicated a separate chapter to them, given the volume of evidence on these matters.
Another issue related to the risks is the fact that CPABC currently does not engage in anti-money laundering regulation of its members, given its view that its mandate does not capture such regulation (see Chapter 32). The lack of anti-money laundering regulation by CPABC, combined with the apparently low compliance with the PCMLTFA and few compliance examinations by FINTRAC, suggests that accountants in this province have been largely free of any meaningful anti-money laundering oversight. In my opinion, this lack of oversight increases the risk in this sector.

A “Common Sense” Approach to Risk

The risks facing accountants, like those applicable to lawyers, seem to be common sense. Accountants have special knowledge of their clients’ finances, understand potentially complex financial transactions, and lend an air of legitimacy to the activities they undertake. Matthew McGuire, a fellow of the Chartered Professional Accountants of Ontario with expertise in money laundering, testified that accountants’ involvement in money laundering can take different forms:

- **Self-laundering:** the accountant commits a fraud, theft, or other offence and launders the proceeds for his or her own benefit.

- **Unknowing involvement:** the accountant commits an unknowing fraud by, for example, giving advice to a client ostensibly about tax efficiency but in reality to help move proceeds of crime abroad.

- **Knowing complicity:** the accountant may knowingly be involved in commingling legitimate and illegitimate proceeds, such as by making financial statements believable for tax purposes.

These different roles reveal that the capacity in which an accountant is acting may call for different responses. An accountant who self-launderers is essentially a primary offender. The main “responder” would therefore be law enforcement, although the regulator would also have an interest in addressing unethical conduct. An accountant who is unknowingly involved in money laundering by clients would likely benefit from increased education from the regulator. Finally, an accountant who is knowingly complicit in a client’s money laundering activities requires responses from both law enforcement and the regulator.

Limitations in Assessing Risk

In assessing areas of risk facing accountants, we must keep in mind the limitations on evidence relating to their involvement in money laundering. In a report prepared for the Commission, Mr. McGuire and his colleague Monika Cywinska addressed

---

1 See Chapter 26.
the nature and extent of accountant involvement in money laundering domestically and internationally, the effectiveness of current measures in place, and areas of improvement. To determine the nature and extent of accountant involvement, they relied on authoritative sources, including guidance from FATF, FINTRAC, law enforcement, and academia. Based on that review, they conclude:

*The role of accountants in money laundering internationally has been escalating since the adoption of anti-money laundering standards.* This is due to the complexity of money laundering at scale, the nature of their expertise, and the credibility that the collective reputation of the profession brings. *Without additional controls, the role of the accountant and professional money launderer will continue to gain prominence* to keep pace with the enhancements to global anti-money laundering measures and their more consistent application worldwide.

The extent of accountant involvement in money laundering changes based on the sophistication of the organization for which they are laundering funds and the degree to which the organization's activities are illegal. Accountant expertise becomes more critical as organizations become more sophisticated and geographically diverse, and as they accumulate capital from excess criminal profits. The most prevalent money laundering techniques used by accountant, wittingly and not, and those that are causing the greatest international concern generally include:

a) the exploitation of the opacity of beneficial ownership

b) trade based money laundering

c) the use of new and alternative payment systems

The crimes from which those funds derive range from corruption to tax evasion, securities fraud, narcotics offences and human trafficking. [Emphasis added.]

They further note that “credible research has pointed to accountant involvement in money laundering since it was criminalized” and that the absence, until recently, of an element of recklessness in the *Criminal Code* offences, combined with generally low enforcement levels in Canada, has led to few reported criminal cases of money laundering involving accountants.

Although these conclusions are presented firmly in the report, Mr. McGuire candidly acknowledged some caveats in his testimony. First, many of the sources

---

4 I discuss trade-based money laundering in Chapter 38.
5 Exhibit 394, McGuire Report, paras 77–78.
6 Ibid, para 79.
he and Ms. Cywinska examined do not reference specific cases or even narratives to back up their statements. Second, none of the sources refer specifically to Canadian CPAs or suggest that CPAs are systematically involved in money laundering in Canada. Finally, he agreed that some of the accounting skills and knowledge presumably needed for complex money laundering skills could be held by unregulated accountants. Given these limitations, Mr. McGuire agreed that the conclusions in his report are ultimately a hypothesis that has not been proven by actual convictions.

I review the sources referenced in Mr. McGuire and Ms. Cywinska’s report below. I agree that they do have several limitations, as Mr. McGuire acknowledged. In particular, many include broad statements that accountants are increasingly involved in money laundering without discussing particular cases or evidence, and there are few studies on the subject. Further, many sources do not discuss the situation in British Columbia or even Canada specifically. On the available evidence, I am unable to make firm findings about the precise nature and extent of accountants’ involvement in money laundering in this province. However, the sources are nonetheless useful to consider in that they reveal areas of accountants’ practice that raise particular risk.

Of particular interest are the Canadian cases that Mr. McGuire and Ms. Cywinska identified in which an accountant appeared to be implicated in money laundering. Mr. McGuire explained that they used a simple methodology to identify the cases: searching keywords in published cases on the Canadian legal database CanLII. They identified 10 cases meeting those criteria between 1992 and 2020. Mr. McGuire acknowledged that, as not all cases are published on CanLII and given the general lack of prosecution of money laundering, the sample is not representative or indicative of all accountant involvement in money laundering. However, it can serve as an indicator of what money laundering can look like. I agree that the sample cases are illustrative of ways in which accountants may be involved in money laundering, and I refer to some of them below. However, I am mindful of the small sample size and am unable to draw firm conclusions about accountant involvement in money laundering in this province from the sample cases.

I am also mindful of the submissions of CPABC and CPA Canada expressing concerns with these cases. First, they assert that only one case (Neilson) involves a CPA since the unification of the profession. Second, they point out that two of the four BC cases pre-date the PCMLTFA, one involves an unregulated bookkeeper, and one references an accounting firm without indicating that it did anything illegal. Third,

12 R v Neilson, 2020 ABQB 556.
13 Closing submissions, CPABC, para 61; Closing submissions, CPA Canada, para 73.
they highlight that there were relatively few cases in a 28-year period. Overall, CPABC submits that these cases “do not provide credible support for the assertion that there is a systemic problem – or any problem – relating to professional accountants in British Columbia or Canada being engaged in or helping to facilitate money laundering or terrorist financing.”

While I appreciate these concerns, as I noted above, I am considering these cases as illustrations rather than relying on them to draw specific conclusions about the extent to which CPAs in British Columbia are involved in money laundering. I agree that the cases do not support a finding of a systemic problem of CPA involvement in money laundering in British Columbia. However, I am not persuaded that the fact that several cases predate the PCMLTFA and the unification of the accounting profession renders them less significant. Again, compliance with the PCMLTFA appears to be low and, despite the unification of the accounting profession, CPABC does not currently engage in anti-money laundering regulation. Therefore, I respectfully disagree with CPABC’s attempt to minimize the issues raised in these cases.

Mr. McGuire and Ms. Cywinska also reviewed professional and disciplinary cases between 2017 and 2020 from the Chartered Professional Accountants of Ontario and CPABC and found that none related to compliance with anti-money laundering or counterterrorist financing or sanctions legislation. As practice reviews in British Columbia do not include anti-money laundering within their scope, it is not surprising that there is a dearth of disciplinary cases addressing activity related to money laundering.

In what follows, I consider the main areas of risk facing accountants, mindful of the limitations in the evidence I have identified. I have found it useful to organize my discussion broadly in line with the areas of risk discussed by FATF:

- financial and tax advice;
- bookkeeping;
- company and trust formation;
- buying or selling property;
- performing financial transactions;
- preparation, review, and auditing of financial statements; and
- the lack of regulation of non-CPAs in this province.

---

15 Ibid.
16 Exhibit 394, McGuire Report, para 61.
Areas of Money Laundering Risk in the Accounting Profession

Financial and Tax Advice

The FATF guidance states that “criminals may pose as individuals seeking financial or tax advice to place assets out of reach in order to avoid future liabilities.”\(^{18}\) As I expand in the next chapter, providing advice is not considered to be a triggering activity under the \(\text{PCMLTFA}\). However, there was no dispute in the evidence before me that accountants frequently provide advice on financial and tax affairs. Indeed, in Mr. McGuire’s view, accountants provide advice with respect to transactions more frequently than they conduct the transactions themselves.\(^{19}\)

In his paper entitled “The Role of Accounting in Money Laundering and Money Dirtying,” Frédéric Compin developed a vertical and hierarchical approach organizing accountant involvement in money laundering based on the sophistication of criminal players.\(^{20}\) The vertical model looked at three “levels” of crime that progressively increase in sophistication, namely unorganized crime, organized crime, and organized crime networks. Mr. Compin argues that accountants’ services become more important as the crime becomes more sophisticated, as there is increased capital accumulation and a desire to maintain tax compliance to avoid scrutiny by tax authorities.\(^{21}\)

Mr. McGuire explained why criminals need assistance with tax compliance:

> Tax compliance is one of the weak spots of any organized crime network ... Because, you know, the point of a good money laundering scheme is to ... have the absence of the most oversight. So, less scrutiny paid to the activities and the identities of the people involved and the ultimate sources and use of the money. And so, the moment you fall afoul of tax rules, you attract that scrutiny and those audits which can uncover identities and purposes and means. And, you know, the tax powers are quite significant when it comes to the power to seize and gather information.\(^{22}\)

Thus, in considering the areas of risk below, it is important to keep in mind that accountants provide advice with respect to them, even if they do not necessarily conduct the activity themselves. In providing advice, accountants clearly gain knowledge about a client’s financial affairs and are well placed to observe suspicious circumstances. Therefore, there are significant money laundering risks associated with the provision of financial and tax advice.

Bookkeeping

The FATF guidance notes that “maintenance of incomplete records by clients as revealed during the accounting/bookkeeping services provided by accountants can be an area of higher risk.” It further states that criminals may seek to engage an accountant to provide a sense of legitimacy to falsified accounts:

> Criminals may abuse services provided by accountants to provide a sense of legitimacy to falsified accounts in order to conceal the source of funds. For example, accountants may review and sign off such accounts for businesses engaged in criminality, thereby facilitating the laundering of the proceeds.

Dr. Katie Benson, a professor of criminology at Lancaster University, notes that accountants may be involved in preparing accounts that hide or falsify transactions (e.g., hiding income or misdescribing money coming out of a business) or providing a public, legitimate face to a business.

In Chapter 26, I review a 2004 study by Stephen Schneider, professor of criminology at St. Mary’s University in Halifax, in which he analyzed 149 cases from RCMP proceeds of crime case files in an attempt to analyze how proceeds are laundered through Canada’s legitimate economy. He concluded that “[b]ecause the vast majority of the [proceeds of crime] cases examined in this study involved the use of at least one sector of the legitimate economy, it was inevitable that the accused or an accomplice came in contact with a professional working in one of these industries.” Accountants did not, however, figure prominently in the cases he analyzed. He found that an accountant had come into contact with proceeds of crime in approximately 9 percent of cases. He testified that “[n]ot that many [accountants] came up in my study … I have not come across a large number of cases that involved accountants.”

Professor Schneider described the necessity of involving an accountant in money laundering as follows:

> Although criminal organizations parallel legitimate businesses in many ways, they are unique in that few companies conduct business entirely in
cash. A principal job of an accountant working for a successful criminal enterprise is to keep track of the volumes of cash generated and spent. In those police cases where accountants were implicated in laundering money, they were used to provide accounting services for both the personal and company-related finances of criminal entrepreneurs.29

Elsewhere he explains:

As with a legitimate company, criminal entrepreneurs need to keep track of their revenue and expenses, as well as assets and liabilities. Ideally, this job is best carried out by a bookkeeper or accountant. A principal job of an accountant working for a successful criminal enterprise is to keep track of the volumes of cash generated and spent.30

Professor Schneider reviews some sample cases involving accountants. He notes that in one instance, a Hells Angels affiliate would collect bags of cash for cocaine purchases. Police eventually confiscated about $5.5 million in cash, along with accounting spreadsheets, and overheard a criminal talking about how he would give his accountant cash to launder.31 Another case involved a drug dealer who held multiple companies. Police seized correspondence indicating the use of accountants, including comprehensive financial statements.32

It is important to keep in mind that Professor Schneider’s study is somewhat dated, relying on cases concluded between 1993 and 1998.33 I am also mindful of the relatively few cases involving accountants in his study and the fact that no differentiation is made between CPAs and non-CPAs. Nonetheless, the cases are illustrative of the fact that criminals may seek the assistance of accountants in bookkeeping.

Another study illustrating the potential for misuse of bookkeeping services is one done by Melvin Soudijn, a member of the National Crime Squad of the Netherlands Police Agency.34 Mr. Soudijn analyzed the involvement of “financial facilitators” in money laundering, referring to professionals of various backgrounds who assist a criminal in a key way with money laundering.35 He put the cases into two categories:

---

31 Ibid.
34 Melvin R.J. Soudijn, “Removing Excuses in Money Laundering” (2012) 15(2) *Trends in Organized Crime* p 146. Dr. Benson notes that Soudijn’s study is one of the few empirical studies that have been done on professionals’ involvement in money laundering: Exhibit 218, p 14.
35 He adopted this approach as the criminal law notion of a “facilitator” is not necessarily someone from a legitimate professional society. For example, a janitor who provides their access pass to an airport’s restricted area to someone involved in human smuggling would be acting in the capacity of a facilitator. Soudijn therefore added the qualifier that the person’s involvement must be essential to narrow the potentially broad category of facilitators and the qualifier of a financial facilitator to narrow the discussion to professionals, such as lawyers, accountants, bank employees, and the like: Melvin R.J. Soudijn, “Removing Excuses in Money Laundering” (2012) 15(2) *Trends in Organized Crime*, p 148.
those where the involvement centred on cash and those whose work involved the documentation required to lend an air of legitimacy to activities.36

The latter category revealed instances of accountant involvement in money laundering. For example, he came across a bookkeeper whose job was to reconcile the profits of a café that was used to launder proceeds of heroin sales. Mr. Soudijn notes that research indicates criminals have a preference for small businesses for such work as they are more vulnerable economically, and criminal clients are less likely to be turned away.37

Another case revealed a bookkeeper who regularly deposited large amounts of money at a local bank on behalf of two owners of a garage. The bank reported the activity to the financial intelligence unit. It turned out that the garage owners were involved in a wholesale cocaine business and mixed their illegitimate funds with the garage’s profits. The bookkeeper maintained that it was not his job to notice discrepancies in the books, one of which was the fact that the garage would have had to be open six days a week and operating at full capacity to even approach the profits it was reporting.38

A final case involved a money transfer company that misused the identities of people who had sent legitimate transfers in order to launder proceeds of narcotics trafficking. The police investigation showed that an accountant had drawn up fraudulent annual financial statements concealing the true owner of the money transfer company, who was a trafficker in narcotics. Ultimately, his statements to police were used as evidence against the trafficker.39

Because Mr. Soudijn’s paper does not expand on its methodology, it is unclear how these cases were identified or what countries they are from. Nonetheless, the case studies are again illustrative of ways in which bookkeeping services can be misused for money laundering purposes.

**Company and Trust Formation**

The FATF guidance states that criminals may attempt to confuse or disguise the links between the proceeds of a crime and the perpetrator by forming corporate vehicles or other complex legal arrangements including trusts and companies:

> Criminals may seek the opportunity to retain control over criminally derived assets while frustrating the ability of law enforcement to trace the origin and ownership of the assets. Companies and often trusts and other similar legal arrangements are seen by criminals as potentially useful vehicles to achieve this outcome. While shell companies, which do not

---

36 Ibid, p 150.
37 Ibid, p 154.
38 Ibid.
have any ongoing business activities or assets, may be used for legitimate purposes such as serving as a transaction vehicle, they may also be used to conceal beneficial ownership, or enhance the perception of legitimacy. Criminals may also seek to misuse shelf companies, which can be formed by accountants, by seeking access to companies that have been “sitting on the shelf” for a long time. This may be in an attempt to create the impression that the company is reputable and trading in the ordinary course because it has been in existence.40

The guidance recognizes that accountants in some countries are involved in forming companies and other legal entities, while in others they provide advice at least in relation to initial corporate, tax, and administrative matters.41 The guidance further states that criminals will sometimes seek to involve accountants in the management of companies or trusts to provide respectability and legitimacy to the company or trust and its activities. Similarly, criminals might seek to have accountants hold shares as a nominee. The guidance recognizes, however, that professional rules in some countries prohibit or restrict those activities.42

As I discussed in Chapter 30, I accept that the incorporation of companies and the establishment of trusts or other legal entities in this province requires a lawyer. Nonetheless, accountants provide advice with respect to these matters and require knowledge of the client’s financial circumstances to do so. In providing advice on these matters, therefore, accountants are well placed to observe suspicious circumstances.

**Buying or Selling Property**

The FATF guidance states that criminals sometimes use property transfers to disguise transfers of illegal funds or as an investment following the laundering process.43 Relatedly, Canada’s 2015 national risk assessment states that real estate transactions can involve accountants as facilitators:

> The real estate sector is integrated with a range of other sectors, and the purchase and sale of real estate involves a variety of facilitators, including real estate agents, lawyers, accountants, mortgage providers and appraisers ... Although real estate transactions are typically done face-to-face, third parties can be used to conduct the transactions and there is opportunity to put in place complex ownership structures to obscure the beneficial owner and the source of funds used for the purchase.44

---

40 Exhibit 391, Appendix B, FATF Accounting Guidance, para 27.
41 Ibid, para 26.
43 Ibid, para 22.
As noted in Chapter 30, the PCMLTFA includes as triggering activities the “purchase or [sale of] securities, real property or immovables or business assets or entities.”\(^{45}\) It also specifies that accountants are covered by the regime whether they conduct the transaction or give instructions with respect to it. Such a purchase or sale clearly gives rise to money laundering risks. Purchasing property is a key way in which criminals may seek to disguise or legitimize ill-gotten gains. To the extent that accountants in this province are engaged in these activities, they raise money laundering risks.

**Performing Financial Transactions**

The FATF guidance states that “criminals may use accountants to carry out or facilitate various financial operations on their behalf (e.g. cash deposits or withdrawals on accounts, retail foreign exchange operations, issuing and cashing cheques, purchase and sale of stock, sending and receiving international funds transfers, etc.).”\(^{46}\) The triggering activities under the PCMLTFA accordingly cover performing or providing instructions with respect to the receipt or payment of funds or virtual currency or the transfer of funds, virtual currency, or securities by any means.\(^{47}\)

CPA Canada’s *Guide to Comply with Canada’s Anti–Money Laundering (AML) Legislation*\(^{48}\) provides examples in which accountants may be involved in financial transactions:

- a) Your Accounting Firm performs bookkeeping services and has signing authority over the account of a not-for-profit organization client and pays invoices from that account on its behalf.

- b) A client issues a cheque to you as a sole practitioner Accountant in an amount equal to their income tax payable and your accounting fees. You then deposit the cheque and wire the income tax payable to the Canada Revenue Agency from your account.

- c) A client instructs their vendor to settle their invoice by remitting funds to your Accounting Firm and then asks that your firm issues a cheque for the difference between the value of the wire and your outstanding fees.

- d) A client requests assistance in transferring funds from a sanctioned country into Canada, in respect of which an Accountant arranges for Canadian accounts and wire transfers through intermediate countries.\(^{49}\)

\(^{45}\) *PCMLTF Regulations*, s 47(1)(b).

\(^{46}\) Exhibit 391, Appendix B, *FATF Accounting Guidance*, para 22(d).

\(^{47}\) *PCMLTF Regulations*, s 47(1).

\(^{48}\) Exhibit 393, CPA Canada, *Guide to Comply with Canada’s Anti–Money Laundering (AML) Legislation*, prepared by MNP LLP (2014). This guide was prepared to help CPA Canada’s members and accounting firm understand amendments to the PCMLTFA and their obligations: Preface.

\(^{49}\) Ibid, pp 4–5.
Mr. McGuire testified that it much more common for accountants to perform financial transactions than real estate transactions. In his experience, the smaller the firm is, “the more likely it is that an accountant is trusted by an individual to perform financial transactions on their behalf, to open bank accounts or to assist in references to opening bank accounts, to assist with making payments, to make out cheques, in preparing the documentation related to those things.”50

Some Canadian cases illustrate how accountants’ involvement in financial transactions may raise money laundering risks. In Neilson,51 a certified general accountant (one of the precursors to the CPA designation) was convicted of multiple counts of fraud, theft, and money laundering. He had convinced various individuals to invest in two businesses that he controlled by showing them fraudulent banking and financial statements and making fraudulent representations about the potential and actual results of the businesses.52 He admitted to defrauding nine investors and a lender of approximately $2.3 million in total.53

The PacNet case54 involved an entity that was sanctioned by the US Office of Foreign Asset Control as a “significant transnational criminal organization” based on its involvement in fraudulent mailings. The BC director of civil forfeiture learned that a bank draft was about to be delivered from PacNet Services’ account in the United Kingdom to an unnamed accounting firm in British Columbia (referred to as “ABC Accounting”) and its principal (referred to as “John Doe #4”); the firm had provided external accounting services to PacNet for many years.55 PacNet had asked ABC Accounting and John Doe #4 to hold the funds in trust and later disburse them.56

PacNet did not question the propriety of ABC Accounting and John Doe #4 receiving the funds. Indeed, CPABC submits that there is no indication that the accounting firm did anything illegal.57 I agree that the case does not focus on the legality or propriety of the firm’s or its principal’s actions. Even so, the case illustrates that accountants and firms may be called upon to hold funds in trust and should be aware that such funds could be illegitimate. I discuss accountants’ trust accounts in Chapter 33.

The Loewen case58 was an appeal of a conviction of two counts of attempting to launder money. The charges were brought following an undercover sting operation. The case mentions a chartered accountant who met with the undercover police agent and agreed to launder bags of cash derived from drug trafficking for a 5 percent commission. The accountant apparently laundered the cash by transferring it to

bank accounts in Vancouver on the undercover officer’s instructions. Mr. Loewen participated in the scheme by taking cash to various financial institutions, arranging to obtain money orders and the like. The funds were eventually consolidated into a bank account in Manitoba that Mr. Loewen controlled and forwarded to the Vancouver bank accounts. Although the case does not detail how the accountant transferred the funds, it demonstrates one way in which an accountant’s ability to perform financial transactions can be misused.

Finally, Joubert involved a scheme whereby two individuals used a lawyer’s trust account to launder large amounts of cash. The case mentions that a chartered accountant was aware of the transactions in the trust account. Although there is little detail about the accountant’s involvement, it shows that accountants have special knowledge of a client’s financial affairs.

As these cases illustrate, accountants can face money laundering risks with respect to financial transactions, whether they provide advice, conduct the transactions, or give instructions with respect to the transactions. For this reason, as I elaborate in Chapter 32, I am of the view that anti-money laundering regulation must focus not only on transactions; it should encompass advice as well.

**Preparation, Review, and Auditing of Financial Statements**

The FATF guidance notes that the preparation, review, and auditing of financial statements may be susceptible to misuse where there is no oversight by a professional body or required use of accounting and auditing standards. As I elaborate in Chapter 32, I am satisfied that there is robust regulation in place in British Columbia applicable to auditing services, which significantly mitigates the money laundering risks associated with these activities.

**CPABC and CPA Canada’s Positions Regarding Risks in the Sector**

CPABC and CPA Canada strongly dispute that there is a money laundering problem in British Columbia with respect to CPAs. They submit that there is “no evidence before the Commission” of CPAs being involved in or enabling money laundering. Instead, there is a “dominant” and “unproven” assumption, which was adopted by Mr. McGuire, that, because money laundering is increasing in complexity, criminals must be enlisting the help of accountants.

59 Loewen at paras 10–13.
60 R v Joubert, 1992 CanLII 1073 (BCCA) [Joubert].
61 Exhibit 391, Appendix B, FATF Accounting Guidance, para 23.
62 Closing submissions, CPABC, para 6; Closing submissions, CPA Canada, para 71.
63 Closing submissions, CPA Canada, para 71.
I agree that the available evidence has limitations and that it would not be prudent to come to firm conclusions about the nature and extent of accountant involvement in money laundering in this province based on it. However, I respectfully disagree with CPABC and CPA Canada insofar as they state that there is no evidence of CPA involvement.

To begin with, some of the cases reviewed above do involve CPAs and their precursors. More generally, however, I am not prepared to accept that the limited state of the evidence means CPAs are not involved in money laundering. It may be that cases are difficult to prove or that cases involving accountants are generally not investigated, as Dr. Benson’s research suggests. It may also be the case that law enforcement and prosecutors prefer to use accountants as witnesses in cases relating to primary offenders, as Dr. Benson’s research also suggests and as appears to have occurred in some of the cases I reviewed above. Finally, the fact that CPABC does not consider anti-money laundering to be within its mandate or the scope of its practice reviews and does not otherwise investigate anti-money laundering can readily be seen as a factor going into the lack of disciplinary cases. The international experience, the limited evidence available about the Canadian context, and common sense provide a sufficient basis to conclude that there is a significant risk of accountants being used to facilitate money laundering, and that the services they provide give them insight that could allow them to identify suspicious activity.

CPABC and CPA Canada further submit that, if there is a risk of money laundering in this sector, it lies with unregulated accountants. This is because unregulated accountants are not subject to CPABC’s Code or regulatory jurisdiction and are not covered by any PCMLTFA regime. As CPABC explains:

Accountants are unlike many of the other professionals who are often labeled as possible “enablers,” “facilitators,” or “gatekeepers.” Unlike lawyers, notaries, or real estate professionals, the majority of people working in the accounting sector in BC are not registered or licensed by any regulatory body, but rather are unregulated accountants who are not subject to any professional regulation, oversight or accountability at the provincial level.

Since unregulated accountants operate outside of CPABC’s regulatory jurisdiction and oversight, CPABC generally has no contact with them and no direct knowledge of who they are. However, to the extent there may be any money laundering risk relating to the provision of accounting services, that risk clearly applies to unregulated accountants who provide many of the same services, but without being subject to CPABC’s educational and training requirements, the ethical obligations of the CPA profession, or CPABC’s regulatory oversight.
With respect, I do not agree that the fact of CPAs being regulated and subject to the PCMLTFA means that any risk in the sector lies solely with unregulated accountants. As I expand in the next chapter, compliance among CPAs and firms with the PCMLTFA appears to be low. Further, CPABC acknowledges that it does not regulate for anti-money laundering purposes. Thus, I do not consider that CPABC’s regulation or the fact of the PCMLTFA applying to accountants has significantly lessened the risk of CPA involvement in money laundering. It may be that unregulated accountants pose an even greater risk, but I do not accept that provincial regulation that explicitly does not consider anti-money laundering lessens the risks facing CPAs.

CPABC and CPA Canada point to various factors that lessen the risk among CPAs. The first is that many activities identified by FATF involving significant risk (i.e., company and trust formation, real estate) are beyond their practice. As I have said, whether CPAs actually incorporate a company, create a legal entity, or perform a particular kind of transaction, they provide advice with respect to those activities and thus are exposed to risks.

A second factor said to decrease risk is that FATF states that the preparation, review, and auditing of financial statements may be susceptible to misuse by criminals only “where there is a lack of professional body oversight or required use of accounting or auditing standards.” CPABC does provide significant oversight, as do others such as the Canadian Public Accountability Board and the Public Company Accounting Oversight Board. As I elaborate in the next chapter, I agree that auditing is already heavily regulated and accept that further anti-money laundering regulation is not necessary in this regard.

A third factor said to decrease risk is that CPABC understands that the use of trust accounts and acceptance of cash by its members is low. I return to this subject in Chapter 33. However, I note here that this understanding by CPABC is based on a survey with significant limitations and therefore does not provide a strong basis to conclude that such use is low. CPABC must do more to understand its members’ activities in this regard.

Finally, CPABC and CPA Canada point out that the 2015 national risk assessment said that accountants (without differentiating between CPAs and unregulated accountants) have a “medium vulnerability” rating and that only one of the 21 distinct sectors had a lower risk rating. This is true. However, given the relatively scarce discussion of accountants in the risk assessment, I find it difficult to rely on it to conclude that accountants pose a low risk.

67 Ibid, para 78.
68 Exhibit 391, Appendix B, FATF Accounting Guidance, para 23.
69 Closing submissions, CPABC, para 79.
70 Closing submissions, CPABC, para 80; Closing submissions, CPA Canada, para 76.
71 Closing submissions, CPABC, para 81; Closing submissions, CPA Canada, para 75.
On the whole, I agree with CPABC and CPA Canada that evidence is lacking on accountant involvement in money laundering. However, with respect, I do not agree with their subsequent reasoning. They essentially reason that, because there is little direct evidence of CPA involvement in money laundering, there is no problem. In my view, the more likely explanation is that insufficient law enforcement, regulatory, and academic attention has been paid to the subject.

**Conclusion**

This chapter has reviewed the money laundering risks in the accounting profession, while noting that evidence is generally lacking on the precise nature and extent of accountant involvement in money laundering. While I am unable to make definitive findings about the nature and extent of accountant involvement in money laundering in British Columbia, it is clear that accountants are at a significant risk of being used to facilitate money laundering. This risk must be addressed both by the PCMLTFA and by CPABC. In the next two chapters, I discuss ways in which anti-money laundering regulation of accountants can be strengthened to address these risks.
Chapter 32
Limitations of the *PCMLTFA* and the Need for Additional Provincial Measures

In order to evaluate money laundering vulnerabilities and recommend improvements in the accounting sector in British Columbia, I must consider the current state of regulation, compliance, and oversight of accountants in this province. Significant evidence was led before me relating to the scope of the federal *PCMLTFA* and the level of compliance by chartered professional accountants (CPAs) and accounting firms with the reporting and other requirements mandated by that legislation. Witnesses endorsed expanding the scope of the regime, and evidence put before me suggests that the understanding and compliance of CPAs and firms with the *PCMLTFA* regime is low. Despite this low level of understanding and compliance, FINTRAC has conducted few compliance examinations of CPAs and accounting firms.

As a provincial commissioner, my jurisdiction is limited to recommending changes that fall within the provincial domain; I am not permitted to make recommendations to the federal government. However, in evaluating the money laundering risks facing the accounting sector in British Columbia and recommending improvements to the provincial government, it is essential that I analyze the current state of anti-money laundering regulation of accountants in this province and evaluate its sufficiency. As this regulation is at present contained almost entirely within the *PCMLTFA*, this cannot be accomplished without discussing the current scope of the *PCMLTFA* and the level of compliance by CPAs and accounting firms with their obligations. It is important to understand what form of anti-money laundering regulation of accountants currently occurs in order to consider what further provincial measures should be put in place, including what kind of regulation CPABC should undertake.
In what follows, I first explain why, in my view, CPABC’s mandate is broad enough to encompass anti-money laundering regulation and why it should engage in this work. I then review evidence highlighting limitations with the current state of anti-money laundering regulation of accountants with a view to strengthening provincial measures in the accounting sector. I also examine the limited reach of the PCMLTFA and its impact in this province, which will allow the provincial government to decide whether to request that the federal government amend the PCMLTFA. Finally, I discuss the apparently low compliance by CPAs with the PCMLTFA regime.

**CPABC’s Mandate**

Witnesses from CPABC and CPA Canada expressed the view before me that CPABC’s mandate does not extend to anti-money laundering regulation of its members. In their view, this regulation properly falls to FINTRAC, and it would be duplicative for CPABC to engage in such regulation as well.

I respectfully disagree with this position for two reasons. First, in my view, CPABC’s mandate, as it currently stands, is broad enough to encompass anti-money laundering regulation, as CPABC is mandated to regulate all aspects of members’ practice in the public interest. Second, as I discuss later in this chapter, the anti-money laundering regulation of accountants provided for in the PCMLTFA is insufficient to address the risk in the accounting sector. The fact that CPAs and accounting firms are subject to the PCMLTFA does not mean that FINTRAC is or should be the sole anti-money laundering regulator for accountants.

It is convenient to begin with CPABC’s mandate, as articulated in the CPA Act:

3 The CPABC has the following objects:

(a) to promote and maintain the knowledge, skill and proficiency of members and students in the practice of accounting;

(b) to establish qualifications and requirements for admission as a member and continuation of membership, and for enrolment and continuation of enrolment of students;

(c) to regulate all matters, including competency, fitness and professional conduct, relating to the practice of accounting by members, students, professional accounting corporations and registered firms;

(d) to establish and enforce professional standards;

(e) to represent the interests of members and students.\(^1\)

---

\(^1\) *Chartered Professional Accountants Act*, SBC 2015, c 1 [CPA Act], s 3.
Subsection (c) states that one of CPABC’s objects is to regulate all matters relating to a CPA’s practice and refers to the competency, fitness, and professional conduct of its members. Mr. Tanaka testified that courts have recognized the protection of the public as the “transcendent purpose of CPABC” and that “we regulate in that fashion ... our paramount object or mandate is the protection of the public.”

CPABC further notes that it has “general authority under the CPA Act to regulate all matters relating to the practice of accounting by its members” and that “[a]lthough the CPA Act does not give CPABC a specific mandate over money laundering, CPABC may use these regulatory tools, as appropriate, to respond to money laundering-related concerns.”

It submits that the CPA Code is “nimble and flexible enough to respond to a wide range of potential issues in an ever-changing business environment.” Indeed, Mr. Tanaka testified that several sections of the CPA Code are broad enough to prohibit or encompass money laundering conduct, namely:

- Rule 102, which requires members to self-report convictions and regulatory offences;
- Rule 201, which requires members to abide by the CPA Act, the Bylaws, the Regulations, and the CPA Code;
- Rule 205, which prohibits members from being involved in false or misleading statements;
- Rule 211, which requires members to report non-compliance by other members; and
- Rule 213, which prohibits involvement in unlawful activity.

Despite the foregoing, CPABC takes the position that all anti–money laundering regulation falls to FINTRAC. It notes that “FINTRAC is the regulatory and oversight authority for Canada’s [anti–money laundering] regime” and that “CPABC does not have any specific [anti–money laundering] mandate under its governing legislation” nor is it given a role under the PCMLTFA. Accordingly, CPABC has focused on education and providing resources to assist its members in meeting their PCMLTFA obligations.

It is important to recognize what exactly FINTRAC does. Canada created FINTRAC to fill the role of a “financial intelligence unit” as outlined by the FATF recommendations. Recommendation 29 describes the function of a financial intelligence unit:

---

3 Closing submissions, CPABC, para 4.
6 Closing submissions, CPABC, paras 34, 36, 93–94. See also Evidence of E. Tanaka, Transcript, January 12, 2021, p 26; Evidence of L. Liu, Transcript, January 12, 2021, p 29; Closing submissions, CPA Canada, para 80.
Countries should establish a financial intelligence unit (FIU) that serves as a national centre for the receipt and analysis of: (a) suspicious transaction reports; and (b) other information relevant to money laundering, associated predicate offences and terrorist financing, and for the dissemination of the results of that analysis. The FIU should be able to obtain additional information from reporting entities, and should have access on a timely basis to the financial, administrative, and law enforcement information that it requires to undertake its functions properly.\(^8\)

The financial intelligence unit’s role is therefore to gather intelligence and information, distribute it to law enforcement and other bodies, and monitor compliance with the *PCMLTFA*. This kind of supervision is qualitatively different from that undertaken by self-regulatory bodies like CPABC, which is mandated to regulate all aspects of members’ conduct and to ensure high standards of work, professionalism, and ethics. Further, FINTRAC lacks the same access to reporting entities as regulators, who can view all parts of their members’ files (even confidential information), compel information, and impose important sanctions.

The volume of reporting entities under FINTRAC’s supervision also renders it unable to undertake the same detailed supervision of reporting entities as a regulator like CPABC. As set out in FATF’s 2016 mutual evaluation, FINTRAC supervised 26,000 designated non-financial businesses and professions and had a total staff of 79 members in 2014–15.\(^9\) As a practical matter, the volume of reporting entities that FINTRAC supervises, combined with its relatively small team, provides it with far less capacity to regulate every reporting entity than a regulator like CPABC can do. Moreover, FATF evaluators noted that FINTRAC’s “understanding of the different sectors and business models and of how [anti–money laundering / counterterrorist financing] obligations apply taking into account materiality and context is somewhat limited,” and that, although FINTRAC had increased its understanding of the different sectors, it “is a challenge given the large number and diverse range of entities it supervises.”\(^10\)

In contrast, regulators have particular knowledge of the populations they regulate.

As the above demonstrates, CPABC has a broad public interest mandate and authority over all aspects of its members’ practice. The CPA Code already contains provisions that are broad enough to address intentional or unwitting involvement by CPAs in money laundering. In my view, CPABC’s public interest mandate is broad enough to encompass anti–money laundering, and CPABC should begin regulating its members for this purpose. Notably, the Law Society of British Columbia has a similarly broad public interest mandate and has long held the view that regulating in

\(^10\) Ibid, para 253.
the public interest necessitates conducting anti–money laundering regulation (see Chapters 27 and 28).

I accept that FATF describes FINTRAC as the anti–money laundering “supervisor” in its fourth mutual evaluation report. However, it also notes that provincial regulators have a role to play. In my view, it is essential that both FINTRAC and self-regulatory agencies play roles in anti–money laundering regulation based on their respective mandates and powers. It is insufficient for CPABC to proceed on the footing that FINTRAC is the regulator and to limit its involvement to education and support. This is not to say that CPABC must duplicate measures in place under the PCMTLFA; to the contrary, as I set out below and in Chapter 33, CPABC should play a complementary role and address matters that are not covered by the PCMLTFA.

Exclusion of Unregulated Accountants from the PCMLTFA

As I noted in Chapter 30, the PCMLTFA defines “accountant” as “a chartered accountant, a certified general accountant, a certified management accountant or, if applicable, a chartered professional accountant.”\textsuperscript{11} This definition excludes unregulated accountants. In other words, unregulated accountants have no obligations under the PCMLTFA, even if they conduct triggering activities.

In their report for the Commission, Mr. McGuire and Ms. Cywinska adopt broad definitions of “accountant” and “accounting firm” to include both CPAs and unregulated accountants.\textsuperscript{12} Mr. McGuire testified that they did so because they consider it to be consistent with the FATF approach, which does not differentiate based on the designation of an accountant. He explained:

\begin{quote}
[R]egardless of what designation you hold, if you have the skills, wherever gained, and you perform these services or help somebody to prepare for performing these services, you pose the same threat as someone who’s designated.\textsuperscript{13}
\end{quote}

CPABC expressed concerns with Mr. McGuire and Ms. Cywinska’s approach of defining these terms broadly. It notes that the 2016 Census indicates that, of the approximately 89,000 individuals working as accountants in British Columbia, only around 31,000 are CPAs. It submits:

By adopting a broad definition of accountants and failing to make any distinction between CPAs and unregulated accountants throughout the analysis, the McGuire Report disregards:

\begin{itemize}
  \item Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations, SOR/2002-184 [PCMLTF Regulations], s 1(1).
  \item Exhibit 394, Report on Accountants, Money Laundering, and Anti–Money Laundering, prepared by the amlSHOP (October 31, 2020 and updated December 31, 2020) [McGuire Report], para 11.
  \item Transcript, January 11, 2021, p 20.
\end{itemize}
Part VIII: Accountants • Chapter 32  | Limitations of the PCMLFTA and the Need for Additional Provincial Measures

- The extensive education and training of CPAs;
- That CPAs are the only accountants in British Columbia subject to regulatory oversight, including CPABC's ethical and professional standards; and
- The fact that only CPAs are subject to Canada's anti-money laundering regime and that unregulated accountants are not.14

I accept that failing to distinguish between CPAs and unregulated accountants when identifying money laundering vulnerabilities in the accounting sector risks blending two groups with quite different levels of regulation and oversight. I am mindful of the distinction between the two groups and have considered this distinction where it is relevant to my analysis. That said, I agree with Mr. McGuire that the activities of all accountants should be considered when evaluating risk, measures currently in place, and opportunities for improvement. Apart from the activities listed in section 47 of the CPA Act, all other accounting activities can be undertaken by both CPAs and unregulated accountants in this province. Regulation may lessen the money laundering risks, but it is the services rendered (whether by a CPA or an unregulated accountant) that are of interest to criminals.

Mr. McGuire and Ms. Cywinska urge that the definition of “accountant” in the PCMLTFA should be amended to include all those who perform FATF-specified accounting services, rather than focusing on professional designations.15 CPABC and CPA Canada support an extension of the PCMLTFA regime to capture unregulated accountants.16 As I noted in Chapter 31, CPABC submits that any risks in the sector rest with unregulated accountants; it therefore states that any new regulatory measures should be focused on unregulated accountants rather than CPAs.17

Although, as I explained in Chapter 31, I do not agree that all risks in the accounting sector lie with unregulated accountants, it is problematic that approximately two-thirds of accountants in this province are not regulated or subject to the PCMLTFA. As a result, the majority of those offering accounting services that money launderers may require have no supervision or obligations to report suspicious activity or collect client identification and verification information. With respect to the PCMLTFA specifically, it seems anomalous that any number of accountants may be performing the same activities as CPAs and yet have no obligations under that regime. From a risk-based perspective, there would appear to be no less risk (and possibly even more risk) if a non-designated accountant performs certain services compared with a designated one.

---

15 Exhibit 394, McGuire Report, para 86.
16 Exhibit 403, CPABC McGuire Review, p 18; Closing submissions, CPABC, paras 66, 105–7; Closing submissions, CPA Canada, para 69.
17 Closing submissions, CPABC, paras 63–64.
The decision by the BC Legislative Assembly (and, as I understand it, every province) to allow unregulated accountants to perform most accounting services without any supervision or oversight is not a matter that is squarely before me. I have not heard evidence about why this is the case or what unintended consequences could arise from a decision to subject all accountants to regulation. The issue also touches on matters extending beyond my mandate. Accordingly, I am not prepared to make a recommendation that unregulated accountants should be subject to regulation by CPABC or some other body. However, I consider it essential that the Government of British Columbia better understand the kind of work being performed by unregulated accountants in this province, given that many of the same money laundering risks arise whether a service is provided by a professional or unregulated accountant. I accordingly recommend that the Province study the unregulated accounting sector in this province and consider whether to subject unregulated accountants to some form of anti-money laundering regulation and oversight.

**Recommendation 70:** I recommend that the Province study the nature and scope of work performed by unregulated accountants in British Columbia to determine where they work, what clientele they service, what services they provide, whether those services engage a significant risk of facilitating money laundering, and, if so, what some form of anti-money laundering regulation and oversight is warranted.

**Limited Triggering Activities**

As I explained in Chapter 30, the PCMLTFA currently applies to CPAs and accounting firms only when they complete the following “triggering activities”:

- receiving or paying funds or virtual currency;
- purchasing or selling securities, real property or immovables, or business assets or entities; or
- transferring funds, virtual currency, or securities by any means.\(^\text{18}\)

FATF’s fourth mutual evaluation of Canada in 2016 noted that the PCMLTFA regime does not apply to “all relevant activities of accountants.”\(^\text{19}\) FATF Recommendations 22 and 23 state that accountants should be subject to customer due diligence measures and suspicious transaction reporting requirements when they engage in the following activities:

- buying and selling of real estate;
- managing of client money, securities or other assets;

\(^{18}\) *PCMTLF Regulations*, s 47.

Part VIII: Accountants • Chapter 32  | Limitations of the PCMLFTA and the Need for Additional Provincial Measures

- management of bank, savings or securities accounts;
- organisation of contributions for the creation, operation or management of companies;
- creation, operation or management of legal persons or arrangements, and buying and selling of business entities.\(^\text{20}\)

Recommendation 23 also “strongly encourages” countries to extend these measures to “the rest of the professional activities of accountants, including auditing.”\(^\text{21}\)

The FATF fourth mutual evaluation report found that Canada was not technically compliant with the FATF recommendations relating to accountants, in part because several of the above accounting services were not included as triggering activities in the PCMLTFA.\(^\text{22}\)

In Mr. McGuire’s view, the limited scope of triggering activities ultimately deprives FINTRAC of important data, which is problematic given that “it's generally accepted that financial intelligence is the way to defeat money laundering and so accountants have a front seat to these transactions.”\(^\text{23}\) Further, on a practical level, Mr. McGuire testified that the current PCMLTFA scheme results in a lack of clarity for the profession given the various exceptions. For this reason, while preparing CPA Canada’s anti–money laundering guide,\(^\text{24}\) he included a “waterfall diagram” that asked a series of questions CPAs could use to determine if their activities fell under the PCMLTFA regime.\(^\text{25}\) In describing the “waterfall diagram” he explained the difficulties for the profession as follows:

So if you don’t provide those accounting services to the public, then you are not covered. So that’s an important point ... you could be providing [triggering] activities ... and not be an accounting firm and have no obligation under the legislation. That is why I’m a big fan of approaches that look to the services you provide and not necessarily what designation you have.

And then the next question is [even if you are providing] ... accounting services to the public, [do you] ... have an employee who is professionally designated with a Canadian designation? So picture, if you will ... a bookkeeping firm where the individual at the helm of the bookkeeping firm is a foreign trained chartered accountant [for example] ... a US CPA. Well, that firm would not qualify once we get to this point in the table

---

\(^{20}\) Exhibit 4, Appendix E, FATF Recommendations, p 18, Recommendation 22(d).
\(^{21}\) Ibid, pp 18–19, Recommendation 23.
\(^{22}\) Ibid, pp 159–62, finding Canada non-compliant with Recommendations 22 and 23 in part because of the scope of accountants’ activities.
\(^{23}\) Transcript, January 11, 2021, p 41.
\(^{24}\) Exhibit 393, CPA Canada, Guide to Comply with Canada’s Anti–Money Laundering (AML) Legislation, prepared by MNP LLP (2014).
\(^{25}\) Ibid, pp 8–11.
because they don’t have at least one of their folks who are professionally designated with a Canadian professional designation.

So then you get to the next point and you say, well, do you perform transactions or give instructions that involve triggering activities, otherwise known as qualifying activities. Those are those three there: receiving, paying, or transferring funds; purchasing, selling property, business assets, or entities; [and] purchasing, transferring, selling securities. So you see the problem here is that … this is performing the transactions … or giving instructions, not advice. So if you get to this point in the diagram and you realize … that [if] you’re only giving advice with respect to these things, you’re still … not covered.

Let’s say that you are covered. And then the next question is are you only doing those things with respect to [an] insurance engagement or trustee in bankruptcy appointments. And if the answer is yes, again you’re not covered.

So … in this guide together with CPA Canada we’ve spent … nearly four pages just to try to explain to a person or a firm whether or not they even have obligations. And ... I think you can see as we go through the waterfall diagram that it gets narrower and narrower to the point where it might not capture all the concepts that the FATF say are subject to a money laundering threat by the sorts of services accountants provide.26

CPABC and CPA Canada are opposed to any recommendation that would expand the scope of triggering activities under the PCMLTFA. CPA Canada submits that the nature and extent of money laundering risks can be answered by the scope of the Act. In other words, the “risks arise when an accountant is acting as an intermediary in the financial system,” which is reflected in the triggering activities.27 It explains:

These triggering activities reflect how the PCMLTFA has been intentionally sculpted to target the risk posed by the direct involvement of a CPA or Accounting Firm in a transaction that actually interfaces with the financial system. When directing the transaction or providing instructions, the CPA or Accounting Firm is directly interacting with the financial system and so is scoped into the regime, unlike when they are merely providing advice and have no involvement in the transaction itself.28

José Hernandez, a CPA who formerly represented CPA Canada at the Department of Finance’s Public–Private Advisory Committee on Money Laundering and Terrorist Financing,29 similarly testified that the current triggering activities are those in which

27 Closing submissions, CPA Canada, para 36.
28 Ibid, para 38.
29 See Chapter 33.
accountants “are actually transacting in a way that is having an impact on the financial system.”30 Ms. Wood-Tweel added that this kind of activity is “not core necessarily to the business that we do, which is public accounting. It can happen, but it’s not as common as one might think.”31

With respect, I do not agree that the analysis can begin and end with what activities are included in the PCMLTFA. It may be that the intention was to include only activities directly implicating the financial system, but that is a different question from whether other activities that do not “directly” implicate the financial system also pose a risk.

In what follows, I review the various accounting services flagged by the FATF as presenting money laundering risks and consider whether additional anti-money laundering regulation is necessary. From this review, I arrive at the following conclusions and recommendations.

First, the Province of British Columbia should advocate for amendments to the PCMLTFA to include the preparation for and the provision of advice with respect to triggering activities.

**Recommendation 71:** I recommend that the provincial Minister of Finance urge her federal counterpart to introduce amendments to the Proceeds of Crime (Money Laundering) and Financing of Terrorism Act so that accountants’ reporting and other obligations arise when they prepare for and provide advice about triggering activities.

Second, CPABC should impose client identification and verification measures for high-risk activities, namely the provision of advice with respect to financial transactions and tax affairs, as well as private sector bookkeeping. These measures should include a requirement to verify a client’s source of funds, in line with the provisions in the Code of the International Ethics Standards Board for Accountants on handling the property of others and determining source of funds.32 It is important that CPABC impose such measures because expanding the scope of triggering activities in the PCMLTFA will not, on its own, address the risks in the accounting sector. As I have discussed throughout this Report, particularly in Chapter 7, a repeated criticism of the PCMLTFA regime is that it generates a high volume of low-quality reports and that intelligence is not shared with law enforcement and other stakeholders as often as would be desirable. Further, as I discuss below, CPAs appear to have a poor understanding of, and have demonstrated low compliance with, the PCMLTFA regime. All of this underscores that CPABC must undertake its own anti-money laundering regulation.

---

32 Ms. Wood-Tweel testified that CPA Canada is doing a “mapping project” in which it is comparing all the Canadian provisions with the IESBA provisions: Transcript, January 13, 2021, p 38.
**Recommendation 72:** I recommend that the Chartered Professional Accountants of British Columbia implement client identification and verification requirements, as well as requirements to verify a client’s source of funds, that apply, at a minimum, when a chartered professional accountant engages in the following activities:

- preparing for and providing advice with respect to financial transactions, including real estate transactions;
- preparing for and providing advice with respect to the use of corporations and other legal entities; and
- private-sector bookkeeping.

Finally, as I discuss further in Chapter 8, the AML Commissioner should be responsible for monitoring anti-money laundering measures put in place by CPABC going forward.

**Preparation for Transactions and Advice**

The FATF recommendations state that accountants should be subject to reporting obligations both when they execute and prepare for transactions. In contrast, the Canadian regime applies only when a CPA or firm engages in or gives instructions with respect to triggering activities. Thus, the Canadian regime is narrower than the FATF recommendations insofar as it excludes preparation for triggering activities.

The FATF recommendations do not specify what is meant by “preparing for” transactions. However, it seems logical that it would include the provision of advice. FINTRAC has issued an interpretation notice distinguishing between “giving advice” and “giving instructions”:

- **Example of giving instructions:** “Based on my client’s instructions, I request that you transfer $15,000 from my client’s account, account number XXX, to account number YYY at Bank X in Country Z.”
- **Example of providing advice:** “For tax purposes, we recommend that you transfer your money into a certain investment vehicle.”

---

33 FATF’s Recommendation 22 states that accountants should be subject to customer due diligence and record-keeping obligations when they prepare for or carry out listed activities: Exhibit 4, Appendix E, FATF Recommendations, p 18.

Therefore, FINTRAC does not consider giving advice to constitute “giving instructions.” As the PCMLTFA refers to engaging in triggering activities or giving instructions with respect to them, providing advice is not covered. Mr. McGuire testified that this omission is problematic given that, in his experience, accountants provide advice far more often than they engage in or give instructions with respect to transactions:

[F]ar less often does an accountant provide specific instructions for a particular financial activity than does an accountant provide advice about how to structure affairs in a tax-efficient manner. For instance, the advice is far more common an activity and, in my view, just as threatening from a money laundering perspective as conducting the instructions themselves.

[I]n fact, if I saw an accountant conducting transactions through one of the accounts we monitor for a client, it would arouse far more suspicion than if the client conducted it themselves, and I wouldn't know about the advice behind the scenes, for instance. And so, as I say, only the actual instructions themselves are covered by Canadian law.35

He added that preparation and advice about the use of corporations and other legal entities are services that are routinely provided by accountants.36

Ms. Wood-Tweel testified that advice is not included as a triggering activity under the PCMLTFA because that would be contrary to the intent of the legislation, which is focused on interactions with the financial system:

It's been sculpted in a way to look at the risk posed by the involvement of an accountant in a transaction that actually interfaces with the financial system, and the provision of advice doesn't. However, clearly what has been made clear is that if you are providing instructions and you are directing, then that is the same thing as being actually involved in the direct transaction. So there's a differentiation being made between advice and between instructions.37

In my view, it is problematic that the provision of advice and preparation for transactions are not covered by the PCMLTFA. When providing advice on financial matters or helping a client prepare for transactions, an accountant needs to have a good understanding of the client’s financial affairs. In doing so, the accountant is well placed to observe suspicious circumstances, yet currently has no obligation to report the suspicious activity. Further, it appears that accountants provide advice much more frequently than they engage in triggering activities.

For this reason, I have recommended above that the Province seek amendments to the PCMLTFA to include the provision of advice and preparation for triggering activities.

35 Transcript, January 11, 2021, p 40.
36 Ibid, p 34. See also Exhibit 394, McGuire Report, p 20, footnote 13.
I have also recommended that CPABC implement client identification and verification measures that will apply when a CPA prepares for or provides advice on financial transactions and the use of corporations and other legal entities.

**Bookkeeping**

Ms. Wood-Tweel testified that bookkeeping likely does not constitute a triggering activity under the *PCMLTFA*:

> The keeping of books is basically – I say this with respect – a paper process. So it is not the movement of assets and it is not the movement of money. It is the recording of transactions on paper and is not anything that ends up leading to a financial transaction itself with the financial system.\(^{38}\)

Mr. Hernandez added that the “nostalgic view of an accountant actually booking the revenues and the expenses” is “not really true for most corporations” today, given that many use compartmentalized and automated services around the world.\(^{39}\)

While I take the point that the nature of bookkeeping may have changed over the years, I consider that private sector bookkeeping nonetheless presents opportunities for accountants to come across suspicious activity relating to money laundering. Indeed, several cases I reviewed in Chapter 31 related to private sector bookkeeping.

It is also interesting to consider the situation in the United Kingdom. Ms. Wood-Tweel testified that, whereas a suspicious transaction report in Canada requires a transaction or attempted transaction, the United Kingdom uses “suspicious activity reports” that do not necessarily require a transaction; rather, “circumstances may be observed, seen or arise where suspicion is formed.” She gave the example that an accountant might observe that the possessions of an individual were inconsistent with their overall income, which may in some situations arouse suspicion that needs to be reported.\(^{40}\) Although I am mindful that the two systems are structured differently, the UK model seems to recognize that suspicions can arise in circumstances not involving financial transactions.

In my view, it is crucial to impose some form of anti-money laundering regulation on private sector bookkeeping activities. As the *PCMLTFA* focuses on transactions, it is not surprising that its reporting and other requirements do not extend to bookkeeping services. Given this context, I have concluded that anti-money laundering regulation over private sector bookkeeping performed by CPAs in this province ought to be done by CPABC. I have therefore recommended above that CPABC implement client identification and verification requirements that would apply when a CPA engages in private sector bookkeeping activities.

Auditing and Assurance Services

FATF strongly recommends, but does not require, that auditing be included as a triggering activity. 41 Mr. McGuire and Ms. Cywinska express the view that auditing should be included as a triggering activity under the PCMLTFA. 42 However, CPABC and CPA Canada take the opposite view, noting that there are various reasons why the exception for audits, review, and compilation agreements exist and should continue to exist:

• They do not involve interaction with the financial system, which is the approach taken in the PCMLTFA. Their exclusion aligns with the goal of targeting activities that involve financial intermediation. 43

• Auditing activities are already heavily regulated, being “subject to the requirements of the profession and, depending on the circumstances, the Canadian Public Accountability Board and Public Company Accounting Oversight Board.” Further, the Canadian Auditing Standards apply. 44

• The Canadian Auditing Standards already state that if a CPA comes across information suggesting non-compliance with laws and regulations, including money laundering, they should escalate the issue with management. If the issue cannot be resolved, they are encouraged to seek legal advice and may need to resign. 45

• Auditing was not noted as an area of deficiency in the 2016 FATF mutual evaluation. 46

• On the whole, “[c]ompliance with the FATF Recommendations must be interpreted within the legislative and regulatory context of each member country. In Canada, these services are adequately regulated, and scoping into the federal regime is not needed.” 47

As I noted in Chapter 30, three of the Canadian Auditing Standards (CAS) deal with money laundering. This includes CAS 250, which states that auditors who identify or suspect non-compliance with laws and regulations must determine if they are required to report to an appropriate authority and potentially seek legal advice and resign if the issue cannot be resolved.

In my view, the auditing regulation currently in place by CPABC is sufficiently rigorous that additional anti-money laundering regulation of these services is not

41 FATF’s Recommendation 23(a) states that “[c]ountries are strongly encouraged to extend the reporting requirement to the rest of the professional activities of accountants, including auditing”: Exhibit 4, Appendix E, FATF Recommendations, p 18.
42 Exhibit 394, McGuire Report, para 88; Mr. McGuire testified that he is “less convinced that professional accountants are complicit in the preparation of assurance statements for those that they know are laundering money”; rather, the point is that reviewing and auditing financial statements is an opportunity to observe potential crime and money laundering: Transcript, January 11, 2021, p 37.
43 Closing submissions, CPA Canada, paras 41, 78.
44 Ibid, paras 41, 78; Closing submissions, CPABC, para 104.

46 Ibid, para 44.
47 Ibid, para 78.
necessary. When conducting auditing and assurance services, CPAs are held to a very high standard of conduct and are subject to extensive regulation by CPABC and other independent boards. Further, the Canadian Auditing Standards already address the possibility of coming across indicators of illegality including money laundering in the course of an audit and set out recommended actions for auditors. Therefore, I am satisfied that, from an anti-money laundering perspective, additional regulation for auditing and assurance services is not necessary.

**Insolvency and Related Activities**

As I noted in Chapter 30, FINTRAC does not consider the following activities to be “providing accounting services to the public”:

- Acting as a receiver pursuant to a Court order or by way of a private letter appointment pursuant to the terms of a security interest;
- Acting as a trustee in bankruptcy; and
- Acting as a monitor under the provisions of the *Companies’ Creditors Arrangement Act* [RSC 1985, c C-36], or any other proceeding that results in the dissolution or restructuring of an enterprise or individual and to which the firm, individual or insolvency practitioner serves as an officer of the Court or agent to a creditor(s) or the debtor.48

The policy rationale for these exclusions is that there is a very low risk of money laundering with respect to these activities, given the extensive court oversight and the reporting obligations that already exist under the *Bankruptcy and Insolvency Act*, RSC 1985, c B-3.49

In my view, given the extensive court supervision and highly regulated nature of insolvency proceedings, there is a very low risk of these activities being misused for money laundering purposes. Accordingly, I am satisfied that further anti-money laundering regulation in this area is not necessary.

**Compliance Issues**

The evidence before me suggests that compliance by CPAs and accounting firms with the *PCMLTFA* is low, and that, despite this low reporting, FINTRAC conducts few compliance examinations of CPAs or firms.

---

Low Reporting

The 2016 FATF fourth mutual evaluation report indicates that, between 2011 and 2015, only one suspicious transaction report was filed by an accountant or accounting firm in Canada.\(^{50}\) The report accordingly noted that “accountants' level of awareness of [anti-money laundering / counterterrorist financing] obligations is quite low” and that the “fact that no [suspicious transaction reports] have been filed by accountants ... raise[s] concern.”\(^{51}\)

It is curious that the number of suspicious transaction reports filed by accountants and firms between 2001 and 2007 was somewhat higher, ranging from seven to 40 per year, for a total of 119 reports.\(^{52}\) Nevertheless, the evaluators who conducted the third mutual evaluation in 2008 characterized those numbers as “relatively low” even though accountants and firms had been subject to outreach from FINTRAC.\(^{53}\)

Mr. McGuire testified that there are, in his view, three principal reasons why CPAs and firms are not reporting suspicious transactions:

- They lack an understanding of their obligations.
- The triggering activities are so narrowly defined that even when accountants do observe suspicious activity, they need not report it.
- There are no consequences for a failure to report, given the low numbers of examinations conducted by FINTRAC and the complete absence of any administrative penalties being applied to any accounting firms (both discussed below).\(^{54}\)

He also highlighted that suspicious activity report figures in the United Kingdom were much higher than in Canada: roughly 5,000 were filed in 2019, around 25 percent of which indicated suspected accountant involvement.\(^{55}\) I am mindful of differences between the two regimes, including (as noted above) that suspicious activity reports in the United Kingdom do not require a transaction and that it appears that accountants there are permitted to incorporate companies,\(^{56}\) unlike accountants in this province. Nonetheless, the difference between 5,000 suspicious activity reports and numbers of suspicious transaction reports ranging from one to 40 in a year (as outlined above) is stark.

In 2015, CPA Canada’s Anti–Money Laundering and Terrorist Financing Committee\(^{57}\) invited FINTRAC to give a presentation on its role and accountants’ obligations under

---

\(^{50}\) Exhibit 4, Appendix N, *FATF Fourth Mutual Evaluation*, para 232.

\(^{55}\) Ibid, p 142.

\(^{57}\) See Chapter 33.
the PCMLTFA. FINTRAC’s presentation58 noted the deficiencies observed in compliance examinations with respect to several requirements, including the obligations to conduct a two-year review, implement a training program, and conduct risk assessments. The presentation also noted that the level of awareness appeared to be low and that many accountants did not realize they were covered by the regime.59

The presentation also said, however, that FINTRAC considered the accounting sector to be low risk.60 Mr. McGuire testified that he found this surprising, given that the 2015 national risk assessment called the sector at least medium risk and that a 2014 study by Grant Thornton had assessed the sector as highest risk along with real estate. In his view, FINTRAC did not seem to be prioritizing the sector, despite expressing frustration at the level of compliance.61

Ms. Wood-Tweel testified that we must be careful in considering the statistics on suspicious transaction reporting because only a fraction of the CPA membership actually engages in triggering activities. She explained that if accountants are “fastidious” about how they enter into business with clients, they may never come across a suspicious transaction. She testified that she personally has not come across a suspicious transaction in her practice.62 She further noted that triggering activities are not part of the “core” of a CPA’s practice.63

CPA Canada accordingly submits that “the fact that low numbers of [suspicious transaction reports] are filed in the accounting sector does not necessarily point to a compliance issue, since few CPAs engage in the type of activity that would trigger a reporting obligation. Of the approximately 200,000 CPAs in Canada, only around 20 percent are in public practice. Of those, only a fraction are likely to be involved in triggering activities.”64 Therefore, “[d]ue to the narrower scope of practice in Canada, it is entirely possible that a CPA would not encounter any reportable transactions over the course of their career;” and “[o]ne of the reasons that few [suspicious transaction reports] are filed by the accounting sector may be that CPAs’ services are not being used to carry out money laundering transactions.”65 CPABC agrees that it is “not surprising” that the levels of reporting are “relatively low,” noting that “Canada’s AML regime is designed to focus on interaction with the financial system, and CPAs’ reporting obligations are triggered only in narrow circumstances.”66

Notably, neither CPABC nor CPA Canada gathers statistics on the numbers of its members who engage in triggering activities.\(^67\) While I accept that CPA Canada and CPABC are speaking from experience when they say that it is relatively uncommon for a CPA to be engaged in triggering activities, I am not prepared to make such a finding in the absence of some formal evidence confirming that such is the case. As I elaborate in Chapter 33, I consider it essential that CPABC begin to collect reliable data on its members’ activities in order to have an accurate picture.

On the whole, the reporting numbers of CPAs and firms are concerning. Although it may be that it is less common for CPAs to engage in triggering activities than other accounting services, I find it unlikely that only one CPA or firm encountered a suspicious transaction across Canada between 2011 and 2015. Rather, it is more likely that CPAs and firms have a low level of understanding and, therefore, compliance. As I elaborate in the next chapter, it is essential that CPABC and CPA Canada continue to provide guidance and education to their members on their obligations under the *PCMLTFA*.

**FINTRAC Compliance Examinations**

Despite the low reporting numbers I have just discussed, FINTRAC has conducted few compliance examinations of CPAs and firms. FATF’s third mutual evaluation of Canada noted that FINTRAC had conducted 26 compliance examinations between 2004 and 2007. The evaluators expressed the view that this was far too low:

> Quite obviously, such a limited number of on-site examinations made by FINTRAC compared with the number of potential reporting entities cannot be considered as sufficient to ensure an effective monitoring of compliance even if FINTRAC targets its examinations based on a comprehensive risk assessment. It should be completed by interventions of provincial regulators or [self-regulatory organizations]. However, these institutions are not in charge of ensuring [anti–money laundering / counterterrorist financing] compliance and, as for the other sectors examined above, their level of involvement in that area, the regulatory basis on which they rely and the methodology adopted may strongly differ from one province or sector to another.\(^68\)

The fourth mutual evaluation notes that, between 2009 and 2015, FINTRAC conducted 114 compliance examinations of CPAs and accounting firms. This constitutes 2 percent of the total number of examinations conducted for designated non-financial businesses and professions in that same period (114 of 5,434).\(^69\)

Perhaps because of the increase from 26 to 114 examinations, the FATF’s fourth mutual evaluation was less harsh in its critiques. It noted that FINTRAC is applying its supervisory program to designated non-financial businesses and professions

\(^{68}\) Exhibit 4, Appendix L, *FATF Third Mutual Evaluation*, para 1315.

\(^{69}\) Exhibit 4, Appendix N, *FATF Fourth Mutual Evaluation*, para 256.
(including accountants) on a risk-based approach. In other words, it is “conducting more examinations in higher-risk sectors and using assistance, outreach, and compliance questionnaires to a large extent in sectors that it sees as lower-risk.”

Since the fourth mutual evaluation, the number of compliance examinations has decreased again, with FINTRAC conducting only seven examinations between 2016 and 2020. The compliance examinations done have revealed significant numbers of “structural deficiencies.” Such deficiencies are “anti-money laundering pillars,” namely, the requirements to have a designated officer, policies and procedures, training, a risk assessment and management plan, and a mechanism for evaluating compliance over time. The following statistics indicate the percentage of firms cited for at least one structural deficiency between 2008 and 2014:

- 2008/2009 – 38% (8 of 21)
- 2009/2010 – 52% (25 of 48)
- 2010/2011 – 45% (9 of 20)
- 2011/2012 – no examinations
- 2012/2013 – 92% (23 of 25)
- 2013/2014 – 64% (7 of 11)

Despite the foregoing, no CPA or accounting firm has ever received an administrative monetary fine under the PCMLTFA.

It is concerning that there have been so few compliance examinations in view of the low reporting numbers and high numbers of structural deficiencies identified in the examinations that have been done. The low number of compliance examinations again points to the need for CPABC to be more involved in anti-money laundering regulation. As I discuss in the next chapter, CPABC should incorporate anti-money laundering considerations into its practice review program.

**Conclusion**

This chapter has illustrated a number of ways in which anti-money laundering regulation of accountants in this province is currently inadequate. Of considerable

L) Overview Report: Miscellaneous Documents, Appendix 15, p 16 (one examination in 2019–20).
73 Exhibit 394, McGuire Report, para 58.
74 Ibid, para 59.
concern is the fact that most accountants in British Columbia are not subject to any regulation, despite being able to provide many of the same services as professional accountants. Further, the application of the PCMLTFA to accountants is narrow, applying only to CPAs and only for specific activities. It also appears that compliance and understanding among CPAs with the PCMLTFA regime is low, and FINTRAC conducts few compliance examinations in this sector.

The foregoing makes it clear that CPABC must play a role in anti-money laundering regulation. In my view, CPABC’s mandate is already broad enough to encompass anti-money laundering, and it should begin exercising this part of its mandate promptly. I have outlined in this chapter, and expand in Chapter 33, some ways in which CPABC should exercise this mandate.
In this final chapter on the accounting sector, I discuss the current state of the regulation of accountants for anti–money laundering purposes in British Columbia and improvements that can be made. I begin by considering some further measures to those set out in Chapter 32 that CPABC can take to begin regulating for anti–money laundering purposes. I then consider CPA Canada’s anti–money laundering activities and recommend further measures that it can take. Finally, I discuss the desirability of a whistle-blower framework in which accountants and firms could report suspicious activity without breaching their duty of confidentiality.

**CPABC’s Anti–Money Laundering Regulation**

As CPABC has not considered anti–money laundering to fall within its mandate to date, it has taken relatively few steps to address the issue. In what follows, I outline measures that CPABC should take, in addition to the client identification and verification measures I recommend in Chapter 32.

**Amendments to the CPABC Code and Bylaws**

I reviewed CPABC’s Code and Bylaws in detail in Chapter 30. Mr. Tanaka expressed the view that the Code and Bylaws are broad enough to cover anti–money laundering activities.\(^1\) This belief may be correct in some respects; however, in my view, some anti–money laundering issues should be dealt with more explicitly.

---

\(^{1}\) Transcript, January 12, 2021, pp 16–18, 20–21.
CPABC submits that the harmonization of professional standards nationally is critically important to ensuring the efficient functioning of financial systems that depend on the seamless delivery of services by CPAs across provincial and international boundaries. That efficiency would be hindered by inconsistency in regulatory practices. As such, any significant changes to the CPABC Code require national study and review.2

I accept that changes to the CPABC Code could have effects on the codes in other provinces. However, although harmonization is important, it should not trump the necessity of updating the CPABC Code to address money laundering risks in British Columbia. CPABC should therefore implement the following measures promptly. I encourage CPABC to continue working with its counterparts and CPA Canada to seek harmonization of rules and practices across the country, while also recognizing that it has a duty to regulate its members in this province in the public interest and has the ultimate authority to implement changes in this province to effect that purpose.

Use of Trust Accounts

Accountants in British Columbia are permitted to use trust accounts, although it is unclear how often they do so and for what purpose.

Rule 212 of the CPA Code speaks to handling the property of others. Among other things, the rule states that members who receive, handle, or hold money or property while acting in specified circumstances (e.g., as a trustee, guardian, or liquidator) shall do so in accordance with the terms of the engagement and the applicable law. They must also maintain records to account for the money or property and, unless otherwise provided for in the terms of the trust, hold money in a separate trust account. Members must also “handle with due care any entrusted property.”

CPABC states that, to its knowledge, the use of trust accounts by CPAs in public practice and their firms is infrequent.3 It accordingly submits that it “does not believe that trust accounts held by CPAs in BC pose a significant risk for money laundering.” CPABC notes it has never received information from law enforcement, another regulatory agency, or a member of the public expressing concerns about how a CPA or a firm handled funds (contrary to examples in the legal profession).4

CPABC does not, however, collect information from its members in any systematic or regular way as to whether they use trust accounts and, if they do, why. It appears that CPABC’s first attempt to ascertain this information was through an informal survey

---

2 Closing submissions, CPABC, para 31.
4 Closing submissions, CPABC, para 51.
conducted in December 2020. That survey, however, had important limitations. A key one was that only 450 of the 4,129 licensed public practice members responded, or approximately 10 percent. Further, the survey did not collect any information about the characteristics of the firms of the members who responded, nor did it ask for details about why members engaged in certain activities, such as the use of trust accounts or acceptance of cash.

A reporting memo on the results of the survey notes that “[i]t is our understanding that trust accounts are more often used in relation to bankruptcy and insolvency matters as well as professionals who act as trustees in estate matters” and that when practitioners take retainers, “[i]t is believed [they] typically apply the retainers against their client’s account, as opposed to placing the retainer in trust as lawyers may do.” Ms. Liu testified that the belief that practitioners typically apply the retainers against their client’s account rather than putting it in trust was an assumption based on CPABC’s general understanding of how its members practice. The survey did not ask why practitioners used trust accounts.

Apparently based on the results of this informal survey, CPABC noted in its closing submissions that the “few CPABC members who do operate trust accounts” must comply with the “regulatory requirements,” meaning Rule 212. It noted that it is “in the process of seeking additional information from members” with respect to their use of trust accounts.

I accept that the survey was meant to be anonymous and simply an attempt to gain information so that CPABC could determine further outreach measures. While the survey was a good first step, its limitations – particularly the very small sample size and minimal information collected – make it difficult to draw any firm conclusions about members’ practices. Accordingly, I do not accept that the survey establishes that “few” members operate trust accounts, and I cannot conclude that the use of trust accounts among CPAs is infrequent or that the risk associated with them is low.

In my view, CPABC must better understand its members’ use of trust accounts. The risks relating to trust accounts operated by CPAs differ from those relating to lawyers, as there is not the risk of solicitor-client privilege attaching to a CPA’s trust account records. Nonetheless, to minimize the risk of a CPA’s services being misused, it is important to have robust anti-money laundering regulation in place when a CPA

---

10 Closing submissions, CPABC, para 50.
11 Ibid, para 52.
handles client funds through a trust account. Further, funds that pass through a CPA's trust account benefit from the perceived legitimacy that the CPA's professional status provides – a perception that underscores the need for robust regulation. I accordingly recommend that CPABC promptly determine how many of its members operate trust accounts, for what purpose, and in what circumstances.

**Recommendation 73:** I recommend that the Chartered Professional Accountants of British Columbia promptly determine how many of its members operate trust accounts, for what purpose, and in what circumstances.

Once CPABC determines which of its members operate trust accounts, it should begin conducting regular trust account audits. It strikes me that it would be relatively straightforward for CPABC to conduct these audits in the course of its practice reviews (which I discuss below). CPABC is well placed to determine how frequently its members’ trust accounts should be audited; however, I note that the Law Society of British Columbia has implemented a system whereby every law firm operating a trust account will be audited every six years, with audits occurring more frequently in some situations. Further, the Law Society audits a sample of firms that report not operating a trust account, to ensure that is the case. I discuss the Law Society’s audit procedures, which could serve as a useful model for CPABC, in Chapter 28.

**Recommendation 74:** I recommend that the Chartered Professional Accountants of British Columbia implement a trust account auditing regime in which chartered professional accountants and firms that operate a trust account are audited on a regular basis, and that a sample of chartered professional accountants and firms that report not operating a trust account be audited to ensure that is the case.

**Acceptance of Cash**

CPABC’s informal survey asked about members’ acceptance of cash. Approximately 40 percent of respondents noted that they accept cash for payments or retainers. The reporting memo notes that “[i]t is likely that such cash is for nominal payments of services such as preparation of simple tax returns.” Ms. Liu testified that that belief is based on answers suggesting the sums were nominal, so they assumed that cash was received for those kinds of services; however, the survey did not ask why or in what amounts members were accepting cash.

Based on the results of this informal survey, CPABC concluded that “a small number of members may receive and handle cash from clients,” likely in small amounts. It

---

13 Exhibit 400, CPA Education Memo, p 2.
14 Transcript, January 12, 2021, p 43.
15 Closing submissions, CPABC, para 53.
submits that it is “in the process of seeking additional information from members” regarding their handling of cash. Given the limitations of CPABC’s informal survey, I am unable to conclude that a “small number” of members “may” receive and handle small amounts of cash. It is important that CPABC promptly gain an accurate understanding of its members’ use of cash, whether this information is gathered through a self-reporting mechanism or other method.

**Recommendation 75:** I recommend that the Chartered Professional Accountants of British Columbia determine the circumstances in which its members accept cash from clients and in what amounts.

A related question is whether there should be a limit on the amount of cash that accountants can receive, as there is for lawyers (see Chapter 28). There is currently no limit on the amount of cash that accountants can receive. Ms. Wood-Tweel testified that she is not opposed to imposing a limit on the amount of cash that can be accepted. However, she emphasized that the CPA Code already provides protection in this regard:

> I look at the issue and I look to my experience in terms of the profession. I think that what we have is ... a code that speaks to the principles that right off the bat, if you are accepting any form of payment – cash, cryptocurrency, ... virtual currency, anything that is anything other than bona fide – you are already having problems with the Code because the Code is saying you shouldn't be doing it. So the principles of the Code remain true. It's the foundation of the profession, and we have it.

> If we were to look towards something that is more pointed as a rule, that certainly could be introduced. It's not to say that the principles of the Code are not applying. They are. It's just that you may choose to move to a pointed rule with respect to cash.

Ms. Wood-Tweel repeated that, in her experience, the majority of the work carried out in public practice does not relate to specific assets or the specific management of assets. In some parts of the profession, such as bankruptcy and insolvency, that work is routine; however, in her view, it “is not something that is ... a core process of ... the profession's work” in Canada.

CPABC indicates that it is considering imposing a cash transactions rule similar to that in place by the Law Society of British Columbia. In my view, a cash transactions rule is an important anti-money laundering measure that CPABC should adopt. In an

---

16 Ibid, para 54.
19 Ibid, p 37.
20 Exhibit 403, CPABC McGuire Review, p 22.
era when much economic activity takes place electronically, there are inherent risks when a client provides a professional such as an accountant with large sums of cash. I therefore recommend that CPABC implement a cash transactions rule.

**Recommendation 76:** I recommend that the Chartered Professional Accountants of British Columbia implement a cash transactions rule limiting the amount of cash its members can receive in a single client matter.

**Understanding of Members’ Activities Relating to the PCMLTFA**

CPABC and CPA Canada have largely not gathered information about the frequency with which their members engage in triggering activities under the *PCMLTFA.*21 CPABC’s December 2020 informal survey, discussed above, appears to have been its first effort to gather this information. Some 88 percent of respondents said they did not engage in triggering activities.22 Importantly, however, the survey did not ask how often or for what purpose they engaged in these triggering activities, or the amounts involved.23

Again, I accept that the survey was meant to be high level. However, if this is as far as CPABC has gone to determine how many of its members engage in triggering activities and why they do, it is inadequate. In my view, CPABC must ascertain how often its members engage in triggering activities. While I leave the specifics to CPABC, it strikes me that a good option would be to require self-reporting on a member’s annual declaration form.

**Recommendation 77:** I recommend that the Chartered Professional Accountants of British Columbia determine how often its members engage in the activities specified in section 47 of the *Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations.*

**Practice Reviews**

As I discuss in Chapter 30, CPABC conducts practice reviews to ensure that members are complying with accounting standards. The practice review program does not currently address anti-money laundering. Ms. Liu testified that the mandate of the program is to ensure the firm’s compliance with professional standards, and the program has focused on engagements to the public.24

---

22 Exhibit 400, CPA Education Memo, p 2.
The purpose of the practice review program (which includes practice inspection) is to ensure that firms are meeting professional standards; the program does not involve “audits” into any and all potential breaches of law. Practice inspections provide an opportunity for CPABC to engage with and educate its members and firms about enhancing their compliance with professional standards.

If CPABC became aware of any type of unlawful activity (including a concern with money laundering or terrorist financing) during the course of a practice inspection or otherwise, CPABC would take any action considered necessary or appropriate within its regulatory mandate.25

In an internal memo dated September 11, 2020, CPABC concluded that it would not be desirable to include PCMLTFA compliance within its practice review program because doing so “would be getting into the management and internal practices of a firm, whereas our inspections have always focused on [CPA Canada Handbook] standards.” The memo further expressed the view that doing so could overstep CPABC’s authority, given that FINTRAC oversees compliance.26 Ms. Liu testified that CPABC accordingly decided to focus on education and support instead.27

CPABC submits that “its practice review program [should] continue to focus on evolving professional standards, while supporting FINTRAC’s work through increased awareness and education activities for its membership. CPABC sees no need to duplicate FINTRAC’s regulatory compliance program regarding anti-money laundering.”28 CPABC also suggested that it could review its ability to provide FINTRAC with “regular access to a list of CPABC’s registered firms, to assist FINTRAC to inform its own risk sensitive inquiries.”29

Mr. Tanaka testified that an expansion of CPABC’s mandate would likely require additional resources, including human resources with special expertise or knowledge, new technology, more resources, or more money.30 Ms. Liu added that, as CPABC is self-funded, there could potentially be an impact on membership. She noted that the current practice review team does not have expertise in forensics, which they would need if the practice review program were to extend to anti-money laundering.31

As I discuss throughout these chapters on the accounting profession, I do not agree with CPABC that it would duplicate efforts by FINTRAC if it engaged in some form of anti-money laundering regulation. I have concluded that CPABC should conduct anti-money laundering regulation alongside FINTRAC.

26 Exhibit 402, Public Practice Committee Data Sheet, Pre-Reading #6, September 4, 2020, p 2.
27 Transcript, January 12, 2021, p 89.
CPABC’s position that it should not be engaging in money laundering–related, risk-sensitive inspection is notably at odds with the FATF’s guidance. The guidance states that supervisors and self-regulatory bodies (of which CPABC is one) should “draw on a variety of sources to identify and assess [money laundering / terrorist financing] risks,” including national and supranational risk assessments, domestic or international typologies, supervisory expertise, feedback from the financial intelligence unit, information-sharing, and collaboration with other supervisors. The guidance further states that supervisors and self-regulatory bodies should understand the level of inherent risk including the nature and complexity of services provided by the accountant. Supervisors and [self-regulatory bodies] should also consider the type of services the accountant is providing as well as its size and business model (e.g. whether it is a sole practitioner), corporate governance arrangements, financial and accounting information, delivery channels, client profiles, geographic location and countries of operation. Supervisors and [self-regulatory bodies] should also consider the controls accountants have in place (e.g. the quality of the risk management policy, the functioning of the internal oversight functions and the quality of oversight of any outsourcing and subcontracting arrangements.

The guidance goes on to make a number of points regarding the actions that supervisors and self-regulatory bodies should take, including:

- ensuring that their supervised populations are fully aware of and compliant with measures to identify and verify a client’s identity and the client’s source of wealth and funds, and measures designed to ensure beneficial ownership transparency;

- taking proportionate measures to mitigate and manage money laundering and terrorist financing risks. To that end, they must have a clear understanding of the risks present in a country and associated with the type of accountant, clients, products, and services;

- developing a means of identifying which accountants are at the greatest risk of being used by criminals;

- updating their risk assessment regularly; and

- supervising the implementation of the risk-based approach by members.

It is not necessary for me to repeat the entirety of FATF’s commentary on this matter. The point is that CPABC’s view that it does not have a responsibility to engage in anti-

---

33 Ibid, para 140.
34 Ibid, paras 141–50.
money laundering regulation is at odds with FATF’s view, which discusses the roles that should be played by both financial intelligence units such as FINTRAC and self-regulatory bodies such as CPABC.

I acknowledge CPABC witnesses’ concerns about extending the ambit of practice reviews, and I have given those concerns due consideration. However, I am of the view that CPABC must take on a role of anti-money laundering supervision. FINTRAC is not the regulator of CPAs. It plays an important, complementary role, but it does not, and it should not, replace the in-depth regulation carried out by provincial CPA regulators.

CPABC is best placed to understand the activities in which its members are engaged. Whereas FINTRAC is tasked with receiving information from a variety of sectors in the economy, CPABC is mandated to focus on CPAs in British Columbia. It has significant powers to compel information, investigate members, and impose appropriate sanctions. It can also view all aspects of its members’ practice, including confidential information.

CPABC has taken virtually no steps to monitor its members’ compliance with the PCMLTFA or to understand how that regime is relevant to its membership. The December 2020 survey is a start but, as noted, its response rate was very low and the questions were posed too broadly to provide any meaningful information.

In my view, practice reviews are a prime opportunity for CPABC to ensure that CPAs are complying with their obligations. I recommend that CPABC expand its practice review program to include regulation focused on anti-money laundering. In particular, CPABC should ensure through its practice reviews that members are complying with the client identification and verification measures that I recommend in Chapter 32. It should also conduct audits of members’ trust accounts and audit a sample of chartered professional accountants who report not operating a trust account, as I discuss above. Finally, CPABC should implement measures that are complementary to FINTRAC’s role. Although FINTRAC is ultimately responsible for ensuring compliance with the PCMLTFA, CPABC is well placed to determine if its members have put in place a compliance program as required by the PCMLTFA and to inquire about members’ practices and policies relating to record-keeping and transaction reporting required by the PCMLTFA.35

35 In this regard, it is useful to consider the complementary roles played by the British Columbia Financial Services Authority (BCFSA) and FINTRAC. In the course of examining provincially regulated financial institutions through operational risk assessments or prudential reviews, BCFSA considers issues including whether the institution has up-to-date anti-money laundering policies, whether there is ongoing anti-money laundering training, whether the institution does self-assessments of its anti-money laundering programs, and whether there is sufficient oversight of the anti-money laundering program. BCFSA also has semi-annual discussions with FINTRAC in which FINTRAC provides information to it on various provincial financial institutions about deficiencies it has identified, and BCFSA in turn includes those deficiencies in its own reviews. BCFSA also shares its concerns surrounding anti-money laundering training or policies with FINTRAC: Evidence of C. Elgar, Transcript, January 15, 2021, pp 23–25, 29–42, 49–54.
**Recommendation 78:** I recommend that the Chartered Professional Accountants of British Columbia (CPABC) expand its practice review program to address anti-money laundering issues including, at a minimum:

- compliance with client identification and verification measures implemented by CPABC;

- audits of trust accounts or confirmation that a member does not operate a trust account; and

- assessment of the adequacy of the anti-money laundering policies and programs in place by the member to ensure compliance with the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act*.

**Education**

The December 2020 survey indicated that the “complexity of the [PCMLTFA] legislation and regulations appear to be one of the areas of concern for those practitioners who responded to the survey.”

Ms. Liu testified that, since the survey, CPABC has launched a webpage focused on anti-money laundering, on which it intends to add guidance and support for members. Mr. Tanaka added that CPABC offers ethics and other courses that, while not focused on anti-money laundering, nonetheless address it. He added that the 2020 member engagement tour also included a presentation on anti-money laundering. In addition, an advisory services line is available for members to address various matters.

CPABC notes that, between 2017 and 2020, it offered 10 professional development courses and seminars focused on money laundering, with further courses planned. CPABC provided the Commission with a list of courses that it and CPA Canada have offered on anti-money laundering. Such courses are relevant and useful educational resources. I encourage CPABC and CPA Canada to continue anti-money laundering education to their members, ensuring that the courses include a focus on the requirements under the *PCMLTFA*, given the apparently limited understanding of the topic and levels of compliance among CPAs.

CPABC has also published a document called CAS (Canadian Auditing Standard) 240, “The Auditor’s Responsibilities Relating to Fraud in an Audit of Financial Statements.”

---

36 Exhibit 400, CPA Education Memo, p 2.
42 Ibid, p 95.
This document provides guidance for where an auditor encounters circumstances that suggest money laundering activities and, consequently, an increased risk of misstatement in financial statements and other forms of fraud. Auditors who believe that financial statements are false or misleading should request information. If that information is not forthcoming, they should consider not releasing the financial statements and resigning.43

Ms. Wood-Tweel further testified that mandatory continuing professional development requirements do address ethics and that CPABC and CPA Canada are working to incorporate information relating to money laundering within the mandatory ethics courses.44 When asked whether there would be merit in requiring those who engage in triggering activities to take continuing education on anti–money laundering reporting requirements, she noted that it is left to a CPA's professional judgment to determine which professional development programs are relevant to one's practice. In her view, incorporating information on money laundering into the mandatory ethics education also achieves that goal.45

While I appreciate that there will soon be a component of the ethics education that deals with money laundering, it is important to include further information with respect to money laundering. In line with my recommendation to the Law Society that it implement a requirement for education focused on anti–money laundering for members in high-risk areas, I believe the same is desirable for accountants. This mandatory education need not be an annual requirement but should occur at regular intervals.

**Recommendation 79:** I recommend that the Chartered Professional Accountants of British Columbia implement a mandatory continuing professional education requirement focused on anti–money laundering that applies, at a minimum, to chartered professional accountants who engage in the following activities:

- the activities specified in section 47 of the *Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations*;
- preparing for and providing advice with respect to financial transactions, including real estate transactions;
- preparing for and providing advice with respect to the use of corporations and other legal entities; and
- private-sector bookkeeping.

43 Exhibit 391, Overview Report on the Accounting Sector in British Columbia, para 96.
44 Transcript, January 13, 2021, pp 88–89.
**Engagement with CIFA-BC**

CPABC notes that it has recently joined the Counter Illicit Finance Alliance of British Columbia (CIFA-BC) and “intends to continue to work collaboratively with CIFA-BC’s stakeholders and the RCMP in their joint efforts to prevent and combat money laundering in BC.”\(^{46}\) This is a promising step and is in line with my view that CPABC has a mandate relating to anti-money laundering regulation. I expect that CPABC will continue its engagement with CIFA-BC and consider how else it may involve itself in money laundering efforts with links to accountants.

**CPA Canada Engagement**

CPA Canada has been actively involved in anti-money laundering activities both in Canada and internationally. Below, I review the working groups in which CPA Canada has participated, as well as educational and other materials they have produced.

**CPA Canada’s AML/ATF Committee**

CPA Canada’s Anti-Money Laundering and Anti-Terrorist Financing Committee (CPA Canada AML/ATF Committee) was created in 2014–15 as an internal committee devoted to anti-money laundering and counterterrorist financing issues in the accounting profession.\(^{47}\) Ms. Wood-Tweel testified that, although this was the first committee created following the unification of the professions, others existed before it.\(^{48}\)

The committee’s objectives were as follows:

- **a.** Assist CPA Canada in contributing, on behalf of the CPA profession and in the public interest, to the more effective and efficient fight against money laundering and terrorist financing.

- **b.** Assist CPA Canada in continuing to develop a trusted reputation for the CPA profession in the area of AML/ATF.

- **c.** Provide CPA Canada with input into the impact on individual CPAs and CPA firms of AML/ATF legislation and related governmental consultations and initiatives.

- **d.** Support CPA Canada’s efforts in the area of AML/ATF by identifying, prioritizing and analyzing issues that may have an impact on CPAs and CPA firms.

- **e.** Assist CPA Canada with the development of timely and relevant guidance and resources that will assist CPAs and CPA firms in

47 Exhibit 406, Background Report on CPA Canada’s Anti-Money Laundering Activities (with appendices) [CPA Canada Background Report], para 3.

understanding their obligations under the AML/ATF legislation and improving their level of compliance.49

Mr. McGuire testified that part of the committee’s mandate involved considering and commenting on substantial changes to the legislation.50

In 2014, the committee prepared a webinar entitled “Compliance with Canada’s Amended AML and ATF Legislation.”51 This webinar was “designed to help CPAs determine whether and what AML obligations apply to them and their firm, recognize changes to AML obligations and update their compliance programs; and become familiar with CPA Canada’s new guide for AML compliance.”52 Shortly after the webinar, CPA Canada released its updated Guide to Comply with Canada’s Anti–Money Laundering (AML) Legislation.53 This guide “set out recent changes to Canada’s AML legislation and provided practical guidance for AML compliance to accountants and accounting firms.”54 I discuss CPA Canada’s webinar and guide in greater detail below.

In May 2014, Mr. McGuire (then chair of the committee) made representations to the federal government’s Standing Senate Committee on Banking, Trade and Commerce and the House of Commons Standing Committee on Finance on proposed amendments to the PCMLTFA.55

In early 2015, the committee invited FINTRAC to make a presentation on the obligations of CPAs and accounting firms under the PCMLTFA. As I note in Chapter 32, FINTRAC’s presentation stated that there were deficiencies in CPAs’ compliance with the PCMLTFA and that the level of awareness appeared to be low. Following that presentation, the committee considered ways to raise awareness of anti–money laundering issues among the profession and ultimately decided to issue an alert to the profession in July 2015 (discussed below).

The committee was wound down in 2016 as CPA Canada refocused its anti–money laundering efforts on engagement with the federal government.56 In particular, it joined the Advisory Committee on Money Laundering and Terrorist Financing (discussed below).

51 Exhibit 406, CPA Canada Background Report, Appendix B.
52 Exhibit 406, CPA Canada Background Report, para 4.

54 Exhibit 406, CPA Canada Background Report, para 5.
55 Transcripts to these submissions can be found in Exhibit 406, CPA Canada Background Report, Appendices D and E.
56 Exhibit 406, CPA Canada Background Report, para 9.
CPA Canada’s *Guide to Comply with Canada’s AML Legislation*

Mr. McGuire testified that CPA Canada increased its focus on education and produced its anti-money laundering guide when it realized that compliance with FINTRAC was exceptionally low. The guide set out recent changes to legislation and provided practical guidance for compliance. It contained questionnaires, checklists, copies of forms from FINTRAC, and practical guidance on how to complete the forms. Mr. McGuire wrote the guide with contributions from CPA Canada’s AML/ATF Committee.

As I discuss in Chapter 32, the guide contains what Mr. McGuire described as a “waterfall diagram” outlining when CPAs and accounting firms are subject to the regime (which, in his view, is complicated to determine, given the various exceptions and limited triggering activities). The guide also refers to FINTRAC’s guidance on indicators of suspicion, noting:

> The presence of an indicator is one factor which may lead to the consideration of a suspicious transaction report, but by itself is not definitive. Contextual information about the client, the transaction(s) and historical behaviour will assist in determining whether there are sufficient grounds to suspect the transactions are relevant to a money laundering or terrorist financing offence.

The list of suspicious indicators includes but is not limited to the following:

- Client appears to be living beyond his or her means.
- Client has cheques inconsistent with sales (i.e., unusual payments from unlikely sources).
- Client has a history of changing bookkeepers or accountants yearly.
- Client is uncertain about location of company records.
- Company carries non-existent or satisfied debt that is continually shown as current on financial statements.
- Company has no employees, which is unusual for the type of business.

Ms. Wood-Tweel testified that although these indicators are helpful, CPA Canada trains for a “very high level of professional skepticism” in general.

---

58 Exhibit 406, CPA Canada Background Report, para 5.
60 Exhibit 393, CPA Compliance Guide, pp 23–24.
The guide is currently being revised and updated to reflect recent changes to the *PCMLTF Regulations*. CPA Canada indicated that it intended to issue the revised version in the spring of 2021. At the time of writing, it does not appear to have been released yet.

**2015 Alert to the Profession**

Following FINTRAC’s presentation to the CPA Canada AML/ATF Committee in 2015, CPA Canada issued an alert to the profession in July 2015. The alert was shared by CPA Canada and provincial CPA regulators with their members.

The alert noted that FINTRAC had informed CPA Canada that compliance by CPAs and firms with the *PCMLTFA* required improvement. It reminded CPAs and firms that, as reporting entities, they have obligations when they engage in triggering activities. It also pointed them toward FINTRAC’s guidance and policy interpretations, as well as the CPA Canada guide. The alert notes that the accounting sector “plays a very important role” in anti-money laundering and counterterrorist financing, given the nature of its work. Ms. Wood-Tweel testified that the sector plays two critically important roles:

One is obviously sculpted under the legislation as reporting entities under the legislation. We have responsibilities to comply with the triggering activities, et cetera, so clearly we’re there because we matter. So that’s one of the ways in which we are important to the battle. But the other way is because ... obviously in the public interest [we work] towards the security of the financial system in Canada at large and the capital system. That’s part of our role in the work that we do every day in our craft.

Finally, the alert highlighted the requirements to implement a two-year effectiveness review as well as risk assessment and mitigation plans. As I discuss in Chapter 32, these were areas in which FINTRAC compliance examinations found compliance to be particularly low.

**Federal Advisory Committee on Money Laundering and Terrorist Financing**

The Federal Advisory Committee on Money Laundering and Terrorist Financing is the successor to the federal government’s former Public-Private Sector

Advisory Committee.68 It brings together Finance Canada, FINTRAC, and industry representatives.69 CPA Canada has participated as a member since 2016, represented by Mr. Hernandez.70 Ms. Wood-Tweel represents CPA Canada on two working groups relating to legislation and policy.71

CPA Canada notes that its representatives attend meetings of the committee; take part in discussions; receive information; and provide input and feedback, including with respect to FINTRAC guidance.72

**Input on FINTRAC Guidance and Legislative Reform**

CPA Canada has made numerous submissions to federal government departments, committees, and officials on money laundering issues affecting CPAs. It has made 12 such submissions since 2014 on matters ranging from regulatory amendments to the *PCMLTFA*, the need to improve the availability of beneficial ownership information, and its view that a whistle-blower framework is needed.73 It also regularly participates in information sessions, consultations, meetings, and discussions with federal government officials and representatives.74

A CPA Canada submission from March 13, 2017, is illustrative. It made a series of recommendations regarding three “pillars”: beneficial ownership; enforcement and prosecution; and whistle-blowing. Mr. Hernandez explained that beneficial ownership is important to help clients do their due diligence and avoid becoming inadvertently involved in activities in which they should not engage.75 As for enforcement and prosecution, he explained that there needs to be “a real deterrence factor”; a need to file a suspicious transaction with “consequences … a cost of crime.”76 Finally, whistle-blowing is important to encourage individuals to speak up and then allow law enforcement to bring matters to a close.77

CPA Canada has also provided comments to FINTRAC on its Risk-Based Approach Guidance for Accountants.78

Engagement with International Anti–Money Laundering Efforts

CPA Canada is a member of the International Federation of Accountants (IFAC), which has been engaged as an anti-corruption partner in the B20, the official business community engagement forum for the G20.79

In December 2020, CPA Canada and the International Ethics Standards Board for Accountants (IESBA) issued an alert to the profession on COVID-19 and evolving risks concerning money laundering, terrorist financing, and cybercrime.80 CPA Canada also provided comments on IFAC’s Point of View document, Fighting Corruption and Money Laundering.81

In May 2019, Mr. Hernandez and Ms. Wood-Tweel attended the FATF Private Sector Consultative Forum on behalf of CPA Canada. This forum considered an updated draft of the FATF 2019 guidance on the accounting profession (released in June 2019).82 CPA Canada representatives also participated in the 2020 FATF Private Sector Consultative Forum on November 24, 2020.83

Presentations

CPA Canada has also organized and given presentations on money laundering–related issues. In February 2019, it hosted a session where members of provincial CPA bodies joined several panellists to discuss the role of CPAs in combatting money laundering.84 On September 2, 2020, Ms. Wood-Tweel gave a presentation to CPA Saskatchewan. Entitled “Anti–Money Laundering and Terrorist Financing Update,”85 the presentation explained the PCMLTFA regime and provided an overview of beneficial ownership, new amendments to the PCMLTFA Regulations, and how COVID-19 was creating evolving money laundering risks.86 Ms. Wood-Tweel testified that she was encouraged by the quality of questions from practitioners and members of industry about how they could assist in the anti–money laundering fight.87

CPA Canada advised in its closing submissions that additional presentations have been made for the Nova Scotia and Manitoba CPA associations, and that its webinar is available for a broader audience online.88

Other Resources

CPA Canada regularly publishes information on anti-money laundering developments and issues on its website, in its magazine for the profession, and through other media channels. It also has a webpage dedicated to anti-money laundering policy developments, including its submissions to government and its work on beneficial ownership.

As well, CPA Canada’s Practitioner’s Toolkit contains a module on regulatory and risk management. However, it does not reference anti-money laundering legislation or standards. Ms. Wood-Tweel testified that including this information is under consideration.

Follow-up on Compliance with the PCMLTFA

Ms. Wood-Tweel testified that CPA Canada has not received further information from FINTRAC about members’ compliance since issuing the 2015 alert. She acknowledged, however, that CPA Canada has not followed up “in a direct way” to assess whether its members have improved their compliance, focusing instead on education and collaborating with federal committees. In her view, it is important to have a “feedback loop” with members to hear about their experiences and questions, but FINTRAC, as the regulator, should be playing an important role, too.

CPA Canada has not conducted surveys or the like to obtain data about members’ compliance, including whether there are a significant number of transactions that ought to be but are not reported; however, it is considering doing so. Ms. Wood-Tweel explained that such data would be relevant for several purposes, including PCMLTFA compliance, a better understanding of the nature of members’ work, and determining what continuing professional development to offer.

The above review demonstrates that CPA Canada has generally been active in preparing educational materials and engaging with government initiatives relating to anti-money laundering. However, CPA Canada must do more to ensure that its members understand their obligations under the PCMLTFA. Following FINTRAC’s presentation in 2015 and the July 2015 alert, CPA Canada has not followed up directly with FINTRAC to determine if its members’ compliance or understanding has improved. I recommend that CPA Canada acquire and maintain insights into its members’ compliance with the PCMLTFA.

89 A list can be found in Exhibit 406, CPA Canada Background Report, para 14.
90 Exhibit 406, CPA Canada Background Report, para 15. A copy of the webpage can be found in Exhibit 406, Appendix S.
93 Ibid, pp 63–64.
95 Ibid, p 74.
Recommendation 80: I recommend that the Chartered Professional Accountants of Canada follow up with the Financial Transactions and Reports Analysis Centre, on an ongoing basis, to acquire and maintain insights into the level of reporting and compliance of its membership with the requirements of the Proceeds of Crime (Money Laundering) and Terrorist Financing Act.

Confidentiality Obligations and a Potential Whistleblower Regime

As I explain in Chapter 30, the CPA Code contains provisions on confidentiality. CPABC and CPA Canada witnesses expressed concern that their members’ duty of confidentiality prevents them from disclosing confidential information, and that even in circumstances where disclosure is permitted, members could still face civil liability for breach of the duty. For this reason, CPA Canada has advocated for a whistleblower regime that would allow CPAs to report their suspicions while being protected for the breach of confidentiality.

Concerns were also raised before me regarding CPABC’s duty to maintain confidentiality under section 69 of the CPA Act and whether it is permissible to share information with law enforcement or others.

I address both issues in turn.

The Duty of Confidentiality Under the CPA Code

Section 208.1 of the CPA Code states that a member “shall not disclose any confidential information concerning the affairs of any client, former client, employer or former employer.” Ms. Wood-Tweel testified that the rules of confidentiality exist in relation to current and former clients, and current and former employers. They allow for full disclosure from the client, which in turn allows the accountant to do his or her job.97

Section 208.1 contains some exceptions. Specifically, a member can disclose confidential information when

(a) properly acting in the course of carrying out professional duties;

(b) such information should properly be disclosed for purposes of Rules 101, 211 or 302 or under the [CPA] Act or Bylaws;

(c) such information is required to be disclosed by order of lawful authority or, in the proper exercise of their duties, by the Board, or a committee, officer or other agent of CPABC;

(d) justified in order to defend the registrant or any associates or employees of the registrant against any lawsuit or other legal proceeding or against alleged professional misconduct or in any legal proceeding for recovery of unpaid professional fees and disbursements, but only to the extent necessary for such purpose; or

(e) the client, former client, employer or former employer has provided consent to such disclosure.

The duty is also overridden when information is provided to CPABC for the purpose of a practice review or investigation.98

CPABC submits that although the duty of confidentiality is different from the legal concept of privilege, it would not consider members to have committed professional misconduct or a breach of the CPA Code if they disclosed confidential information in circumstances that are equivalent to those for which the law recognizes an exception to solicitor-client privilege.99 These circumstances would include:

- disclosure to appropriate authorities of communications from a client or employer that are themselves criminal or made with a view to obtaining advice to facilitate the commission of a crime;100 and

- other disclosure that a CPA has reasonable grounds to believe is necessary to prevent a crime involving death or serious bodily harm to any person.101

However, CPABC notes that although these circumstances might be exceptions to the duty of confidentiality, “they do not necessarily shield a CPA from civil liability for breach of an express or implied duty of confidence, or other possible legal consequences over which CPABC has no authority.”102 In this regard, Mr. Hernandez testified that a CPA who breaches confidentiality in a situation where there is no duty to report could be held civilly liable or terminated by their employer.103

Without deciding the issue, CPABC’s position on the above exceptions appears logical. It would seem to be an anomalous result if the exceptions to solicitor-client privilege (which, as I discuss in Chapter 27, is a constitutionally protected right with stringent protections and few exceptions) would not exist for the non-

98  CPA Act, ss 51(9), (10).
99  Closing submissions, CPABC, para 72.
100  Closing submissions, CPABC, para 72, citing Solosky v the Queen, [1980] 1 SCR 821 at 835–36 and Descôteaux v Mierzwiński, [1982] 1 SCR 860 at 881. CPABC further notes that, in line with McDermott v McDermott, 2013 BCSC 534, it would consider that communications in which a client deliberately uses the CPA to facilitate unlawful conduct does not come within the scope of the duty of confidentiality: Closing submissions, CPABC, footnote 73.
101  Closing submissions, CPABC, para 72, citing Smith v Jones, [1999] 1 SCR 455 at paras 74–86.
102  Closing submissions, CPABC, para 74.
constitutionally protected duty of confidentiality owed by CPAs. Nonetheless, I would encourage CPABC or CPA Canada to seek a legal opinion if they consider it necessary to definitively determine what exceptions to the duty of confidentiality exist. This opinion could be particularly useful with respect to CPABC’s suggestion, as I understand it, that CPAs might still be liable for breaching confidentiality, even when an exception applies.

Mr. Hernandez testified that the above issues related to the duty of confidentiality are the reason that CPA Canada has been advocating for a whistle-blower regime since 2017. Such a regime would allow CPAs with suspicions to provide information to law enforcement, prosecutors, or regulators and be protected for the breach of confidentiality. Indeed, several of CPA Canada’s submissions to the federal government have dealt with the whistle-blower proposal. Ms. Liu testified that CPABC is also supportive of a whistle-blower regime.

In this regard, the International Ethics Standards Board for Accountants has developed the Non-Compliance with Laws and Regulations (NOCLAR) framework. Ms. Wood-Tweel explained that NOCLAR is a framework by which accountants can determine their steps in response to known or suspected non-compliance with laws or regulations. It was designed with anti-money laundering in mind.

Ms. Wood-Tweel testified that Canada has no single legislative infrastructure for public disclosure and whistle-blowing, a problem that makes it difficult to implement NOCLAR. Whistle-blowing provisions exist in various statutes, including the PCMLTFA, environmental legislation, and securities legislation.

CPA Canada accordingly submits, and CPABC agrees, that a national whistle-blowing framework is important so that CPAs need not navigate a complex patchwork system of reporting governed by discrete legislative frameworks. It points to the United Kingdom’s Public Disclosure Act and the US Bank Secrecy Act. CPA Canada submits:

A national whistleblowing framework would be an important mechanism for those professionals who may encounter money laundering activities in circumstances that, for example, do not meet the requirements for a [suspicious transaction report], and where the CPA is not able to resolve the issue within the organization according to professional standards. It is an important consideration for the potential adoption of the NOCLAR international standard in the Canadian CPA profession ... is currently under review.

I strongly endorse the work being done by CPA Canada toward implementing a national whistle-blower framework for chartered professional accountants. I encourage CPA Canada to continue its work in this regard.

**CPABC’s Duty of Confidentiality Under the CPA Act**

Although CPABC supports a whistle-blower framework, it has concerns about any recommendation that would contemplate CPABC disclosing to FINTRAC confidential information about its members’ clients. In CPABC’s view, such disclosure would raise serious concerns about privacy and confidentiality and would also be incompatible with CPABC’s regulatory role:

The disclosure of identifiable client information to FINTRAC could be harmful to CPABC’s ability to carry out its regulatory functions under the *CPA Act*, which depends on registrants providing CPABC with access to client information on a confidential basis when it is relevant in both practice reviews and investigations, on the understanding that CPABC will be required to maintain the confidentiality of that information.\(^{111}\)

Mr. Tanaka testified that section 69 of the *CPA Act* and the CPABC *Code of Professional Conduct* contain strong protections with respect to confidentiality. Section 69 states in part:

69(1) A person acting under this Act must keep confidential all facts, information and records obtained or provided under this Act or under a former enactment, except so far as the person’s public duty requires or this Act or the bylaws permit the person to disclose or to report or take official action on the facts, information and records.

Mr. Tanaka testified that, in part because of section 69, CPABC would “very rarely” refer a matter to law enforcement:

Q: Appreciating that CPABC is not a criminal court and it’s not a prosecuting body, ... what would CPABC do if it uncovered activity that it suspected might be associated with criminality? ... Would CPABC ever refer something to the police?

A: Very rarely. I mean, we’re an independent organization. We’re not an agent of the state. And ... we have strict confidentiality requirements in [the CPA] Act in section 69 and so we have to respect that and in addition there’s privacy legislation as well, so it would be very rare.\(^{112}\)

Interestingly, however, the Law Society of British Columbia, which has a similar limitation in section 88(3) of the *Legal Profession Act*, has implemented rules permitting the executive director to provide information to law enforcement in certain...
circumstances upon obtaining consent from the Discipline Committee (see Chapter 28). Section 88(3) reads:

88(3) A person who, during the course of an investigation, audit, inquiry or hearing under this Act, acquires information or records that are confidential or subject to solicitor client privilege must not disclose that information or those records to any person except for a purpose contemplated by this Act or the rules. [Emphasis added.]

It strikes me that the italicized portion of section 88(3) is similar to the exception in section 69 of the CPA Act; namely, “except so far as the person's public duty requires or this Act or the bylaws permit.” In the same way that the Law Society has enacted rules allowing for disclosure to law enforcement in certain situations, it appears that CPABC could enact rules or bylaws permitting it to disclose confidential information to law enforcement in certain situations. The reference to a person’s “public duty” is particularly interesting, as this seems to contemplate disclosing information for a public interest purpose.

CPABC, as a regulator, has unique access to everything in a CPA's file, including confidential information. Further, through practice reviews, it may very well come across situations in which a member was, wittingly or unwittingly, potentially involved in money laundering or other illegal activity. It is important that CPABC be able to share this information with law enforcement in appropriate circumstances. I therefore recommend that CPABC enact bylaws or rules addressing situations in which it can disclose information to law enforcement.

**Recommendation 81:** I recommend that the Chartered Professional Accountants of British Columbia pass bylaws or rules enabling it to share information with law enforcement in appropriate circumstances.

**Conclusion**

My discussion of the accounting sector has revealed that much work remains to be done. While there is, unfortunately, a relative shortage of evidence on the precise nature and extent of the involvement of accountants in money laundering in this province, I am satisfied that the nature of their work presents a significant money laundering vulnerability. Anti-money laundering regulation in this sector is crucial and must be strengthened.

As a regulator with a public interest mandate, CPABC has an important role to play in anti-money laundering regulation. This regulation is especially important considering the apparently low compliance rate by CPAs and firms with the PCMLTFA and the relatively few compliance examinations carried out by FINTRAC. I trust that
CPABC will consider my recommendations seriously and begin regulating its members for anti-money laundering purposes.

As I discuss further in Chapter 8, I have recommended the creation of an AML Commissioner. The commissioner’s role would include a reporting function in which he or she would report to the provincial government on progress being made in various sectors with respect to anti-money laundering regulation. The commissioner will be well placed to monitor CPABC’s progress in implementing anti-money laundering measures and report on this progress to the provincial government.

Other Sectors
Chapter 34
Luxury Goods

Section 4 of the Commission’s Terms of Reference directs me to make findings and recommendations with respect to the extent, growth, evolution, and methods of money laundering in the luxury goods sector.

This chapter sets out my findings and recommendations with respect to this sector. I begin by discussing the meaning of the phrase “luxury goods” in this context and the process undertaken by the Commission to examine money laundering in this aspect of the province’s economy. As I discuss below, I propose an expansive approach to determining what a luxury good is, based on four features that such goods possess. While the bulk of this chapter is devoted to luxury goods, I note at the outset that some services also present money laundering risks; I return to this topic later and include services in the recommendations I make at the end of this chapter.

After reviewing the nature of luxury goods, I discuss the risk of money laundering and evidence that money laundering is actually occurring in luxury goods markets, as well as the implications of the manner in which these markets are organized and regulated. I then set out a general model for addressing money laundering risks in luxury goods markets and the role that may be played by a permanent AML Commissioner, the creation of which is recommended in Chapter 8.¹ The flexible model I propose in relation to luxury goods is centred on principles that can be adapted to the nature of different luxury goods markets and the varying risk levels they present. I conclude this chapter by addressing money laundering in the motor vehicle market and by briefly discussing recent steps taken by the Insurance Council of British Columbia to address money laundering in the insurance industry.

¹ As I explain in Chapter 8, I expect that the AML Commissioner will require a team to assist him or her with the various duties I am proposing. As such, my references to the AML Commissioner should be taken to include the commissioner’s office.
While I am not in a position to identify with precision the extent to which money laundering is occurring in the luxury goods sector, it is evident from the evidence before me that this sector is at a high risk of being exploited for money laundering or spending of criminal proceeds and that, to some degree, this risk has been realized in the form of actual money laundering activity. The risk of money laundering associated with this sector arises, in part, from the inherent features of luxury goods and the markets in which they are traded. In this province, however, it is clear that this risk has been exacerbated by a near-complete absence of visibility into and scrutiny of what is taking place within this sector of the economy. In my view, it is essential that the Province take immediate action to drastically reduce this risk and ensure that the luxury goods sector is not exploited for money laundering moving forward.

What Are “Luxury Goods”?
My Terms of Reference do not define the phrase “luxury goods,” and the parameters of this sector are more ambiguous than those of some other listed economic sectors, such as real estate or gaming. Given this ambiguity, it is necessary to comment briefly on the meaning of the phrase, how it has been used in previous study and analysis of money laundering in this sector, and how it is used in this Report.

The notion that money laundering may occur through luxury goods markets is not new. To the extent that the luxury goods sector has been a focus of anti-money laundering scholarship and analysis in the past, this work has tended to focus on specific luxury goods markets. As examples, Dr. Peter German was directed to focus on luxury vehicles in his second report,2 the Financial Action Task Force has released separate reports focused on the markets for gold3 and diamonds,4 and several academic publications have examined the risk of money laundering in the fine arts market.5 A 2017 report prepared by Transparency International addressed the risk of money laundering in several luxury goods markets, including those for fine art, precious stones and jewels, super-yachts, and “personal luxury items” (which encompass accessories, apparel, watches and jewellery, and perfume and cosmetics).6 While the Transparency International report considers several different luxury

---

goods markets, it largely treats them as separate markets rather than a single economic sector.

These past efforts to examine money laundering in luxury goods markets offer examples of the types of items that may qualify as luxury goods but provide little insight into how this category ought to be defined, or how to determine what is excluded from it. While it may not be difficult to identify examples of products that intuitively qualify as luxury goods, in my view, defining “luxury goods” only by way of example is of little value for the purpose of understanding and addressing the risk of money laundering in this sector.

Rather, I believe that, for this purpose, the category of “luxury goods” should be understood to be a broad and open one defined by the nature of the money laundering risk presented by the markets and products in question. As I discuss in more detail below, the money laundering risk posed by luxury goods markets is derived in large part from four features: their high value, their capacity to retain value, their transferability, and their portability.

While the unique features of individual luxury goods markets – such as the traditions of confidentiality and discretion in the fine art world,7 or the capacity of precious metals and stones to serve as mediums of exchange8 – may further contribute to the money laundering risk in these markets, any market at risk of money laundering because of the four features I have just identified should be considered a luxury goods market for anti-money laundering purposes. This definition, which should be understood to apply to the use of the phrase “luxury goods” throughout this Report, encompasses conventional luxury goods such as yachts, jewellery, and fine art, but also includes products that may not immediately come to mind as falling within this category, such as electronics, vintage wine, event tickets, or sports and entertainment memorabilia. One might reasonably argue that a more inclusive phrase such as “high-value goods” may more accurately capture this category, but in the interest of consistency with my terms of reference, I will continue to use the phrase “luxury goods” throughout this Report.

In my view, this broad and open definition is preferable to a fixed list of examples of luxury goods for two reasons. First, it recognizes that the products and markets that may fall within this category are numerous and constantly evolving, underscoring the need to continually search for additional markets that bear a similar risk and that should be subjected to anti-money laundering scrutiny. A closed list of existing markets risks creating the incorrect impression that if the money laundering risk associated with the goods sold in those particular markets can be addressed, money laundering through luxury goods would cease to be a cause for concern. In reality, however, even in the

---

8 Exhibit 774, Overview Report: Luxury Goods, paras 35–38.
unlikely event that a comprehensive list of such markets could be compiled, this list would quickly become obsolete as markets for new products emerge. I note as examples the growth in consumer electronic goods in recent years, including the introduction of many new products to the marketplace, and the very recent advent of “non-fungible tokens,” which clearly fall into this category but would likely not have been included on a list of luxury goods markets even at the time that this Commission was established in 2019.

The second reason why a broad, open definition is preferable is that it encourages those engaged in the fight against money laundering to think of these diverse markets as a unified economic sector for the purpose of preventing money laundering. Because the money laundering risks associated with these markets are similar, they may be viewed by those intent on laundering the proceeds of crime as largely interchangeable. Accordingly, addressing money laundering in one luxury goods market may be of little use to the province as a whole if the effect is simply to displace this illicit activity to another sector of the province’s economy. This risk of displacement has important implications both for the type of anti-money laundering measures to be implemented and for the sorts of bodies or agencies best able to implement those measures. For example, providing new resources and authorities to regulators responsible for single markets – or even the creation of new regulators – may be a sensible approach if the objective is to eliminate money laundering in the market for a single luxury good, but may be of little utility in addressing money laundering throughout this sector. Defining luxury goods as a broad category rather than as a list of individual markets maintains a focus on this economic sector broadly, rather than on the loose collection of individual markets that may be commonly thought to comprise it.

The Commission’s Process

The Commission undertook extensive efforts to examine money laundering in various luxury goods markets in British Columbia. These efforts included consultation with experts in Canada and internationally, review of relevant literature, and obtaining records from and interviewing representatives of trade associations, regulatory bodies, and businesses operating in various luxury goods markets within the province. Through these efforts, the Commission developed an in-depth understanding of the risk of money laundering in this sector and identified indicators of actual money laundering in the markets that it comprises.

Despite these efforts, Commission counsel elected not to devote significant hearing time to the luxury goods sector. This should not be taken as an indication that the Commission assessed the luxury goods sector as an area of low priority or low risk. Rather, the nature of this sector was such that it was not necessary for the Commission to devote as much hearing time as it did to others.

While the information obtained by the Commission is sufficient to allow me to draw conclusions regarding the risk of money laundering in luxury goods markets in this
province and identify indicators that this activity is actually occurring, it is necessary to acknowledge two factors that limited the Commission’s efforts in this sector.

The first of these factors is the COVID-19 pandemic. While the pandemic had an impact on all aspects of the Commission’s work, few areas were as significantly affected as its inquiries into the luxury goods sector. The Commission’s intended approach to this sector included the engagement of private investigators to seek out information by attending luxury goods retailers, identifying and cultivating sources of information about these businesses and industries, and gaining insight into whether and where activity that may be associated with money laundering is taking place in these industries. These investigative efforts commenced in early 2020 but came to a halt almost immediately following the onset of the COVID-19 pandemic. Due to the initial closure of many retailers, changes in their operations, and concern for the safety of Commission and retailer staff and the broader public, it was not possible to pursue these investigations as initially planned. The Commission quickly adjusted its approach and made contact with a number of luxury goods retailers, obtaining relevant documents and conducting remote interviews. While this process yielded valuable information, it is impossible to say how it compares to what the Commission would have learned had it been able to execute its original plan.

The second limitation faced by the Commission in its investigations into money laundering in the luxury goods sector was legal restrictions on the extent to which the Commission was able to collect information. In particular, despite the summons power set out in the Public Inquiry Act, SBC 2007, c 9, the Commission faced limits in its ability to obtain information related to provincial sales tax rebates for vehicles exported from the province and to records held by the Vehicle Sales Authority, which regulates motor vehicle dealers and salespeople. These comments are in no way meant to suggest that these records and information were improperly withheld from the Commission. To the contrary, I am satisfied that those in possession of those records were properly complying with the governing legislation. However, the reality is that the Commission’s ability to inquire into money laundering in the luxury goods sector was, to some degree, hampered by these limitations.

I do not believe that these limitations significantly affected the Commission’s ability to fulfill its mandate with respect to this sector. Rather, I consider it necessary to identify them for two reasons. First, as this is a public inquiry, I believe that, to the extent possible, it is important that I explain to the public the steps the Commission did and did not take and, where the Commission did not take what may seem to be logical steps, the reason why those steps were not taken. Second, the above-noted limits on the Commission’s ability to obtain information are likely to inhibit future efforts to obtain the same information by others concerned with combatting money laundering in the province, including the AML Commissioner. By identifying these limits here, my hope is that steps can be taken to ensure that these barriers do not restrict future efforts to address money laundering in British Columbia.
Money Laundering Risk in Luxury Goods Markets

While the luxury goods sector is comprised of a diverse set of markets for a broad range of products, these markets are unified by the money laundering risk that they face. Broadly speaking, the luxury goods sector is at risk of money laundering in three forms:

1. **Luxury goods as a means of laundering money:** The first form of money laundering through luxury goods – a more traditional one – involves using luxury goods as a means of storing the value of the proceeds of crime so that they can be dealt with in a manner that would be difficult or impossible if the illicit funds remained in the form in which they were originally obtained and give the funds a façade of legitimacy when the goods are sold. In this form, luxury goods are a means to an end, acquired for the purpose of laundering money.

2. **Use of proceeds of crime to purchase luxury goods for use and enjoyment:** The second form of money laundering risk facing the luxury goods sector involves the use of proceeds of crime to acquire luxury goods, such as luxury automobiles or yachts, for the purpose of using and enjoying those goods. In this form, the acquisition of luxury goods is an end in itself. The goods are not acquired solely for the purpose of laundering money; however, they ultimately serve the purpose of storing value and giving the proceeds a façade of legitimacy when sold.

3. **Use of luxury goods in the “Vancouver model”:** As I expand below and in Chapter 2, the “Vancouver model” involves lending proceeds of crime to individuals who were not directly involved in the criminal activity that generated those proceeds (and who may not be aware of their illicit origins), with the expectation that the loan will be repaid in another form and/or location. It seems highly likely that money laundering has occurred through the Vancouver model in the luxury goods sector, with those receiving the illicit funds using them to purchase luxury goods.

In what follows, I review these three forms of money laundering in more detail.

My focus in this chapter is primarily on luxury goods, as stipulated in my Terms of Reference. However, I note that there are at least two ways that services can be used to launder money. First, an individual may ostensibly pay for services, but those services are not in fact performed. This allows for the movement of illicit funds and an appearance of legitimacy of the funds in the hands of the purported service provider. Second, individuals who receive illicit funds as part of the Vancouver model can spend those funds on services. As the model ultimately requires repayment from the individual who was loaned the funds, the use to which those funds are put by the borrower is immaterial to the successful laundering of the illicit funds. As such, their use to purchase services furthers the aims of the money laundering scheme as effectively as their use to gamble, purchase luxury goods, or for any other purpose. The two methods of money laundering through services raise significant risks and concerns; I have therefore included services in the recommendations I make at the end of this chapter.
Luxury Goods as a Means of Laundering Money

The first money laundering risk arises from the possibility that proceeds of crime can be used to acquire goods, which can then be held, transferred, sold, and/or transported. This is done in order to store value, convert value, or transfer it to another location, jurisdiction, or person. This in turn obscures the source of funds initially used to acquire the luxury good and/or the movement of the value stored in that good.

The nature of this risk was captured in a 2015 report prepared by the Europol Financial Intelligence Group titled *Why Is Cash Still King?* (which uses the phrase “high value goods” in place of “luxury goods”):

Typically, the reason for using high value goods (such as watches, art works, luxury vehicles, precious metals and jewels) or real estate is that they offer criminals an easy way to integrate funds into the legal economy, converting criminal cash into another class of asset which retains its value and may even hold opportunities for capital growth.

... Another reason that attracts criminals to the purchase of high value goods is that certain items, such as gold or precious stones, are readily liquid and moveable asset classes which can be traded globally. As these items have a very high value, just like high denomination notes, they offer criminals the opportunity to shrink bulky cash holdings into discrete and portable holdings of gold or diamonds, for example. These items can be smuggled across borders and thereafter sold ... [T]hese items are not captured under European cash control regulations and as such have an added advantage in that they need not be declared.9

The risk that luxury goods may be used to launder money in this way arises primarily from the four features common to luxury goods that I identified above: their high value, capacity to hold value, transferability, and portability. There are, of course, additional features of specific luxury goods markets that may exacerbate or attenuate these risks for specific markets. In my view, however, these four features are the primary sources of the risk of this form of money laundering that afflicts the sector as a whole, and they are useful in defining what should qualify as a luxury good for the purpose of combatting money laundering in British Columbia.

*High Value*

The first, and most obvious, feature of luxury goods that contributes to the risk of money laundering is their high value. The value of luxury goods is relevant to money laundering risk because the more expensive a good, the greater the volume

---

of illicit funds that can be converted into that good. This enables the laundering of proceeds of crime because it permits the more efficient conversion, transfer, or transportation of illicit funds. Where, for example, a substantial volume of illicit cash is used to purchase a single piece of jewellery or work of art, the cash is converted into a different form in a single transaction, and the value of that cash can be much more easily stored or transported than could the cash itself or a larger volume of less expensive goods. Moreover, the luxury good can be converted back into cash or another monetary instrument in a single transaction, rather than a series of transactions, which would be required to convert a large quantity of less expensive goods. This should not be taken to suggest that money laundering cannot be accomplished through the purchase of lower-value goods – particularly if purchased in high volumes – or that lower-value goods should not be the subject of anti–money laundering scrutiny; rather, in my view, the risk associated with particular markets will typically increase with the value of the goods sold in that market.

**Capacity to Retain Value**

A second feature of luxury goods that gives rise to an elevated risk of money laundering is their capacity to retain value. Goods like vehicles, yachts, jewellery, and fine art are not perishable and do not typically become valueless following purchase, as evidenced by the robust markets for used or pre-owned goods in each of these categories. While some of these items may decline in value, if purchased with the proceeds of crime, these items can be relied on to retain at least a portion of the value of those illicit funds while offering relief from the burden and inconvenience of storing and concealing large quantities of cash – as well as the suspicion that large amounts of cash may attract.

**Transferability**

The utility of luxury goods in efforts to launder money is further enhanced by the relative ease with which these goods can be transferred to others.10 As noted above, because luxury goods tend to retain their value following purchase, there are relatively robust markets for used or pre-owned goods in many of these categories. This facilitates money laundering by ensuring that a bad actor can reasonably expect to be able to transfer the good to another person and, in doing so, extract the value retained by the good after it was acquired with the proceeds of crime. This feature of these goods may also facilitate the transfer of value for criminal purposes other than through the exchange of cash by permitting that value to be transferred through the delivery of a good, rather than cash itself.

The transferability of these goods is also useful to those intent on laundering money, as it enables the creation of a legitimate explanation for criminally derived property. Where a luxury good acquired with the proceeds of crime is resold, the funds obtained through the resale can be explained as the proceeds of the sale of the luxury good, obscuring the criminal origins of the funds initially used to acquire the item.

Portability

A further common feature of luxury goods that contributes to the risk of money laundering posed by this sector is the portability of these goods.\textsuperscript{11} Goods like jewellery, electronics, and works of fine art are often relatively compact and easily transported. Some items within this category, such as vehicles and yachts, are themselves modes of transportation. The portability of these goods allows the value of the proceeds of crime stored in these items to be moved between locations – and potentially jurisdictions – easily and without attracting the scrutiny often directed at large volumes of cash.

Additional Features of Specific Luxury Goods

There are, of course, other features of certain luxury goods markets that may further contribute to a risk of money laundering. The risk of money laundering through fine art, for example, is elevated by the industry’s traditions of confidentiality and discretion,\textsuperscript{12} while the risk of money laundering through jewellery and precious metals and stones is exacerbated by their capacity for use as a medium of exchange, obviating the need to convert them to currency before they can be spent.\textsuperscript{13} These additional features do not apply to all luxury goods, but illustrate how the features listed above, which are of more general application and unify the luxury goods sector, may be exacerbated by other characteristics.

Using Risk to Define the Sector

In my view, and for the reasons outlined in detail above, the foregoing four characteristics are a useful means of defining this otherwise amorphous sector of the economy. Efforts to combat money laundering through luxury goods should be focused on any market that satisfies this description – including those that arise following the conclusion of the Commission’s work – regardless of whether those markets sell goods that would typically be considered “luxuries.” The proposed regulatory model for combating money laundering in this sector, set out later in this chapter, is intended to apply to all such markets and, in my view, will be most effective if implemented in a way that permits it to do so.

Using Proceeds of Crime to Purchase Luxury Goods for Use and Enjoyment

The second, broader form of money laundering connected to the luxury goods sector involves the use of proceeds of crime to purchase luxury goods with the intention of using or enjoying those goods.

\textsuperscript{11} Ibid, paras 2, 35, 57, 60.
\textsuperscript{12} Ibid, paras 2, 57, 60; Appendix D, \textit{Art Trade Guidelines}, p 103; Appendix F, \textit{Art Industry and Undermining Sanctions}, p 121.
\textsuperscript{13} Ibid, paras 35, 37–38, 49.
Witnesses during the Commission’s hearings referred to the affinity of criminals for high-value, luxury goods. Simon Lord, one of the world’s leading experts on money laundering, described how the purchase of luxury goods by those who commit crimes may not be attempts to launder money, but rather the ultimate purpose motivating their criminal endeavours:

People like to buy luxury goods, and one of the things that you tend to find with criminals is that they go for things like expensive cars. They go for ... expensive watches and things like that. And there's always an argument as to the extent to which the purchase of an expensive item is a method of laundering funds or whether it's just a way of realizing your ill-gotten gains ... [T]he whole purpose of committing most types of crime is the acquisition of a large amount of money ... [W]henever I talk about money laundering, I say that actually all crimes, a million crimes, are actually money laundering, but just with a predicate offence bolted on that generates the money that you're going to launder. And so ... in a lot of cases, if you want to buy a flash car or you want to buy a decent watch, it is simply the way you enjoy your ill-gotten gains. But the other side of that is ... that you're essentially getting into a type or form of trade-based money laundering.

Similar observations were made by Dr. German in the “luxury vehicles” section of Dirty Money 2, where he suggested that criminality motivated by a desire to live a luxurious lifestyle may be particularly prevalent in this province:

Gangsters in B.C. have often been associated, for good reason, with living a fast life of upscale restaurants, designer clothes, expensive jewellery, and luxury cars, funded and fuelled by drug trafficking and other crimes. Through their ostentatious lifestyle, they seek to portray power and wealth. One expert on gangs internationally wrote, “In none of the places that I visited did I see the same level of wealth on display by gang members that I have observed in B.C.”

British Columbia gangs are unlike territorial street gangs in other cities in the world that are a product of economic necessity or oppression; rather, they are motivated by the “ability to make quick money and enjoy a lifestyle of hedonism and decadence,” and their girlfriends have “a desire to live in the upper echelon of society – fast cars, fast drugs and fast parties.”16

I am not in a position to assess whether those engaged in a life of crime do indeed have a greater fondness for luxury goods than law-abiding people, or whether crime in British Columbia is disproportionately motivated by a desire for conspicuous consumption. I do accept, however, that the purchase of luxury goods with the proceeds

---

16 Exhibit 833, Dirty Money 2, p 181.
of crime is likely often motivated simply by a desire to own and use those goods and not always part of a premeditated money laundering scheme.

The likelihood that criminals may use the proceeds of crime to purchase luxury goods for the same reason that anyone else might purchase an expensive car, piece of jewellery, or painting does not, in my view, exclude these purchases from being categorized as money laundering – nor does it in any way diminish the need to eliminate this kind of activity. The ultimate goal of money laundering is to convert the proceeds of crime into a form that can be used in the legitimate economy. If illicit funds can be used to purchase luxury goods directly – without distinct, intervening steps to make the funds appear legitimate – the goal of laundering has been accomplished, just as it would if those funds had been routed through a series of offshore bank accounts and numbered companies in secrecy jurisdictions. That this type of complex laundering process was not required before the funds could be spent only simplifies the criminal operation and lowers its costs of business. Further, that a luxury good was not acquired for the purpose of laundering money does not mean that it will not ultimately be used to launder money. A vehicle purchased for personal use with the proceeds of crime will, in most instances, eventually be sold. When it is, the value derived from the sale will appear legitimate in the same way that it would if the vehicle was purchased with the intent of laundering the illicit funds originally used to purchase it. In my view, as there is ultimately no difference in outcome, the purchase of luxury goods for personal use with illicit funds should be viewed as no less concerning than their purchase for the purpose of laundering.

**Vancouver Model**

The third way in which luxury goods can be used to launder money is through the “Vancouver model.” This model, discussed in more detail in Chapter 2, involves the lending of cash or other instruments of illicit origin to individuals not directly involved in the criminal activity that generated those proceeds, with the expectation that the loan will be repaid in another form and/or location. The borrower may or may not have knowledge of the illicit source of the funds.

The evidence before me does not definitively prove that there is widespread systematic use of the Vancouver model of money laundering through luxury goods in the same way as in casinos. However, there is a sufficient basis to be concerned about criminal proceeds being loaned to fund the purchase of luxury goods in this province. As I discuss in Chapter 13, it is clear that, due in part to barriers to the removal of money from China, patrons of BC casinos gambled substantial amounts of illicit funds acquired as part of the Vancouver model. It seems obvious that the barriers these individuals faced in obtaining legitimate funds with which to gamble would have also impacted their ability to obtain legitimate funds to finance other aspects of their lives. In this context, it seems highly likely that some of these patrons – if in need of funds with which to purchase a vehicle, jewellery, artwork, electronics, or any number of
other luxury goods – would have resorted to the same source of illicit cash that they used to gamble.

As such, it is clear, in my view, that the risks of money laundering in the luxury goods sector include a high risk of money laundering through the Vancouver model. In my view, using proceeds of crime in this way can certainly be considered money laundering and should be cause for concern – just as it is cause for concern when those who engage in illicit activity themselves purchase goods with illicit funds (as discussed above).

Use of Proceeds of Crime by Criminals and the Vancouver Model Beyond Luxury Goods Markets

I pause here to note that there is no credible basis to believe that the use of proceeds of crime by criminals themselves or by third parties is limited to luxury goods markets or, in the case of the Vancouver model, the gaming sector. On the contrary, it would seem that these typologies can appear in virtually any aspect of the economy, including (as noted above) payment for services. Absent measures that would prevent the use of proceeds of crime in certain sectors, it seems entirely likely that an individual with access to criminal proceeds – whether through the Vancouver model or their own criminal activity – would use those proceeds to fund any and all aspects of their lives. While the use of illicit funds to gamble or purchase luxury vehicles may lead to more compelling headlines, it is just as likely that these funds are also used for more mundane purposes, such as groceries, entertainment, and payment for services. However, despite the capacity of criminal proceeds to be spent on virtually anything, I remain of the view that there is good reason to focus efforts to detect and combat money laundering in the “luxury goods” sector, with reference to the four characteristics I have identified above – high value, capacity to retain value, transferability, and portability.

While the risk of money laundering through the Vancouver model and the direct use of proceeds of crime by criminals are not restricted to the luxury goods (or gaming) sectors, I believe that their use in the luxury goods sector is worthy of particular attention for two reasons. First, these typologies are likely to be much more detectable in this sector than in other parts of the economy. Second, the use of proceeds of crime to purchase luxury goods is more likely to have a greater impact on society than is their use in other types of transactions.

The use of proceeds of crime in the form of cash to purchase luxury goods is likely to be more detectable than in other transactions because of the high value of luxury goods. The use of illicit cash to make small purchases such as groceries, restaurant meals, or movie tickets is unlikely to stand out from similar transactions made using legitimate funds because the value of those purchases is such that it would not be at all unusual for any member of the public to use cash. This is not the case where the item purchased is a luxury car, yacht, work of fine art, or piece of jewellery costing tens or even hundreds of thousands of dollars. As such, the relevance of these
typologies to the luxury goods sector – and the reason, in part, for their inclusion in this chapter – is not the exclusivity of their use in this sector, but rather the opportunity for detection. Accordingly, the model for addressing money laundering in this sector that is developed later in this chapter is designed to address all three forms of money laundering outlined above – the purchase of luxury goods with the intention of laundering money, by criminals themselves to purchase items they desire, or by others through the Vancouver model.

The second reason why the use of proceeds of crime to purchase luxury goods is deserving of particular attention is the elevated impact this activity may have on society because of its potential to motivate criminal activity and to distort local economies. The profit motivation that drives revenue-generating criminal activity is dependent on the ability of those engaged in those crimes to spend their ill-gotten gains. As discussed previously in this Report, the purpose of any money laundering endeavour is to ensure that the proceeds of crime can be spent. While in an ideal world it would not be possible to spend illicit funds at all, it seems obvious that some types of spending will provide a stronger incentive for criminal activity than others and that profit-driven crime would be much less attractive in this province if those who make money through crime were limited to using that money to purchase the necessities of life rather than the luxury vehicles, expensive jewellery, and super-yachts often associated with a stereotypical criminal lifestyle.

In addition, limiting the spending of illicit funds to the purchase of the same kind of day-to-day necessities that all law-abiding British Columbians purchase – if this were possible – would be less likely to distort local economies. In his evidence, journalist Oliver Bullough described how the unfettered use of the proceeds of crime and corruption to purchase luxury goods can distort the mix of businesses and “hollow out” a local economy:

[I]t inflates asset prices enormously – I mean house prices enormously – and it skews the economy towards particular sectors ... the luxury watch sector, the sports car sector ... the high-end boutique sector ... the kind of things that are purchased by oligarchs and the relatives of oligarchs, but not by the rest of us ... [I]t skews the economy towards what Ajay Kapur called plutonomy rather than the kind of things that the rest of us buy.17

In my view, because of the greater likelihood that proceeds of crime in the form of cash will stand out when used to purchase luxury goods and the potential that these transactions hold to motivate criminal activity and impact local economies, it is important that efforts to combat money laundering in luxury goods markets include a focus on preventing the use of illicit funds to purchase luxury goods, even where those purchases are for the purpose of consumption and not part of a deliberate money laundering scheme.

17 Evidence of O. Bullough, Transcript, June 2, 2020, p 57.
Money Laundering Risk in Luxury Goods Markets Realized

The evidence before me establishes that the risk of money laundering in luxury goods markets described above is not merely a hypothetical concern. To the contrary, the evidence indicates that this risk has been realized and that substantial amounts of proceeds of crime and corruption have been laundered through luxury goods markets in jurisdictions around the world, including in Canada. While I am unable to determine precisely how much money is being laundered through luxury goods markets in British Columbia specifically, the record before me offers strong indications that this form of money laundering is present in this province.

Money Laundering Through Luxury Goods Globally

Money laundering through luxury goods markets is clearly a source of concern to those working to combat money laundering internationally. This issue has been addressed in reports prepared by organizations including Transparency International,18 the Financial Action Task Force,19 Europol,20 the Basel Institute on Governance,21 the United Kingdom's National Crime Agency,22 and the United States Senate Permanent Subcommittee on Investigations.23 Money laundering in this sector globally has also been addressed in academic commentary24 and was referred to by a number of international experts who gave evidence during the Commission’s hearings.25

Much of this evidence included references to concrete examples of money laundering through luxury goods markets. These examples offer valuable insight into how money laundering through luxury goods markets actually occurs and demonstrate that it is much more than a theoretical risk. A sampling of these examples from various sources is set out below.

Europol’s 2015 report Why Is Cash Still King? offered the following example of a money laundering scheme uncovered in France involving the purchase, transportation, and sale of gold:

20 Exhibit 64, Europol Cash Report, p 13.
21 Exhibit 774, Appendix D, Art Trade Guidelines.
23 Exhibit 774, Appendix F, Art Industry and Undermining Sanctions.
A recent investigation by French authorities into a drug trafficking network led to several arrests relating to the laundering of the group’s profits. Money from the sale of cannabis was collected in France and its laundering was orchestrated through the movement of cash from Paris to Belgium, where it was used to buy gold. Thereafter, couriers (often Belgian students) acted as mules, transporting the gold to Dubai. In Dubai the gold was then made into jewellery and sent to India to be sold on the gold market. The profits were finally shared between the [organized crime groups] and money launderers with the assistance of bankers with access to the financial system. A key organiser admitted laundering EUR 36 million since 2010 and sending 200 kg of gold from Belgium to India. The network collected about EUR 170 million per year.26

Simon Lord spoke of money laundering schemes involving gold observed in the United Kingdom in strikingly similar terms:

[O]ne of the things that we have seen is people using … bullion dealers, paying cash into the accounts of a bullion dealer, the bullion dealer supplying them with fine gold bars, and then people … moving the gold bars across an international boundary instead of moving cash. Now, the advantage that they had of doing that in the UK up until relatively recently was that gold and precious metals, stones, and things like that didn't count as cash, and so you couldn't seize it in the same way that you could cash. That has actually changed recently. There has been something ... called the "listed asset" provisions which have been introduced into our primary money laundering legislation ... [They] effectively enabl[e] us to seize ... gold, precious metals, items like that, in the same way that we would do in cash. But ... it is something we've seen, and it's a useful method of money laundering, when you're moving gold to ... a gold processing centre or [somewhere], the demand is very high. So, in places like India, for example, and in places like the [United Arab Emirates] ... which processes a lot of gold [and] turns it into jewellery. And India, the price of gold actually tends to go above the gold fix a lot of the time because the demand is so great, they can't get enough gold to meet the demand. So if you're going to move money and you're going to move it to somewhere like India, then doing it through gold is quite an effective way of dealing with it.27

A 2013 Financial Action Task Force report identified a money laundering scheme involving the purchase of vehicles in the United States with funds originating in Lebanon, and the export of those vehicles to West Africa:

An investigation by the Drug Enforcement Administration (DEA) and other federal law enforcement agencies discovered a scheme to launder money

---

26 Exhibit 64, Europol Cash Report, p 37.
27 Transcript, May 29, 2020, p 22.
through the United States financial system and the United States used car market. As part of the scheme, funds are transferred from Lebanon to the United States in order to purchase used cars, which were are [sic] shipped to West Africa and sold for cash. Cash proceeds of these car sales are then transferred, along with the proceeds of narcotics trafficking and other crimes, to Lebanon. The cash is often moved through bulk cash smuggling. In 2012, the US District Court—Southern District of New York (SDNY) issued a civil ML complaint and “in rem” forfeiture action involving a number of Lebanese financial institutions and exchange houses.  

Other examples found in these sources describe the identification of luxury goods including luxury cars, fine art, yachts, and jewellery purchased with the proceeds of crime or corruption; the use of various luxury goods to convert, store, transport, and/or transfer value acquired through illicit activity; and efforts to launder luxury goods that are themselves the proceeds of crimes such as theft or smuggling. In my view, this evidence clearly establishes not only that it is possible to launder money through luxury goods markets, but that this type of activity is a reality in jurisdictions across the globe.

Money Laundering Through Luxury Goods in Canada

The evidence before me also establishes that Canada’s luxury goods markets are not immune to this form of money laundering. Of the 38 case examples set out in the Financial Action Task Force report referred to above, six were drawn from Canada. The methodology used in compiling the Financial Action Task Force report was clearly not intended to produce a representative sample, and no conclusions should be drawn as to the prevalence of this typology from the apparent disproportionate number of cases in this report emanating from Canada. However, these examples, set out below, clearly demonstrate that luxury goods markets are being used to launder money in Canada:

a. **Case Study #1:** This case involved an organised criminal group that distributed drugs and controlled several low-level (street-level) drug dealers. The higher-placed distributor would distribute drugs to the street-level dealer and receive diamonds, gemstones, and jewellery as payment, as well as cash. Likewise, the street-level drug dealer traded drugs for diamond jewellery and then traded up to the higher placed drug dealer for more drugs and debt payments. The higher placed drug distributor would then sell the diamonds and jewellery at small

---

incremental amounts (CAD $3,000–$8,000) to the jewellery market (jewellers) and in return would receive payment by way of cheque. The drug distributor also received high-end jewellery (watches) instead of payment for the illicit jewellery.\textsuperscript{33}

b. **Case Study #4:** This case involved a drug dealer/producer who sold drugs and traded drugs for collectively over US $1 million in stolen and purchased jewellery. The drug dealer – who had strong industry, commodity, and market knowledge – sold the least valuable (scrap) jewellery as scrap to jewellery stores and bullion dealers. Jewellery that had some aesthetic or residual market value above the component parts was sold as estate jewellery to jewellers. In return, the drug dealer received cash, gold and silver bars, and coins and diamond jewellery. The drug dealer used some of the proceeds of crime from the sale of drugs and sale of jewellery obtained through trade for drugs to purchase specific diamond jewellery and gemstones items (jade) as a means to store wealth. The drug dealer used appraisals to define the value of jewellery that was stored as wealth and to help negotiate fair prices for the resale of the jewellery to the market.\textsuperscript{34}

c. **Case Study #13:** This is a case where fraud was the predicate offence. The criminals had jewellery industry contacts at the wholesale level. To launder the proceeds of crime, they purchased over CAD $1 million worth of diamonds that were then re-sold back to the jewellery market and also to the general public through the Internet. They did not mark up the value of the diamonds for retail purposes; instead, they sold them to retail customers at wholesale prices and therefore moved them quickly. The diamonds were all in a size and quality class that are the most desirable and resulted a quick turnover of the diamonds. The money received from the sale of the diamonds was wired direct to their bank from the various sales locations.\textsuperscript{35}

In addition to these examples, evidence from witnesses who testified before me also supports the conclusions that proceeds of crime are being used to purchase luxury goods in Canada and that the markets for these goods are being used to launder money in this country. Garry Clement, an anti-money laundering expert and former RCMP member who was heavily involved in the early days of the RCMP’s proceeds of crime section, described the frequency with which proceeds-of-crime investigations undertaken by the units he led involved luxury goods:

> I can tell you in just about every investigation that I was involved in or had my units investigate, we came across all kinds of safety deposit boxes full

\textsuperscript{33} Exhibit 774, Overview Report: Luxury Goods, para 44.
\textsuperscript{34} Ibid.
\textsuperscript{35} Ibid.
of high-value jewellery, Rolex watches, not so much of interest today, but they were quite popular in the '80s and '90s. We all know that paintings from renowned artists are worth [a] tremendous amount of money, but ... high-valued goods [haven't] been something that Canada in the past has looked at, and yet it's a great investment because we've gone into lots of fairly sophisticated criminals and found their house[s] full of art. So it was a great way to launder money and at that time, and still for the most part, a lot of these high-end jewellers have not had to report. So it's ... a vehicle for money laundering very much like the high-end car industry was. And so what we had to look at and we've looked at for years is that ... anything that can ... hide your cash, a vehicle to hide your cash, definitely is used by sophisticated criminals, and I think it's an area that we are tightening up in some areas in Canada, but it's an area that we really need to take a serious look at, whether it's done provincially or otherwise ... I started a program in the '90s out of Ottawa called Merchants Against Money Laundering, and I really believe that all merchants need to get on side here. It's both a moral and ethical responsibility because we are sadly losing the fight in this arena.36

Similarly, Chief Superintendent Robert Gilchrist, director general of Criminal Intelligence Service Canada, gave evidence of an investigation into a casino-focused money laundering scheme resulting in the seizure of property including luxury vehicles presumably believed to have been purchased with the proceeds of crime:

A recent example of the use of casinos by organized crime is actually an example out of the Province of Ontario. It's a York Regional Police investigation that has been publicly reported on and therefore I can comment. It's an investigation into an organized crime group based in Ontario. During that investigation, group members collectively gambled in Ontario casinos and are believed to have laundered over $70 million Canadian inside legal casinos. It's reported members of their group went to casinos nightly with $30 to 50,000 Canadian funds, lost a fraction of their cash, and allegedly pocketed the rest as legitimate wins. In July of 2018, this investigation resulted in numerous arrests in Canada and Italy, and approximately $35 million in seizures, including homes and luxury vehicles.37

While it is not possible based on this evidence to gain a sense of the prevalence of this method of money laundering in Canada generally, it makes clear that the risk of money laundering through luxury goods markets in this country is not simply theoretical. It also demonstrates that, as is the case elsewhere in the world, proceeds of crime are actually being used to purchase luxury goods, including as part of deliberate efforts to launder those illicit funds.

Money Laundering Through Luxury Goods in British Columbia

The foregoing examples of money laundering through luxury goods markets in Canada are not identified as occurring within British Columbia specifically. The example drawn from Mr. Gilchrist's evidence occurred in Ontario, while the remainder do not specify the province in which they occurred. While I am unable to determine whether any of these specific incidents occurred in British Columbia, it would be naïve, in my view, to believe that the proceeds of crime were being laundered through luxury goods markets globally and elsewhere in Canada, but not in this province. This is particularly so in light of the near-complete absence of regulatory efforts to deter or prevent this form of money laundering in this province, as I discuss later in this chapter.

While the evidence described above offers, in itself, ample basis to infer that this method of money laundering must also be in practice in this province, evidence before the Commission – including testimony of criminologist Stephen Schneider, Dr. German's second report (Dirty Money 2), and evidence of efforts relating to luxury vehicles undertaken as part of Project Athena – provides additional support for this inference.

Dr. Schneider gave evidence before the Commission for three days and produced a report titled Money Laundering in British Columbia: A Review of the Literature. As part of this literature review, Dr. Schneider identified both “Motor Vehicles” and “Precious Metals and Gems” as methods of money laundering in the province, offering examples of the use of proceeds of crime to purchase jewellery and motor vehicles, including the following two case studies:

Case Study #1: In August 2018, a multi-agency police task force investigation into gang activity in Greater Vancouver arrested members of the “Kang/Latimer Group,” charging 14 people with 92 criminal offences. As part of the bust, police seized 93 firearms, an improvised explosive device, 59 prohibited devices, 9.5 kilograms of fentanyl, almost 40 kilograms of other illicit drugs, $833,000 in cash, $800,000 in jewellery, and $350,000 in collector cars, all of which became the subject of civil forfeiture proceedings. The next week, the Delta Police Department announced additional drug trafficking and weapons charges against seven men linked to the Red Scorpion gang. Among the assets seized as proceeds of crime from Latimer were $82,000 in cash and four luxury vehicles.

Case Study #2: In November 2014, the B.C. Civil Forfeiture Office successfully pursued a civil claim to force the forfeiture of more than CAD $200,000 worth of jewellery from an individual who was, at the time, a member of the Renegades MC, a Hell's Angels affiliate in Prince George. The individual was found guilty in May 2014 of weapons offences, although the Civil Forfeiture Office alleged that he and his girlfriend derived

39 Ibid, p 76.
their income from drug trafficking. Among the items (and their worth) ordered to be forfeited by the courts were a man’s yellow 10-karat gold diamond pendant (CAD $42,610.40), a man’s Breitling watch ($37,916.00), a man’s 12-karat yellow gold chain ($30,284.80), a man’s 14-karat white gold diamond ring ($26,073.60), a man’s 18-karat white gold diamond ring ($22,797.60), a yellow and white gold diamond cross pendant ($15,444.80), a man’s 12-karat yellow gold diamond ring ($12,331.20), a man’s yellow gold demon garnet ring ($3,472.00), and a yellow gold chain ($3,225.60). The girlfriend allegedly stored some of the jewelry in a safety deposit box to prevent its seizure by the RCMP.40

Dirty Money 2 provides further support for the contention that money laundering through the luxury goods market is actually occurring in British Columbia. Focusing specifically on luxury vehicles, Dr. German identified significant cause for concern regarding possible money laundering in the motor vehicle market, setting out information obtained from motor vehicle dealers about suspicious transactions and activity suggestive of money laundering.41 Dr. German42 and Doug LePard, who worked with Dr. German on his second report, gave evidence as to the efforts undertaken with respect to the motor vehicle industry in preparation of the report. Mr. LePard, a policing and criminal justice consultant and former deputy chief with the Vancouver Police Department, explained the process by which they examined this industry and the ease with which he was able to identify activity he believed to be connected to money laundering:

I did a lot of reading to orient myself to what the situation was and looked at investigations into money laundering in other jurisdictions that had been occurring through vehicles. There was really a wealth of information about that. I applied my police experience too in terms of, well, how does a criminal with no legal source of income buy an expensive car? Well, they are going to need to buy it with cash because they’re not going to be getting bank loans and that sort of thing.

So again, to put it in a nutshell, I approached it from a number of different angles. And one of those was to cold call dealerships – sometimes with information that I had received confidentially, either through tips that we received when we were working on the project or through police officers who were expert at these kinds of investigations – about where I might want to look and found it wasn’t hard at all to find that there was money laundering going on through luxury cars in a number of different ways, either directly purchasing very expensive cars with the proceeds of crime to engaging in various scams to legitimize proceeds of crime.43

41 Exhibit 833, Dirty Money 2, pp 184–89.
42 Evidence of P. German, Transcript, April 12, 2021, pp 67–70.
43 Transcript, April 7, 2021 (Session 1), pp 60–61.
Similarly, Melanie Paddon, a retired RCMP sergeant with 27 years of experience investigating the proceeds of crime, gave evidence regarding the efforts undertaken with respect to luxury vehicles, undertaken as part of Project Athena (described in detail in Chapter 39). 44 Sergeant Paddon described her own efforts to examine the practices of motor vehicle dealers in British Columbia, identifying a number of indicators of possible money laundering activity observed at motor vehicle dealerships in this province. 45 Given her experience and qualifications, Sergeant Paddon’s evidence offers some further support for the conclusion that money laundering through luxury goods markets is a reality in British Columbia.

It is therefore clear, in my view, that money laundering is occurring in British Columbia’s luxury goods markets. There is no credible basis to believe that this province would be immune to this phenomenon, observed in multiple international jurisdictions and in Canada generally. The work of Dr. German and Dr. Schneider, as well as the efforts of Sergeant Paddon as part of Project Athena, are sufficient to put to rest any lingering doubts that British Columbia may be an outlier in this regard and satisfies me not only that the province faces a significant risk of money laundering through luxury goods markets, but that activity of this sort is actually occurring.

**Organization and Regulation of Luxury Goods Markets**

The significant risk of money laundering in the luxury goods sector – and the inescapable conclusion that this risk has been realized – call for a forceful regulatory response to mitigate risk and eliminate this activity through the prevention and detection of money laundering in this sector. Unfortunately, no such response has materialized to date, and to whatever extent the proceeds of crime are being laundered in luxury goods markets in British Columbia, they are being laundered largely without interference. In fact, efforts to combat money laundering in the luxury goods sector in this province are so anemic that they inhibited the Commission’s efforts to examine money laundering in the sector simply because, in many markets, there are no records, no information about suspicious activity is gathered, and there is no one with relevant responsibilities to speak to.

This absence of anti-money laundering regulation is one of three features of the luxury goods sector that exacerbate the inherent money laundering risk associated with these types of goods, discussed above. The other two features – the diversity of the sector and diffusion of the markets that comprise the sector – are contextual features that add to the money laundering risk in luxury goods markets. In what follows, I discuss these two features and their impact on the risk associated with the sector, before addressing the absence of regulation in greater depth.

---

44 Transcript, April 14, 2021, pp 90–95; Exhibit 842, Luxury Vehicle Sub Group (undated).
45 Transcript, April 14, 2021, pp 91–95; Exhibit 842, Luxury Vehicle Sub Group (undated).
The Nature of British Columbia’s Luxury Goods Sector: Diversity and Diffusion

In order to understand the money laundering challenge facing British Columbia's luxury goods sector, it is necessary to appreciate the significance of the two features of the sector identified above: diversity and diffusion. These features add to the risk of money laundering in the sector, while also complicating efforts to regulate it.

The sector is diverse in the sense that it is comprised of a broad range of different markets, selling products ranging from motor vehicles to jewellery to electronics. Even as the risk of money laundering faced by these markets is shared, they are, in other ways, distinct, each with their own unique cultures, traditions, and practices. While, in my view, it is useful to view these markets as one sector for anti-money laundering purposes, this does not change the fact that it is a sector comprised of a loose collection of very different markets that may have little in common beyond the elevated value of the goods that they sell and the nature of the money laundering risk that they face.

The diversity of the sector exacerbates money laundering risk and complicates anti-money laundering efforts. In particular, it creates a complex tapestry of distinct markets, the idiosyncrasies of which can be exploited by those intent on laundering money. Meanwhile, efforts to regulate these markets in a coordinated way are forced to grapple with how each operates and consider how to distinguish the normal functioning of unique markets from genuinely suspicious activity. For example, the tradition of confidentiality and discretion in the market for fine art creates money laundering risk, but also a possible legitimate explanation for an interest in maintaining a level of secrecy over transactions that would be difficult to justify in other markets. Effective anti-money laundering regulation of this sector in a unified way requires an in-depth knowledge of how each of these markets functions sufficient to distinguish normal behaviour consistent with the cultures and traditions of each from genuinely suspicious activity.

Money laundering risk and the complexity of regulation is also elevated by the diffusion of the luxury goods sector. The sector is diffuse in the sense that the markets that comprise the sector typically consist of a large number of separate, often small, retailers. For example, by the end of 2021, there were 1,535 separate licensed motor vehicle dealers in British Columbia, while in 2018 a representative of the Canadian Jewellers Association estimated in testimony before the House of Commons Standing Committee on Finance that there were approximately 5,000 jewellers in Canada. Add to these all of the art dealers and galleries, yacht brokers, electronics retailers, and other businesses dealing in luxury goods in British Columbia and it is clear that the number of

---

46 Exhibit 774, Overview Report: Luxury Goods, paras 2, 57, 60; Appendix D, Art Trade Guidelines, pp 103, 121.
48 Exhibit 776, Affidavit No. 1 of Beatrice Sturtevant, March 22, 2021 [Sturtevant #1], p 23.
distinct businesses operating in this sector creates an industry very different in character from, for example, the gaming industry, which is overseen by a single Crown corporation.

The diffusion of the sector presents a money laundering challenge and complicates regulation by creating a vast number of distinct locations at which money laundering could occur. Whereas the gaming industry offers a limited number of casinos – all under the control of single Crown corporation – that can be targeted for money laundering, the luxury goods sector presents a virtually limitless number of distinct businesses, any one of which could be used to launder money. The challenge this presents for regulation is obvious. Given the realities of finite time and resources, the task of maintaining effective oversight over activities within one such market is daunting. When multiplied by the number of distinct markets that comprise the sector, the challenge only grows.

**The Absence of Anti–Money Laundering Regulation in the Luxury Goods Sector**

While the foregoing features of the luxury goods sector offer insight into why it may be difficult to address the risk of money laundering in this sector in British Columbia, they offer no excuse for the near-complete absence of any efforts to combat or even detect the use of illicit funds in this area of the province’s economy. In most instances, the absence of anti–money laundering regulation is likely a function of the absence of any kind of significant regulatory regime. Most luxury goods markets – for example, art dealers and galleries, jewellers, yacht brokers, and luxury clothing and apparel retailers – are largely unregulated industries, save for the reporting and other obligations of jewellers under the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act*, SC 2000, c 17 (PCMLTFA) and routine obligations for requirements such as business licenses.49

However, even heavily regulated markets in this sector – particularly the motor vehicle industry – suffer from a dearth of anti–money laundering regulation. The sale of motor vehicles in British Columbia is governed by the *Motor Dealer Act*, RSBC 1996, c 316, and the regulations to that Act.50 The Act and regulations set out a comprehensive scheme for regulating motor vehicle dealerships and salespeople, which is administered in part by the Vehicle Sales Authority of British Columbia.51 Among the regulatory requirements set out in the Act are requirements that motor vehicle dealers be registered with the authority52 and that motor vehicle salespersons be licensed by it.53 The Act provides for a complaints process54 and authorizes the
authority to take various investigative steps and impose disciplinary measures in response to complaints.\textsuperscript{55} The authority also has the power to refuse, cancel, or suspend a registration and to refuse, revoke, or suspend a license if the registration or license is not in the public interest.\textsuperscript{56}

Despite these stringent regulatory requirements, motor vehicle dealers are not subject to any anti-money laundering requirements: neither the Act nor the mandate of the Vehicle Sales Authority extends to money laundering, and motor vehicle dealers are not subject to the \textit{PCMLTFA}.\textsuperscript{57} The primary function of the Vehicle Sales Authority is consumer protection.\textsuperscript{58} Accordingly, while it has the power to conduct inspections and compel dealers to produce information, it cannot do so for the purpose of identifying indicators of money laundering.\textsuperscript{59} Further, although the authority can produce rules and regulations binding motor vehicle dealers and salespeople, it has no such rules or regulations requiring basic anti-money laundering practices such as customer due diligence requirements or regulations governing cash payments.\textsuperscript{60}

\textbf{Impact of Diversity, Diffusion, and Absence of Regulation on Perceptions of Money Laundering in the Luxury Goods Sector}

In addition to the above challenges, the absence of centralization and regulation in luxury goods industries may contribute to an underestimation of the severity of money laundering activity in this sector. Because no one is responsible for monitoring possible money laundering activity in these markets, and because no one is collecting the information necessary to do so, it may appear as though there is no money laundering concern in these markets simply because signs of such activity go unnoticed. As such, it may be that the greater public concern about money laundering in the gaming industry (a centralized, regulated sector), compared to the luxury goods sector, is not a reflection of limited money laundering activity in luxury goods markets, but rather the result of greater scrutiny of the gaming industry, which brings those issues that do exist to light. In other words, it may be that the reason the public has not been alarmed by surveillance footage of bags of cash accepted at car dealerships, jewellers, art dealers, and yacht brokerages is not because there are no bags of cash, but because there is no surveillance footage. This possibility underscores the need for further efforts to examine money laundering in this sector as well as the need to structure the sector to ensure that effective anti-money laundering scrutiny is possible.

Industry-Driven Anti–Money Laundering Efforts

The near-complete absence of any kind of meaningful anti–money laundering regulation in British Columbia’s luxury goods sector does not mean that there is no cause for optimism that steps are being taken to address the elevated risk faced by this sector. While regulators and other public authorities are, for the most part, not taking meaningful action, there are examples of industry itself working to mitigate the risks of money laundering in luxury goods markets. In particular, the jewellery and precious metals and stones industry, as well as the yacht brokerage industry, have taken action to prevent money laundering within their markets. As I discuss below, however, there are inherent limitations on the impact of this kind of voluntary, industry-led action, and it cannot be relied upon as a complete solution to this problem.

Jewellery and Precious Metals and Stones

In contrast to the motor vehicle sales industry, where heavy regulation has not resulted in meaningful anti–money laundering action, the market for jewellery and precious metals and stones offers an example of how limited regulation can spur an industry to take additional action on its own initiative where that industry is well-organized and where that regulation is focused on the risk of money laundering.

The jewellery and precious metals and stones industry is largely unregulated. While the industry is the subject of some federal legislation such as the Export and Import of Rough Diamonds Act, SC 2002, c 25, and the Precious Metals Marking Act, RSC 1985, c P-19, there is no legislation at the federal or provincial level establishing a comprehensive regulatory regime for the industry. Accordingly, in contrast to the motor vehicle sales industry, there is no requirement that jewellery and precious metals and stones retailers register with a regulator, or that salespeople working in the industry be licensed. Nor is there a regulator equivalent to the Vehicle Sales Authority, which is empowered to receive complaints, conduct inspections, impose discipline, or exclude bad actors from the industry.61

Where the regulation of this industry exceeds that of the motor vehicle sales industry, however, is with respect to regulations specifically targeted at money laundering. Unlike motor vehicle dealers (and most luxury goods retailers), dealers in precious metals and stones are subject to the PCMLTFA and have been since 2008.62 Accordingly, dealers in precious metals and stones are required to comply with the obligations of that regime, including reporting suspicious and other transactions to the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC) and implementing a compliance program.63

While the requirements of the PCMLTFA may well assist in the identification and prevention of money laundering in the industry, perhaps of greater interest in understanding the impact of regulation is the response of the industry itself to this regulation, organized by the Canadian Jewellers Association.

62 Ibid, para 39; Exhibit 776, Sturtevant #1, pp 32, 67.
63 Exhibit 776, Sturtevant #1, para 25. See Chapter 7 for a more detailed explanation of the PCMLTFA regime.
The Canadian Jewellers Association is a national trade association for the Canadian jewellery industry, founded in 1918 and comprises retailers, suppliers, appraisers, designers, and providers of goods and services. Membership in the Canadian Jewellers Association is voluntary. In 2020, the association had 444 members across Canada, including 57 in British Columbia. I note that this membership seems to be a small proportion of the total number of jewellers operating in Canada, given the association’s 2018 estimate that there were 5,000 jewellers operating in Canada.

Since the incorporation of dealers in precious metals and stones into the PCMLTFA, the Canadian Jewellers Association has taken a number of actions to assist its members and the industry more broadly to comply with their obligations under the regime and to reduce the risk of money laundering in the market for jewellery, precious metals and stones. These actions include:

- producing training and professional development materials for the association’s members, available in person and online;
- publishing anti-money laundering articles and resources, including in the association’s monthly newsletter and in trade publications; and
- developing resources in conjunction with a consulting firm to assist in implementation of compliance programs, including the creation of an online tool to assist in risk assessment and identification of necessary components of a compliance program.

It does not appear that any data have been collected that would allow the Commission to draw any conclusions as to the impact these measures have had on the prevalence of money laundering in the jewellery and precious metals and stones industry. However, experience in other sectors has taught us that anti-money laundering education and resources can go some way toward addressing risk. These efforts on the part of the industry were clearly prompted by the increased regulation introduced when the PCMLTFA was extended to dealers in precious metals and stones. Yet, there was no obligation for the Canadian Jewellers Association to take the action that it took, and I applaud the association and, by extension, the industry, for the steps it has taken.

The activity by the Canadian Jewellers Association demonstrates not only that enhanced regulation can have positive ancillary effects that go beyond basic legal

requirements, but also that voluntary industry action may be a viable means of enhancing the province’s response to money laundering. It also shows that there may be value in government working with industry groups such as the Canadian Jewellers Association in the hope of inspiring such action.

**Yacht Brokerages**

The example of the yacht brokerage industry in British Columbia suggests that it may be possible to prompt this kind of voluntary action by industry even in the absence of binding regulations. Like many luxury goods retailers, yacht brokers are not subject to the *PCMLTFA*. The industry is also largely unregulated, with no licensing or registration requirements in the same way as the motor vehicle sales industry.

While largely unregulated, the industry in this province is organized through the British Columbia Yacht Brokers Association. The association is a society incorporated under the *Societies Act*, SBC 2015, c 18, and has the following purposes:

a. To unite those engaged in the yacht brokerage business for the purpose of promoting cooperation and professionalism through its members.

b. To promote and maintain a high standard of conduct in the transacting of the yacht brokerage business.

c. To instill in the boating public a greater confidence in yacht brokers.

d. To encourage a greater interest in the welfare and safety of the boating public.

In June 2020, the BC Yacht Brokers Association introduced its “Anti–Money Laundering Practice Policy” and amended its Code of Ethics to require compliance with the policy. The policy requires members to implement certain anti–money laundering practices, including those related to client identification, ascertaining beneficial ownership, and handling cash transactions. It also assigns brokers responsibility for establishing a “comprehensive and effective program” for complying with the policy and provides tips for identifying possible money laundering activity.

As with the actions taken by the Canadian Jewellers Association, I am unable to evaluate the precise impact the actions taken by the BC Yacht Brokers Association have had on money laundering in the industry. However, this is clearly a positive development from

an anti-money laundering perspective and further demonstrates that voluntary action on the part of industry may realistically contribute to the province’s anti-money laundering efforts. Moreover, the actions of the BC Yacht Brokers Association indicate that this kind of industry-led action may be possible even without binding regulation like that applicable to dealers of precious metals and stones. Based on documents produced by the BC Yacht Brokers Association, I understand that it was contact from the Commission itself that may have spurred the development of this practice policy. This suggests that it may be possible for authorities to inspire meaningful action to address money laundering in luxury goods markets simply by reaching out to industry and raising awareness of the risk of illicit activity.

The Limits of Industry-Driven Action

The examples of voluntary industry action noted above are encouraging. I commend the Canadian Jewellers Association and the BC Yacht Brokers Association for their efforts to protect their own industries from criminal activity, and I encourage other industries to take similar action. In my view, however, while industry-led action may be part of the solution to the elevated money laundering risk faced by the luxury goods sector, it cannot be relied upon to resolve the problem in the absence of meaningful action from government.

This is so in part because both of these examples involve voluntary industry action prompted by action on the part of government or public authorities. The efforts of the Canadian Jewellers Association are clearly a response to the inclusion of dealers in precious metals and stones in the PCMLTFA, while I understand the actions of the BC Yacht Brokers Association to have been a response to contact by the Commission. It is possible that these industries may have eventually taken action on their own initiative, but it seems likely that in both cases the “nudge” provided by a public authority was a necessary precondition to the voluntary action. This illustrates the importance of government engaging at least to the point of encouraging voluntary action by industry. Further, as I noted above, the Canadian Jewellers Association represents approximately 10 percent of the total number of jewellers in Canada; while I understand that their anti-money laundering activities are not strictly limited to their own membership, they likely leave unaddressed a large proportion of the industry.

More fundamentally, voluntary industry action cannot be relied on as a complete solution to the risk of money laundering precisely because it is voluntary. There will inevitably be businesses within luxury goods markets that choose not to adopt these voluntary measures, and even entire industries that will decline to do so. As an example, the Commission engaged with the Art Dealers Association of Canada in a manner similar to its communications with the BC Yacht Brokers Association. Whereas the BC Yacht Brokers Association responded by taking meaningful action to reduce the risk of money laundering in their industry, the Art Dealers Association of Canada responded with skepticism that their industry could be affected by money
laundering and by cautioning that “over-legislation” could harm the industry.\textsuperscript{80} To be clear, the Commission did not ask the Art Dealers Association of Canada to take action to respond to the risk of money laundering in its industry, and I have no evidence supporting a conclusion that its members are anything but ethical, law-abiding business owners. That said, this response does underscore the limits of voluntary action and the need for active engagement by government to effectively address money laundering in the luxury goods sector.

\textbf{Lessons from the Organization and Regulation of Luxury Goods Markets}

The following section sets out a model for addressing money laundering in the luxury goods sector in British Columbia and describes the role that could be played within that model by a permanent AML Commissioner. Before discussing this model, however, I believe that it is useful to pause and identify three key lessons that can be learned from the discussion above regarding the regulation and organization of luxury goods markets and their implications for the risk and response to money laundering in this sector.

\textit{Access to Information}

The Commission’s own experience illustrates that the first step in addressing the risk of money laundering in this sector of the economy is to make it possible to understand what is happening in the markets that comprise the sector. The diffusion of the sector makes the task of collecting information onerous; the absence of regulation means that no one is tasked with attempting to do so (with the exception of FINTRAC in the case of jewellers); and the absence of any record-keeping or reporting requirements in most of the sector mean that useful information may not exist even if it was possible to collect and someone had the mandate to do so. I would add that even though many people have a superficial sense of money laundering, the stereotypical or simplistic view belies the complexity and the reality of money laundering. This is a topic area that is not intuitive, and if anything is often misunderstood or oversimplified. Any effort to combat money laundering in this sector must begin by solving this informational challenge, including statutory barriers that may exist.

\textit{The Importance of Focused Regulation}

The example of the Vehicle Sales Authority demonstrates that, even where a robust regulatory regime exists within a luxury goods market, regulation must be targeted at preventing money laundering if it is likely to have a meaningful impact. The vehicle sales industry is heavily regulated – including registration and licensing requirements for dealerships and salespeople – yet there is no meaningful, industry-wide effort to prevent money laundering in the industry. If we are to expect a regulator like the

Vehicle Sales Authority to take effective action to prevent money laundering in the industry it regulates, it must be given a mandate – as well as the necessary authority and resources – to do so.

**The Role of Voluntary Action**

The experiences of the Canadian Jewellers Association and the BC Yacht Brokers Association demonstrate that voluntary action by industry is a viable, if limited, means of addressing risk in this sector. With the support and encouragement of government, industry may take on the task of combatting money laundering itself by setting voluntary standards and providing resources to individual retailers that may not have the knowledge or resources to limit their money laundering risk themselves. Voluntary action of this sort has the advantages of being extremely low cost for government and allowing an industry to develop a bespoke approach to combatting money laundering – one tailored to the culture, traditions, and practices of the industry. While the presence and potential of voluntary industry measures does not obviate the need for more direct and coercive action by government, encouragement and support of voluntary action is deserving of investment.

**A Model for Addressing Money Laundering in the Luxury Goods Sector**

The preceding discussions of the risk of money laundering facing the luxury goods sector and the regulation and organization of luxury goods markets offer valuable insight into the nature of the risk facing this sector of the economy and the very limited measures in place to address it. In what follows, I draw on these insights to develop a model for addressing the risk of money laundering in this sector by identifying six components essential to an effective money laundering response in the luxury goods sector.

The model here is not intended to be a prescriptive one. While it is not devoid of specific recommendations, it does not identify a comprehensive set of specific measures that must be implemented in all luxury goods markets. As discussed above, the luxury goods sector consists of a collection of distinct markets, each with its own unique cultures, practices, and risk factors. Due to the nature of the sector, it is my view that the response to the risk of money laundering in this sector must be flexible and adaptive to ensure that the response can be tailored to the unique circumstances and risk factors of individual markets and evolving activity within those markets. The model proposed below is intended to facilitate this flexible and adaptive response.

As I expand below, the model I am proposing will involve a central authority receiving reports on transactions involving $10,000 or more in cash. The Province is best placed to determine which entity should receive and store these reports (for the
purposes of this discussion, I will refer to this entity as the “central authority”). Indeed, the Province may consider that having the reports go directly to the AML Commissioner is desirable. In any event, it is essential that the AML Commissioner have access to these reports and the ability to communicate with the central authority about the usefulness of such reports and possible changes to the regime.

I add that the reports should ideally go to one central authority, rather than, for example, having reports about vehicles going to the Vehicle Sales Authority and those for other luxury goods elsewhere. The primary reason for this reporting regime is to permit the central authority and the AML Commissioner (who, again, must have access to the reports) to understand activity in the luxury goods sector, which is, at present, something of a black box due to the difficulties I have outlined above. Having the reports go to different entities would make it more difficult for the central authority and the AML Commissioner to assess the luxury goods sector as a whole.

**Visibility into Activity Within Luxury Goods Markets**

In order to effectively combat money laundering in the luxury goods sector, it is necessary to first understand the nature of the activity occurring within the markets that comprise the sector. As discussed above, among the challenges associated with combatting money laundering in the luxury goods sector are diversity, diffusion, and lack of regulation in the sector. Because of these features, as things presently stand, it is very difficult to gain an understanding of the extent to which money laundering is occurring within the sector and, if it is occurring, how it is being accomplished.

If there is any hope of ensuring that the luxury goods sector in British Columbia is not used to launder illicit funds, this challenge must be overcome by creating visibility into activity occurring within the markets that make up this sector. There are a range of possible measures that may assist in creating this visibility. These include reporting requirements like those applicable to reporting entities under the PCMLTFA, or the granting of audit and inspection powers to regulatory or other public authorities. The most appropriate measures will likely vary by market, and it will be necessary to work and consult with industry to identify the most appropriate approach for each market.

As I have discussed, one of the ways criminals launder proceeds through luxury goods is to use illicit cash to purchase the luxury goods, thereby transforming the cash into a less suspicious form that can be transferred or sold to provide a façade of legitimacy. Given the elevated risk associated with certain types of transactions, it is necessary, in my view, to establish a common basic reporting requirement that will ensure a minimum level of visibility into suspicious activity – not only in the luxury goods sector, but across the province’s economy.

To this end, I recommend that the Province implement a universal record-keeping and reporting requirement for cash transactions of $10,000 or more for all businesses,
with limited, enumerated exceptions. This recommendation is not intended as a complete solution to the challenge of creating visibility into these markets, but rather as a minimum necessary starting point, onto which further measures will inevitably be added. This recommendation is discussed in detail below, followed by a discussion of the role that could be played by the AML Commissioner in evaluating the need for additional measures.

**Recommendation 82:** I recommend that the Province implement a universal record-keeping and reporting requirement for cash transactions of $10,000 or more. Every business that accepts $10,000 or more in cash in a single transaction or a series of related transactions should be required to:

- verify a customer’s identification and record their name, address, and date of birth;
- inquire into and record the source of funds used to make the purchase;
- determine whether the purchase is being made on behalf of a third party and, if so, inquire into and record the identity of that third party; and
- report the transaction – including the total amount of cash accepted; the item or service purchased; the source of funds reported by the customer; whether the purchase was made on behalf of a third party and, if so, the identity of that third party; and the name, address, and date of birth of the customer – to the Province.

The Province should ensure that the AML Commissioner has access to these reports.

The universal record-keeping and reporting requirement should apply in all circumstances, with some narrow exceptions:

- one-time transactions between private individuals;
- financial institutions and financial services businesses;
- lawyers; and
- other situations where it is determined that the requirement would be unduly onerous, generate reports of little value, or is otherwise inappropriate.

I note that this recommendation is broad enough to encompass cash transactions involving both goods and services, in line with my discussion earlier in this chapter about the money laundering risks associated with services. It is also broad enough to encompass the receipt of cash by builders and building supply companies. As I elaborate in Chapter 17, the Commission conducted a small study into the acceptance
of cash by builders and building supply companies, which showed that five building suppliers took in over a million dollars in large cash transactions ($10,000 or more) between 2015 and 2020.

**A Universal $10,000 Cash Record-Keeping and Reporting Requirement**

As a general principle, I believe that anti–money laundering measures, including information-gathering mechanisms, should be tailored to the unique circumstances of individual luxury goods markets. There are some types of activity, however, that give rise to sufficient suspicion that they must be subjected to scrutiny regardless of the market in which they occur. The use of very large volumes of cash is one such type of activity.

Given the extent to which Canadian society has moved away from cash in favour of other payment methods, in most circumstances it is difficult to conceive of why a purchaser spending legitimate funds would choose to pay for any high-value good or service using cash. While I do not propose, at this stage, that the Province ban such transactions, I do believe that very large cash transactions pose a significant risk of money laundering and that this risk justifies requiring that additional information be gathered and reported to appropriate authorities. For this reason, I am recommending that any business that accepts $10,000 or more in cash as payment for a good or service in a single transaction or series of related transactions, with identified exceptions, be required to:

- verify and record the identity of the customer making the payment by viewing a piece of government-issued photo identification and recording the customer's name, address, and date of birth;
- inquire into and record the source of the funds used to make the purchase;
- determine whether the purchase is being made on behalf of a third-party, and if so, inquire into and record the identity of that third party; and
- report the transaction – including the total amount of cash accepted; the item or service purchased; the source of funds reported by the customer; whether the purchase was made on behalf of a third party and, if so, the identity of that third party; and the name, address, and date of birth of the customer – to the Province.

One-time transactions between private individuals, such as the private sale of a vehicle by a person not habitually in the business of selling vehicles, should not be captured by this requirement.

While this requirement should be applied to all businesses offering goods or services, I anticipate that there may be certain markets where this requirement is particularly onerous, where the reports generated are of little value, or where there are other reasons why it may be sensible to exempt some types of businesses or sectors of
the economy from this requirement. I am therefore recommending that exemptions be made where appropriate, including, from the outset, the following two exemptions:

1. **Financial institutions and financial services businesses, including credit unions and money services businesses:** By their nature, these businesses routinely handle cash in large volumes and, as such, are likely to generate a very large volume of reports that will be of little value in detecting genuinely suspicious activity.

2. **Lawyers:** As I explain in Chapter 27, I have concluded that the Province should not implement a reporting requirement for lawyers due to the significant constitutional difficulties that would arise in doing so, as well as in recognition of the strong anti-money laundering regulation already undertaken by the Law Society of British Columbia.

I expect that additional exemptions may well be added to this list prior to and following the implementation of this recommendation. The Province may wish to consider, for example, whether requirements to provide proof of the source of cash used in transactions of $10,000 or more are sufficient, such that, if they are continued, further reporting under this regime is unnecessary.

Unlike reporting to FINTRAC, I anticipate that the primary function of the information collected through this requirement will be to guide anti-money laundering policy development. By providing insight into the types of businesses and locations where suspicious transactions are occurring (and likewise where such transactions are not occurring), the information will assist the AML Commissioner to identify where suspicious activity is occurring. It will provide valuable insight into the markets and geographic locations that should be targeted with enhanced anti-money laundering measures. For example, if these records indicate a sudden increase in large cash purchases of luxury vehicles in one region of British Columbia, this may indicate the need to gather further information as to the cause of that increase and consider policy responses ranging from an education campaign for motor vehicle dealers in that region up to a permanent, province-wide prohibition on the use of cash to purchase vehicles.

In a similar way to informing policy development, the information will allow the AML Commissioner to have a strong evidence-based understanding of the realities of what is occurring in the luxury goods sector. As I have noted throughout this chapter, such a “real world” understanding is currently lacking, and there is little information (or even avenues to obtain such information) available that can inform the Province’s or the new AML Commissioner’s work. Further, the information may very well assist with improved regulatory responses. Armed with this new data, the AML Commissioner will be in a much better position to recommend changes in particular sectors in order to respond to particular risks.

Though not the primary purpose of collecting this information, an ancillary effect of a reporting regime would be the preservation of this information and the
potential for law enforcement, using established law enforcement procedures, to access that information in appropriate cases. I do not propose, at this stage, to replicate the FINTRAC model of analysis and proactive disclosure to law enforcement. Instead, the reports should initially be held by the central authority and available to law enforcement through established and familiar legal processes. While the AML Commissioner would review and analyze them for the primary purpose of guiding policy development identified above, I do not propose that the reports also be routinely analyzed for the purpose of identifying whether there is a basis to provide them to law enforcement. The reason for this is that, at this stage, I have little sense as to the volume or nature of the reports that will be made and, as such, I am unable to assess whether the value of these reports to law enforcement justifies the potentially significant effort and expense of analyzing these reports for this purpose. Accordingly, I believe the most sensible approach is to allow the Province (in consultation with the AML Commissioner) to determine whether this expense is justified once it has a clear understanding of the volume and nature of the reports that will be received in response to this requirement. Again, the absence of this analytical capacity does not mean that law enforcement will not have access to these reports, only that the reports will not be proactively analyzed for this purpose. I add that, prior to implementing a process in which the reports could be disclosed to law enforcement, the Province would need to conduct an assessment of the impact of legal or constitutional issues on the manner and feasibility of such proactive disclosure, or whether certain safeguards, such as a standard for disclosure, would have to be included in the system to protect legal and/or constitutional interests.

I also note that the volume of reports and the intensity of the work for the AML Commissioner will be proportional to what is actually occurring in the luxury goods sector. If, for example, few businesses are in fact accepting cash in amounts over $10,000, there will be few reports (and vice versa). It will be important for the AML Commissioner to assess, after a specified period of time, how many reports have been made and any utility gained from them. Further, the AML Commissioner should report to the Legislature on the progress of the regime.

In addition to the value of the reports submitted under this requirement to policy development (and preserved for potential access by law enforcement), I expect that a further ancillary, but significant, benefit of this recommendation will be to deter large cash transactions from occurring at all, especially by those seeking to avoid scrutiny. While I encourage government to streamline the reporting process to the extent possible, it is inevitable that the recommended record-keeping and reporting requirement will pose an administrative burden on businesses required to comply. I expect that this administrative burden will incentivize some businesses to simply refuse transactions of cash over $10,000 altogether, which would reduce the opportunities for those intent on laundering proceeds of crime to spend illicit cash. Similarly, the reporting requirement may also deter customers from using large volumes of cash. The knowledge that a large cash transaction will result in the production of a report
identifying the customer and their personal information (including name, address, and date of birth), the details of the transaction, and their explanation as to the source of the funds will surely make those intent on avoiding scrutiny of those funds think twice before proceeding with any such transactions in British Columbia.

As a final note, I do, as indicated above, recognize that the implementation of this recommendation will impose a new burden on many honest and legitimate businesses throughout the province. Given this impact, I do not make this recommendation lightly. However, I am convinced that it is necessary and, due in part to the evidence before me of similar requirements in other jurisdictions,81 viable. I also note that the burden is optional, in that each business will have the option of declining cash transactions of this size, completely absolving them of the burden. Still, I encourage the Province to bear in mind the impact on legitimate businesses when implementing this recommendation and to seek to minimize that impact, including through the use of technology to streamline the reporting process.82 I note as well that this recommendation poses a significant communication challenge for the Province, as virtually every business in British Columbia will require notice of this new requirement. I encourage the Province to take steps to ensure that no business suffers consequences for failing to comply with this requirement if they have not been given fair notice of its existence. Conversely, it will be necessary for the government to determine a suitable compliance regime to encourage observance once businesses have been notified of the requirement.

Role of the AML Commissioner

The potential role that the AML Commissioner may play in ensuring visibility into activity in luxury goods markets is not limited to analysis of reports submitted under the requirement that I have recommended above. As discussed previously, this reporting requirement is intended as a starting point for gathering information about money laundering risk and activity in luxury goods markets, and it must not be treated as a complete solution.

Alongside the analysis of these reports, I envision that the AML Commissioner will be engaged in additional efforts to collect information about luxury goods and other markets on an ongoing basis. These efforts could include consulting with businesses, industry associations, and regulators; studying activity in specific markets or regions; and monitoring international money laundering trends. In order to fulfill this function, the AML Commissioner must have the resources to carry it out. The Province may also wish to consider providing the AML Commissioner with the ability to compel information from private entities for the purpose of studying money laundering risks. This would require careful consideration of the manner in which the compulsion power should be limited.

82 For this recommendation to succeed, the Province must offer an easily accessible and intuitive platform where reports can be submitted. In designing this platform, the Province should seek to minimize the potential for human error and different reporting styles; for example, options such as drop-down menus or checkboxes will lead to more consistent data than allowing the user to write in responses.
**Vehicle Sales Authority Cash Study**

One innovative means of gaining insight into possible money laundering activity in the vehicle sales market that may serve as a model for the AML Commissioner’s efforts in this regard was proposed by the Vehicle Sales Authority and the Ministry of Public Safety and Solicitor General in 2019 in response to Dr. German’s second report. The proposal would have seen the Vehicle Sales Authority conduct a study in which it would collect information from motor vehicle dealers regarding the use of cash and other anonymous forms of payment in transactions conducted by those dealers. This data would have been collected voluntarily and in a form that would have preserved the anonymity of the dealer providing the information.

In my view, there are clear deficiencies in this proposed study. Collecting information on a strictly voluntary basis would offer those intent on hiding their activities a simple means of doing so and would undermine the reliability of the results by allowing for the under-reporting of higher risk activity. I understand as well that there were some concerns on the part of dealers about the suggestion that the data collected would be anonymous, as the source of some of the data may have been evident from the data itself. It is necessary that these issues be resolved before any such study is undertaken; however, a study aimed at understanding the nature of activity in a particular market does strike me as a sound initial step in the process of creating necessary visibility into luxury goods markets. These types of studies may be an effective means of gathering information that will assist the AML Commissioner in understanding the types of activity prevalent in these markets and identifying the extent of the money laundering risk present, without undue disruption to the businesses involved. Based on the results of such studies, it may be possible to determine whether further, more permanent – and potentially more invasive – measures are required. For example, where the initial study reveals minimal activity of concern, it may be sufficient to plan a future follow-up study to ensure that there are no significant changes from the time of the first one. In contrast, where an initial study reveals significant high-risk activity, it may be necessary to consider enhanced regulation or additional reporting requirements.

**Ongoing Assessment of Risk in Luxury Goods Markets**

Closely associated with the need to provide visibility into what is taking place in luxury goods markets is the second component of the proposed model for combatting money laundering in this sector: the need for ongoing assessment of risk. Creating visibility into activity within these markets is of value only if the information made available is reviewed and, if necessary, acted upon. Accordingly, it is essential that an appropriate authority be charged with the responsibility for examining this

83 Exhibit 994, Affidavit No. 1 of Tobias Louie, Affirmed May 5, 2021 [T. Louie #1], para 8 and exhibits A, B, C, D.
84 Ibid, para 8 and exhibits A, B, C, D.
85 Ibid, para 8.
86 Ibid, para 12.
87 Ibid.
information and considering its implications for money laundering risk and the adequacy of existing measures.

As was the case with the first component, how this second component is enacted in practice is likely to vary between luxury goods markets. In general, this is clearly an appropriate task for the AML Commissioner; however, in markets that are already regulated, like the vehicle sales market, it may be prudent to empower – and provide necessary resources to – the existing regulator to review the available data and work in collaboration with the AML Commissioner to take action as needed.

In addition to examining previously identified luxury goods markets, the need to assess risk in the luxury goods sector on an ongoing basis also extends to the identification of new markets that fit the luxury goods risk profile described earlier in this chapter. It seems certain that new products and industries bearing a money laundering risk similar to that of existing luxury goods markets will emerge in the future. In order to adequately address this risk, it is essential that public authorities continuously examine new industries to determine whether they should be treated as luxury goods markets for anti-money laundering purposes. This again falls squarely within the anticipated role of the AML Commissioner.

Flexible and Adaptive Regulation

As crucial as ensuring that available data is reviewed and risk is assessed on an ongoing basis is ensuring that timely and effective action can be taken in response to this information. As the risk landscape for money laundering in luxury goods markets evolves, it is essential that action to address new and emerging risks can be taken quickly. Such action must be tailored to the market in question so as to respond to the risk effectively, while ensuring minimal disruption to legitimate business within the industry.

In the course of receiving the reports discussed above, the AML Commissioner may become aware of new and evolving money laundering threats requiring timely action. For example, the reporting may demonstrate an increase in suspicious transactions among yacht brokerages in a particular region of the province. A timely measure to respond to that increase might be a requirement that yacht brokers obtain proof of the source of funds used in any transaction above an identified threshold, or a temporary prohibition on using cash or another medium of exchange.

Accordingly, there should be a mechanism through which targeted measures can be put in place in response to emerging threats or changing risk landscapes that require participants to take action aimed at those threats. These actions could include requirements to report certain types of transactions, collect specific information about customers, or refuse transactions with identified risk factors – such as the use of large quantities of cash. These measures could be permanent but could also be imposed for short durations of time to respond to specific intelligence or threats or increases in suspicious activity.
My expectation is that this model will allow for significantly greater flexibility and adaptability than anti-money laundering regimes like the PCMLTFA while minimizing interference in legitimate business. In place of a one-size-fits-all approach that imposes the same set of permanent requirements on a broad array of industries, the targeted measures envisioned in this model would allow authorities to respond to threats rapidly and to focus their response on specific activity of concern. The response could also take into account the nature of the market in question to maximize the effectiveness of anti-money laundering measures, while reducing disruption and cost to retailers. It could also impose new restrictions or requirements only for as long as they are needed – again minimizing the burden on legitimate participants in the market.

The Province is best suited to determine how this mechanism is set up. It may be, for example, appropriate to assign the task to a particular minister (for simplicity, I will refer simply to “the minister”). The measures I am envisioning here are meant to address new and evolving money laundering risks. Consequently, the minister should be able to implement the measures quickly – without the need for legislative amendment. While the Province will determine what authority is appropriate, it strikes me that a minister having the power to issue binding directives or regulations would be effective in this regard. I add that it is essential that the minister be in close contact with – and responsive to – suggestions from the AML Commissioner and the central authority receiving the reports on cash transactions.

**Recommendation 83:** I recommend that the Province establish a mechanism by which a minister, in consultation with the AML Commissioner, can implement timely measures to address new and evolving risks in the luxury goods sector (as defined in Chapter 34 of this Report).

I also anticipate that this authority may have value as an information-gathering tool. The imposition of temporary measures will provide further insight into the nature of suspicious activity and the impact of possible responses. Where, for example, a temporary restriction seems to result in the complete cessation of suspicious activity, this will suggest a different kind of problem – and call for a different kind of response – than where the temporary restriction appears to result in the displacement of suspicious activity to a different market or geographic location.

**Support for Voluntary Action by Industry**

Based on the evidence before me, I am persuaded that coercive regulatory action is not the only means of addressing the risk of money laundering in luxury goods markets. The actions taken by the Canadian Jewellers Association and the BC Yacht Brokers Association, as described above, demonstrate that voluntary action by industry is a viable means of addressing money laundering risk. In my view, efforts to support and encourage such action should form an essential part of the Province’s efforts to combat money laundering in the luxury goods sector.
The experiences of both the Canadian Jewellers Association and the BC Yacht Brokers Association suggest that while industry groups may be willing and able to take voluntary action to address money laundering risks, they will often require prompting from government to do so. The action taken by the Canadian Jewellers Association, for example, was prompted by the inclusion of dealers in precious metals and stones in the PCMLTFA, while the action taken by the BC Yacht Brokers Association appears to have been prompted by contact from this Commission.

While it may not be possible to persuade every luxury goods retailer to adopt measures of the sort implemented by the BC Yacht Brokers Association, the potential benefits of voluntary action are substantial and worthy of investment. In my view, the Province ought to encourage and support voluntary action by industry by proactively reaching out to industry to educate retailers and trade associations on the risks of money laundering in the markets in which they operate and strategies that industry can employ to reduce those risks. I fully expect that the vast majority of luxury goods retailers in this province want nothing to do with business connected with the proceeds of crime and would be more than willing to voluntarily implement measures to ensure that their businesses are not used to launder money.

Again, this function is well suited to the AML Commissioner, and I suggest that public engagement and education be made part of his or her mandate. Given the Commissioner’s role in assessing risk and access to information, he or she will be well equipped to identify the kind of voluntary measures that will best respond to the risks facing particular industries and support those industries in taking action.

**Leveraging Existing Regulatory Capacity**

While the focus of the present discussion has primarily been on the role and functions of the AML Commissioner, this does not mean that there is no role for existing, industry-specific regulators in addressing the risk of money laundering. I encourage government to consider giving existing regulators, such as the Vehicle Sales Authority, explicit anti-money laundering mandates. In such instances, care should be taken to ensure that these regulators are able to work in coordination with the AML Commissioner and avoid duplication of efforts.

In my view, it is important to engage industry-specific regulators where possible for several reasons. First, as is the case with the Vehicle Sales Authority, regulators often already have access to – or at least the power to access – valuable information relevant to money laundering in the industries they regulate, which should be leveraged to advance anti-money laundering objectives. Secondly, where an industry is already regulated, it will often be the regulator and not government that is best positioned to implement new anti-money laundering measures, including those recommended by the AML Commissioner. By empowering regulators to directly implement anti-money laundering measures in the industries they already regulate, the Province can ensure that action to prevent money laundering can be taken as efficiently and effectively
as possible. Finally, adding the prevention of money laundering to the mandate of
regulators reinforces that addressing this problem is a shared responsibility. There
is a risk that creation of a distinct AML Commissioner can create the perception
that “someone else” is responsible for solving the problem of money laundering. By
explicitly tasking regulators with this responsibility, the Province can reinforce that they
are an essential part of a society-wide response to this issue.

**Sector-Wide Oversight and Coordination**

The final necessary component of an effective anti-money laundering model for
the luxury goods sector is sector-wide oversight and coordination. As discussed
previously, because of the similarity in the nature of the money laundering risk facing
different luxury goods markets, they may be viewed as largely interchangeable by
those intent on laundering money. Moreover, efforts to discourage or disrupt money
laundering activity in one luxury goods market may result in displacement to another
market rather than the elimination of that activity altogether.

For this reason, it is insufficient to attempt to address the money laundering risk
in individual luxury goods markets independently of one another. These efforts must
be coordinated and subject to some form of sector-wide oversight. While there may
be an important role to be played by market-specific regulators like the Vehicle Sales
Authority, there must also be coordination between markets to assess evolving threats
and the impact of anti-money laundering measures between markets. This kind of
coordination may be useful in a number of ways. First, it may assist in identifying and
addressing trends affecting multiple markets. An increase in suspicious activity in a
single market may have different implications and call for a different response than a
similar phenomenon affecting multiple luxury goods markets simultaneously. Secondly,
coordination and communication across the sector may assist in identifying activity as
suspicious in instances where the suspicious nature of the activity may not be apparent
until connected to activity or trends elsewhere in the economy. Finally, coordination
within the sector may assist in determining whether measures enacted in one market
have led to displacement to another.

There is an obvious role for the AML Commissioner in ensuring coordination across
the luxury goods sector (and beyond). To the extent that regulators are empowered to
take direct action on money laundering, it is imperative that they share information
and work collaboratively with the AML Commissioner to ensure that their actions are
not unnecessarily redundant and that they avoid working at cross-purposes. While the
precise nature of the relationship between the AML Commissioner and regulators will
necessarily vary depending on the nature of the industry and role of the regulator, there
must always be a strong relationship between the commissioner and the regulator that
enables coordinated action.
Money Laundering Through Grey Market Vehicle Exports

Grey market export of vehicles involves the purchase of vehicles in British Columbia and their export and resale to purchasers in other jurisdictions for amounts that exceed the purchase price paid, resulting in a profit for the exporter. In theory, grey market vehicle exports could facilitate money laundering where the exported vehicle was initially acquired with the proceeds of crime. The export of such a vehicle would serve the purpose of transferring the illicit funds used to acquire it to another jurisdiction, while the resale of the vehicle would provide an apparently legitimate explanation for the funds and potentially facilitate their placement into the financial system.

This typology was the subject of some discussion in Dr. German’s second report, which identified the grey market vehicle exports as a possible form of trade-based money laundering.\textsuperscript{88} Dr. German concluded, based largely on provincial sales tax data obtained from the provincial government, that grey market vehicle exports had increased substantially in recent years.\textsuperscript{89} The relevance of this data is that, in some circumstances, individuals who resell or export a vehicle following purchase are exempt from paying provincial sales taxes that would normally be payable on the sale of a vehicle.\textsuperscript{90} Where provincial sales tax was paid at the time of purchase but the exemption applies, the purchaser can apply to the provincial government for a rebate.\textsuperscript{91} On this basis, Dr. German concluded that “[t]he number of applications for refunds of PST on vehicles is a strong indication of the size of the grey market for exported vehicles from B.C.”\textsuperscript{92} He interpreted a substantial increase in applications for provincial sales tax rebates, beginning in 2016, as evidence of a substantial increase in vehicle exports.\textsuperscript{93}

The Commission obtained further provincial sales tax data for years subsequent to those included in Dr. German’s review.\textsuperscript{94} This data disclosed that although applications for provincial sales tax rebates associated with the resale of vehicles had declined from their peak in 2018, they remained elevated – relative to 2015 levels – in the two years subsequent to the last year for which Dr. German received data.\textsuperscript{95}

In addition to the potential money laundering risk associated with grey market vehicle exports, this activity is clearly of significant concern to vehicle manufacturers. Dr. German alluded to this concern and the efforts made by manufacturers to prevent this activity in his second report.\textsuperscript{96} The Commission also received evidence from

\textsuperscript{96} Exhibit 833, Dirty Money 2, p 197.
Norman Shields, vice-president of finance and administration at BMW Canada Inc., detailing the challenges that grey market exports pose for BMW and the efforts it has made to prevent and respond to this practice.97

I am persuaded that grey market vehicle exports pose a real risk of money laundering, and I accept that the practice has significant negative repercussions for vehicle manufacturers. The available data does not, however, allow me to draw conclusions as to the extent to which grey market vehicle exports from British Columbia are connected to actual money laundering.

While grey market vehicle exports present an opportunity for money laundering, they cannot be assumed to be connected to money laundering in all cases. Grey market exports may be contrary to the terms of agreements between motor vehicle dealers and purchasers, but do not amount to criminal activity per se.98 It is apparent from the evidence before me that exporters engage in practices that may give their activities the appearance of criminality or illegality, such as the use of nominee or “straw” buyers.99 However, it is unclear whether, and to what extent, these practices are motivated by a desire on the part of exporters to distance themselves from illicit proceeds used to purchase vehicles as opposed to a desire to circumvent manufacturer and dealer efforts to prevent grey market exports.100

The connection between grey market vehicle exports and criminality is rendered even more tenuous by the apparent economic rationality of engaging in grey market export of vehicles acquired with legitimate funds. Dr. German indicated in his report that international price differentials ensure “huge profits” for exported vehicles.101 If this is the case, then the grey market export of vehicles offers the opportunity for profit and is economically viable even if the vehicles are acquired with legitimate funds.

Accordingly, while the grey market export of vehicles is often discussed in a manner that suggests it is synonymous with money laundering, in my view, the connection is not so clear. Based on the evidence before me, grey market export of vehicles is itself a potentially profitable business model, including where the exported vehicles are purchased with legitimate funds. Grey market vehicle exports may also be used by those intent on laundering money by offering a convenient market for the sale of vehicles purchased with the proceeds of crime; however, in my view, it is not the case that grey market vehicle exports invariably occur in the context of a money laundering scheme, nor is it necessarily the case that the increase in grey market vehicle exports in recent years correlates to an increase in money laundering.

97 Exhibit 778, Affidavit No. 1 of Norman Shields, made on March 26, 2021.
98 Exhibit 777, Affidavit No. 1 of Marko Goluza, made on March 25, 2021 [M. Goluza #1], p 210; Exhibit 779, M. Lee #1, exhibit E.
99 Exhibit 777, M. Goluza #1, p 210; Exhibit 779, M. Lee #1, para 21, see also exhibit E; Exhibit 778, T. Shields #1, paras 18–35.
100 Exhibit 777, M. Goluza #1, p 219.
101 Exhibit 833, Dirty Money 2, p 196.
In light of this tenuous connection between grey market vehicle exports and money laundering, I am not persuaded that such exports should be the primary point of focus for efforts to combat money laundering using motor vehicles. By the time a vehicle is exported, it will be difficult to immediately distinguish vehicles acquired with proceeds of crime from those purchased with legitimate funds and, consequently, difficult to distinguish those vehicles being exported as part of a money laundering scheme from those being exported in violation of a private agreement between dealer and purchaser – or even those being exported entirely legitimately. Further, by the time an attempt is made to export a vehicle purchased with proceeds of crime, the illicit funds have already successfully been converted into the vehicle and, to an extent, successfully laundered. For these reasons, in my view, the primary focus of efforts to combat money laundering through the trade of vehicles is at the point at which vehicles are acquired using illicit funds. It is at this stage that money laundering transactions can likely be most easily detected and money laundering most completely prevented.

This does not mean that vehicle exports are not a cause for concern. While the extent to which proceeds of crime are actually being laundered through vehicle exports is unclear, I am persuaded that the risk of vehicles purchased with illicit funds being exported through British Columbia’s ports is sufficiently significant that some scrutiny should be applied to these activities. The Province should regulate the purchase and sale of vehicles for the purpose of export from British Columbia. Regulation of this activity should involve, at a minimum, a registration requirement for those who export more than an identified number of vehicles annually and a requirement that the export of all vehicles by registered exporters be reported prior to export. Failure to register and failure to report as required should amount to provincial offences. This reporting requirement will ensure that a clear record exists of what vehicles have been exported and by whom, obviating the need to rely on provincial sales tax data for this purpose. The Province should consult with the Vehicle Sales Authority in order to determine whether it is feasible and appropriate for the mandate of the Authority to be expanded to include vehicle exporters.

**Recommendation 84:** I recommend that the Province regulate the purchase and sale of vehicles for the purpose of export from British Columbia. This regulation should involve, at a minimum, a registration requirement for those who export more than an identified number of vehicles annually and a requirement that the export of all vehicles by registered exporters be reported prior to export.

To assist in the effective regulation of motor vehicle exports, the Province should amend the *Provincial Sales Tax Act*, SBC 2012, c 35, to ensure that information collected for the purpose of processing provincial sales tax rebates is available to the Vehicle Sales Authority or other body tasked with regulating this activity. Currently, the
limits on disclosure of this information\textsuperscript{102} are so restrictive that the Commission was unable to obtain access to the complete records even through the use of its summons power.\textsuperscript{103} While there is undoubtedly a need to limit dissemination of these records, I am convinced that this information – particularly that which was unavailable to the Commission – would be of significant assistance in efforts to regulate this practice.

\begin{center}
\textbf{Recommendation 85:} I recommend that the Province amend the \textit{Provincial Sales Tax Act} to ensure that information collected for the purpose of processing provincial sales tax rebates is available, at a minimum, to the Vehicle Sales Authority and the AML Commissioner.
\end{center}

\section*{Insurance Council of British Columbia}

A final issue I wish to address before concluding this chapter is money laundering risk and regulation in the insurance industry. Alongside evidence related to money laundering in the luxury goods market, the Commission received evidence from Marko Goluza, director of professional conduct for the Insurance Council of British Columbia, regarding the risk of money laundering in the insurance market and efforts being made by the Insurance Council of BC to address this risk.\textsuperscript{104} The Insurance Council of BC is a regulatory body established under section 220 of the \textit{Financial Institutions Act}, RSBC 1996, c 141, with responsibility for licensing and regulating insurance agents, insurance salespersons, insurance adjusters, and employed insurance adjusters.\textsuperscript{105}

I would not consider insurance itself to meet the criteria for inclusion in the “luxury goods” category as outlined above. I have included it in the present chapter, however, because of the close connection between insurance and money laundering through vehicle sales, and particularly vehicle exports.

Mr. Goluza’s evidence touches briefly on an identified theoretical risk of money laundering through the life insurance market, involving individuals purchasing life insurance policies with the proceeds of crime and subsequently cashing in those policies, thereby obscuring the source of the funds used to purchase the original policy.\textsuperscript{106} I refer to this risk as “theoretical” as the Insurance Council of BC has not confirmed any cases in which this money laundering typology has actually been employed, and as such, there is no evidence that money laundering using this method is actually occurring in this province.\textsuperscript{107}

\item\textsuperscript{106} Ibid, paras 30–31.
\item\textsuperscript{107} Ibid, para 30.
\end{enumerate}
\end{footnotesize}
In his evidence, Mr. Goluza indicated that the indicators of money laundering that the Insurance Council of BC has actually observed have related predominantly to the motor vehicle insurance and the role of insurance professionals in facilitating the grey market export of vehicles.¹⁰⁸ These indicators include:¹⁰⁹

• vehicle type (late-model, luxury vehicles);
• quick transfers of ownership from straw buyers to exporters;
• pre-determined and timely cancellation of one-year insurance policies;
• a contact known by a licensed insurance professional at a dealership; and
• a common exporter across multiple transactions.

Mr. Goluza’s evidence also detailed the efforts being made by the Insurance Council of BC to take action to address money laundering in and connected to the insurance market.¹¹⁰ Money laundering was specifically referred to in the following strategy identified in the Insurance Council’s 2020–2023 Strategic Plan:

Assess regulatory processes and modify as needed to detect and counter money laundering activities in the insurance industry.¹¹¹

Three key performance indicators connected to money laundering have also been identified as part of the Insurance Council’s strategic planning:¹¹²

a. to ensure staff are trained on money laundering detection techniques;

b. to complete random practice audits to review licensee compliance with [FINTRAC] money laundering and terrorist finance guidelines; and

c. to ensure applicants for licensure are screened for money laundering and terrorist financing activities per FINTRAC guidelines.

Since the 2020–2023 Strategic Plan has come into effect, the Insurance Council of BC has taken action to pursue these goals by increasing organizational competency, including via staff training; reviewing processes to ensure alignment with FINTRAC guidelines; identifying activity that may be associated with money laundering in practice audits and investigations; and actively participating in the Counter Illicit Finance Alliance of British Columbia, discussed in Chapter 39.¹¹³

Notably, Mr. Goluza indicates in his evidence that the actions taken by the Insurance Council of BC with respect to money laundering in the industry it regulates have led to

---

¹⁰⁹ Ibid, para 32.
¹¹¹ Ibid, para 18.
¹¹² Ibid, para 20.
¹¹³ Ibid, para 21.
disciplinary action against two licensees related to the issuance of insurance connected to the grey market vehicle exports.\textsuperscript{114} The Insurance Council was unable to confirm whether these matters were also connected to money laundering, and for the reasons discussed above, I caution against the assumption that they were. Mr. Goluza suggests, however, that it may have been possible to make this determination with access to additional information about the source of funds used to acquire the vehicles in question.\textsuperscript{115}

In my view, the Insurance Council of BC should be commended for the efforts it has made to address money laundering in and connected to the insurance industry, and the Province should consider providing the Insurance Council with additional support to further enhance its efforts. The Insurance Council has managed to take these limited but meaningful steps to address money laundering risks in its industry in the absence of an explicit anti-money laundering mandate and using its existing authority and resources.\textsuperscript{116}

I encourage the Province to work with the Insurance Council of BC to ensure that it has the support required to further advance its efforts to address money laundering in and connected to the insurance industry. This could include giving the Insurance Council an explicit anti-money laundering mandate. In his evidence, Mr. Goluza identified a number of additional measures that would assist the Insurance Council in effectively addressing money laundering in the industry it regulates.\textsuperscript{117} On the evidence before me, I am unable to determine whether each of these measures should be implemented or to make a recommendation in this regard. However, given the efforts already made by the Insurance Council to address this issue – even in the absence of an explicit statutory mandate to do so – the Province should take these proposals seriously and begin consultations with the Insurance Council and other affected parties to determine how the efforts already being made by the Insurance Council can be supported and advanced by the Province. These consultations should include, in particular, consideration of the following measures proposed by Mr. Goluza:

- adding a “duty to report” provision to the \textit{Financial Institutions Act} that would require licensees to report identified conduct to ensure that the Insurance Council of BC has timely access to information related to suspicious transactions and possible money laundering in the insurance industry;\textsuperscript{118}

- clarifying section 231(1)(b) of the \textit{Financial Institutions Act} to ensure that it clearly provides that the Insurance Council of BC may levy separate fines up to the maximum allowable fine for each individual contravention of “a term, condition or restriction of the licence of the licensee”;\textsuperscript{119}

\textsuperscript{114} Ibid, paras 33–34.
\textsuperscript{115} Ibid, para 35.
\textsuperscript{116} Ibid, paras 12–14.
\textsuperscript{117} Ibid, paras 42–53.
\textsuperscript{118} Ibid, para 45.
\textsuperscript{119} Ibid, paras 46–48.
• increasing the maximum fines that can be levied by the Insurance Council of BC;\textsuperscript{120}

• creating an administrative penalty regime for minor and technical breaches by licensees;\textsuperscript{121}

• expanding the type of disciplinary measures that may be imposed by the Insurance Council of BC;\textsuperscript{122} and

• exempting the Insurance Council of BC from the Public Sector Employees’ Council Guidelines to ensure that it is able to offer remuneration adequate to permit hiring experienced insurance professionals.\textsuperscript{123}

\textbf{Conclusion}

For the reasons discussed above, it is clear to me not only that the luxury goods sector is at high risk for money laundering but that illicit funds are being used to purchase luxury goods in this province. While I am unable to identify with precision the extent to which such activity is occurring, I am convinced it is presently a significant problem that is largely unchecked. Because of the high value, capacity to retain value, transferability, and portability of luxury goods, there is the very real potential that enormous amounts of illicit funds are being converted, transferred, transported, and ultimately laundered through the markets that comprise this economic sector. It is clear that this potential has been realized in British Columbia. That there is limited data available about money laundering through the luxury goods markets in British Columbia is the product of the reality that, in this province, no one has been watching.

Given the elevated risk associated with luxury goods markets, this is unacceptable. The Province must proactively work to uncover money laundering and the use of illicit funds in this sector and take action to drastically reduce the elevated risk of money laundering present in this sector by implementing measures that give effect to the principles outlined above.

\textsuperscript{122} Ibid, para 51.
\textsuperscript{123} Ibid, para 53.
Unlike other topics I have discussed in this Report, virtual assets are unique in that many cannot readily describe what they are, let alone imagine how they might be misused for money laundering purposes. By far the most well-known virtual asset is Bitcoin, which emerged roughly 13 years ago and continues to dominate the sector. Yet, some 7,700 other virtual assets exist, and their characteristics, functions, and uses – both legitimate and illegitimate – have developed rapidly in a relatively short period of time. That criminals are already exploiting this new technology is illustrative of the need for governments, regulators, and law enforcement to actively monitor new technologies and develop the expertise needed to disrupt the use of virtual assets in money laundering schemes.

It is challenging to define a virtual asset in simple terms. The Financial Action Task Force describes a virtual asset as “a digital representation of value that can be digitally traded, or transferred, and can be used for payment or investment purposes.”¹ In some ways, we can make an analogy between virtual assets and normal “fiat” currency (i.e., real-world money or bank-issued currencies²); however, as I elaborate below, the analogy is not a perfect fit. Further, alongside the term “virtual asset,” a new vocabulary has emerged, which includes terms such as “cryptocurrency,” “cryptography,” “blockchain,” “hot wallets,” “cold wallets,” and “mining.”

In this chapter, I first explain various concepts relating to virtual assets and how transactions are completed. Notably, many virtual asset transactions are, despite their complexity, highly visible: a good deal of information is publicly available on

the blockchain, which essentially functions as a public ledger of transactions. I then set out the regulatory scheme applicable to virtual assets, which is largely contained in the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act*, SC 2000, c 17 (PCMLTFA). The scheme is new, having come into force in June 2020 and June 2021, rendering it difficult to determine how effective it is at this stage. Nonetheless, it is a promising step. Finally, I discuss crime involving virtual assets and methods of investigation. The virtual asset space poses unique challenges for law enforcement, because it is a rapidly developing and complex area, as well as opportunities for disruption of money laundering activity, because a significant amount of information is available publicly on the blockchain. It is essential that law enforcement, regulators, and government develop and maintain expertise in the area of virtual assets, which will undoubtedly continue to be exploited by criminals.

**What Is a Virtual Asset?**

As noted above, the Financial Action Task Force defines “virtual asset” as “a digital representation of value that can be digitally traded, or transferred, and can be used for payment or investment purposes.” It further notes that virtual assets do not include digital representations of fiat currencies, securities, or other financial assets covered in its 40 recommendations (discussed in Chapter 6).⁴ As that definition suggests, a virtual asset can serve a few functions:

- as a medium of exchange, by operating like a currency in some environments;
- as a unit of account, by defining, recording, or comparing value; and/or
- as a store of value, by having value to a creditor willing to accept it.⁵

There are two broad categories of virtual assets. A **non-convertible virtual asset** has value only within the domain in which it is used. For example, some online games have their own “currency,” such as World of Warcraft Gold.⁶ In contrast, a **convertible virtual asset** can be converted into fiat money; in other words, it has an equivalent value in real currency or acts as a substitute for real currency.⁷ A convertible virtual asset can be centralized, meaning it has a single administering authority or a kind of central bank, or decentralized, meaning it lacks a central administrator and instead operates peer to peer.⁸

---

⁴ Exhibit 4, Appendix E, *FATF Recommendations*, p 126, definition of “virtual asset.”
⁵ A “real life” comparison is Canadian Tire money, which has value at Canadian Tire but not elsewhere: Evidence of A. Vickery, Transcript, November 23, 2020, p 19.
Bringing the above points together, a cryptocurrency is a type of virtual asset that (a) is convertible; (b) is decentralized; and (c) uses cryptography, which is a method of securing transactions. Unlike traditional currencies, cryptocurrencies do not have legal tender status in any country, and their exchange value depends on agreement or trust among their community of users. As I elaborate below, cryptocurrency can be exchanged directly from person to person, through a cryptocurrency exchange, or through other intermediaries.

Bitcoin is the most popular and well-known cryptocurrency. Although more than 7,700 cryptocurrencies exist, over 62 percent of cryptocurrency transactions are done in bitcoin. Its popularity is due mostly to its accessibility: it was the first widely accepted and used cryptocurrency and is the most widely featured, accepted, and exchanged, rendering it more accessible for new users. People sometimes use the term “Bitcoin” when generically referring to cryptocurrency, and much of the focus in the evidence before me was on Bitcoin rather than cryptocurrencies generally.

The value of Bitcoin has varied considerably since its inception. In 2017, its value notably reached $20,000, at which time its market capitalization was approximately $20 billion. At that time, 10 other cryptocurrencies had a market capitalization of over $100,000. The value of Bitcoin varied between 2017 and 2020, falling to $10,000 in 2018. However, in 2020, Bitcoin’s market capitalization had grown to approximately $300 billion, and the values of the other top 10 cryptocurrencies were 10 times those of 2017. As of April 19, 2022, Bitcoin’s value was $52,186.30.

How Does a Cryptocurrency Transaction Work?

Understanding how a cryptocurrency transaction works requires a review of some key concepts. First, transactions require the use of a “private key” and a “public key.”

---

9 Exhibit 248, Appendix H, US Cryptocurrency Enforcement Framework, pp 2–3. However, Sgt. Vickery noted that some countries, such as China and Venezuela, are considering the possibility of a virtual currency tied to or managed by a national banking authority. Canada is part of a working group with other countries seeking to identify best practices and approaches in this regard: Evidence of A. Vickery, Transcript, November 23, 2020, p 26.
12 Evidence of A. Gilkes, Transcript, November 23, 2020, p 25.
13 Market capitalization refers to the overall value of a cryptocurrency, which is obtained by multiplying the value of each coin by the number of coins in circulation: Evidence of A. Gilkes, Transcript, November 23, 2020, p 21.
14 Exhibit 253, RCMP Virtual Assets Slideshow, slides 6 and 7; Evidence of A. Gilkes, Transcript, November 23, 2020, pp 21–22.
A private key functions as a PIN or password and is needed to spend cryptocurrency.\textsuperscript{16} A public key is roughly akin to a bank account number and is used to actually send or receive cryptocurrency.\textsuperscript{17} Private and public keys consist of lengthy combinations of numbers and letters.\textsuperscript{18}

Cryptocurrency is stored in a digital wallet, which is similar to a virtual account. Wallets interface with blockchains and generate or store the public and private keys.\textsuperscript{19} There are several kinds of wallets:

- **Online wallets** are associated with cryptocurrency exchanges, which, as I discuss below, are services that provide a forum to exchange cryptocurrency with other users. Online wallets provide the least amount of control for the user, as the exchange maintains control of the user's private key through a “custodial wallet.”\textsuperscript{20}

- **Desktop wallets** are generated on a computer. Users maintain control of both the private and the public keys and have full control over their transactions. Conducting transactions using a desktop wallet tends to be very fast.\textsuperscript{21}

- **Mobile wallets** are essentially the same as desktop wallets except that they are generated on a smartphone.\textsuperscript{22}

- **Hardware wallets** are small, encrypted devices similar to USB keys, which are created specifically to store private keys. With a hardware wallet, users can spend cryptocurrency completely free from the internet. However, because they cost around $100, they tend to be less popular for casual users.\textsuperscript{23}

- **Paper wallets** are private and public keys printed on paper. They can be generated automatically through a visit to a cryptocurrency ATM, which, as I elaborate below, is a machine similar to a traditional ATM that allows a user to buy or sell cryptocurrency.\textsuperscript{24}

Wallets can be “hot” or “cold.” A hot wallet is one where the user’s private key is or has been online, whereas with a cold wallet, the private key has never been online.
The first three wallets listed above are hot wallets, and the last two are cold wallets. Cold wallets are more secure than hot wallets in that, if prepared properly, they have never been online and are therefore not at risk of being targeted by malware or related threats. The trade-off is that spending cryptocurrency using a cold wallet requires a little more time and effort. Desktop and mobile wallets are less secure insofar as users risk losing their keys or cryptocurrency if a device becomes corrupted, lost, or subject to malware. However, a user may be able to use a “seed phrase,” which is a combination of 12 to 24 words, to recover a wallet. Finally, an online wallet with an exchange is secure in the sense that the exchange takes care of the private keys and uses its network security to ensure that no one else has access. The exchange can also help a user who loses their wallet or login information to recover the wallet.\(^{25}\)

Cryptocurrency transactions occur on the blockchain,\(^ {26}\) which is a public ledger that captures the history of all verified transactions.\(^ {27}\) (Note, however, that not all cryptocurrencies have a public blockchain;\(^ {28}\) the discussion that follows relates primarily to those that do.) A report prepared by the Standing Senate Committee on Banking, Trade, and Commerce explains the concept of a public ledger as follows:

> The public ledger is exactly what it sounds like – a large bulletin board (written in a cryptic computer database called the blockchain). The public ledger logs and broadcasts transactions to the entire network.

> Everyday transactions – using, for example, a debit or credit card to buy a cup of coffee – are tied to a bank. If you have enough money in your account, or credit on the card, the bank authorizes the transaction and you get your coffee. If you bought that same cup of coffee with bitcoin, you would simply announce it on the public ledger without the bank or any other financial institution (and all their transaction fees) being involved. The merchant gets their money and you get your coffee.

> The public ledger is always accessible through computers literate in the blockchain. It cannot be forged or changed. It provides a permanent record of all bitcoin transactions that have ever happened, a history that within an hour is unalterable.\(^ {29}\)

Each block in the blockchain consists of a group of reported transactions in chronological order.\(^ {30}\) Once a transaction has been verified and added to the

\(^{26}\) While my focus here is on blockchain technology used in cryptocurrencies, I note that blockchain can also be used for non-cryptocurrency purposes. For example, Walmart has used it to track the movement of produce from the crops through to the distribution centre and the store shelf, which can assist with tracking outbreaks of listeria and the like: Evidence of A. Vickery, Transcript, November 23, 2020, p 92. Blockchain has also been used in situations such as digital voting, art, music, and collective decision-making: Transcript, November 25, 2020, p 142.

\(^{28}\) Evidence of A. Gilkes, Transcript, November 23, 2020, p 33.

blockchain, the block is permanent and cannot be modified, deleted, or removed. In this way, the use of a blockchain prevents double-spending and counterfeiting.31

The blockchain is often called “pseudo-anonymous” because almost all the information is publicly available except the identity and location of the person who conducted the transaction.32 The blockchain shows information such as the date and time of transactions, the accounts that the cryptocurrency was sent from and to, the transaction number, the transaction fee, and the amount transacted.33 As I elaborate later in this chapter, the public nature of the blockchain is helpful for law enforcement when investigating crime involving virtual assets.

Transactions are verified and added to the blockchain through a process called “mining.” When a user initiates a transaction, it is encrypted with a private key and then submitted on the network for verification by special users known as “miners.” Miners verify that the units have not already been spent and validate the transaction by solving a complex algorithm called a “random hash algorithm.” In exchange for mining, miners are paid transaction fees by the sender of the funds. These fees do not depend on the size of the transaction but rather by demand: if there is a high demand for transactions, senders may increase their transaction fee to incentivize miners to validate the transaction faster.34

As Sergeant Aaron Gilkes of the RCMP explained, the mining process is competitive. He noted that there is a finite number of bitcoins that will exist. To ensure that there are enough bitcoins to be distributed at a proper pace, it has to take approximately 10 minutes for each block of the blockchain to be solved. Depending on how many miners are working to solve the blocks, the software will adjust the difficulty of solving the random hash algorithm. The first miner to reach the “hash” number set by the software is awarded the block and receives transaction fees as well as the initial coins that are discovered.35 Thus, “it is a competition as to who can solve that equation the fastest and who can add that block of transactions to the blockchain the fastest.”36

33 Ibid, pp 34–35. For an example of information available on the blockchain see Exhibit 253, RCMP Virtual Assets Slideshow, slide 10.
35 Sgt. Gilkes noted that the term “miners” is used because when a block is added, the miners are paid in newly minted bitcoin, that is, coins that “didn’t exist before or they weren’t in circulation before, but now they’re being distributed through the discovery of a new block”: Transcript, November 23, 2020, p 30.
36 Evidence of A. Gilkes, Transcript, November 23, 2020, pp 30–31. Sgt. Gilkes explained that mining requires special, powerful computers that generate an enormous amount of heat and require an enormous amount of electricity to function. He added that, given the cold climate, inexpensive electricity, and minimal regulation in Quebec, it has become a popular place for miners to locate their computers: Evidence of A. Gilkes, Transcript, November 23, 2020, pp 38–39; Exhibit 253, RCMP Virtual Assets Slideshow, slide 9.
Alternative Coins

While Bitcoin is by far the most popular cryptocurrency, some of its features are unattractive to certain users, both legitimate and illicit. First, the fact that the blockchain is transparent poses obvious problems for criminals and may also be unattractive for legitimate users concerned about privacy. Second, there is the potential for high transaction fees during times of high demand. For example, when Bitcoin was at its highest value in 2017, transaction fees were US$55 per transaction. Third, the volatility of Bitcoin's value leads to unstable purchasing power. Fourth, there can be long wait times because only about seven transactions can be processed per second (compared to around 24,000 Visa transactions or 200 PayPal transactions per second). Fifth, as Bitcoin is not backed by a central authority, there is no insurance or legal recourse if a user's account is compromised. Finally, transactions are irreversible: if a user sends funds to the wrong key, there is no way to undo the transaction.37

Alternative coins have developed to address these deficiencies.38 Stable coins are backed by fiat currency, a stable commodity such as gold, other cryptocurrencies, or algorithms. This backing addresses the volatility issue, rendering the coin less vulnerable to fluctuation.39 Meanwhile, privacy coins (also known as “anonymity-enhanced cryptocurrencies”) offer enhanced encryption and privacy features that potentially obfuscate the ability to trace transactions. Privacy coins are very attractive for illicit users, as they allow the movement of funds across borders without detection by law enforcement, government, regulators, or the private sector. They can, however, also be attractive to legitimate users, such as those who are particularly concerned about data privacy or who are living under authoritarian regimes.40

Privacy coins pose obvious money laundering vulnerabilities. Notably, aftermarket software tools are not able to provide services with respect to closed blockchain ledgers, with the result that these tools cannot provide analysis on transactions involving privacy coins.41 This is an area requiring further study and attention, as criminals will undoubtedly seek to take advantage of the anonymity provided by privacy coins and the difficulties in investigating transactions on closed blockchains.

Modes of Exchange

There are various methods of exchanging cryptocurrency, each with its own advantages and risks. I review each in turn.

38 Evidence of A. Vickery, Transcript, November 23, 2020, p 90.
41 Evidence of J. Spiro, Transcript, November 24, 2020, p 57.
Public Exchanges

Public exchanges, also known as centralized exchanges, are the most popular method for individuals to purchase cryptocurrency. They allow users to purchase or sell cryptocurrency, as well as convert it into other cryptocurrencies, and are usually funded through transaction fees. They can be brick-and-mortar businesses or online businesses.42

As I noted above, exchanges take custody of a user’s private key through a custodial wallet. As a result, users are not really in control of their private keys.43 The private keys are not retained within the exchange itself – an arrangement meant to protect both the exchange and users from potential hacks. Most private keys are stored in a cold wallet, and the exchange keeps only what is necessary to meet the supply and demand of transactions in its hot wallet. As the reserve depletes, the exchange can replenish it from the cold wallet.44

Concerns about the storage of private keys by exchanges were raised in the case of an exchange called QuadrigaCX (Quadriga), whose co-founder and chief executive officer was found by staff at the Ontario Securities Commission to have engaged in fraudulent activities. I discuss Quadriga and the Ontario Securities Commission report below.

As of June 2021, public exchanges are deemed to be money services businesses under the PCMLTFA and therefore have all the typical customer due diligence and other obligations under that regime. They are also required to register with FINTRAC. However, prior to the amendments, most exchanges gathered a significant amount of information from clients, including their name, address, phone number, a photo of the client holding their government-issued photo identification, bank account information, and transaction history.45 The exchange would usually run an algorithm on the photo of the client holding their government-issued ID to confirm that they were who they said they were.46

Sergeant Adrienne Vickery, the national cryptocurrency coordinator at the RCMP, characterized exchanges as being the “on ramps” or “off ramps” of cryptocurrencies in the sense that they provide methods of cashing out cryptocurrency into fiat currency. When law enforcement can trace a transaction going to an exchange, it can seek a production order to obtain the information in their possession.47

42 Exhibit 253, RCMP Virtual Assets Slideshow, slide 15; Evidence of A. Vickery, Transcript, November 23, 2020, p 62; Evidence of A. Gilkes, Transcript, November 23, 2020, p 59.
43 Evidence of A. Vickery, Transcript, November 23, 2020, p 62.
44 Ibid, p 63.
45 Exhibit 253, RCMP Virtual Assets Slideshow, slide 16.
46 Some exchanges had been victims of fraud where corrupt entities had bought images of individuals holding a driver’s licence on the dark web. The algorithm was meant to prevent that from happening: Evidence of A. Vickery, Transcript, November 23, 2020, pp 60–62.
Private Exchanges

A private exchange is a peer-to-peer platform that connects buyers and sellers of cryptocurrency. In a similar way to Craigslist or Kijiji, a seller or purchaser of cryptocurrency can post an advertisement to buy or sell cryptocurrency. Many private exchanges exist. One of the most common is Paxful, which advertises over 300 payment methods, including cash and gift cards.

Sergeant Vickery testified that from a law enforcement perspective, private exchanges are a very risky way to purchase cryptocurrency. They are very expensive compared to public exchanges: whereas a public exchange typically charges fees of ¼ to 4 percent, private exchanges charge around 10 to 15 percent. Users are willing to pay those fees because the exchange offers anonymity. Further, the variety of payment options makes it difficult for law enforcement to follow the flow of funds.

Individuals using private exchanges often meet in person to exchange cash. Although transactions on the blockchain take at least 10 minutes, it may take an hour or more for the transaction to be validated and to appear on the blockchain. As individuals meeting in person are unlikely to wait the 30 to 60 minutes to ensure a transaction is validated, there is a risk of fraud. In some cases, individuals have been assaulted or had bags of cash stolen.

Cryptocurrency ATMs

Cryptocurrency ATMs or “kiosks” are “stand-alone machines that allow users to convert fiat currency to and from Bitcoin and other currencies.” Users can buy or sell cryptocurrency with their mobile devices or have it delivered in the form of a paper wallet.

Fees associated with using cryptocurrency ATMs are typically higher than with exchanges. There are certainly uses for legitimate users: for example, ATMs can be useful for traditionally unbanked people to be able to deal with and transact currency all over the world. Further, they are attractive to those who do not want to rely on a third party holding assets for them or to share personal information with companies. However, as I elaborate later in this chapter, there are significant money laundering risks associated with the use of cryptocurrency ATMs.

The use of cryptocurrency ATMs has increased substantially in recent years. Sergeant Vickery testified that, at the time of the hearings, there had been a 100 percent

---

48 Evidence of A. Vickery, Transcript, November 23, 2020, p 68.
49 Ibid, p 70.
51 Ibid, p 70.
52 Ibid, pp 69–70.
54 Evidence of A. Vickery, Transcript, November 23, 2020, p 75.
increase in a year, from around 6,000 to 12,000 ATMs worldwide. Of approximately 1,000 such machines in Canada at the time of the hearings, 101 were in Vancouver.56

There are different ways to run a cryptocurrency ATM. An operator may have an open account with an exchange, such that transactions will be mirrored on an open account at an exchange. This arrangement ensures that the wallet used to support the ATM is fully replenished and will meet the supply and demand of the machine. It also helps with volatility, ensuring the operator of the machine is paying the same for cryptocurrency as it is being sold for. Alternatively, operators may purchase machines and support them with their own hot wallets – a practice requiring a lot of cryptocurrency reserves.57

As of June 2021, cryptocurrency ATMs are considered money services businesses under the PCMLTFA and are therefore subject to that regime’s customer due diligence and other measures.58 Sergeant Vickery testified that there is not much incentive for operators to do more than is required under the PCMLTFA, noting that operators have reported that business has dropped since implementing even basic customer due diligence measures.59 She expressed the view that the vast majority of cryptocurrency ATMs will not be doing any form of customer due diligence under the required threshold of $1,000 (discussed below).60

Prepaid Cryptocurrency Cards

Although cryptocurrency is increasingly accepted by merchants as a form of payment, it is still relatively uncommon. This is due to the volatility of cryptocurrency: merchants cannot be sure of their purchasing power from one day to the next. Prepaid cryptocurrency cards offer a solution. These cards involve a user transferring cryptocurrency to a third-party operator that funds the cards, which can then be spent anywhere.61 As I discuss below, these cards present money laundering risks.

Over-the-Counter Brokers

Over-the-counter (OTC) brokers facilitate trades between buyers and sellers who cannot or do not want to transact on an open cryptocurrency exchange. They are usually associated with – but operate independently from – exchanges.62 This arrangement is sometimes referred to as being “nested” within an exchange and means that a transaction conducted by an OTC broker may show up on the blockchain as being conducted by the exchange.63

56 Evidence of A. Vickery, Transcript, November 23, 2020, pp 70, 75, 78; Exhibit 253, RCMP Virtual Assets Slideshow, slide 19.
58 Evidence of C. Cieslik, Transcript, November 25, 2020, pp 100–1.
60 Ibid, p 80.
OTC brokers provide an avenue to exchange large amounts of cryptocurrency outside of an open exchange.\textsuperscript{64} Large cryptocurrency transactions can have an impact on the liquidity of the market and pricing, with the result that there are usually limits set on how much cryptocurrency can be converted or transferred at a given time. OTC brokers are therefore attractive to those looking to move large amounts of cryptocurrency. They are generally seen as off-market service providers and provide increased privacy in that transactions are not directly connected to individuals on an exchange.\textsuperscript{65}

An exchange’s level of insight into the activities of a nested OTC broker varies. Further, customer due diligence practices among OTCs vary wildly, with some being very compliant and others not requiring any customer due diligence.\textsuperscript{66}

Chainalysis, a company that provides blockchain forensics investigative services (discussed further below), observes in an annual report that there is a “huge range in how much illicit transaction volume nested services process – some are just as compliant as mainstream exchanges, while others appear to cater specifically to cybercriminals.” It continues:

Many appear to be large businesses for whom illicit activity is just a small share of total transaction volume, suggesting that these services are likely inadvertently moving illicit funds due to lax compliance policies, but could continue to operate if they stopped. However, some of these deposit addresses receive such a high percentage of their funds from illicit addresses that it seems impossible the activity could be accidental, or that the services could even continue to operate without serving cybercriminals.\textsuperscript{67}

Chainalysis has identified 100 “rogue” OTCs that have processed trades with bad actors and wallets associated with large volumes of illicit cryptocurrency or proceeds of crime.\textsuperscript{68} Jesse Spiro, global head of policy and regulatory affairs at Chainalysis, agreed that OTCs are disproportionately favoured by bad actors, including money launderers. In his estimation, this is likely because they either solicit that kind of business or have been identified as OTCs conducting little or no customer due diligence. Indeed, some OTCs are nested within exchanges that conduct little or no due diligence.\textsuperscript{69}

There are clear money laundering vulnerabilities associated with OTC brokers. This is evident from their business model, which involves facilitating large cryptocurrency transactions for individuals without accounts at exchanges, and the absence of regulation over their activities. To borrow Sergeant Vickery’s terminology, OTC brokers can be seen as “on ramps” or “off ramps” of virtual currencies, potentially allowing criminals

\textsuperscript{64} Evidence of A. Vickery, Transcript, November 23, 2020, p 82; Exhibit 253, RCMP Virtual Assets Slide-show, slide 23.
\textsuperscript{65} Evidence of J. Spiro, Transcript, November 24, 2020, pp 61–62, 85.
\textsuperscript{66} Ibid, pp 85–86.
\textsuperscript{67} Exhibit 1021, Appendix 1, Chainalysis 2021 Report, p 13.
\textsuperscript{68} Exhibit 257, Chainalysis 2020 Report, p 13; Evidence of J. Spiro, Transcript, November 24, 2020, p 87.
\textsuperscript{69} Evidence of J. Spiro, Transcript, November 24, 2020, pp 88–89.
to launder and cash out large amounts of cryptocurrency with little or no oversight.\textsuperscript{70} However, I am mindful that there are legitimate uses of these services as well.\textsuperscript{71}

It appears that OTC brokers may constitute dealers of virtual currencies for the purposes of the \textit{PCMLTFA}. FINTRAC may wish to work in co-operation with exchanges to identify OTC brokers and, where appropriate, ensure that they are registered.

**Private Off-Chain Transactions**

Private off-chain transactions are another way of exchanging cryptocurrency. These are transactions that are not recorded on the blockchain. For example, an individual might give their private key to someone else in exchange for cash, thereby allowing the recipient of the key to access the cryptocurrency. In that way, the recipient has essentially received cryptocurrency without a formal transfer appearing on the blockchain.\textsuperscript{72}

**Lightning Network**

A final way of exchanging cryptocurrency is through the lightning network. This network essentially runs like a tab: it enables users to perform multiple transactions outside the main blockchain and be recorded as a single transaction at the end.\textsuperscript{73} Sergeant Vickery testified that, from a law enforcement perspective, the lightning network poses problems because it is not possible to see what occurred in the various transactions leading up to the final one that is recorded. In fact, it may not be possible to see that more than one transaction has occurred.\textsuperscript{74}

**Regulation of Cryptocurrencies**

Regulation of cryptocurrencies is fairly recent both at the international and domestic level. In what follows, I review the Financial Action Task Force’s recommendations\textsuperscript{75} and guidance on virtual assets, the recent amendments to the \textit{PCMLTFA}, and the potential for provincial regulation.

**The Financial Action Task Force’s Recommendations and Guidance**

The Financial Action Task Force first addressed virtual assets in 2012 as a “new technology” in Recommendation 15. Over the years, the recommendation has become

\begin{itemize}
\item \textsuperscript{70} Exhibit 257, Chainalysis 2020 Report, p 12.
\item \textsuperscript{71} Evidence of J. Spiro, Transcript, November 24, 2020, p 89; Exhibit 257, Chainalysis 2020 Report, p 12.
\item \textsuperscript{72} Evidence of A. Vickery, Transcript, November 23, 2020, pp 83–84; Exhibit 253, RCMP Virtual Assets Slide-show, slide 23.
\item \textsuperscript{73} Evidence of A. Vickery, Transcript, November 23, 2020, pp 84–85; Exhibit 253, RCMP Virtual Assets Slide-show, slide 23.
\item \textsuperscript{74} Transcript, November 23, 2020, pp 84–85.
\item \textsuperscript{75} I discuss the recommendations, which set out anti-money laundering and counterterrorist financing measures that member countries are encouraged to adopt, in Chapter 6.
\end{itemize}
more precise and new guidance has been made available. Recommendation 15, “new technologies,” currently states:

Countries and financial institutions should identify and assess the money laundering or terrorist financing risks that may arise in relation to (a) the development of new products and new business practices, including new delivery mechanisms, and (b) the use of new or developing technologies for both new and pre-existing products. In the case of financial institutions, such a risk assessment should take place prior to the launch of the new products, business practices or the use of new or developing technologies. They should take appropriate measures to manage and mitigate those risks.

To manage and mitigate the risks emerging from virtual assets, countries should ensure that virtual asset service providers are regulated for [anti-money laundering / counterterrorist financing] purposes, and licensed or registered and subject to effective systems for monitoring and ensuring compliance with the relevant measures called for in the [Financial Action Task Force] Recommendations.  

The recommendations also contain the following definitions of “virtual asset” and “virtual asset service provider”:

A virtual asset is a digital representation of value that can be digitally traded, or transferred, and can be used for payment or investment purposes. Virtual assets do not include digital representations of fiat currencies, securities and other financial assets that are already covered elsewhere in the [Financial Action Task Force] Recommendations.

Virtual asset service provider means any natural or legal person who is not covered elsewhere under the Recommendations, and as a business conducts one or more of the following activities or operations for or on behalf of another natural or legal person:

i. exchange between virtual assets and fiat currencies;

ii. exchange between one or more forms of virtual assets;

iii. transfer of virtual assets;

iv. safekeeping and/or administration of virtual assets or instruments enabling control over virtual assets; and

---

76 For a chronology of the evolution of the FATF standards and guidance, see Exhibit 249, Overview Report: Federal Regulation of Virtual Currencies, pp 1, 5–9.

77 Exhibit 4, Appendix E, FATF Recommendations, p 15.
v. participation in and provision of financial services related to an issuer's offer and/or sale of a virtual asset.78

The interpretive note to Recommendation 15 clarifies a number of points, of which I highlight a few. First, it notes that all value-based terms in the recommendations (namely “property,” “proceeds,” “funds,” “funds or other assets,” or other “corresponding value”) should include virtual assets. As a result, all relevant measures under the recommendations should apply to virtual assets and virtual assets service providers.79 Second, it states that virtual asset service providers should be required to be licensed or registered. Licensing or registration should be done at minimum in the jurisdiction in which the virtual asset service provider is created, but countries may also require virtual asset service providers that offer products and/or services to customers in, or conduct operations from, their jurisdiction to be licensed or registered in that jurisdiction.80 Third, member jurisdictions must ensure that virtual asset service providers are supervised and regulated by a competent authority (which should not be a self-regulatory body) with recourse to a range of different disciplinary and financial sanctions.81

Virtual asset service providers should be subject to the same customer due diligence, record-keeping, and reporting requirements as other reporting entities, with two qualifications: (a) the threshold for requiring customer due diligence should be US$1,000 or 1,000 euros, and (b) virtual asset service providers should be required to gather originator and beneficiary information on virtual asset transfers, submit the information to the beneficiary provider or financial institution immediately and securely, and make it available on request to appropriate authorities.82

The latter qualification, referred to as the “travel rule,” is based on Recommendation 16, which relates to wire transfers.83 The travel rule is an anti-money laundering and counterterrorist financing measure that ensures originators and beneficiaries of financial transactions are identifiable and not anonymous.84 It is meant to track and have a record of the movement of funds: who sends and receives them, which jurisdictions they are in, and which accounts are used.85

The Financial Action Task Force has also released a number of guidance documents, including its Guidance for a Risk-Based Approach: Virtual Assets and Virtual

78 Exhibit 4, Appendix E, FATF Recommendations, pp 126–27.
80 Ibid, para 3.
81 Ibid, paras 5, 6.
82 Ibid, para 7.
Asset Service Providers, which was most recently updated in October 2021. This lengthy guidance document explains how each of the 40 recommendations should be applied in the virtual asset space, provides examples of measures in place in certain jurisdictions, and sets out best practices in terms of information sharing and co-operation by supervisors.

In July 2020, the Financial Action Task Force published a 12-month review of members' implementation of the recommendations relating to virtual assets. It found that 35 of 54 reporting jurisdictions had implemented the revised standards and emphasized the need for all members to implement the standards to ensure their effectiveness. Jurisdictions were encountering issues in implementing the travel rule, with many noting that technological solutions were lacking. The review provided some observations on the use of virtual assets for money laundering and terrorist financing purposes, including:

- The value of virtual assets involved in detected cases had been relatively small so far compared to cases using more traditional services and products, though ongoing monitoring is necessary.
- The most prominent typology observed so far has been the use of virtual assets for layering, possibly due to the ease of rapid transfer.
- Professional money laundering networks appeared to be starting to exploit this vulnerability and use virtual assets as a means of laundering.
- Bad actors tended to use virtual assets service providers registered or operating in jurisdictions lacking effective anti-money laundering or counterterrorist financing regulation, as well as multiple providers, rendering it challenging for authorities to follow the trail of funds.
- Bad actors tended to use tools and methods to increase the anonymity of transactions, including anonymizing domain names, tumblers or mixers, privacy coins, chain hopping, and other techniques (many of which I review below).

The July 2020 review concluded that there was no clear need to amend the recommendations or the interpretive note as of yet. It committed to publishing a further
review in July 2021,\textsuperscript{91} which it subsequently did.\textsuperscript{92} Among the second review’s findings were the following:

- Fifty-eight of 128 jurisdictions had introduced the necessary legislation to implement the revised Financial Action Task Force standards, but global implementation is uneven.

- Although there had been clear progress in the implementation of the standards by the public sector, there was not yet sufficient implementation to enable a global anti-money laundering and counterterrorist financing regime for virtual assets and providers.

- As in 2020, there was not yet sufficient implementation of the travel rule or the development of associated technological solutions.

- There had been strong and rapid growth in the virtual assets sector since the revised standards, including a large increase in the use of virtual assets to collect ransomware payments and to launder proceeds.

- There was no need to amend the standards or interpretive note as of yet.\textsuperscript{93}

In September 2020, the Financial Action Task Force released a series of “red flag indicators” associated with virtual assets.\textsuperscript{94} These indicators were developed by examining over 100 case studies contributed by member jurisdictions between 2017 and 2021 as well as other Financial Action Task Force reports and information in the public domain.\textsuperscript{95} The cases revealed that the majority of offences focused on predicate or money laundering offences, with the most common type of misuse being illicit trafficking in controlled substances and the second most common being frauds, scams, ransomware, and extortion.\textsuperscript{96} The various indicators are divided into six categories: transactions, transaction patterns, anonymity, senders or recipients, source of funds or wealth, and geographical risks. Several case studies are included to illustrate the involvement of red flags. I would encourage law enforcement bodies in British Columbia tasked with investigating money laundering or cryptocurrency-related crime to carefully review these red flag indicators.

Notably, the Financial Action Task Force red flag indicators were significantly influenced by a private sector initiative. Peter Warrack, a consultant specializing in blockchain technology, anti-money laundering, and cryptocurrency, testified that the

\textsuperscript{91} Ibid, paras 4, 70.
\textsuperscript{93} Ibid at paras 2–7.
\textsuperscript{95} Ibid, para 6.
\textsuperscript{96} Ibid, p 4.
Financial Action Task Force document was based on a report that he and peers in the industry (including exchanges, aftermarket software companies, and law enforcement) developed through an initiative called Project Participate (discussed below). While I applaud this private sector initiative, I emphasize that law enforcement, regulators, and government must develop their own expertise in cryptocurrency. The evidence before me showed that many private sector actors are committed to implementing measures to fight cryptocurrency-related crime, and this is certainly positive. However, the ultimate responsibility to investigate cryptocurrency-related crime, as with other criminal activity, lies with the state. It is crucial that law enforcement, government, and regulators – whose primary motivation is to act in the public interest – develop their own expertise in this area. Although private sector initiatives are to be welcomed, state actors must remain the primary investigators of this activity and ensure they are not overly dependent on private sector expertise and activity, given that law enforcement will likely need to investigate private sector actors in some cases. I recommend that the government, in consultation with the proposed AML Commissioner (see Chapter 8), ensure that law enforcement and regulators are trained to recognize indicators and typologies of money laundering through virtual assets. Prosecutors who are routinely tasked with advising on or supporting proceeds-of-crime and money laundering investigations may also benefit from such training. Members of the new anti-money laundering intelligence and investigation unit (discussed in Chapter 41), who will have or will need to develop a high degree of expertise in this area, would be well placed to develop and deliver such training.

**Recommendation 86:** I recommend that the Province, in consultation with the AML Commissioner and the dedicated provincial money laundering intelligence and investigation unit, ensure that law enforcement, regulators, and Crown counsel with relevant duties are trained to recognize indicators and typologies of money laundering through virtual assets.

**The PCMLTFA**

Amendments to the PCMLTFA to include virtual assets were introduced in June 2014. However, these and subsequent amendments needed to be brought into force

---

98 In this regard, I agree with Detective Inspector Craig Hamilton of New Zealand’s Financial Crime Group: “[Virtual assets are] an emerging area of opportunity for money laundering. It’s also an emerging area of opportunity for regular career enhancement and policing response. It’s here to stay. We need to understand it, and our people need to understand it. We need to be vigilant looking for it. It’s not something to be scared of or intimidated by. Quite the reverse. And it’s an area that ... law enforcement globally need to work together to respond because the way it operates is that money can obviously transfer very, very quickly between people and certainly almost in other parts of the world, and it can finance illegal activity. And we need to be responsive to those issues”: Transcript, May 12, 2021, p 62.
by regulation, which ultimately occurred in June 2020 and June 2021. With these amendments, dealers in virtual currencies have been deemed to be money services businesses, and foreign money services businesses now include virtual currency dealers that do not have a place of business in Canada. The Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations, SOR/2002-184, define “virtual currency” and “virtual currency exchange transaction” as follows:

**virtual currency** means

(a) a digital representation of value that can be used for payment or investment purposes, that is not a fiat currency and that can be readily exchanged for funds or for another virtual currency that can be readily exchanged for funds; or

(b) a private key of a cryptographic system that enables a person or entity to have access to a digital representation of value referred to in paragraph (a). (**monnaie virtuelle**)

**virtual currency exchange transaction** means an exchange, at the request of another person or entity, of virtual currency for funds, funds for virtual currency or one virtual currency for another. (**opération de change en monnaie virtuelle**)

Dealers in virtual currencies must now, among other things, do the following:

- register with FINTRAC;
- report various transactions to FINTRAC, including large cash and large virtual currency transactions and suspicious transactions;
- engage in client identification and verification measures in various circumstances, including:
  - when remitting $1,000 or more at the request of a customer;
  - conducting a foreign exchange transaction of $1,000 or more;
  - entering into an ongoing service agreement with a customer; and
  - conducting a large cash or large virtual currency transaction;
- take efforts to identify individuals who attempt to undertake a suspicious transaction; and
- implement compliance programs and policies.

---

99 For a chronology of the amendments and regulations, see Exhibit 249, Overview Report: Federal Regulation of Virtual Currencies.

100 **PCMLTFA**, ss 5(h)(iv) and 5(h.1)(iv); **Proceeds of Crime (Money Laundering) and Terrorist Financing Regulations**, SOR/2002-184 [**PCMLTF Regulations**], s 1, “money service business” and “foreign money service business.”

101 **PCMLTFA**, ss 7, 11.1; **PCMLTF Regulations**, ss 30–37, 84, 85, 95, 156.
In line with the Financial Action Task Force’s recommendations, the regulations also implement a travel rule:

124.1 (1) A financial entity, money services business or foreign money services business that is required to keep a record under these Regulations in respect of a virtual currency transfer shall

(a) include, with the transfer, the name, address and, if any, the account number or other reference number of both the person or entity who requested the transfer and the beneficiary; and

(b) take reasonable measures to ensure that any transfer received includes the information referred to in paragraph (a).

(2) Every person or entity referred to in subsection (1) shall develop and apply written risk-based policies and procedures for determining, in the case of a virtual currency transfer received by them that, despite reasonable measures taken under paragraph (1)(b), does not have included with it any of the information required under paragraph (1)(a), whether they should suspend or reject the virtual currency transfer and any follow-up measures to be taken.

The evidence before me revealed that there have been some difficulties in the implementation of the travel rule. Mr. Warrack testified that no single workable technological solution for the travel rule existed when the Financial Action Task Force formulated the corresponding recommendation. However, he noted that the industry has come together to establish technology solutions, common standards, and common language. Ryan Mueller, chief compliance officer at the cryptocurrency platform Netcoin, added that there are many ways to move cryptocurrency, not all of which require customer due diligence measures, and that not all providers are willing to share information. Cryptocurrency exchanges have different ways of identifying the device initiating a transaction and of encrypting information, and “not all of those methods [can] talk to each other.” Further, techniques exist to obfuscate the trail of funds. Mr. Warrack added that the travel rule applies only between virtual asset service providers – it does not apply when a transaction is between a virtual asset service provider and a private wallet.

The amendments have also placed obligations on other reporting entities. For example, all reporting entities that deal in virtual currencies (such as financial entities, casinos, securities dealers, and traditional money services businesses) must report large and suspicious transactions conducted in virtual currency. Similarly, as part of their compliance programs, reporting entities must perform a risk assessment before using new technologies.

106 PCMLTF Regulations, s 156(2).
In February 2022, in the context of the so-called “Freedom Convoy” protests in Ottawa, Windsor, and elsewhere in Canada, the federal government took swift and unprecedented action to expand the ambit of the PCMLTFA as it applies to virtual assets. On February 15, 2022, it invoked the Emergencies Act\textsuperscript{107} for the first time and implemented various measures intended to target the blockades and their funding.\textsuperscript{108} The measures were in force from February 15 to 23, 2022.\textsuperscript{109} Significantly, some of the emergency measures related to virtual assets and reporting under the PCMLTFA: an emergency economic measures order required various financial entities to (a) cease dealing with property – including virtual assets – owned, held, or controlled by members of the Freedom Convoy, and (b) determine on a continuing basis whether they were in possession or control of such property.\textsuperscript{110}

Notably, the financial entities targeted by the order were not limited to banks, credit unions, and other similar institutions; the order also extended to crowdfunding platforms that raise funds or virtual currency through donations.\textsuperscript{111} Crowdfunding platforms were also required to register with FINTRAC and report suspicious and other transactions involving Freedom Convoy participants to FINTRAC.\textsuperscript{112} It appears that the federal government intends to bring crowdfunding platforms into the PCMLTFA on a permanent basis.\textsuperscript{113}

The amendments to the PCMLTFA that brought virtual assets into the regime were not in force at the time of the Financial Action Task Force’s 2016 mutual evaluation of Canada.\textsuperscript{114} The evaluation accordingly concluded that Canada was non-compliant with Recommendation 15, but noted that legislative steps had been taken to include virtual currencies in the regime.\textsuperscript{115} In its recent re-rating of Canada, the Financial Action Task Force re-rated the country as largely compliant with Recommendation 15, given the amendments to the PCMLTFA.\textsuperscript{116} The re-rating noted with approval the broad

\textsuperscript{107} RSC, 1985, c 22 (4th Supp).

definitions of “virtual asset” and “virtual asset service providers,” the requirement for the latter to register with FINTRAC and take preventive measures, and the steps taken by Canada to understand the money laundering and terrorist financing risks associated with virtual assets.\footnote{117}

In Mr. Warrack’s view, deeming virtual asset service providers as money services businesses is not a perfect fit. He noted that a traditional money services business, such as one used to remit funds to another country, “is a very different model to the way that a lot of [virtual asset service providers] operate where in fact they are actually trading platforms with very, very different rules – a very, very different activity to what would be expected in a traditional [money services business].” He observed that rapid trading and rapid movement of funds might be very normal for a virtual asset service provider but a red flag in the traditional financial sector.\footnote{118} He also expressed the view that the requirement to report the receipt of virtual currency of more than $10,000 seems “somewhat ridiculous,” as it would be “very normal for a customer who’s a trader to have maybe thousands of transactions in an hour above that amount in and out of their account, particularly if they’re using automated trading bots, et cetera”; nor does it take into account change transactions\footnote{119} or the fact that exchanges may value a cryptocurrency differently at any given time.\footnote{120}

Charlene Cieslik, a consultant on anti-money laundering and counterterrorist financing matters for financial and virtual currency businesses, testified that the $10,000 “magic number” was set around 30 years ago as a high amount but is not necessarily a good fit for cryptocurrency, given the price fluctuations. In her view, this threshold results in noise being reported to FINTRAC, and the number should be revisited.\footnote{121} Ms. Cieslik was also concerned that some virtual asset service providers and money service providers can allow various transactions under the $1,000 threshold for conducting client identification and verification to avoid doing those measures. In her view, some guidance on this matter is needed.\footnote{122} Conversely, Mr. Mueller noted that in some situations, such as with liquidity providers, every single transaction will meet the $1,000 threshold because they are servicing other high-volume entities.\footnote{123}

\begin{footnotes}
\item[117] Ibid.
\item[118] Transcript, November 25, 2020, pp 53–54.
\item[119] Mr. Warrack explained a “change transaction” as follows. In the same way as an individual might pay for something worth $10 with a $20 bill and receive $10 in change, an individual may send 20 bitcoins worth $300,000 and want to send 10 bitcoins elsewhere. To do so, the individual would have to send the 20-bitcoin transaction through the blockchain and then receive 10 bitcoins in change. Mr. Warrack understands that the change transaction – the 10 bitcoins back – would trigger the $10,000 reporting rule, despite its being, in his view, “noise” being reported to FINTRAC that could obscure information that might actually lead to valuable information: Transcript, November 25, 2020, pp 54–57. Ms. Cieslik added that it would be helpful for FINTRAC to clarify whether change transactions need to be reported, as there is a wide discrepancy in industry practice: Transcript, November 25, 2020, p 57.

Sergeant Vickery testified that she would like to see FINTRAC be able to issue higher monetary penalties for non-compliance. She noted that the US Financial Crimes Enforcement Network (FinCEN) issued a US$250 million penalty for a former exchange called BTC-e, which was found to have facilitated money laundering. In her view, penalties such as these would be good deterrents.124

Having just come into force in June 2020 and June 2021, the PCMLTFA amendments are very new, and it is too soon to evaluate their effectiveness. Although the above concerns are well taken and could very well materialize, the amendments appear to be promising and long overdue. Nonetheless, criminals are adaptive and will certainly find ways around them.125 It is therefore crucial that the federal government, FINTRAC, and industry members closely monitor the implementation of these new amendments as well as new trends and money laundering techniques that emerge.

**Potential Provincial Regulation**

The inclusion of virtual currencies in the PCMLTFA regime is a good first step for regulation in this industry. It does not, however, preclude complementary provincial regulation. As the PCMLTFA is focused on money laundering and terrorist financing risks, it does not address the internal activities of virtual asset service providers, consumer and investor protection, consumer fraud, or the regulation of third-party payment processors.126

In the next section, I review the rise and fall of QuadrigaCX (Quadriga), a Canadian cryptocurrency exchange that operated from December 2013 to February 2019. In a 2020 report, staff at the Ontario Securities Commission127 concluded that Quadriga had committed various types of fraud. While Quadriga’s story does not involve money laundering specifically, the circumstances leading to its downfall are illustrative of regulatory gaps in the virtual asset space and how lack of provincial regulation in this sector may facilitate criminal activity.

It seems likely that provincial regulation of virtual assets could have prevented many of the issues, including likely criminality, that arose in relation to Quadriga. In my view, the Province should regulate virtual asset service providers. The virtual asset space is developing quickly – as is cryptocurrency-related crime. It is essential that the Province put a regulatory regime in place promptly to address the risks that arise in this sector.

125 Ibid, pp 149–50; Evidence of A. Gilkes, Transcript, November 23, 2020, p 150.
127 Exhibit 265 is a report prepared by Ontario Securities Commission staff. It notes that, in normal circumstances, there would likely have been an enforcement action before the Ontario Securities Commission itself against Mr. Cotten and/or Quadriga; however, this was not practical because Mr. Cotten was deceased and Quadriga was bankrupt. Instead, staff at the Ontario Securities Commission prepared a report summarizing their findings: Exhibit 265, Ontario Securities Commission, QuadrigaCX: A Review by Staff of the Ontario Securities Commission (April 14, 2020) [OSC Quadriga Report], p 4.
In Chapter 21, I have recommended that the Province regulate money services businesses and that this regulation be carried out by the British Columbia Financial Services Authority (BCFSA). Given that virtual asset service providers are deemed to be money services businesses for the purposes of the PCMLTFA, it may be that subjecting them to the same provincial regulation as money services businesses is appropriate. However, as I explain further below, securities regulators are developing guidance specifying when virtual asset service providers are engaged in activities that fall under their purview. It is not clear at this stage what proportion of virtual asset service providers engage in activities that would require them to register with a securities regulator. If many or most are engaged in such activity, there would seem to be a risk of duplication between a regulator of virtual asset service providers and regulation by the BC Securities Commission. It is also notable that Quebec – the only province that regulates money services businesses at the time of writing – has not included virtual asset service providers in its regime.\footnote{See Chapter 21 for a more detailed discussion of Quebec's regime. Under the Money Services Businesses Act, CQLR c E-12.000001, money services are defined to include currency exchange, funds transfer, the issue or redemption of traveller's cheques, money orders or bank drafts, cheque cashing, and the operation of automated teller machines: s 1.}

Given the foregoing, I am not prepared to recommend that a particular body be responsible for regulation of virtual asset service providers. The Province is best placed to determine whether this regulation should be carried out by the BCFSA, the BC Securities Commission, or some other authority. In doing so, it should consult with the AML Commissioner, the BCFSA, the BC Securities Commission, industry members, and other stakeholders.

**Recommendation 87:** I recommend that the Province implement a regulatory regime for virtual asset service providers. In determining which authority is best placed to act as the regulator, the Province should consult with the AML Commissioner, the British Columbia Financial Services Authority, the British Columbia Securities Commission, industry members, and other stakeholders.

**Quadriga**

As I noted above, the circumstances of the rise and fall of Quadriga illustrate that an absence of regulation in the virtual asset field at the provincial level may allow criminal activity to occur undetected. Quadriga's story illustrates the pitfalls that can arise when an industry is able to operate free from meaningful scrutiny. I emphasize, however, that my discussion should not be taken as suggesting that all cryptocurrency-based entities are risky and non-compliant. To the contrary, the evidence before me indicates that many cryptocurrency exchanges seek to be compliant and had been long awaiting the amendments to the PCMLTFA.\footnote{Evidence of R. Mueller, Transcript, November 25, 2020, p 29; Evidence of C. Cieslik, Transcript, November 25, 2020, pp 22–23, 30–31; Evidence of P. Warrack, Transcript, November 25, 2020, pp 31–32.}
Quadriga was a Canadian cryptocurrency exchange that operated from December 2013 to February 2019. Its downfall – which staff at the Ontario Securities Commission concluded was caused by fraud perpetrated by its co-founder and CEO, Gerald Cotten – led to over 76,000 clients being owed a combined $215 million in assets.

The Quadriga platform allowed users to store, buy, and sell various cryptocurrencies. Fuelled by rising cryptocurrency asset prices, Quadriga became the largest cryptocurrency asset trading platform in Canada between 2016 and 2017. Staff at the Ontario Securities Commission considered that its business model meant that clients’ entitlements constituted securities or derivatives; however, Quadriga did not register with any securities regulator.

When the price of virtual assets began to fall in 2018, Quadriga became unable to meet client withdrawal requests. In January 2019, Quadriga announced that Mr. Cotten had died in India in December 2018. By February 2019, Quadriga had ceased operations and filed for creditor protection.

Initial media reports said that Mr. Cotten had died without sharing the passwords to Quadriga’s cold storage, which meant that client assets were inaccessible. However, the Ontario Securities Commission staff determined that this was not the case; rather, Mr. Cotten had been engaged in various forms of fraud, and, even before his death, Quadriga did not have enough assets to support its clients’ holdings. The report concludes that Mr. Cotten’s fraud took many forms:

- Most of the shortfall (approximately $115 million) arose from fraudulent trading on the Quadriga platform. Mr. Cotten opened accounts under aliases and credited himself with fictitious currency and crypto-asset balances, which he traded with clients. He sustained real losses when the price of crypto assets fell, leading to a shortfall in assets to satisfy client withdrawals. He then covered clients’ shortfalls with other clients’ deposits – effectively, a Ponzi scheme.

- He lost $28 million while trading client assets on three external crypto-asset trading platforms, without his clients’ authorization or knowledge.

- He misappropriated millions in client assets to fund his own lavish lifestyle. He transferred approximately $24 million of client funds to himself and his partner.
and bought a Tesla, a Lexus, a luxury yacht, a plane, a share in a private jet, and multiple properties.\textsuperscript{137}

The Ontario Securities Commission staff and Ernst & Young (which was appointed monitor for the \textit{Companies’ Creditors Arrangement Act} proceedings) identified various problems with the way that Quadriga had handled its clients’ assets, both virtual and fiat. These problems included:

- holding all client assets in a central Quadriga account rather than separate client accounts;\textsuperscript{138}
- storing clients’ assets primarily in hot wallets and other crypto-asset trading platforms, despite assuring clients that their assets would be stored in cold storage;\textsuperscript{139}
- relying almost exclusively on third-party payment processors to hold clients’ fiat assets, since banks refused to hold the funds;\textsuperscript{140}
- doing millions of dollars of business in cash, despite Mr. Cotten knowing that such cash would surely not be accepted by banks;\textsuperscript{141}
- failing to maintain boundaries between client assets and business administration assets;\textsuperscript{142} and
- failing to maintain proper accounting ledgers or accounting records.\textsuperscript{143}

The Ontario Securities Commission report determined that of the $215 million that Quadriga owed, $46 million was recovered – a collective loss of $169 million.\textsuperscript{144} The RCMP and the FBI have confirmed that they have opened investigations into Quadriga.\textsuperscript{145}

\textbf{Access to Banking Services}

The Quadriga case also illustrates the difficulty that some cryptocurrency exchanges have in securing banking services. Prior to the \textit{PCMLTFA} amendments, these businesses were not covered by the regime and had no obligation to register with

\begin{itemize}

\end{itemize}
FINTRAC or otherwise comply with the scheme. Further, some businesses obtained bank accounts through “less than transparent methods,” with the result that “banks were not at all happy with people using their accounts for crypto-services when they found out and started closing all of their accounts.”146 Many financial institutions decided that the risk of dealing with virtual asset service providers was too high and declined to provide access to them.147 This is known as “de-marketing” or “de-risking,” and a similar issue has occurred with money services businesses (see Chapter 21). The lack of access to banking poses difficulties for virtual asset service providers, who lose access to “fiat on-ramp[s] and off-ramp[s]” and therefore have difficulty serving their clients, supporting their businesses, making payroll, and generally running their businesses.148 To address the need for banking services, virtual asset service providers have turned to third-party service providers, including providers with less stringent concerns about regulatory status and some offshore financial institutions willing to provide banking services.149 Indeed, Quadriga initially had access to banking services, but, over time, banks began to refuse to hold Quadriga-related funds. As a result, by 2017, Quadriga relied almost exclusively on third-party payment processors to hold its clients’ fiat assets.150

Mr. Mueller testified that third-party service providers are a “grey area” when it comes to the PCMLTFA. Technically, businesses that remit funds need to register as money services businesses; however, there is “no clear designation” that payment processors constitute money services businesses.151 As a result, use of these processors creates a “black box” from FINTRAC’s perspective because engaging a third-party service provider – rather than a bank with reporting obligations – means that transactions may not be reported.152 Further, from a law enforcement perspective, the use of third-party service providers tends to further distance the funds from the source, which can in turn facilitate money laundering.153

With the introduction of the PCMLTFA amendments and the requirement for cryptocurrency exchanges to register with FINTRAC, it appears that access to banking services for virtual asset service providers has been improving.154 The AML Commissioner recommended in Chapter 8 would be well placed to monitor developments in this area, including whether access to banking services is improving and whether continued reliance on third-party service providers is problematic from an anti-money laundering perspective. The Commissioner should report on these matters to the Province and make recommendations as needed.

Availability of Auditing Services

Virtual asset service providers have had difficulties obtaining the kinds of auditing services available to “traditional” financial institutions. Giles Dixon, an anti–money laundering advisor to the financial services and virtual currency industries at Grant Thornton Canada, explained that traditional financial institutions obtain audits or reports on matters including the risks associated with their businesses and the efficacy of their financial and system controls. They can also obtain “public-facing” reports meant to assure the public of the efficacy of the financial and system controls.155

Some virtual asset service providers in the United States have begun to seek such reports.156 However, in Canada, it has been difficult to identify auditors with the skills and capabilities required to conduct audits involving virtual assets, and there has been a lack of guidance from central bodies about how audit standards apply in this context.157 Further, as virtual asset service providers are focused on getting their businesses “up and running,” they do not necessarily have all the controls in place that an auditor would be assessing, and the cost of obtaining audits can be high.158

 Regulation of Virtual Asset Service Providers by Securities Regulators

As noted above, staff at the Ontario Securities Commission considered that Quadriga’s business model meant that it was engaging in securities or derivatives activities requiring it to register with a securities regulator. Indeed, the Canadian Securities Administrators (the umbrella organization of Canada's provincial and territorial securities regulators) has issued guidance on virtual asset services and when registration with a securities regulator will be necessary.159 This guidance has explained when “initial coin offerings” and “initial token offerings” will constitute securities or derivatives,160 as well as when platforms that facilitate buying and selling of crypto assets will be considered to fall under securities legislation.161 The Canadian Securities Administrators and the Investment Industry Regulatory Organization of Canada have also prepared a joint consultation paper setting out a proposed regulatory framework for crypto-asset trading platforms.162

155 Transcript, November 25, 2020, pp 73–75.
156 Ibid, pp 75–79.
159 See Exhibit 247, Overview Report: Canadian Securities Administrators Publications on Virtual Assets.
As of the hearings in November 2020, there were representatives of at least two virtual asset service providers who were in the process of applying for status as securities dealers.\textsuperscript{163} Mr. Mueller testified that obtaining this status can be beneficial for cryptocurrency exchanges that are seeking to show customers – particularly new customers – that they are established, stable, and abiding by regulations.\textsuperscript{164}

It is encouraging that securities regulators are developing frameworks for virtual assets and providing guidance to businesses about when they will be subject to securities regulation. I expect that this work will continue, which will provide an additional layer of oversight over activities in the virtual asset space.

\section*{Cryptocurrency and Crime}

The 2015 national risk assessment assessed virtual assets – particularly convertible, decentralized virtual currencies – as posing a high money laundering and terrorist financing risk. It noted that they are highly vulnerable due to their anonymity, ease of access, and complexity and that these characteristics pose significant challenges for law enforcement in determining the beneficial ownership of virtual currency involved in criminal activities.\textsuperscript{165}

It is true that virtual assets pose money laundering risks and must be regulated accordingly. In what follows, I review some key areas of risk and ways in which the virtual asset space has been misused for money laundering and other criminal purposes. However, it is important to keep in mind that there are many legitimate users of cryptocurrency and that, by some estimates, the criminality associated with virtual assets appears to be a fairly low percentage. Regulation must strike a careful balance to take care not to stifle innovation in this area or penalize legitimate users, while also addressing key risks that arise.

\section*{How Much Crime Is Related to Cryptocurrencies?}

It is difficult to ascertain with certainty how much crime involving cryptocurrencies is occurring. Sergeant Gilkes testified that it is more prevalent than most of us know, noting that many of the phone scams we regularly receive demand payment in cryptocurrencies. He added that many of these crimes go unreported or under-reported because people may be unsure whether they have fallen victim to them, may be ashamed that they have fallen victim, or may think they are encountering a technological issue rather than fraud.\textsuperscript{166}

Conversely, in its recent annual report on trends in the cryptocurrency universe, Chainalysis concludes that the number of cryptocurrency transactions involving illicit activity is low, at 2.1 percent of the transaction volume it analyzed from 2019 and 0.34 percent in 2020. Those low percentages do, however, translate into large numbers, totalling approximately US$2.4 billion and US$10 billion, respectively.¹⁶⁷ Chainalysis concludes that although the number may in fact be higher due to unreported criminal activity, the “good news is three-fold: Cryptocurrency-related crime is falling, it remains a small part of the overall cryptocurrency economy, and it is comparatively smaller than the amount of illicit funds involved in traditional finance.”¹⁶⁸ Importantly, however, the Chainalysis report relies on transactions involving entities and would not capture, for example, peer-to-peer activity or other activity outside the “controlled ecosystem”; in other words, it does not purport to summarize the entire blockchain ledger.¹⁶⁹ Further, as noted above, companies such as Chainalysis do not have visibility into cryptocurrencies that do not have a public blockchain, including privacy coins.

The Chainalysis numbers do highlight that there is a large proportion of legitimate cryptocurrency activity. Its 2020 report notes that the use of cryptocurrency is increasing, with 18 percent of all Americans and 35 percent of American millennials purchasing it in one year. Further, mainstream financial institutions including JP Morgan Chase and popular retailers such as Amazon and Starbucks have made use of cryptocurrency.¹⁷⁰ Proponents of cryptocurrency also point to various advantages for legitimate users, including the potential to minimize transaction costs, avoid inflation in fiat currencies, grant access to individuals in the developing world who are not served by banks or other financial institutions, and provide increased privacy.¹⁷¹

Given the limitations on the Chainalysis data and the anecdotal nature of evidence suggesting that cryptocurrencies are regular features in some crimes and are increasingly prevalent in money laundering operations, I am unable to arrive at definitive conclusions on the precise magnitude of the problem. Nonetheless, the available information is sufficient to convince me that cryptocurrencies offer significant benefits to criminals, including those seeking to launder illicit funds, and that cryptocurrencies and those offering services associated with them present a significant money laundering risk. Indeed, as I discuss below, there have been several cases in which investigations have identified virtual assets being used to facilitate criminal activity, including money laundering. These cases are likely only the tip of the iceberg, given that there are obvious benefits virtual assets offer to criminals looking to launder illicit funds, that this area of economic activity and criminality is relatively new, and that law enforcement is still developing its knowledge and expertise in this area.

¹⁶⁸ Ibid.
¹⁷⁰ Exhibit 257, Chainalysis 2020 Report, p 5.
I expect that cases will continue to come into public view as law enforcement, regulator, and government expertise in cryptocurrency continues to develop. I encourage government and law enforcement to monitor developments in the use of cryptocurrencies by the criminal element and be progressive in developing strategies to combat such use. The many benefits of cryptocurrency for criminals suggest that its use will only increase and that this is an area of significant money laundering vulnerability.

It is convenient to consider crime involving cryptocurrencies in four broad categories. First, and of most obvious importance to this Commission, is the use of cryptocurrency in money laundering. Second, cryptocurrency has been used to engage in financial transactions and activities associated with the commission of crimes such as scams, ransomware, and activities on the dark web. Third, cryptocurrency can be used to support terrorist activity. Finally, crimes occur on the cryptocurrency platform itself, such as theft or fraud. Although the last three categories do not squarely relate to money laundering, it is useful to review them as the categories tend to overlap.

**Using Cryptocurrency for Money Laundering**

Money laundering using cryptocurrency dates back at least to the early 2000s. In this section, I review some early cases before describing methods of money laundering using cryptocurrency and the advantages and disadvantages of doing so.

**Early Cases**

Sergeant Gilkes testified that identified criminality associated with virtual assets dates back at least to a virtual asset called E-gold. In 2003 or 2004, law enforcement determined that a group called Shadowcrew was engaged in laundering funds from stolen credit cards, identity theft, selling counterfeit identities, and other criminal activities through E-gold. Law enforcement arrested around 20 people involved in the scheme. Further, E-gold itself, which was based in the United States, was indicted in 2007 and had many bank accounts and assets seized.172

Some years later, a company called Liberty Reserve became what Sergeant Gilkes termed “version 2.0 of E-gold.”173 Liberty Reserve was an international online payment processor based in Costa Rica.174 It had more than a million users worldwide and processed approximately 55 million transactions, almost all of which were illegal. It had its own virtual currency, Liberty Dollars, but at each end, transfers were denominated and stored in US dollars. Liberty Reserve required its users to make deposits and withdrawals through recommended third-party exchangers, which were typically unlicensed money-transmitting businesses operating in countries without significant money laundering oversight or regulation. As users

---

173 Ibid, p 100.
174 Exhibit 254, Senate Report, Digital Currency: You Can’t Flip This Coin! (June 2015), p 41.
could not directly deposit or withdraw from their Liberty Reserve account, the company “evaded collecting information about them through banking transactions or other activity that would create a paper trail.” For an extra “privacy fee” of 75 cents per transaction, users could hide their Liberty Reserve account numbers when transferring funds, rendering the transfers completely untraceable. As Sergeant Gilkes explained, Liberty Reserve’s practices attempted to avoid pitfalls that had occurred with E-gold:

Now, what we can see is a variation on a theme, right? So, I mean, rather than starting another virtual assets company within the United States, they started it overseas. Rather than dealing with actual fiat money and potentially being accused of money laundering, they were dealing simply with virtual currency, which didn’t mean anything or had no actual intrinsic value to anyone. And by dealing with a broker, a middleman, then they could simply say that they had no involvement or had no way of knowing who was actually behind the funds that were actually being transacted.

In May 2013, the US Department of Justice charged Liberty Reserve with operating an unregistered money transmitter and money laundering for facilitating the movement of more than US$6 billion in illicit proceeds. The Department of the Treasury identified Liberty Reserve as a financial institution of primary money laundering concern under the US Patriot Act, which effectively cut it off from the US financial system.

Sergeant Gilkes explained that Bitcoin was very popular for those who lost money through E-gold and Liberty Reserve because it responded to two issues. First, it created a decentralized network, which meant that police could not simply go to one place and seize all the accounts belonging to clients. Second, it provided anonymity because, at the time, there were no tools or means to aid police in tracking people behind a transaction.

Methods of Obfuscating the Source of Funds

Criminals have resorted to a number of techniques to obfuscate the source of funds in cryptocurrency transactions.

First, criminals seek out unregulated exchanges – those that operate in countries with little to no customer due diligence requirements or anti-money laundering regulation, or properly registered exchanges that operate under lax rules or flout anti-
money laundering protocols.\textsuperscript{180} Chainalysis has observed that jurisdictions with lax regulation and low to no enforcement are particularly attractive for illicit activity.\textsuperscript{181} The Financial Action Task Force has made similar observations.\textsuperscript{182} Given that virtual assets remain a relatively new technology and that the Financial Action Task Force’s recommendations on this subject are fairly recent, it is not surprising that some countries have experienced delays in implementing anti–money laundering measures. It is my hope that this loophole will become less pronounced as more countries implement robust anti–money laundering regimes relating to virtual assets.

In the meantime, there is unfortunately an effect on compliant Canadian exchanges. Ms. Cieslik testified that Canadian exchanges find it challenging that other exchanges can operate in countries with less regulation and still offer services to Canadians.\textsuperscript{183} Mr. Dixon added that many exchanges are compliant and are seeking to understand what they can do proactively to better recognize risk. He has observed increased levels of co-operation between stakeholders in which they, for example, alert each other to hacks and potential thefts. Stakeholders have also participated in public-private initiatives such as Project Participate (discussed below).\textsuperscript{184}

A second method of obfuscating the source of funds is through cryptocurrency ATMs. As I noted above, these are now considered money services businesses under the PCMLTFA and therefore have ensuing obligations. However, previously the standards of customer due diligence varied widely,\textsuperscript{185} and there are examples of criminals exploiting loopholes. For example, in May 2019, a criminal organization was found to be importing drugs from a Colombian cartel, selling them in Spain, feeding the proceeds into two Bitcoin ATMs, and then instantly sending the money back to the cartel. The organization had created a fictitious money services business and fabricated its books to justify this influx of cash. They were caught by the Spanish police.\textsuperscript{186} A similar situation arose in California when a man pled guilty in July 2020 for exchanging $25 million in cash through 17 cryptocurrency ATMs and creating a fictitious money services business to justify the proceeds.\textsuperscript{187}

A third method of obfuscating the source of funds is through services known as “mixers” or “tumblers.” These are third parties that, for a fee, mix cryptocurrency provided by a user with cryptocurrencies from other users before delivering it to its ultimate recipient. The result is that the cryptocurrency received by the recipient is not connected to the initial

\begin{flushleft}
\textsuperscript{181} Evidence of J. Spiro, November 24, 2020, pp 79–80.
\textsuperscript{183} Transcript, November 25, 2020, pp 116–18.
\textsuperscript{184} Transcript, November 25, 2020, pp 25–27.
\textsuperscript{185} Exhibit 253, RCMP Virtual Assets Slideshow, slide 49; Evidence of A. Vickery, Transcript, November 23, 2020, pp 77–80.
\textsuperscript{186} Evidence of A. Vickery, Transcript, November 23, 2020, pp 72–73.
\textsuperscript{187} Ibid, pp 73–74.
\end{flushleft}
Mr. Spiro testified that FinCEN recently issued a penalty to a money services business that was providing mixing and tumbling services to customers it solicited off the darknet. The money services business was not conducting record keeping and, in fact, was specifically deleting user information. Nor was it filing suspicious transaction reports. Mr. Spiro testified that there may be some legitimate users of tumblers and mixers who are concerned with privacy, but he expressed the view that most users are illegitimate.

A fourth method of obfuscating the source of funds is through prepaid cryptocurrency cards. Sergeant Vickery testified that such cards are extremely vulnerable to money laundering: criminals can buy several of them online using a fake ID or straw buyer and then transfer the PIN or virtual card number to a bad actor. She noted that many of the websites ask for very little customer information. Similarly, gift cards bought with cryptocurrency are considered “closed loop” and therefore do not have any customer due diligence requirements.

A fifth method is through online gaming websites. Cryptocurrency can be used to buy credit or virtual chips, which users can cash out after just a few transactions. When users cash out, they do not necessarily receive the same cryptocurrency back, which effectively cleans it. Online gambling also allows for direct deposit from an ATM to the online account.

A sixth method is through crowdsourcing or angel investor websites such as GoFundMe. Criminals may fund those websites with deposits from their own cryptocurrency addresses. Sergeant Vickery testified that a money laundering threat arises because there is no limit on how many addresses or wallets someone can hold, such that a money launderer could create a GoFundMe page and funnel transactions to it through various addresses. A bad actor may also commingle the transactions with legitimate ones. The result is a large reserve of cryptocurrency that is difficult for law enforcement to trace. Further, as I discuss below, websites such as these have been used to fund terrorist activity.

Criminals may also conduct special kinds of transactions on the blockchain to obfuscate the source of funds. “Peel chains” involve conducting a number of transactions that are then consolidated. Meanwhile, “chain hopping” involves moving...
one cryptocurrency to another, often in rapid succession. Converting cryptocurrency into another kind, and thus a different kind of blockchain, makes it difficult to trace the flow of funds, even using aftermarket software.¹⁹⁶

Finally, Sergeant Vickery highlighted some particular practices that may be indicative of money laundering, which combine a number of the above techniques:

• depositing funds into an account from a cryptocurrency exchange, followed by rapid deletion via cash, email, or wire transfers;

• making several cash deposits into a cryptocurrency ATM and then immediately crediting them to a cryptocurrency exchange (a variation on smurfing);

• making frequent deposits or withdrawals from cryptocurrency exchanges;

• the presence of unusual third-party deposits from online wallets or payment processors; and

• prolonged meets in vehicles with smartphones, which, as noted above, may indicate that individuals are waiting for transactions to clear on the blockchain.¹⁹⁷

As the above discussion demonstrates, criminals have already identified ways to launder money through cryptocurrency despite the industry being relatively new. While new federal regulation will help, it will not eliminate the risk. Law enforcement must stay on top of the evolving risks and money laundering methods involving cryptocurrencies. The rapid development of virtual assets technology and the uptake by criminals highlight the pressing need for law enforcement, government, and regulators to maintain expertise in this area and monitor developments in technology.

In Chapter 41, I recommend the creation of a dedicated provincial money laundering intelligence and investigation unit. As I expand in that chapter, the new unit should be staffed with individuals who have experience and expertise in virtual assets and the money laundering typologies that make use of them.

**Advantages and Disadvantages of Using Cryptocurrency for Money Laundering**

As my discussion this far has shown, cryptocurrency contains some obvious attractions to money launderers but also some pitfalls. Having reviewed various money laundering techniques using cryptocurrency, it is useful to tie together the various advantages and disadvantages identified thus far.

Some advantages of using cryptocurrency for money laundering are:

- **fast transactions with minimal fees** (which are, on average, about $11 per transaction);
- **accessibility**: as noted above, the availability of cryptocurrency ATMs has rapidly increased;
- **easy conversion**: a bitcoin is a bitcoin anywhere in the world and can be converted into different fiat currencies;
- **ease of moving value globally**: cryptocurrency can be moved across borders instantaneously, in any amount, for minimal fees, which is in contrast to difficulties in moving large amounts of cash;
- **pseudo-anonymity**: although cryptocurrency is not as anonymous as cash, its pseudo-anonymous nature makes up for it, as transactions are very fast and information about the account holder is not immediately available to law enforcement;
- **lack of understanding by law enforcement**: there is a lack of understanding worldwide by law enforcement on what cryptocurrencies are, how to investigate crime involving them, and how to seize them; and
- **lack of global regulations**: although Canada now has regulations in place, many countries do not, and there is nothing to stop Canadians from using services operating in other countries.198

There are, however, disadvantages to laundering money through cryptocurrencies:

- **volatility of value**: as criminals cannot be sure of the purchasing power of cryptocurrencies, holding on to them for long periods may be a disadvantage if the value drops exponentially;
- **traceability**: criminals may realize that law enforcement can purchase aftermarket software tools and trace the flow of funds; and
- **lack of understanding by criminals**: although cryptocurrencies have been used by criminals, many may still not understand them.199

The transparency, visibility, and traceability of many virtual assets are unprecedented.200 As I elaborate below, aftermarket software tools have been developed that have assisted law enforcement in their investigations.

Using Cryptocurrency to Commit Other Crimes

In addition to money laundering, criminals use cryptocurrency to facilitate other crimes and avoid detection in ways that would be more difficult with fiat currency. Such crimes include, among others, scams, ransomware, distributed denial of service attacks, and money muling. It is useful to discuss these crimes as they can serve as predicate offences for money laundering, and there is often overlap between the predicate and money laundering offences.

In its 2021 report on crime, Chainalysis notes that scams are the highest-grossing form of cryptocurrency-based crime. In 2019, six Ponzi schemes took in nearly US$7 billion in cryptocurrency, and total scam revenue was roughly US$9 billion. In 2020, when there were no large-scale Ponzi schemes, the total revenue fell to US$2.7 billion. Chainalysis observes that scammers in 2020 primarily moved cryptocurrency received from victims to exchanges to convert it into cash, noting an increase in proceeds being sent to mixers and high-risk exchanges (being those with weak or non-existent compliance programs).201 A report from the US Department of Justice notes that the FBI has noticed an increase in cryptocurrency fraud scams during the COVID-19 pandemic, with scammers threatening to infect victims and their families unless they sent payment via bitcoin or selling phony or defective products that would cure or prevent the disease.202 Further, some phishing scams, such as emails or phone calls that purport to be from the Canada Revenue Agency (CRA), attempt to extort bitcoin from their victims.203

Another common crime involving cryptocurrency is ransomware, which is a type of malicious software that encrypts or blocks access to a victim's data. To regain access, the victim must pay a ransom, typically in bitcoin.204 Chainalysis observed a significant increase in ransomware attacks in 2020, with the total amount paid by victims reaching nearly $350 million in cryptocurrency (a 311 percent increase from 2019). This large figure is likely lower than the amounts that were actually paid due to under-reporting.205

Cryptocurrency has also been used in distributed denial of service (known as “DDoS”) attacks. These are a process of flooding a network with traffic so that websites hosted on it can no longer operate unless the victim pays an amount of bitcoin. Sergeant Gilkes explained that this disruption can be a big problem for certain websites, such as gambling websites, that can sustain considerable losses if shut down for even half an hour.206

201 Exhibit 1021, Appendix 1, Chainalysis 2021 Report, pp 71–74.
203 Evidence of A. Gilkes, Transcript, November 23, 2020, pp 104–5; Exhibit 253, RCMP Virtual Assets Slideshow, slide 33.
205 Exhibit 1021, Appendix 1, Chainalysis 2021 Report, pp 6, 26; Exhibit 253, RCMP Virtual Assets Slideshow, slide 32.
206 Evidence of A. Gilkes, Transcript, November 23, 2020, p 105; Exhibit 253, RCMP Virtual Assets Slideshow, slide 34.
Criminals have also used cryptocurrency for money muling. Sergeant Gilkes gave the example of a cybercriminal who breaches an account, such as by stealing credentials, at a bank. The criminal then transfers the stolen funds to money mules, who are individuals recruited in various ways. The money mules buy cryptocurrency with the funds and transfer the cryptocurrency back to the cybercriminal.\textsuperscript{207}

A significant amount of crime using cryptocurrency occurs on the dark web or darknet.\textsuperscript{208} Between 50 and 70 percent of the websites hosted on the dark web are illegal. They include websites to buy drugs, child exploitation materials, weapons, counterfeit identification documents, unlawfully obtained personal information, and the like. However, there is also some legal activity, such as journalists trying to transmit messages without being intercepted.\textsuperscript{209}

A number of darknet markets selling a variety of these illegal products and services exist. A well-known example was Silk Road, which was similar to eBay but with illicit products (including drugs, guns, and child exploitation material). Silk Road's payment system was novel. Buyers purchased bitcoin through an exchange or broker and sent the bitcoin to Silk Road. The latter would then hold the bitcoin in escrow until the product was delivered, at which point it would release the funds, minus a commission, to the vendor.\textsuperscript{210} The FBI dismantled Silk Road in 2013. It was estimated to have generated sales revenue of over 9.5 million bitcoin (US$1.2 billion) and the operators collected over 600,000 bitcoin (US$80 million) in commission. In 2015, the creator was found guilty in the United States of seven charges, including money laundering, narcotics trafficking, and computer hacking.\textsuperscript{211}

Another well-known darknet market was AlphaBay, which Sergeant Gilkes described as “Silk Road on steroids.”\textsuperscript{212} At the time of its takedown by law enforcement in 2017, it was the dark web's largest criminal marketplace, serving over 200,000 users and facilitating the sale of illegal drugs, firearms, malware, toxic chemicals, counterfeit identification documents, and more. It used a number of different kinds of virtual assets and had approximately 200,000 users, 40,000 vendors, and 250,000 listings, and facilitated more than US$1 billion in virtual asset transactions between 2015 and 2017. The administrator was arrested in 2017 in

\textsuperscript{207} Evidence of A. Gilkes, Transcript, November 23, 2020, pp 107–8. For a diagram of a money mule transaction, see Exhibit 253, RCMP Virtual Assets Slideshow, slide 36.

\textsuperscript{208} Sgt. Gilkes explained that there are three layers to the internet. First, the “surface web” contains the websites that most of us interact with, such as Wikipedia and Google. Second, most of the internet is in the “deep web,” which contains information that we do not want indexed, such as medical records, and is usually accessed through portals that require credentials. Finally, the “dark web” is an alternate internet hosted on voluntary computers. It is encrypted, rendering it very difficult to trace traffic coming to, from, or through it: Transcript, November 23, 2020, pp 108–9.

\textsuperscript{210} Evidence of A. Gilkes, Transcript, November 23, 2020, pp 110–11.

\textsuperscript{212} Transcript, November 23, 2020, p 112.
Thailand and had 1,600 bitcoins seized (worth US$16 million at the time, around US$38 million today).  

A third and well-known example of illegal darknet activity is Welcome to Video, a child pornography website that was the world's largest online child sexual exploitation market at the time of its seizure. It offered child sexual exploitation photos and videos for sale using virtual currency. The alleged operator was arrested in the United States in October 2019, and at least 337 users have been arrested around the world.

Finally, the Chainalysis 2021 report on crime indicates that alt-right groups and personalities involved in the January 2021 US Capitol riot received cryptocurrency donations prior to the storming of the US Capitol Building. The largest recipient received 13.5 bitcoin, worth approximately US$250,000 at the time of the transfer. Other recipients included the anti-immigration organization VDARE and an alt-right streamer. Similarly, the 2022 “Freedom Convoy” appears to have received a large amount of cryptocurrency funding. On February 17, 2022, a proposed class action lawsuit obtained an order (referred to as a “Mareva injunction”) that froze various cryptocurrency wallets connected with members of the convoy.

**Using Cryptocurrency to Support Terrorism**

Terrorist groups have also begun to use cryptocurrency as a method of funding their activities. A high-profile case involved “SamSam” ransomware. A terrorist group extorted US$6 million from various hospitals, universities, and government institutions by installing the ransomware and demanded a ransom to be paid in bitcoin. US law enforcement determined that the scammers had supplied the same two bitcoin addresses to the entities that were extorted; as a result, they were able to use aftermarket software tools to trace and identify the suspects. The two bitcoin addresses were the first ever to be added to the US Office of Foreign Assets Control list. Sergeant Vickery testified that the SamSam case was a great success, except that...

---

it alerted the criminal element that law enforcement can trace transactions and that they would be caught if they used the same bitcoin address every time.220

Indeed, a case involving the al-Qassam Brigades sought to avoid the pitfalls in the SamSam case. The group posted requests for bitcoin donations on its social media page and official websites, claiming that the donations would be untraceable and used to support violent causes. However, unlike SamSam, the donation process involved creating a link that would generate a new bitcoin address for every donation.221 The group then used a mainstream cryptocurrency exchange, cryptocurrency merchant services provider, and two unlicensed money services businesses to convert the cryptocurrency into cash.222 Despite these measures, US law enforcement tracked and sought forfeiture of 150 cryptocurrency accounts used to launder funds to and from the al-Qassam Brigades’ account.223

Al-Qaeda and ISIS have also engaged in criminal activities using cryptocurrency. Al-Qaeda has conducted social media campaigns to solicit donations that claim to be for charities but in fact solicit funds for terrorist attacks. US law enforcement identified and sought forfeiture of 155 virtual currency assets linked to the group.224 Similarly, US law enforcement determined that individuals associated with ISIS marketed fake personal protective equipment such as N95 respirator masks to customers around the world during the COVID-19 pandemic.225

**Crime Within the Cryptocurrency Space**

A final type of crime associated with virtual assets is that occurring in the cryptocurrency space itself. This includes theft that occurs when criminals exploit vulnerabilities in wallets and exchanges. The Chainalysis 2021 report on crime indicates that cryptocurrency worth over US$520 million was stolen from services and individuals through hacks and other attacks in 2020.226

Another form of crime in the cryptocurrency space is cryptojacking. This occurs when a criminal makes unauthorized use of someone else’s computer to generate or mine cryptocurrency. This can be done through the use of malware or compromised websites that cause the victim’s computer to run crypto-mining code.227

---

220 Ibid, p 123.
222 Exhibit 1021, Appendix 1, Chainalysis 2021 Report, p 96.
Finally, fraud can occur in the cryptocurrency space. The events leading to Quadriga's downfall (discussed above) illustrate how fraud can take place in the cryptocurrency space. Indeed, as the staff at the Ontario Securities Commission put it, Quadriga is an example of “an old-fashioned fraud wrapped in modern technology.”

**Investigating Cryptocurrency-Related Crime**

The evidence before me revealed that law enforcement in Canada has begun to identify the risks with cryptocurrency and investigate cryptocurrency-related crime. It was clear to me that Sergeants Vickery, Gilkes, and Warren Krahenbil (RCMP Federal Cybercrime Operations Group team leader) understood the risks, have developed some expertise in relation to virtual currencies, and have made good use of aftermarket software tools to aid in their investigations. It is less clear whether other units have developed the same expertise and abilities. I have recommended above that the Province and the AML Commissioner ensure that training is accessible for all law enforcement units, which will be crucial to ensure that this new area of criminality is investigated and prosecuted effectively in this province. It will also be important for the new provincial anti-money laundering unit to have particular expertise in this area. I also encourage law enforcement, regulators, and government to continue exploring innovative ways to investigate crime relating to virtual assets.

**Law Enforcement’s Ability to Investigate Cryptocurrency-Related Crime in Canada**

Sergeant Vickery testified that a notable file in May 2018 provided an impetus for the RCMP to significantly ameliorate its capacity to handle cryptocurrency-related investigations. That file involved a prolific darknet vendor that was selling fentanyl. The RCMP’s Milton detachment, despite most of its members only recently learning what Bitcoin was, became aware of cryptocurrency to be seized and contacted the digital forensics unit to re-create the wallet and facilitate the seizure. The case resulted in a conviction and around 22 seized bitcoins with a value of approximately $200,000 successfully forfeited as offence-related property.

Sergeant Vickery testified that, although the investigation was a success, it made clear to the RCMP that, from a national headquarters level, it was deficient at the time in its ability to handle these investigations and support its members. It became clear that they needed policies, guidelines, and training to be put in place. The RCMP named Sergeant Vickery as the national cryptocurrency coordinator to put these in place and ensure that they could meet operational demands and support officers.

The RCMP has since developed guidelines that direct members on how to conduct these investigations and how to seize virtual currencies. It also offers

---

228 Exhibit 265, OSC Quadriga Report, p 4.
national financial crime courses on topics such as proceeds of crime, counterfeiting, financial integrity, terrorist financing, cybercrime, and online undercover activities. The RCMP has also organized one-day workshops and are putting together an online cryptocurrency 101 course that will be available to all RCMP members and, hopefully, to municipal and provincial law enforcement through the Canadian Police Knowledge Network. The RCMP also created a virtual currency working group in 2017 in response to several initiatives across different divisions that were encountering cryptocurrency in their investigations.

The RCMP also works with other government agencies. For example, the Canadian Anti-Fraud Centre is the “first point of contact” for RCMP members in cases involving frauds facilitated by cryptocurrency. The RCMP also has partnerships with the CRA, the federal Department of Finance, FINTRAC, and the Forensic Accounting Management Group. Further, the RCMP has international partnerships through the Five Eyes Cryptocurrency Readiness Group, which discusses best practices and trade craft as well as strategies to build capacity internally and how to leverage it.

The Seized Property Management Directorate is a government entity designed to manage seized offence-related property and proceeds of crime. It manages the seized property until it is either ordered returned upon no conviction or forfeited. Although the directorate’s services were previously limited to federally prosecuted crimes, a June 2019 amendment now allows it to be used for all seized assets, including cryptocurrency, and by municipal and provincial police forces as well. Sergeant Vickery testified that the directorate has been a strong partner of the RCMP for 25 years and that its services save government money because it has contracts across the country allowing for storage of seized assets for a limited fee.

A new unit in the RCMP “E” Division, the Federal Cybercrime Operations Group, was created in April 2020 and has a mandate to investigate cybercrime in accordance with federal policing strategic priorities. The unit currently has three members and an analyst, with plans to expand the unit.

Finally, a notable public-private partnership called Project Participate warrants discussion. A working group made up of virtual asset service providers, Project Participate focuses on increasing compliance and implementation of anti-money

234 Ibid, p 141.
237 A similar working group focused on anti–human trafficking efforts called Project Protect was created in 2016 by Mr. Warrack. The working group came together to share best practices, indicators of suspicion, and the like, with the result that a massive number of suspicious transaction reports and disclosures to law enforcement were made: Evidence of P. Warrack, Transcript, November 25, 2020, pp 112–13.
laundering and customer due diligence measures within the exchanges. The RCMP has a representative in the working group. Sergeant Vickery testified that the working group has helped law enforcement to identify virtual assets and targets of transactions. For example, it produced a list of information that virtual asset service providers regularly capture through their normal business activity and provided it to law enforcement as a starting point or template for how to get information through production orders.238

The above demonstrates that the RCMP has taken steps to address the cryptocurrency threat. I am encouraged that there appears to be a desire to share tools and training with provincial and municipal police units. It remains to be seen whether the RCMP’s new cybercrime unit from 2020 will be expanded and achieve success in investigating and prosecuting these offences. Although federal efforts are important and should continue, provincial law enforcement units – particularly the dedicated provincial money laundering intelligence and investigation unit – must also develop their own expertise in virtual assets, provide training to their members, and ensure that they have access to the tools needed to effectively investigate this form of crime. These tools include aftermarket software tools, to which I turn now.

**Aftermarket Software Tools**

Aftermarket software tools and open-source technology allow law enforcement to analyze transactions and obtain a history of the movement and flow of funds. Companies providing these services can analyze the blockchain, attribute, and cluster addresses together, and then link them to criminality, risky cryptocurrency addresses, exposure to the darknet, and mixing services. Specialized law enforcement officers are trained to use the software and analyze the information. In doing so, they may identify IP addresses or other data, enabling them to seek judicial authorization for information from exchanges or third-party service providers.239

The largest software companies used by Canadian law enforcement are Chainalysis and CipherTrace. The National Cybercrime Coordination Centre has acquired several licences to these services to support Canadian law enforcement at the municipal, provincial, and federal level.240 Below I review services provided by Chainalysis in further detail.

While there are undoubtedly advantages to using these tools, Sergeant Gilkes emphasized that they are not an exact science:

I would like to add that the tools are not an exact science. So we’re thinking about heuristics here. So there is clustering, basically trying to attribute multiple transactions to the control of one or several individuals. There are

---

238 Transcript, November 23, 2020, pp 141–43.
also some properties inherent in the blockchain which ... aid in providing a location for where a transaction may have occurred. But a lot of, I would say – I don't want to call it guesswork because [these are] educated guesses. But [a lot is] based on information which is collected in the clearnet, the darknet ... circle information, reports from police ... journalistic reports, [which] will provide information that will help to attribute ownership or attribute usership of particular addresses. But, like I mentioned, [it is] not an exact science, and regular policework has to be done in collaboration.241

As I have emphasized throughout this chapter, although private sector initiatives and tools are certainly useful and to be encouraged, it is crucial that law enforcement develop its own expertise and capabilities and should be cautious about overreliance on private sector tools.

**Chainalysis**

Mr. Spiro and Ian Place, director of solutions architecture at Chainalysis, gave detailed evidence about the operation and uses of Chainalysis’ services. In what follows, I describe a few of Chainalysis’ services as an example of how aftermarket software tools work and can assist law enforcement.

Chainalysis provides several services to its clients, which include virtual asset service providers, governments, regulatory agencies, and domestic and international police.242 It also has a professional services team of investigators specialized in cryptocurrency investigations that is available to assist clients with investigations. Mr. Spiro testified that this team is particularly helpful in complex cases or those requiring a quick turnaround (for example, if there is an urgent need to freeze funds) or limited resources.243 Chainalysis also produces publications, which include:

- an annual cryptocrime report, which reviews blockchain data and information Chainalysis has collected to generate new insights to share with the community;
- geography reports, which identify and map out cryptocurrency-related activity around the world and identify trends;
- occasional case studies about a certain kind of illicit activity and how Chainalysis was able to investigate and generate information; and
- thought leadership about regulatory developments and how the regulation aligns with different products and services.244

241 Transcript, November 23, 2020, pp 46–47.
242 Evidence of J. Spiro, Transcript, November 24, 2020, pp 143, 149.
Mr. Place walked me through three services provided by Chainalysis: Know Your Transaction (KYT), Reactor, and Kryptos. I will discuss each in turn.

KYT is a transaction-monitoring tool that provides real-time alerts to identify potential risks and transaction histories. It is predominantly used by virtual asset service providers for compliance purposes. KYT shows when a client has “direct exposure” or “indirect exposure” to risks. The former refers to a risk connected to a direct counterparty to a transaction – that is, the entity receiving or sending funds. Meanwhile, indirect exposure refers to funds that go indirectly from the platform to intermediary addresses; KYT therefore identifies a potential change of ownership or intermediaries conducting a transaction. Alerts can include things such as darknet market flags, which identify transactions into and out of darknet markets.

Reactor is a graphing, mapping, and investigative tool used to follow the flow of funds visually and to perform enhanced due diligence. It can be used to identify entities that control wallets and to discover related entities. Reactor is predominantly used by law enforcement rather than private sector clients. It is currently only able to look at Bitcoin transactions, not other cryptocurrencies. Mr. Place walked me through a real-world example in which a client received an alert that it had indirect exposure to a sanctioned entity. Reactor generated a graphic representation of the various entities that provided funding for the transaction. The way the transaction was structured suggested that the person who sent the funds to an intermediary was the same person who sent funds to the entity designated by the US Office of Foreign Assets Control. It also suggested that the person was using a personal unhosted wallet, which is a common obfuscation technique.

Finally, Kryptos provides “market intelligence and specific information in relation to entities that are within the cryptocurrency ecosystem.” It allows users to see what kinds of services they are interacting with (e.g., whether a service is a hosted wallet, a mining pool, or an exchange) and whether services are engaged in risky or non-risky activities. Users can flag particular businesses that they want to monitor. Each business has a profile that shows information such as a risk rating given by Chainalysis, the kind of fiat currencies used, the country of headquarters, legal names, place and

country of incorporation, assets traded or accepted on the platform, stable and privacy coins offered, trading pairs, and recent news.  

Aftermarket software tools can therefore assist law enforcement in being able to trace transactions on the blockchain and monitor entities. I expect that they will also be useful for virtual asset service providers in fulfilling their new obligations under the PCMLTFA. I encourage law enforcement in this province to remain current on available software and technology that might assist them in identifying and investigating the potential use of cryptocurrency in money laundering and to trace and seize such illicit funds.

Conclusion

Virtual assets are a relatively new technology whose functionality and uses have rapidly developed in a short amount of time. Just as this technology has developed swiftly, criminals have learned to exploit it. Law enforcement in this country has begun to develop capacity and expertise in this area, and specialized tools and services now exist to assist in tracing transactions that use cryptocurrency. The virtual asset space will undoubtedly continue to transform, and new methods of criminality will certainly emerge. It is crucial that government, law enforcement, and regulators stay current on the risks facing this sector.

It will be important for the AML Commissioner to keep a particular focus on money laundering techniques using virtual assets. The virtual asset space is a rapidly evolving sector, and its complexities mean that state actors whose work involves identifying crime in this space – including law enforcement and regulators – must receive regular updates and training on emerging and developing typologies in this space. It will be key for the AML Commissioner to monitor whether that training occurs and report to government on any additional measures that should be taken.

Much of what I have discussed in this Report focuses on the legitimate economy – money laundering that occurs in the context of legitimate business sectors and takes advantage of regulatory gaps or a lack of understanding. However, money laundering occurs in the informal or “underground” economy as well, in the sense that it takes place outside the regulated financial system and may not be caught by countermeasures put in place by countries that have adopted the Financial Action Task Force model.

In Chapter 36, I discuss bulk cash smuggling, which, as its name suggests, involves physically transporting large quantities of cash across international borders. Chapter 37 considers informal value transfer systems, which allow for the transfer of value from one location to another without actually transferring funds. Finally, in Chapter 38, I examine trade-based money laundering, in which individuals abuse trade transactions to avoid the scrutiny of more direct forms of transfer and to move illicit funds (or more accurately, value) from one location to another. I have chosen to address trade-based money laundering in Part X because it is another way of moving value outside of the regulated financial system and is sometimes used in conjunction with informal value transfer systems.
Chapter 36

Bulk Cash Smuggling

Bulk cash smuggling is an important part of the underground economy. It is often thought of as the oldest and most basic form of money laundering – however, it still occurs frequently today.1

As the name suggests, bulk cash smuggling refers to the practice of moving large quantities of cash (that is, physical dollars or euros or other banknotes) across international borders. As I explain below, the Financial Action Task Force (FATF) has urged member countries, through its 40 recommendations, to require declarations or disclosure by travellers transporting cash over a certain threshold. With that in mind, another way of conceiving of bulk cash smuggling is as the “transfer of cash across the border in violation of currency reporting requirements, that is, above the permitted maximum threshold and without justification.”2

The money laundering risks associated with bulk cash smuggling are self-evident. Given that much criminal activity continues to occur primarily in cash3 and that it is increasingly difficult to conduct all of one’s transactions in cash, criminals need to find ways to move large quantities of cash back into the legitimate economy. This often involves transporting the cash to another jurisdiction. Simon Lord, a senior officer with the UK’s National Crime Agency and one of the world’s leading experts on money laundering, explained the criminal’s dilemma as follows:

---

Cash is still the raw material of most criminal activity – certainly all of the commodity-based crime that you can think of, so drug trafficking, robbery, smuggling cigarettes … even things like the trafficking of human beings, modern slavery, and all the rest of it.

... All that type of crime generates cash. And so, criminals have to find something to do with the cash that they have made in part with their criminal activities. And cash actually, when you see it in large amounts, the thing that strikes you about it is just how big and heavy it is ... it ceases almost to become money, but becomes a commodity in its own right. And so, what that means is, in order to sort of enjoy the fruits of your ill-gotten gains, you've got to try and find something to do with it. And in most western societies now, and certainly anybody who sort of complies with the [Financial Action Task Force's] 40 recommendations, it's actually extremely difficult to get rid of large amounts of cash now.

So, one of the ways in which people deal with their cash is to move it away from the jurisdiction where it is, where maybe you can't get it into the banking system, and move it somewhere else ... either to break the audit trail in between the possession of the cash and the commission of the crime, or ... move it to a jurisdiction where you can bank it much more easily ... And so physically moving the cash across borders is something that's on the up.  

In this chapter, I first review the regulation applicable to transportation of cash across international borders. In this area, the province of British Columbia is heavily reliant on the federal government, which is responsible for international trade, imports, exports, and national borders. I then discuss the continued prevalence of cash in the legitimate economy, despite the rise of alternative payment methods such as credit cards. Finally, I examine the role of cash in the criminal economy, ways in which it is smuggled across borders, and difficulties in detecting this activity.

Legal and Regulatory Framework

The transportation of cash across borders is addressed by both the FATF’s 40 recommendations and domestically in the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 (PCMLTFA).

FATF Recommendation 32

FATF has addressed the movement of cash across international borders in Recommendation 32, titled “Cash Couriers,” which states:

---

Countries should have measures in place to detect the physical cross-border transportation of currency and bearer negotiable instruments, including through a declaration system and/or disclosure system.

Countries should ensure that their competent authorities have the legal authority to stop or restrain currency or bearer negotiable instruments that are suspected to be related to terrorist financing, money laundering or predicate offences, or that are falsely declared or disclosed.

Countries should ensure that effective, proportionate and dissuasive sanctions are available to deal with persons who make false declaration(s) or disclosure(s). In cases where the currency or bearer negotiable instruments are related to terrorist financing, money laundering or predicate offences, countries should also adopt measures, including legislative ones consistent with Recommendation 4, which would enable the confiscation of such currency or instruments.

The interpretive note to Recommendation 32 expands on the obligations set out above. I highlight a few points from it. First, Recommendation 32 is meant to ensure that countries can:

- detect physical cross-border transportation of currency and bearer negotiable instruments;
- stop or restrain currency and bearer negotiable instruments that are suspected to be related to terrorist financing or money laundering;
- stop or restrain currency or bearer negotiable instruments that are falsely declared or disclosed;
- apply appropriate sanctions for making a false declaration or disclosure; and

---

5 A “bearer instrument” is a type of instrument that requires no ownership information to be recorded: Exhibit 64, Europol Financial Intelligence Group, Why Is Cash Still King? A Strategic Report on the Use of Cash by Criminal Groups as a Facilitator for Money Laundering (European Police Office, 2015) [Europol Cash Report], p 51. The FATF recommendations define “bearer negotiable instrument” as including monetary instruments such as traveller’s cheques; negotiable instruments (such as cheques, promissory notes, and money orders) that are in bearer form, endorsed without restriction, made out to a fictitious payee, or in some other form that allows title to pass upon delivery; and incomplete instruments that are signed but omit the payee’s name: Exhibit 4, Overview Report: Financial Action Task Force, Appendix E, FATF, International Standards on Combating Money Laundering and the Financing of Terrorism & Proliferation: The FATF Recommendations (Paris: FATF, 2019) [FATF Recommendations], p 113, general glossary.

7 Ibid, p 23, Recommendation 32.

• enable confiscation of currency or bearer negotiable instruments that are related to terrorist financing or money laundering.9

“Physical cross-border transportation” is defined to include:

• physical transportation by a natural person or in their accompanying luggage or vehicle;
• shipment of currency or bearer negotiable instruments through containerized cargo; and
• mailing of currency or bearer negotiable instruments by a natural or legal person.10

Countries can meet their obligations under Recommendation 32 by implementing either a declaration or disclosure system. A declaration system should require all persons transporting over 15,000 US dollars or euros to submit a truthful declaration (written, oral, or a combination of the two) to competent authorities.11 Meanwhile, a disclosure system should require travellers to provide appropriate information to authorities upon request.12 Whether the country adopts a declaration or disclosure system, the information should be available to the financial intelligence unit, and authorities should be able to stop or restrain cash when it is suspected to be connected to money laundering, terrorist financing, or a false declaration or disclosure.13 There should also be effective, proportionate, and dissuasive sanctions for false declarations or disclosures, and authorities should be able to confiscate cash related to money laundering, terrorist financing, or a predicate offence.14

A 2015 FATF report entitled Money Laundering Through the Physical Transportation of Cash found that the methods of implementing Recommendation 32 varied considerably among the countries surveyed.15 For example, some countries required cash declarations to be checked for accuracy by actually counting the cash; other countries said this was done only occasionally.16 Further, some countries kept statistics on the amount of cash transported, while others did not.17 The report also found that there was little collaboration between neighbouring countries in developing their systems, which led to significant incongruences.18

The PCMLTFA

Canada has implemented the requirements of Recommendation 32 in Part II of the PCMLTFA and the Cross-Border Currency and Monetary Instruments Reporting Regulations, SOR/2002-412 (Currency Regulations). The Canada Border Services Agency (CBSA) is responsible for administering the cross-border currency reporting regime.19

Travellers carrying, importing, or exporting $10,000 or more across Canada’s borders must declare those funds to CBSA officers using one or more currency reporting forms.20 CBSA shares all completed currency reporting forms with FINTRAC for further analysis.21 It also gathers and analyzes intelligence in order to detect contraband and provide intelligence on travellers or transportation of funds that portray indicators of illicit activity.22

CBSA officers can search persons or vehicles when they have reasonable grounds to suspect that a person has concealed or failed to declare funds of $10,000 or more.23 They can seize those funds if they have reasonable grounds to believe a person has concealed or failed to declare funds of $10,000 or more.24 Officers are also empowered to open international mail where they have reasonable grounds to suspect that it contains $10,000 or more of undeclared funds, and they can seize the funds.25

Where a CBSA officer has seized undeclared funds, the latter will be forfeited if the officer has reasonable grounds to suspect that they are proceeds of crime or for use in the financing of terrorist activities.26 This is referred to as a “Level 4 seizure.”27 Where the officer does not have reasonable grounds to suspect that funds are illicit, the funds will be returned upon payment of a penalty of $250 (a “Level 1 seizure”), $2,500 (“Level 2 seizure”), or $5,000 (“Level 3 seizure”) depending on the circumstances of the concealment.28

Table 36.1 provides a summary of the number and total value of seizures of undeclared funds in British Columbia between 2016 and 2020:

**Source:** Closing submissions, Government of Canada, para 66.

The total value of funds that were reported entering or leaving Canada through BC ports of entry between 2016 and 2020 are as follows:

- $1,380,679,435.88 (2016)
- $1,463,351,600 (2017)
- $1,879,120,057.97 (2018)
- $923,734,249.37 (2019)
- $161,761,260.26 (2020)

FATF’s 2016 mutual evaluation of Canada rated Canada as largely compliant with Recommendation 32, noting a few minor deficiencies. The evaluators noted that the penalty provisions in the PCMLTFA – the fact that Level 1, 2, and 3 seizures of cash must be returned to the individual upon payment of a penalty of $250, $2,500, or $5,000 – was not proportionate or dissuasive for undeclared or falsely declared cash over the threshold. Cambridge Professor Jason Sharman described this result as a “forgiving policy of often returning undeclared cash to those detected carrying it in through the border, with very small penalties. To an outsider, this policy seems like an incredible favour to international money launderers.” Given that penalties are low, these may seem to a criminal to be simply a cost of doing business, payable only in the event they are caught. However, as I noted above, funds will be forfeited under the Canadian regime where a CBSA officer has

reasonable grounds to suspect that they are proceeds of crime or for use in the financing of terrorist activities.\textsuperscript{34}

A 2018 report by the federal Department of Finance acknowledges that Canada’s penalties are low and advises that it is “revising the penalty structure is under consideration.”\textsuperscript{35} The report also notes some differences between the Canadian penalties and other countries:

- Some countries, such as Spain, impose a blanket minimum penalty over double the Canadian minimum of $250.
- In Australia, the minimum penalty varies based on the value of the currency that was not declared.
- In the United States, all currency may be seized and forfeited when there is a false or no declaration by assessing a penalty equal to the amount not declared.\textsuperscript{36}

I expect that Canada will consider the view of the FATF evaluators and ensure that the fines under the \textit{PCMLTFA} are proportionate and dissuasive.

\section*{Legitimate Cross-Border Transfer of Cash}

It is important to emphasize that people transport cash across borders every day, and much of this activity is legitimate. It is not, in itself, illegal to transport cash. Movement of cash across borders becomes unlawful once it is not declared when required. In addition, bulk cash smuggling does not, in itself, necessarily constitute money laundering, though it is often a required step in the money laundering process.\textsuperscript{37}

Despite increasing use of non-cash payment methods, cash “remains an important means of settlement across the globe, with an estimated USD 4 trillion in circulation and between 46\% and 82\% of all transactions in all countries being conducted in cash.”\textsuperscript{38} The FATF report notes that some 2 billion adults in the world today do not have access to banking services, which means that cash is the only form of payment they can rely on day to day. Indeed, the economies of many of the world’s poorest and least developed countries rely on cash.\textsuperscript{39}

\bibitem{Ibid} Ibid.
\bibitem{Canada’s 2015 national risk assessment noted that bulk cash smuggling is frequently used, including by professional money launderers and organized crime groups, as the first step in the money laundering process: Exhibit 3, Overview Report: Documents Created by Canada, Appendix B, Department of Finance, \textit{Assessment of Inherent Risks of Money Laundering and Terrorist Financing in Canada, 2015} (Ottawa: 2015), pp 21, 25, 42.
\bibitem{Exhibit 4} Exhibit 4, Appendix LL, \textit{FATF Bulk Cash Report}, pp 3, 11.
\end{thebibliography}
That said, cash is also prevalent in many of the world’s largest and wealthiest economies. Some reasons for a preference for cash include:

- **Cultural preference**: some cultures may prefer to use cash because of a distrust of governments and large financial institutions.

- **Retailer preference**: some retailers prefer cash for low-value transactions because it avoids processing fees.

- **Speed**: unlike transactions through the banking system that can take days, weeks, or months to clear, cash transactions occur immediately.

- **Reduction of spending**: people who purchase goods and services with cash tend to spend less than those who use credit or debit.

- **Reduction of debt**: using cash can help reduce indebtedness by limiting the individual to spending what they actually possess.

- **Discounts**: in some countries, it is possible to negotiate a lower price when paying in cash because the merchant can avoid paying fees for processing credit, debit, or cheque transactions.

- **Avoiding interest and fees**: using cash avoids paying interest and fees that would be charged for credit balances or bank accounts.

- **Dependable in a crisis**: cash is dependable in the event that a financial institution’s operations are affected by a crisis or otherwise.

- **Store of value**: cash is often used to store wealth in volatile economies or jurisdictions threatened by war or natural disaster (including foreign currencies that are perceived to be more stable than the local one).40

However, cash also has some disadvantages:

- Large amounts are heavy and bulky.

- Large amounts are vulnerable to theft.

- Cash hoarding can restrict wealth, as the individual collecting the cash loses access to currency markets and investments and does not earn interest.

- Cash reduces purchasing options, given that it cannot be used for certain goods or in large amounts due to anti-money laundering regulations.

- To make a remote payment using cash, the cash needs to be physically transported.

- It can be costly to count and process cash.

---

• Using cash can restrict access to other financial services because, by deliberately choosing to transact in cash, an individual does not build a financial profile that is needed to save, invest earnings, or apply for loans, insurance, and the like.41

The FATF report found that although legitimate cross-border transportation of cash is common, it is not well understood by many countries both in terms of the methods and extent. This in turn hinders the ability of customs officials to determine if a shipment is legitimate or not.42 A 2015 report by the European Police Office (Europol) Financial Intelligence Group similarly notes that there is little, if any, concrete data available on the legitimate use of cash beyond figures relating to the volume and value of bank notes issued and in circulation. As a result, much is unknown about the legitimate use of cash, although observations on consumer patterns show that cash continues to be the preferred method of payment for low-value purchases.43

The Europol report notes that, despite the steady growth of non-cash payment methods and a decline in the use of cash, the total number of euro banknotes in circulation continues to rise beyond the rate of inflation year after year. It states that cash is used mostly for low-value payments, and its use for transaction purposes is estimated to account for approximately one-third of bank notes in circulation. Yet, the demand for high-denomination notes that are not commonly associated with payments (for example, the 500-euro note) has been sustained. This apparent contradiction is likely explained by criminal activity.44 High-value banknotes are not convenient for the average shopper, but they are highly convenient for money laundering and cash smuggling, as they can substantially reduce the size and weight of the funds and make them easier to transport.

**Capital Flight**

At various points of this Report, I have referred to “capital flight,” which has been defined as “a large scale exodus of financial assets and capital from a nation due to events such as political or economic instability, currency devaluation or the imposition of capital controls.”45 The last factor (imposition of capital controls) refers to situations where a state places restrictions on the amount of cash that can legally be exported, by whom, and for what purpose.46 The main “driver” for capital flight is that funds are perceived to be under threat for some reason (for example, avoidance of strict exchange controls, an illicit source, or cultural considerations), which causes the owner to want to move the funds abroad to a place of safety.47

---

41 Ibid, pp 9–10.
44 Ibid, pp 6, 11–16.
46 Ibid, p 15.

---

1421
Capital flight is, in a sense, in a grey zone between legitimate and illegitimate transfer of cash. The capital being moved in such a situation is often not derived from criminal activity. However, according to the FATF report, anecdotal evidence suggests that the capital may sometimes be derived from tax fraud or other illicit activity.48

Criminal Cross-Border Transportation of Cash

As I noted above, there is a disconnect between the fact that cash use is generally on the decline and yet circulation of cash, particularly high-denomination notes, is on the rise. The Europol report posits that this disparity is due at least in part to criminal activity.49 In this section, I discuss the prevalence of cash in criminal activity, methods in which it is smuggled across borders, and difficulties in detecting such activity.

Why Do Criminals Rely on Cash?

Despite the rise of non-cash payment methods, cash continues to be “the raw material of most criminal activity.”50 Professor Sharman testified that people often assume cash laundering is no longer relevant or common, given that “cash is something of the oldest and crudest way of money laundering” and that anti–money laundering policies have been in place for almost 30 years. But in his view, that assumption is wrong: “cash is probably still one of the most important mechanisms for laundering the proceeds of crime.”51 He added that while cash is perhaps more common in low-value crimes,

    even very recently, even in jurisdictions that have had anti–money laundering laws for 30 years, there are still cases of drug dealers coming to banks with bags of millions of dollars in cash and being able to deposit that over the counter repeatedly and not being detected through this most unsubtle and unsophisticated style of money laundering.52

    In other words, money launderers “don’t innovate when they don’t have to. If old ways still work, then there’s not much incentive to go with new ways.”53 As cash is still effective for many forms of criminality, it continues to be used.54

    Most suspicious transaction reports in Europe relate to cash or cash smuggling.55 Suspicious cash is also a problem in Canada, as indicated in a 2018 report prepared by the federal Department of Finance:

48 Ibid, p 36.
49 Exhibit 64, Europol Cash Report, pp 6, 11–16.
50 Evidence of S. Lord, Transcript, May 29, 2020, p 5.
52 Ibid, pp 15–16.
53 Ibid, p 16.
54 Ibid, p 16.
In Canada, there are criminal networks across the country that are responsible for the processing of hundreds of millions of proceeds of crime in cash. These transactions are often observed by law enforcement in public places as bags or boxes of cash are exchanged. Those who are providing cash in these situations have links to criminal organizations and criminal activity and do not otherwise have legitimate reasons for possessing these amounts in cash. However, the use of multiple cash transfers, the recourse to professional money movers, and the placement of cash in the financial system often make it difficult for law enforcement to establish the link between the cash and the commission of a specific criminal offence.\textsuperscript{56}

Cash remains attractive for criminals today because it is relatively untraceable, readily exchangeable, and anonymous.\textsuperscript{57} However, the FATF report notes that cash is only truly anonymous in smaller amounts; it is easier to justify small to medium amounts of cash, but harder to justify the possession or movement of large amounts of cash with no explanation of its origin or purpose.\textsuperscript{58}

Cash plays a role at all three of the traditional “stages” of money laundering (see Chapter 2 for a discussion of the three-stage model and critiques of it). As the Europol report notes, “Although not all use of cash is criminal, all criminals use cash at some stage in the money laundering process.”\textsuperscript{59} Cash can be generated in any number of predicate offences, including drug trafficking, illegal trafficking of commodities (such as alcohol or tobacco), tax fraud, weapons and arms smuggling, organized immigration fraud, or the financing of terrorism. The FATF report concludes that there is seemingly no predicate offence that is more commonly associated with one method of cash smuggling.\textsuperscript{60}

Cash smuggling often begins the money laundering cycle:

Criminals who generate cash proceeds seek to aggregate and move these profits from their source, either to repatriate funds or to move them to locations where one has easier access to placement in the legal economy, perhaps due to the predominant use of cash in some jurisdictions’

\textsuperscript{56} Exhibit 960, Department of Finance, Reviewing Canada’s Anti–Money Laundering and Anti–Terrorist Financing Regime (February 7, 2018), p 36.

\textsuperscript{58} Exhibit 4, Appendix LL, FATF Bulk Cash Report, p 27.

\textsuperscript{59} Exhibit 64, Europol Cash Report, p 7.

\textsuperscript{60} Exhibit 4, Appendix LL, FATF Bulk Cash Report, pp 3, 30–31. Riccardi and Levi note that most European anti–money laundering units report drug trafficking as the predicate offence most closely linked to the use of cash in money laundering schemes; however, other crimes (such as extortion, sexual exploitation, and smuggling of migrants) are likely to generate cash proceeds as well. Corruption (e.g., through bribes) is the second predicate offence most frequently reported by law enforcement agencies: Exhibit 24, M. Riccardi and M. Levi, “Cash, Crime and Anti–Money Laundering,” pp 141–42.
economies, more lax supervision of the financial system or stronger banking secrecy regulations, or because they may have greater influence in the economic and political establishment.\(^{61}\)

Cash smuggling can also occur at other stages of the money laundering cycle. Moreover, it is also used by non-cash generating offences: for example, criminals engaged in cybercrime such as phishing or hacking make use of money mules to receive and withdraw funds fraudulently obtained and then send the funds by wire transfer to other jurisdictions where they are then collected in cash, likely for onward transportation.\(^ {62}\)

**Smuggling Cash Across Borders**

A key finding of the FATF report was that the more countries impose restrictions on the use of cash, the more people start to smuggle it across borders.\(^ {63}\) Although there are no reliable estimates on the amount of cash laundered through smuggling cash across borders and then introducing it into the financial system in another country, the figure “would seem to be between hundreds of billions and a trillion US dollars per year.”\(^ {64}\)

Other key findings in the FATF report include the following:

- Physical transportation of cash distances criminal proceeds from the predicate offence and breaks the audit trail.\(^ {65}\)
- The amounts of cash being concealed in cargo and adapted freight are in excess of what can be carried by a natural person.\(^ {66}\)
- The currencies most frequently encountered in consignments of criminal cash are those that are the most stable, widely used, and readily traded in the world.\(^ {67}\)
- While not universally seen, high-denomination notes are often used to reduce the bulk and weight of criminal cash when seeking to conceal it.\(^ {68}\)
- Criminals exploit cash declaration systems, including by:
  - using the fact that cash has been declared on entry as a way of legitimizing criminal cash paid into a bank account;

---

66 Ibid.
67 Ibid.
68 Ibid.
• reusing cash declarations several times for the same purpose; or
• over-declaring cash on entry.  

• Although most countries seem to have reasonable knowledge and understanding of cash transported by natural persons (and measures in place to monitor and control this activity), much less attention is paid to money being moved by cargo.

While a review of the entire FATF report is beyond the scope of this chapter, it is worth examining some of these findings in more detail.

**Breaking the Audit Trail**

A key driver of moving criminally derived cash from one jurisdiction to another is to break the audit trail – in other words, make it difficult for authorities in the second jurisdiction to establish that the cash is the proceeds of a crime in the first jurisdiction. Relatedly, criminals may choose to move cash to a jurisdiction with less stringent anti-money laundering regulation, such that they can introduce large amounts of cash into the financial sector without attracting scrutiny.

The Europol report notes that the most significant challenge reported by law enforcement in regard to cash is linking it to criminal activity. It explains that “[m]ost European law enforcement agencies are required to demonstrate the predicate offence in order to prosecute money laundering: given that cash is a bearer instrument, this is a challenging task, and successful investigations involving cash usually entail the use of traditional techniques.”

Although difficulties in linking predicate offences to money laundering is not limited to cash, “the inability to trace physical cash money movements intensifies the problem when compared to other instruments for which records are kept.”

As I discuss in Chapter 40, the need to establish the predicate offence has also been identified as one of the barriers to effective law enforcement in this province.

**Currencies and Denominations**

As noted above, the currencies most frequently encountered in consignments of criminal cash are those that are the most stable, widely used, and readily traded.

---

69 Ibid, pp 16, 61–62. As Simon Lord, one of the authors of the FATF report, explained: “One of the things that we found, for example, is people were occasionally declaring cash that didn’t actually exist so that they could then walk into a bank with a big pile of cash and say, look, this is entirely legitimate, here’s the cash declaration form I filled in, so would you mind paying it into the bank account for me. And so that happens quite a lot. And it’s the sort of adaptation you might expect actually when people are getting used to the way that regulatory systems work”. Transcript, May 29, 2020, p 8.

71 Ibid, p 40.

72 Ibid, p 41.

73 Exhibit 64, Europol Cash Report, p 7.

74 Ibid, p 11.
These include the US dollar, euro, British pound, and Swiss franc. While less common than the foregoing currencies, the Canadian dollar is high on the list as well.75

The FATF report notes that high-denomination bills are more likely to be encountered when there is an element of concealment involved in the transportation of cash.76 It explains:

The reason for this is self evident ... Taking the British pound as an example, measurements of the size and weight of the relevant banknotes shows that GBP 250 000 in “street cash”, a mixture of GBP 10 and GBP 20 notes, weighs between 15–20 kg and is bulky enough to fill an average sports holdall [gym duffel bag]. The same value in EUR 500 notes would weigh about 0.6 kg and would fit in a fat envelope. High-denomination notes therefore facilitate the concealment of large values of cash.77

Authorities in the Netherlands believe that almost all 500-euro notes are used for criminal activity and have even noted that in some cases, a 500-euro note costs more than 500 euros because of demand.78

Despite the foregoing, the denominations most commonly held by criminals can vary depending on the country. For example, the UK and the Netherlands see many high-denomination bills, whereas Germany has made many more seizures of low to medium denominations.79 The UK ultimately withdrew the 500-euro note from circulation after determining that there were few legitimate uses of it.80

As of April 27, 2019, the 500-euro note is no longer being issued.81 However, ceasing to issue it will not eliminate the problem. The UK’s 2015 national risk assessment notes that despite withdrawing the 500-euro note, “it is apparent that the €500 note is still being purchased from customers by the UK currency sector” and that it still frequently appears in suspicious activity reports.82 Further, criminals may simply move to other high-denomination bills:

---

75 Exhibit 4, Appendix LL, FATF Bulk Cash Report, pp 4, 52.
76 Ibid, p 56.
77 Ibid, p 56. See also Exhibit 64, Europol Cash Report, p 20: “EUR 1 million in 500 notes equates to just 2000 notes weighing 2.2 kg, taking up a space of just under 3 litres (which, for instance, would easily fit inside a small laptop bag). Meanwhile, the same amount of money (EUR 1 million) in EUR 50 notes equates to 20,000 pieces weighing over 22 kg and taking up the space of a small suitcase.”
82 Exhibit 33, Her Majesty’s Treasury and Home Office, UK National Risk Assessment of Money Laundering and Terrorist Financing (October 2015), p 76, para 8.9.
The effect of [withdrawing the 500-euro bill] was [that] people moved almost immediately into purchasing the 200-euro notes instead, because it was the next highest note value and the best way of packing a lot of value into a small ... space.83

**Purposes of Cash Smuggling**

The FATF report explains that the method used to transfer cash depends on a decision-making process by the criminal, which ultimately depends on the *purpose* of the cash movement:

This process begins with the criminal deciding what the purpose of the cash movement is (for example, to break the audit trail, to pay a supplier, to bank it in another jurisdiction etc.). This will dictate the ultimate destination, which will in turn inform the method used, and ultimately the route chosen. At all stages, influences such as risk, familiarity, simplicity and the demands of partners will affect the decisions made.84

Simon Lord testified that transporting small amounts of cash can be accomplished by having someone hide the cash on their person, whereas when moving cash “on an industrial scale” – for example, in quantities possessed by Colombian drug trafficking cartels – would require transportation by freight, given the size, weight, and bulkiness of such quantities of cash.85

There are a number of reasons why criminals may seek to move cash. As noted above, a key one is to break the audit trail. Others include:

- **Demand**: cash may be needed in another jurisdiction to pay for further consignment of illicit goods or purchase an asset.

- **Avoiding regulatory oversight**: it may be easier to bank funds or otherwise use them in another jurisdiction due to less stringent anti–money laundering controls.

- **Familiarity**: criminals may move cash across borders where they were successful in doing so before.86

Depending on the purpose of moving the cash, criminals may engage in transactions that have no obvious business purpose. For example, criminals may withdraw cash from a bank account in one country and pay it into a bank in another.87 Simon Lord explained that a colleague from the Tunisian financial intelligence unit has observed such activity:

---

83 Evidence of S. Lord, Transcript, May 29, 2020, p 7.
84 Exhibit 4, Appendix LL, FATF Bulk Cash Report, p 3.
86 Exhibit 4, Appendix LL, FATF Bulk Cash Report, pp 37–44.
[Criminals] had gotten money in the financial system in Tunisia and they had managed to withdraw the money in large amounts of cash. And obviously that’s something that you can do in Tunisia, but you may not be able to do in somewhere like Canada or the UK. And the guy had then taken the cash and just moved it across a couple of midland boundaries to another country in Africa and paid it back into the bank in that location. And it was simply to break the audit trail ... it was moving the cash across an international boundary, because he knew that even though they were only ... maybe 500 kilometres apart, the authorities in country B wouldn't be talking to the authorities in country A, and equally, didn't consider the cash to be suspicious. And so, there was no way you would be able to know that that person in location A also had a bank account in location B and he just moved the cash from one place to another.  

Methods and Routes of Cash Smuggling

There are a number of ways in which cash can be smuggled across borders. Again, the technique chosen will depend on the purpose of moving the cash. Some methods include:

- **Cash couriers**: cash may be moved by a person who has been recruited by a criminal organization to transport criminally derived cash across an international border on their person – for example, concealed in clothing, in a money belt, in their luggage, or even internally.  
- **Concealed within a method of transport**: cash may be concealed in cars, trucks, or maritime craft, with or without the knowledge of the carrier.  
- **In containerized or other forms of cargo**: this method is popular for very large amounts of cash, given that individuals can only carry so much with them.  
- **Concealed in mail or post parcels**: significant amounts of cash can be concealed in this way if using large denomination bills.  
- **Hidden in plain sight**: this might be done by taking advantage of limited requirements for declaring cash.

Closely related to methods of smuggling is the route chosen, which again will depend on the purpose of moving the cash in the first place. For example, a criminal seeking to move 100,000 euros from the Netherlands to Spain may make different decisions that a criminal seeking to move 100,000 British pounds from the United

---

89 Exhibit 4, Appendix LL, FATF Bulk Cash Report, p 28; Exhibit 64, Europol Cash Report, p 19.
90 Exhibit 4, Appendix LL, FATF Bulk Cash Report, p 28; Exhibit 64, Europol Cash Report, p 19.
Kingdom to Spain. The first criminal may choose to move cash from the Netherlands to Spain by car because (a) 100,000 euros would be very heavy, (b) they would likely be detected by authorities if moved by air, and (c) the Schengen agreement means that there are no restrictions on movement in the European Union. In contrast, moving cash between the United Kingdom and Spain raises other considerations, including that (a) the United Kingdom has a different currency than Spain, meaning currency exchange would be necessary; and (b) concealment will be more important to avoid scrutiny by border agents, which may lead to increased use of high-denomination notes to reduce bulk and weight. Further, if the risk of detection is deemed too high, the criminal may choose to transport the funds by car through the Channel Tunnel to France before moving to Spain – while this would normally not be a sound business choice, it may achieve the criminal's purpose in moving the cash.

Difficulties in Detecting Cash Smuggling

A number of difficulties arise in detecting cash smuggling across borders. The FATF report identifies a number of challenges that countries face domestically, including:

- a lack of training for customs officers specifically relating to cash-based money laundering;
- inefficient coordination between customs and other agencies (mainly law enforcement);
- insufficient information being communicated to the financial intelligence unit;
- limited resources;
- lack of access to tools such as X-ray facilities, body scanners, and cash detection dogs; and
- lack of knowledge by financial institutions’ staff about how cash declaration forms can be misused.

Given the necessarily international dimension of cash smuggling, it is also important to have effective information and intelligence sharing between countries. The FATF report notes a number of difficulties in this regard. Related to intelligence sharing is the exchange of evidence: the report notes issues relating to ineffective use of mutual legal assistance.

---

94 Ibid, p 49.
95 Ibid, p 49.
The FATF report also notes a number of legislative barriers that countries face. Although some countries may have a comprehensive legal framework in place to address cash smuggling by natural persons, they may lack the necessary legal tools to properly address cash in cargo and mail. For example, customs authorities may not have the legal authority to detain shipments for further information, to require the disclosure of further information, or to investigate appropriately.99

Simon Lord testified that cash, when being freighted, has its own commodity code that does not attract any duty or value-added tax (VAT). As a result, customs paperwork often does not refer to the amount in the shipment, and cash is sometimes deliberately misdeclared for security reasons. As a result,

that makes actually understanding how much cash there is in transit from place A to place B extremely difficult, because what you might find, even if the cash is declared correctly, the ... customs forms might just say “cash, two tons,” and then give the value of the consignment as the value of the paper that it’s printed on and the ink that’s on it rather than the fact that it’s 60 million francs.

And so, it’s actually quite difficult to work out how much cash is actually being moved around the world, and you have to dig into it quite a lot. And one of the things that we discovered was ... that occasionally you might need to use ... coercive powers on a financial institution to get them to tell you who the actual beneficial owner of the cash is, but you didn’t have access to those powers because the cash had been declared entirely correctly according to customs procedures, and you have no other grounds for suspicion which might allow you to go for a court order.100

The difficulties in investigating crime involving large quantities of cash are unlikely to disappear in the near future, given that cash continues to be widely used in criminal activity. It is essential that law enforcement and policymakers continue to develop expertise in cash-based activity and have the necessary tools required to detect such activity. In Chapter 8, I recommend the creation of a new provincial AML Commissioner, a person and office that will develop significant expertise with money laundering typologies and vulnerabilities, as well as measures to combat money laundering. The AML Commissioner will be well-placed to engage in ongoing monitoring and research of bulk cash smuggling and to issue public reports that set out recommendations for improvement. I would also encourage the new provincial money laundering intelligence and investigation unit that I recommend in Chapter 41 to be alive the ways in which the movement of cash can be a component of a money laundering operation.

100 Evidence of S. Lord, Transcript, May 29, 2020, pp 8–9.
Conclusion

Bulk cash smuggling, a practice that has existed for years and continues to occur, plays a key role in the underground economy. By its nature, bulk cash smuggling will always involve at least two countries, and thus has an inherently international dimension. Consequently, the activity calls for responses primarily at the federal level. It is my hope and expectation that the federal government will review the currency declaration regime under the *PCMLTFA* – particularly the continued appropriateness of the penalties therein – and pay close attention to reports by the FATF and Europol in order to strengthen the Canadian regime.
I have referred to informal value transfer systems (sometimes called “underground banks”) at various points in this Report, including Chapters 2, 3, and 21. In basic terms, these systems allow people to move value from one location to another without transferring funds through the regulated financial system. This occurs through the use of “cash pools” in different locations that, in simple terms, enable someone to make a deposit in one location and access cash in another, with the cash pools ultimately being settled.

While, as I discuss below, informal value transfer systems can have legitimate uses, they also play a significant role in the underground money laundering economy. They exist around the world, and there is remarkable similarity between the various versions worldwide.¹ Informal value transfer systems internationally include hawalas (Middle East), hundi (India), undiyal (Sri Lanka), fei qian (China), and saraf (Iran).² In this province, one criminal operation employing the “Vancouver model,” which I discuss in more detail in Chapter 3, made extensive use of informal value transfer to launder substantial sums of illicit cash over a number of years.

In what follows, I explain how these systems work and the money laundering vulnerabilities associated with them. Although this chapter focuses largely on illicit activity involving informal value transfer systems, I emphasize at the outset that such systems are often used for legitimate purposes as well, including by individuals who have difficulty accessing traditional banking services.

¹ Evidence of S. Lord, Transcript, May 28, 2020, p 82.
² Exhibit 445, FINTRAC, Financial Intelligence Report: Criminal Informal Value Transfer Systems (IVTS) (February 2016), para 2; Evidence of S. Lord, Transcript, May 28, 2020, p 75.
What Are Informal Value Transfer Systems?

Informal value transfer systems are essentially underground “banking” channels that allow users to move value between locations without actually transferring funds. While each system is slightly different, the operators typically have “pools” of cash available to them in different locations. When a client needs to transfer funds from one location to another, the money will be paid into the cash pool in the first location and paid out of the cash pool in the jurisdiction where the recipient needs the money. (Across borders, this may mean the use of different currencies, but for equivalent value.) The money paid into the first pool will be held in that location until another client needs to transfer funds into that jurisdiction. Over time, the operator may need to reconcile the cash pools to keep them in balance. However, there is no transfer of funds on an individual basis. In this way, individuals are not actually sending funds across borders – rather, the settling process enables funds to be deposited in one location and accessed in another.

Simon Lord described the operation of these systems as follows:

Essentially, it’s money transmission at its most basic. Quite a lot of the time these types of systems are tied to specific geographic regions, ethnic communities and what have you, and essentially what they do is they arrange for transfer and receipt of funds or equivalent value without the physical need to transfer the funds themselves. So you’re transferring value but not necessarily the funds. So there won’t be a straight line remittance from point A to point B through the banking system ... [S]omeone will make a deposit of funds in one location and will receive an equivalent value in another location, less fees and commission, but without there actually being a physical connection between the two. And they generally involve a process which I generally refer to as “cash pooling.” So, the people who are involved in these types of networks have available to them pools of funds in different locations, not always cash. Sometimes it’s money in bank accounts, sometimes it’s trade. But pools of funds in different locations and you receive the payment into one of those pools and make a payment out of another one. And then over time there will be a settlement arrangement between the pools to keep them in balance. Because obviously if all the money went one way, you would end up with lots of money in one place and not in another, and you would have to have some sort of settlement mechanism in place. So settlement can take place through trade, through cash, through net settlements over a long period of time, quite often through the banking system. They’re often informal in so far as this type of stuff often happens outside of the formal financial system, but by no means all the time. They often interact with financial systems as well.3

---

Informal value transfer systems can be used to send money around the world. In a 2013 report, the Financial Action Task Force focused on what it termed “hawalas and other similar service providers.”⁴ The task force considers such services to be a subset of money or value transfer services and defines them as “money transmitters, particularly with ties to specific geographic regions or ethnic communities, which arrange for transfer and receipt of funds or equivalent value and settle through trade, cash, and net settlement over a long period of time.”⁵ However, the report differentiates informal value transfer systems from money transmitters as follows:

While [hawalas and other similar service providers] often use banking channels to settle between receiving and pay-out agents, what makes them distinct from other money transmitters is their use of non-bank settlement methods, including settlement via trade and cash, as well as prolonged settlement time. There is also a general agreement as to what they are not: global money transfer networks (including agents) operated by large multinational money transmitters and money transfers carried out through new payment methods including money remittance services. This description is based on services provided by them and not their legal status. [Emphasis in original.]⁶

The report divides hawalas and similar service providers into three categories: pure traditional (legitimate) ones, hybrid traditional (sometimes unwitting) ones, and criminal (complicit) ones.⁷ Traditional, legitimate service providers – the first category – have existed for centuries in South Asia and the Middle East in largely unregulated environments.⁸ They are used extensively for low-value remittances on behalf of individuals and tend to be popular among migrants because of familial, regional, or tribal affiliation, as well as inadequate access to regulated financial services.⁹ If they are sufficiently regulated and supervised, these providers will present low or lower money laundering and terrorist financing risks because of the low value of average transactions.¹⁰

The second category – hybrid providers – are ones that may be used, intentionally or not, for illegitimate purposes such as the transmission of illicit money across borders. They are not primarily set up to move illicit money, but may become involved in illegal activities such as moving money generated from tax evasion or other crime, evading currency controls, or avoiding sanctions. They use similar methods to traditional providers and are not part of a criminal network.¹¹

---

⁵ Ibid, pp 9, 12.
⁸ Ibid, p 14; Evidence of S. Schneider, Transcript, May 26, 2020, p 23.
¹⁰ Ibid.
Finally, criminal providers are knowingly involved in criminal activity. The Financial Action Task Force report indicates that in some countries, informal value transfer service providers are increasingly being set up or expanded to service criminals. They are often controlled by criminals or criminal groups – particularly professional money launderers – and present high money laundering and terrorist financing risks.\(^{12}\) Their networks often enable other crimes beyond money laundering, such as tax fraud, currency offences, and corruption.\(^{13}\)

A 2016 report by the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC) notes that although the Financial Action Task Force divides informal value transfer systems into three categories, “it is likely that even legitimate [systems] may, at times, facilitate transactions involving illicit funds. Similarly, criminal [systems] may facilitate transactions involving completely [lawful] funds.”\(^{14}\)

It is important to emphasize that there are many legitimate uses of informal value transfer services. Indeed, Professor Jason Sharman testified that “as far as we know, the overwhelming majority of those transfers are used for entirely legitimate and lawful purposes.”\(^{15}\) Informal value transfer services can be particularly useful in countries with underdeveloped financial systems. They have the ability to deliver money to distant countries where regulated channels do not exist; in some cases, they may be the only channel through which funds can be transmitted in conflict regions.\(^{16}\) These systems are also frequently used by illegal foreign migrants residing in developed countries, whose illegal status precludes them from accessing banks and regulated financial services providers.\(^{17}\) Further, in some countries, individuals may have a lack of confidence in banks; that is often the case in countries where bank failures have occurred and customers have lost deposits. Some users may also have limited understanding or familiarity with traditional financial services due to a lack of financial literacy or language barriers.\(^{18}\) Some informal value transfer services also have some advantages over banks, offering cheaper or faster services or better exchange rates.\(^{19}\)

**How Does an Informal Value Transfer System Work?**

The Financial Action Task Force’s 2013 report outlines four different methods of settlements used by informal value transfer systems:

- simple reverse transactions;
- triangular settlement;

---

\(^{12}\) Ibid, p 15.

\(^{13}\) Ibid; Evidence of S. Schneider, Transcript, May 26, 2020, p 26.

\(^{15}\) Evidence of J. Sharman, Transcript, May 6, 2021, p 23.

\(^{16}\) Exhibit 4, Appendix BB, FATF Hawala Report, pp 17–18.

\(^{18}\) Exhibit 4, Appendix BB, FATF Hawala Report, p 18.

\(^{19}\) Ibid, p 17.
• settlement through value; and
• use of cash couriers.  

**Simple reverse transactions** are a classic form of transfer. For example, a customer may want to send money from the United States to India. The customer provides cash to the US service provider, who in turn asks his counterpart in India to make a payment to the beneficiary in India. The Indian service provider uses his local cash pool to make the payment – no transfer of funds actually occurs between the US and Indian providers. To settle the transaction, the US provider will make a future payment to a beneficiary in the US on behalf of a customer of the Indian service provider. Over a period of time, the overall net amount of transactions may balance, but if not, a settlement will take place, usually via wire transfer.  

**Triangular settlement** is a variation of the simple reverse transaction approach. It involves several service providers. In the above example, the US provider asks the Indian provider to provide cash to someone. At the same time, the Indian provider has a customer seeking to send money to Somalia. If the Indian provider does not have a counterpart in Somalia, he may seek assistance from the US service provider to identify a provider in Somalia that owes a debt to the US one. Once the Somali service provider pays the beneficiary on behalf of the Indian one, all accounts are settled.  

**Settlement through value** is a common practice in Afghanistan, Iran, Pakistan, and Somalia. Operators use a surplus of cash or banked money to fund trade payments at the request of a business that in turn pays the individual recipients in the remittance destination region. Finally, settlement can occur through the use of cash couriers who physically transport cash, including across borders.  

Money laundering schemes involving informal value transfer systems can become very complex, involving multiple networks and countries and incorporating trade-based money laundering and other forms of criminality. Mr. Lord provided an example of a complex money laundering operation using informal value transfer, which I discuss in detail below.  

Informal value transfer systems often involve multiple actors in several countries who may not know each other personally, and the amounts of money involved can be quite large. In order to ensure that the money is given to the right person, operators of informal value transfer systems often use a technique known as “token-based” exchange. As I explain further below, criminal informal value transfer systems typically involve a controller, collector, coordinator, and transmitter. The controller is in charge of the entire operation, and the collector actually meets with the criminal to receive the cash. When a

---

21 Ibid, p 23.
22 Ibid.
23 Ibid.
controller asks a collector to meet a criminal to receive cash, the collector quotes the serial number of a small-denomination bill in his possession to the controller. The controller then transmits that number to the criminal by way of text message, WhatsApp, or another messaging system. When the criminal ultimately provides the cash to the collector, the collector produces the bill with its unique serial number, and the criminal is assured that the collector is the person meant to receive the cash – nobody else could have that bank note with its unique serial number. Further, when the collector hands over the bill, that bill acts as a kind of receipt: the criminal can show it to his boss in the event of a loss. Mr. Lord testified that token-based exchange is used all over the world, including in Canada.\textsuperscript{24}

\section*{Money Laundering Risks}

Informal value transfer systems entail a number of money laundering risks. In general, they can pose a money laundering vulnerability “simply because of the fact that they’re off the books and that there’s no official record of them [and] they’re not part of the anti–money laundering surveillance system that covers formal banking.”\textsuperscript{25} Indeed, they may be attractive to money launderers precisely because they enable criminals to operate under the radar.\textsuperscript{26}

In what follows, I review the “controller, collector, coordinator, transmitter” money laundering typology as well as the “Vancouver model.” I then consider difficulties with anti–money laundering regulation of informal value transfer systems.

\section*{Controller, Collector, Coordinator, Transmitter Typology}

Criminal informal value transfer systems often employ the controller, collector, coordinator, transmitter typology. The controller (also known as a money broker) is the individual who arranges for the collection of street money (such as drug proceeds) and arranges for the delivery of an equivalent value to its ultimate destination (for example, businesses controlled by a drug cartel). The Financial Action Task Force report calls the controller the “key to the success of the system,” noting that the controller acts as a third-party money launderer and is normally responsible for the money from the time it is collected until the value is successfully delivered (and may bear the cost of funds that are lost or not effectively transferred). The collector is instructed by the controller to collect money from criminals and to dispose of it following the controller’s instructions. He is the controller’s trusted representative and faces the highest risk of arrest because

\textsuperscript{24} Evidence of S. Lord, Transcript, May 28, 2020, p 77–79. A receipt is important because the money laundering network assumes responsibility for the safe delivery of the funds to the remote location. As a result, the network will be responsible for paying out the funds even if, for example, a member of the network is arrested and the cash is seized. Further, this system avoids a situation where the networks would need to literally record the name of the criminal providing the funds, the amount of the funds, and the recipient – recording such info “would be suicide” for a criminal: ibid, p 78.

\textsuperscript{25} Evidence of J. Sharman, Transcript, May 6, 2021, p 24.

\textsuperscript{26} Evidence of S. Schneider, Transcript, May 26, 2020, p 48.
he actually meets the criminal customer to collect the cash.  

The criminal customer using an informal value transfer system is typically charged a percentage of the amount sought to be transferred; this is a commission paid to the criminal network. Some schemes involve a **coordinator**, who is an intermediary that manages parts of the money laundering process for one or more controllers. Finally, the **transmitter** receives and dispatches the money to the control of the controller.

The diagram below (Figure 37.1; also included as Exhibit 11) was prepared by Mr. Lord and illustrates a fictitious example of a complex informal value transfer system and how it can be used to launder illicit funds. The diagram demonstrates that criminal informal value transfer systems can quickly become very complex, spanning multiple countries and using several money laundering techniques. Indeed, such systems can be used not only for money laundering but also for facilitating other crimes, including illegal currency trade, import and export fraud, sanctions evasion, tax evasion, and financing of terrorism.

---

27 Evidence of S. Lord, Transcript, May 28, 2020, pp 78–79.

28 Ibid, p 72.

30 Ibid, pp 9, 18, 33–44.
The diagram is nicknamed the “London Underground map” given the various colours and arrows. What follows is a summary of Mr. Lord's explanation of the diagram. The controller at the centre of the picture (highlighted in yellow) is operating out of Dubai. He has access to a number of cash pools: in this example, cash pools are located in the UK, the Netherlands, Turkey, Iran, and Pakistan. A collector is indicated in relation to each of these pools.

On the left side of the diagram, a UK criminal (in this example, a drug trafficker) is seeking to have £150,000 appear in the Netherlands. “Dutch criminal (2)” at the bottom left supplied the drugs, and the UK criminal is seeking to pay him. The controller arranges for his UK collector to meet with the criminal and collect the cash. The cost to the UK criminal to have his transaction pass through this network is around 6 to 8 percent of the amount he is seeking to pay Dutch criminal (2).

The controller arranges for his UK collector to meet with the criminal and collect the cash. The cost to the UK criminal to have his transaction pass through this network is around 6 to 8 percent of the amount he is seeking to pay Dutch criminal (2).

The UK collector takes the cash from the UK criminal to a safe location, counts it, and reports to the controller on the amount received. The controller then contacts the Dutch collector, who in turn has received cash from “Dutch criminal (1)” that the latter wants to appear in Turkey. The controller tells the Dutch collector to provide £150,000 to Dutch criminal (2).

In most situations, the controller will pay out the criminal (in this example, Dutch criminal (2)) from the pool of cash he maintains in the Netherlands (here, Cash Pool 2). However, there may be situations in which that pool does not have enough cash for the payout. In such cases, the controller may work with other controllers conducting similar operations in order to facilitate the transfer.

In this example, the Dutch collector is missing EUR 106,000. He informs the controller, who then contacts “Controller 2,” who also happens to be located in the United Arab Emirates. The two controllers are technically in competition, but they will work together where it benefits them both. Here, Controller 2 agrees to provide EUR 106,000 (equivalent to £100,000) to the Dutch collector. In exchange, the controller agrees to provide £100,000 to Controller 2’s network in the UK (recall that the UK cash pool has £150,000 in cash from the UK criminal). The controller instructs his UK collector to provide £100,000 to a collector working for Controller 2, and a reciprocal handover of EUR 106,000 occurs in the Netherlands.

---

33 Ibid, p 69.
34 Ibid, pp 68–69. The scheme will often include a “coordinator” as well, who controls various collectors in an area.
36 Ibid, p 70.
37 Ibid. The Turkish collector has likewise received cash from “Turkish criminal (2)” that the latter wants to appear in Iran, and the cycle continues.
At this point, the Dutch collector has sufficient funds to settle the transaction between the UK criminal and Dutch criminal (2). The collector pays Dutch criminal (2), and the transaction is settled (indicated by the red arrows on the diagram).\(^{40}\)

Importantly, the UK collector still has £50,000 in the UK cash pool – the UK criminal had provided £150,000, and the UK collector transferred £100,000 to the collector working for Controller 2. The UK collector does not want the £50,000 to sit idle; he instead engages in trade-based money laundering.\(^{41}\)

On the right side of the diagram, Cash Pool 5 is located in Pakistan. A Pakistani company is importing goods worth $75,000 from China. The Pakistani company wants to import these goods without paying the value-added tax (VAT), customs duties, and other charges. The Pakistani importer therefore arranges with the Chinese company to invoice for only half of the value of the goods – so, the paperwork indicates the value is $37,500 rather than $75,000.\(^{42}\) At this point, the Pakistani company has received $75,000 worth of goods but has only paid $37,500. To compensate the Chinese company for the under-invoicing, the Pakistani company makes a payment of $37,500 to an exchange company in Pakistan that is complicit with the controller.\(^{43}\)

At the same time, the controller contacts the UK collector to put £25,000 (of the £50,000 that remains from the UK criminal) into a bank account of a money services business located in the UK.\(^{44}\) Meanwhile, some migrants want to send funds to their family in Pakistan for legitimate reasons. They send funds to the UK money services business, which transfers the funds to a foreign exchange (FX) trading company. That company is instructed to pay the $37,500 that the Chinese company is owed.\(^{45}\) So, the Chinese company has been paid in full, and the Pakistani company has successfully evaded tax and fees.\(^{46}\)

The result of all this is that a UK investigator, who sets off trying to follow the original £150,000, may not appreciate everything that has occurred:

\[\text{The important thing to realize here is if you were following the old adage of “follow the money,” what you would see is the UK criminal’s money going to the UK collector, going into a money services business, and going to China, and you’d be saying to yourself as a financial investigator, well, why does my guy want his money in China? And the fact is he doesn’t, and his money hasn’t gone to China. His money has actually popped out in the Netherlands, but the actual money that he put into the collector has been used for a different purpose, to settle a trade transaction in between two completely independent people.}\(^{47}\)
This is not the end of the matter, however. The UK collector still has £25,000 remaining from the original £150,000, and he uses those funds to facilitate two legitimate transactions.\(^48\) First, he makes a £20,000 payment to a UK company that has exported medical supplies to a company in Iran. While the export of medical supplies is perfectly legal, it is virtually impossible for the company receiving those supplies to make a direct bank transfer to the UK company because of the international sanctions in place against Iran, so the Iranian company has paid the UK company through an Iranian saraf (essentially a money services business). The saraf settles with the controller, and the controller completes the transaction by making a cash payment to the UK company.\(^49\)

Second, the UK collector allows an Iranian doctor to send £5,000 to his son, who is studying medicine in the UK. Like the Iranian company importing medical supplies, a direct bank transfer is impossible. Accordingly, the father provides an equivalent amount to the Iranian saraf, who transfers those funds to the controller, who instructs his UK collector to provide £5,000 to the son. While the use made of those funds is completely legitimate, it is important to note that the cash given to the son is the product of drug trafficking activity carried out by the UK criminal in the United Kingdom (something referred to as “cuckoo smurfing”).\(^50\)

**Informal Value Transfer in British Columbia**

The evidence before me revealed that informal value transfer systems have undoubtedly been used to launder significant amounts of money in British Columbia. Once such example was uncovered through the E-Pirate investigation, discussed further in Chapter 3, which revealed that a criminal organization engaged in a laundering operation utilizing a method that has been referred to as the “Vancouver model” made extensive use of informal value transfer to settle accounts between China, British Columbia, and other jurisdictions.

The Vancouver model is a method of money laundering that has figured prominently – as the name suggests – in British Columbia. The term appears to have been first used by an Australian professor, John Langdale, in a presentation about criminal alliances from China that posed a threat to Australia.\(^51\) In this model, organized crime groups operating in British Columbia deposit the cash of their illegal activity with the operator of an informal value transfer system in the Lower Mainland and receive an equivalent value (less the commission earned by the operator) in countries such as Mexico and Colombia. The cash received by the operator is then repurposed and provided to wealthy Chinese nationals who are unable to move their wealth to British Columbia because of the currency export restrictions imposed by the Chinese government. Those individuals make payments to the operator of the

---

\(^48\) Ibid. This is illustrated on the far right of the diagram.

\(^49\) Ibid, pp 74–75.

\(^50\) Ibid, pp 75–76.

informal value transfer system in China and receive the equivalent value in cash when they arrive in British Columbia.\textsuperscript{52}

While a significant portion of that cash was used to make large cash buy-ins at Lower Mainland casinos (see Chapter 13), it is important to understand that the cash can be used for any legitimate or illegitimate purpose, including the purchase of real estate and luxury goods. I also emphasize that the individuals seeking to move their wealth from China to British Columbia are not necessarily involved in criminal activity; they may well have acquired that wealth through legitimate means. The problem is that most, if not all, of the actual cash provided to those individuals in British Columbia is derived from profit-oriented criminal activity and is being paid out by the operator of the informal value transfer system in furtherance of a money laundering scheme.

Elsewhere in this Report, I have concluded that the Vancouver model was used to launder significant sums of money through the British Columbia economy (see Chapter 13). That the model has been used to launder significant sums shows that informal value transfer systems have great potential to be misused — and indeed have been misused — by those intent on money laundering and other criminality. These systems are therefore a significant money laundering vulnerability in this province.

Indeed, the Criminal Intelligence Service British Columbia / Yukon Territory concludes in a 2018 report that there are professional money launderers in British Columbia who use informal value transfer systems to assist their organized crime clientele.\textsuperscript{53} According to the report, organized crime relies on professional money launderers and their money services businesses and informal value transfer systems to handle illicit funds, convert currency, and move money internationally.\textsuperscript{54} The report opines that criminal informal value transfer systems are of great concern in British Columbia because they provide organized crime with the ability to move illicit funds to other organized crime groups, including in other countries.\textsuperscript{55}

FINTRAC has similarly concluded that professional money laundering in Canada takes place through money services businesses and informal value transfer systems, noting that professional money launderers may own or have connections to one or several money services businesses and informal value transfer systems.\textsuperscript{56} A FINTRAC

\textsuperscript{52} Ibid, pp 29–31; Evidence of S. Schneider, Transcript, May 25, 2020, pp 27, 47–48, 59–61, 65. While the Vancouver model typically involves Chinese nationals seeking to move their wealth out of China, the same model could be used by any foreign national seeking to avoid the currency export restrictions imposed by the government in their home country and move significant sums of legitimate or illegitimate wealth to British Columbia.

\textsuperscript{53} Exhibit 438, Criminal Intelligence Service British Columbia / Yukon Territory, Professional Money Launderers Who Own/Control Money Services Businesses (November 2018), p 1.

\textsuperscript{54} Ibid, pp 1–2.

\textsuperscript{55} Ibid, p 4.

\textsuperscript{56} Exhibit 442, FINTRAC, Financial Intelligence Report: Professional Money Laundering in Canada (March 2019), p 6.
report notes that it has identified two professional money laundering networks that use both formal and informal value transfer systems and were, as of March 2019, under investigation by law enforcement.  

Difficulties with Regulation

Informal value transfer systems are not regulated in the same way as other sectors I have discussed in this Report. FINTRAC considers them to be a form of money services business and therefore expects them to comply with the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 (PCMLTFA) regime in the same way as a money services business would (see Chapter 21). The requirements for money services businesses under the PCMLTFA notably include a requirement to register with FINTRAC. However, I expect that the vast majority of these systems do not comply with the PCMLTFA regime, both because those that are involved in criminality would have no incentive to do so, and because those that seek to operate legally may be unaware of their obligations due to language or cultural barriers (this occurs with money services businesses, as I discuss in Chapter 21).

Indeed, a key challenge flagged by both the Financial Action Task Force and FINTRAC is the difficulty in identifying unregistered informal value transfer systems. A FINTRAC report notes that regulatory agencies, including FINTRAC, have difficulty identifying such systems because they rely on voluntary registration systems. The Financial Action Task Force similarly observes that informal value transfer systems are difficult to detect because they are often trust-based, secretive, and unregistered; moreover, it is difficult to assess compliance of such services even when they operate legally. It concludes that regulating and supervising informal value transfer service operators is one of the key challenges facing authorities.

Some countries have attempted to regulate informal value transfer services, including by requiring that they be licensed or registered and report suspicious and other transactions. A 2010 Financial Action Task Force report notes that Denmark, Sweden, the United Kingdom, the United States, and Germany had done so. As of 2013, a slight majority of countries had barred informal value transfer systems from operating legally. Those that allowed their operation (and required licensing/registration) believed

---

57 Ibid.
59 PCMLTFA, s 11.1.
60 Exhibit 445, FINTRAC, Financial Intelligence Report: Criminal Informal Value Transfer Systems (IVTS) (February 2016), para 4.
1443
that legalization had helped expand remittances through legal channels; however, relatively few had actually registered or become registered. Further, many countries had not yet devised effective mechanisms to identify, monitor, and take action against illegal operators.

The difficulties with regulation increase the money laundering risk associated with informal value transfer systems. Operators that conduct their activities with no regulation are particularly vulnerable because they permit funds to be moved with little or no customer due diligence requirements – this allows criminals to freely send or receive funds with limited risk of being identified. Relatedly, criminal informal value transfer service operators are difficult to prosecute: as the operators are typically far removed from the criminal activities that generate the illicit proceeds, it is difficult for law enforcement to demonstrate that they are handling proceeds of crime.

In contrast to other members of the Financial Action Task Force, Canada and British Columbia have taken relatively few steps to regulate informal value transfer systems. As I noted above, FINTRAC takes the view that informal value transfer systems constitute money services businesses and are therefore subject to the requirements of the PCMLTFA, including a requirement to register with FINTRAC. In a 2016 report, FINTRAC indicates that it has engaged with the eight largest financial institutions in Canada with the goal of enhancing suspicious transaction reporting on informal value transfer systems that are not complying with the PCMLTFA.

As with the identification of unregistered money services businesses (see Chapter 21), outreach with other reporting entities may assist in identifying unregistered and non-compliant informal value transfer networks, particularly in instances where the problem is an operator's lack of knowledge or understanding of their obligations. However, such outreach is likely less useful when it comes to criminally run informal value transfer networks, the identification of which is properly a law enforcement issue. Some tools, such as surveillance and certain sources of intelligence, are available only to law enforcement, making it a key actor for the detection of such networks. Indeed, as I discuss in Chapter 39, it did not take long for law enforcement to make a link between Silver International and a criminal informal value transfer network. It is crucial that law enforcement be aware of the risks attaching to such networks and work toward identifying them using tools that only it possesses.

64 Exhibit 4, Appendix BB, FATF Hawala Report, p 11.
65 Ibid, p 55.
69 Exhibit 445, FINTRAC, Financial Intelligence Report: Criminal Informal Value Transfer Systems (IVTS) (February 2016), para 15.
I have recommended elsewhere (Chapter 41) that the Province establish a new law enforcement unit within the Combined Forces Special Enforcement Unit focused on money laundering investigation and intelligence. It will be key that the new unit develop intelligence relating to underground informal value transfer networks, including those operating in the Lower Mainland whose aim is to navigate around foreign currency export restrictions. I emphasize that, despite the measures now in place in casinos that have greatly reduced the acceptance of cash (see Chapters 11, 12, and 14), other industries – such as real estate and luxury goods – may very well have become more vulnerable to money laundering through informal value transfer. The new unit will need to be aware of the potential displacement of this typology and actively seek to identify the criminal informal value transfer networks operating in the province.

Finally, it is important that government agencies and regulators are adequately informed of informal value transfer systems and related typologies of money laundering. In this regard, the AML Commissioner (recommended in Chapter 8) will be well placed to conduct ongoing study in this area and ensure that affected government agencies and regulators are aware of the risks and typologies associated with informal value transfer.

**Conclusion**

Informal value transfer systems are an important part of the underground economy. While they have legitimate uses for many customers, there are clear money laundering risks associated with those operators who are complicit with criminals. Money laundering using such systems has occurred in this province and will likely continue to occur. It is important that government, regulators, and law enforcement continue to develop their knowledge and awareness of this activity. Reporting entities have an important role to play in reporting activity that they suspect is liked to criminal informal value transfer systems. However, law enforcement – particularly the new investigation and intelligence unit I have recommended – must play a key role in disrupting this underground activity, which has had significant impacts on British Columbia's economy.
Chapter 38
Trade-Based Money Laundering

Trade-based money laundering is generally understood as the process of disguising illicit funds and moving value between jurisdictions through the use of international trade transactions, in an attempt to legitimize their illicit origins. At their most complex, these schemes can be a tangled web of transactions involving multiple criminal actors in various jurisdictions. When combined with other money laundering tools – such as shell companies, offshore accounts, nominees, legal trusts, and the use of cryptocurrency – it can be extremely difficult for investigators to analyze and unravel these complex schemes.

While there is general agreement that trade-based money laundering is a significant threat, and arguably one of the largest and most pervasive methodologies in the world, it is not well understood and there is good reason to think that a significant percentage of such activity goes undetected. Fortunately, however, there are a number of promising tools that can assist investigators in identifying suspicious transactions and deterring this type of conduct.

In this chapter, I provide an overview of trade-based money laundering and discuss some of the international trade transactions commonly used to launder illicit funds. I also examine the risks associated with trade-based money laundering in British Columbia and conclude with concrete proposals for reform.

The International Trade System

In order to understand how trade-based money laundering operates, it is important to have a basic understanding of the international trade system.
International trade is the buying and selling of goods and services between parties in different states, which allows countries to expand their markets and results in increased competition and competitive pricing. In the Canadian context, an **export** is a product sold to the global market, and an **import** is a product bought from the global market.

International trade is a matter of federal jurisdiction under section 91(2) of the **Constitution Act, 1867**. The federal government has the exclusive delegated jurisdiction to enter into international treaties and participates in a number of international agreements and memoranda of understanding with other governments.\(^1\)

Trade accounts for a significant portion of Canada's gross domestic product and has, with few exceptions, continued to rise in recent years.\(^2\) Exports have grown in British Columbia relatively consistently since 2010, with 2020 standing as an anomaly, likely due to the COVID-19 pandemic. BC exports the most (by value) to the United States, followed by China, Japan, and South Korea. Natural resource and energy products represent, by a large margin, the most significant export sector in British Columbia.\(^3\)

**Trade Finance**

In many cases, those involved in international trade require financing to support their activities – something known as trade finance. Exporters, for example, may require working capital to process or manufacture products for export before receiving payment. Conversely, importers may require a line of credit to buy goods from overseas.

John Cassara, a former US law enforcement official and an internationally renowned expert on trade-based money laundering, explained trade finance in the following terms:

\[
[T]rade\text{ }finance\text{ }covers\text{ }trade\text{ }transactions\text{ }in\text{ }which\text{ }a\text{ }bank\text{ }provides\text{ }some\text{ }form\text{ }of\text{ }financing\text{ }to\text{ }a\text{ }party\text{ }in\text{ }the\text{ }transaction.\text{ }In\text{ }the\text{ }transactions,\text{ }a\text{ }party\text{ }will\text{ }present\text{ }documents\text{ }to\text{ }the\text{ }bank,\text{ }and\text{ }often\text{ }a\text{ }letter\text{ }of\text{ }credit,\text{ }for\text{ }example,\text{ }is\text{ }requested.\text{ }And\text{ }these\text{ }are\text{ }referred\text{ }to\text{ }as\text{ }"documentary\text{ }transactions."
\]

In these transactions, banks generally process documentation involved in the trade transactions, such as bill of lading, invoice, packing lists. This type of stuff. And the trade finance officer in the bank reviews the information underlying the transaction for soundness and compliance with anti–money laundering policies and procedures.\(^4\)

---

1. See, for example, Exhibit 338, Overview Report: Canada’s Customs Mutual Assistance Agreements, which contains examples of customs mutual assistance agreements and other international agreements and memoranda of understanding between Canada and its partners.
Some of the more common trade finance products include:

- **bills of exchange**, which bind a purchaser to pay a fixed sum to an exporter on demand or at a predetermined date, much like a promissory note;
- **countertrade**, where an exporter takes on a reciprocal obligation in lieu of a cash payment or settlement; and
- **documentary credit**, where a bank extends credit to its client (usually an importer) and assumes responsibility for payment of the imported goods.

International trades that do not rely on financing from a financial institution are known as **open account trade transactions**. By one estimate, open account trade constitutes 80 percent of international trade processed through financial institutions.5

While most open account trade transactions are processed through conventional electronic funds transfers, I heard evidence that mobile payments such as WeChat (a Chinese social media app used to transfer money) and cryptocurrencies are increasingly favoured by those involved in trade-based money laundering and other underground financial systems.6

**Trade-Based Money Laundering**

Trade-based money laundering is the process of disguising illicit funds and moving value through the use of trade transactions in an attempt to legitimize their illicit origins.7 It typically occurs through the misrepresentation of price, quantity, or quality of imports or exports in order to transfer value between complicit sellers and complicit buyers in different jurisdictions (something known as **trade mispricing**).8

Trade-based money laundering involves varied and, in some cases, elaborate schemes to transfer value between countries. However, the basic techniques include

Cassara, Transcript, December 9, 2020, pp 41–42; Evidence of B. Gateley, Transcript, December 10, 2020, p 15; Evidence of J. Gibbons, Transcript, December 10, 2020, pp 19–20 (Mr. Gibbons testified that the use of “illicit financial flows,” as opposed to “proceeds of crime,” is intended to capture more conduct, including capital flight, proceeds of corruption, and sanctions evasion).
8 Exhibit 339, Overview Report: Trade-Based Money Laundering Reports and Records, p 61; Exhibit 347, CBSA, TBML (June 5, 2019), pp 11–13. See also Evidence of J. Gibbons, Transcript, December 10, 2020, p 27. Evidence of J. Zdanowicz, Transcript, December 11, 2020, p 122. (To move money out of a country, a party must undervalue its exports or overvalue its imports. Conversely, to move money into a country, a party must overvalue its exports and undervalue its imports.)
over- and under-invoicing, multiple invoicing, over- and under-shipments, and falsely described goods and commodities. I discuss each of these techniques below.\(^9\)

**Over- and Under-invoicing**

Over- and under-invoicing occurs where the exporter issues an invoice for an amount greater or less than the true value of the goods in order to transfer value between countries. In an **under-invoicing** scenario, an exporter seeking to move value to another country might sell widgets worth two dollars per widget to a foreign importer for a price of one dollar per widget. When the foreign importer sells those widgets in its home country, it will receive one dollar more per widget than was paid for those products.\(^{10}\)

In an **over-invoicing** scenario, an exporter seeking to transfer money into the country could sell widgets worth two dollars each to the foreign importer and invoice the importer for a higher price (for example, three dollars per widget). When the invoice is paid, the exporter will have received one dollar per widget more than the widgets were worth. If a thousand widgets were sold at this elevated price, one thousand dollars would be surreptitiously transferred to the exporter.

John Zdanowicz, a professor emeritus at Florida International University and a pioneer in the research of illicit financial flows through international trade, provided the following example of under-invoicing:

Let me give you an example. If I am a drug dealer here in Miami and I have $1 million in cash that I want to move to a foreign country, let’s say Colombia, I can go into downtown Miami in an afternoon and buy 200 gold watches for $5,000 each. So I’ve converted my million dollars in cash into a million dollars of a commodity, gold watches. I then export them to my colluding partner in the foreign country, but I invoice him $5 per watch. Therefore, I export the gold watches. He actually pays me $1,000 for those, which is just a transaction cost. Once the watches are in Colombia, they are sold in the open market for $5,000 each. Actually a few years back in Miami there were drug dealers buying Corvettes for $40,000 cash [and] exporting them to Latin American countries, and they were invoiced at $500 an automobile. And when they got into the Latin American countries, they were sold for $50,000. So not only do they launder $40,000, they made a $10,000 profit doing it.\(^{11}\)

\(^{10}\) It will also receive one dollar more per widget than what was reflected on the invoice and shipping documents, which helps to obscure the transfer of illicit funds.

\(^{11}\) Transcript, December 11, 2020, pp 122–123.
He also provided a number of extraordinary examples of trade mispricing, including plastic buckets imported to the United States from the Czech Republic with a declared price of $972 per bucket, toilet tissue from China imported at a price of over $4,000 per kilogram, and bulldozers shipped from the United States to Colombia at a price of $1.74 per bulldozer.\textsuperscript{12}

**Multiple Invoicing**

Multiple invoicing occurs where the exporter issues multiple invoices for the same shipment of goods. The second invoice is completely fictitious. However, it creates a pretext for the transfer of money from a foreign importer to the domestic exporter.\textsuperscript{13}

**Over- and Under-shipping**

Over- and under-shipping is similar to over- and under-invoicing, except that the exporter sells widgets to the foreign importer for the correct price (two dollars per widget) but includes more widgets than indicated on the shipping documents to transfer value to the foreign importer, or fewer widgets than indicated to transfer value into its home country.\textsuperscript{14}

The common feature of these methods is that value (though not actual dollars) is secretively moved from one country to another, in a manner that obscures the real transaction. Such a process may also provide an explanation for certain funds (that they resulted from a particular transaction) and hide the real amount of value involved.

**Falsely Described Goods and Commodities**

In some cases, the importers and exporters involved in trade-based money laundering will falsely describe the goods and commodities being shipped in order to transfer value into or out of the country. The shipment of more valuable goods will result in a transfer of value to the foreign importer while the shipment of less valuable goods will result in a transfer of value to the domestic exporter when the invoice is paid.

**New and Emerging Methodologies**

While the export of goods through marine-containerized shipping remains the key driver of trade-based money laundering activity, it is important to note that there are a number of emerging methodologies. Service-based money laundering seeks

\textsuperscript{12} Exhibit 341, Cassara Report, p 17. Although these prices could be the result of input or classification errors in the database used in Professor Zdanowicz's study, they could also represent attempts to transfer value into or out of the United States.

\textsuperscript{13} Evidence of J. Gibbons, Transcript, December 10, 2020, pp 26-27.

\textsuperscript{14} As I understand it, over- and under-shipping refers to a situation where the price of the goods as set out on the trade documents is correct but the exporter ships a different number of goods than indicated. Over- and under-invoicing refers to a situation where the correct number of goods is shipped but the exporter manipulates the price of those goods to surreptitiously transfer value between countries.
to obscure the transfer of illicit funds through the trade of services as opposed to commodities. It presents difficulties for law enforcement because of the challenge in establishing market prices for specialized professional services.\textsuperscript{15} It is particularly difficult to detect, given the absence of a database of services comparable to that for imports and exports.\textsuperscript{16}

**Phantom shipments**, where money is transferred between importers and exporters through the financial system in order to settle a purely fictitious invoice without any physical movement of goods, have also emerged as a new typology.\textsuperscript{17} Because the bank is not extending any kind of financing to the Canadian exporter or the foreign importer, it has a limited stake in the transaction and will not perform any real due diligence unless it sees other red flags associated with the transaction. Moreover, there are no customs declarations or shipping documents to fill out, with the result that the Canada Border Services Agency (CBSA) may not know about the trade unless the information comes to its attention through other sources.

I return to some of the unique challenges faced by CBSA and law enforcement agencies investigating trade-based money laundering later in this chapter.

**Nature and Magnitude of the Threat**

While the nature and prevalence of trade-based money laundering has never been systematically examined, there can be little doubt it poses a significant risk to Canada and Canadian institutions.

Bryanna Gateley, an intelligence analyst supervisor with the RCMP’s Federal Serious and Organized Crime Border Integrity Unit and a former intelligence analyst with FINTRAC, testified that trade-based money laundering causes four types of harm to Canada:

- First, it has national security implications insofar as it gives criminals – including terrorists, extremists, and transnational organized crime groups – a relatively risk-free mechanism to repatriate illicit funds and continue their unlawful activities.
- Second, it leads to the perception that Canada is a jurisdiction of concern from a money laundering perspective (thereby leading to reputational harm).
- Third, it has the potential to cause harm to the economic security of the country, including the integrity of financial institutions and legitimate markets for goods and commodities. It also has the potential to undermine the foundation of macroeconomic policy decisions made by the federal government, insofar as it distorts the trade data that forms the basis of those decisions.

\textsuperscript{15} Evidence of J. Cassara, Transcript, December 9, 2020, pp 79–80.
\textsuperscript{16} Evidence of J. Zdanowicz, Transcript, December 11, 2020, p 195; see also Evidence of B. Gateley, Transcript, December 10, 2020, p 30.
\textsuperscript{17} Evidence of J. Gibbons, Transcript, December 10, 2020, pp 82–88; and Evidence of B. Gateley, Transcript, December 10, 2020, p 26.
• Fourth, the misdescription of goods and commodities on customs forms could result in less tax revenue being collected by the federal government (although the magnitude of that loss is unknown and there are some trade-based money laundering schemes that could theoretically result in more revenue being collected).18

While the magnitude of these harms or potential harms cannot be ascertained without further study, I agree with Ms. Gateley that trade-based money laundering poses a serious risk to Canadian and BC institutions and requires a meaningful response.19

A June 8, 2020, assessment by CBSA suggests that, at a minimum, hundreds of millions of dollars are being laundered through the trade in goods “to and through Canada each year.” Moreover, it appears that a significant percentage of trade-based money laundering activity is carried out by professional money laundering organizations and networks.

A 2018 operational alert issued by FINTRAC warns that professional money launderers are using traditional trade-based money laundering techniques such as multiple invoicing to transfer illicit funds to complicit parties in other jurisdictions.20 It also raises the spectre of Canadian businesses participating in underground currency exchanges such as the black market peso exchange (which is one of the best-known examples of trade-based money laundering).

In basic terms, the black market peso exchange and other similar exchanges allow transnational organized crime groups such as Mexican and Colombian cartels to move US drug-trafficking proceeds back to their home countries. From the perspective of the transnational organized crime group, the US drug money is “sold” to the black market peso dealer at a discount, with the cartel receiving “clean” money in its home country. However, the peso dealer must undertake a complex series of transactions in order to produce “clean” money for the transnational organized crime group in Mexico or Colombia. In a simple version of the scheme, the black market peso dealer may contact business owners in Mexico who want to buy goods or services from US vendors but need US dollars to purchase those goods. The peso dealer will arrange for the US drug money to be transferred to the US vendor to pay for the goods ordered by the business owner in Mexico. In return, it receives “clean” funds from the Mexican business owner, which are provided to the transnational organized crime group.21

Joel Gibbons, a senior analyst at CBSA and a senior program advisor to the Trade Fraud and TBML Centre of Expertise, testified that these schemes range from the simple

19 A Government of Canada PowerPoint presentation dated April 28, 2018, suggests that the lack of reliable information with respect to the magnitude of the problem is the result of a “circular policy trap” whereby “resources are required to prove resources are needed”; see Exhibit 339, Overview Report: Trade-Based Money Laundering Publications and Records, Appendix CC, p 1063.
20 A copy of the FINTRAC alert that includes these risk factors is included as Appendix 38A.
21 Online: https://www.fintrac-caafe.gc.ca/intel/operation/oai-ml-eng. See also Evidence of J. Gibbons, Transcript, December 10, 2020, pp 63–69, and December 11, 2020, pp 35–36. Of course, there are many other versions of the scheme, some of which have a high level of complexity.
to the exceedingly complex and, more often than not, involve the shipment of goods through multiple jurisdictions in an attempt to obfuscate the audit trail. He stated:

More often than not, goods are routed through multiple different countries all around the world, even in often-times nonsensical trading routes, before they ultimately arrive back at the jurisdiction where the criminal proceeds are destined. And so Canada, for example, can be used as just one node in a very complex international black market peso exchange scheme where the US could be involved – Canada, and imagine any number of countries around the world. And shipments are broken up at specific locations around the world to further obfuscate the trail of those goods. And so a customs service like mine may only be able to see just one leg in the international routing of goods that are involved in black market peso exchange schemes, and criminal actors are well aware of that, and they exploit it to their advantage. So, by breaking up one of these schemes into multiple jurisdictions where Canada or the United States don't really have any knowledge of how those goods are being declared in those foreign jurisdictions, the trail goes cold, and it's one of the many reasons that black market peso exchange schemes are such a concern and used to the extent that we believe they are by criminal actors.22

British Columbia may be particularly vulnerable to trade-based money laundering because of its international shipping ports; its large volume of international trade; and its stable, accessible financial system. For example, intelligence reports produced by the Criminal Intelligence Service British Columbia / Yukon Territory indicate that:

- There are organized crime groups in British Columbia that have the capability, knowledge, and transnational relationships to orchestrate trade-based money laundering schemes.
- These organized crime groups have the knowledge, skills, and relationships to manipulate trade chains and conduct complex foreign exchange transactions to commingle proceeds of crime with legitimate funds.
- Two BC-based organized crime groups were known to be involved in trade-based money laundering as of 2018 (though that is believed to be an under-representation, with the true scope of trade-based money laundering in British Columbia being a significant “intelligence gap”).23

22 Evidence of J. Gibbons, Transcript, December 10, 2020, pp 68–69. The FINTRAC alert notes that the two variants of the scheme that FINTRAC observes most often involve (a) brokers sending suspected illicit funds held in Latin America or the United States to Canadian trading companies, wholesalers, dealers, and brokers via electronic funds transfer and, to a limited extent, cash couriers with these entities subsequently sending the funds to entities in places such as China, Hong Kong, and the United States to pay for the goods; and (b) brokers sending suspected illicit funds held in Latin America to US-based entities, as well as Chinese- or Hong Kong-based trading companies, through electronic funds transfer via a Canadian financial institution acting as a correspondent bank.

Staff Sergeant Sushile Sharma, a senior RCMP investigator with significant experience investigating trade-based money laundering schemes, gave an example of an investigation that involved the export of used vehicles and furniture from individuals in Vancouver to areas of Africa, including Tanzania and Nigeria. These goods were sold at a considerable profit, with the proceeds being used to purchase heroin at cheaper prices than in North America. Female drug mules then transported the heroin back to North America on commercial flights, where it was sold at a profit. In some cases, the proceeds of those sales were used to purchase additional vehicles and furniture to continue the loop.

After receiving information from an international partner, the RCMP determined that the individuals involved in that scheme were also involved in a “very, very, very sophisticated and far-reaching mass-marketing fraud ring operation extending ... from Los Angeles to the Midwest as well as the eastern seaboard of America.” The proceeds of that fraud were making their way into the hands of their target and used to accumulate more goods, vehicles, and furniture to sustain the cycle.

Overall, I am satisfied that trade-based money laundering is a significant (and perhaps the most significant) money laundering threat facing this province. I am also satisfied that this problem is deserving of serious attention by law enforcement agencies, particularly at the federal level. I return to the law enforcement response to trade-based money laundering later in this chapter.

### Goods Typically Used in Trade-Based Money Laundering Schemes

Trade-based money laundering schemes can involve a wide range of commodities ranging from high-value, low-volume goods (such as precious metals) to low-value, high-volume sectors (such as textiles). Generally speaking, preferable goods have the following qualities:

- they are easy to sell;
- they have wide pricing margins;
- they have extended trade cycles, meaning that they are shipped through multiple jurisdictions; and
- they are difficult for customs authorities to examine.

Mr. Gibbons testified that electronics and mobile phones are an attractive commodity for trade-based money laundering in Canada: these commodities are portable, easy to ship, and have wide pricing margins. Kilo-level heroin purchased off the east coast of Africa can run anywhere from $15,000 to $18,000 per kilo, whereas the kilo-level price of heroin in North America would be anywhere from $55,000 to $70,000 and sometimes even $80,000 per kilo.
easy to sell, and have a high value. Moreover, their descriptions can be easily manipulated and their values adjusted. Other commodities vulnerable to trade-based money laundering include fresh and frozen food products, clothing, textiles, lumber and paper-based products, scrap metal, scrap plastic, precious metals and stones, and used vehicles.

Mr. Cassara raised particular concerns about the international gold trade. He testified that, in his experience, some of the largest money laundering cases have involved misuse of the international gold trade. Gold, he said, is attractive to money launderers because it is both a commodity and a de facto bearer instrument that offers stability as well as anonymity to money launderers:

Gold is a readily acceptable medium of exchange. It’s accepted anywhere in the world. In times of uncertainty, gold offers stability. Gold offers easy anonymity to money launderers. Depending on the need ... the form of gold can be easily changed or altered. It can be melted, smelted down. There’s a worldwide market in cultural demand. Gold transactions can easily be layered or hidden. It’s perfect for placement, layering, and integration. Old and varied forms can be easily smuggled. And by weight, it represents much more value than cash.

Mr. Cassara went on to state that the countermeasures for the misuse of gold as a money laundering tool are known but have not been implemented in many jurisdictions:

While there have been major investigations around the world involving the misuse of gold, precious metals, diamonds, and gems, it is not clear if cases have been made in Canada. Certainly, Canada is vulnerable. Canada has all the factors that would enable gold and precious gems to be used as a money laundering mechanism. Countermeasures are known. Gold in all its many forms should be an automatic red flag for customs, law enforcement, intelligence agencies, and bank compliance officers – particularly when the sourcing, destination, or routing is problematic. Trade data for gold in almost all its forms should be collected and analyzed. Anomalies should be identified and the results disseminated. Money laundering via the misuse of the international gold trade should be prioritized simply because gold represents one of the prime risks for laundering large amounts of money or transferring large amounts of value. Also, we know that gold manufacturers and dealers should set up [anti-money laundering / combatting the financing of terrorism] compliance programs. The challenge is that these common sense countermeasures are not sufficiently implemented.

29 Transcript, December 9, 2020, p 110.
30 Exhibit 341, Cassara Report, p 34.
I agree with Mr. Cassara that gold is particularly vulnerable to trade-based money laundering. I also agree that there are a number of common sense countermeasures that could be put in place to deter the use of gold in trade-based money laundering schemes, and I would urge further study of this issue at the federal and provincial levels.

Another commodity frequently used in trade-based money laundering schemes is used vehicles. Such vehicles may not hold their value long in the North American market, but they continue to hold their value in other parts of the world because of their scarcity.

Staff Sergeant Sharma testified that the US Drug Enforcement Administration has recently exposed a massive money laundering scheme involving the purchase of used cars by traders in West Africa (see Figure 38.1). His evidence with respect to that scheme illustrates the extreme complexity of many trade-based money laundering schemes as well as the manner in which other money laundering tools, such as informal value transfer systems, are used in conjunction with these schemes:

So this graphic [on display] really is part of the United States Drug Enforcement, DEA’s exposure of a massive money laundering scheme operated by Hezbollah for major drug cartels in South America. The scheme involved Lebanese banks wiring money to the United States for the purchase of used cars. These were transported to West Africa, which is known as a springboard location for the delivery of European-bound drug shipments and sold for cash. The cash from the used cars was mixed with drug proceeds and laundered using ... Hezbollah-controlled hawalas.

... From here the money was deposited into accounts at Lebanese Canadian banks, the branches in Lebanon, which [have] strong links with the Hezbollah. A portion of the funds that were deposited into these bank accounts were then wired back to the US to continue the trade of used cars to West Africa, and this all sustained the convoluted money laundering loop. So as you can see, there’s a number of things happening here from this graphic, this slide. We’re talking about drug trade. We’re talking about the movement of vehicles from North America to Africa. We’re then talking about the purchase of drugs on the continent of Africa and then the movement of those drugs into Europe.32

While the evidence before me is not such that I can make express findings with respect to this scheme, the evidence given by Staff Sergeant Sharma and others underscores the magnitude of the problem and the need to address this type of money laundering.

**Figure 38.1: “Canadian Schemes: Cars”**

**Types of Businesses Used in Trade-Based Money Laundering Schemes**

Trade-based money laundering schemes can be carried out by a wide range of business types, including shell companies, freight forwarders, and customs brokers. Risk factors indicating that a particular business could be involved in trade-based money laundering include:

- rapid growth of a newly formed company into existing markets;
- evidence of consistent and significant cash payments, including those directed toward unrelated third parties;
- receipt of unexplained third-party payments;
- unnecessarily complicated and complex supply chains;
- unexpected pivots into an entirely unrelated sector (e.g., an information technology company becoming involved in the acquisition and distribution of bulk pharmaceuticals); and
- simultaneous involvement in more than one unrelated sector.
A 2018 FINTRAC alert contains a list of factors that may indicate a particular entity is part of a professional money laundering network. It states:

**Indicators of trade-based money laundering by professional money laundering networks**

- An entity is a Canadian small or medium-size import / export company, wholesaler, dealer or broker operating in a sector dealing in high-volume, high-demand commodities with variable price ranges, including agri-food, textiles, electronics, toys, lumber and paper, and automotive or heavy equipment.

- The entity has business activities or a business model that is outside the norm for its sector, or conducts no business activities in Canada. It may also be difficult to confirm the exact nature of the business.

- The entity transacts with a large number of entities that have activities in the above-noted sectors or have names that suggest activities in a wide range of unrelated sectors, and also does some or all of the following:
  - receives a sudden inflow of large-value electronic funds transfers;
  - orders electronic funds transfers to the benefit of China- or Hong Kong–based trading companies or individuals, and receives electronic funds transfers from the U.S. and Latin American countries;
  - orders electronic funds transfers to the benefit of entities or individuals in the U.S., Mexico or Latin American countries, and receives such transfers from the U.S.;
  - orders or receives electronic funds transfers to / from entities holding a bank account in Latvia or Cyprus, and are registered to addresses in the U.K., Cyprus, the British Virgin Islands, Panama, the Seychelles, Belize, the Marshall Islands or other offshore financial centers; and
  - orders or receives payments for goods in round figures or in increments of approximately US$50,000.

- A trading company based in the United Arab Emirates orders electronic funds transfers to the benefit of individuals or entities in Canada.

- An entity's U.S. dollar business accounts held in Canada exhibit flow-through activity – that is, money is taken or transferred out of the account as quickly as it flows in.
• An entity imports currency (predominantly U.S. dollars) from Latin American countries.

• An entity makes large business purchases by credit card, funded by overpayments.

• An individual issues cheques, purchases drafts or orders electronic funds transfers through the account of a legal professional for trade-related payments.33

A 2020 CBSA report indicates that freight forwarders are particularly well-placed to control and direct trade-based money laundering schemes while disguising their role from law enforcement.34 Freight forwarders occupy a pivotal place in most international supply chains. They are neither the seller nor the buyer of goods. Rather, they expedite the shipment of goods by helping buyers and sellers navigate complex shipping routes and customs processes. In one ongoing investigation, Canadian and foreign freight forwarders were believed to be manipulating the exporter and consignee information on both the Canadian export and overseas import declarations, in order to conceal the true identities of the originator and recipients of the goods on either side of the transaction.35

Many money laundering schemes also make use of third parties (i.e., parties with no apparent connection to the international trade transaction) to make payment on the invoices issued by the exporter, in order to reduce scrutiny on the transaction.36

Key Challenges Faced by Investigators

Trade-based money laundering schemes pose a number of unique challenges for customs authorities and law enforcement officials. The sheer volume of international trade and the impossibility of checking every transaction and shipment mean it is easy for trade-based money laundering to “hide in plain sight.”37

Some estimates suggest that, globally, less than 2 percent of shipping containers are physically examined and that criminals “routinely” take advantage of customs processes by intentionally misstating the value, quantity, quality, weight, and descriptions of commercial goods in order to evade duty and regulatory requirements.38

33 A copy of the FINTRAC alert that includes these risk factors is included as Appendix 38A.
37 Evidence of J. Gibbons, Transcript, December 10, 2020, p 134. See also Evidence of J. Cassara, Transcript, December 9, 2020, pp 75–76; Exhibit 339, Overview Report: Trade-Based Money Laundering Reports and Records, p 60. A general discussion of the challenges faced by investigators in the investigation of money laundering is set out in Chapter 40.
38 Exhibit 357, CBSA – COVID-19 Implications for Trade Fraud, p 2.
Even if an examination takes place, it can be extremely challenging for border agents to value the commodities being shipped. For example, it is very difficult for a front-line customs agent to tell whether a particular shipment of gold is 18 or 24 carats (which has a substantial impact on value). Moreover, there is often no way for border agents to cross-reference the price that is actually paid for the product against the amount claimed on the shipping documents.

Mr. Gibbons provided an example of a trade-based money laundering scheme where the export declaration indicated that the value of the goods was $80,000, but $100,000 was transferred from the foreign importer to the Canadian exporter in order to transfer value into Canada. He testified that the commodity chosen was very difficult to value and examine. However, even if customs agents had examined the shipment, it would have been very difficult to uncover the fraud for various reasons, including the fact that CBSA does not have a systematic way to determine how much money was actually wired.39

While trade data may be collected by customs agencies, that information is often paper-based or buried within multiple databases such that it cannot be readily accessed by investigators. In some cases, the software used to aggregate data may not be compatible between agencies, a problem that leads to “information silos” and undermines the effective investigation of trade-based money laundering. Ms. Gateley summarized these challenges as follows:

Additional challenges are that, as you would expect, the trade system is very opaque. It’s often paper based. There [are] very long supply chains where you see various documents, including manifests, bills of lading, invoices moving around with the shipment and being processed by various entities, including ports, customs authorities, banks. Though trade data might be collected, the information needed can be buried within multiple databases that [are] really not readily available to analyze or it’s not in a format that can be analyzed, especially if it’s paper based. Or the trade data arrives just before or even after the product has been delivered, so … as my colleague Staff Sergeant Sushile [Sharma] has mentioned, it’s kind of a day late and a dollar short. It’s difficult to ascertain what actually happened after the fact and [to] verify what happened … [A]dditional challenges are software to analyze aggregate data [that] might not be compatible between agencies, so it’s a puzzle piece that we have that needs to be shared amongst agencies so that we can build this larger puzzle of what the scheme is and who’s involved. But if our basic software systems aren’t compatible to be able to analyze that across various platforms [that] various agencies have, that creates a bit of an issue and an information silo. So essentially the upshot here is that we’re missing a lot of these foundational pieces that are really needed to build the picture of what our [trade-based money laundering]

39 Evidence of J. Gibbons, Transcript, December 10, 2020, pp 71–74; Evidence of B. Gateley, Transcript, December 10, 2020, pp 134–36. Indeed, it may be only when goods or documents are examined in conjunction with other data that an otherwise innocuous shipment will appear suspicious.
scheme is and who the threat actor is involved, in that information sharing at the domestic and international level is typically very ad hoc, case by case based, very target specific and very manual. So this can make it very difficult to take a macro look or step back as an analyst and extrapolate broader trends, indicators or determine the scope or the true scope of the issue.40

When trade-based money laundering is combined with other money laundering tools – such as the use of shell companies, offshore accounts, nominees, legal trusts, third-party payment methods, and cryptocurrencies41 – it becomes exponentially more difficult for investigators to unravel these complicated schemes and to prove that each person involved in a scheme has the requisite degree of knowledge and control needed to secure a criminal conviction. Moreover, the investigation of trade-based money laundering offences often requires Canadian authorities to work with international partners in order to gather relevant information.

With a co-operative partner it can sometimes take months, if not years, to obtain relevant information through the mutual legal assistance treaty process. However, there are also cases where corruption, ambivalence, or even blind ignorance among foreign police departments makes the investigation of trade-based money laundering even more difficult. For example, Staff Sergeant Sharma gave evidence that his investigators had to be extraordinarily careful about the information they provided to a foreign police agency in one of his investigations because of concerns about corruption within that agency.

In light of these complexities, investigative agencies often focus on the predicate offence and leave the trade-based money laundering scheme unaddressed. This is highly problematic, given the volume of illicit funds that can be laundered through trade-based money laundering schemes and the impact of that activity on government institutions.

**Measures Currently in Place**

Investigating trade-based money laundering is largely a federal responsibility. Not only does it involve the manipulation of international trade transactions – an area of exclusive federal responsibility – but it is perpetrated by transnational organized crime groups and requires the co-operation of international partners to investigate.42

At present, four key players are involved in the federal response to trade-based money laundering in the province of British Columbia: FINTRAC, CBSA, the RCMP, and the Canada Revenue Agency.

---

41 Evidence of J. Gibbons, Transcript, December 10, 2020, pp 28–29. By way of example, illicit funds can be commingled with funds from legitimate businesses, routed through uncooperative jurisdictions, or moved through the use of informal value transfer systems, a process that makes it difficult for investigators to follow the audit trail and prove that each person involved in the scheme has the requisite degree of knowledge and control.

42 At the same time, there may be a role for the Province in the investigation of trade-based money laundering schemes to the extent that part of the scheme occurs in British Columbia or involves BC companies. There may also be a role for the BC Civil Forfeiture Office in pursuing illicit assets located in British Columbia.
FINTRAC

FINTRAC plays a central role in the identification of trade-based money laundering through the receipt and analysis of suspicious transaction reports. While FINTRAC has received some reports concerning trade-based money laundering activity, there are a number of gaps in the current reporting regime that allow many trade-based money laundering schemes to go undetected.

Importers, exporters, customs brokers, freight forwarders, and other similar entities are not designated as reporting entities under the PCMLTFA and have no obligation to file suspicious transaction reports with FINTRAC. These businesses are on the front lines of trade-based money laundering and would undoubtedly be in a position to identify and report at least some suspicious activity.

Financial institutions have an obligation to file suspicious transaction reports concerning electronic funds transfers (sometimes referred to as wire transfers). However, these institutions do not have the opportunity to review sales documents, shipping invoices, or customs forms at the time they process these transfers. As a result, many suspicious transactions are not identified and reported, through no fault of the financial institution.

While financial institutions are better able to identify and report transactions that are processed using the trade finance tools reviewed earlier in this chapter, these transactions make up only about 20 percent of international trade transactions, and, in any event, the evidence suggests that trade-based money laundering may be hidden by a lack of access to financial information and a low degree of awareness of the problem within the capital markets divisions of many financial institutions.

Another complication is that lawyers, who often negotiate trade finance contracts, are exempt from anti-money laundering reporting requirements.

For these reasons, there is good reason to think that a significant percentage of trade-based money laundering activity in this country goes undetected by FINTRAC, and that law enforcement entities engaged in the investigation of trade-based money laundering must develop new ways of identifying and detecting such activity (see below).

Canada Border Services Agency

CBSA is primarily responsible for managing the flow of goods and people into and out of Canada. It manages all of Canada’s ports of entry and has staff at the three major international mail-processing centres in Canada. It is important to understand that CBSA is not responsible for the investigation of money laundering and terrorist financing activity. Such investigations remain within the purview of the RCMP. However, CBSA has a role in the investigation of trade-based money laundering because of its role as a trade gatekeeper responsible for the identification of trade transactions indicative of trade fraud.
In identifying trade fraud and trade-based money laundering, CBSA is largely reliant on external sources of information. Financial disclosures from FINTRAC, which are received on a proactive basis and in response to voluntary information requests submitted by CBSA, provide the agency with one of its largest sources of information and will often be the starting point for further exploration of suspicious transactions. Other sources of information include law enforcement bodies at the federal, provincial, and municipal levels, as well as requests from international partners, which often lead to a closer examination of Canadian companies believed to be engaged in trade fraud or trade-based money laundering activity.

CBSA also has border services officers at all of Canada's ports of entry, who are responsible for processing the importation and exportation of goods into or out of Canada. Where these officers have grounds to suspect that a particular transaction has indicators of trade fraud (e.g., where the description does not seem to match the goods they have examined, or where an exporter who is in one line of business presents customs documents for goods that are in a completely different sector), these transactions will be flagged in the system.

A separate program, described as the “trade” program, is responsible for the final accounting of goods once they have arrived in Canada, to ensure that all appropriate duties and taxes have been paid on the shipment. If investigators in that program develop grounds to suspect that any potential non-compliance is wilful, they can make referrals to CBSA's Intelligence and Enforcement Branch for further analysis.

Mr. Gibbons testified that CBSA is on the cusp of implementing a new information technology system known as the CBSA Assessment and Revenue Management (CARM) Project. The system will allow for advanced data analysis of imported goods and search for potential indicators of trade fraud and trade-based money laundering.

One example is anomalous unit pricing, where the individual unit price for a good being declared is inconsistent with the aggregate pricing ranges for previous importations of that same commodity. While these anomalies may be indicative of trade fraud or trade-based money laundering, it would be extremely difficult for a CBSA agent to detect pricing anomalies in shipments of similar goods without access to that software.

While the CARM system may provide some assistance in identifying suspicious transactions, the primary purpose of that software is to ensure compliance with revenue requirements such as duties and tax payments, and it has a number of important limitations for the investigation of trade-based money laundering, including the fact that it focuses on imports and does not compare Canadian prices with commodity prices in other countries. I return to this issue later in this chapter.

Evidence of J. Gibbons, Transcript, December 10, 2020, p 50.
RCMP

The RCMP has primary responsibility for the investigation of money laundering offences, including trade-based money laundering. While it has recently increased the number of investigators examining money laundering issues (see below), it is an “information consumer” in the sense that it largely relies on information and intelligence provided by other federal agencies in making operational decisions involving the investigation of money laundering offences. Moreover, I am unaware of any successful trade-based money laundering investigations or prosecutions in recent years.

In an expert report prepared for the Commission, John Cassara, a senior American money laundering expert, recommended the creation of a specialized unit within the RCMP to investigate trade-based money laundering. Mr. Cassara testified that such a unit would reassure the public that trade-based money laundering is being taken seriously, and would pay for itself through the collection of increased taxes, duties, and forfeitures. He also argued that it would allow for the development of specialized expertise in trade-based money laundering.

Staff Sergeant Sharma disagreed, and shared his view that trade-based money laundering does not need to be investigated as an “alien entity.” In his view, there are already money laundering investigators within the RCMP and trade-based money laundering is “just a more specialized manner of layering that investigators now need to be alive to.” He did agree, however, that more training is required, not just for law enforcement officials but also for all federal partners.

I agree with Staff Sergeant Sharma that the creation of a specialized unit to address trade-based money laundering may not be necessary, provided sufficient resources are dedicated to existing money laundering units and information pathways are created to ensure that the RCMP receives as much information as possible with respect to trade-based money laundering. I return to this topic in Chapter 39.

Canada Revenue Agency

The Canada Revenue Agency has a mandate to investigate criminal violations of the legislation it administers, including organized tax schemes and international tax evasion. It also works jointly with law enforcement on money laundering files, including those involving trade-based money laundering.

Recent Federal Initiatives

In the past few years, the federal government has announced two new initiatives aimed at addressing trade-based money laundering: the TBML Working Group and the Trade Fraud and TBML Centre of Expertise.

44 Exhibit 341, Cassara Report, p 35.
46 Evidence of S. Sharma, December 10, 2020, p 150.
47 Ibid.
**TBML Working Group**

In the summer of 2018, the officer-in-charge of the RCMP’s Federal Serious and Organized Crime Financial Integrity Unit created the Interagency TBML Working Group. The intention was to bring together directors from various agencies, including the RCMP, CBSA, the Canadian Security Intelligence Service, and the Canada Revenue Agency to explore opportunities for these agencies to work together on trade-based money laundering. Unfortunately, however, the individual who spearheaded that project is no longer with the RCMP, and it is unclear whether the working group is still in existence or whether it has produced any tangible results.

**Trade Fraud and TBML Centre of Expertise**

In its 2019 budget, the federal government announced a number of initiatives aimed at strengthening Canada’s anti-money laundering and anti-terrorist financing regime. One of those initiatives was the creation of a multidisciplinary Trade Fraud and Trade-Based Money Laundering Centre of Expertise. Mr. Gibbons testified that the primary thrust of the initiative is to develop more institutional knowledge about trade-based money laundering, including the scope and scale of the problem, and to better position CBSA to leverage its capabilities under the *Customs Act*, RSC 1985, c 1 (2nd Supp.) and to work beside the RCMP in combatting trade-based money laundering activity.

CBSA officers are able to refer suspected money laundering files to the Trade Fraud and TBML Centre of Expertise, and these referrals may result in criminal investigations for trade fraud or trade-based money laundering. At the time of writing, the centre has received a number of potential leads, but no referrals have been made to criminal investigators. It remains to be seen whether the centre will continue to receive support from the federal government and whether it will lead to any tangible law enforcement results.

**Additional Measures**

I heard evidence from a number of leading trade-based money laundering experts on steps that could be taken to address the problem. While many of these steps fall within areas of federal responsibility, I outline three of the most promising recommendations below.

---

48 More specifically, the federal government announced the investment of $28.6 million over four years beginning in 2020–21, with $10.5 million per year on an ongoing basis to fund 21 full-time-equivalent employees (FTEs); Exhibit 339, Overview Report: Trade-Based Money Laundering Reports and Records, p 556.

49 A PowerPoint presentation prepared by CBSA with respect to this initiative states that “incremental funding starting in 2022–23 is frozen” and that a report to the president of the Treasury Board is required by March 2022 to unlock funding for an additional 27 FTEs; Exhibit 339, Overview Report: Trade-Based Money Laundering Reports and Records, p 912.
Trade Transparency Units

One of the most promising recommendations is the creation of a trade transparency unit to collect customs and trade data and share that data with similar units in other countries in order to identify anomalies that might demonstrate over- and under-invoicing. The United States has had a trade transparency unit since 2004, and approximately 17 to 20 units are currently established worldwide.\(^5\) As of 2015, the unit’s network had seized over $1 billion in assets.\(^5\) To help analyze that trade data, US Homeland Security investigations developed specialized software called the Data Analysis and Research for Trade Transparency System (DARTTS). DARTTS incorporates trade, customs, financial, and other data from across US agencies as well as customs services in partner countries.\(^5\) Mr. Gibbons explained the operation of the system as follows:

An example I often give when talking about trade transparency units are banana [exports] from Colombia. So think of a marine container that has bananas in it that’s destined for the United States, it’s destined for the port of Miami. The Colombian government gathers export information on the bananas that are departing Colombia and that are outbound for the United States, and on the US side the US government gathers import data for that same transaction. And ... DARTTS ... is able to cross-compare those two data points ... the Colombian export transaction and the US import transaction ... and it will cross-compare the elements of the customs declarations – the Colombian export, the US import – to see if they match. That’s a relatively simple and simplistic explanation, but that’s the fundamental underpinnings of the trade transparency unit concept.

So if the bananas were declared as being valued at the equivalent of $100,000 US in Colombia but on the US side on import they’re being declared to the US authorities as $2 million worth of bananas, you can see that you’ve now enabled the movement of the difference, so 1.9 equivalent US dollars, out of Colombia and into the United States. And the DARTTS system ... is designed to detect those anomalies, so it’s a form of proactive lead generation really for Homeland Security investigations to try to uncover trade fraud, including possibly trade-based money laundering.\(^5\)

Mr. Gibbons testified that a trade transparency unit could, in principle, be an effective tool in the fight against money laundering. However, a 1987 memorandum of

---

\(^5\) Evidence of J. Cassara, Transcript, December 9, 2020, p 91; Exhibit 341, Cassara Report, Appendix 2; Evidence of J. Gibbons, Transcript, December 10, 2020, p 76.

\(^5\) Evidence of J. Cassara, Transcript, December 9, 2020, p 89.

\(^5\) There have, however, been implementation challenges. Mr. Cassara opined that those challenges stemmed primarily from insufficient financial and human resources: Evidence of J. Cassara, Transcript, December 9, 2020, pp 87–91.

understanding between Canada and the United States makes the implementation of that concept difficult in practice. Under the terms of that memorandum, Canada and the United States only collect data involving the import of goods into the two countries.\footnote{Ibid p 79–80. Importantly, the memorandum of understanding applies to the import and export of goods only to and from the United States.} Export data – such as the value of goods when they leave the country – is not collected by either party, with the result that there is no useful way to compare the price of goods when they leave Canada against the price of goods when they enter the United States (and vice versa).\footnote{Ibid, pp 75–81. Export data is collected in the aggregate but no specific information is collected with respect to the declared value of goods when they leave Canada.} Accordingly, the creation of an effective trade transparency unit would likely require the renegotiation of the 1987 memorandum of understanding.

Canada could also create a trade transparency unit and enter into bilateral or multilateral agreements with other countries to identify anomalies that could demonstrate over- and under-invoicing. It is important to note, however, that the identification of anomalous transactions is only the first step in the investigation of trade-based money laundering and that significant human effort would be required to follow up on those red flags and determine whether they are, in fact, the result of mispricing or money laundering activity. There is little benefit to creating a trade transparency unit unless the federal government is willing to properly resource these follow-up efforts.

### Advanced Data Analytics

Another solution is to use advanced data analytics to identify anomalies in the Canadian trade data. Such an initiative could assist in detecting and measuring the flow of illicit funds without the need to examine every shipment of goods into and out of the country.

While the CARM Project, discussed above, is one example of software that could allow for advanced data analysis of imported goods, that software appears to be more focused on compliance issues, such as tax and duty evasion, than on trade-based money laundering. For example, it only analyzes data from Canada and does not compare imports with commodity prices in other parts of the world.

Moreover, it focuses only on imports and does not analyze any export data, despite the fact that the Canadian export environment is more susceptible to trade-based money laundering than the Canadian import environment because of the significant volume of illicit funds moving from Canada to countries such as Mexico and Colombia.\footnote{Evidence of J. Gibbons, Transcript, December 10, 2020, pp 55–59; Exhibit 993, Affidavit of Joel Rank, paras 17–18, 28, 40. In fairness, there is a separate reporting system for exports that was launched by CBSA in June 2020. However, there remains somewhat of an imbalance between border controls on exports and controls on the import side of the equation.}

By contrast, Professor Zdanowicz has developed a methodology that involves examining US trade data purchased from the US Department of Commerce, Bureau of the Census, to identify anomalies that might assist in detecting and measuring the...
flow of illicit funds. Examples of those anomalies include razor blades imported from Colombia at $34.81 per blade when the world average price was nine cents (a markup of about 38,000 percent) and emeralds imported from Panama at $974.58 per carat when the world average price was $43.63 (a markup of more than 2,000 percent). While not all these transactions will be indicative of money laundering, the anomalies identified through his analysis are, at the very least, worthy of investigation.

Professor Zdanowicz testified that anyone in the United States can purchase the trade data for the sum of $4,800 per year and that he routinely gets retained by organizations such as the World Bank, as well as financial institutions involved in trade finance, to perform his analysis. He also testified that the US trade data is updated monthly and that the analysis can be performed in real time.

Professor Zdanowicz was asked to undertake a similar analysis of Canadian import and export data and generated five macro reports for the Commission that show the amount of money being moved into and out of Canada (and each of its provinces) from 2015 to 2019. In 2019, for example, $45 billion was moved out of Canada in undervalued exports, and $44 billion moved out of the country in overvalued imports, for a total of $90 billion. In British Columbia, there were more than $4.3 billion in undervalued exports and $4.1 billion in overvalued imports, for a total of $8.4 billion.

In terms of money moved into Canada, there were $20.34 billion in overvalued exports and more than $124 billion in undervalued imports, for a total of $144.44 billion, of which $16.5 billion was moved into British Columbia.

Professor Zdanowicz also produced four micro reports for British Columbia. These reports identified approximately 10,000 suspicious transactions, including:

- undervalued exports of digital cameras, resulting in the movement of a $5.4 million value from British Columbia to Australia;
- undervalued exports of smart cards, resulting in the movement of more than $148 million out of British Columbia;

57 In order to understand the technique used by Professor Zdanowicz, it is extremely helpful to watch the livestream of his testimony on December 11, 2020, which can be found here: https://www.youtube.com/watch?v=i5LjoNex9cY. The US trade data covers 239 countries and includes 9,084 unique commodity codes for exports and 18,243 unique commodity codes for imports to the United States.
58 Professor Zdanowicz’s analysis also allows for the possibility of country-specific prices (as opposed to worldwide prices) to take into account the heterogeneity in goods imported from different countries. For example, clothing imported from France may be valued differently from clothing imported from Haiti.
59 For example, the anomalies could be caused by a data entry error or there could be a good reason for the increased price (such as the import or export of prototypes); see Evidence of J. Zdanowicz, Transcript, December 11, 2020, p 161.
60 Using updated data is critically important in conducting an effective analysis because commodity prices change over time: Evidence of J. Zdanowicz, Transcript, December 11, 2020, p 153. While Professor Zdanowicz’s methodology is based on pricing data, he suggested that there are other ways of identifying anomalous transactions, including the weight of the imported goods. For example, he was able to identify briefcases imported from Malaysia at 98 kg per briefcase: Evidence of J. Zdanowicz, Transcript, December 11, 2020, p 142.
• undervalued exports of prefabricated wood buildings, resulting in the movement of a $4.2 million value out of British Columbia;

• overvalued imports of pistols, resulting in the movement of a $3 million value out of British Columbia;

• overvalued imports of beer, resulting in the movement of a $1.9 million value from British Columbia to Mexico; and

• undervalued imports of dishwashing machines from the United States, resulting in the movement of a $64.9 million value into British Columbia.

In producing these micro reports, Professor Zdanowicz reviewed every import and export transaction into and out of British Columbia in 2019 and used the statistical analysis outlined above to identify these, and other, anomalous transactions. While the data provided to Professor Zdanowicz does not include identifying information about the importer or exporter, that information is available and could be provided to law enforcement agencies once a suspicious transaction is identified.

Professor Zdanowicz was retained by the federal government in 2004 to make a presentation about his data analysis to FINTRAC and other government agencies. Unfortunately, however, it appears that no one followed up with him with a view to implementing this kind of analysis in Canada.61 I consider his technique to be an extremely valuable tool insofar as it allows for the identification of anomalous transactions in real time without the need to examine every shipment into and out of the country. Moreover, it is noteworthy that Canada already has the data that would allow for the generation of a list of suspicious companies and individuals.

All law enforcement agencies with involvement in the identification and investigation of trade-based money laundering would do well to examine how Professor Zdanowicz’s software (or other software with the same capability) could assist in the investigation and prosecution of trade-based money laundering activity. Indeed, his software would be useful not only in identifying trade-based money laundering activity but also in identifying professional money laundering organizations and networks operating in the province.

I therefore recommend that the dedicated provincial money laundering intelligence and investigation unit recommended in Chapter 41 take steps to implement and make use of that software as part of its intelligence functions.

Recommendation 88: I recommend that the dedicated provincial money laundering intelligence and investigation unit implement and make use of the software developed by Professor John Zdanowicz, or other software with the same capability, as part of its intelligence functions.

Financial institutions involved in trade financing may also benefit from Professor Zdanowicz’s software in order to ensure that they do not inadvertently facilitate the transfer of illicit funds into or out of the country.

Professor Zdanowicz also identified six red flags that may assist law enforcement agencies, financial institutions, and others to identify individuals and groups involved in trade-based money laundering activity:

- conducting business in high-risk jurisdictions;
- shipping products through high-risk jurisdictions;
- conducting transactions involving high-risk products (with high-risk products defined as products likely to give rise to anomalous transactions);
- misrepresentation of the quantity and type of products on customs documents;
- invoices that are inconsistent with customs documents; and
- obvious over- and underpricing of commodities (such as bulldozers shipped from the United States to Colombia at $1.74 per bulldozer).

Finally, I heard evidence that distributed ledger technology has promise in detecting and preventing trade mis-invoicing. I understand that the United States has applied such technology at cargo entry on a pilot basis, and I would encourage all levels of government to explore the use of this technology as a tool in the fight against this form of money laundering.

**Information Sharing**

A repeated theme in the evidence on trade-based money laundering was the need for better information sharing among relevant stakeholders. At present, information sharing at the national and international level is typically ad hoc, targeted, and manual, which makes it difficult to get a macro analysis of trends or indicators in order to understand the scope of the issues. For example, the software currently used to analyze aggregate data might not be compatible among agencies even within Canada (let alone internationally). Mr. Gibbons explained that one reason that Canada does not have an integrated system is to ensure that each agency has access to information only when there are grounds to suspect that there is money laundering or non-compliance occurring within its sphere of authority. In other words, incompatibility between systems is a safeguard built into the system to protect privacy and Charter rights.

---

64 Ibid, pp 135–38.
65 Evidence of J. Gibbons, Transcript, December 10, 2020, p 140.
While I do not wish to diminish the importance of those rights, it may be that a more effective system would include compatible software with access limitations that could be overcome in appropriate instances. Ms. Gateley opined that the use of IT systems that are capable of sharing and analyzing big data sets and can “speak interagency” would be a structural improvement. She also addressed the need to engage the private sector through public/private partnerships such as Project Athena (see Chapter 39) and to leverage non-traditional public sector partners such as Global Affairs Canada, Export Development Canada, and Industry Canada, which hold information that may be relevant to trade-based money laundering.

While information sharing is an important piece of any anti-money laundering regime, the collection and analysis of trade data is particularly important in addressing trade-based money laundering. All efforts should be made to ensure that government systems are at least capable of sharing relevant information when legally permissible, and that CBSA engages all relevant stakeholders in both the public and the private sectors. I would also note that improved trade data analysis and information sharing will only contribute to the identification and disruption of trade-based money laundering if sufficient resources are allocated to the agencies charged with investigating and prosecuting such activity.

In light of the fundamental importance of information sharing in addressing trade-based money laundering, I would urge British Columbia to work with the federal government to encourage improvements to trade data analysis and information sharing capabilities, as well as the resourcing of appropriate agencies to such a level that they can make meaningful use of this information.

Appendix 38A: FINTRAC – Operational Alert

Professional money laundering through trade and money services businesses

Professional money launderers are sophisticated actors who engage in large-scale money laundering on behalf of transnational organized crime groups such as drug cartels, motorcycle gangs and traditional organized crime organizations. Professional money launderers sell their services to these groups and are involved in the majority of sophisticated money laundering schemes; they are not members nor are they involved in the predicate offences that generate illicit proceeds. As such, they present unique identification challenges.

While professional money launderers may be accountants, bankers or lawyers, current financial intelligence suggests that they often are owners of, or associated with, trading companies or money-services businesses. Professional money launderers use their occupation and knowledge, as well as the infrastructure associated with their line of work and their networks, to facilitate money laundering, providing a veneer of legitimacy to criminals and criminal organizations.

This operational alert provides indicators for money laundering carried out through trade and money services businesses. Entities required to report to FINTRAC should use these indicators on their own and in combination to identify potential professional money laundering activities. Reporting entities should also use these indicators in conjunction with a risk-based approach and other money laundering indicators. Financial institutions are especially well positioned to recognize and report on suspicious financial transactions that may be connected to professional money laundering. FINTRAC uses these indicators, along with other sources of information, to assess reporting entities’ compliance with their reporting obligations.

Trade-based money laundering

Professional money launderers use trade transactions to legitimize proceeds of crime and move them between jurisdictions and between currencies. FINTRAC has observed two main schemes of this type.

- Schemes involving falsified customs, shipping and trade finance documents, including the following:
  - Phantom shipments: Transferring funds to buy goods that are never shipped, received or documented.
  - Falsely described goods and services: Misrepresenting the quality, quantity, or type of goods or services traded.
  - Multiple invoicing: Issuing a single invoice but receiving multiple payments.
  - Over/under invoicing: Invoicing goods or services at a price above or below market value in order to move money or value from the exporter to the importer or vice-versa.
- The Black Market Peso Exchange, which typically works as follows:
  - Transnational organized crime groups, such as Colombian or Mexican drug cartels, place proceeds of crime into the U.S. financial system through structured cash deposits (deposits that are organized to avoid record-keeping or reporting requirements) of U.S. dollars.
A Colombian or Mexican importer buys those dollars from complicit brokers, paying for them in pesos. The importer uses the U.S. funds to purchase goods that are then shipped to Colombia or Mexico. The brokers return the pesos they received from the importer to the cartel.

There are many variations on the Black Market Peso Exchange—which is essentially a form of unregistered foreign currency exchange—involving locations other than Latin America, other criminal groups and other world currencies (although the U.S. dollar is the most common). The two versions FINTRAC observes most often are the following:

- Brokers send suspected illicit funds held in Latin America or the U.S. to Canadian trading companies, wholesalers, dealers and brokers via electronic funds transfer and, to a limited extent, cash courier. These entities subsequently send the funds to entities in multiple jurisdictions, including China, Hong Kong and the U.S., to pay for goods.
- Brokers send suspected illicit funds held in Latin America to U.S.-based entities of varying types, as well as to China- or Hong Kong-based trading companies, through electronic funds transfer via a Canadian financial institution acting as a correspondent bank.

Indicators of trade-based money laundering by professional money laundering networks

- An entity is a Canadian small or medium-size import/export company, wholesaler, dealer or broker operating in a sector dealing in high-volume, high-demand commodities with variable price ranges, including agri-food, textiles, electronics, toys, lumber and paper, and automotive or heavy equipment.
- The entity has business activities or a business model that is outside the norm for its sector, or conducts no business activities in Canada. It may also be difficult to confirm the exact nature of the business.
- The entity transacts with a large number of entities that have activities in the above-noted sectors or have names that suggest activities in a wide range of unrelated sectors, and also does some or all of the following:
  - receives a sudden inflow of large-value electronic funds transfers;
  - orders electronic funds transfers to the benefit of China- or Hong Kong-based trading companies or individuals, and receives electronic funds transfers from the U.S. and Latin American countries;
  - orders electronic funds transfers to the benefit of entities or individuals in the U.S., Mexico or Latin American countries, and receives such transfers from the U.S.;
  - orders or receives electronic funds transfers to/from entities holding a bank account in Latvia or Cyprus, and are registered to addresses in the U.K., Cyprus, the British Virgin Islands, Panama, the Seychelles, Belize, the Marshall Islands or other offshore financial centers; and
  - orders or receives payments for goods in round figures or in increments of approximately US$50,000.
- A trading company based in the United Arab Emirates orders electronic funds transfers to the benefit of individuals or entities in Canada.
- An entity’s U.S. dollar business accounts held in Canada exhibit flow-through activity—that is, money is taken or transferred out of the account as quickly as it flows in.
- An entity imports currency (predominantly U.S. dollars) from Latin American countries.
- An entity makes large business purchases by credit card, funded by overpayments.
- An individual issues cheques, purchases drafts or orders electronic funds transfers through the account of a legal professional for trade-related payments.
Money services businesses

Money services businesses provide a wide range of unique and valuable financial services to Canadians and international customers; however, the sector has unique challenges and risks with respect to money laundering. Most money services businesses engage in legitimate activities but some allow professional money launderers to exploit their services with their full cooperation. Others turn a blind eye to the fact that they are serving criminals. Professional money launderers who own or are connected to money services businesses use these entities to place and transfer illicit funds.

Indicators of professional money laundering through money services businesses

- A Canadian money services business does some or all of the following:
  - receives a sudden inflow of large electronic funds transfers and cash deposits; this is followed by an increased outflow of electronic funds transfers, cheques and bank drafts made out to multiple unrelated third parties for loans or investments, or to the individual conducting the transaction;
  - undertakes numerous currency exchanges involving Canadian and U.S. dollars and/or Euros;
  - carries out business largely with or through Iran or other countries subject to sanctions, the United Arab Emirates, Kuwait, Hong Kong, and China or countries with internal capital controls; and
  - receives electronic funds transfers from foreign exchange and trading companies based in the above-noted countries for real estate transactions, loans or investments.

- A money services business owner, associate or employee does some or all of the following:
  - maintains personal account activity similar to that of a money services business;
  - attempts to avoid reporting obligations when exchanging currency on behalf of another money services business;
  - lists multiple occupations, addresses and/or telephone numbers with financial institutions or online;
  - lists occupation as immigration consultant, student, homemaker or unemployed;
  - lives outside of their reasonable means (i.e., buys real estate beyond what they could reasonably afford on their claimed income);
  - attempts to close an account(s) to avoid due diligence questioning;
  - receives wires and transfers from multiple sources in accounts at numerous banks and credit unions; the individual then depletes these amounts through drafts payable to self or for real estate purchases;
  - places large structured cash deposits into the same account at multiple locations on the same day; and
  - is a customer at many banks and credit unions, and negotiates many self-addressed bank drafts from various financial institutions.

- A Canadian import/export company has account activity similar to that of a money services business, including the following:
  - receives one or two large electronic funds transfers and then orders multiple outgoing cheques and drafts to multiple third-party individuals and companies; and
  - receives large incoming electronic funds transfers from Iran, the United Arab Emirates, Kuwait, Hong Kong and China for living costs, expenses or spare parts.
Reporting to FINTRAC

To facilitate FINTRAC’s disclosure process, please include the term #pml in Part G—Description of suspicious activity on the Suspicious Transaction Report. (See also, STR guidance.)

Cat. No. FD4-16/2018E-PDF

FINTRAC Operational Alerts provide up-to-date indicators of suspicious financial transactions and high-risk factors related to new, re-emerging or particularly topical methods of money laundering and terrorist activity financing.
One of the cornerstones of an effective anti-money laundering regime is the investigation and prosecution of money laundering offences. While money laundering has long been a criminal offence in Canada, a recent assessment by the Financial Action Task Force indicates that law enforcement results in this country are not commensurate with money laundering risks, and evidence tendered during the Commission process demonstrates that there have been very few successful money laundering investigations or prosecutions in recent years. The most high-profile money laundering investigation in this province (E-Pirate) was terminated before the case went to trial and statistics produced by the RCMP establish that, from 2015 to 2020, there were no other major federal investigations that resulted in money laundering charges.

In the following three chapters, I review the law enforcement response to money laundering in this province.

Chapter 39 outlines the history and structure of policing in British Columbia, with particular emphasis on the resources dedicated to the investigation of money laundering / proceeds of crime offences over the past 15 years. It also recommends that all provincial law enforcement bodies engaged in the investigation of profit-oriented criminal activity implement a standard policy requiring that all investigators (a) consider money laundering / proceeds of crime issues at the outset of the investigation and (b) conduct an investigation with a view to pursuing those charges and identifying assets for seizure and/or forfeiture.
Chapter 40 reviews some of the challenges associated with the investigation and prosecution of money laundering offences, including the complexity of money laundering / proceeds of crime investigations, the ever-increasing sophistication of money laundering schemes, and the inability of FINTRAC to reliably produce timely, actionable intelligence with respect to money laundering threats.

Chapter 41 recommends the creation of a specialized provincial anti-money laundering intelligence and investigation unit with a mandate to identify, target, and disrupt sophisticated money laundering activity occurring within the province.
Chapter 39
History and Structure of Policing in British Columbia

Broadly speaking, there are three tiers of policing in British Columbia: federal, provincial, and municipal. Federal policing is primarily concerned with national and international priorities such as transnational and serious organized crime, national security, and cybercrime.1 Provincial policing is primarily concerned with serious crime within the province, as well as the provision of local police services to rural communities and municipalities with a population under 5,000.2 For many years, the province has engaged the RCMP to provide most of these services (though there are a few provincial units that provide specialized policing functions).3 Municipal policing is primarily concerned with the provision of police services in municipalities with a population over 5,000 and focuses mostly on local issues such as violent crime.4 Each level of policing is discussed in turn.

---

2 Exhibit 789, Police Resources in British Columbia, p 2.

3 Ibid, pp 2–3. Section 4.1 of the Police Act, RSBC 1996, c 367, allows the provincial government to create designated policing units to provide policing and law enforcement services “in place of or supplemental to the policing and law enforcement otherwise provided by the provincial police force or a municipal police department.”

4 While it is open to these municipalities to create their own municipal police department, most have opted to engage the RCMP to provide these services. Of the 77 municipalities with a population over 5,000, 11 have opted to create their own municipal police department. These municipalities are Vancouver, Victoria, Saanich, Central Saanich, Oak Bay, Delta, Abbotsford, New Westminster, West Vancouver, Nelson, and Port Moody. One municipality (Esquimalt) has entered into a contract with the City of Victoria for the provision of policing services by one police service in both municipalities: Exhibit 789, Police Resources in British Columbia, p 3.
Federal Policing

The RCMP serves as the federal police service across the country and is primarily concerned with the priorities set by national headquarters in Ottawa. The province has no formal input into the prioritization process and has limited visibility into the files and investigative strategies pursued by federal investigators. It does, however, receive information from those involved in federal policing on an informal basis and has been taking steps to increase visibility into federal operations by requesting metrics relating to resources and performance (among other things).

At the present time, there are three key priorities in federal policing: transnational and serious organized crime, national security, and cybercrime. Within each of these priorities are a number of key activities to target, one of which is money laundering.

Superintendent Brent Taylor, officer-in-charge of the Federal Serious and Organized Crime (FSOC) Financial Integrity Unit in British Columbia, testified that the goal is to “go after the highest levels of organized crime” and that all major investigations are “tiered” to ensure that federal resources are deployed in the most effective way. Tier 1 files are defined as the most serious, which signals to the commanding officer of that division that the file should be given priority in terms of time and resources. Tier 2 files are seen as high-level investigations but do not have the same importance as Tier 1 files. Tier 3 files rank much lower in terms of importance.

On an annual basis, the RCMP allocates approximately $100 million to federal policing in British Columbia. Most of these funds can be moved around by the commanding officer to support different investigations. However, there are some units that operate on a “fenced-funding” model, meaning that the funds allocated to that unit cannot be transferred to other initiatives (though individual officers can sometimes be pulled from those units in order to address other federal priorities, such as wildfires and VIP visits).
Integrated Proceeds of Crime Units

From 1990 to 2012, the RCMP maintained Integrated Proceeds of Crime (or IPOC) units in most provinces, which were responsible for conducting money laundering investigations. The mandate of these units was to “identify, seize, restrain and forfeit illicit and unreported wealth accumulated by the highest level of organized criminals and crime groups … thereby removing the financial incentive for engaging in criminal activities.”14 Funding was provided on a fenced funding model and was in the range of $23 million per year across all provinces and participating agencies, which included the Canada Border Services Agency (CBSA), the Public Prosecution Service of Canada, Public Works and Government Services Canada Forensic Accounting Management Group, Public Safety Canada, and the RCMP.15

IPOC units were mainly regarded as a support unit for other investigations (primarily drug investigations). When such investigations revealed that proceeds of crime were being accumulated, the officers conducting that investigation would ask for support from the IPOC units to conduct a parallel investigation.16 IPOC units also worked closely with international partners – including, in particular, the US Drug Enforcement Administration – and were often the first point of contact for referrals and inquiries.17

While these units were initially supported by members of other federal agencies, the engagement of those agencies diminished over time. In 1992, the IPOC unit in British Columbia (“E” Division) comprised 55 people, including 45 RCMP members, three civilian members, and seven public service employees.18 By 2010, the unit comprised 41 people, including 38 RCMP members and three representatives of the Public Works and Government Services Canada Forensic Accounting Management Group (which provided forensic accounting services to investigators within that unit).19

On March 30, 2011, Public Safety Canada released an evaluation report with respect to the relevance and performance of the IPOC initiative.20 The report concluded that the underlying objectives of the IPOC units remained relevant as they responded to Canada's national and international commitments to address organized crime, and that the literature reviewed “overwhelmingly support[ed] the need for continuing efforts to combat organized crime by targeting proceeds of crime.21

15 Ibid, p 9. In 2005, the initiative was allocated $116.5 million over five years, averaging $23.3 million per year. According to the report, this amount was the same, unadjusted for inflation, as had been allocated in 1996–97: Ibid. However, there were stringent reporting guidelines concerning how those funds were spent: Evidence of B. Baxter, Transcript, April 8, 2021, pp 6–7.
17 Evidence of B. Baxter, Transcript, April 8, 2021, pp 15, 93.
20 Exhibit 822, Evaluation of the IPOC Initiative.
21 Ibid, p ii.
The report also found that the initiative had an impact on organized crime and organized crime groups through operations such as Opération Colisée, a joint operation of IPOC partners and provincial and municipal police forces, which succeeded in dismantling the Montréal-based Italian mafia. However, it noted that the integration achieved in the early days of the initiative may have faded over time and highlighted several human resource challenges that were having an adverse impact on efficiency and effectiveness. These challenges included: staff turnover, vacant positions, recruitment difficulties, lack of experience, and insufficient training.

Ultimately, the report recommended that the RCMP take steps to address these issues in order to ensure optimal performance of the IPOC units.

One factor leading to the success of the IPOC units was the high level of expertise they developed in proceeds of crime investigations. Barry Baxter, a retired RCMP officer who was officer-in-charge of the IPOC unit in “E” Division from 2010 to 2012, spoke to the expertise and experience of his investigators when he arrived at that unit:

Generally all of the investigators in IPOC when I arrived were very well experienced, having come from drug section or from commercial crime where you need a level of expertise on the movement of money nationally and internationally. You need to be aware of areas where you could seek assistance, whether it be through mutual legal assistance treaty. You needed to know financial systems and how to restrain assets or have assets seized. So generally well experienced people it’s something that takes many, many years to gather that experience, and in fact several of the members under my command were credited in what was called expert witness program which allowed them to give expert testimony during proceeds of crime prosecutions.

Mr. Baxter’s comments were echoed by Melanie Paddon, a retired RCMP member who was part of the IPOC units from 1992 to 2012:

IPOC, I found, was very beneficial to the actual act of investigating money laundering and proceeds of crime. It was a self-contained unit, there was a lot of expertise in that unit ... [I]t was integrated. We had Department of Justice working with us in house, in IPOC. We had CRA working with us. We had CBSA working with us. And so you had your little group of people all work[ing] on particular projects who all had a role in what their job was. And so to me it was very fruitful because it allowed you to actually go from your predicate offence to money laundering offence, and you had all

25 Evidence of B. Baxter, Transcript, April 8, 2021, pp 8–9. For a list of some of the successful investigations conducted by these units, see Exhibit 864, Assessment of Proceeds of Crime Responsibilities Within FSOC, pp 9–11.
that in house expertise helping you out so that at the end of the day you were able to get to the point of prosecution.26

One of the investigations undertaken by these investigators during their time at IPOC was an intelligence probe into the large amount of suspicious cash entering Lower Mainland casinos. Mr. Baxter testified that, when he arrived at IPOC in 2010, he conducted a file review and became concerned about the large volume of $20 bank notes going through BC casinos (as reported by the suspicious transaction reports, large cash transaction reports and section 86 reports received by the RCMP).27

After meeting with senior members of the RCMP, he directed the money laundering team (a team known as C-22) to initiate an investigation.28 The investigation soon became the team’s most high profile because of the substantial amount of cash entering Lower Mainland casinos and “the potential that it was backed by organized crime using ... casinos to launder the proceeds of those crimes.”29

Although the intelligence probe was not able to make a definitive link to criminal activity, there was a strong belief among investigators that the funds were criminal in nature. For example, Sergeant Paddon testified that the manner in which the cash was bundled and brought into casinos led her to conclude that it had criminal origins:

[D]efinitely I believed it was criminal ... cash coming in bags, suitcases, boutique bags is not normal practice ... [I]n my opinion illegal cash is basically held together in bricks, and they’re sub-bundled with elastic bands on them usually in amounts of, like, 1,000, 2,000 or 5,000 which makes up the actual brick. Often the bills would be facing in different directions.

Criminals basically take their cash whereas a bank would put together a bundle of cash – it would be 100 notes of one specific denomination. Criminals don’t. They basically take their brick of cash, and it’s made up in dollar amount, so it would be in even dollars of 5,000, 10,000, that kind of idea. It’s not in hundred-note amounts. There are no paper bands around it. It’s held together with elastics on both ends, sometimes in the middle.

The bricks are put together and they’re often thrown into a boutique bag. They often tend to use, you know, grocery bags, plastic grocery bags, they’re concealed in compartments in vehicles, they’re hidden in briefcases and they’re basically brought into the casino.

28 Ibid, p 27.
29 Evidence of B. Baxter, Transcript, April 8, 2021, pp 27 –30. See also ibid, pp 77–78, where he discusses the possibility of Asian organized crime groups acting as a “depository” for other organized crime groups and assisting them to launder illicit funds. See also Evidence of M. Paddon, April 14, 2021, pp 13–16.
That is dirty cash. I mean, that is … not from a legal source. A bank would never distribute cash like that.30

She also testified that the manner in which the cash was received by gamblers strengthened her belief that it was derived from criminal activity:

Well, it was strengthened because it's never just the cash. It's the circumstances that surround the seizure of cash or anything like that … [I]t's the fact that maybe the person has no criminal – sorry, has no legitimate income … maybe they don't have access to a bank account, so for whatever reason – especially in a case when you've got Chinese nationals come in, they don't have access to banking where they can go and take out $50,000 or $100,000 because of the restrictions over in China with moving cash across the country – you know, obviously sending cash over to Canada.

As time went on, these loan sharks were seen meeting with these gamblers. Some of the gamblers would go in, they'd gamble, they'd go back out to the parking lot, they'd meet the loan shark and then they would go back into the casino and continue gambling. There was chip passing going on. In some of the VIP rooms you could … clearly see that these loan sharks were approaching … the gamblers in the VIP rooms and replenishing their funds.

You know, it was going on in the bathroom because there's no cameras in there. So there would be … things being slipped in the bathroom. And … unfortunately because we were unable to see anything through the cameras, you know, someone would come back out with … a bag of cash, and it's kind of unknown where they'd got it from, but obviously the loan shark had given it to them in the bathroom and then they'd gone back out to the tables to play.31

On January 30, 2012, the C-22 team put together an operational plan to address the issue of money laundering in Lower Mainland casinos.32 The plan notes that investigators had identified “significant money-laundering activity in and around several B.C. casinos” including almost $40 million in suspicious cash buy-ins in the one-year period ending in August 2011.33 It also indicates that the methodology used to launder illicit cash through Lower Mainland casinos involves groups of loan shark “facilitators” who are constantly present in and around casinos “ready to supply large quantities of cash to … high-roller players who pay back the cash facilitators using a “hawala” style of debt-settlement.”34

30 Evidence of M. Paddon, Transcript, April 14, 2021, pp 16–17. Sgt. Paddon, who is certified as an expert in cash bundling, has provided expert opinion evidence for both the RCMP and the Civil Forfeiture Office: ibid, p 18.
33 Exhibit 760, Casino Operational Plan, pp 3, 4.
34 Exhibit 760, Casino Operational Plan, p 4. A full description of the hawala model of debt settlement is contained in Chapters 3 and 37 of this Report.
The operational plan had two key objectives: (a) to disrupt money laundering activity in and around Lower Mainland casinos (thereby disrupting the activities of organized crime groups within the province); and (b) to work with stakeholders in the gaming industry to effect legislative and regulatory change to minimize and/or eliminate the need for wealthy foreign gamblers to access large amounts of local, criminally derived cash.35

If the investigation had been allowed to continue, I expect that the RCMP would have been able to achieve those objectives and stem the flow of suspicious cash into Lower Mainland casinos. IPOC had already made significant progress toward identifying the methodology being used to carry out the money laundering scheme and had a great deal of information about the high-stakes gamblers who were making large cash buy-ins.36 Moreover, in relatively short order, the RCMP made a direct link between the suspicious cash being provided to high-stakes gamblers and a large underground bank in Richmond when it turned its attention to this issue in 2015.37

Unfortunately, however, the federal government decided to make significant cuts to government services, leading to the “re-engineering” of federal policing, the disbandment of the IPOC units, and the termination of the intelligence probe (see below). The result was a lost opportunity to disrupt the flow of illicit funds into Lower Mainland casinos and a significant enforcement gap that allowed those involved in money laundering to operate in plain sight and with relative impunity for the better part of a decade. While I appreciate that the decision to disband the IPOC units was a policy decision made by a federal entity, it is critical to review the timing and effect of that decision in order to make findings of fact and recommendations concerning the law enforcement response to money laundering in this province.

The Re-Engineering of Federal Policing

On June 6, 2011, Jim Flaherty, the federal minister of finance, introduced the 2011–2012 federal budget (Budget 2011) in the House of Commons.38

One of the key announcements made in the budget was a strategic review of government spending aimed at improving the “efficiency and effectiveness” of government operations and programs. The strategic review was part of a broader deficit action reduction plan, which called on all federal departments to cut existing spending in order to achieve a specified level of savings.

35 Ibid.
36 The RCMP officers involved in the intelligence probe also believed it was a promising investigation with considerable potential: see, for example, Evidence of M. Paddon, Transcript, April 14, 2021, pp 14–18; Evidence of B. Baxter, Transcript, April 8, 2021, pp 86–90.
37 The RCMP started surveillance in April 2015 and advised Brad Desmarais that they had made a direct link to a large underground bank in July 2015: see Exhibit S22, Affidavit #1 of Brad Desmarais, exhibit 55, p 313; Evidence of B. Desmarais, Transcript, February 1, 2021, pp 121–22.
38 Budget 2011 received Royal Assent on June 26, 2011.
Superintendent Taylor testified that the strategic review created a situation where the RCMP had to become “cleaner and more focused” and “do less with less” (meaning that the RCMP would have to focus on higher-level priorities and refuse investigations that did not rise to that level).39

In an attempt to find greater efficiencies within its operations, the RCMP made the decision to “re-engineer” its federal policing operations and disband the IPOC units.40 Mr. Baxter attended a number of meetings in which the re-engineering of the IPOC units was discussed. He testified that the officers-in-charge (or OICs) of these units raised concerns about Canada’s international commitments and the RCMP’s ability to “look after” money laundering / proceeds of crime issues if the IPOC units were disbanded. In my view, the concerns raised by these officers were prescient:

Yes, we had had some meetings in Ottawa about the federal re-engineering and some IPOC meetings during which again with senior managers, senior leaders, there was robust discussion and ... some of the concerns being raised by all of us as OICs of IPOC units were, one, that the funding aspect, the specialization, the expert witness program, the international commitments under the United Nations where Canada had signed on to do certain things under the Financial Action Task Force, the FATF, and our concerns myself included was we have these obligations. Who’s going to look after this? Where are we going to go with this? And again it was all discussions and they were difficult decisions, I know, by the senior leaders of the day, and the decision was made that IPOC would be disbanded, and that was the end of it. We voiced concerns and I said boy, this I think is going to come back and bite us. Canada had played a leading role in that UN resolution where we were monitoring and evaluating other countries’ money laundering regimes and banking industries and here we were shutting down the very people who were a part of that process, myself included. [Emphasis added.]41

In British Columbia, officers previously assigned to IPOC were transferred to other areas of federal policing including the FSOC section.42 The concept was that officers

39 Evidence of B. Taylor, Transcript, April 16, 2021, pp 18, 24–25. Many estimates suggest that British Columbia saw at least a 25 percent reduction in federal policing as a result of these cuts: see Exhibit 790, Email from Lori Wanamaker to Clayton Pecknold, re fwd German Money Laundering (December 15, 2018), p 3; Evidence of C. Pecknold, Transcript, April 6, 2021, pp 51–55. See also Evidence of W. Rideout, April 6, 2021, pp 16–17 (over recent years, vacancy numbers in federal policing (the difference between the authorized strength of the RCMP and the number of officers filling those positions) have ranged from 140 to 200). In 2019, the authorized strength of the RCMP was 1,038, including 135 positions in protective policing: Exhibit 789, Police Resources in British Columbia, p 17. For another area in which these reductions created a policing gap, see Evidence of B. Taylor, Transcript, April 16, 2021, pp 26–27; Evidence of D. LePard, Transcript, April 7, 2021 (Session 1), pp 56–57.

40 Evidence of B. Taylor, Transcript, April 16, 2021, pp 18–22, 37–38. Note, however, that there were other reasons for the restructuring of federal policing, including increased costs and the emergence of serious national security threats: Evidence of P. Payne, Transcript, April 16, 2021, p 153. While not entirely clear, it appears that the decision to re-engineer federal policing operations was made in mid-2012.

who came from an IPOC background would bring their expertise to other units and investigate the money laundering aspects of ongoing investigations (such as drug investigations). However, there is widespread agreement that the re-engineering led to a significant dilution of expertise, along with an inability to pursue complex money laundering investigations requiring multiple investigators.43

Importantly, it also meant that money laundering investigations were subject to the federal prioritization process and were weighed against other pressures and priorities including national security investigations and requests made by international partners.44 One of the practical consequences of the new prioritization process was the termination of existing investigations, including the intelligence probe into money laundering in BC casinos (which would have been a priority investigation had the IPOC units remained intact).45 While I appreciate that the RCMP was forced to make a number of difficult decisions concerning the allocation of law enforcement resources, I find it unfathomable that it would terminate that investigation without taking any meaningful steps to address the growing volume of suspicious cash entering Lower Mainland casinos.

The RCMP had identified serious criminal activity occurring in British Columbia casinos and had developed an action plan that would likely have succeeded in disrupting this criminality. Its decision to terminate the intelligence probe, without taking any meaningful steps to investigate this conduct, allowed for the continued proliferation of money laundering through Lower Mainland casinos in the years that followed.

A report prepared by the provincial Gaming Policy and Enforcement Branch (GPEB) on November 19, 2012 provides the following snapshot of the suspicious activity occurring in and around Lower Mainland casinos from January 1, 2012, to September 30, 2012:

Total Money Laundering/SCT [Suspicious Currency Transaction] files: 794

Total dollar amount: $63,971,727.00

Total dollar amount in $20 dollar denominations: $44,168,660.00. This represents 70% of all suspicious cash entering casinos.

79 patrons had SCT buy-ins at least once with $100,000

17 patrons had total SCT buy-ins over $1,000,000

The top 22 patrons had SCT buy-ins totaling: $45,12,130.00 [sic]. This represents 71% of the total dollar amount of all Suspicious Cash Transactions.

43 See, for example, Evidence of B. Baxter, Transcript, April 8, 2021, pp 82–83; Evidence of M. Paddon, Transcript, April 14, 2021, pp 23–24. In some cases, there was also a loss of expertise as many of the people previously working within IPOC (some of whom had law or accounting backgrounds) started rethinking their career paths and trying other things: Evidence of B. Taylor, Transcript, April 16, 2021, p 20; Exhibit 864, Assessment of Proceeds of Crime Responsibilities Within FSOC, p 12.

The top ten patrons SCT buy-ins generated 285 separate s. 86 reports from the service providers and BCLC.

The top five patrons SCT buy-ins generated 172 separate s. 86 reports from the service providers and BCLC.

By comparison; the top 22 patrons who generated 285 SCT reports between them, in a nine-month period in 2012, is more that [sic] the total number of SCT reports generated in 2007, 2008 and 2009, and is only ten less than 2010.

Using the figures from the first nine months of 2012, it is estimated that the yearly totals will be;

Total Money Laundering/SCT files: 1060

Total dollar amount: $85,295,636.00

Total dollar amounts in $20 denominations: $58,891,546.00

It has become routine for patrons to buy-in with suspicious cash totalling $200,000, $300,000, $400,000, and on two occasions where $500,000 and $580,000 respectively, were presented at the cash cage of a casino.46

Moreover, there can be no doubt whatsoever that the RCMP was aware of the nature and seriousness of the problem at the time it terminated the intelligence probe. GPEB and the BC Lottery Corporation (BCLC) had long been sharing information with the RCMP concerning suspicious transactions at Lower Mainland casinos47 and the operational plan prepared by the C-22 team in January 2012 described the problem as follows:

In a one-year period (ending August, 2011), almost $40 million dollars in suspicious buy-ins were identified, with the vast majority of these being in $20 bills.

As noted, the individuals actually conducting the buy-ins at the casino, and doing the gambling, were wealthy Chinese businessmen, many with little to no ties to Canada. They choose to gamble at the casinos here, and to do so, they need ready access to significant amounts of Canadian cash. Typically, they are wealthy, but their funds are overseas ... and are subject to PRC [People’s Republic of China] government currency export and transaction-restrictions.

47 For example, Gordon Friesen, who was manager of investigations at BCLC during the relevant time period, testified, “[W]e were sending reports to the RCMP proceeds of crime unit right from the day I got there [in 2005] ... we actually had a specific dedicated email site where we sent our reports to automatically”. Transcript, October 29, 2020, p 13. See also Exhibit 145, Affidavit #1 of Rob Barber, made on October 29, 2020, paras 48–49; Evidence of B. Baxter, Transcript, April 8, 2021, pp 22–24, 86, 92.
To fulfill the need of these gamblers for Canadian cash, there are several groups of people known to regularly frequent the River Rock and Starlight casinos. Investigation by IPOC ... to date indicates that these groups of loan-shark “facilitators” are constantly present in and around the casinos, ready to supply large quantities of cash to these high-roller players. These high-roller players typically pay-back their losses via bank-deposits in the PRC or Hong Kong, which are ultimately brought back to Canada by the loan-sharks (in non-cash form) as “legitimate” money. This is often done by international money-laundering groups, using a “hawalla” style of debt-settlement, where a debt in Canada can be paid-back with a corresponding credit overseas (or vice-versa), with actual money rarely even changing hands between the parties.

These high-roller gamblers are coming into the casino literally with “shopping bags full of cash”, often in the hundreds of thousands of dollars at one time. It is the root source of this cash that is of greatest concern to law-enforcement. Both by its appearance and the surrounding circumstances, it is apparent that virtually none of this cash was withdrawn from a bank, or any other legitimate source. Especially given the presence of huge amounts of $20 bills (the most common “street money”), the origins of these actual dollar-bills being used can likely be traced-back to drugs, prostitution, or other street-level criminal activities being run and/or controlled, by organized criminal groups.

The goal of this “cash-service” provided by the loan-sharks, is both for the purpose of earning interest on the loans, and also to launder illicit funds. The individuals running the drug-operations or bawdy houses where these funds originate pay the loan-sharks a commission in order to turn their $20 bills into a form (bank drafts or wire-transfers) that they can use to buy their expensive homes, cars, etc. Turning “street money” into a seemingly legitimate form, is a necessary part of any successful criminal enterprise.

The listed targets have been identified by IPOC as being “middle men”, who directly supply high-roller gamblers with large quantities of cash on very short notice, in surreptitious locations. IPOC surveillance and investigation to-date has shown discrete night-time parking-lot meetings, not far from the casino, where high-roller gamblers have met with these “middle men”, then bought-in at the casino only minutes later with a bag full of cash. [Emphasis added.]48

Overall, I view the prolonged lack of attention to this issue as a significant failure that allowed for the unchecked growth of money laundering activity in British

---

48 Exhibit 760, Casino Operational Plan, p 4. See also Evidence of B. Baxter, Transcript, April 8, 2021, p 86.
Columbia. It is also indicative of a serious disconnect between the priorities of the RCMP and the law enforcement needs in this province. In what follows, I review the RCMP’s response to the money laundering problem in two key periods (2013–2015 and 2015–2020).

**The 2013–2015 Period**

From 2013 to 2015, the gaming industry continued to struggle with the ever-increasing volume of suspicious cash entering Lower Mainland casinos. A GPEB report dated October 25, 2013, indicates that an “overwhelming amount of suspicious currency, most being in small denominations, continues to flood into casinos in British Columbia” and that “[n]one of the measures introduced by BCLC, the service provider, the AML X-DWG [a cross-divisional working group in the gaming sector] or a combination of these entities over the past 3 years have stopped or slowed that increase.” It also indicates that the number of section 86 reports had increased from a low of 103 in 2008–9 to a projected total of 1,120 in 2013–14, and that the amount of suspicious funds entering BC casinos had increased from approximately $87 million in 2012 to a projected total of $95 million in 2013–14. In reality, the actual numbers for 2013–14 far exceeded the projections, resulting in 1,382 section 86 reports, totalling $118 million in suspicious funds.

In 2014, BCLC was submitting as many as 150 suspicious transaction reports per month (three times as many as in 2011) with most of those reports relating to suspicious cash buy-ins at Lower Mainland casinos. There was also a “rapid acceleration” of suspicious cash entering casinos with the number of section 86 reports filed by service providers increasing to a projected total of 1,750 in 2014–15 and the total dollar value of suspicious funds entering Lower Mainland casinos increasing to a projected total of $185 million.

Individual occurrences also demonstrate the “alarming” volume of suspicious cash entering BC casinos. On September 24–25, 2014, for example, a patron made two $500,000 cash buy-ins at the River Rock Casino. The player had initially bought-in for $50,000 in $100 bills but exhausted those chips. At approximately 11 p.m., he made a

---

49 The lack of attention to this issue is particularly troubling when we consider the conclusions reached in the March 2011 IPOC evaluation report concerning the central role played by proceeds of crime investigations in combatting organized crime: see Exhibit 822, Evaluation of the IPOC Initiative, p ii.

50 Exhibit 181, Affidavit #1 of Larry Vander Graaf, exhibit Q, Gaming Policy and Enforcement Branch Investigation Division, Suspicious Currency Transactions / Money Laundering in British Columbia Casinos (October 25, 2013), p 161.

51 Ibid, p 159. The projections also estimated that approximately 75 percent of those funds would be accepted at the River Rock Casino, and 67 percent would be in $20 bills.

52 Exhibit 181, Affidavit #1 of Larry Vander Graaf, exhibit Q, Gaming Policy and Enforcement Branch Investigation Division, Suspicious Currency Transactions/Money Laundering in British Columbia Casinos (October 27, 2014), p 171.

53 Exhibit 148, Affidavit #1 of Daryl Tottenham, sworn October 30, 2020, para 64.

54 Exhibit 181, Affidavit #1 of Larry Vander Graaf, exhibit Q, p 171.

55 Ibid, p 172.
telephone call, left the casino, and entered a waiting vehicle. The patron returned a short
time later with a black suitcase and a brown bag and used the cash contents of those
bags to make a cash buy-in of $500,040. The cash consisted entirely of $20 bills that were
bundled and secured with elastic bands inside silver plastic bags.56 By approximately
1 a.m., the patron had lost all or most of the $500,000. He made another call, left the
casino, and interacted with two males outside a waiting vehicle. The patron subsequently
returned with another suitcase filled with approximately $500,000, which he used to
make a further cash buy-in of $500,030. Almost all the cash was in $20 bills, bundled and
secured with elastic bands in silver plastic bags.57

Robert Barber, a retired member of the Vancouver Police Department (VPD) and
an investigator with GPEB from 2010 to 2017 testified that this was a “fairly typical
transaction in that time period.”58 He also indicated that there may have been another
five or six similar events on that same night:

[T]his was an interesting case. It had many obvious factors indicating
money laundering and perhaps other offences, but there might have been
on that same night another five or six very similar events ... [O]bviously we
didn’t have surveillance capabilities or any of the other niceties of policing
that would have allowed us to move forward with an investigation.59

At the time these transactions were occurring, BCLC had adopted a practice whereby
all suspicious transaction reports submitted to FINTRAC were copied to the RCMP.60
However, no meaningful steps were taken to investigate. Daryl Tottenham, a former
member of the New Westminster Police Department and the manager of anti–money
laundering programs at BCLC, gave evidence that the suspicious transaction reports
prepared by BCLC “should have been very useful to law enforcement” and that he was
“shocked” by the lack of response:

From 2011 to 2014, I observed that BCLC investigators (and as of 2013 the
AML Unit) did not receive any reaction to or feedback about these reports
from FINTRAC or GPEB, and was not receiving any assistance from law
enforcement on the issues identified in the reports[.]

... In my view, these reports should have been very useful to law
enforcement. If someone had provided that kind of information to me
when I was working as a police officer, I would have immediately attempted
to initiate a project ...

56 Exhibit 145, Affidavit #1 of Rob Barber, exhibit E, pp 8–11.
57 Ibid.
58 Evidence of R. Barber, Transcript, November 3, 2020, p 29.
I was also shocked at the lack of response I observed from proceeds of crime units and GPEB during the period of 2011 to 2014. There was no indication to me that either were working on the information identified in BCLC’s [suspicious transaction reports].

In April 2014, BCLC adopted a new strategy and began actively reaching out to the RCMP (and other law enforcement bodies) to urge them to investigate the suspicious activity occurring in and around Lower Mainland casinos.

Later that month, Mr. Tottenham met with representatives of the Combined Forces Special Enforcement Unit (CFSEU) and presented a package of information about potential targets believed to be involved in cash facilitation at Lower Mainland casinos. He testified that the purpose of the meeting was to “engage them to come help us, to come investigate and deal with [the issue] because we were at a loss [as to how] to deal with it – effectively deal with it.”

In June 2014, Robert Kroeker, who was then vice-president of compliance at Great Canadian Gaming Corporation (Great Canadian), and Patrick Ennis (director of surveillance at Great Canadian) organized a “site orientation” for CFSEU at the River Rock Casino (where the majority of the suspicious activity was believed to be occurring).

Mr. Tottenham testified that the site orientation was “part of … the pitch for the project. We wanted to come in and show them what they had access to, what we would provide, how we can provide it, what the abilities are of the surveillance operators and how we would be able to assist them if they took a project on.”

At approximately the same time, BCLC compiled a package of its “Top 10 casino cash facilitator targets” which was provided to CFSEU in order to assist in conducting surveillance. The information included in that package included “tombstone” information such as names, driver’s licence numbers, occupations, addresses, and vehicle information. It also included photographs of each target.

Over the next few months, Mr. Tottenham repeatedly followed up with CFSEU to urge an investigation into the individuals he identified. He described this as a “rattle-the-chain moment” where he was trying to determine whether they were “actually going to engage and do a project.” Eventually, he was told that CFSEU’s focus was on guns and gangs, not proceeds of crime, and while they might re-engage if they had time, they were tied up with other projects and were therefore unable to assist.
Mr. Tottenham continued to follow up with CFSEU throughout the fall of 2014, but no investigative steps were taken and they seemed to lose interest in the issue. For example, CFSEU initially offered to have one of its members attend a monthly law enforcement briefing by BCLC. However, it does not appear that anyone ever attended.67

While CFSEU was the primary focus of BCLC’s efforts to prompt a criminal investigation into the network of cash facilitators operating in and around Lower Mainland casinos, it was not the only law enforcement agency alerted to the issue. Moreover, it appears that BCLC continued to advocate for an investigation by contacting the Real Time Intelligence Centre,68 the Richmond RCMP detachment, and even their former contacts at IPOC (many of whom were still being copied on the suspicious transaction reports submitted by BCLC).69 On each occasion, they were told that the law enforcement agencies they approached did not have the mandate or the resources to pursue a large-scale investigation into money laundering in Lower Mainland casinos.70

In making these comments, it is not my intention to criticize CFSEU or any of the other provincial and municipal law enforcement agencies approached by BCLC (and others) to report suspicious activity. CFSEU clearly had its hands full with the significant gang violence problem in the Lower Mainland and local detachments will rarely have the capacity, expertise, or resources to undertake complex money laundering investigations. However, the fact that the gaming industry had nowhere to go with evidence of a cash facilitation network responsible for laundering hundreds of millions of dollars highlights the significant enforcement gap created by the disbandment of the IPOC units, and the need for a specialized intelligence and investigative unit with an exclusive focus on proceeds of crime and money laundering.

Unfortunately, these issues were not limited to the gaming industry. It appears that actors in other sectors of the economy experienced a similar level of frustration in getting the attention of law enforcement. For example, an investigation conducted by the Registrar of Mortgage Brokers in 2012 determined that one of its registrants was likely involved in laundering illicit funds for individuals with criminal associations through a series of suspicious mortgage transactions.71 In August 2013, the matter was referred to the RCMP’s FSOC section and assigned to Corporal Karen Best, who

---

67 Evidence of D. Tottenham, Transcript, November 4, 2020, p 72; Exhibit 148, Affidavit #1 of Daryl Tottenham, exhibit 25.
68 I understand the Real Time Intelligence Centre to be an intelligence and analysis unit created to give investigators real-time access to information concerning individuals who pose a substantial risk to public safety.
69 Exhibit 148, Affidavit #1 of Daryl Tottenham, paras 118–22; Exhibit 145, Affidavit #1 of Rob Barber, para 60. On the latter point, see Evidence of B. Baxter, Transcript, April 8, 2021, p 92 (“Well, I know they continued to call, if you will. Because I personally received calls because of our personal relationships. And most times I would refer them to Inspector Cal Chrustie, who was overseeing one of the investigative teams ... just so they could pass on relevant information or ongoing intelligence that they were receiving. They wanted some point of contact to continue that ability”).
70 Exhibit 148, Affidavit #1 of Daryl Tottenham, paras 118–22.
supplemented the information provided by the Registrar of Mortgage Brokers with information from police sources and developed the theory that what was being observed was mortgage fraud in furtherance of a money laundering scheme.72

A report prepared by Corporal Best in March 2016 concluded that “organized crime groups in the Lower Mainland may have been using secondary mortgage financing in order to launder [illicit] funds and that this practice may still be occurring.”73 Her report is more than 100 pages and contains a detailed review of money laundering risks in the real estate sector. In the fall of 2016, it was sent to the head of FSOC’s Financial Integrity Unit. Corporal Best received compliments on her “exceptional” work. However, the investigation was terminated and the RCMP conducted no further investigation into the alleged money laundering scheme.74 Notably, the registrant was permitted to carry on his activities until May 2019, when he was the subject of regulatory action.

The 2015–2020 Time Period

In February 2015, Brad Desmarais, BCLC’s vice-president of corporate security and compliance, had an informal meeting with Mr. Chrustie at a coffee shop in North Burnaby. At the time, Mr. Chrustie was a senior member of the RCMP’s Federal Serious and Organized Crime section.

Mr. Desmarais expressed his frustration that the issue of cash facilitation at Lower Mainland casinos was not being treated seriously and Mr. Chrustie agreed to assign a few of his investigators to look into the issue.75

After three months of investigation, the FSOC investigation (which ultimately became Project E-Pirate) was able to make a “direct link” between the suspicious cash being provided to patrons at the River Rock Casino and an illegal cash facility in Richmond.76

BCLC was also advised that “potentially some of the funds at the cash house were linked to transnational drug trafficking and terrorist financing.”77

While the E-Pirate investigation (reviewed in detail in Chapter 3) was undoubtedly a step in the right direction, Mr. Tottenham gave evidence that it seemed to be a constant battle to keep the RCMP engaged on the project.78 For example, a few months into the

78 Exhibit 148, Affidavit # 1 of Daryl Tottenham, para 126.
investigation, Mr. Tottenham was asked to urgently prepare a presentation for the E-Pirate team in order to justify continued funding for the investigation.79

Moreover, there was no sustained effort to investigate and pursue money laundering charges against other individuals and networks engaged in money laundering activity in this province. Between 2015 and 2020, there were only three major money laundering investigations across all of the RCMP’s federal, provincial, and municipal business lines that progressed to the charge approval stage. One of those investigations (E-Pirate) resulted in charges that were approved but subsequently concluded before trial, one did not meet the charge approval standard, and the third is currently being considered by prosecutors.80

When one considers the nature and extent of the money laundering activity occurring during this time period, it is clear that law enforcement results were not commensurate with the magnitude of the problem. For example, the financial records seized by the RCMP in connection with the E-Pirate investigation revealed that Silver International conducted credit transactions totaling $81,462,730 and debit transactions totalling $83,075,330 between June 1 and October 15, 2015. On an annual basis, that corresponds to approximately $221 million in debit transactions and $217 million in credit transactions.81 While I am unable to conclude that all of those transactions were carried out in furtherance of a money laundering scheme, I have previously found that a substantial portion of the cash being left at Silver International was derived from profit-oriented criminal activity and that Silver International was assisting organized crime groups in laundering the funds generated by that activity (see Chapter 3). I also heard evidence from Mr. Chrustie about other money laundering operations in this province that were comparable in size and scope, including one that was allegedly laundering billions of dollars through the BC economy.82

While the volume of suspicious cash entering Lower Mainland casinos decreased significantly over the next few years, there was still a large volume of suspicious cash entering those facilities. In 2016, for example, the volume of suspicious cash entering Lower Mainland casinos had decreased significantly, but was still in the range of $72 million (see Chapter 11). Moreover, the nature of the Vancouver model is such that the illicit cash generated by criminal activity and provided to those seeking to avoid the currency restrictions imposed by the Chinese government can be used for any purpose including, for example, the purchase of real estate and luxury goods.

79 Ibid, paras 126–27 and exhibit 39. The presentation, entitled “Economic and Social Consequences of Money Laundering,” was delivered to the E–Pirate investigative team in May 2015. Following the presentation, Mr. Tottenham was advised E–Pirate would continue to be resourced.

80 Exhibit 794, Money Laundering and Proceeds Investigations by “E” Division – Response to Item 11 of the Cullen Commission’s May 4, 2020 Request, pp 9, 12–14. See also Evidence of P. Payne, Transcript, April 16, 2021, pp 140–43. Note, however, that there were an additional 24 “open” major money laundering investigations at the time Exhibit 794 was prepared: Exhibit 794, Appendix B, pp 9, 12–14; Evidence of P. Payne, Transcript, April 16, 2021, pp 178–79. Open investigations are defined as “ongoing” investigations with charges yet to be determined by police.

81 Exhibit 663, Affidavit of Melvin Chizawsky, para 99.

82 Evidence of C. Chrustie, Transcript, March 29, 2021, pp 69–70.
Accordingly, the decrease in suspicious cash entering casinos does not necessarily mean there was a decrease in money laundering activity.

I also note that there were other serious forms of money laundering activity occurring within the province during this period. For example, John Zdanowicz, a professor emeritus at Florida International University and a pioneer in the research of illicit financial flows through international trade, prepared a report for the Commission indicating that there were more than $4.3 billion in undervalued exports and $4.1 billion in overvalued imports from British Columbia in 2019 (see Chapter 38). While I appreciate that there may be legitimate explanations for some of these transactions, it seems very likely that a substantial number of these transactions were connected to money laundering activity. There is also a large body of evidence suggesting that the real estate industry provided fertile ground for money laundering and that money laundering was a significant problem in other sectors of the economy.

**Causes of the Poor Enforcement Outcomes in this Province**

While I accept that there are significant challenges for law enforcement in the investigation and prosecution of money laundering offences, the primary cause of the poor enforcement outcomes in this province appears to be a lack of resources.

Some estimates suggest that there was at least a 25 percent reduction in federal policing following the 2012 re-engineering. Moreover, I heard evidence that it was extraordinarily difficult for the RCMP to staff the units responsible for money laundering investigations.83 Superintendent Taylor testified that the Financial Integrity Unit “experienced a shortage of personnel” and there “really were challenges ... trying to piece together teams to look after the files that we had.”84 In March 2019, for example, there were 27 authorized positions within Money Laundering Team 2 (one of two federal units responsible for the conduct of money laundering investigations) but only 10 of those positions were filled. Moreover, there was a significant draw on those resources for other federal priorities – such as wildfires and VIP visits – with the result that there were often few (if any) officers available to investigate money laundering.85

In a narrative document prepared for the Commission, Superintendent Taylor estimated that “[a]t any given time, due to leave, training and other duties (fires/VIP) there [were] likely only 3 or 4 people in the office to work on [money laundering / proceeds of crime files] between 2015 and 2018.”86 In his testimony before the

83 Exhibit 790, Email from Lori Wanamaker to Clayton Pecknold, re fwd German Money Laundering (December 15, 2018), p 3; Evidence of C. Pecknold; April 6, 2021, pp 51– 55. See also Exhibit 795, RCMP Narrative Document – Business Cases and Proposals for Provincially Funded ML Unit [Business Case for Provincially Funded ML Unit], p 2.
84 Evidence of B. Taylor, Transcript, April 16, 2021, p 73. Similarly, Insp. Tony Farahbakhchian, officer-in-charge of that unit from May 2018 to March 2021, testified that resources were scarce and it was challenging to get capable officers released from other areas to come to the Financial Integrity Unit: Transcript, April 15, 2021, pp 51–52.
85 Exhibit 795, Business Case for Provincially Funded ML Unit, p 2.
86 Ibid.
Commission, Superintendent Taylor stated that these numbers were not accurate and that there were more people working on money laundering issues in that unit. Moreover, it is important to note that Money Laundering Team 2 was not the entirety of the federal response to money laundering and that the RCMP was pursuing other disruption opportunities including covert operations with international partners. However, there can be little doubt that the resources dedicated to money laundering were insufficient to respond to the problem in any meaningful way.

Another cause of the poor enforcement outcomes in this province was an institutional failure, at all levels of policing, to consider money laundering / proceeds of crime charges at the outset of investigations into profit-oriented criminal offences. An RCMP analysis of 127 serious organized crime, financial crime, and cybercrime files between January 1, 2017, and December 31, 2018, illustrates this point. Despite the fact that most, if not all, serious organized crime activity gives rise to the need to launder illicit funds, the analysis found that only 30 of 127 investigations (24%) pursued a money laundering charge in 63 of those investigations (50%) even though money laundering was considered a national priority. Similar results were observed in an analysis of serious organized crime investigations from 2013 to 2017 which found there was no consideration of money laundering / proceeds of crime charges in more than 50 percent of FSOC and financial crime investigations.

Even a basic financial investigation into the accumulation of wealth by those believed to be involved in criminal activity has real benefits for the disruption of organized crime networks insofar as it identifies assets, points to criminal hierarchies and shows how the subjects are laundering their money. Stefan Cassella, a former

87 Transcript, April 16, 2021, p 74.
88 Dr. German’s conclusion that “there are currently no federally funded [RCMP] resources in B.C. dedicated to criminal money laundering investigations” must be approached with particular caution: Peter M. German, Dirty Money, Part 2: Turning the Tide – An Independent Review of Money Laundering in B.C. Real Estate, Luxury Vehicle Sales & Horse Racing, March 31, 2019, p 18. While there may have been a limited number of dedicated money laundering investigators (i.e., investigators with an exclusive focus on money laundering), federal RCMP officers were working on money laundering issues: Evidence of B. Taylor, Transcript, April 16, 2021, pp 74–75. For information on these covert operations, which can sometimes engage 30–40 officers and result in significant “disruption” opportunities, including criminal charges in other jurisdictions and the seizure of significant amounts of money, see Evidence of B. Taylor, Transcript, April 16, 2021, pp 32–34; Evidence of C. Chrustie, March 29, 2021, pp 35–36.
89 Exhibit 866, RCMP Federal Policing Projects Review: January 2017–December 2018, p 1, suggests that money laundering charges were not considered in 97 of 127 investigations, with the result that 76 percent of applicable files are not considering such charges. However, page 4 suggests that 63 of 127 investigations did not consider a proceeds of crime component, in the sense there was no mention of conducting a proceeds of crime investigation or seizing any assets in the operational plan.
91 Exhibit 866, RCMP Federal Policing Projects Review: January 2017–December 2018, p 6. See also Evidence of S. Cassella, Transcript, May 10, 2021, pp 79–82. In some cases, the investigation of money laundering / proceeds of crime charges may also make it easier for the Crown to meet its burden of proof about the predicate offence. For example, the fact the accused was involved in significant money laundering activity may strengthen the inference of knowledge and control necessary to prove many drug offences. Involvement in money laundering activity may also be an aggravating factor that leads to a more significant sentence for the offender.
US prosecutor with significant experience in the prosecution of money laundering offences, explained the impact these measures can have on organized crime groups:

[T]here's no doubt ... and economists have studied this, that you have much more of an effect on, let's say, a drug organization or similar organized crime organization if you take their assets than if you simply arrest low-level people.

[J]ust use the drug case as the prototypical example, you could arrest any number of street sellers and take the cash that was found on their persons or in ... the safe under the bed in their house and they get replaced fairly quickly. It's the large sums of money that are flowing back to Mexico and other places in South America that ... sustain the cycle of a drug trafficking organization.

[W]hen we'd get a ... low-level operative in a drug organization to cooperate with the government and plead guilty and testify, and we would ask him what of our investigation was the most effective in terms of slowing down the drug operation that you used to be a part of? He would say, those seizures; when you took $500,000 off the courier on the airplane, that was the money that was going to buy the next load and we had to start all over and raise that money again before we can get another load, and the supplier then went to somebody else and so forth in Mexico and caused all kind of problems for us.92

On February 4, 2020, RCMP Deputy Commissioner Michael Duheme issued a policy directive requiring that all future operational plans submitted for approval and tiering within the FSOC section “clearly denote all dimensions being considered, examined and investigated in relation to the accumulation of illicit funds and wealth including the laundering of money derived from criminal activity.”93 If a money laundering / proceeds of crime investigation is not being pursued, the supporting rationale must be documented and submitted with the operational plan. Moreover, the directive states that “charges for the [money laundering / proceeds of crime] offence should be laid at the same time as those related to the underlying offence or shortly thereafter” and that engaging the Public Prosecution Service of Canada at the outset of the investigation “will greatly assist in the determination of timelines and charges.”94

I believe that the consistent and rigorous implementation of this directive has the potential to substantially improve law enforcement results in this province. Not only would it allow for additional charges and forfeiture proceedings to be brought against

94 Ibid.
the existing defendant, it would also “expand the universe of potential defendants” and allow for charges to be brought against those who are involved in different aspects of the criminal enterprise. Mr. Cassella described the benefits of this approach as follows:

Money laundering tends to expand the scope of the criminal investigation in several ways. It expands the category or the universe of potential defendants. Some defendants committed the underlying crime. Some defendants committed the underlying crime and laundered the money. Some defendants only laundered the money. If you didn't charge money laundering, you would not reach that last group of defendants.

The person whose job it is simply to store the money in a drug offence and ... launder it through a series of bank accounts and then go to Mexico, or the professional money launderer, a lawyer or an accountant, who was charged with creating ... trusts or putting money in the names of shell companies or doing whatever it was that was done to conceal or disguise the money. So it expands the universe of possible defendants.95

I would therefore encourage the RCMP to ensure that this directive is followed, and that investigators consider money laundering / proceeds of crime issues in every investigation involving serious organized crime groups and profit-oriented criminal offences.96 I also recommend that all provincial and municipal law enforcement agencies implement a policy requiring all officers involved in the investigation of profit-oriented crime to (a) consider money laundering and proceeds of crime issues at the outset of the investigation, and (b) where feasible, conduct an investigation with a view to pursuing those charges, and identifying assets for seizure and/or forfeiture.

Such investigations are not beyond the competence of these investigators and ought to be pursued as a matter of course whenever provincial law enforcement bodies are involved in the investigation of profit-oriented crime.97

**Recommendation 89:** I recommend that all provincial and municipal law enforcement agencies in British Columbia implement a policy requiring all officers involved in the investigation of profit-oriented crime to consider money laundering and proceeds of crime issues at the outset of the investigation and, where feasible, conduct an investigation with a view to pursuing those charges, and identifying assets for seizure and/or forfeiture.

---

96 I note that a similar directive was discussed as early as 2008, but it does not appear to have gained any significant traction within the FSOC unit: Evidence of B. Taylor, Transcript, April 16, 2021, pp 44–46. Moreover, I heard evidence that current resourcing levels within certain units may preclude any serious attempt to conduct a financial investigation.
In order to carry out these investigations, it is important that these investigators have proper training in the conduct of basic financial investigations. I therefore recommend that all provincial and municipal law enforcement agencies involved in the investigation of profit-oriented crime (such as drug trafficking, fraud, and human smuggling) develop training modules to ensure that their members have the ability to conduct these types of investigations.

**Recommendation 90:** I recommend that all provincial and municipal law enforcement agencies involved in the investigation of profit-oriented crime develop training modules to ensure that their members have the knowledge and skills to pursue money laundering and proceeds of crime investigations, and identify assets for seizure and/or forfeiture.

The dedicated provincial money laundering intelligence and investigative unit recommended in Chapter 41 may be well positioned to provide training to other investigations with respect to proceeds of crime and money laundering issues.

While I appreciate that the allocation of law enforcement resources to these matters will put additional strain on law enforcement agencies in the short term, I strongly believe they will have a significant impact on organized crime groups and result in substantial financial benefits for the Province (which could be used to fund additional law enforcement resources and other government priorities).

Evidence from other jurisdictions illustrates the massive financial benefits that flow from a focused and effective asset forfeiture regime. For example, an expert report prepared for this Commission on anti-money laundering efforts in New Zealand indicates that the cumulative value of assets restrained by the police-run asset recovery unit between July 2017 and October 2020 was in the range of NZ$428 million (approximately Can$358 million). The report states:

On most accounts, the CPR [Criminal Proceeds (Recovery)] Act system in the hands of enthusiastic and well-drilled Police and Prosecutor operations has been wildly successful. It is a high-profile deterrent force, countering to some extent the attractions that organised crime gangs can use, such as cars, motorbikes, boats, jet skis, flashy bling and assets, to lure new recruits. Nothing speaks as symbolically in this field of crime prevention as a fleet of criminal toys being loaded up onto a confiscation truck pursuant to a surprise freezing order operation.

As at the end of October 2020, assets under restraint between the 5 regional Asset Recovery Units for the Commissioner of Police had grown to NZ$428m cumulative since July 2017, The top 3 offences used as a basis for seeking the asset restraining orders were reported by Police as being: money laundering (56%), drug crime (26%) and fraud (12%).
The largest single forfeiture to date has been a NZ$43m settlement reached in 2016–17 with a Chinese person resident in New Zealand, Mr William Yan, who was wanted for offences back in China and agreed to forfeit major property and shareholding interests in New Zealand as part of an agreed settlement.

Property that has eventually been forfeited to the Crown under the CPR Act regime (a process that can take years for all challenges and appeals and third party interests in the property to have been heard) is sold at auction or by other methods. The proceeds from that are lodged in a government Proceeds of Crime Fund administered by the Ministry of Justice. A variety of government agencies and some selected non-governmental organisations can then bid for funding for specific community or criminal justice projects they wish to carry out, such as drug treatment, healthcare services or offender rehabilitation programmes. There is a strong preference for funding initiatives at a grassroots level to fight organised criminal gang influences, especially where they are dealing in methamphetamine and other drugs. [Emphasis added.]98

While it is important to use caution in looking at the experiences of other jurisdictions, New Zealand's population, GDP, legal system, and government structure are similar to British Columbia's, which make it a useful point of reference in examining the benefits arising from an effective asset forfeiture regime.99 If the measures recommended in this Report result in seizures and/or forfeitures that are remotely similar to those in New Zealand, they would dwarf the costs of any new initiatives and result in a significant surplus of funds that could be used to fund other government services.

Other Enforcement Gaps

Finally, it is important to note that other areas of federal policing have suffered as a result of the 2012 federal re-engineering. For example, I heard evidence that the RCMP's commercial crime section was disbanded, leaving nobody to investigate the “mid-level” frauds that have a significant impact on citizens throughout the province.

---

98 Exhibit 953, Gary Hughes, Report to the Commission of Inquiry into Money Laundering in British Columbia Regarding the Anti–Money Laundering Regime of New Zealand (April 2021) [Anti–Money Laundering Regime of New Zealand], pp 37–38. Other information suggests that close to $1 billion in assets have been brought under restraint over the past 10 years: see Evidence of G. Hughes, Transcript, May 3, 2021, p 74. In considering these figures, it is important to understand that they refer to the value of assets seized (or “restrained”) by law enforcement, and not to the value of assets actually forfeited to the state. However, I understand that approximately 57 percent of the assets restrained over the past five years have been forfeited, which works out to approximately NZ$331 million (Can$278 million): see Exhibit 976, Dashboard – CPBA (Criminal Proceeds (Recovery) Act 2009), April 30, 2021 (redacted). I also understand that forfeiture proceedings are still underway with respect to most of the other assets restrained by police (these actions take an average of two years to complete). For further evidence with respect to the percentage of restrained assets forfeited to the state, see Evidence of C. Hamilton, May 12, 2021, pp 110–14.

99 For the similarities between these jurisdictions, see Exhibit 953, Anti–Money Laundering Regime of New Zealand.
Before the re-engineering, there were approximately 100 officers and support staff investigating these types of fraud.\textsuperscript{100}

An RCMP business case for the creation of a provincial financial crime unit provides a list of some of the financial crime cases that were not investigated because of the federal re-engineering.\textsuperscript{101} These files include a number of serious credit card, mortgage, investment, and tax frauds that resulted in significant losses to individuals, businesses, and public sector entities throughout the province.

One of these frauds (described as an “International Lottery Fraud”) has connections to international money laundering and a number of the other files are described as being sophisticated, multi-jurisdictional frauds with links to organized crime.

I strongly encourage the Province’s Policing and Security Branch to work with its federal partners to identify and explore these types of enforcement gaps in order to ensure that the citizens of this province are protected from all forms of criminal activity.

\section*{Current Structure and Resourcing}

Since the establishment of this Commission, the RCMP has renewed its efforts to address money laundering / proceeds of crime issues through measures such as the February 4, 2020 directive (discussed above). It has also taken steps to address some of the resourcing issues that led to the poor enforcement results from 2012 to 2020. While it remains to be seen whether these changes will lead to any concrete results, I have some optimism that the RCMP may find a measure of success if its newfound commitment to money laundering / proceeds of crime investigations is genuine, and if the federal government prioritizes and devotes sufficient resources to this issue once the work of the Commission is over and the public scrutiny on this issue has diminished.

In what follows, I review the mandate and structure of each federal law enforcement agency with responsibility for the investigation of money laundering offences.

\section*{FSOC Financial Integrity Unit}

The FSOC unit continues to have primary responsibility for the investigation of money laundering offences at the federal level.\textsuperscript{102} It does so through two operational

\footnotesize{101} Exhibit 797, Business Case for Financial Crime Unit, Appendix D, Examples of files affected by federal re-engineering.

\footnotesize{102} Closing submissions, Government of Canada, July 9, 2021, p 64; Exhibit 868, Money Laundering / Proceeds of Crime Presentation, p 2.
groups (Group 1 and Group 2), which together make up the RCMP’s Financial Integrity Program.103

Group 1 is made up of two separate teams: the Integrated Market Enforcement Team (IMET) and the Sensitive Investigations Unit (SIU). Neither of these teams has a specific money laundering mandate (though money laundering issues may arise in the course of their investigations, and they have been directed to consider money laundering charges at the outset of each investigation).104

IMET has a mandate to detect, deter, and investigate capital market fraud that is of regional or national significance and that poses a threat to investor confidence, economic stability, and the integrity of capital markets.105 It has an authorized strength of 27 positions (though there have been staffing problems within the unit and only 15 of these positions were occupied in March 2021).106 IMET receives “fenced” funding from the federal government and its files are prioritized within “E” Division (as opposed to the federal prioritization process).107 At the time of writing, it has 14 active investigations, many of which have been referred by federal and provincial partners such as the BC Securities Commission.108

While money laundering is not part of its core mandate, there appears to be a genuine desire to build in a money laundering component to its investigations, in accordance with the directive made by Deputy Commissioner Michael Duheme on February 4, 2020.109

SIU has a mandate to investigate “sensitive” files such as breach of trust, corruption, fraud, and similar offences involving government officials and employees in British Columbia. It also has a mandate to investigate threats directed towards government institutions that imperil political, economic, or social integrity.110 Like IMET, its files are prioritized within “E” Division and are not subject to the federal prioritization process.
SIU has an authorized strength of 28 positions (19 of which were occupied at the time of writing) and has 11 active investigations.111

Group 2 is made up of two teams with a specific focus on money laundering (Money Laundering Teams 1 and 2).112 It also includes an Asset Forfeiture Unit, made up of three members, which is responsible for referring files to the Civil Forfeiture Office.

Money Laundering Team 1 has an authorized strength of 19 positions, focuses on regional files and works with various partner agencies within Canada.113 It is also responsible for tracking and undertaking cryptocurrency and cyber-related financial transaction investigations.114

Money Laundering Team 2 has an authorized strength of 25 positions, has more of an international focus, and works with international partners to target individuals tied to transnational criminal networks.115

At the time of writing, 17 of 19 positions were occupied within Money Laundering Team 1, and 21 of 25 positions were occupied within Money Laundering Team 2.116 This is a significant improvement from the situation from 2015 to 2020, when less than half of those positions were filled and there was a significant draw on those resources for other federal priorities.117

I heard also evidence that there has been a “positive increase, not only in the capacity and the training, but … overall in the mindset and the satisfaction of the work that's being done within the unit” and that there are “a lot of very confident investigators out there right now that are ready to take on some significant files.”118

While I am encouraged by these developments, it is important to note that the renewed focus on money laundering is very recent, much of it being announced in the context of the public scrutiny of this Commission, and has yet to yield any tangible results. It remains to be seen whether these resourcing levels will be maintained once the work of the Commission is over and the attention of law enforcement turns to other matters.

---

111 Exhibit 856, FSOC Presentation, slides 3, 6.
112 I understand that the recently created Integrated Money Laundering Investigation Team will also be housed within Group 2 of the Financial Integrity Unit. I discuss those teams in the section below.
113 Exhibit 856, FSOC Presentation, slide 16; Evidence of T. Farahbakhchian, Transcript, April 15, 2021, pp 42–43.
114 While Team 1 was previously known as the Project Development Unit and was tasked with evaluating and proposing potential projects for investigation, it has always been responsible for the review and evaluation of money laundering files (though the recent “rebranding” seems to have sharpened its focus on money laundering): Evidence of T. Farahbakhchian, Transcript, April 15, 2021, pp 42–48.
115 Exhibit 856, FSOC Presentation, slide 17; Evidence of T. Farahbakhchian, Transcript, April 15, 2021, pp 42–43.
116 Exhibit 856, FSOC Presentation, slides 16–17.
117 Note, however, that VPD secondments account for four of the positions in Money Laundering Team 1 and Money Laundering Team 2 (with two officers assigned to each of those teams): Evidence of T. Farahbakhchian, Transcript, April 15, 2021, p 46.
118 Evidence of B. Taylor, Transcript, April 16, 2021, pp 75–77. See also Evidence of P. Payne, Transcript, April 16, 2021, p 102 (“So the RCMP is taking this rather seriously. It is a priority”).
The IMLIT Initiative

On December 17, 2020, the RCMP announced that it would be using a portion of the money allocated to the RCMP in Budget 2019 to create Integrated Money Laundering Investigative teams (IMLITs) in Ontario, Quebec, Alberta, and British Columbia.

Five investigator positions were created in each of these provinces and one position was created at national headquarters. In British Columbia, four of these investigators will be working alongside investigators from Money Laundering Team 1 and 2 in the Financial Integrity Unit and one of the investigators has been assigned to the Counter Illicit Finance Alliance (CIFA; discussed below). The RCMP has also invested in data scientists and other support teams.

I understand that the mandate of these units is to build integrated partnerships with municipal and provincial partners – as well as federal agencies such as the Canada Revenue Agency (CRA), Canada Border Services Agency, and the Public Prosecution Service of Canada – and increase enforcement actions against targeted organized crime groups through the removal of their assets.

While the IMLIT initiative is a step in the right direction, a 2021 IMLIT work plan acknowledges that federal policing will “still require far more of a shift in focus to get the results it needs” and that additional resources will be needed to achieve any tangible results. Others are more cynical and suggest that adding five new resources will not have any real impact when there are already 160 vacancies in federal policing:

My understanding of the IMLIT proposal is approximately $20 million spread over five years in four provinces. I think the numbers that I've recently seen indicate a 22R CIFA initiative that was born here but is now being managed by the RCMP and then three additional resources into federal policing. That's five resources. There's already 160 vacancies in federal policing. It's not going to do anything.

If you add a little expertise, I suppose, but at the end of the day ... it gets absorbed into this big giant pond, then I think that that is inherently the problem ... you know, there's very little that two or three people can actually accomplish.

I appreciate that there remain a large number of vacancies in federal policing and it is obvious that the addition of four new investigators in British Columbia is unlikely to have any drastic impact on the investigation and prosecution of money

119 Exhibit 859, “E” Division Criminal Operations Chart (March 15, 2021); Evidence of B. Taylor, Transcript, April 16, 2021, p 70; Evidence of P. Payne, Transcript, April 16, 2021, p 161. I also understand that CRA has committed one resource for the IMLIT team in British Columbia.

120 Evidence of P. Payne, Transcript, April 16, 2021, p 111.

121 Exhibit 872, 2021 IMLIT Way Forward, p 1. See also Exhibit 849, Letter from Bill Blair to David Eby (December 10, 2020).

laundering offences. At the same time, the total number of investigators assigned to money laundering and proceeds of crime issues, including those assigned to Money Laundering Teams 1 and 2, is now approaching the levels seen in the IPOC days.124

While I am encouraged by the renewed focus on money laundering at the federal level, I believe that more is required to respond to the significant – and perhaps unique – money laundering vulnerabilities in this province. I am deeply concerned by the apparent disconnect between the priorities of the RCMP federal police service and law enforcement needs in this province over the past 10 years. If not obvious from my earlier comments, I also have concerns that the RCMP's newfound commitment to money laundering / proceeds of crime issues may be short-lived, and that current resourcing levels will not be maintained once the work of the Commission is over.

In light of the significant benefits that flow from prioritizing money laundering and proceeds of crime issues, it is my sincere hope that the federal government will continue to focus on this issue and add the additional resources needed to achieve tangible law enforcement results. However, it is essential for the province to take matters into its own hands and ensure that the unique money laundering / proceeds of crime issues that arise in this province are properly addressed.

I therefore recommend that the Province create a dedicated provincial anti-money laundering intelligence and investigation unit to lead the law enforcement response to money laundering in this province by (a) identifying, investigating, and disrupting sophisticated money laundering activity, and (b) training and otherwise supporting other investigators in the investigation of the money laundering / proceeds of crime offences.125

**Recommendation 91:** I recommend that the Province create a dedicated provincial money laundering intelligence and investigation unit to lead the law enforcement response to money laundering in this province by (a) identifying, investigating, and disrupting sophisticated money laundering activity, and (b) training and otherwise supporting other investigators in the investigation of the money laundering and proceeds of crime offences.

I also recommend that the AML Commissioner (discussed in Chapter 8) as well as the Policing and Security Branch make best efforts to monitor the response to money laundering within the RCMP federal police service by seeking detailed metrics concerning the resources dedicated to money laundering investigations, the number of money laundering investigations undertaken by the RCMP, and the results of those investigations.

---

124 At their height, these units comprised at least 50 investigators. However, it is important to note that the C-22 team responsible for conducting money laundering investigations comprised five investigators who undertook money laundering investigations with support from other members of the IPOC units.

125 I return to what I consider to be the essential elements of that unit in Chapter 41.
Recommendation 92: I recommend that the AML Commissioner and the Policing and Security Branch make best efforts to monitor the response to money laundering within the RCMP federal police service by seeking detailed metrics concerning the resources dedicated to money laundering investigations, the number of money laundering investigations undertaken by the RCMP, and the results of those investigations.

One way those metrics could be provided without compromising the integrity of ongoing investigations is for the RCMP to publish annual reports concerning the resources dedicated to money laundering and the performance of those units.

While I appreciate the cost associated with the creation of a specialized money laundering intelligence and investigation unit, I strongly believe that the new asset forfeiture opportunities created by the implementation of these measures will offset, if not exceed, the cost of the new unit and result in a net financial gain for the province.

Other Federal Initiatives

Three other RCMP initiatives play a role in the federal response to money laundering: the Anti–Money Laundering Action, Coordination and Enforcement team; the Counter Illicit Finance Alliance; and the Trade Fraud and Trade-Based Money Laundering Centre of Expertise.

The Anti–Money Laundering Action, Coordination, and Enforcement Team

The Anti–Money Laundering Action, Coordination, and Enforcement (ACE) team was created as a pilot project to bring together experts from intelligence and law enforcement agencies to identify significant money laundering and financial crime threats and to strengthen inter-agency cooperation and coordination.126

In the first phase of the pilot project, the ACE team consulted with Canadian and international partners and used the information collected during that process to guide it during the second phase of the project (the operational phase).127

In the second phase of the project, the ACE team was renamed the Financial Crime Coordination Centre (FC3) to better reflect its role – namely, to coordinate support to anti–money laundering operational partners, including law enforcement bodies.128

While the second phase of the project is still in the planning stage, FC3 plans to offer support to anti–money laundering partners in three main areas: policy, training, and operations. FC3’s policy support role will be focused on working with operational partners to modify and develop anti–money laundering strategies, legislation, and

---

126 Exhibit 1019, Affidavit #1 of Lesley Soper, May 11, 2021, para 5.
127 Ibid, para 10.
policies. FC3’s training role aims to support the development of financial crime knowledge, skills, and expertise by providing anti-money laundering partners with greater access to training programs.\footnote{Ibid, paras 16–17, 20.} I understand that one of the initiatives being undertaken by FC3 is to host a national-level anti-money laundering conference for those who work in financial crime enforcement or prosecution services at the federal, provincial, and municipal level.\footnote{Ibid, para 22.}

FC3’s operational support role will focus on providing its partners with the support they require to undertake financial crime investigations effectively. These activities may include assistance in accessing federal support services such as forensic accounting services and the development of subject matter experts who can assist and provide guidance to partners on specific issues.\footnote{Ibid, paras 23–24.}

While it remains to be seen whether this initiative will be able to provide any meaningful assistance, the development of subject matter experts who can provide assistance to law enforcement bodies and regulators has been an invaluable tool in guiding money laundering investigations in other countries.

Training programs aimed at improving financial crime knowledge may also strengthen the effectiveness of anti-money laundering initiatives, and I would encourage FC3 to develop basic training programs aimed at front-line investigators, in addition to advanced courses for experienced financial crime investigators. Such programs will enhance the ability of those involved in the investigation of predicate offences to conduct effective financial crime investigations at the same time they are investigating the predicate offence (an approach that has a number of significant benefits, including the disruption of organized criminal activity).

\textit{Counter Illicit Finance Alliance of British Columbia}

CIFA is a financial information sharing partnership that evolved out of two previous initiatives spearheaded by Sergeant Ben Robinson: the Bank Draft Intelligence Probe and Project Athena.

The Bank Draft Intelligence Probe was an intelligence probe conducted by CFSEU in the aftermath of Dr. German’s interim recommendation that gaming service providers complete a source of funds declaration whenever they receive cash deposits or bearer bonds in excess of $10,000.

While that recommendation was intended to stem the flow of illicit funds into BC casinos, CFSEU continued to have concerns about the anonymity and transferability of bank drafts, including the fact that most financial institutions did not include the name of the purchaser or the account number from which the funds were sourced on the
In March and April 2018, CFSEU analyzed bank drafts received at BC casinos in January and February of that year. It also contacted the financial institutions that issued those bank drafts to determine whether the person presenting the bank draft at the casino held an account with that financial institution. While the analysis revealed that most casino patrons had an account at the financial institution that issued the bank draft, it uncovered a number of discrepancies in the source-of-funds declarations completed by casino patrons when they made large cash buy-ins at BC casinos. For example, the analysis revealed that parts of the source-of-funds declarations were not fully complete and that casino patrons were often including the bank draft number rather than the account number from which the funds were sourced on the declaration.

A briefing note prepared by GPEB in December 2018 summarizes the concerns associated with bank drafts as follows:

Both JIGIT [the Joint Illegal Gaming Investigation Team] and CFSEU-BC have expressed concerns with the risk presented by bank drafts and the process in place to establish the source of funds. There is concern that due to the limited information on bank drafts and a policy that permits patrons to write-in missing information (e.g., account name and number) onto receipts, bank drafts can be passed from underground service providers to casino patrons who are not the account holder.

In May 2018, CFSEU hosted a meeting with financial institutions, BCLC, and GPEB, where it shared its concerns about the exploitation of bank drafts and facilitated a round-table discussion about the use of bank drafts in BC casinos. One of the solutions proposed during the discussion was to put the purchaser’s name on the front of the bank draft to reduce anonymity. The meeting also had the effect of raising awareness of the issue, which allowed stakeholders to be on alert for it and report any concerns to FINTRAC.

In order to streamline the reporting process, the RCMP renamed the intelligence probe Project Athena and reporting entities were asked to identify the typology as “Project Athena” in submitting reports to FINTRAC.

---

132 At the time, CIBC was the only major bank that included this information on its bank drafts.
134 Ibid, p 50.
135 Exhibit 841, GPEB Briefing Note – Bank Drafts and Source of Funds Update (December 28, 2018), p 2. Importantly, Sgt. Robinson testified that other aspects of these source-of-funds declarations piqued his interest as an investigator, including full sections missing, entries in multiple different colours of ink, and items crossed out: Transcript, April 14, 2021, p 50.
137 Ibid.
The rationale for the name was to assist FINTRAC in identifying the reports that were being filed by reporting entities. So one important part to emphasize here is that between the naming of Project Athena, there was a meeting that took place between the stakeholders that each had a varied view on the problem. So we brought together GPEB, BCLC and financial institutions and CFSEU presented what the problem was. And as a result of that discussion ... that meeting, we talked about anonymity of bank drafts, and one of the solutions that was presented ... to reduce the anonymity of bank drafts was to put the purchaser’s name on the front of the draft.

With respect to the part about Project Athena and the naming of Project Athena was that now that reporting entities were aware of the typology and the activity, they could now ... be on alert for it and they could file reports. And when those reports were filed ... it’s helpful for FINTRAC to be able to sort them and to identify them as a Project Athena typology.139

On October 24, 2018, CFSEU hosted the inaugural Project Athena meeting at “E” Division headquarters. Present at the meeting were representatives from CFSEU, BCLC, GPEB, FINTRAC, CRA, and a number of major financial institutions.140

One of the items discussed at that meeting was the exchange of tactical information relating to the exploitation of bank drafts (i.e., the exchange of information with respect to specific individuals and bank drafts). As I understand it, the anticipated flow of information was as follows:

• BCLC would provide CFSEU with information concerning the suspicious use of bank drafts at BC casinos;

• CFSEU would analyze that information and seek information from financial institutions as to whether the individual in possession of a suspicious bank draft held an account with the issuing financial institution;141

• CFSEU would share that information with BCLC, which could conduct an investigation into the use of that bank draft and, where appropriate, file a suspicious transaction report with FINTRAC;

• the financial institution that issued the bank draft could conduct its own investigation and, where appropriate, file a suspicious transaction report with FINTRAC;

• where the statutory pre-conditions were met, FINTRAC would share relevant information concerning the bank draft (or the person in possession of the bank draft) with CFSEU and other law enforcement bodies; or

139 Ibid, pp 51–52.
140 Exhibit 840, CFSEU, Project Athena Stakeholders Meeting Presentation (October 24, 2018) [Project Athena Presentation], slide 9.
141 Typically, a bank draft would be flagged as suspicious when the casino patron was presenting bank drafts from multiple financial institutions or a high total volume from a single financial institution.
• CFSEU could submit a voluntary information record to FINTRAC with respect to a suspicious transaction and share any information received from FINTRAC with BCLC and/or the financial institution that issued the bank draft.¹⁴²

While participation was strictly voluntary, it is easy to see how the exchange of tactical information in this manner would assist all parties in identifying suspicious transactions. From a law enforcement perspective, knowing whether a particular customer has an account with the financial institution that issued the bank draft allows investigators to focus their efforts on bank drafts that are truly suspicious (rather than sorting through every bank draft tendered at BC casinos in an attempt to identify suspicious conduct).

It also creates a more efficient and effective reporting regime in which BCLC and individual financial institutions are able to file reports in relation to conduct that is truly suspicious and flag those reports in a way that ensures they are brought to the attention of the proper law enforcement agency.

As a result of these efforts, CFSEU received numerous FINTRAC disclosures related to the use of bank drafts at BC casinos and reviewed these disclosures to determine next steps. Sergeant Paddon described the process of analyzing these disclosures as follows:

So as a result of STRs that were filed from the banks to FINTRAC under Project Athena, FINTRAC … would then forward FINTRAC disclosures to me … I would go through each FINTRAC disclosure … looking at the gambler [and] … the banking activity of what that gambler was doing.

…

[A]fter looking at each FINTRAC disclosure, we would establish what we were going to do with it, what was going to be the next process we were going to go through. Some of them looked somewhat legit. It was just their banking activity, so they were put aside. Other ones were identified that may be suspect or were clearly layering in the money laundering process, and then they would be spin-off files. We would open separate files for each of those gamblers and we would look at investigating them further.

Of the [ones] identified for interviews, we would work with GPEB. GPEB would deal with BCLC as well. Sometimes BCLC would interview the patron themselves. Other times, if it was an investigative process, we were looking at them possibly for money laundering, we would actually organize an interview to have them come in and then we would interview them and ask them … what was going on in their banking activity.

…

¹⁴² Transcript, April 14, 2021, pp 55–56; Exhibit 840, Project Athena Presentation, slide 10.
Sometimes other detachments would have a money laundering investigation or a cash seizure at the casinos or whatever it was, and then they would ask me to share the FINTRAC disclosure or talk about what it was...they had FINTRAC disclosures they actually obtained, and then I would help them to analyze what was in them.

There were four lawyers identified in some of the FINTRAC disclosures, two notary publics, and there was a number of...car dealerships and other things.143

In my view, the success of this initiative in raising awareness of the issue among stakeholders, putting in place preventive measures such as the inclusion of the purchaser's name and account number on bank drafts, and generating actionable intelligence with respect to the misuse of bank drafts illustrates the value of strategic and tactical information sharing in responding to the money laundering threat. At the same time, it is important to note that the ultimate success of information-sharing initiatives such as Project Athena will depend on whether law enforcement has sufficient resources to act on the intelligence generated through these initiatives.

In mid- to late 2019, the decision was made to expand the scope of Project Athena to include other money laundering typologies in other sectors of the economy, including real estate and luxury vehicles. While the expansion of Project Athena to these sectors was soon suspended in favour of a more permanent information-sharing partnership (see below), Sergeant Paddon’s laudable efforts to develop strategic intelligence with respect to the luxury vehicle sector are deserving of mention.

After being chosen to lead the luxury vehicle subgroup, Sergeant Paddon conducted wide-ranging interviews with representatives of legitimate, well-respected luxury vehicle dealerships, as well as dealerships that were frequently mentioned on suspicious transaction reports, to determine whether there was any difference in the way they were conducting business.144 Her analysis revealed that the more reputable dealerships took a 5 percent deposit, with the remainder of the purchase price being paid with certified cheques, credit cards, and bank drafts (all of which can be traced). Moreover, they always confirmed the source of funds used to pay the purchase price by calling the bank to confirm that the purchaser of the bank draft was, in fact, the person purchasing the vehicle.145

By contrast, the less reputable dealerships would routinely take 20 percent in deposits and rarely conducted any due diligence in relation to the source of funds used to pay the purchase price (taking the position that it was for the bank to do that work). They often had multiple bank accounts, held their inventory off-site in order to create distance between themselves and the vehicle, and used leasing companies operating under different names in different locations. One dealer even complained

143 Transcript, April 14, 2021, pp 78–81.
144 Evidence of M. Paddon, Transcript, April 14, 2021, pp 88–89.
that the Cullen Commission was causing him to lose a great deal of revenue from his customers.\textsuperscript{146}

Sergeant Paddon presented the results of her analysis at the first (and only) meeting of the luxury vehicle subgroup, which included stakeholders such as RBC, HSBC, ICBC, the Vehicle Sales Authority, the New Car Dealership Association of British Columbia, CBSA, CRA, the Criminal Intelligence Service and the Automobile Retailers Association. Based on the minutes of that meeting, it appears there was a wide-ranging and productive discussion about regulatory gaps and the steps that could be taken to strengthen the anti-money laundering regime as it relates to luxury vehicles.\textsuperscript{147}

In my view, the extraordinary work undertaken by Sergeant Paddon illustrates the potential value of enforcement-led information sharing partnerships in identifying regulatory gaps and addressing money laundering vulnerabilities in various sectors of the economy.

In late 2019, the RCMP and CFSEU came to the realization that Project Athena was not sustainable in light of the demands presented, the number of resources dedicated to the project, and the level of oversight needed for a project of this nature. A February 13, 2020, RCMP report describes Project Athena as a “corner of the desk initiative” and states that the rapid expansion of Project Athena “exposed the Project’s need for defined structure, clear governance, and co-ordination among participants – both internally and externally.”\textsuperscript{148} In more concrete terms, Sergeant Robinson testified that nobody was “seconded” to Project Athena specifically and that it was being run by a few dedicated officers within CFSEU in addition to their other responsibilities:

This all started with the bank draft intelligence probe, which was understanding source of fund declarations and ... identifying criminality. Soon we found that there was incredible interest from other stakeholders in this type of forum and it grew and it grew. All the while in my case as a team leader at JIGIT managing a team of investigators and investigations. So it was a corner of the desk, and we did our best with Sgt. Paddon and Ben Granger and GPEB resources assigned to CFSEU JIGIT to maintain Project Athena operations. But it was a very heavy lift.\textsuperscript{149}

In light of these concerns, the RCMP decided to suspend the expansion of Project Athena and transition it into a permanent information-sharing partnership within

\textsuperscript{146} Ibid, pp 92–94.

\textsuperscript{147} Exhibit 844, Project Athena – High End Luxury Vehicle Working Group Minutes (January 22, 2020). Sgt. Paddon also presented a “case scenario” to the group to solicit feedback on what each of the stakeholders could do to assist the investigation; Transcript, April 14, 2021, p 90; Exhibit 843, Luxury Vehicle Case Scenario. A full description of money laundering risks that arise in the luxury vehicle sector, along with measures that could be taken to address those risks, is set out in Chapter 35.

\textsuperscript{148} Exhibit 846, RCMP Investigational Planning and Report, Project Athena (February 13, 2020), p 1.

\textsuperscript{149} Transcript, April 14, 2021, p 86. Similarly, Sgt. Paddon testified that “we were all running other files and investigations off the side of our desk” and it was “a lot of work for us to continue maintaining and keeping up with [Project] Athena on top of other tasks and priorities”: ibid, p 87.
federal policing known as the Counter Illicit Finance Alliance. A report dated April 9, 2021, on the new initiative states that “[t]he experiences from Project Athena highlighted the need for a formalized [information-sharing partnership] with a clearly defined structure, strategic objectives, governance model, and operational process” but indicates that the three “pillars” of the initiative remain the same:

- prevention of money laundering activity by raising awareness and improving understanding among stakeholders;
- identification of money laundering risks and threats; and
- disruption of money laundering activity.

While I appreciate the need to lay the necessary groundwork for a national information-sharing partnership, I have serious concerns about the extent to which the original concept has been watered down. First, it appears the analytical work associated with the information-sharing partnership will no longer be done by law enforcement and that the RCMP will be relying on its partners to carry out that work. Second, and most significantly, it appears that CIFA is only intended to be a strategic information-sharing partnership and will not be engaging in any tactical information sharing (at least in the short term). Sergeant Robinson testified that the only information that will be shared within CIFA is “strategic general information.” Moreover, the April 9, 2021, report discussed above warns that expectations need to “tempered” in light of that reality:

[T]he type of information being shared at CIFA-BC, namely strategic information, holds certain implications for outcomes. Traditionally, public-private tactical information sharing is the most direct means of supporting law enforcement and disruption efforts across international FISP [financial information sharing partnership] models. Without a tactical component, the path to progress intelligence generated at FISPs to law enforcement investigations becomes less linear. As a law enforcement led initiative, expectations for CIFA-BC results may steer towards traditional enforcement-centric outcomes that include quantitative measures of investigations, prosecutions, and charges. Potential misunderstandings around traditional outcomes stem from a mismatch between the type of input needed for enforcement-centric outcomes (i.e. tactical public-private information sharing) and the type of input currently possible given understandings of provincial and national legislative frameworks in place (i.e. strategic public-private information sharing). As a strategic information sharing public-private partnership, the correlation between the type of information shared at CIFA-BC and the outcomes that are produced as a result,
will conceivably be less traditional and expectations will need to be tempered accordingly. [Emphasis added.]  

I see both elements (analytical work by law enforcement and tactical information sharing between public- and private-sector entities) as being critical to the initial success of Project Athena, and I am not persuaded that the new model will be as effective as the Project Athena model in the identification and disruption of money laundering activity.

I am strengthened in that view by the evidence of Nicholas Maxwell, one of the world’s leading experts on public-private financial information-sharing partnerships. Mr. Maxwell repeatedly emphasized the need for law enforcement to provide strategic and tactical insight to reporting entities in order to guide the collection of intelligence with respect to money laundering. He also stressed the need for ongoing assessment and analysis of tactical information by law enforcement in order to inform the direction and collection of further intelligence by reporting entities:

[A]nyone that’s familiar with an intelligence cycle knows that the direction needs to inform the collection of intelligence, and viewed as an intelligence asset, reporting entities are the collection arm. So they are meant to report what’s happening in the real world and then it needs to be assessed, generated into intelligence and understood by the users, whether they are decision-makers or operational stakeholders, and then that informs further direction and further collection.

So there’s no direction of collection in this cycle. It’s not a cycle. The reporting entities stand there in isolation, not able to speak to each other, not able to get insights, tactical level insights from public agencies and try to their best to look at their data and find all crime as it might come through as money laundering. And then they never hear anything back. So it’s a black box situation where the reports are filed and they don’t get any feedback. So any system that doesn’t have feedback is unable to improve and that is why we describe the system as fundamentally broken from the perspective of an intelligence cycle and it’s certainly built backwards in terms of direction happening within the individual reporting entities in isolation and a lack of any form of tactical direction.

Mr. Maxwell went on to explain that the absence of a legal gateway for tactical information sharing between public- and private-sector entities has led to a disjointed and ultimately ineffective anti–money laundering regime:

[F]undamentally these reporting entities are part of the AML/ATF [anti–money laundering / anti–terrorist financing] system, they are required to
identify crime, so if you don’t assist them in that process then they are going to be less effective. And when crimes are priorities and you have particular crimes of concern, money laundering issues of concern in British Columbia and there isn’t a process for those priorities to inform the collection process, at the strategic level we talked about prioritization but at a tactical level, your law enforcement officers who are working on serious organized crime in British Columbia should be able to understand for intelligence purposes what the financial intelligence AML/ATF system has in terms of relevant information to their investigation. That’s the whole point of the AML/ATF regime, that it provides useful information to law enforcement. But your law enforcement officers are not able to request any specific information. They are not able to outside of a production order for evidence where they must already know that the financial institution holds the account. They are not able to share tactical information with specific financial institutions or other reporting entities to allow those reporting entities to be responsive to the law enforcement collection requirements, so that is why the flow of information is so disjointed and ultimately the effectiveness and challenges that we see in terms of the lack of ability for the Canadian regime to demonstrate effective results in a large part are due to this lack of information sharing and lack of a cycle that really is fit for purpose. [Emphasis added.]158

While I appreciate the constitutional concerns that arise in this context, I have concluded that more must be done to explore constitutionally permissible ways of developing actionable intelligence that is responsive to the needs of law enforcement agencies.159 I return to this topic below in discussing the creation of the specialized provincial money laundering intelligence and investigation unit.

**Trade Fraud and Trade-Based Money Laundering Centre of Expertise**

The Trade Fraud and Trade-Based Money Laundering Centre of Expertise is a federal initiative aimed at strengthening Canada’s response to trade-based money laundering. A full discussion of this initiative, along with its potential value in addressing the risks associated with trade-based money laundering, is set out in Chapter 38.

**Provincial Policing**

In British Columbia, two government officials have primary responsibility for policing and law enforcement: the minister of public safety and solicitor general (minister of public safety) and the director of police services. The minister of public safety is the highest law enforcement official in the province and has a statutory duty to maintain an “adequate and effective” level of policing.160 The director of police services has

---

159 For a discussion of the constitutional concerns that arise in this context, see Chapter 7.
160 Police Act, s 2. See also Evidence of W. Rideout, April 6, 2021, pp 8–9.
statutory responsibility for superintending police and law enforcement functions, including the responsibilities set out in section 40(1) of the Police Act, RSBC 1996, c 367. The director also holds the position of assistant deputy minister and is responsible for the Policing and Security Branch.\textsuperscript{161}

The Police Act allows the minister of public safety (with assistance from the director of police services and the Policing and Security Branch) to establish priorities, goals, and objectives for policing and law enforcement agencies in British Columbia.\textsuperscript{162} However, these individuals are not involved in the operational management of the provincial police force or the establishment of tactical priorities. These are established independently by senior police officers in line with their constitutionally protected independence.\textsuperscript{163}

In what follows, I review the mandate and structure of the provincial police service in British Columbia, along with a number of specialized agencies created by the province.

**RCMP Provincial Police Service**

Since at least the 1950s, the Province has chosen to provide provincial police services through a series of agreements with the federal government (Police Service Agreements).\textsuperscript{164} The agreements contemplate that the federal and provincial government will share the costs of provincial policing, with the RCMP providing provincial police services in addition to its federal policing responsibilities.\textsuperscript{165} In the current iteration of the Police Service Agreement, these costs are shared on a 70/30 basis, with the Province reimbursing the federal government for 70 percent of the costs of providing a provincial police service.\textsuperscript{166}

While a full review of that agreement is beyond the scope of this Report, a few aspects of it have particular relevance to the work of the Commission.

**Purpose, Term, and Scope**

The overall purpose of the Police Service Agreement is to have the federal government “provide and maintain” a provincial police service within the province.\textsuperscript{167}

The preamble states that “[c]ontract policing is recognized as an increasingly effective national policing model to address the cross-jurisdictional (i.e., municipal, provincial, territorial, national and international) and evolving nature of crime.”\textsuperscript{168}

\begin{flushleft}
\textsuperscript{161} Ibid, p 9. \\
\textsuperscript{162} Police Act, s 2.1. \\
\textsuperscript{163} Exhibit 790, Email from Lori Wanamaker to Clayton Pecknold, re fwd German Money Laundering (December 15, 2018), p 3. \\
\textsuperscript{164} Evidence of W. Rideout, April 6, 2021, p 10. \\
\textsuperscript{165} Importantly, however, the Police Act also gives the Province the ability to establish a designated policing unit to provide policing and law enforcement services “in place of or supplemental to the policing and law enforcement otherwise provided by the provincial police force” (s 4.1). \\
\textsuperscript{166} Exhibit 788, Province of British Columbia, Provincial Police Service Agreement (April 1, 2012) [Police Service Agreement], art 11.1. \\
\textsuperscript{167} Exhibit 788, Police Service Agreement, art 2.1. \\
\textsuperscript{168} Ibid, p 5.
\end{flushleft}
It also states that both the federal and provincial government receive benefits from the RCMP acting as the provincial police service by:

i. facilitating the flow of intelligence between all levels of policing;

ii. having a direct connection, though the RCMP, between municipal, provincial, territorial, national and international policing that is important to modern policing and the security of provincial infrastructure and communities;

iii. promoting Canadian sovereignty through the RCMP's presence across Canada including in isolated communities and at Canada's borders;

iv. having RCMP members available for redeployment;

v. sharing the costs and use of common police and administrative services; and

vi. having a professional, efficient and effective police service that reflects reasonable expenses for operating and maintaining a police service.169

The agreement was signed on April 1, 2012, and has a 20-year term that expires on March 31, 2032, though it can be extended or renewed for an additional period on terms agreed to by the parties.170 There is also provision for the agreement to be terminated by either party by giving notice to the other party not less than two years before the termination date.171

At present, the services provided by the RCMP include (a) general police services, such as the investigation and prevention of gang and gun violence, and (b) detachment policing (defined as the provision of local police services to municipalities with a population under 5,000 as well as unincorporated areas throughout the province).172

Federal police services such as policing services of a national or international nature, national security investigation services, protective security, and services provided to federal government departments are excluded from the scope of the agreement.

So, too, are municipal police services (defined as local police services provided to municipalities with a population over 5,000), though such municipalities can enter into separate contracts with the provincial government for RCMP services (see below).173

169 Ibid.
170 Ibid, art 3.0.
171 Ibid, art 3.3. Note also that the federal government will be conducting an assessment of contract policing before the expiry of that agreement, with the result that there could be significant changes to the RCMP's policing agreements before the expiry of the 20-year term.
172 Exhibit 789, Police Resources in British Columbia, pp 2–3.
173 Ibid, p 3. See also Exhibit 788, Police Service Agreement, art 10.2.
Objectives, Goals, and Priorities

Articles 6 and 7 of the Police Service Agreement provide that the minister of public safety will set the “objectives, priorities and goals” of the provincial police service and that the commanding officer of the RCMP provincial police service will “act under the direction of the [minister of public safety]” and “implement the objectives, priorities and goals as determined by the [minister of public safety] to the extent practicable.”¹⁷⁴

In practice, these objectives, priorities, and goals are communicated to the RCMP through a formal letter to the commanding officer of the provincial police service.¹⁷⁵ However, there are a number of formal and informal mechanisms in place by which the Policing and Security Branch communicates with the RCMP to “assess the evolving nature of crime and pressures that are facing the RCMP.”¹⁷⁶ In some cases, these mechanisms also allow the Policing and Security Branch to track progress on the objectives, priorities, and goals set by the minister of public safety.¹⁷⁷

Overall, I am satisfied that there is a high level of engagement between the RCMP provincial police force and the Policing and Security Branch with respect to the objectives, priorities, and goals of the RCMP provincial police service (though there remains a fundamental disconnect between the objectives, priorities, and goals of the RCMP federal police service and criminal activity in the province). The bigger problem in relation to the provincial police force seems to be one of resourcing.

Over the past 10 years, provincial priorities have largely been focused on organized crime, guns and gang violence, and the opioid crisis.¹⁷⁸ It does not appear that money laundering has ever been identified as a priority for the provincial police service (though there is evidence that the Policing and Security Branch has sought to deal with that issue as part of its overall organized crime strategy).¹⁷⁹ It is also important to recognize the significant pressures on the provincial police force during that period.

Not only was the province in the midst of a very serious gang violence problem, in which sophisticated organized crime groups were engaging in open air violence, but the provincial police force was required to “lean in heavily” to assist the federal force in the aftermath of the deficit reduction action plan and the national security surge that occurred in or around 2014.¹⁸⁰ There were also a large number of prosecutions for

¹⁷⁴ Ibid, arts 6, 7.
¹⁷⁵ For example, see Exhibit 791, Briefing Note to Mike Farnworth, Minister of Public Safety and Solicitor General, re Organized Crime Priorities (April 30, 2018).
¹⁷⁶ Evidence of W. Rideout, April 6, 2021, p 29. See also Evidence of C. Pecknold, Transcript, April 6, 2021, pp 31–32, where he discusses information sharing through formal committee structures and reporting through the contract policing group, as well as informal processes with senior leadership of the RCMP.
¹⁷⁷ Evidence of W. Rideout, Transcript, April 6, 2021, pp 28–31. The Police Service Agreement also requires the commanding officer of the RCMP provincial police service to produce an annual report to the minister of public safety regarding the implementation of the Province’s objectives, priorities, and goals for the provincial police service: Exhibit 788, Police Service Agreement, art 7.2.
¹⁷⁹ Ibid, p 36.
major offences such as murder, conspiracy, and kidnapping, which were a significant draw on police resources. All of these pressures must be considered in evaluating the law enforcement response to money laundering at the provincial level and in making recommendations. That said, the failure to attach any meaningful priority to money laundering resulted in a lost opportunity to disrupt the organized crime groups fuelling many of the issues that the RCMP provincial police force had to address.

Resourcing

One of the principal challenges in provincial policing is ensuring that sufficient resources are in place to meet the objectives set by the minister of public safety.

Annex A of the Police Service Agreement sets out the “authorized strength” of the RCMP provincial police force as agreed upon by the parties.

“Authorized strength” refers to the maximum number of positions that the federal and provincial government have committed to funding. However, it does not refer to the number of positions within the RCMP provincial police force that have been filled, and there are often a large number of vacancies within the RCMP provincial police force. Under Article 11.1 of the Police Service Agreement, the Province is required to pay 70 percent of the cost of providing and maintaining the RCMP provincial police service, with the result that it does not pay for positions that are not filled.

Since April 2012, the authorized strength of the RCMP provincial police force has been 2,602. However, there are approximately 110 vacancies in the provincial force, and there is evidence that the impact on core policing has reached “critical” levels.

Because of these shortages, the Province has to be cautious when looking to staff large units because of the “cascading effect on the provincial force” and has started to look at building some permanent legacy infrastructure within designated policing units such as the Organized Crime Agency of British Columbia (OCABC; discussed below) to ensure that these units do not have a direct impact on the provision of core provincial policing services provided by the RCMP provincial police force – such as policing in rural communities – could potentially be “hollowed out” by the creation of too many specialized agencies. Note, however, that the Province has, in recent years, been able to find ways of creating specialized units that do not detract from the provincial force: Evidence of W. Rideout, Transcript, April 6, 2021, pp 17–19.

181 Ibid, p 59.
183 Exhibit 788, Police Service Agreement.
184 Exhibit 789, Police Resources in British Columbia, p 17. RCMP contributions to specialized units such as CFSEU come out of that total, with the result that core policing services provided by the RCMP provincial police force – such as policing in rural communities – could potentially be “hollowed out” by the creation of too many specialized agencies. Note, however, that the Province has, in recent years, been able to find ways of creating specialized units that do not detract from the provincial force: Evidence of W. Rideout, Transcript, April 6, 2021, pp 17–19.
185 Evidence of W. Rideout, Transcript, April 6, 2021, pp 14, 16–17, 115–16. See also Exhibit 800, Ministry of Public Safety and Solicitor General Policing and Security Branch – Decision Note (June 7, 2019), p 4 (“The pressures and resource shortages in front–line policing and resulting risk has reached a critical point”). Note, however, that these numbers fluctuate over time and that “federal police numbers generally suffer from greater vacancy patterns than the provincial police force”: Evidence of W. Rideout, Transcript, April 6, 2021, p 16.
resources.\textsuperscript{186} Such units also allow the Province to hire police officers and civilian specialists with the proper credentials to do the work.\textsuperscript{187}

Article 5 of the Police Service Agreement allows the province to request an increase or decrease in the total authorized strength of the RCMP provincial police force. Such a request must be made in accordance with Annex B and include written confirmation that the Province will fund its share of the increase.\textsuperscript{188}

Wayne Rideout, the current director of police services, testified that increasing the authorized strength of the force is a complex process that requires the Policing and Security Branch to secure funding from both the federal and provincial government.\textsuperscript{189}

At the same time, the Province has found some success using existing vacancies within the total authorized strength to support provincial initiatives.\textsuperscript{190} In such cases, it is not necessary to seek the approval of the federal government to fill these positions. All that is required is the willingness of the Province to fund them.\textsuperscript{191}

**Emergencies and Events**

Another issue that arises in this context is the impact of provincial and federal emergencies on the ability of the RCMP provincial police force to deliver on its mandate.

Article 9.0 of the Police Service Agreement contains detailed provisions governing the redeployment of police officers in the event of a provincial or federal emergency.

If an emergency occurs in an area of provincial responsibility, the RCMP provincial police service must, at the written request of the minister of public safety, be redeployed to such an extent as is “reasonably necessary to maintain law and order, keep the peace and protect the safety of persons, property or communities.”\textsuperscript{192} If an emergency occurs in an area of federal responsibility, or in a province other than British Columbia, the federal government is entitled to temporarily withdraw up to 10 percent of the RCMP provincial police service to deal with that emergency.\textsuperscript{193}

\textsuperscript{186} Evidence of W. Rideout, Transcript, April 6, 2021, p 116–17.
\textsuperscript{187} Ibid.
\textsuperscript{188} Exhibit 788, Police Service Agreement, art 5.0.
\textsuperscript{189} Transcript, April 6, 2021, pp 21–22. See also Evidence of C. Pecknold, Transcript, April 6, 2021, p 34. On its face, article 5 of the Police Service Agreement (Exhibit 788) does not require the approval of the federal government to increase the total authorized strength of the force. However, there may be other provisions of the agreement which require federal approval before the authorized strength of the provincial force can be increased. At the very least, it appears that the approval of the federal government is a practical necessity.
\textsuperscript{190} Evidence of C. Pecknold, Transcript, April 6, 2021, p 34. For example, JIGIT was staffed using existing vacancies within the RCMP provincial police service.
\textsuperscript{191} Ibid.
\textsuperscript{192} Exhibit 788, Police Service Agreement, art 9.1. Examples include wildfires and floods.
\textsuperscript{193} Ibid, arts 9.3, 9.4.
Likewise, the federal government is entitled to temporarily withdraw up to 10 percent of the RCMP provincial police service where there is a need to use those officers in connection with a major event (defined as “an event of national or international significance that is planned in advance, within Canada, that requires additional police resources, if the overall responsibility for security for that event rests with Canada”).

While there is no doubt that the deployment of RCMP officers in these circumstances is necessary and appropriate, it has a significant impact on the core responsibilities of the RCMP provincial police service, particularly where resources are already constrained.

Proposals for Reform

In order to respond to perceived “gaps” in provincial policing, the RCMP provincial police force often develops proposals for new provincial units. These proposals are broad in nature and are normally made in response to “changing community needs, changing expectations on the police [and] changing requirements for the courts.”

In 2016, the RCMP developed a business case for the creation of a provincial financial crime unit designed to fill the gap between the large commercial frauds investigated by federal investigators and mid-level frauds that did not meet the threshold for a federal investigation but had a significant impact on vulnerable citizens in the community. While the proposal was never implemented, it provided the impetus for an exchange of proposals concerning the creation of a dedicated provincial money laundering unit.

On November 21, 2017, Clayton Pecknold, then director of police services, wrote to RCMP Deputy Commissioner Brenda Butterworth-Carr acknowledging receipt of a business case for the creation of a provincial fraud unit and advising that the province would be interested in receiving a proposal for the creation of a provincial financial integrity unit. The proposed unit would be similar in nature to the provincial fraud unit but focused on the “prevention, disruption and enforcement against organized crime infiltration, and compromise of public and private institutions critical to the British Columbia economy,” including the investigation of money laundering.

194 Ibid, arts 1.0, 9.5. Examples include security for G7 meetings and the Olympic Games.
195 Evidence of B. Taylor, Transcript, April 16, 2021, pp 10–18. Note, however, that because the RCMP has more time to prepare for the loss of resources within its core policing operations, major events have less of an impact than emergencies such as wildfires and floods.
196 Evidence of W. Rideout, Transcript, April 6, 2021, pp 92–93. Examples include the creation of an emergency response team or changing the focus of highway patrols.
197 Exhibit 796, RCMP “E” Division, Business Case Proposal for a Provincial Financial Crime Unit (November 9, 2016) is one version of this business case. However, as an iterative document, it changed over time, leaving numerous versions of the business case in circulation: see Evidence of W. Rideout, Transcript, April 6, 2021, pp 96–97; Exhibit 795, Business Case for Provincially Funded ML Unit, p 1; Exhibit 799, Ministry of Public Safety and Ministry of Attorney General, Joint Briefing Note (February 7, 2018).
198 Exhibit 798, Letter from Clayton Pecknold to Brenda Butterworth-Carr, re Request for Proposal Provincial Economic Integrity Unit (November 21, 2017), p 1; Exhibit 795, Business Case for Provincially Funded ML Unit, p 1.
On January 22, 2018, the RCMP developed a business case for the creation of a provincial financial integrity / financial crime unit comprising 38 members at an approximate annual cost of $7.7 million as well as start-up costs of $825,000.\(^\text{199}\)

Upon the release of Dr. German’s 2018 *Dirty Money* report, that proposal was updated to include a specific focus on money laundering. A “concept paper” produced by the RCMP in February 2019 states that there is currently “no dedicated agency, team or department in place within BC to organize or lead a coordinated, collaborative and focused effort around the prevention, disruption and enforcement of provincial financial crime priorities [including money laundering].”\(^\text{200}\) It goes on to state that the FSOC section is focused on national priorities dictated by Ottawa and will only address money laundering activities that occur in BC when the criminality is multi-jurisdictional or international in scope. The next level of policing would be economic crime units within municipal police departments, which are focused on smaller scale financial crimes and do not have the capacity to address regional or provincial-level issues or priorities.\(^\text{201}\)

The solution proposed in that paper is a dedicated provincial financial crimes unit that would be responsible for “identifying, engaging and bringing together various stakeholders (government, private, public, prosecution, associations and regulators) to organize and lead a coordinated / collaborative effort of addressing money laundering in BC.”\(^\text{202}\) The proposed unit would be focused on provincial priorities but would be supported by the FSOC section.\(^\text{203}\)

While that proposal was being developed, the Province was developing an “alternative” model that contemplated the creation of a provincial unit to be housed within CFSEU. The idea was to maintain the “core expert teams” designed to address gang violence but add a team of financial crime specialists to enhance its ability to disrupt organized crime and gang activity.\(^\text{204}\)

On June 7, 2019, the Policing and Security Branch sent a briefing note to the minister of public safety recommending the creation of a financial intelligence and investigations unit (FIIU) to “gather actionable intelligence for enforcement and prosecution.”\(^\text{205}\) A draft proposal indicates that the FIIU “will identify and address cases

\(^{199}\) Exhibit 804, RCMP “E” Division, Draft Proposal for a Provincial Financial Integrity / Crime Unit (January 22, 2018), pp 1–2. The proposal contemplates that these costs would be shared on a 70/30 basis, with the Province’s share of the annual costs being in the range of $5.4 million.

\(^{201}\) Ibid.

\(^{202}\) Ibid, p 2.

\(^{203}\) Ibid, p 4.

\(^{204}\) Exhibit 799, Ministry of Public Safety and Ministry of Attorney General, Joint Briefing Note (February 7, 2018), p 2.

\(^{205}\) Exhibit 800, Ministry of Public Safety and Policing and Security Branch – Decision Note (June 7, 2019); Exhibit 60, Anti–Money Laundering Financial Intelligence and Investigations Unit – Draft Proposal (May 7, 2019) [FIIU Draft Proposal], p 4.
of money laundering ... that are linked to public safety concerns and social harms.”

The proposal called for a total of 78 police and support positions and had an estimated cost of $18.5 million in the 2019–20 fiscal year (with that number decreasing somewhat in subsequent years).

While the proposal contemplated a governance model that would allow for ongoing dialogue and co-operation with national partners, it advocated for the unit to be 100 percent provincially funded and housed within the CFSEU / OCABC structure given the “historical realities” of the 70/30 cost-share structure. The proposal also suggests that tethering specialized units such as the FIIU to the federal RCMP or a provincial force would “compromise human resource capacity and expertise, staffing levels, provincial priorities, information flow, and the agility to respond to emerging issues.” Finally, it notes that the nature of the work to be undertaken by the FIIU calls for “expertise, specialists, and continuity under a provincial strategic vision that identifies and responds to BC priorities.”

In recognition of the “widely held” view that police agencies are unlikely to achieve any notable success without multidisciplinary support, the proposal recommends a multidisciplinary approach that includes various police officers, experts, and analysts broken down into two units: (a) an intelligence unit responsible for the intake, analysis, and dissemination of information; and (b) an investigative unit responsible for the investigation and disruption of money laundering offences that fall within its mandate.

The proposed intelligence unit would be made up of numerous police officers, analysts and subject-matter experts and include (among other things):

- a senior management team responsible for the overall management of the intelligence unit;
- an intake team responsible for receiving information from other law enforcement agencies, Crime Stoppers, confidential informants, mainstream media, social media, and other sources;
- an intelligence analysis support team responsible for compiling information from various open and closed sources, and assisting with the creation and analysis of intelligence work product;

---

206 Examples include the opioid crisis, gang violence, and housing affordability: Exhibit 60, FIIU Draft Proposal, p 4.
207 Ibid, p 7. Interestingly, the proposal is complementary to federal efforts to address the problem, noting that “in March 2019, the federal government made significant financial commitments towards their national priorities related to money laundering by announcing a proposal that mirrored, in many ways, this FIIU proposal.”
208 Ibid, p 15.
209 Ibid.
210 Ibid.
• a covert asset support team responsible for the recruitment, development, and management of confidential informants; and

• an administrative and operations support team responsible for human resources, IT support, media relations, and various other tasks. 212

The proposed investigative unit would primarily consist of police and investigator positions supported by forensic accountants, subject-matter experts and two embedded prosecutors (one from the federal Public Prosecution Service of Canada and the other from the BC Prosecution Service). 213

The FIIU proposal is substantially similar to the proposal made in a report prepared for the Commission by Christian Leuprecht, Jeff Simser, Arthur Cockfield, and Garry Clement, 214 which is discussed in greater detail below.

After considering these proposals, I am strengthened in my view that there is a need for a specialized money laundering unit similar to the FIIU to lead the law enforcement response to money laundering in this province. I am also persuaded that the new unit must have both an intelligence and an investigative function and should be located within the CFSEU structure to avoid “hollowing out” the RCMP provincial police force; ensure the new unit has the flexibility it needs to hire and retain officers and staff with the requisite knowledge and expertise to conduct effective money laundering investigations; and enable the Province to direct the strategic priorities of the new unit. I return to the mandate and structure of the new unit in Chapter 41.

CFSEU / OCABC

While the RCMP provincial police service is primarily responsible for provincial policing in British Columbia, there are a number of other units which perform designated, and in many cases, specialized policing functions. One such unit is CFSEU, a provincially funded law enforcement agency established to respond to the spike in gang violence in the province.

CFSEU is made up of seconded police officers from 14 police agencies, including the RCMP, the VPD, and OCABC (a designated police agency created under section 4.1 of the Police Act). 215

212 Ibid, pp 20–22.
214 Exhibit 828, Detect, Disrupt and Deter: Domestic and Global Financial Crime – A Roadmap for British Columbia (March 2021) [Leuprecht Report].
215 Section 4.1 allows the Province to create a designated policing unit to provide policing and law enforcement services “in place of or supplemental to the police and law enforcement otherwise provided by the provincial police force or a municipal police department.” It appears that the provincial officers working within the CFSEU are seconded to that unit from OCABC, with the remaining officers seconded from the RCMP or municipal police departments.
While the RCMP provides operational leadership, CFSEU has its own board of governance that is responsible for providing “policy objectives and operational strategic direction” to the officer-in-charge of CFSEU. The board of governance is accountable to the minister of public safety and includes representatives from various federal, provincial, and municipal police agencies, including the commanding officer of “E” Division (who chairs the CFSEU Board of Governance), the “E” Division criminal operations officer, the commander of the RCMP’s Lower Mainland District, and the chief constable of the VPD.

CFSEU also has stringent reporting requirements, which give the Policing and Security Branch a high degree of visibility into its operations. It is also responsible for the provincial tactical enforcement priority, a prioritization tool that allows for the identification and investigation of individuals who pose the greatest risk to public safety.

Mr. Rideout testified that the establishment of CFSEU and other similar agencies allows the province to build a “separate police agency that is integrated with the RCMP.” The RCMP contribution to these agencies comes out of the authorized strength of the RCMP provincial police force (as negotiated under the provincial Police Services Agreement). However, seconded police officers from OCABC are not taken from the RCMP provincial police force, with the result that there is less of an impact on core policing.

Joint Illegal Gaming Investigation Team

Over the past few years, the province has been exploring ways to enhance the capacity of CFSEU to allow it to take on additional issues beyond its current mandate. One example is JIGIT, a specialized unit within CFSEU that was created in April 2016 to provide a “dedicated, coordinated, multi-jurisdictional investigative and enforcement response to unlawful activities” in BC gaming facilities. A March 10, 2016, letter from the minister of public safety, Mike Morris, identifies JIGIT’s strategic objectives as “targeting and disrupting top-tier organized crime and gang involvement in illegal gaming, and the prevention of criminal attempts to legalize the proceeds of crime.

---

216 Exhibit 803, Doug LePard and Catherine Tait, Review of the Joint Illegal Gaming Investigation Team (JIGIT) (November 2020) [LePard Report], pp 72–73.
217 Exhibit 803, LePard Report, pp 72–73. The Policing and Security Branch also exercises its oversight and stewardship responsibilities by meeting twice monthly with the officer-in-charge of CFSEU and the heads of each of the fenced-funding units. It uses its annual delegation letter to ensure these units are on mandate and aligned with provincial priorities: ibid, p 77.
218 Evidence of C. Pecknold, Transcript, April 6, 2021, pp 84–85; Evidence of W. Rideout, Transcript, April 6, 2021, p 37 (“We also participate with the CFSEU board of governance and are aware on an ongoing basis as to where that particular agency is performing and we receive reports relative to that performance”).
220 Evidence of W. Rideout, Transcript, April 6, 2021, p 117.
222 Exhibit 902, Letter from Mike Morris to Michael de Jong, re Creation of JIGIT (March 10, 2016), p 1.
through gaming facilities.” It goes on to identify a secondary objective of public education with respect to the “identification and reporting of illegal gambling in British Columbia.” In many ways, JIGIT provides a model for the creation of a provincial anti-money laundering investigative unit.

JIGIT has an annual budget of $4,285,700 and consists of 22 law enforcement positions along with four investigators from GPEB. The provincial government covers 70 percent of those costs, with the federal government covering the remaining 30 percent.

While the initial plan was to create two investigative teams (one to handle long-term investigations and the other to handle “quick-hit” investigations), the lack of actionable intelligence on gaming-related offences was quickly identified as a key challenge, and a decision was made to reorganize JIGIT into a single investigative team supported by an intelligence team, which became known as the gaming intelligence and investigative unit (GIIU). Staff Sergeant Joel Hussey, unit commander of JIGIT, explained the rationale for that decision:

We noted a lack of coordinated collaborative intelligence model and we sought to change that ... we did form a team called the gaming intelligence and investigation unit, which ... allowed timely, actionable intelligence and combined the GPEB resources with our JIGIT resources. And today ... it's an intelligence hub that's effective in guiding law enforcement and GPEB in their regulatory and criminal investigations as well. So we feel we are a centralized hub for gaming intelligence that is very effective and we're very proud of that.

In carrying out its intelligence functions, the GIIU uses the Crime Analysis Search Tool (CAST) to query various police databases and cross-reference that information with information from other sources, including suspicious transaction reports and unusual financial transaction reports, to produce actionable intelligence for use by investigators.

A November 2020 report by Doug LePard and Catherine Tait (the LePard Report) concludes that JIGIT has delivered on key parts of its mandate while also developing considerable subject-matter expertise. The report goes on to state that JIGIT provides a “valuable tool for prevention, disruption, and enforcement against money laundering in casinos and the operation of illegal gaming houses” and acts as a “force multiplier” in increasing the knowledge and ability of other police departments to take action.

223 Ibid.
224 Ibid.
225 Ibid; Exhibit 803, LePard Report, pp 46–47.
226 Exhibit 803, LePard Report, p 11; Evidence of J. Hussey, Transcript, April 7, 2021 (Session 2), p 15.
227 Evidence of J. Hussey, Transcript, April 7, 2021 (Session 2), p 15.
229 Ibid, p 17. In preparing the report, the authors interviewed a number of prosecutors who commented positively on the quality of JIGIT investigations. One prosecutor with experience on several JIGIT files described its work as of the “highest quality” and “exceptionally thorough”: ibid, p 106.
At the same time, the LePard Report makes a number of findings and recommendations aimed at increasing the overall effectiveness of the unit. One of these recommendations is that consideration be given to expanding JIGIT’s mandate to include the investigation of money laundering activity in all sectors of the economy. In what follows, I review some of the key findings and recommendations contained in the LePard Report with particular emphasis on the performance of that unit in the investigation of money laundering.

**Governance**

With respect to governance, the report indicates that the CFSEU Board of Governance is primarily focused on the performance of CFSEU as a whole and recommends that it take a more active role in providing strategic guidance to individual teams (such as JIGIT) to ensure that their work remains on mandate, that they are achieving expected outcomes, and that they are furthering the goals of the agency as a whole. It also recommends that an advisory committee be established to advise on JIGIT’s mandate, role, and priorities, including its role within the provincial anti-money laundering strategy.

At the same time, the LePard Report indicates that there is a well-defined and robust management process in place within CFSEU, which ensures appropriate oversight of the team, its operations, human resources, and finance.

Interviews with JIGIT team members indicate there is a high degree of satisfaction with the internal management of the team and the decisions made by their superiors.

**Mandate**

With respect to mandate, the LePard Report notes that there is some debate within JIGIT as to the value of investigating illegal gaming houses, with some members expressing frustration about the resources needed to conduct a successful investigation as well as the minimal sentences that typically result. While recognizing that the police and the public often believe that penalties for these offences are inadequate, the authors emphasize that consideration must be given to other factors, including the highly profitable nature of illegal gaming as well as the collateral crimes (loan sharking, extortion, assaults, etc.) arising from these operations. They write:

> While there are many offences in BC for which sentences appear to police to be “too short,” the likely sentence cannot be the only determining factor in deciding whether to pursue an investigation; rather, consideration must also be given to the impact on public perception of safety, the ability and willingness of the police to take action regarding community concerns, the

---

230 Ibid, p 79.
231 Ibid, p 76.
232 Ibid.
234 Ibid.
suppression of illegal activities, and the deterrent effect. Given that gaming houses presented 50% of the General Occurrence files ... it is important to ensure there is a provincial entity providing support for the investigation of these offences. Further, despite relatively few cases and the perceived insufficient sentences, seizures of gaming paraphernalia and cash for referral to the CFO [Civil Forfeiture Office] also have a beneficial impact that may be greater than the consequences of the criminal charge.\(^{235}\)

With respect to money laundering, there was no debate within JIGIT about the value of pursuing investigations into such activity and the LePard Report praises the work undertaken by JIGIT in connection with the E-Nationalize investigation (which is described in the report as a “groundbreaking,” “extraordinary,” and highly complex investigation into a multimillion-dollar casino-related money laundering operation).\(^{236}\)

**Structure and Resourcing**

With respect to the structure of JIGIT, there was a “strong consensus” that the creation of the gaming intelligence and investigative unit (as opposed to the creation of a “quick-hit” investigative team) was a better model that made better use of GPEB members’ knowledge and skills, resulted in better information sharing and intelligence, and allowed the investigative team to focus more of their efforts on investigative tasks.\(^{237}\) However, the LePard Report raises a number of capacity concerns, including the fact that the long-term investigative team could become completely consumed by a complex investigation, leaving nobody to conduct quick-hit investigations of illegal gaming houses.\(^{238}\)

The officer-in-charge of the RCMP’s Richmond detachment, who praised JIGIT’s work, made the following comments about the need for a quick-hit team:

>T]here really needs to be the team that does the quick hits like when JIGIT started. They learn a lot doing those investigations, and it’s good for the public to see the reactivity, that the police are doing something. The quick hits help with deterrence, demonstrating to the targets we’re there and looking for them, even the lower level ones. We’re really remiss if we don’t have a quick hit team because the bigger team can get bogged down in complex investigations, disclosure and so on.\(^{239}\)

Importantly, the LePard Report also raises significant concerns about vacancy rates within JIGIT, especially at the senior levels. From the end of 2017 to the end of 2018, there was no staff sergeant assigned to the team, and a number of other senior positions were filled in an acting capacity in the four years preceding the review.\(^{240}\) There was also

\(^{235}\) Ibid, p 56. See also Evidence of D. LePard, Transcript, April 7, 2021 (Session 1), pp 29–31.

\(^{236}\) Because of the ongoing nature of these investigations, I have not had the opportunity to assess the work undertaken by JIGIT. My comments are based solely on the information in the LePard Report.

\(^{238}\) Ibid, pp 66–67.

\(^{239}\) Ibid, p 67.

\(^{240}\) Ibid, p 59.
a high level of attrition within JIGIT caused in part by the failure to incorporate OCABC members as part of the JIGIT structure in any meaningful way. Mr. LePard explained the impact of these vacancies as follows:

[I]t just makes it very difficult because if you don’t have that continuity, you’re always onboarding new members and they have to get up to speed and be developed and they’re being trained as they’re working ... [T]his is not unique to JIGIT. It’s just one of the realities of policing where you have members coming in and out.

The attrition in JIGIT, just based on my experience, did seem to be quite high but also they’re mostly RCMP members, and ... the RCMP have so many and varied demands on them as, you know, municipal, provincial and federal policing that it didn’t surprise me to see that. I note in the RCMP’s own report, for example, describing the proposal for the FIIU, it talks about the 30 percent vacancy in federal positions and so on.

So it ...is more difficult to function well when you’ve got that sort of turnover. At one point we were told ... when we were doing the review that only three of the original members from 2016 were still in the unit. So that’s quite a bit of turnover and it just makes it more challenging because ... you’re constantly bringing people up to speed, getting them the training they need. They’re learning on the fly essentially.

Another issue raised by Mr. LePard was the lack of available surveillance capacity within CFSEU. In policing, surveillance resources are generally shared among various units rather than being attached to a particular unit. They are always in high demand and police managers generally allocate these resources based on the risk posed to the public. For example, surveillance to gather evidence against a homicide suspect will take priority over a break-and-enter suspect.

At present, there are four surveillance teams within CFSEU, which are shared among the various units and may also be used to assist external units such as the Integrated Homicide Investigative Team (IHIT). Because these resources are, quite properly, allocated to investigations where there are significant public safety concerns, there are often no surveillance resources available to JIGIT, with the result that JIGIT members spend considerable time doing their own surveillance. Not only does that take them away from other investigative tasks (and decrease their capacity to take on more cases), but it makes for less effective surveillance and risks compromising investigations.

241 Ibid, p 60. Indeed, the original JIGIT business case contemplated that these members would provide “expertise, tenure, and operational continuity ... required to achieve results.”
242 Evidence of D. LePard, Transcript, April 7, 2021 (Session 1), pp 19–20.
244 Ibid, pp 61–62. It is important to note that surveillance is a highly specialized field of policing that carries with it considerable risk and liability. Training for surveillance teams is extensive, and the standards for surveillance operations are high: ibid.
In response to these concerns, the LePard Report recommends the creation of an additional surveillance team that is able to prioritize JIGIT’s needs. It notes that such units are not without precedent and have been successfully created in other police agencies:

The only way to address this resource gap is to create a surveillance team that prioritizes JIGIT’s needs. There is certainly precedent for such an initiative. For example, the VPD created two “Strike Force” surveillance teams in the 1980s ... to provide 24/7 capacity when needed ... The members are trained to a very high level to conduct mobile surveillance of often high-risk targets, usually for units in the Major Crime Section (e.g., Homicide, Robbery/Assault) or the Specialized Crime Section (e.g. Sex Crimes, High Risk Offenders Unit). However, VPD managers responsible for addressing property crime – which affects more citizens than any other crime type – experienced the same frustrations as JIGIT in accessing these resources, and so eventually additional surveillance teams were created whose priority is property crime. There are currently two such teams, which report to the Inspector in charge of the Property Crime Section, as well as one more team responsible to conduct [surveillance] for the Organized Crime Section. It is in a similar situation to JIGIT in that its investigations are proactive, rather than in response to an imminent risk to public safety.

There is a case to be made that an additional surveillance team should be created in CFSEU-BC whose priority would be JIGIT investigations. It could also support any other CFSEU-BC unit engaged in investigations that are currently not prioritized because of a lack of imminent risk to the public.245

A third issue relating to the structure and staffing of JIGIT is the need for prompt, ongoing legal advice. The report indicates that “policing has become increasingly complex and that it is important that police have competent legal advisors throughout the life cycle of the investigation.”246 It also states that “having expert legal advice leads to better search warrant and wiretap applications, and improved disclosure to Crown.”247

In addressing this issue, the authors explored three different models for providing prompt, ongoing legal advice. One model is to have an organized crime prosecutor embedded within JIGIT to provide legal advice to investigators on an ongoing basis. However, one prosecutor interviewed by the authors suggested that the embedded prosecutor model “could create problems with respect to the mutual independence of police and Crown.” They also raised concerns about “potential problems created by having a prosecutor giving advice to police in circumstances where the prosecutor was not responsible for the charge approval and prosecution phases [of the investigation].”

245 Ibid, p 62.
A second model is for the investigative agency to retain dedicated in-house counsel to provide JIGIT with legal advice and liaise with Crown counsel to ensure that Crown is in agreement with their legal analysis.248

A third model (which the authors describe as “the WorkSafeBC Model”) involves the creation of a pre-assigned group of prosecutors with expertise in the relevant area. When investigators need legal advice, they can contact the director of the group who will assign a prosecutor to assist. If a Report to Crown Counsel is submitted, that prosecutor (or another prosecutor from the group) will be responsible for reviewing it and making a decision on whether to proceed with criminal charges.249

The report recommends that JIGIT adopt the WorkSafeBC Model and create a stable of prosecutors with the requisite expertise to provide ongoing legal advice and prosecute money laundering / illegal gambling offences. They write:

The advantages of this model are that rather than relying on a single embedded prosecutor, who will not always be available due to absences, there are a group of prosecutors to draw on with expertise in the relevant areas of law. Further, there is a consistency in approach because of the centralization of this expertise. Finally, just as discussion and brainstorming is important in police investigative teams to develop the best investigative approach, in this model, the preassigned group of prosecutors benefits from the round-tabling of cases and the synergy that results, rather than being isolated from their Crown colleagues and precluded from regular discussion on legal issues.250

I agree that this model has a number of advantages and return to this issue in my discussion of the provincial anti-money laundering intelligence and investigation unit.

**Information Sharing and Public Outreach**

One of the most important aspects of JIGIT’s mandate is to engage in public outreach activities aimed at preventing financial crime. Mr. LePard described the benefits of prevention as a law enforcement strategy as follows:

> [I]f war is a failure of diplomacy, crime is a failure to a great extent of policy … [P]olicing is not necessarily the best response except where police can be very influential and effective in prevention because investigating is complicated and expensive and the results are uncertain. And even when they are successful, the nature of the crime may be that the sentences don’t provide necessarily deterrent or incapacitation of the offenders.

So that’s why police recognize that it’s far better to look upstream and engage in prevention activities and police have an important role

---

248 Ibid, p.68.
249 Ibid.
250 Ibid.
in that, but so do many others. And so around policy and legislation and regulation, cooperation between businesses and government and so on, far better to prevent than to try to investigate or to use investigation as the way to address a problem.251

One of the key outreach activities undertaken by JIGIT was the bank draft intelligence probe (which ultimately led to the creation of Project Athena and the Counter Illicit Finance Alliance of British Columbia). The authors note that this initiative was “... critical to exposing criminal activity, identifying new trends and activities, and contributing to informed decision-making so as to deter money laundering activity at BC casinos.”252

The LePard Report also notes that JIGIT has delivered on its mandate with respect to providing education to police and industry stakeholders, with the authors indicating that they were impressed by the “passion, knowledge and articulateness” of the JIGIT members.253

**Conclusion**

Overall, the LePard Report concludes that JIGIT has delivered on key portions of its mandate while also developing considerable subject matter expertise in the identification and investigation of money laundering activity.

While the E-Nationalize investigation is still in the charge approval stage, the authors describe it as a “groundbreaking” investigation into a sophisticated money laundering operation, and I view the bank draft intelligence probe and subsequent creation of Project Athena as one of the most important anti-money laundering initiatives in recent years.

In light of these successes, I have carefully considered whether JIGIT’s mandate should be expanded to include the investigation of money laundering activity in all sectors of the economy. While there is some appeal to this approach, given that the unit exists and has, by all accounts, been doing some very good work, I believe the Province would be better served by creating a specialized provincial money laundering intelligence and investigation unit with an exclusive focus on proceeds of crime and money laundering.

Like many investigative agencies, JIGIT has faced significant resourcing challenges in recent years. Asking it to take on the resource-intensive work of conducting money laundering investigations has already interfered with its mandate to investigate illegal gaming. It also bears repeating that money laundering activity is not limited to one sector of the economy and requires a coordinated response across multiple sectors.

In light of the challenges faced by investigators in responding to money laundering in all its various forms, it is essential that investigators have an exclusive focus on

252 Exhibit 803, LePard Report, p 117.
253 Ibid, p 123.
money laundering / proceeds of crime offences and not have additional responsibilities for investigating illegal gaming. I do, however, acknowledge the significant money laundering knowledge, expertise, and infrastructure developed by JIGIT over the past five to six years, including the expertise it has developed in money laundering typologies and the information-sharing agreements it has developed with various public- and private-sector entities. I believe it is essential for CFSEU to incorporate those elements into the new money laundering unit as much as possible. Moreover, CFSEU may also wish to consider whether the new unit would benefit from the incorporation of individuals who have developed money laundering knowledge and expertise through their work with JIGIT.

**Municipal Policing**

Under section 3(2) of the *Police Act*, municipalities with a population of more than 5,000 persons must provide policing and law enforcement services within their municipality. They can do so in one of three ways. First, they can enter into an agreement with the minister of public safety to have the RCMP provide policing and law enforcement services within their municipality. Second, they can establish a municipal police department to provide policing and law enforcement services. Third, they can enter into an agreement with a municipality that has a municipal police department to have that police department service both municipalities.

In 2019, there were 77 municipalities in British Columbia with a population over 5,000. Of these 77 municipalities, 65 opted to have the RCMP provide policing and law enforcement services within their municipality and 11 opted to create their own municipal police department (Vancouver, Victoria, Saanich, Central Saanich, Oak Bay, Delta, Abbotsford, New Westminster, West Vancouver, Nelson, and Port Moody). One municipality (Esquimalt) entered into a contract with another municipality (Victoria) for the provision of policing and law enforcement services within both municipalities.

**RCMP Municipal Police Services**

RCMP municipal police services are provided pursuant to an agreement between the federal and provincial government known as the municipal police service agreement.

Like the provincial police service agreement, the municipal police service agreement states that contract policing is increasingly recognized as an effective national policing model to address the cross-jurisdictional (i.e., municipal, provincial, territorial, national, and international) and evolving nature of crime.

---

254 *Police Act*, s 3(2).
255 Exhibit 789, *Police Resources in British Columbia*, p 3. In 2018, the City of Surrey opted to create a municipal police service, and efforts are currently underway to transition from the RCMP to the Surrey Police Service.
It also states that the federal and provincial government both receive benefits from the RCMP acting as the provincial police service by:

i. facilitating the flow of intelligence between all levels of policing;

ii. having a direct connection, though the RCMP, between municipal, provincial, territorial, national and international policing that is important to modern policing and the security of provincial infrastructure and communities;

iii. promoting Canadian sovereignty through the RCMP’s presence across Canada including in isolated communities and at Canada’s borders;

iv. having RCMP members available for redeployment;

v. sharing the costs and use of common police and administrative services; and

vi. having a professional, efficient and effective police service that reflects reasonable expenses for operating and maintaining a police service.

Under the terms of that agreement, municipalities with a population between 5,000 and 14,999 pay 70 percent of the policing costs, with the federal government covering the remaining 30 percent. Municipalities with a population over 15,000 pay 90 percent of their policing costs, with the federal government covering the remaining 10 percent. Municipalities are also responsible for 100 percent of costs such as accommodation and support staff.256

In 2019, the total authorized strength of the RCMP municipal police service was 3,969 officers, with 3,512 serving municipalities with a population over 15,000 and 457 serving municipalities with a population between 5,000 and 14,999.257

In many areas of the province, the RCMP operates integrated detachments (defined as a detachment comprising two or more provincial and/or municipal police units). For example, the North Vancouver detachment includes three policing units: two municipal units (North Vancouver District and North Vancouver City) and one provincial unit (North Vancouver Provincial). The detachment works on a post-dispatch system, which means that members respond to calls in any of the three policing jurisdictions regardless of their assignment.258

The RCMP also maintains a number of regional detachments that offer a central point of management and coordination for integrated or stand-alone detachments in a particular area. For example, the Kelowna Regional Detachment provides a central point of management for the Kelowna municipal unit, the West Kelowna integrated

256 Exhibit 789, Police Resources in British Columbia, p 3.
257 Ibid, pp 4, 16. These numbers will likely change with the establishment of the Surrey Police Service.
258 Ibid, p 3.
Municipal Police Departments

Eleven municipalities have elected to create their own police department to provide policing and law enforcement services in their communities. Each municipal police department is governed by a police board that determines the priorities and objectives for the municipal police department. Under section 25 of the Police Act, the mayor of the municipality is the chair of the municipal police board. In 2019, the total authorized strength of all municipal police departments across the province was 2,461 officers.

While each municipal police department is organized differently, they generally consist of front-line (or “patrol”) officers who are responsible for responding to calls for service as well as general, and in some cases, specialized investigative units. For example, the Abbotsford Police Department is made up of 224 sworn members in four separate branches: a patrol branch responsible for responding to calls for service; an investigative support branch that conducts investigations beyond the scope of front-line patrol officers; a major crime unit that conducts investigations into serious offences such as homicide, assault, arson, and missing persons; and an operational support branch that is made up of a community policing unit, a youth squad, and a traffic branch.

The Vancouver Police Department is made up of approximately 1,348 sworn members and 441 civilian members divided into three divisions: an operations division made up of front-line patrol officers responsible for responding to calls for service; an investigations division made up of a number of specialized investigative units including organized crime, major crime (homicide and robbery), sex crime, domestic violence, child exploitation, and forensic identification; and a support services division that provides research and administrative support to members of the VPD.

The VPD also has 72 members seconded to other units including the RCMP FSOC section, the Integrated Market Enforcement Team, the Waterfront Joint Forces Operation, and CFSEU.

While municipal police departments come across money laundering in the investigation of other offences, their primary focus is on violent crime and other public safety concerns, and they do not have the resources or expertise to embark on complex proceeds of crime investigations. For example, Inspector Christopher Mullin testified that the New Westminster Police Department is largely concerned with local issues such as violent and property crime:

260 Police Act, s 26.
261 Exhibit 789, Police Resources in British Columbia, p 3.
264 Ibid, p 22.
[O]ur priorities really do fall to local level issues as it relates to violent crime. Property crime is a significant fact for our organization. Our major crime unit focuses primarily on investigations such as robberies or crimes against children, sexual exploitation type investigations, attempted murders, those sorts of things. Our street crime unit essentially is our only proactive unit, and when they’re not assisting major crime on some of the more significant investigations that they have underway, they do tend to focus a lot on local drug trafficking and distribution. Through there we do have good working relationships with our partner agencies within the Lower Mainland and even provincially if the case may take us to that level. But that’s more or less the focus of our proactive efforts as far as targeting anyone that may be tied to money laundering.265

He went on to state that his department takes financial crime investigations as far as it can but does not have the capacity to follow through on those investigations and sees its contribution to these investigations occurring mainly through secondments to regional units such as FSOC and CFSEU.266

Deputy Chief Brett Crosby-Jones gave similar evidence concerning the Abbotsford Police Department. He stated that the primary focus of his department is responding to calls for service and ensuring that front-line resources are properly staffed to deal with issues such as domestic violence, mental health, homelessness, and gang violence:

We’re governed by a police board. We have a strategic plan that we come out with every year. It’s Abbotsford-centric. Basically responding to calls for service, ensuring we staff our frontline resources in order to meet public safety needs. We’re looking at domestic violence, our advancing mental health response, our dealing with homelessness and our gang crime issue. Proactively, similar to New West, we have a gang crime unit, a drug enforcement unit, a crime reduction unit. So based on some of their investigations we do enter into financial crime type files, but we are limited [in] our ability to investigate and respond to those.267

Even the larger municipal departments – such as the VPD – lack the expertise to investigate sophisticated money laundering schemes. Inspector Michael Heard, an experienced investigator with the VPD, gave the following evidence with respect to these matters:

[T]hese investigations are extremely complex. I think that they’re very nuanced, and quite frankly from a municipal perspective ... our predicate offences are the ones that identify the money laundering ... in a lot of money, vehicles, car leases, et cetera. But I think that when you start

getting into more sophisticated investigations where you’re doing trade-based money laundering, you start involving shell companies, you have some more level of sophistication, we just don’t have the subject matter experts that have the ability to investigate these on a continual basis.268

Another concern that arises in this context is the need to get certain offenders off the street for public safety reasons. Because proceeds of crime investigations are often slow and time-consuming – particularly where they require production orders or assistance from international partners – municipal police departments often elect to proceed only on the predicate offence without following up on the money laundering aspect of the investigation. Inspector Heard explained that dynamic as follows:

I think that for public safety and … to ensure that we meet our disclosure obligations to obtain a criminal charge or have judicial conditions on the person upon release. We will go forward with the charges for the substantive offence … [but] with the other offences, unfortunately based on timelines and seeking multiple production orders and obtaining all the orders required to follow the money and follow where it’s going, we just don’t have the time or the resources … if we have a substantive offence that requires us to … put someone in custody right away for public safety.269

For these reasons, I have concluded that it is unreasonable and unrealistic to expect municipal police departments to take on any significant responsibility for the investigation of complex money laundering schemes. Such investigations must be undertaken by specialized units that have the time, expertise, and resources to conduct a proper investigation.

At the same time, it is important that municipal police officers involved in the investigation of profit-oriented criminal offences (particularly at the project level) have the training, confidence, and available expertise to follow the money and pursue money laundering charges of low to medium complexity in conjunction with the underlying investigation. These investigations are well within the competence of most municipal police officers and present a number of significant disruption opportunities, including additional criminal charges and the identification of assets for seizure and/or forfeiture.

I turn now to some of the key challenges faced by law enforcement bodies in the investigation and prosecution of money laundering offences.

269 Transcript, March 30, 2021, p 33.
While there can be little doubt that law enforcement results in British Columbia are not commensurate with money laundering risks, it is useful to consider some of the challenges associated with the investigation and prosecution of money laundering offences in order to make effective recommendations to the Province concerning the investigation of these matters. These challenges include (a) the legal complexity of money laundering investigations and prosecutions; (b) the inability of FINTRAC to reliably produce actionable intelligence concerning money laundering threats; and (c) the complexity of many money laundering schemes. Each of these challenges are discussed in greater detail (below).

Legal Complexity

One of the key challenges associated with the investigation and prosecution of money laundering offences is the complexity of these investigations. Such complexity begins with the definition of the offence. Section 462.31 of the Criminal Code provides:

Laundering proceeds of crime

462.31 (1) Every one commits an offence who uses, transfers the possession of, sends or delivers to any person or place, transports, transmits, alters, disposes of or otherwise deals with, in any manner and by any means, any property or any proceeds of any property with intent to conceal or convert that property or those proceeds, knowing or believing that, or being reckless as to whether, all or a part of that property or of those proceeds was obtained or derived directly or indirectly as a result of
(a) the commission in Canada of a designated offence; or

(b) an act or omission anywhere that, if it had occurred in Canada, would have constituted a designated offence.1

Over the course of the evidentiary hearings, I repeatedly heard evidence that proving the predicate offence (i.e., proving that the property or proceeds were obtained or derived from the commission of a designated offence) is a significant hurdle for investigators in many cases. For example, an RCMP report with respect to the large amounts of suspicious cash entering BC casinos makes the following comments concerning the need to draw a “concrete” or “definite” link to criminal activity:

Although intelligence gleaned to-date indicates that these “bags of cash” involved in these large buy-ins have their ultimate origins in street-level criminal activity, drawing a concrete link to those activities has thus far been an elusive goal. In order for IPOC [Integrated Proceeds of Crime units] to pursue a successful prosecution for Possession of Proceeds or Money Laundering, it is essential to show a definite link to criminal activity. IPOC will task E Div CIS [Criminal Investigation Service] to provide this “missing link” to criminal activity. The task for CIS would be to gain sufficient information and evidence to conduct enforcement action, resulting in the seizure of currency and the successful prosecution of the individual(s) involved in the money-laundering activity. If an opportunity for significant enforcement action does not come to light in the course of the CIS intel-probe, it is anticipated that CIS will be able to open new investigative avenues for IPOC to pursue upon conclusion of the intel-probe.2

I also heard evidence with respect to the considerable difficulties faced by investigators in proving the knowledge element of the offence (i.e., that the accused knew or believed, or was reckless as to whether, the property or proceeds were obtained or derived from the commission of a designated offence).3 For example, Mr. Baxter made the following comments with respect to proof of these elements in connection with the casino probe:

[I]n order to conduct the criminal side of the investigation, you got to prove knowledge. You got to prove intent. You have to show the source of funds. And those were hurdles that were very, very difficult for investigators to locate to a sufficient level of beyond a reasonable doubt ... [T]here was lots of ... levels of intelligence and conclusions, but to get to that threshold, we just weren’t there yet.4

---

1 *Criminal Code*, RSC 1985, c C-46.
3 In order to prove the knowledge element of the offence, the prosecution must prove that the accused knew that the proceeds were obtained or derived from the commission of a *specific* designated offence (e.g., drug trafficking). However, it is not necessary to prove that the accused knew about the details of the offence (e.g., what specific drugs were trafficked or how the trafficking was carried out): *R v Tejani* (1999), 138 CCC (3d) 266 (Ont C.A.) [Tejani] at para 36.
4 Transcript, April 8, 2021, p 88.
While the essential elements of the offence are a matter of exclusive federal jurisdiction under section 91(27) of the Constitution Act, 1867, I make two observations with respect to these matters which may be useful to law enforcement agencies in the investigation and prosecution of money laundering offences. First, the 1997 amendments to the Criminal Code (which replaced the term “knowing” with the terms “knowing or believing”) may obviate the need to prove that the property or proceeds were obtained or derived from the commission of a designated offence in circumstances where the Crown can prove that the accused believed the property was obtained in that manner.

While it is not my place, as a Commissioner, to decide that issue, a plain reading of section 462.31 suggests that the actus reus of the offence is complete when an offender deals with any property or the proceeds of any property in any of the ways set out in that provision (using, transporting, sending, delivering, etc.), and the knowledge element will be satisfied where the offender did so knowing or believing that the property or proceeds were obtained or derived through the commission of a designated offence.5

Second, I note that section 462.31 was recently amended to include recklessness as one of the mental elements of the offence, thereby expanding the circumstances in which criminal liability can be imposed. The inclusion of recklessness in section 462.31 will no doubt make it easier for law enforcement to make out the mental element of the offence in circumstances where the evidence is insufficient to prove knowledge but the accused was aware of the risk that the property was obtained or derived from the commission of a designated offence.

It strikes me that these amendments will be particularly useful in bringing criminal proceedings against third-party money launderers, including professional money launderers who were not involved in the commission of the predicate offence but who receive a commission for laundering illicit funds generated by other criminal groups.

The inclusion of recklessness as one of the mental elements of the offence also increases the number of individuals and groups who could potentially be caught by these provisions. For example, a currency exchange or money services business that becomes aware of a risk that certain funds were obtained or derived from the commission of a designated offence may acquire criminal liability if it chooses to convert those funds into another form. Lawyers, accountants, realtors, mortgage brokers, financial institutions, and others could also face criminal penalties in circumstances where they become aware of a money laundering risk and proceed nonetheless.

Another form of legal complexity relates to the labour-intensive nature of most major money laundering investigations. Even getting a basic financial picture can take multiple production orders (which typically have a 30- to 60-day turnaround) and require a significant amount of time to review and analyze the results. Investigators

---

5 For case law on the essential elements of the offence see United States of America v Dynar, [1997] 2 SCR 462 at paras 39–45, 69–71, Tejani at para 29, R v Bui, 2010 ONSC 6180 and R v Drakes, 2006 Carswell Ont 1585 (Ont. S.C.J.). While Dynar appears to be dispositive of the issue, it is important to note that the decision was rendered before the 1997 amendments to section 462.31.
may also need to seek the assistance of professionals – such as forensic accountants – to understand the information they receive and need to cope with the constantly evolving ways in which organized crime groups are laundering illicit funds through the BC economy. Inspector Heard described some of these challenges as follows:

[D]uring a course of an investigation to follow the money we may come into unexplained wealth like cars, houses, et cetera, that ... aren't consistent with the lifestyle that they're leading. And during the course of our investigation we may uncover banking information from a myriad of different banks ... depending on the level of sophistication to ... disguise their money to [a] multitude of financial institutions, but each of those require production orders for us to get the information back from the bank. Production orders ... are supposed to have a 30-day turnaround, but unfortunately ... everybody has capacity issues, even the financial sector. So production orders that were supposed to get back within 30 days now are leading up to towards 60 days of being returned ... I always say one production order turns into about three or four more once you start gleaning information. And then you start thinking about ... between 30 and 60 days upon return of each order and you keep kind of adding and compounding those on top of each other ... and then by the time you analyze the information and have someone that either we can bring in people with financial backgrounds, we have people in our financial crime units that are accountants, but to go over the information to make assessments on the money it just isn't feasible.6

A serious money laundering investigation will almost certainly require the use of other investigative techniques, including wiretaps, search warrants, undercover operations, and police agents, which significantly increase the cost and complexity of these investigations.7

On a related note, I heard a great deal of evidence concerning the challenges faced by investigators in complying with the requirements of R v Stinchcombe 8 (which requires the Crown to make full disclosure, to the accused, of all evidence needed to make full

6 Evidence of M. Heard, Transcript, March 30, 2021, p 34–35. See also Exhibit 821, RCMP, A Resourcing Overview of Major Money Laundering Investigations in BC, p 5, where the RCMP states that a production order for a bank typically exceeds 100 pages, takes approximately 35 hours to review and produces up to 300 pages of disclosure. Another source of delay arises from the Mutual Legal Assistance Treaty (MLAT) process, which is often used when the investigation extends beyond Canada. Jeffrey Simser, a lawyer with the Ontario Public Service and an expert on money laundering issues, described that process as ponderous, slow, and bureaucratic – and one that often results in the production of “stale” information: Transcript, April 9, 2021, pp 105–6. For additional evidence concerning the labour-intensive nature of money laundering investigations, including the work required to properly analyze FINTRAC reports, see Evidence of M. Paddon, Transcript, April 14, 2021, pp 78–81.

7 Indeed, an RCMP analysis of money laundering investigations indicates that a major money laundering investigation can require ten times as many person hours as a major drug operation and cost four times as much. Money laundering investigations may also require twice as many judicial authorizations as a major drug investigation and can involve as many as 20,000 documents, 35,000 intercepts, dozens of electronic devices, and various other types of evidence that must be reviewed and analyzed: see Exhibit 821, RCMP, A Resourcing Overview of Major Money Laundering Investigations in BC, pp 1, 5.

answer and defence) and *R v Jordan*9 (which requires the Crown and the courts to get the matter to trial within strict time limits). Multiple witnesses testified that the disclosure requirements that arise in this context require law enforcement to expend considerable time and resources organizing and facilitating disclosure.10

I also understand that the disclosure requirements mandated by *Stinchcombe* can cause challenges for Canadian law enforcement agencies when working with international partners who have less stringent disclosure requirements. These challenges are particularly acute when dealing with police agents and confidential informants (which form an essential part of many organized crime files). Indeed, Mr. Chrustie testified that there were many instances where law enforcement bodies were unable to take action in Canada because of the requirement to disclose source information:

> [W]ith transnational organized crime networks ... the matrix and the enforcement activity and the operations take place ... worldwide. And ... our own legal system really precluded us because of the disclosure laws under *Stinchcombe* to take enforcement action here because a lot of the key pieces of ... intelligence and/or source information quite often came out of places like Colombia at the highest level. And those parties were quite often in, what we would refer to, the agent capacity within the Canadian legal system, which meant we had to disclose that information if it reached the Canadian court.

> So ... when we looked at making a decision where to prosecute, where to arrest, knowing that it wasn't going to be compatible to the Canadian courts and trying to mitigate those four threats ... social harm, public safety, national security and financial integrity – collectively as a collaborative group of investigators from around the world, we would pick places that were going to likely result in a trial and a conviction. And quite often it was never Canada because of those problems.11

While I appreciate that complex financial crime investigations involve massive amounts of disclosure and that mistakes in the disclosure process – particularly as it relates to source information – can sometimes “blow up” an entire prosecution,12 it is important to understand the constitutional basis of *Stinchcombe* disclosure and the critical role it plays in ensuring the fairness of the criminal justice system. Before *Stinchcombe*, there were no uniform rules governing pre-trial disclosure and there were cases where prosecutors used the element of surprise to their advantage or did not disclose exculpatory evidence to the accused.13 Such practices have repeatedly been identified as one of the leading causes of wrongful convictions. For example, the Royal

10 For reference to the “punishing” nature of these disclosure requirements, see Evidence of J. Simser, Transcript, April 9, 2021, pp 68–69.
12 Evidence of J. Simser, Transcript, April 9, 2021, p 69.
13 Exculpatory evidence is any evidence that may show an accused’s innocence or justify his or her actions.
Commission on the Donald Marshall, Jr., Prosecution found that the failure to disclose prior inconsistent statements to the accused was an important contributing factor to the wrongful conviction and concluded that “anything less than complete disclosure by the Crown falls short of decency and fair play.”

In *Stinchcombe*, the court recognized that the constitutional right to make full answer and defence demands that the prosecution make full disclosure of all relevant information (subject to certain exceptions). It also emphasized that the right to make full answer and defence is one of the pillars of the criminal justice system “on which we heavily depend to ensure that the innocent are not convicted” and held that the practical arguments in favour of such a duty are overwhelming. In the 30 years since that decision was rendered, the precise contours of the duty have been the subject of thousands of decisions, which have not been without criticism. However, *Stinchcombe* is one of the most important decisions in recent history and the principles underlying it are unlikely to change any time soon. Nor, in my view, should they.

The implication is that law enforcement bodies must put the necessary infrastructure in place to ensure they can comply with their disclosure obligations. Jeffrey Simser, a lawyer with the Ontario Public Service and an expert on money laundering issues, gave the following evidence with respect to these matters:

> [I]f you’re really serious about going after organized crime and about going after money laundering, aside from the data analytics you need an infrastructure to do it. Disclosure requirements are punishing, they’re massive, and the last thing that you want to do is two or three or four years into a major project on organized crime [is] discover whoops, in the first tranche we revealed three confidential informants in our disclosure to the defence lawyer or whatever because that will blow up the entire prosecution and the best you’ll be able to do is maybe a civil forfeiture action. So you need the technology and you need the people that know how to use it and war game it strategically so that you don’t end up investing massive amounts of resources going after a target and then losing it in the year three or four because that will [undermine] confidence in the whole system.

While the *Jordan* decision is more recent than *Stinchcombe*, it has also led to significant changes within the criminal justice system. In that decision, the Supreme Court of Canada sought to cure the “excessive delays” and “culture of complacency” within the criminal justice system by introducing a presumptive ceiling on the time it should take to bring an accused person to trial. For cases going to trial in the provincial

---

15 *Stinchcombe*, para 17.
17 *Jordan*, paras 4, 40–41.
court, the presumptive ceiling is 18 months. For cases going to trial in the superior
court, the presumptive ceiling is 30 months. If the total delay from charge to the actual
or anticipated end of trial (minus defence delay) exceeds the presumptive ceiling,
the delay is presumptively unreasonable. The Crown can rebut the presumption
of unreasonableness by showing that the delay was attributable to exceptional
circumstances outside the Crown’s control such as family and medical emergencies.

If the Crown cannot establish the presence of exceptional circumstances, the court
will be required to find that the delay is unreasonable and enter a stay of proceedings.

While *Jordan* undoubtedly poses challenges for law enforcement bodies, it is
important to note that the *Jordan* clock starts to run from the time the information is
sworn (i.e., from the time criminal proceedings are commenced) and not from the time
of the offence or the time the police commence their investigation. The implication
is that law enforcement can prepare the disclosure package and otherwise ready the
case for trial before starting the *Jordan* clock. Indeed, the main issue with *Jordan*
seems to be that drug investigations and proceeds of crime investigations often progress at
a different pace, with investigators being forced to choose between waiting for the
proceeds of crime investigation to be completed before laying charges on all counts or
proceeding only on the drug charges in order to get the offender off the street.

Superintendent Peter Payne, current director of financial crime at RCMP national
headquarters, explained:

Q Just to pick up on the *Jordan* point. The way I understand that the
Supreme Court of Canada decision articulates … the ticking clock on
cases is that … the start of when the stopwatch goes is when a charge
is brought in court, so an information or indictment is preferred. And
if that’s the case, is it not the case that *Jordan* imposes pressure on
the prosecutor once the case starts in court to get it done within the
timeline but doesn’t necessarily impose pressure on the police to get
an investigation done in a certain period?

A Yes, that’s correct. But I think where some issues might come into
play, let’s say we have a large scale investigation into an organized
drug group and we wait until that investigation is done and charges
are laid against those drug charges [sic]. Then we start our POC/ML
[proceeds of crime / money laundering] investigation. It’s going to
take time for us to get success – the required evidence for that POC/
ML charge down the road, which could take another year or two while
the *Jordan* clock is ticking on the other charges.

18 Ibid, paras 46–47.
20 Evidence of P. Payne, Transcript, April 16, 2021, pp 106–7. See also Evidence of M. Heard, Transcript,
March 30, 2021, p 33 with respect to the need to move forward immediately with the substantive offence
in order to get dangerous offenders off the street.
In my view, these considerations underscore the need for investigators to consider and pursue money laundering / proceeds of crime charges at the same time as the predicate offence (as recommended in Chapter 39). While there may be cases in which public safety concerns require the Crown to lay charges on the predicate offence before the money laundering / proceeds of crime investigation is complete, these cases should be the exception if a serious attempt is made to implement my recommendation.

I would add that there is a perception within law enforcement that there is little to be gained by pursuing money laundering charges because the courts will often impose concurrent sentences for the predicate and the money laundering offence. While I would certainly encourage prosecutors to give greater consideration to seeking consecutive sentences in these circumstances, there is much to be gained from conducting a money laundering / proceeds of crime investigation even if concurrent sentences are imposed (see above).

FINTRAC

A second challenge faced by law enforcement is the ineffectiveness of FINTRAC in producing timely, actionable intelligence for use by investigators. Christian Leuprecht, an internationally renowned money laundering expert and lead author of the Leuprecht Report, testified that FINTRAC is a “very good entity that is very good at watching things and observing things, but there’s relatively little that it can actually do with what is provided.”

Similar evidence was given by Nicholas Maxwell, one of the world’s leading experts on financial information-sharing partnerships, as well as individual law enforcement officials such as Inspector Heard, who spoke to the lack of timely disclosures by FINTRAC.

While it is not my intention to make recommendations to the federal government concerning the management and administration of federal entities, it is essential to explore the shortcomings in the current regime in order to understand the constraints faced by those charged with investigating and prosecuting money laundering offences and make effective recommendations to the Province concerning the law enforcement response to money laundering. In what follows, I review four specific criticisms of the financial intelligence provided to law enforcement bodies.

21 Evidence of C. Leuprecht, Transcript, April 9, 2021, p 42.
22 Evidence of N. Maxwell, Transcript, January 14, 2021, p 93 (“that’s the whole point of the AML/ATF regime, that it provides useful information to law enforcement”). See also Evidence of M. Heard, Transcript, March 30, 2021, p 78
High-Volume, Low-Quality Information

One of the key criticisms of FINTRAC is the ratio between the volume of information collected and the number of proactive disclosures made to law enforcement.

In the 2019–20 fiscal year, a total of 31,417,429 individual reports were submitted to FINTRAC (up from 28,119,852 in the 2018–19 fiscal year and 25,319,625 in the 2017–18 fiscal year).\(^23\) Of these reports, 386,102 were suspicious transaction reports (up from 235,661 in 2018–19 and 179,172 in 2017–18).\(^24\)

However, there were only 2,057 “unique” disclosures made to law enforcement (down from 2,276 in 2018–19 and 2,466 in 2017–18)\(^25\) and it appears that only 1,582 of these disclosures were directly related to money laundering (with 296 related to “terrorism financing and threats to the security of Canada” and 179 related to “money laundering, terrorism financing and threats to the security of Canada”).\(^26\)

Law enforcement agencies in British Columbia received 335 disclosures during the 2019–20 fiscal year (though a large number of disclosures were provided to national headquarters, which may have been used to support investigations in this province).\(^27\)

Even more concerning is the fact that FINTRAC received 2,519 voluntary information records from law enforcement agencies across the country in the 2019–20 fiscal year (down from 2,754 in 2018–19).\(^28\) Voluntary information records are used by law enforcement to prompt FINTRAC to provide information relevant to ongoing investigations. Investigators will provide FINTRAC with information relating to an ongoing investigation (such as the name of a target). FINTRAC will review that information and determine whether it is in possession of any additional information that could assist with the investigation. If so, it will disclose that information to investigators, provided the statutory conditions for disclosure are satisfied.\(^29\)

While there is limited evidence before me concerning the number of FINTRAC disclosures made in response to voluntary information records, I expect that most of the 2,057 unique disclosures made to law enforcement in 2019–20 were made in response to these requests. If so, the number of proactive disclosures (i.e., disclosures not prompted

\(^{23}\) Exhibit 828, Christian Leuprecht, Jeff Simser, Arthur Cockfield, and Garry Clement, Detect, Disrupt and Deter: Domestic and Global Financial Crime – A Roadmap for British Columbia (March 2021) [Leuprecht Report], Appendix 3, p 2 (Table 5).

\(^{24}\) Ibid.

\(^{25}\) Ibid, Appendix 3, pp 2–3 (Table 6). It is my understanding that “unique” disclosures represent the number of distinct reports disclosed, as opposed to the total number, as in some cases, the same report is sent to multiple law enforcement agencies: ibid, p 2 (Table 6), footnote 4. See also Evidence of C. Leuprecht, Transcript, April 9, 2021, pp 138–39.

\(^{27}\) Ibid, p 9.

\(^{28}\) Ibid, p 10.

by voluntary information requests) would be considerably smaller than the 1,582 unique disclosures referenced in FINTRAC’s 2019–20 annual report.\(^{30}\)

The issue is important because proactive disclosures may prompt the commencement of a new investigation (or assist in identifying a new target), whereas voluntary information records are typically made to support an investigation already underway. If the number of proactive disclosures is small, it could be a sign that the financial intelligence unit is not able to effectively identify and report money laundering activity.

On one hand, the small number of disclosures that make their way into the hands of law enforcement could suggest that FINTRAC is taking its statutory obligations very seriously and is disclosing information to law enforcement agencies only where there are reasonable grounds to suspect that the information would be relevant to the investigation and prosecution of a money laundering offence.

On the other hand, I have serious concerns about the number of proactive disclosures made to law enforcement agencies, given that the primary purpose of the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 [PCMLTFA] is to detect money laundering activity and provide actionable intelligence to law enforcement.

Legitimate concerns could also be raised about the cost of the PCMLTFA regime in light of these concerns. At present, there are approximately 24,000 individuals and businesses with reporting obligations under the PCMLTFA and a 2019 survey by LexisNexis put their annual cost of compliance in the range of $6.8 billion.\(^{31}\)

Moreover, I understand that FINTRAC’s annual expenditures are in the range of $55 million\(^{32}\) and that the reporting obligations mandated by the PCMLTFA impose a considerable burden on many designated non-financial businesses and professions.

While I appreciate that FINTRAC’s mandate extends beyond the production of actionable intelligence, it is difficult to reconcile those costs with the production of 2,057 disclosures, particularly when many of those disclosures were likely prompted by voluntary information records. It may be that there are better, and more cost-effective, measures the Province could put in place to identify money laundering activity.

Mr. Maxwell testified that the large number of reports submitted to FINTRAC, as compared to the extremely low number of disclosures being provided to law enforcement, is the product of a “defensive” reporting regime in which reporting entities are required to report everything from a $20 transaction to a $20 million transaction.\(^{33}\) He also indicated that Canadian reporting entities file roughly 10 million

\(^{30}\) Of course, that assumes that the number of unique disclosures includes disclosures made in response to voluntary information records. However, even if voluntary information record disclosures are not included in those statistics, the number of proactive disclosures is still very small.
\(^{32}\) Exhibit 733, FINTRAC Annual Report 2019–20, p 35.
more reports each year than their counterparts in the United States, and 30 million more reports each year than their counterparts in the United Kingdom (notwithstanding the population differences between these countries).\(^{34}\) This places a huge financial burden on the private sector without a corresponding increase in the ability of law enforcement to identify and disrupt financial crime because of broader information-sharing challenges.\(^{35}\)

Another concern that arises in this context is uneven reporting among reporting entities in different sectors of the economy. For example, I heard evidence that reporting entities in the BC real estate sector submitted only 37 suspicious transaction reports in the 2019–20 fiscal year (though I note that other reporting entities such as banks and credit units will sometimes file reports concerning suspicious activity in the real estate sector).\(^{36}\) The lack of consistent reporting in these areas gives rise to serious concerns about the quality and comprehensiveness of information in the FINTRAC database.

### Lack of Direct, Real-Time Access

Another factor that impairs the ability of law enforcement to conduct effective money laundering investigations is the lack of direct and real-time access to information in the FINTRAC database. Mr. Simser testified that the federal government took a “timorous” approach when it created FINTRAC because of concerns about privacy.\(^{37}\) He contrasted the Canadian system with the US system – where investigators can “literally go right into the database and look at the [suspicious transaction reports] or [suspicious activity reports] and the currency transaction reports and then try and see whether something fits with the investigative footprint they’re developing for a particular target.”\(^{38}\)

While I have no doubt it would assist law enforcement agencies to have direct and real-time access to information in the FINTRAC database, it is important to understand that the constraints on access in Canada are the product of constitutional limitations.

---

\(^{34}\) Ibid, pp 72–73.

\(^{35}\) Ibid, pp 72–73. In concrete terms, I understand that Canadian reporting entities filed approximately 31 million reports in 2019–20, whereas US reporting entities filed approximately 21.6 million reports, and reporting entities in the UK filed 573,085 reports. Note, however, that the number of suspicious transaction reports filed by Canadian entities was 386,102, as compared with 5,596,620 in the US and 573,085 in the UK (which only requires reporting entities to file suspicious activity reports). The large number of FINTRAC reports made by reporting entities also has a significant impact on privacy rights: see, for example, Evidence of N. Maxwell, Transcript, January 14, 2021, pp 73–76. While constitutional constraints prohibit me from making recommendations concerning the administration of federal entities such as FINTRAC, the solution proposed by Mr. Maxwell is increased tactical and strategic information sharing between the public and the private sector to guide the collection of intelligence by reporting entities: see, for example, Transcript, January 14, 2021, pp 90–93.

\(^{37}\) Transcript, April 9, 2021, p 102.

\(^{38}\) Ibid, pp 102–3. Detective Inspector Craig Hamilton gave evidence of a similar database in New Zealand that is accessible by police when investigating financial crimes: Transcript, May 12, 2021, pp 71–76. Other witnesses also testified that it would be of great use to law enforcement to have real-time access to financial data: see, for example, Evidence of M. Heard, Transcript, March 30, 2021, pp 79–80.
rooted in section 8 of the Canadian Charter of Rights and Freedoms, which protects against state interference with privacy rights and will be engaged whenever law enforcement conducts a search that interferes with a recognized privacy interest.\footnote{R v Cole, 2012 SCC 53 at para 34 (“An inspection is a search and a taking is a seizure, where a person has a reasonable privacy interest in the object or subject matter of the state action and the information to which it gives access”).}

One of the privacy interests protected by section 8 is informational privacy (i.e., the right to control how much information about ourselves and our activities we can shield from the “curious eyes of the state”).\footnote{R v Tessling, 2004 SCC 67 at paras 20–23.} While there are circumstances in which law enforcement can access information protected by section 8, investigators will normally be required to apply for and obtain a production order before they can access that information. With respect to financial records, investigators normally require reasonable and probable grounds to suspect that an offence has been or will be committed, and must establish that the information will assist in the investigation of the offence.\footnote{Criminal Code, s 487.018(1).}

Given this legal landscape, law enforcement bodies cannot realistically expect to receive unfettered access to information in the FINTRAC database.

**Lack of Timely Disclosure**

While constitutional considerations may prevent FINTRAC from giving law enforcement agencies direct and real-time access to its database, the lack of timely disclosure is not rooted in any recognized constitutional principle and is a source of significant frustration for investigators. For example, Inspector Heard testified that FINTRAC disclosures often arrive many months after the information has been requested, which creates significant challenges for investigators in formulating investigative plans and otherwise moving forward with their investigations:

> [W]hen it comes to proactive investigations, in my experience, FINTRAC hasn't been as timely. Unfortunately as an investigation goes on you provide FINTRAC with the information you're looking for, targets you're looking at obtaining information on. [For] [s]ome of those the return on information is three, four, five months past when it's been asked for or requested ... if you have whatever the predicate offence is and you're coming up with your plans to investigate the person for the named offences and then three, four, five months later the investigation is progressing, the information comes forward with the FINTRAC information, it definitely delays and it makes it challenging trying to investigate when the information isn't timely, in my opinion.\footnote{Evidence of M. Heard, Transcript, March 30, 2021, pp 78–79.}
These comments were echoed by Inspector Mullin of the New Westminster Police Department, who testified that he has seen instances of sophisticated targets selling off assets while investigators wait for FINTRAC disclosures:

Targets are sophisticated, they do know how we work and we’ve had instances where the information from FINTRAC has been delayed and by the time we’ve traced some of the money to properties, the properties have been sold off, so it makes it difficult for us … from a civil forfeiture aspect [to] capture all of the assets people possess that may be linked to the proceeds.43

While I acknowledge that the experiences of these senior officers are anecdotal, there is no excuse for these types of delays in getting information to law enforcement. I recommend that the Policing and Security Branch develop a way of tracking FINTRAC disclosures made in response to voluntary information records, in order to ensure that they are received promptly. If there are systemic delays with the receipt of these disclosures, the Policing and Security Branch should bring these concerns to the attention of the federal minister of public safety as well as the AML Commissioner.

**Recommendation 93:** I recommend that the Policing and Security Branch develop a way of tracking FINTRAC disclosures made in response to voluntary information records, in order to ensure that they are received promptly.

If law enforcement agencies are to be successful in their efforts to investigate money laundering / proceeds of crime offences, it is essential that they have as much support as possible from FINTRAC through the production of timely disclosures.

**Lack of Useful Disclosure**

Finally, I note that some witnesses raised issues with respect to the quality of FINTRAC disclosures received by law enforcement bodies. For example, Christian Leuprecht and his co-panelists gave evidence that much of the intelligence provided by FINTRAC to law enforcement agencies is often nothing more than information concerning specific transactions and is not connected to other suspicious activity or otherwise accompanied by any explanation about what is happening from a money laundering perspective.44

---

43 Evidence of C. Mullin, Transcript, March 30, 2021, p 82.
44 See, for example, Evidence of A. Cockfield, Transcript, April 9, 2021, p 41 (“they take it all in, but they don’t necessarily turn it into operationalized intelligence for law enforcement”) and p 140 (“it’s not … what we call actionable intelligence … like they’ve got a cross border transfer of over 10,000, maybe it has to do with a real estate transaction, and they send that to some agency, but they don’t necessarily tell the agency what exactly is happening. Nor do they know themselves, FINTRAC … [T]hey’re just coughing up information. It may or may not be useful”). See also Evidence of G. Clement, Transcript, April 9, 2021, p 101; Evidence of J. Simser, Transcript, April 9, 2021, p 104; Evidence of A. Cockfield, Transcript, April 9, 2021, pp 123–24.
So, as not to jeopardize any ongoing criminal investigation or proceeding, I have not conducted a comprehensive review of the disclosures received by law enforcement agencies in this province and am unable to comment on the quality of the information received by law enforcement. However, it is essential that law enforcement bodies receive timely, useful intelligence with respect to money laundering networks and typologies in addition to information concerning specific transactions. If law enforcement bodies have concerns about the quality of these disclosures, I would encourage them to bring their concerns to the attention of the Policing and Security Branch and the AML Commissioner to ensure they are properly addressed.

While law enforcement should continue to seek access to and make use of FINTRAC disclosures when available, the issues set out above, including, in particular, the lack of timely, proactive disclosures, have led me to conclude that law enforcement agencies in this province cannot rely on FINTRAC to provide timely, proactive intelligence with respect to money laundering threats and must take steps to develop their own intelligence with respect to money laundering activity within the province.

Accordingly, I have recommended that the provincial anti-money laundering intelligence and investigative unit recommended in Chapter 41 include a robust intelligence division with the expertise and resources to identify money laundering activity in the province. I have also recommended that the intelligence division explore new ways of developing intelligence with respect to money laundering activity.

**Complexity of Money Laundering Schemes**

A third challenge for law enforcement in the investigation and prosecution of money laundering offences is the ever-increasing sophistication of higher-level money laundering schemes. Examples of these schemes are reviewed in previous chapters of this Report and include the use of shell corporations and offshore financial havens, trade-based money laundering, and the use (or, more accurately, misuse) of cryptocurrency and informal value transfer systems to transfer illicit funds from person to person. When new and emerging technologies are added to the mix, or when these techniques are used in combination, it becomes exponentially more difficult for law enforcement to follow the money and uncover evidence of criminal activity. Moreover, there is evidence that transnational organized crime groups are using increasingly sophisticated countermeasures – such as encrypted communications devices – to defeat attempts by law enforcement to investigate money laundering schemes:

[A] lot of these organized crime groups today, they're using encrypted communications. So having secure comms is a big factor in a lot of these major investigations.
Virtual currency is at the forefront now. I mean, they look at different ways, more secure ways of looking at the funds going back and forth as they try to normalize the funds and [bring] them into the regular system.

Dark web marketplace, et cetera. So all these areas are themselves complex and they create the extra burden on these types of investigations.45

The Leuprecht Report suggests that it is unreasonable to expect even the most highly trained investigator to become an expert in all of these areas, which underscores the need for a multidisciplinary team comprised of legal experts, forensic accountants, computer specialists, and others to investigate money laundering activity. It also suggests that law enforcement bodies must make better use of experts in the private sector to gain a more complete understanding of complex money laundering schemes:

To be more effective and disrupt criminal organizations and their activities, law enforcement must explore recruiting private experts who fully understand some of these more complex techniques. There has been a real reluctance in Ontario and Canada to enter in public-private partnerships and, unlike most countries, it has been relatively absent from law enforcement investigations. Although there is no real legal framework for these relationships, it is mostly absent due to ignorance, legal uncertainty, security clearance and cost.46

While I appreciate the added costs associated with the use of outside experts, I agree that they can sometimes add great value and would encourage law enforcement agencies to reach out to private-sector experts in appropriate cases.

I hasten to add that consultations with legal experts in the private sector may also be useful for law enforcement bodies in understanding the structures put in place to launder illicit funds (either generally or in connection with a specific investigation). While law enforcement bodies are always entitled to seek legal advice from prosecutors, the intricacies of these structures may be such that specific expertise in areas such as company law, real estate, debt financing, and international trade may be required in order to unravel some of the more sophisticated money laundering schemes.

45 Evidence of P. Payne, Transcript, April 16, 2021, p 99. Mr. Simser also gave the example of “peekaboo” trusts, which are set up so that the money is automatically wired to an account in another jurisdiction as soon as a law enforcement demand is made for information about the trust. The problem with these trusts is that investigators will “spend all this time fighting to get information and when you finally get it you find out that the money has then transited to Panama or somewhere else and it’s then put beyond your reach” (see Evidence of J. Simser, Transcript, April 9, 2021, pp 36–37). Investigation of money laundering offences is also hampered by the fact that criminals deliberately exploit weaknesses in the anti-money laundering regimes of different countries: Evidence of G. Clement, Transcript, April 9, 2021, pp 35–36.

46 Exhibit 828, Leuprecht Report, p 44.
Chapter 41
A Dedicated Provincial Anti–Money Laundering Unit

One of the key recommendations made in this Report is the creation of a specialized provincial anti-money laundering investigation and intelligence unit to lead the law enforcement response to money laundering in this province. While I acknowledge – and appreciate – the submissions of the BC Civil Liberties Association concerning the effectiveness of specialized police units in the fight against money laundering, I am persuaded that the investigation of sophisticated money laundering activity by a specialized, multidisciplinary team has the potential to significantly disrupt organized crime activity in this province and that the new provincial unit will make substantial progress in the fight against money laundering if it is properly structured and resourced.

I also expect that the cost of the new unit will be offset through the increased asset forfeiture opportunities created by that unit, though I would not tie the funding of the new unit to that revenue to avoid potential conflicts. The New Zealand experience (reviewed in Chapter 39) demonstrates that a focused and effective asset forfeiture regime can have a significant impact on organized crime, and lead to substantial financial benefits for the state, which can be used to fund a range of important government services.

In what follows, I review what I consider to be the essential components of the new unit with particular emphasis on its location and governance, mandate, and organizational structure.
Location and Governance

While I have considered whether the new unit should be located (or “housed”) within the RCMP provincial police force as suggested by the RCMP in its January 22, 2018 business case,¹ I have concluded that the Province would be better served by placing the new unit within the Combined Forces Special Enforcement Unit (CFSEU) framework for three principal reasons.

First, the placement of that unit within CFSEU gives the Province a higher degree of oversight and visibility into its operations. Unlike the RCMP provincial police force, CFSEU has its own board of governance which is responsible for providing policy objectives and strategic direction to the officer-in-charge of CFSEU.

The board of governance is accountable to the provincial minister of public safety and includes representatives from various federal, provincial, and municipal police agencies, including the commanding officer of “E” Division (who chairs the board of governance), the “E” Division criminal operations officer, the commander of the RCMP’s Lower Mainland District and the chief constable of the Vancouver Police Department.²

The Policing and Security Branch also meets regularly with the officer-in-charge along with the heads of each of the fenced-funding units and has a compliance and evaluation group that monitors the performance of CFSEU on an ongoing basis.³

While there is also communication between the Policing and Security Branch and the RCMP provincial police force, that communication is less specific and less frequent.⁴

Second, there is a very real risk that the creation of a new unit within the RCMP provincial police force would have a cascading effect on core police services. A decision note prepared for the minister of public safety in connection with the Financial Intelligence and Investigations Unit (FIIU) proposal indicates that the pressures and resource shortages in front-line policing have reached a “critical point” and I have serious concerns about further “hollowing out” the provincial police force.⁵

Third, the placement of the new unit within CFSEU gives the Province greater flexibility to hire and retain police officers and civilian specialists with the knowledge, skills, and abilities to do the work. Mr. Rideout summarized these factors as follows:

¹ A full discussion of the RCMP’s business case can be found in Chapter 39.
² Exhibit 803, Doug LePard and Catherine Tait, Review of the Joint Illegal Gaming Investigation Team (JIGIT) (November 2020) [LePard Report], pp 72–73.
³ Evidence of W. Rideout, Transcript, April 6, 2021, p 37. I note as well that CFSEU maintains the provincial tactical enforcement priority (PTEP) which may assist in identifying high-level targets involved in money laundering: see Evidence of C. Pecknold, Transcript, April 6, 2021, p 67; Evidence of T. Steenvoorden, Transcript, April 6, 2021, p 68.
⁴ Evidence of W. Rideout, Transcript, April 6, 2021, p 37.
⁵ Exhibit 800, Ministry of Public Safety and Solicitor General, Policing and Security Branch, Decision Note (June 7, 2019), p 4; Evidence of W. Rideout, April 6, 2021, pp 116–17. A full discussion of the FIIU proposal can be found in Chapter 39.
I think it’s an important distinction [that] simply providing the funding to the provincial force doesn’t necessarily immediately solve the problem because as you accurately describe, ... those experienced resources have to come from somewhere. So if you stand up a unit say like FIU and you need 30 police officers immediately, you need to pull them from other locations, detachments, provincial resources that are often already under great pressure, and as described in the provincial force there’s already some resource gaps that exist on an ongoing basis; federal resources have similar if not greater pressures.

So when we’re establishing significant units we have to look at the global picture and understand that when we look to staff large units there is [a] cascading effect on the provincial force and it has to be considered holistically. I think part of the reason that this proposal and others look at building some permanent legacy infrastructure within our designated policing unit such as OCABC is that it can operate outside of that environment so that it’s not having a direct impact at least permanently on the ebb and flow of the provision core resources.

In other words you’re essentially building a separate police agency that is integrated with the RCMP. I think that also provides the ability to hire specialists rather than your traditional gun-wearing police officer but somebody with the right academic and/or experienced credentials to do this kind of work.6

Likewise, the FIU proposal states that “tethering specialized units, such as the FIU, to the federal RCMP or a provincial force that used the 70/30 cost-share would compromise human resource capacity and expertise, staffing levels, provincial priorities, information flow, and the agility required to respond to emerging issues.”7

I want to be clear, however, that what is contemplated by this recommendation is the contribution of additional resources to CFSEU using the existing Organized Crime Agency of BC (OCABC) structure. This will require a significant investment by the Province and does not appear to have happened with the Joint Illegal Gaming Investigation Team (JIGIT), which has mostly been staffed by RCMP officers drawn from the RCMP provincial police, as opposed to new members seconded by OCABC).8

---

6 Evidence of W. Rideout, April 6, 2021, pp 116–17. For evidence with respect to the need to retain police officers with the necessary knowledge and expertise to conduct complex investigations, see Evidence of D. LePard, Transcript, April 7, 2021 (Session 1), pp 18–20.

7 Exhibit 60, Anti–Money Laundering Financial Intelligence and Investigations Unit – Draft Proposal (May 7, 2019) [FIU Draft Proposal], pp 4, 15. I would add simply that CFSEU is seen by municipal police departments as a “capable organization” with the ability to take on significant money laundering files, possibly in collaboration with a major municipal police department: Evidence of C. Mullin, March 30, 2021, p 51; Evidence of B. Crosby-Jones, March 30, 2021, p 51.

8 Exhibit 803, LePard Report, p 60. Of course, there may also be RCMP officers and officers from municipal police departments who are seconded to the new unit.
It is also essential that the new unit does not distract from the critically important work that CFSEU is already doing in other areas. My objective in making this recommendation is to maintain the “core expert teams” designed to address gang violence but add a team of financial crime specialists to enhance its ability to disrupt organized crime activity.9

**Mandate**

In my view, the mandate of the new unit should be to lead the law enforcement response to money laundering in this province by (a) identifying, investigating, and disrupting sophisticated money laundering / proceeds of crime offences occurring in the province; and (b) training and otherwise supporting other investigators in the investigation of money laundering / proceeds of crime files of low to medium complexity. There may also be a role for the new unit in liaising with regulatory bodies, conducting public outreach activities, and advocating for legislative and regulatory change.10

I would not limit the mandate of the new unit to one sector of the economy, nor would I limit it to one type of offender (though I would note that most serious money laundering activity is committed by or on behalf of organized crime groups).11

In carrying out this mandate, the new unit will need to be aware of federal efforts to tackle money laundering and should work closely with Federal Serious and Organized Crime’s (FSOC) Financial Integrity Unit in developing a coordinated, co-operative, and collaborative approach to the investigation of money laundering activity. I note, in particular, that FSOC may be better placed to investigate money laundering activity involving transnational organized crime groups, as well as specific types of money laundering (such as trade-based money laundering) that fall within the exclusive jurisdiction of the federal government. Conversely, the provincial unit may be better placed to investigate money laundering activity that predominantly occurs within the province. That said, the provincial unit should not shy away from targeting or investigating national or even international organized crime groups who seek to launder illicit proceeds through the BC economy or hold illicit proceeds in this province (for example, in real estate).

I understand that FSOC and CFSEU currently have an excellent relationship and I have full confidence that will continue when the new unit is created.

I also expect that both units will be fully immersed in new files almost immediately and that there will be many opportunities for collaboration.

---

9 On this point see Exhibit 799, Ministry of Public Safety and Ministry of Attorney General, Joint Briefing Note (February 7, 2018), pp 2–3.
10 While money laundering and proceeds of crime offences are separate offences involving different elements, it is my expectation that the new unit will come across a variety of proceeds of crime offences in the conduct of money laundering investigations. For this reason, it makes a great deal of practical sense for the new unit to investigate both offences.
11 In this respect, the mandate of the new unit fits well within the CFSEU structure.
For these reasons, I do not see any redundancy in having two units charged with the investigation of sophisticated money laundering activity within the province. To the contrary, the existence of two units, each with a slightly different mandate, may create some synergy in the law enforcement response and allow each unit to focus on money laundering activity that properly falls within its mandate.12

Organizational Structure

With respect to the structure of the new unit, I believe it is essential for the new unit to have both an intelligence division and an enforcement division in order to mount an effective response to money laundering.

Intelligence Division

One of the key components of an effective money laundering investigation unit is an intelligence division capable of developing actionable intelligence concerning money laundering threats. While FINTRAC was created to fulfill that role, it has proven to be incapable of reliably producing proactive, actionable intelligence concerning money laundering threats (see Chapter 40). Further, it does not do everything needed from an intelligence perspective. For example, FINTRAC does not conduct interviews, perform surveillance, or cultivate informant information.

It is therefore essential that the Province put in place additional measures to identify money laundering activity.

It is also important that the Province put in place a deliberate triage process to ensure that law enforcement resources are put toward money laundering investigations that provide maximum disruption of organized crime networks.13

A robust intelligence division would help to ensure that investigators receive timely intelligence with respect to money laundering activity in the province and are able to tailor their investigations to the most serious threats.14

---

12 For example, where FSOC comes across money laundering activity that falls within the federal prioritization matrix but has important implications for the province, it could refer that file to the provincial unit for investigation. Likewise, there may be files the provincial unit refers to FSOC because the nature of the investigation demands that it be investigated by the RCMP.

14 While the Province could also create a separate financial intelligence unit like FINTRAC to receive reports from financial institutions and other reporting entities, that unit would suffer from many of the same problems as FINTRAC, including the fact that disclosure could only be made to law enforcement where there are reasonable grounds to suspect that the information would be relevant to the investigation or prosecution of a criminal offence. Moreover, information included in that database would be largely the same as the information in the FINTRAC database. For additional evidence concerning the utility of developing an intelligence division within the money laundering intelligence and investigation unit based on the New Zealand model, see Evidence of C. Hamilton, May 12, 2021, pp 17–18. Law enforcement has access to a broad range of information, including information from police databases, confidential sources, and active investigations, which can significantly enhance their ability to identify and target money laundering activity.
The FIIU proposal recommends the creation of an intelligence division made up of a senior management group along with the following support teams:

- an intake team responsible for receiving information from FINTRAC, other police agencies, regulators, banks, confidential informants, the media, and other sources;
- an intelligence analysis support team responsible for gathering and compiling information from various open and closed sources, assisting with the creation and analysis of intelligence work product, and liaising with foreign partners;
- a covert asset support team responsible for the recruitment, development, and management of confidential informants; and
- an administrative and operations support team responsible for human resources, IT support, media relations, and various other tasks.\(^\text{15}\)

While I am not inclined to make any specific recommendations with respect to the number of sworn officers and civilian analysts assigned to the intelligence division, the staffing level identified in the FIIU proposal is the minimum that will be required.\(^\text{16}\)

I would add that, in staffing this division, and the investigative division, the province should prioritize expertise and experience relevant to the investigation of money laundering and proceeds of crime offences. The mandate of the new provincial unit is to identify and disrupt sophisticated money laundering operations. A high level of knowledge and expertise will be required if the new unit is to achieve those objectives.

I would also emphasize the need for the new intelligence division to be proactive in its efforts to identify money laundering activity and take active steps to seek out information concerning money laundering threats. Land title records, court filings, and other government and commercial databases can be valuable sources of information, especially when combined with information in the possession of law enforcement.\(^\text{17}\)

Moreover, the intelligence division should be making use of conventional law enforcement tools such as witness interviews, surveillance, and informant information to identify money laundering activity.

I also believe that the intelligence division should have primary responsibility for the development of tactical information-sharing initiatives with public and private sector entities within the province. While I appreciate that there are a number of challenging legal issues that arise in this context, I believe that the development of tactical information-sharing partnerships is a critical step in addressing the money laundering threat. I also believe it is essential that the intelligence division continue to explore new ways of sharing tactical information with stakeholders in the public and private sector.

\(^{15}\) Exhibit 60, FIIU Draft Proposal, pp 20–22.
\(^{16}\) Ibid.
\(^{17}\) I would add that there are emerging resources that should prove valuable, such as the provincial Land Owner Transparency Registry and the new pan-Canadian corporate beneficial ownership registry discussed in Chapter 24.
In making these comments, it strikes me that the legal issues associated with tactical information sharing are highly contextual. For example, the issues that arise in the gaming sector may be very different from the issues that arise in the real estate sector. Likewise, the issues that arise with public sector entities may be very different from the issues that arise in the private sector.

With that in mind, it may be advisable for the new unit to take a sector-specific approach and explore independent information-sharing agreements and initiatives that respond to the specific issues that arise in each sector of the economy. The approach taken in the early days of Project Athena may be a useful way of approaching the Charter issues that arise in this context.18

As I understand that approach, law enforcement entities would provide tactical information, such as the name of a potential target, to stakeholders in the public and private sector (such as financial institutions). If those stakeholders had relevant information to provide, they would respond by filing reports with FINTRAC, referencing Project Athena. FINTRAC would analyze that information and disclose it to law enforcement if it was satisfied that there were reasonable grounds to suspect the information would be relevant to the investigation or prosecution of a money laundering or terrorist financing offence.

**Investigation Division**

At the heart of the new unit is an investigation division capable of taking on complex money laundering investigations. The FIIU proposal recommends the creation of an investigation unit supported by a surveillance support team, a proceeds-of-crime support team, a civil forfeiture support team, and an international support team.19 The proposed investigation team is comprised of various investigators, criminal analysts, and disclosure facilitators who would perform some or all of the following duties:

- arresting suspects;
- handling the seizure of exhibits;
- providing witness security and management;
- preparing and executing judicial applications;
- conducting structured interviews and interrogations; and
- preparing Reports to Crown Counsel and supporting prosecutions, including by giving evidence in the Provincial and Supreme Court of British Columbia.20

---

18 A full discussion of Project Athena can be found in Chapter 39.
19 The FIIU proposal contemplates that 15 of the 29 officers would be seconded by OCABC, with nine officers being seconded from the RCMP and five officers being seconded by municipal police departments: Exhibit 60, FIIU Draft Proposal, p 23.
20 Ibid, p 24. The FIIU proposal also contemplates that most, if not all, of these investigations would be conducted in accordance with major case management principles.
In terms of staffing, the numbers identified in the FIU proposal are the minimum that will be required to mount a robust response to the money laundering problem facing the province. Moreover, it is essential that the new unit make efforts to hire and retain police officers and civilian staff with the requisite knowledge, skills, and abilities to conduct effective money laundering investigations. Professor Leuprecht testified that the investigation of sophisticated money laundering activity is “not something a regular investigator in a law enforcement agency or your regular sort of prosecutor can pick up. It requires very particular skill sets.”\(^{21}\) Likewise, Mr. Clement emphasized the need for investigators with the proper skill set who are going to be there for the long term:

> Setting this up and going about it, I think there has to be right at the start recognition that this requires specialized skills and we’ve got to get away – and this is a fundamental problem within law enforcement that they are still designed under paramilitary frameworks and resulting in promotion versus paid for skill. So if you’re going to get a unit and invest all that time and money, you want to have people that have longevity and the proper skill set going in. You need to have these people that are as I said going to be there for a long term. And then what you want to have is an allocation of positions or full-time equivalents that are, as I said, concentrated in this and are allowed to expand their abilities through training, et cetera. [Emphasis added.]\(^{22}\)

I expect that most of the investigations undertaken by the new unit will be complex, resource-intensive investigations requiring the implementation of major case management principles. It is therefore essential that the new unit have the infrastructure and technology in place to prepare disclosure packages and otherwise ready cases for trial before the information is sworn and the *Jordan* clock starts.

I would also highlight Professor Sharman’s evidence with respect to the “pattern of incentives” faced by many law enforcement officials.\(^{23}\) Based on confidential interviews with law enforcement officials in the United Kingdom and Australia, he concluded that law enforcement careers are often hurt more by investigations that fail than ones that succeed. In this sense, the career incentive is to avoid investigating crime or to take on simple cases that can be concluded quickly, rather than the time-consuming, complicated investigations needed to effectively address financial crime.\(^{24}\) If the new unit is to make a meaningful difference in the fight against money laundering it must be innovative in its approach and create a culture where law enforcement officials are incentivized to take on challenging investigations and bring forward new initiatives.

---

\(^{21}\) Evidence of C. Leuprecht, Transcript, April 9, 2021, pp 97–98.

\(^{22}\) Evidence of G. Clement, Transcript, April 9, 2021, p 110. See also Evidence of J. Simser, Transcript, April 9, 2021, pp 126–27. As set out above, the placement of the new unit within CFSEU will help to ensure that it can hire and retain officers with the requisite training and expertise. To attract and retain individuals with specialized expertise in financial crime and money laundering (forensic accountants, lawyers, etc.) it may also be necessary to pay a premium to compete with the private sector (see below).

\(^{24}\) Ibid.
Other Necessary Elements

While the intelligence and investigative divisions are at the heart of the new provincial unit, there are a number of additional components that must be in place for it to be successful in the investigation of money laundering / proceeds of crime offences.

First, it is essential that the new unit have access to prompt, ongoing legal advice with respect to investigations undertaken by investigators.

While various models have been proposed for the provision of that advice, I tend to prefer the WorkSafeBC model, which involves the creation of a stable of prosecutors with the knowledge and expertise to give advice to investigators and prosecute money laundering / proceeds of crime offences where the evidence is sufficient to support those charges.25

I would therefore encourage the new unit to work with the BC Prosecution Service and the Public Prosecution Service of Canada to identify prosecutors with training and expertise in this area, who are available to provide prompt legal advice.

In order for the WorkSafeBC model to be successful, the BC Prosecution Service (and, if applicable, the Public Prosecution Service of Canada) will need to develop training programs to ensure that prosecutors assigned to these groups have the requisite knowledge and expertise to provide informed advice on money laundering / proceeds of crime issues. These programs should include substantive training on money laundering risks, vulnerabilities, and typologies. They should also include training on the investigative techniques needed to conduct a thorough investigation into such activity, as the legal advice sought by investigators may relate more to these techniques than money laundering risks, vulnerabilities, and typologies.

Second, it is essential for the new unit to develop and maintain a team or “cadre” of money laundering and financial crime experts who can help investigators understand the evidence and give expert evidence in court. One need only review Simon Lord’s description of the UK’s expert evidence cadre to appreciate the value of this expertise:

In around about … 2008, 2010, when we started dealing more with some of the more complicated types of money laundering, there was a situation [that] arose where cases were failing because people didn’t understand them essentially. The people who were presenting the case in court, so the investigators and sometimes the prosecutors themselves, didn’t understand it. The judge didn’t necessarily have much experience in dealing with this type of activity. And when you’re in that type of situation, the jury aren’t going to get it either.

So the NCA [National Crime Agency] already had at this point in time an expert cadre in respect of drug trafficking. So people who could go

25 A full discussion of the WorkSafeBC model can be found in Chapter 39.
into court and to explain the sort of evidence that you typically get in a
drug trafficking investigation – so things like ledgers and drug prices
and cutting agents and various different things like that. And so … it was
thought a sensible idea to see whether we could end up with a bunch of
individuals, a cadre of individuals who were subject matter experts in
their own right, who could demystify money laundering to a jury to enable
them to understand the evidence properly and to make the appropriate
decisions based on the evidence in front of them.

... What we can also do is, if we are approached by a law enforcement
body, and they might say to us, okay, well, we’re doing a drug trafficking
investigation and maybe a money laundering investigation, and there’s a
guy in this investigation who’s one of our suspects and he runs an MSB,
money service business. We haven’t got a clue what we need to ask this guy
because we don’t understand how MSBs work.

And in a situation like that, what one of us might do is say, okay, we
will provide advice to your investigation, and it might be the situation that
... we will sit down with you and help to plan in interview strategy for the
MSB owner when he’s arrested and what have you.26

While the primary role of these experts should be to support the work of
the specialized anti-money laundering unit, they may also be valuable source
of information and evidence for other investigators conducting money
laundering investigations.27

Third, I am satisfied there is a pressing need to create more surveillance capacity
within CFSEU to support the activities of the new unit. At the time of writing, there are
four surveillance teams within CFSEU, which are shared among the various units and
may also be used to assist external units such as the Integrated Homicide Investigation
Team. Because these resources are, quite properly, allocated to investigations where
there are public safety concerns, there are often no surveillance resources available to
assist other units such as those investigating financial crime.28

The LePard Report notes that “[t]he only way to address this resource gap is to create
a surveillance team that prioritizes JIGIT’s needs” and asserts there is precedent for such
an initiative.29 While I appreciate the significant cost associated with the creation of a new
surveillance unit, I am satisfied that the ability to conduct proper surveillance is critical

26 Evidence of S. Lord, Transcript, May 28, 2020, pp. 35–36, 40. For greater certainty, the expert cadre can
be staffed by members of the new unit as long as they develop the requisite knowledge and expertise
to give expert evidence in court proceedings. These experts may also be able to assist front-line
investigators in other units who are conducting money laundering / proceeds of crime investigations.
27 They may also be able to support the work of the Civil Forfeiture Office.
29 Ibid, p 62.
to the success of the new unit, and confident that the associated cost will be offset by new asset forfeiture opportunities. I therefore recommend that the Province ensure that there is sufficient surveillance capacity within CFSEU to support the work of the new unit.

I anticipate that this will require additional funding and a direction that at least one surveillance team prioritize the work of the new unit.

**Recommendation 94:** I recommend that the Province ensure that there is sufficient surveillance capacity within the Combined Forces Special Enforcement Unit to support the work of the new dedicated provincial money laundering intelligence and investigation unit.

Fourth, it is essential that the new unit incorporate or otherwise have access to individuals with expertise in a wide range of disciplines. While legal experts and forensic accountants are usually cited as the professions that could provide the most assistance, there is also a very real need for computer experts, including those with expertise in blockchain technology.

For these reasons, the new unit must be given the flexibility to hire or retain new experts in order to respond to new and emerging typologies. It is also important that the new unit have the flexibility to consult with experts from the private sector where it would be of assistance to investigators.

I appreciate that these measures will add to the size and cost of the new unit, but I strongly believe they are essential to its success and strongly recommend that the provincial government ensure they are incorporated into the new unit.

**Performance Metrics and Reporting**

In order to ensure that the new unit is properly resourced, and effective in fulfilling its mandate, it is essential that the Province track its performance.

I believe the following metrics are of critical importance in tracking the performance of the new unit (though there may well be other important metrics):

- number of sworn members assigned to the new unit, including the intelligence and investigation divisions;
- number of civilian members assigned to the new unit, including the roles and responsibilities of these members;

---

30 In some cases, it may also be necessary for the new unit to invest in the technology that would allow these experts to identify, detect, and disrupt money laundering activity. For example, the use of after-market software tools such as Chainalysis and CipherTrace are of considerable importance in addressing money laundering activity involving cryptocurrency.
• number of money laundering referrals received from regulators and private sector entities;
• number of money laundering and proceeds of crime investigations commenced by the new unit;
• number of arrests made;
• number of money laundering and proceeds of crime investigations that resulted in charges being recommended;
• number of money laundering and proceeds of crime investigations that resulted in charges being approved;
• number of money laundering and proceeds of crime investigations resulting in guilty pleas / convictions;
• number of referrals to other provincial or federal units;
• number of outside files in respect of which assistance was provided;
• number and value of assets seized and/or forfeited in connection with criminal proceedings; and
• number of cases referred to civil forfeiture.

While I appreciate that these metrics are not the sole measure of success, they provide a good starting point for evaluating the performance of the new unit and should be reported to the CFSEU board of governance and the Policing and Security Branch regularly. The AML Commissioner should also be given access to these statistics in order to fulfill his or her mandate.

While the AML Commissioner should be at liberty to report on the performance of the new unit as he or she sees fit, it is important to continually assess the performance of the new unit, and I recommend that the AML Commissioner undertake a comprehensive review every five years to ensure it remains relevant and effective.

**Recommendation 95:** I recommend that the AML Commissioner conduct a comprehensive review of the provincial money laundering intelligence and investigation unit every five years to ensure it remains relevant and effective.

---

For example, it may be preferable for the new unit to focus on a small number of major investigations with significant disruption potential, as opposed to a large number of less serious investigations.
Relationship with Regulators

Finally, it is important that the new unit develop a good working relationship with provincial regulators such as the BC Financial Services Authority and the Law Society of British Columbia. At present, there is a perception among regulators that law enforcement is not interested in information about potential money laundering activity. The new provincial unit must work to make its genuine interest in receiving investigative leads known to regulators. It should also ensure that it brings relevant information to the attention of regulators where it comes across instances of misconduct, even if the evidence is insufficient to pursue a criminal investigation.

In many cases, regulators have significant investigative powers including, in the case of the Law Society, the power to review information that would otherwise be subject to privilege. These powers can be deployed much more effectively if law enforcement agencies bring relevant information to their attention.

Conclusion

The investigation and prosecution of money laundering / proceeds of crime offences is one of the cornerstones of an effective anti-money laundering regime. Not only does it have a significant deterrent effect on organized crime activity, but it also allows for the identification of assets for seizure through the criminal or civil forfeiture process (see Chapters 42 and 43). In recent years, however, law enforcement agencies have failed to respond to the explosive growth of money laundering in this province, allowing those involved in such activity to operate with relative impunity. I am particularly troubled by the apparent disconnect between federal law enforcement priorities and the situation on the ground in British Columbia (where hundreds of millions, if not billions of dollars are being laundered through the BC economy).

While the failure to respond to the money laundering threat has various causes, I believe the RCMP's decision to disband Integrated Proceeds of Crime units, without putting in place the necessary infrastructure or resources to address the ever-increasing volume of illicit funds being laundered through the BC economy, is one of the primary causes of the poor law enforcement results in this province. If the province truly wishes to address the money laundering problem, it must take matters into its own hands and invest in the creation of a specialized money laundering intelligence and investigation unit to lead the law enforcement response in this province. It is also essential that law enforcement units charged with the investigation of profit-oriented criminal offences consider money laundering / proceeds of crime charges at the outset of their investigations and conduct a financial investigation with a view to pursuing these charges and identifying assets for seizure and forfeiture.

While the investigation and prosecution of money laundering offences has many challenges and complexities, it is my sincere belief that meaningful progress can be made on this issue through sustained effort by law enforcement bodies.
Asset forfeiture is widely regarded as one of the most effective ways of stifling and disrupting organized crime groups. Not only does it deprive these groups of the profits of their unlawful activity (thereby taking the profit out of crime), it also prevents those funds from being reinvested in the criminal enterprise where they can be used to purchase drugs, weapons, vehicles, and other products necessary to support their unlawful activities. Unfortunately, however, the number and value of assets seized through the asset forfeiture system in British Columbia is shockingly low. I view the failure to vigorously pursue these assets as a missed opportunity to disrupt and deter the activities of organized crime groups and others involved in serious criminality.

In what follows, I review the two primary forms of asset forfeiture in this province: criminal asset forfeiture and civil asset forfeiture. In Chapter 42, I review the criminal asset forfeiture regime in Canada and recommend that law enforcement bodies make better efforts to identify and pursue unlawfully obtained assets for seizure and forfeiture under that regime. I also recommend that law enforcement bodies and prosecutors receive training on the tools available within the criminal asset forfeiture regime.

In Chapter 43, I review the civil asset forfeiture regime in British Columbia as well as five other common law jurisdictions: the United States, the United Kingdom, the Republic of Ireland, Australia, and Manitoba. I also make a number of recommendations aimed at strengthening the investigative capacity of the BC Civil Forfeiture Office and recommend the introduction of unexplained wealth orders to give the Civil Forfeiture Office an additional tool to deprive offenders of the profits of their unlawful activity.
Criminal Asset Forfeiture (sometimes referred to as “conviction-based forfeiture”) is generally understood as the forfeiture of proceeds of crime or offence-related property in connection with a criminal prosecution. Criminal asset forfeiture can be contrasted with civil asset forfeiture (sometimes referred to as “non-conviction-based forfeiture”), which is generally understood as the forfeiture of proceeds of crime or offence-related property through the use of civil forfeiture legislation such as the Civil Forfeiture Act, SBC 2005, c 29. Over the past 20 years, there has been a significant decrease in the use of the criminal asset forfeiture regime, in part, because of the proliferation of civil asset forfeiture legislation. However, the legislative tools are still in place, and there are cases in which it is advantageous to pursue the remedies available under that regime.

In what follows, I review the forfeiture provisions of the Criminal Code, RSC 1985, c C-46, and emphasize the need for law enforcement agencies to make better efforts to identify and pursue unlawfully obtained assets for seizure and/or forfeiture under those provisions.

**Criminal Asset Forfeiture Provisions**

While federal legislation has long contemplated the forfeiture of property obtained through the commission of a criminal offence, these provisions underwent substantial amendments in 1989 in order to fulfill Canada’s commitments under the United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances.¹

¹ 1583 UNTS 3; CTS 1990/42. See also Robert Hubbard et al, Money Laundering and Proceeds of Crime (Toronto: Irwin Law, 2004), p 79. While a number of these provisions are contained in the Criminal Code, there are many other federal statutes that allow for the forfeiture of proceeds of crime and offence related property, including the Controlled Drugs and Substances Act, SC 1996, c 19; the Excise Act, RSC 1985, c E-14; the Customs Act, RSC 1985, c 1 (2nd Supp); and the Immigration and Refugee Protection Act, SC 2001, c 27.
In *R v Lavigne*, Madam Justice Deschamps described the history and purpose of those amendments as follows:

In 1989, Canada honoured the commitment it had made when it signed the *Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances*, Can. T.S. 1990 No. 42, by amending the *Criminal Code* to add Part XII.2 (Proceeds of Crime): R.S.C. 1985, c. 42 (4th Supp.) (formerly S.C. 1988, c. 51), s. 2. The new provisions allowed the prosecution to use unprecedented investigative methods (s. 462.32), created new offences (s. 462.31(1)) and established special rules for sentencing (ss. 462.31(2) and 462.37).

... Great importance is ... attached to the proceeds of crime, and one of the stated goals is to neutralize criminal organizations by depriving them of the profits of their activities. The Honourable Ray Hnatyshyn, who was the Minister of Justice when the bill was introduced, said that traffickers had been insufficiently deterred by traditional sentencing methods. Canada therefore had to adopt methods by which it could deprive offenders of the profits of their crimes and take away any motivation to pursue their criminal activities. Of all the methods chosen, the primary one is forfeiture (*House of Commons, Minutes of Proceedings and Evidence of the Legislative Committee on Bill C-61*, Issue No. 1, November 5, 1987, at p. 1:8). The effectiveness of the adopted methods depends largely on the severity of the new provisions and on their deterrent effect (*Quebec (Attorney General) v. Laroche*, [2002] 3 S.C.R. 708, 2002 SCC 72, at para. 25).2

One of the key amendments introduced by Parliament was the ability to apply for pre-trial seizure or restraint of assets where there are reasonable grounds to believe that a forfeiture order could be made in respect of that property.3 Section 462.32(1) allows a judge, on application by the Attorney General, to issue a special search warrant authorizing a peace officer to search a building, receptacle, or other place for property in respect of which a forfeiture order may be made, and seize any property that could be subject to a forfeiture order.4 Similarly, section 462.33 allows the Attorney General to apply for a “restraint order” prohibiting the owner of property (usually real estate) from selling or otherwise dealing with an interest in property except as specified in the order.5

Another key provision is section 462.37, which allows for the forfeiture of unlawfully obtained property in a broad range of circumstances. Section 462.37(1) provides that

---

3 In basic terms, seizure refers to the confiscation of property, whereas a restraint order allows a person to remain in possession of property (usually land) but prevents him or her from selling or otherwise disposing of it.
4 *Criminal Code*, s 462.32(1).
5 Ibid, s 462.33.
where an offender is convicted of a designated offence\(^6\) and the court is satisfied, on a balance of probabilities (in other words, it is more likely than not), that the property sought to be forfeited was obtained through the commission of that offence, it must make an order that the property be forfeited to the state and disposed of in accordance with the law.\(^7\)

For the purpose of these provisions, the court may infer that property was obtained or derived as a result of the commission of a designated offence where:

(a) the evidence establishes that the value of all the property of the person alleged to have committed the offence exceeds the value of all the property of that person before the commission of that offence; and

(b) the court is satisfied that the income of that person from sources unrelated to criminal activity cannot reasonably account for such an increase.\(^8\)

Section 462.37(2) deals with a circumstance where the court is not satisfied that the property was obtained through the commission of the designated offence of which the offender was convicted but is satisfied that the property is proceeds of crime (i.e., that it was obtained or derived through the commission of a designated offence other than the one before the court). In such circumstances, the court can make a forfeiture order only if it is satisfied, beyond a reasonable doubt, that the property is proceeds of crime.\(^9\)

Section 462.37(2.01) gives the court significant powers to order forfeiture where the offender has been convicted of a criminal organization offence punishable by five or more years of imprisonment; an offence under sections 5, 6, or 7 of the Controlled Drugs and Substances Act, SC 2018, c 16 (which include trafficking in a controlled substance, importing or exporting a controlled substance, and production of a controlled substance); an offence under certain provisions of the Cannabis Act, SC 2018, c 16; or human trafficking offences under sections 279.01 to section 279.03 of the Criminal Code. In such circumstances, the court can order that any property of the offender be forfeited if it is satisfied, on a balance of probabilities, that:

- in the ten-year period before criminal proceedings were commenced, the offender engaged in a pattern of criminal activity for the purpose of directly or indirectly receiving a material benefit, including a financial benefit; or

---
\(^6\) The proceeds of crime provisions of the Criminal Code focus on “designated offences,” which are defined as (a) any offence that may be prosecuted as an indictable offence under the Criminal Code or any other Act of Parliament, other than an indictable offence prescribed by regulation, or (b) a conspiracy or an attempt to commit, being an accessory after the fact in relation to, or any counselling in relation to an offence referred to in paragraph (a). Examples include drug trafficking, human smuggling, counterfeiting, illegal gaming, and certain types of fraud: Criminal Code, s 462.3(1).

\(^7\) Criminal Code, s 462.37(1).

\(^8\) Ibid, s 462.39.

\(^9\) Ibid, s 462.37(2).
• the income of the offender from sources unrelated to designated offences cannot reasonably account for the value of all of the offender’s property.10

In determining whether the offender has engaged in a pattern of criminal activity for the purpose of that provision, the court must consider:

• the circumstances of the offence for which the offender is being sentenced;

• any act or omission — other than an act or omission that constitutes the offence for which the offender is being sentenced — that the court is satisfied, on a balance of probabilities, was committed by the offender and constitutes an offence punishable by indictment under any Act of Parliament;

• any act or omission that the court is satisfied, on a balance of probabilities, was committed by the offender and is an offence in the place where it was committed and, if committed in Canada, would constitute an offence punishable by indictment under any Act of Parliament; and

• any other factor that the court considers relevant.11

If an offender is found to have engaged in a pattern of criminal activity, it is always open to the offender to prove that the subject property was not obtained from a designated offence, in which case the court is prohibited from making a forfeiture order.12

I pause here to note that these provisions give the state a number of significant powers to pursue unlawfully obtained assets. First, the use of the disjunctive “or” in section 462.37(2.01) suggests that either a pattern of serious criminal activity or a lack of income from other sources is sufficient for the court to make a forfeiture order. In this respect, section 462.37(2.01) can operate in a manner similar to an unexplained wealth order (see Chapter 43). Where the offender has been convicted of an offence listed in section 462.37(2.01), the prosecution can seek forfeiture of any property of the offender on the basis that the income of the offender from sources unrelated to those offences cannot reasonably account for the value of all of the offender’s property.

Second, the provision seems to allow for the forfeiture of property that was acquired before the conduct forming the basis of the criminal proceedings (provided that the other requirements of that provision are satisfied). In R v Saikaley, for example, the court found that property purchased by the accused before the timeframe covered by

10 Ibid, s 462.37(2.01).
11 Ibid, s 462.37(2.04).
12 Ibid, s 462.37(2.03).
the indictment was, in theory, subject to a forfeiture order under section 462.37(2.01).13 The court stated:

[82] Like the Mercedes Benz, two of the Mr. Saikaley’s homes were purchased before the timeframe of the Indictment. 144 Kerry Hill Crescent was purchased in June, 2006, and a down payment for 168 Ingersoll Crescent was made in 2008 (with the purchase actually completed in 2011). Since s. 467.32(1) requires that the property being sought to be forfeited be directly linked to the offences before the Court, the Crown cannot resort to this section in support of its application for the forfeiture of these properties.

[83] Similar to its claim with respect to the Mercedes Benz, the Crown will have to resort to s. 467.32(2.01) to substantiate its claim against the Respondent’s property.

Section 462.37(3) is another important provision that allows the court to impose a fine in lieu of forfeiture where it would be impracticable to make a forfeiture order under section 462.37(1) or 462.37(2.01). It provides, in relevant part:

(3) If a court is satisfied that an order of forfeiture under subsection (1) or (2.01) should be made in respect of any property of an offender but that the property or any part of or interest in the property cannot be made subject to an order, the court may, instead of ordering the property or any part of or interest in the property to be forfeited, order the offender to pay a fine in an amount equal to the value of the property or the part of or interest in the property. In particular, a court may order the offender to pay a fine if the property or any part of or interest in the property

(a) cannot, on the exercise of due diligence, be located;

(b) has been transferred to a third party;

(c) is located outside Canada;

(d) has been substantially diminished in value or rendered worthless; or

(e) has been commingled with other property that cannot be divided without difficulty. [Emphasis added.]14

Where the court imposes a fine in lieu of forfeiture, it must also impose a term of imprisonment to be served if the fine is not paid within the time established by the court.15 Table 42.1 (below) sets out the maximum and minimum terms of imprisonment (which vary depending on the amount of the fine).

Source: Compiled by the Commission.

Any term of imprisonment imposed under those provisions must be consecutive\textsuperscript{16} to any other term of imprisonment, and cannot be considered as part of the global sentence imposed on the accused. Moreover, the court cannot take into account the rehabilitation of the offender or the offender’s ability to pay in considering these issues.

When used to full effect, this provision can provide a powerful response to profit-oriented crime. In \textit{R v Vallières}, for example, the Supreme Court of Canada upheld a fine of more than $9 million representing the gross profits earned by the offender through a large-scale maple syrup theft, even though the offender made a personal profit of only $1 million. In reaching that conclusion, the court repeatedly emphasized the intent of these provisions – namely, to send a clear message that crime does not pay and to discourage individuals from committing profit-oriented crimes:

Lastly, limiting a fine in lieu to the profit made by an offender from their criminal activities undermines and disregards what Parliament intended ... As this Court stated in \textit{Quebec (Attorney General) v. Laroche}, 2002 SCC 72, [2002] 3 S.C.R. 708, “[t]he legislative objective of Part XII.2 plainly goes beyond mere punishment of crime” ... A fine in lieu is not part of the global sentence imposed on an offender for the commission of a designated offence ... It follows that the amount of the fine does not vary based on an offender’s degree of moral blameworthiness or the circumstances of the offence. Rather, the dual objective of the fine is to deprive an offender of the proceeds of their crime and to deter them from reoffending. But the objective of deterrence is not focused only on the actual offender: it also applies to potential accomplices and criminal organizations ...

Through the severity of the proceeds of crime provisions, Parliament is sending a clear message that “crime does not pay” and is thus attempting to

\textsuperscript{16} A consecutive sentence means that the offender cannot serve two sentences at the same time; rather, the offender must serve both sentences one after another.
discourage individuals from organizing themselves and committing profit-driven crimes. In *Lavigne*, Deschamps J. noted that “[t]he effectiveness of the adopted methods depends largely on the severity of the new provisions and on their deterrent effect” (para. 9). Parliament’s decision that the fine must correspond to the value of the property is therefore deliberately harsh. Reducing a fine to the profit made by an offender from their criminal activities would clearly be contrary to this objective. [Emphasis added.]17

Another example can be found in the *Saikaley* decision, where the court made effective use of section 462.37(3) in circumstances where a forfeiture order would have been impracticable. For example, the court imposed a fine in lieu of forfeiture in respect of unlawfully obtained funds that could not be recovered because they had been used to discharge a mortgage. It also imposed a fine in lieu of forfeiture in respect of “unexplained” funds that passed through a company bank account controlled by the offender.18 Without the ability to impose a fine in lieu of forfeiture, the state would not have been in a position to recover those funds.

I consider section 462.37(3) to be an extraordinarily powerful tool that has the potential to significantly disrupt the activities of criminal organizations and others involved in serious criminal activity. It is also something that differentiates the criminal asset forfeiture regime from the civil asset forfeiture regime, which contemplates *in rem* proceedings against property and does not allow the court to impose a fine in lieu of forfeiture.

It is therefore essential that law enforcement agencies understand the use that can be made of this provision and develop the evidence needed to pursue such an order.

In addition to section 462.37, there are other provisions of the *Criminal Code* that allow for a forfeiture order in specific circumstances. For example, section 462.38 allows the Attorney General to apply for a forfeiture order where the owner of that property has died or absconded, and section 462.43 gives the court the discretion to make a forfeiture order in various circumstances where property is seized pursuant to a warrant under section 462.32.

The *Criminal Code* also contains provisions for the seizure and forfeiture of offence-related property such as the vehicle used to transport illicit drugs and weapons to the point of sale. Section 490.1 is triggered whenever the accused is convicted of an indictable offence and the Crown need only prove that the property was used in connection with the commission of such an offence on a balance of probabilities.

Where the criminal prosecution was commenced at the instance of the provincial government and conducted by or on behalf of that government, the property will be forfeited to the provincial government to be disposed of or otherwise dealt with by the attorney general or the solicitor general of that province.19 In *R v Trac*, 2013 ONCA 246,

---

17 *R v Vallières*, 2022 SCC 10, para 34.
18 *Saikaley*, paras 114, 116–17, 128, 130–33.
19 *Criminal Code*, s 490.1(1).
Doherty J.A. explained that where the Crown seeks forfeiture of offence-related property in connection with a money laundering prosecution, the forfeiture inquiry does not involve tracing the assets back to money generated by criminal activity. Rather, the focus is on the “means” used by the offender to carry out the money laundering scheme with the result that any bank accounts, shell companies, or real estate holdings used in connection with that scheme could be subject to seizure and forfeiture under section 490.1. He wrote:

[88] The Crown led substantial evidence of the kind of activity associated with the use of bank accounts for money laundering. The Crown expert gave detailed evidence that many of the respondent’s accounts displayed several of those *indicia*. That evidence, combined with the respondent’s admission as to the nature of his money laundering operation, had to be considered in determining whether any particular asset the Crown sought forfeited was either the “means” by which the money laundering offence was committed, or was “used in any manner in connection with” the money laundering. If the asset fell within either definition, it was “offence-related property” and subject to forfeiture under s. 490.1, regardless of whether the credit in the account when it was ordered frozen could be traced to cash generated by the respondent’s drug business.

[89] The proper application of the definition of “offence-related property” to the bank accounts in the context of the money laundering offence does away with the need to attempt to segregate legitimate funds in an account from drug money. Instead, forfeiture depends on whether the evidence shows that the accounts were used to further the money laundering scheme. If an account was used in any way to further the respondent’s money laundering scheme, that account, and more precisely the property in the account at the time of seizure (the credit owed to the account holder by the bank), is offence-related property regardless of the origins of the deposits reflected in the credit in the account.20

[Emphasis added.]

Applying the reasoning of Justice Doherty, it seems that the use of section 490.1 to seize bank accounts, shell companies, real estate, and other assets used in most complex money laundering schemes would be a particularly useful tool in targeting sophisticated money laundering operations. I would therefore encourage the dedicated money laundering intelligence and investigation unit recommended in Chapter 41 to consider the potential use of section 490.1 in investigations into serious money laundering activity.

I would also note that Justice Doherty’s reasoning would seem to be applicable in the civil forfeiture context, and I encourage the BC Civil Forfeiture Office to consider the use of the “instrument of unlawful activity” provisions in the *Civil Forfeiture Act* to pursue the “tools” used by professional money laundering organizations and others.

Distribution of Proceeds

Where property is seized under certain provisions of federal statutes, including the 
Criminal Code, the Seized Property Management Act, SC 1993, c 37, governs the custody 
and management of that property. Section 9(b) allows the minister of public works 
and government services to manage that property in any manner that he or she 
considers appropriate, and section 9(c) allows him or her to dispose of any property 
that is forfeited to the federal government under a federal statute.21

Section 10 requires the federal government to share the proceeds of these forfeitures 
with the government of a province that has participated in the investigation leading to 
the forfeiture, in accordance with the Forfeited Property Sharing Regulations, SOR/95-76.

In basic terms, these regulations require the Attorney General of Canada to assess 
the contribution of the federal government and each province that participated in the 
investigation, on the basis of the following:

(a) the nature of information provided by the agencies of the Government of Canada 
and each jurisdiction, and the importance of that information; and

(b) the participation by the agencies of the Government of Canada and each jurisdiction 
in the investigation and prosecution that lead to forfeiture or the imposition of a fine.22

For the purpose of that assessment, the provincial contribution includes 
contributions made by a law enforcement agency operating under provincial legislation 
or the Royal Canadian Mounted Police acting under contract in that province.

Once that assessment is complete, the Attorney General of Canada must assign a 
percentage “representing the contribution of the Government of Canada and of each 
relevant jurisdiction, as compared with the contribution of another jurisdiction or group 
of jurisdictions” to be determined as follows:

(a) where the contribution of the Government of Canada or a jurisdiction constitutes 
the predominant portion of the total contribution, it shall be considered to be 90 percent;

(b) where the contribution of the Government of Canada or a jurisdiction constitutes a 
significant portion of the total contribution, it shall be considered to be 50 percent; and

(c) where the contribution of the Government of Canada or a jurisdiction constitutes a 
minimal portion of the total contribution, it shall be considered to be 10 percent.

Over the past 10 years, the value of assets seized by law enforcement bodies in British 
Columbia and managed by the Seized Property Management Directorate has decreased

21 Seized Property Management Act, s 9. I understand that the Seized Property Management Directorate 
manages assets seized or restrained under this legislation.

significantly from a high of roughly $19.6 million in 2010–11 to a low of $2.9 million in 2018–19 (excluding seizures made in accordance with the Proceeds of Crime (Money Laundering) and Terrorist Financing Act, SC 2000, c 17 (PCMLTFA)). Table 42.2 sets out the value of these seizures from 2009 to 2019.

Source: Exhibit 373, Overview Report: Asset Forfeiture in British Columbia, p 16.

23 Seized assets are assets that have been seized by law enforcement but have not yet been forfeited to the state pursuant to a forfeiture order. Note, however, that assets are often seized in one year and forfeited in another year, which can lead to situations where the value of assets forfeited in a particular year can exceed the value of assets seized in that year.
These numbers are very small. In 2018–19, for example, law enforcement bodies in this province seized only 253 assets with an approximate value of $2.9 million. By contrast, the police-run asset recovery unit in New Zealand seized or restrained approximately NZ$428 million (Can$358 million) in illicit assets between July 2017 and October 2020, with the top three offences used as a basis for the restraining orders being money laundering (56%), drug crime (26%) and fraud (12%). New Zealand’s population, gross domestic product, government structure, and legal system are similar to British Columbia’s, which make it a useful point of reference in examining the potential benefits arising from a robust asset forfeiture regime.

I strongly believe that law enforcement bodies in this province must make better use of the criminal asset forfeiture regime, and I turn to this matter below.

**When Should Criminal Asset Forfeiture Be Pursued?**

After reviewing the criminal asset forfeiture regime, I am persuaded that it contains a number of powerful but underutilized tools that have the potential to disrupt and deter organized crime groups and others involved in serious criminal activity. In many cases, these tools may allow for the seizure and forfeiture of property that could not be the subject of a civil forfeiture action. Moreover, there will be cases where it is more efficient to pursue a forfeiture order in conjunction with the criminal prosecution.

Stefan Cassella, a former US prosecutor with significant experience in the prosecution of money laundering offences, explained that these efficiencies are one reason that US prosecutors often pursue criminal asset forfeiture over civil asset forfeiture despite the lower burden of proof that arises in the civil forfeiture context:

> If you’re going to prosecute the defendant anyway, it’s a whole lot easier to get the forfeiture judgment as part of his sentence than it is to commence an entirely new case – an entirely new *in rem* case against him – and prove everything again. It’s one-stop shopping. It’s easier to just get the forfeiture as part of the criminal case.\(^{24}\)

While decisions about whether to pursue criminal asset forfeiture must be made on a case-by-case basis, it is essential that law enforcement bodies understand and give serious consideration to the criminal asset forfeiture provisions in every investigation into profit-oriented criminal activity. It is also essential that law enforcement bodies develop the evidentiary basis needed to bring successful forfeiture applications.

Where, for example, the target of the investigation has engaged in a pattern of criminal activity within the meaning of section 462.37(2.01), investigators should ensure that they include all relevant information concerning that conduct in their Report to

---

\(^{24}\) *In rem* is Latin for “against a thing” and can be contrasted with *in personam*, which means “against a person.” In other words, *in rem* proceedings relate to an object rather than a person.

\(^{25}\) Evidence of S. Cassella, Transcript, May 10, 2021, p 64.
Crown Counsel. Likewise, where there is an opportunity to pursue a fine in lieu of forfeiture, it is essential that investigators develop the evidence necessary to support such an application.

I therefore recommend that law enforcement bodies implement a policy requiring that all investigators conducting investigations into profit-oriented crime consider the criminal asset forfeiture provisions and, where feasible, develop the evidentiary basis necessary to support a forfeiture application.

**Recommendation 96:** I recommend that law enforcement bodies implement a policy requiring that all investigators conducting investigations into profit-oriented crime consider the criminal asset forfeiture provisions and, where feasible, develop the evidentiary basis necessary to support a forfeiture application.

I also recommend that law enforcement bodies implement a policy requiring that all investigators conducting investigations into profit-oriented crime include, in their Report to Crown Counsel, information concerning the assets owned or controlled by the target of the investigation (and their associates) along with recommendations concerning possible forfeiture applications.\(^{26}\) The inclusion of information concerning the associates of the target is important. In many cases, a police investigation may uncover information about illicit assets held not only by the target of the investigation, but by their family members or associates.

**Recommendation 97:** I recommend that law enforcement bodies implement a policy requiring that all investigators conducting investigations into profit-oriented crime include, in their Report to Crown Counsel, information concerning the assets owned or controlled by the target of the investigation (and their associates) along with recommendations concerning possible forfeiture applications.

In order to ensure that law enforcement agencies and prosecutors understand and make effective use of these provisions, it is essential that they receive appropriate training on the importance of asset forfeiture in combatting organized crime and the use of the criminal asset forfeiture provisions in depriving offenders of the fruits of their unlawful conduct. I therefore recommend that the Province ensure that all investigators and prosecutors addressing profit-oriented criminal activity receive training on the importance and use of the criminal forfeiture provisions.

---

\(^{26}\) If, however, there is a risk that the assets will be sold or removed from the jurisdiction, it may be necessary to consult with Crown counsel at an earlier stage of the investigation to allow it to apply for a seizure or restraint order under ss 462.32 and/or 462.33.
Recommendation 98: I recommend that the Province ensure that all investigators and prosecutors addressing profit-oriented criminal activity receive training on the importance and use of the criminal forfeiture provisions.

I see these recommendations working hand-in-hand with the recommendation made in Chapter 39 that all provincial law enforcement bodies engaged in the investigation of profit-oriented criminal activity implement a standard practice requiring that all investigators consider money laundering / proceeds of crime issues at the outset of the investigation, and conduct a financial investigation with a view to pursuing money laundering / proceeds of crime charges and identifying assets for forfeiture.

Of course, there will be cases where unlawfully obtained assets are more appropriately pursued through the civil asset forfeiture regime.

I turn now to a discussion of the civil asset forfeiture regime in this province.
Civil asset forfeiture (sometimes referred to as “non-conviction-based forfeiture”) is generally understood as the forfeiture of proceeds of crime or offence-related property through the use of civil forfeiture legislation such as the Civil Forfeiture Act, SBC 2005, c 29. The policy rationale for these statutes is similar to the criminal asset forfeiture provisions (i.e., to ensure that the profits of unlawful activity do not accrue and accumulate in the hands of those who carry out such activity and to deter present and would-be perpetrators of unlawful activity). However, civil forfeiture legislation does not create offences, prohibit any conduct, or impose any penalty, fine, or term of imprisonment on any individual.¹ Rather, the state brings in rem proceedings against property alleged to be proceeds of crime or an instrument of crime, and any person asserting an interest in the property may defend the forfeiture claim.

Like the criminal asset forfeiture regime, the BC civil forfeiture regime contains powerful tools that can be used to disgorge unlawfully obtained assets and criminal instruments from organized crime groups and other criminal actors. Unfortunately, however, the value of assets seized through this regime in British Columbia is not commensurate with the volume of illicit funds generated each year. In what follows, I review the asset forfeiture regimes in place in five common law jurisdictions: the United States, the United Kingdom, the Republic of Ireland, Australia, and Manitoba (which has recently enacted an unexplained wealth order regime).² I then review the key provisions of the British Columbia legislation and make a number of recommendations aimed at strengthening the civil forfeiture regime in this province.

¹ Exhibit 378, Civil Asset Forfeiture in Canada, pp 4–5. For a discussion of the policy rationale for civil forfeiture legislation see Chatterjee v Ontario (Attorney General), 2009 SCC 19, paras 3, 23.
² While it is important to use caution in looking at other jurisdictions, a number of useful lessons can be drawn from their experiences.
The United States

The United States was one of the first countries to use asset forfeiture as a law enforcement tool. In 1789, the First Congress enacted statutes authorizing the seizure and forfeiture of ships and cargos involved in customs offences, and later statutes authorized the forfeiture of ships engaged in piracy and slave trafficking.\(^3\) The challenge was that the ship or its cargo might be found within the jurisdiction of the United States but the property owner either remained abroad or could not be found at all.

Allowing the government to file a lawsuit against the ship (as opposed to the property owner) allowed the government to prevent the property from being used to commit another offence, or in the case of a customs offence, to recover the duties that were owed on the imported goods. It also meant that it was unnecessary to prove that the ship's owner had any role in the offence.\(^4\)

Today, American authorities pursue asset forfeiture in a wide variety of cases, including drug and money laundering cases. There is no single US asset forfeiture statute but, rather, a collection of disparate federal statutes that address different aspects of asset forfeiture. Mr. Cassella states:

We have the exact opposite of one comprehensive statute. We have the result of different committees of Congress over a period of more than 200 years deciding when and how to enact asset forfeiture statutes, and you get exactly what you would expect from that process.\(^5\)

One of the unique features of the US system is that there is no separate civil forfeiture agency responsible for bringing civil forfeiture proceedings. Rather, the prosecutor assigned to the criminal case can choose whether to pursue forfeiture as part of the defendant's sentence or bring a separate civil forfeiture action.\(^6\)

Mr. Cassella explained that, in his experience, it has always seemed sensible to have the investigation done by the same agency and make a judgment at the appropriate time as to whether to pursue criminal asset forfeiture or civil asset forfeiture:

It's always seemed to me based on my experience that it was much more sensible to treat these as two different tools to be used to achieve the same objective. Forfeiture is a law enforcement tool and it has purposes. Punishment, deterrence, incapacitation, recovery of money for victims,

---

4 S. Cassella, “An Overview of Asset Forfeiture in the United States,” p 25. See also Harmony v United States, 43 U.S. (2 How.) 210 (1844), pp 233–34 (“[t]he vessel which commits the aggression is treated as the offender, as the guilty instrument or thing to which the forfeiture attaches, without any reference whatsoever to the character or conduct of the owner” and The Palmyra, 25 US (12 Wheat.) 1 (1827), p 14 (“the thing is here primarily considered as the offender, or rather the offense is attached primarily to the thing”).

all of the purposes for which asset forfeiture is pursued. And there are times when it makes sense to do it as part of a criminal prosecution and times when not possible or advisable to do so.

And so, it seemed to us and it has always seemed to me to be sensible to have the investigation done by the same people. The objectives are the same, the facts you have to collect and the things you have to prove are very much the same. And then you make a judgment at the appropriate time as to whether to pursue the case criminally because you have a criminal prosecution or not because you don’t or you think it’s not appropriate to do is.7

In the United States, criminal asset forfeiture is seen as part of the offender’s sentence and requires the government to establish, beyond a reasonable doubt, that the offender has committed a criminal offence before the court can make a forfeiture order.8

By contrast, the civil asset forfeiture requires the government to prove, on the civil standard (expressed in the United States as the preponderance of the evidence), that a crime was committed and that the property subject to the forfeiture order was derived from or used to commit that crime:

Aside from the form of the action, what distinguishes civil forfeiture from criminal forfeiture is that it does not require a conviction or even a criminal case; the forfeiture action may be commenced before a related criminal case is filed, while one is pending, after one is concluded, or if there is no related criminal case at all [citations omitted]. But the Government nevertheless must prove two things: that a crime was committed, and that the property was derived from or used to commit that crime.

As in a criminal forfeiture case, the Government must establish the second element – the nexus between the property and the offense – by a preponderance of the evidence. But in contrast to a criminal case, it need only establish the first element – that a criminal offense was committed – by a preponderance of the evidence as well, not beyond a reasonable doubt.

For example, if the Government brings a forfeiture action against real property in New York, alleging that it was purchased with the proceeds of a foreign criminal offense, it would have to prove, by a preponderance of the evidence, that the foreign offense occurred and the real property was traceable to the proceeds of that offense.9

While the lower standard of proof in civil forfeiture proceedings sometimes provides a reason to pursue civil asset forfeiture over criminal asset forfeiture,

---

7 Ibid, p 33. Mr. Cassella’s evidence concerning the investigation of civil forfeiture matters is important in considering whether to expand the investigative powers of the BC Civil Forfeiture Office. I return to this issue later in this chapter.
8 Exhibit 969, Report for the Cullen Commission by Stefan Cassella, p 37.
9 Ibid.
Mr. Cassella gave evidence that civil forfeiture is a “much more limited tool” (in part, because of the inability to pursue a “value-based” money judgment)\(^\text{10}\) and that US prosecutors generally reserve civil forfeiture for cases where a criminal prosecution is not possible or appropriate. Examples include cases where the wrongdoer is dead or incompetent to stand trial, where the defendant is a fugitive or a foreign national beyond the jurisdiction of the United States, where the limitation period for bringing a criminal prosecution has expired, where the government has recovered property that is demonstrably connected to a criminal offence but does not know who committed the crime, and where the evidence is insufficient to prove to the criminal standard (beyond a reasonable doubt) that the crime was committed by a particular defendant.\(^\text{11}\)

The US also maintains an administrative forfeiture regime for property that is seized in connection with a law enforcement investigation. Once the property has been seized, the government commences the administrative forfeiture proceeding by sending a notice of intended forfeiture to anyone with a potential interest in contesting the action.

If nobody contests the forfeiture within a prescribed period of time, the property will be forfeited to the state. If, on the other hand, someone contests the forfeiture, the government must proceed under the criminal or civil asset forfeiture regime.\(^\text{12}\)

The US Department of Justice publishes annual statistics regarding the value of assets recovered through the criminal and civil asset forfeiture process. Table 43.1 shows the total amount deposited into the Asset Forfeiture Fund from 2017 to 2021.\(^\text{13}\)

\(^{10}\) As I understand it, these judgments allow the government to seek an order requiring the offender to pay to the government the value of an asset that cannot be located or is no longer available for forfeiture.

\(^{11}\) Exhibit 969, Report for the Cullen Commission by Stefan Cassella, pp 40–51; Evidence of S. Cassella, Transcript, May 10, 2021, pp 64–65. In order to ensure that prosecutors have the knowledge and skills to pursue these matters, money laundering and asset forfeiture issues form part of the basic training that all prosecutors receive when they are hired. Moreover, there are specialized money laundering and asset forfeiture courses available for those with a greater interest and a number of specialized money laundering and asset forfeiture prosecutors who and act as a resource for other prosecutors who may not have the same level of expertise: Evidence of S. Cassella, Transcript, May 10, 2021, pp 53–54.

\(^{12}\) Exhibit 969, Report for the Cullen Commission by Stefan Cassella, pp 52–53.

\(^{13}\) US Department of Justice, Asset Forfeiture Program, “Total Deposits & Expenses,” online: [https://www.justice.gov/afp](https://www.justice.gov/afp).
The Department of Homeland Security and the Department of the Treasury also maintain a smaller fund that collects receipts from cases handled by those departments. As I understand it, the amount deposited into these funds annually is roughly one-third of the amount deposited into the Department of Justice’s Asset Forfeiture Fund, which brings the total amount recovered through the criminal and civil asset forfeiture process at the federal level above $2 billion in each of the past five years.¹⁴

The United Kingdom

The United Kingdom has a comprehensive asset forfeiture regime that contains four key mechanisms for the seizure and forfeiture of unlawfully obtained assets: criminal asset forfeiture (known in the UK as confiscation proceedings); non-conviction based asset forfeiture (known in the UK as civil recovery); cash seizure and forfeiture; and taxation of unlawfully obtained profits.¹⁵ It has also introduced amendments to the Proceeds of Crime Act 2002 authorizing the High Court to make an unexplained wealth order (or UWO) if certain conditions are satisfied.¹⁶

Criminal Confiscation

A criminal confiscation order can be made where the accused has been convicted of a criminal offence and has benefited from the criminal conduct forming the basis of that conviction. Prior to making a forfeiture order, the court must determine whether the defendant has been living a “criminal lifestyle.” If so, a “general criminal lifestyle confiscation” takes place and the court is entitled to assume that any property acquired by the accused within six years of the start of the criminal proceedings was obtained as a result of criminal conduct. If not, the court can only make a forfeiture order where it is satisfied that the defendant has received a benefit from the offence before the court.¹⁷

Civil Recovery

Civil asset recovery is governed by Part 5 of the Proceeds of Crime Act 2002, which allows for the recovery of property obtained through “unlawful conduct” committed in England, Northern Ireland, Scotland, or Wales. Helena Wood, an Associate Fellow of the Royal United Services Institute and an expert on civil forfeiture, characterized

¹⁴ Exhibit 969, Report for the Cullen Commission by Stefan Cassella, p 64.
¹⁵ Exhibit 374, Overview Report: Reports Related to Asset Forfeiture and Unexplained Wealth Legislation in Jurisdictions Outside of Canada, Appendix A, p 12. The genesis of this regime can be traced back to an influential report from former Prime Minister Tony Blair’s Performance and Innovation Unit in 2000, which stated that there is “much to be gained from an approach to law enforcement that focuses on treating criminal organizations as profit-making businesses” (ibid, Appendix C, p 8).
this regime as a “basic civil [forfeiture] regime which reduces the burden of proof on the authorities trying to ... go against these assets.”\textsuperscript{18} However, she went on to describe the “slightly checkered” history of the Assets Recovery Agency, which was set up to administer the civil and criminal asset recovery process under the new legislation.\textsuperscript{19}

The Assets Recovery Agency had been set up with a mandate to be self-funding within five years. However, it failed to anticipate the extent to which the \textit{Proceeds of Crime Act} would be challenged in court and the cost burden associated with that litigation.\textsuperscript{20} Moreover, the new agency was entirely reliant on referrals from other law enforcement agencies, which limited the types of cases it could take:

One of the failures one might point to is around this slightly naive setting of a self-funding target by the then heads of the agency, which was ultimately doomed to failure, and again, it goes back to that point of not anticipating the litigious nature of those powers. People were perhaps always going to challenge them in the court because they could and they were so new and so novel. So that perhaps led to the downfall of the agency in that way.

... The other thing I perhaps point to finally is around the model that was established for the Assets Recovery Agency. They were unable to initiate their own cases at the time. They were entirely relying on referrals from other law enforcement agencies, which limited the kind of cases they could take on. And often they were handed cases that perhaps law enforcement didn’t want to deal with within their own law enforcement agencies which were perhaps of a lower level than were anticipated.\textsuperscript{21}

In or around 2008, the Assets Recovery Agency was disbanded and the functions of that agency were transferred to a wider constituency of agencies including the Serious Organized Crime Agency (now the National Crime Agency), the Crown Prosecution Service, and the Revenue and Customs Protection Office (which has since been disbanded).\textsuperscript{22} While the types of cases that can be generated by these agencies is much different from those referred to the Assets Recovery Agency before it was disbanded, Ms. Wood testified that “non-conviction based asset forfeiture in the UK [has] never really achieved the scale that was intended” and that the law enforcement agencies who received these asset forfeiture powers have never used them to the scale that was anticipated after the disbandment of the Assets Recovery Agency.\textsuperscript{23}

\begin{flushleft}
\footnotesize
19 Ibid.
\end{flushleft}
Cash Seizure and Forfeiture

The Proceeds of Crime Act 2002 also contains a regime for the seizure of cash suspected to be proceeds of crime or intended for use in unlawful conduct (such as cash seized before it is used to make a drug purchase).  

Cash forfeiture proceedings are civil proceedings, and the civil standard of proof (balance of probabilities) applies to proceedings brought under those provisions.

Taxation Powers

One of the more interesting elements of the Proceeds of Crime Act 2002 is the use of tax enforcement laws as a means of deterring and punishing criminals. These provisions arose from the realization that criminal organizations generate billions in untaxed revenue, and that the usual tools used by the UK tax authority (known as Inland Revenue) to raise assessments against those shown to have undeclared income are of little utility when dealing with those involved in sophisticated criminal activity.

The Proceeds of Crime Act 2002 allows the National Crime Agency to take over the functions of the UK tax authority and carry out tax investigations where there are reasonable grounds to suspect that income or a gain accruing to a person arises, in whole or in part, as a result of that person or another person’s criminal conduct.

Unexplained Wealth Orders

On January 31, 2018, the Proceeds of Crime Act 2002 was amended to introduce unexplained wealth orders as an additional tool to combat organized crime and other forms of criminality. The introduction of unexplained wealth orders was prompted by concerns about high-end money laundering in the United Kingdom, especially from jurisdictions afflicted by widespread corruption. Ms. Wood explained:

The UK's got a very active civil society contingent. Some organizations you'll be familiar with from Canada, such as Transparency International. The UK chapter is very, very active. And others like Global Witness, Spotlight on Corruption and other corruption bodies. There'd been a growing disquiet generally about growing evidence of grand corruption wealth landing primarily in London but also in the wider UK, particularly real estate market and growing kind of levels of investigative journalistic material coming out about London as a kind of centre for the proceeds of

25 Ibid, p 73.
26 Ibid, p 15.
27 Ibid.
crime or money laundering and criminality more generally. And I think that led to this groundswell of disquiet.29

In the United Kingdom, unexplained wealth orders are primarily an investigative tool that allow an enforcement authority (defined as the National Crime Agency, Her Majesty’s Revenue and Customs, the Serious Fraud Office, and various other law enforcement agencies) to apply for an order requiring a person to provide information concerning the nature and extent of that person’s ownership interest in a particular property and how they were able to purchase that property.30 Section 362A provides:

**362A Unexplained wealth orders**

(1) The High Court may, on an application made by an enforcement authority, make an unexplained wealth order in respect of any property if the court is satisfied that each of the requirements for the making of the order is fulfilled.

... 

(3) An unexplained wealth order is an order requiring the respondent to provide a statement—

(a) setting out the nature and extent of the respondent’s interest in the property in respect of which the order is made,

(b) explaining how the respondent obtained the property (including, in particular, how any costs incurred in obtaining it were met),

(c) where the property is held by the trustees of a settlement, setting out such details of the settlement as may be specified in the order, and

(d) setting out such other information in connection with the property as may be so specified.

Section 362B sets out the criteria that must be satisfied before the court can make an unexplained wealth order. In basic terms, the court must be satisfied that:

- there is reasonable cause to believe that the respondent “holds” the property and that the value of the property is greater than £50,000;

30 Exhibit 382, Unexplained Wealth Orders – UK Experience and Lessons for BC, p 6. For the proposition that unexplained wealth orders are an investigative tool see Evidence of H. Wood, Transcript, December 20, 2020, p 11 (“... speaking in the UK context, the unexplained wealth order is purely an investigative tool. It sits under part 8 of the Proceeds of Crime Act 2002 with a range of other investigative tools that you may be familiar with from your domestic legislation, such as production orders, disclosure orders, account monitoring orders. So it should absolutely in the UK context be seen as an investigative tool to be used to gather information and evidence to support a wider investigation”).
• there are reasonable grounds to suspect that the known sources of the respondent’s lawfully obtained income would have been insufficient to allow the person to obtain the property; and

• the respondent is a politically exposed person or there are reasonable grounds to suspect that (a) the respondent is, or has been, involved in serious crime, or (b) a person connected with the respondent is, or has been, involved in serious crime.

Where the recipient of an unexplained wealth order fails, without reasonable excuse, to comply with the requirements of that order, a presumption arises that the property was obtained through unlawful conduct, and the state can bring civil recovery proceedings under Part 5 of the Proceeds of Crime Act 2002. Note, however, that the presumption arising under that provision is rebuttable, meaning that the recipient of the unexplained wealth order is still able to rebut (or disprove) the presumption by tendering evidence that tends to show that the property was not obtained through unlawful conduct. Ms. Wood explained the operation of these provisions as follows:

Then if we move on to 362C ... In subsection 2, what we see is the real sanction for non-compliance with the unexplained wealth order. Sub-section (1) details what non-compliance is, and it says that if the respondent fails without reasonable excuse to comply with the requirements imposed by an unexplained wealth order, then the sanction envisaged in subsection (2) kicks in, and that is that the property is to be presumed to be recoverable property for the purposes of part 5, Proceeds of Crime Act. And that is the civil forfeiture legal framework ... So in other words, the property that you have not explained, if you have not responded to an unexplained wealth order in relation to property, that property is deemed to be ... the proceeds of crime.

It is then subject to further civil forfeiture process, and it is a rebuttable presumption, so it would be possible in further civil forfeiture process to bring further evidence that shows that the property is not in fact the proceeds of crime. But the presumption is triggered by non-compliance with the unexplained wealth order.

Where the recipient of an unexplained wealth order does respond within the timeframe set out in the order, the information provided by the recipient can be used in civil recovery proceedings (though it is unlikely that the state would proceed with such proceedings if the recipient can show that the property was purchased with legitimate funds). It is also important to note that, with certain exceptions, the information provided by the recipient cannot be used in criminal proceedings against that person.

---

32 Proceeds of Crime Act 2002, s 362C(2).
34 Ibid, p 58.
Unexplained wealth orders are almost invariably accompanied by an interim freezing order that prevents the property owner from transferring the property. Both orders can be sought on an *ex parte* basis, meaning that notice is not generally given to the recipient. Where an interim freezing order has issued, the state has 60 days from receipt of a response to determine whether to commence civil recovery proceedings.\(^{35}\)

When unexplained wealth orders were first introduced, the expectation was that approximately 40 such orders would be issued per year. However, there are only four cases in which unexplained wealth orders are known to have issued, and concerns have been raised about the “long and winding route to the actual reversal of the burden of proof.”\(^{36}\) Anton Moiseienko, a research fellow at the Royal United Services Institute and an expert on financial crime, expressed this point as follows:

> I don’t want to foreshadow too much by way of discussion what other countries are doing, but [you may] come to the conclusion that in some cases it is okay to reverse the burden of proof – for example when there’s an overwhelming public interest in making sure that public officials can account for their wealth. Or perhaps there are other safeguards in place; for instance, [if] you have to justify your belief that someone is involved in serious and organized crime and you provide evidence to court of that, then maybe that is enough of a triggering event in order to have the reversed burden of proof. It’s not entirely clear why the UK has chosen such a difficult and complicated approach to that. And I think that might be in the end one of the reasons why unexplained wealth orders will not lead to significant confiscations of criminal wealth.\(^{37}\)

It strikes me that these are largely design issues and that there are a number of demonstrable benefits associated with the use of unexplained wealth orders. These include the ability to get behind complex ownership structures and the potential deterrent effect on those who are considering the investment of dirty money in a jurisdiction. Mr. Moiseienko referred to news reports suggesting that some people are reconsidering the investment of dirty money in the UK and suggested that “clients from certain high-risk jurisdictions [are] coming to their lawyers in London and asking [whether they are] going to be hit with an unexplained wealth order.”\(^{38}\)

While I appreciate that reports referred to by Mr. Moiseienko are anecdotal and that there is no empirical evidence with respect to the impact of unexplained wealth orders

---

\(^{36}\) Evidence of A. Moiseienko, Transcript, December 15, 2020, p 82. For the number of unexplained wealth orders that have issued, see Evidence of H. Wood, Transcript, December 15, 2020, p 62; Exhibit 382, Unexplained Wealth Orders – UK Experience and Lessons for BC, pp 14–15. Note, however, that this evidence is based on publicly available information and it may be that other unexplained wealth orders have issued.

\(^{37}\) Ibid, pp 82–83. Concerns were also raised about the difficulty in determining what constitutes non-compliance with an unexplained wealth order: see Exhibit 382, Unexplained Wealth Orders – UK Experience and Lessons for BC, pp 11–12.

\(^{38}\) Evidence of A. Moiseienko, Transcript, December 15, 2020, p 84.
on the investment of illicit funds in the UK (or any other country), there is evidence that those involved in money laundering activity often change their behaviour in response to changing legal and regulatory requirements.\(^39\) I expect that the introduction of unexplained wealth orders in the UK likely did have the effect of deterring some organized crime groups from investing money in that jurisdiction. I return to this subject below.

**The Republic of Ireland**

The Republic of Ireland is widely regarded as a model asset forfeiture jurisdiction because of the structure, organization, and operation of its asset forfeiture agency (known as the Criminal Assets Bureau).\(^40\) The Criminal Assets Bureau was established in the wake of two high-profile murders including the death of investigative journalist Veronica Guerin, who had been reporting on the activities of a notorious organized crime figure and who was murdered on her way home from traffic court. There was also a high level of public concern about the accumulation of wealth by certain criminals who were living in impressive properties and claiming social welfare payments from the state.\(^41\) Ms. Wood testified that these events led to a high level of public criticism and a “groundswell of ... cross-party political public support” that has protected the bureau from funding cuts and led to a much better resourced system:

> [O]ne of the strengths that really backs up the Irish system is just the groundswell of kind of cross-party political public support for their action. And that could be seen in the kind of background and context in which their non-conviction based forfeiture system was implemented in the first place, being on the back of a very high-profile murder of a journalist in Ireland by serious and organized criminals which led to a level of public opprobrium that meant that political action against the issue was perhaps inevitable ...

> And I mention that because I think it's protected the Criminal Assets Bureau. That kind of level of political and public support has protected them through ... various levels of public austerity over the past years that we've seen globally. That budget has been protected, and I think that's a really key factor when we compare it perhaps to the UK system more broadly. The UK system has broadly been under-resourced and it's left it open to challenge by high-profile cases where the UK system has been outgunned legally in resourced terms. The same can't be said in Ireland where they have a much better resourced system that's predicated on this kind of groundswell of public support for what they do.\(^42\)

---

\(^{39}\) See, for example, the discussion of geographic targeting orders in Chapter 18.

\(^{41}\) Evidence of C. King, Transcript, December 16, 2020, pp 15–17.

The Criminal Assets Bureau is an independent statutory body with the power to hold and dispose of land (or an interest in land) and to acquire, hold, and dispose of any other property. Importantly, it is also a multi-agency body made up of investigators from the national police force (An Garda Síochána), the customs service, the social welfare agency, and the tax authority. Kevin McMeel, the current legal officer of the Criminal Assets Bureau, described the multi-agency structure of the bureau as follows:

The Criminal Assets Bureau as a structure -- and this is something that we cherish and champion over here -- is a multi-agency body. It comprises ... the police force in Ireland, the An Garda Síochána, ... the customs service, which is part of the revenue ... the ... Irish Department of Social Protection, which is our social welfare agency [and] ... our tax revenue body.

And they all essentially come together to make the Criminal Assets Bureau, but the bureau itself is a separate independent statutory body.43

One of the benefits of that model is that it allows for immediate and real-time information sharing among the representatives of the four member agencies and allows for a multifaceted response to organized crime:

[Y]ou can imagine [that] somebody is on social welfare and they have declared no tax in the previous years and, to use a very far side example, they’re driving a Range Rover. And they can be asked by those three individuals at interview ... how do they afford the Range Rover. Now, they could turn around and they could say, I’m not telling you. And the fact that they have refused to answer that question can be ... stated in an affidavit in our civil proceedings ...

But let’s say they say they turn around and they say well, actually I’ve been washing windows for the last 10 years. Well, that would immediately cause a concern for the revenue inspector who’s saying ... well, if you’ve been washing windows for the last 10 years, well, then ... you haven’t paid any income tax in relation to that. And then that would generate an income tax bill or may generate an income tax bill with considerable interest and penalties. They might have been better off saying nothing. And similarly, if they say either of those two answers, it might have implications from a social welfare perspective if they have been [claiming social welfare payments] at the same time.

So I think that in essence it’s kind of a three-pronged approach, but it works because it means that the individual has, in essence, nowhere to hide.44

All of the police officers assigned to the Criminal Assets Bureau retain their powers of arrest and can conduct criminal investigations based on the information they receive through their involvement with the bureau. Likewise, the tax commissioners assigned to the bureau ensure that the income generated by organized crime groups is properly taxed, and the social welfare representatives ensure that members of these groups are not unlawfully claiming social welfare payments. However, the focus of the bureau is to “deny and deprive” organized crime groups of the profits of their unlawful activity.\(^{45}\)

In order to carry out that mandate, the bureau has extensive investigative powers, including the power to apply for search warrants and production orders. Mr. McMeel testified that the investigative capacity given to the Criminal Assets Bureau is something that sets it apart from other jurisdictions, such as British Columbia, where the Civil Forfeiture Office is largely reliant on referrals from law enforcement and has limited powers to conduct its own investigations.\(^{46}\) He also testified that the bureau has a roster of 474 divisional asset profilers, who assist with the identification of targets for investigation.\(^{47}\) Most of these profilers are local police officers who have a “strong sense of what’s going on … in the community” and are “out and about policing, searching, [and] investigating.”\(^{48}\) They receive training from the bureau as well as access to some of its databases, which they can use to conduct local investigation into unlawfully obtained assets. Where they uncover something significant, a referral is made to the bureau.\(^{49}\)

When the bureau believes that a particular asset was obtained or received as a result of a criminal offence, it can apply for forfeiture of that asset under the *Proceeds of Crime Act 1996*. In broad terms, there are three stages in a civil forfeiture action brought pursuant to that statute. At the first stage, the bureau can apply for an interim order prohibiting any person from disposing or otherwise dealing with the property for a period of 21 days. The application is normally brought *ex parte*, and the order can contain “such provisions conditions and restrictions as the court considers necessary or expedient.”\(^{50}\) If the bureau brings an application for an interlocutory order within 21 days of the issuance of that order (see below), the order remains in effect until the final determination of that application. If no such application is brought, the order will expire.

At the second stage of the process, the bureau can apply for an “interlocutory order” declaring that the property constitutes proceeds of crime or was acquired, in whole or in part, using proceeds of crime. Mr. McMeel testified that the term “interlocutory” is somewhat misleading and that this is the main hearing of the action. Moreover, the statute contains a reverse-onus provision that shifts the burden to the property owner

---

\(^{45}\) Ibid, pp 30–31, 46, 134, 143–44.

\(^{46}\) Ibid, pp 143–44.

\(^{47}\) Ibid, p 70.

\(^{48}\) Ibid, p 71.

\(^{49}\) Ibid, p 71. While these profilers assist with the identification of local targets, the bureau also makes use of other sources. For example, it relies on information provided by the national intelligence service to identify high-end targets.

\(^{50}\) *Proceeds of Crime Act 1996*, s 2(a).
where it “appears to the court” that the property constitutes proceeds of crime or was purchased using proceeds of crime.\footnote{Ibid, s 3(1).} Mr. McMeel testified that “belief” evidence from the Chief Bureau Officer indicating that the property is proceeds of crime, or was purchased using proceeds of crime, is sufficient to shift the onus to the property owner even where the belief expressed by the Chief Bureau Officer is based on hearsay:

\begin{quote}
[P]ursuant to section 8 of the Proceeds of Crime Act there is – belief evidence led. And ... it's exclusively the Chief Bureau Officer who ... provides belief evidence, although I know the Act provides for a senior revenue officer as well to provide that. But in all of the cases that have been taken by the bureau since its inception, it's been the Chief Bureau Officer who provides that belief.
\end{quote}

Now, the belief evidence is very narrow. If the Chief Bureau Officer believes something to be the proceeds of crime and the value is not below the threshold amount ... that constitutes evidence of the fact, but it's open to rebuttal. And it must be reasonably grounded, but that belief evidence can be grounded in hearsay evidence. And that is crucial to our success as well ...

\begin{quote}
Once the belief evidence is accepted, and that's a big ... step, but once that is accepted as being reason to be grounded, the onus then shifts on the respondent to show why it's not the proceeds of crime. Now, some people think that there's a reversal of the burden of proof. That's not the case, but there is a shifting of the burden of proof once we establish on a \textit{prima facie} basis that the belief evidence is reasonably grounded.\footnote{Evidence of K. McMeel, Transcript, December 16, 2020, pp 48–49.}
\end{quote}

A number of academic commentators – including Colin King, director of postgraduate research studies at the Institute of Advanced Legal Studies at the University of London and an expert in non-conviction based asset forfeiture – have criticized the admissibility of belief evidence on the basis that it is “impossible to effectively challenge belief evidence under cross-examination” and that the courts have been “overly acquiescent” in accepting such evidence.\footnote{Evidence of C. King, Transcript, December 16, 2020, p 104.} These concerns are particularly acute where the belief evidence is based on evidence given by secret and unidentified informants (which seems to be relatively common). While recognizing the validity of these concerns, Mr. McMeel testified that it is rare for the Criminal Assets Bureau to proceed only on the basis of belief evidence and that most civil forfeiture cases proceed in the same manner as any other civil action:

\begin{quote}
In reality I've never – and I've been practicing this for eight and a half years and I have been involved ... in one capacity or another in every case that the bureau has prosecuted during that time. So we're talking about hundreds of
\end{quote}
cases. And I’ve never seen a case which was prosecuted solely on the basis of belief evidence. And even when we do incorporate hearsay evidence or intelligence in the belief evidence, there is always other evidence which would support that contention. And the kind of things that would inform the belief of a Chief Bureau Officer would be the obvious things, the kind of things that would be admissible in court anyway. For example, there’s, as we’ve had before, 1.2 million euros in cash found in the back of the truck. That is self-evidently suspicious. And the fact that the person that has that in the back of their truck is not in any gainful employment, and that is something that would inform the chief’s belief that that is the proceeds of crime. The fact that that person has been claiming the dole over that period and the fact that that person may have known criminal associates – and this is where we’re getting into the hearsay element or the intelligence element aspect of it – all of those factors would combine to ground the belief of the chief bureau officer.

Now, the effect of that is – in an ordinary hearing is very straightforward. The hearing is heard like any civil action. The Criminal Assets Bureau provides its evidence. And the court will invariably reserve judgment if ... there is a case put up by the defence. And in that judgment it will say that it found that the belief was well grounded or not. But during the course of the hearing, the bureau just puts forward all its evidence, and the respondent then puts forward all its evidence. And invariably in my experience ... the practicalities of the case are very much the same as any civil case.54

Mr. McMeel also defended the provision on the basis that “the person who is in ... possession, power and control of a particular asset is uniquely well placed to evidence the provenance of that asset” and that “[t]he vast majority of people, if not everybody, that own assets legitimately are able to evidence the source of those assets.”55

At the third stage of the process, the bureau must wait seven years to allow any person with an interest in the property to assert a claim. If no such claim is received within that time, the bureau can apply for a final disposal order allowing the property to be sold.56

All funds recovered through the sale of that property are sent to a central revenue fund, something that differentiates the Irish system from other jurisdictions, such as British Columbia, where the funds recovered through the sale of unlawfully obtained assets are distributed by the Civil Forfeiture Office and used to defray its operating costs. Mr. King testified that this is one area where there was complete unanimity:

In Ireland all the money that is recovered is sent back to the central fund. ... [The Criminal Assets Bureau] does not get any share of recovered

---

money. It has been stressed that how recovered money is spent is a political decision, and [the bureau] is not a political group or a political unit – it is composed of police, revenue, social welfare officials, et cetera – and that they should not have any involvement in deciding how money is spent.

When I spoke to participants in Ireland, this was the one area where there was almost complete unanimity. Everyone that I spoke to who expressed an opinion on this; only one person did not express an opinion. Everyone else agreed with the current approach in Ireland that when money is seized and there is the final court order, that the money should be sent back to the minister to the central fund, and whatever happens after that is none of [the Criminal Asset Bureau’s] business. And that viewpoint was aired by officials in [the bureau] and defence solicitors, barristers who work on both sides.57

Moreover, Ms. Wood testified that the Irish funding model changes the focus of the Criminal Asset Bureau and allows it to focus on cases that have the greatest community impact as opposed to the cases that are the most “commercially viable”:

The whole discussion in Ireland isn’t around whether “POCA [Proceeds of Crime Act] pays for POCA,” which has become a bit of a term in the UK. It’s ... taking it where the asset has a wider community benefit. So in their kind of adoption model of cases, they don’t simply look at whether it’s ... commercially viable ... which is the way the commercial litigator would look at it. They look at in terms of the wider community impact.

So, for example, if it was to cost a million pounds to take away a million-pound property, then within the Irish system that would be absolutely fair. That’s not to say those principles don’t apply in Britain, but I think going back to the legacy that the UK system operates under due to the legacy of the Assets Recovery Agency, there is still this notion that the impact of asset recovery should be measured in financial terms rather than in the more difficult to measure community impacts or dismantling of criminal schemes terms. I think that the UK continues to labour under that position that “POCA should pay for POCA” when absolutely that’s not the legislative intention of any of these provisions across the world.58

While I accept that Ireland is considered by many to be a model asset forfeiture jurisdiction, the constitutional constraints present in the Canadian context – including constraints on the exchange of tactical information – would make it difficult to transpose that model to British Columbia. A legal opinion prepared for the Commission by the Honourable Thomas A. Cromwell, CC, reviews some of the constitutional

challenges associated with tactical information sharing between the Civil Forfeiture Office, law enforcement agencies, and tax authorities.\textsuperscript{59}

**Australia**

Australia introduced its first criminal property confiscation legislation in 1979 by way of amendments to the *Customs Act 1901*, which permitted the imposition of financial penalties against those who engaged in unlawful narcotic trafficking.\textsuperscript{60} In the mid-1980s, the federal and state governments began introducing comprehensive proceeds of crime legislation as part of a concerted effort to curb the drug trade and respond to the threat posed by transnational organized crime. Lionel Bowen, former deputy prime minister and federal attorney general, made the following comments with respect to the federal *Proceeds of Crime Bill* when it was introduced for second reading:

> The Proceeds of Crime Bill provides some of the most effective weaponry against major crime ever introduced into this Parliament. Its purpose is to strike at the heart of major organized crime by depriving persons involved of the profits and instruments of their crimes. By so doing, it will suppress criminal activity by attacking the primary motive – profit – and prevent the re-investment of that profit in further criminal activity.\textsuperscript{61}

From the late 1980s onwards, most state and federal jurisdictions augmented their criminal confiscation regimes with non-conviction-based asset forfeiture schemes that allow for the confiscation of property on the civil standard of proof and in most cases, on the basis of “unlawful” rather than “criminal” conduct.\textsuperscript{62} Broadly speaking, there are four circumstances in which these statues allow for the confiscation of property:

- where the property is used in connection with the commission of a prescribed offence (something known as “crime-used property confiscation”);
- where the property is obtained or derived from the commission of a specified offence (something known as “crime-derived property confiscation”);
- where a person’s wealth exceeds the value of his or her lawfully acquired property (something known as “unexplained wealth order confiscation”); and
- where a person is a declared or taken to be a declared drug dealer (something known as “drug trafficker confiscation”).\textsuperscript{63}

\textsuperscript{59} A copy of that opinion can be found at Appendix I. In addition, submissions were made by the Province of British Columbia and the BC Civil Liberties Association in response to that opinion, and those submissions have been posted to the Commission’s website.

\textsuperscript{61} Exhibit 376, Overview Report: Selected Writings of N. Skead, Appendix D, p 177.

\textsuperscript{62} Ibid.

\textsuperscript{63} Evidence of N. Skead, Transcript, December 17, 2020, pp 15–28; Exhibit 376, Overview Report: Selected Writings of N. Skead, Appendix D, p 178.
For most forms of confiscation, there are conviction-based regimes, non-conviction-based regimes, and hybrid regimes. The breadth of some of these legislative provisions have caused some to raise concerns about disproportionate and unjust outcomes. For example, the drug trafficking confiscation schemes enacted in Western Australia and the Northern Territory go beyond property that is derived from drug trafficking offences and target everything that is owned or controlled by the respondent without many of the procedural safeguards present in other jurisdictions. Dr. Natalie Skead, a professor of law and dean of the University of Western Australia Law School, provided a number of startling examples of the potential injustice that can arise from these provisions.

Australia was one of the first jurisdictions to use unexplained wealth orders as a tool in combatting organized crime. At the federal level, the Proceeds of Crime Act 2002 (Commonwealth) allows the court to issue an order, known as a preliminary unexplained wealth order, requiring a person to appear before the court to enable the court to decide whether such an order should be made. Where the court is satisfied that there are reasonable grounds to suspect that the respondent's total wealth exceeds the value of the person's wealth that was lawfully acquired, the court must make the order.

In principle, that provision allows for the issuance of an unexplained wealth order without any requirement to show that the property owner was involved in criminal activity or that he or she received any financial benefit from that activity. Moreover, the order applies to the entirety of the respondent's wealth and is not limited to a specific asset.

If the respondent does not make an application within 28 days showing why a final order should not be issued, the court will issue a confiscation order requiring the respondent to pay the difference between the person's total wealth and the amount of that wealth that is not derived from criminal activity.

At the state level within Australia, the structure of the regime is largely the same, though there are important differences in the threshold requirements for the issuance of an unexplained wealth order. In Western Australia, there is no threshold for the issuance of such an order; once the application is filed, the burden immediately shifts to the respondent to prove that their wealth was lawfully obtained. In South Australia, the state must show that it "reasonably suspects that a person has wealth that has not been lawfully acquired." In New South Wales, Queensland, and Victoria, the state must establish a "reasonable suspicion" that the respondent has, at any time before the making of the order, engaged in serious criminal activity or acquired property from any such activity.

64 Ibid, pp 15–17.
68 Evidence of H. Wood, December 16, 2020, p 100.
70 Evidence of N. Skead, Transcript, December 17, 2020, pp 46–47.
72 Ibid.
On their face, these provisions would seem to be an extraordinarily powerful tool in the fight against organized crime. However, the number of unexplained wealth orders issued by federal and state courts is extremely low, and it is “generally accepted that [the regime] has not been very successful.”73 One of the primary reasons for the lack of success is the difficulty of proving the quantum of unexplained wealth. Dr. Skead testified that the law enforcement agencies charged with administering this scheme do not have the time, money, or expertise to bring these applications and that it is a “complex, lengthy, and very expensive process with no guarantee of success.”74 She also stated that pinning down the extent of a person's wealth is particularly difficult when dealing with criminals, who do not have a steady stream of predictable income:

Typically, these actions are not brought against somebody like me who earns a salary and has a steady stream of predictable income. That's easy to trace. It is a person, firstly, whose wealth is very difficult to pin down. So even just establishing the wealth, so to speak, of the respondent is a complex and difficult exercise. Then going through the process of earmarking how much of that wealth was lawfully acquired and how is another complex exercise. The balance then is unexplained.75

The New South Wales Crime Commission has found a measure of success in creating specialized teams to deal with forfeiture issues. However, the success of that initiative is limited, and it appears that unexplained wealth orders remain an underutilized tool.76

One of the lessons that can be drawn from the Australian experience is the need to carefully consider the prerequisites for the issuance of an unexplained wealth order.

Unlike the approach in the UK and the Republic of Ireland, the Australian regime is focused solely on the respondent's wealth and allows for the issuance of an unexplained wealth order without the need to establish any link between the property and any unlawful activity. While an exclusive focus on wealth gives the state another route to the forfeiture of unlawfully obtained wealth, it is a complex, lengthy, and expensive process that may not be worth the cost. Likewise, the low threshold for the issuance of an unexplained wealth order (which requires only a reasonable suspicion that the respondent’s total wealth exceeds the value of the person's wealth that was lawfully acquired) raises civil liberties concerns and undermines many of the safeguards “which have evolved at common law to protect innocent parties from the wrongful forfeiture of ... property.”77

Another lesson that can be drawn from the Australian experience is the difficulty in proving that the respondent's total wealth exceeds the value of the person's wealth that was lawfully acquired (which seems to be why unexplained wealth orders remain an underutilized tool).

Manitoba

Manitoba’s civil forfeiture legislation is largely modelled on the BC statute.\textsuperscript{78} The purpose of that legislation is twofold: (a) to prevent people who engage in unlawful activities (and others) from keeping property that was acquired as a result of those activities; and (b) to prevent property from being used to engage in unlawful activities.\textsuperscript{79}

Under section 3 of the \textit{Criminal Property Forfeiture Act}, the director of the Manitoba Criminal Property Forfeiture Unit may commence proceedings in court seeking an order forfeiting property to the government where he or she is satisfied that property is proceeds of unlawful activity or an instrument of unlawful activity.\textsuperscript{80}

The proceedings can be commenced by action or application and must name as parties the owner of the property, any person in possession of the property, any person with a prior registered interest in the property, and any other person whom the director believes may have an interest in the property.\textsuperscript{81}

The Manitoba statute also contains an administrative forfeiture regime. It is similar to the BC model (and other administrative forfeiture models across Canada). In basic terms, that regime applies to property other than real property valued at $75,000 or less that is in the possession of a law enforcement agency.\textsuperscript{82} In such cases, the director can commence administrative forfeiture proceedings by fulfilling three different notice requirements. First, the director publishes notice of the administrative forfeiture proceedings in a newspaper of general circulation throughout the province. Second, he or she files a notice of administrative forfeiture against the subject property in the personal property registry. Third, the director gives written notice to the person from whom the property was seized, the law enforcement agency that seized the property and any other person whom the director believes may have an interest in the property.\textsuperscript{83}

A person who claims to have an interest in the subject property may oppose forfeiture by submitting a written notice of dispute to the director within 60 days of receiving notice. Where a notice of dispute is received, the director can either commence civil forfeiture proceedings against the property in accordance with the regular process or discontinue the forfeiture proceedings. Where a notice of dispute is not received by the deadline, the subject property is automatically forfeited to the government.\textsuperscript{84}

\textsuperscript{78} Evidence of M. Murray, Transcript, May 5, 2021, pp 6–7.
\textsuperscript{79} \textit{Criminal Property Forfeiture Act}, CCSM c C306, s 2.
\textsuperscript{80} Ibid, s 3.
\textsuperscript{81} Ibid, s 5.
\textsuperscript{82} Ibid, s 17.2(1).
\textsuperscript{83} Ibid, ss 17.3, 17.4.
\textsuperscript{84} Ibid, ss 17.7, 17.8.
Melinda Murray, executive director of the Manitoba Criminal Property Forfeiture Unit, testified that the purpose of the administrative forfeiture regime was to streamline the forfeiture of property in cases where the forfeiture order is unopposed:

The rationale for the administrative forfeiture process was [that] we were seeing a lot of ... cases going to default in the judicial stream. And so there was such a high number that ... the idea was to try to streamline and render this more efficient and more cost efficient. So under the judicial process of course there's legal fees attached and court resources that are expended on proceeding in that fashion, and because of the high number of defaults that were occurring and especially in low-value cases, the administrative forfeiture regime came about to reduce that cost and the resource intensiveness as well as the inefficiency.85

Unlike the BC Civil Forfeiture Office, the Manitoba Criminal Property Forfeiture Unit is not a self-funded agency, meaning that its operating costs are paid by government rather than the sale of assets that have been forfeited to the government. While the unit conducts a cost-benefit analysis in deciding whether to pursue a particular asset for forfeiture, the primary considerations are the strength of the evidence and the interests of justice (which includes factors such as fairness and proportionality).86

Ms. Murray testified that there have been cases where the unit has lost money pursuing a particular asset because of the high public interest in proceeding. For example, the unit lost money pursuing a Hells Angels clubhouse because of the high public interest in “ridding the neighbourhood” of that property.87 Likewise, the unit spent a considerable amount of money pursuing the assets of an individual who had defrauded a church in order to return those funds to the church.88

While the Criminal Property Forfeiture Unit receives most of its files from law enforcement referrals and does not conduct any proactive investigations, it takes steps to build out the more complex files it receives by looking at open-source and subscription databases that would allow it to locate additional assets:

Generally speaking ... we do not lack for work, and so there hasn't been the ability to start looking for targets, so to speak. So, what will happen in more high-value complex files is we will look at open-source databases or subscription databases where we may locate further assets that a defendant may have when we do those sort of ... information gathering. So, the police might know about two homes and a bank account and two vehicles, but we may discover that the defendant actually has three homes

or four homes once we look into open-source information. So, we’ll add that to our forfeiture proceedings if we feel we have the evidence to do so.89

One of the most important aspects of the Manitoba regime is the ability to apply for a preliminary disclosure order before the commencement of proceedings. Such orders require the person described in the order to provide the following information:

- the nature and extent of the person's interest in the property that is the subject of the proceeding;
- the particulars of the person's acquisition of the property, including how any costs incurred in acquiring the property were met;
- the sources and amounts of the person's lawfully obtained income and assets;
- if the person holds the property, or any part of it, in trust for another person, the details of the trust and the identity of the beneficial owners; and
- any other information specified by the court.90

A preliminary disclosure order can be made on application without notice to the property owner or any other person. However, there must be reasonable grounds to suspect that:

- the person named in the order is the owner of the property or has possession of the property;
- the fair market value of the property exceeds $100,000;
- the person's known sources of income and assets would have been insufficient to enable the respondent to acquire the property; and
- the person, or a person who does not deal with the respondent at arm's length, is or has been involved in unlawful activity.91

If the person does not provide the information and documents within the time period specified in the order, there is a rebuttable presumption that the property that is subject to the order is proceeds of unlawful activity or an instrument of unlawful activity.92

Ms. Murray testified that most if not all of the information contained in a preliminary disclosure order could be obtained at an examination for discovery, and that the purpose of the provision is to obtain the information at the “front end” in order

90 Criminal Property Forfeiture Act, s 2.3(1).
91 Ibid, s 2.3(6). The court must also be satisfied that the information and documents to be provided under the order would assist the director in deciding whether to commence forfeiture proceedings under section 3.
92 Ibid, s 17.18.
to determine whether to proceed with a forfeiture action.\footnote{Evidence of M. Murray, Transcript, May 5, 2021, p 48.} She also gave the following example of the utility of preliminary disclosure orders in obtaining information about criminal assets:

We had a case … [the] first week that I started … where … there was a homicide of a rival drug gang. And … the police had determined that there was drug trafficking as part of that. So, one of the four individuals charged with the homicide. Also we knew from police that this individual did not work, did not have a job at all and that they received information or found information that he had bank accounts, over $500,000 in … 13 different bank accounts, some with his family, jointly owned bank accounts, and that they were living in a residence that was worth $600,000, yet these individuals, the parents and the defendant or the accused in the criminal case … were collecting what we call employment insurance assistance, so “EIA” in Manitoba.

And so, this would be the perfect example of what we would want to perhaps obtain information as to where this wealth was acquired in order to determine if it’s legitimate wealth and there’s obviously the ability for them to advise us as to legitimacy of the income. We would then not seek forfeiture if the evidence or the information provided to us was adequately indicated that it was legitimate. But if it’s not legitimate, then we would take a closer look at that information and determine whether we’d proceed with forfeiture under section 3 and file a statement of claim.\footnote{Ibid, pp 49–50.}

Finally, she emphasized that information provided in response to a preliminary disclosure order is subject to use immunity can only be used in connection with civil forfeiture proceedings and cannot be provided to the police or any other person.\footnote{Ibid, p 55; Criminal Property Forfeiture Act, s 2.3(12).}

\section*{British Columbia}

The BC \textit{Civil Forfeiture Act} came into force on April 16, 2006, and was modelled on the Ontario \textit{Remedies for Organized Crime and Other Unlawful Activities Act} (commonly referred to as the \textit{Civil Remedies Act}).\footnote{SO 2001, c 28; Exhibit 378, Civil Asset Forfeiture in Canada, p 9; Exhibit 373, Overview Report: Asset Forfeiture in British Columbia, pp 19–20.} While the BC statute does not contain an express statement of purpose, the minister of public safety and solicitor general made the following comments about the legislation when it was introduced for second reading:

\begin{quote}
With this new legislation we will be taking the profit out of illegal activity. It will be another tool to deter and prevent fraud, theft and a host of other illegal activities, and it will enable the recovery of ill-gotten gains and will assist in providing compensation to eligible victims.
\end{quote}
The moneys recovered through forfeiture will compensate eligible victims and will be used to support further crime prevention initiatives. The moral and legal underpinnings of civil forfeiture are very clear. Civil forfeiture is similar to the civil remedy against unjust enrichment. It takes back assets derived from illegal conduct. No one should be allowed to get rich as a result of breaking the law. No one, I hope, can or will seriously argue that point.97

In British Columbia (Director of Civil Forfeiture) v Onn, 2009 BCCA 402, the British Columbia Court of Appeal held that the policy rationale for the statute was threefold:

• to take the profit out of unlawful activity;
• to prevent the use of property to unlawfully acquire wealth or cause bodily injury; and
• to compensate victims of crime and fund crime prevention and remediation.98

The Civil Forfeiture Act is divided into eight parts and is supplemented by the Civil Forfeiture Regulation, BC Reg 164/2006. I discuss each of these parts below.

Part 1

Part 1 of the Civil Forfeiture Act defines various terms used in the legislation including the terms “unlawful activity,” “proceeds of unlawful activity,” and “instrument of unlawful activity.”

In basic terms, there are three categories of unlawful activity under the statute:

• unlawful activity occurring within the province, defined as an act or omission that, at the time of occurrence, was an offence under an Act of Canada or British Columbia;
• unlawful activity occurring in another province, defined as an act or omission that, at the time of occurrence was an offence under an Act of Canada or an act of the other province (as applicable) and would be an offence in British Columbia if it occurred in this province; and
• unlawful activity occurring in another country, defined as an act or omission that, at the time of occurrence was an offence under an Act of that country and would be an offence in British Columbia if it occurred in this province.99

97 Exhibit 373, Overview Report: Asset Forfeiture in British Columbia, para 55.
98 British Columbia (Director of Civil Forfeiture) v Onn, 2009 BCCA 402, para 14. Another reason to pursue civil asset forfeiture is to prevent the profits of unlawful activity from being reinvested in the criminal enterprise through the purchase of weapons, drugs, and other instruments of crime: Exhibit 378, Civil Asset Forfeiture in Canada, p 4.
99 Civil Forfeiture Act, s 1. Note, however, that the definition of unlawful activity excludes acts or omissions that are offences under a corporate regulation as well as acts or omissions that would be an offence under an enactment of any jurisdiction prescribed under the Civil Forfeiture Act.
“Proceeds of unlawful activity” is defined to include the whole or a portion of any right, title, interest, estate, or claim to property, that is acquired, directly or indirectly, as a result of unlawful activity. It also includes any increase in the value of property that results, directly or indirectly, from unlawful activity; the decrease in any debt obligation secured against the property (such as a mortgage) that results, directly or indirectly, from unlawful activity; and any property realized from the sale of the property.100

“Instrument of unlawful activity” is defined as property that has been used to engage in unlawful activity, or is likely to be used to engage in unlawful activity, which

- resulted in or was likely to result in the acquisition of property or an interest in property, or
- caused or was likely to cause serious bodily harm.101

Part 2

Part 2 of the Civil Forfeiture Act sets out the process for seeking a forfeiture order. Section 3(1) provides that the “director” appointed in accordance with section 21(1) may apply for an order forfeiting to the government the whole or a portion of an interest in property that is proceeds of unlawful activity.102

Section 3(2) allows the director to apply for an order forfeiting property that is an instrument of unlawful activity.103

Where an application is filed under these provisions, the director must name as a party and give notice to the registered owner of the property and any other person who the director has “reason to believe is an unregistered owner of the interest in property.”104

Section 5 provides that where proceedings are commenced under sections 3(1) or 3(2) of the Act, the court must, with certain exceptions, make an order forfeiting to the government the whole or the portion of an interest in property that the court finds is proceeds of unlawful activity or an instrument of unlawful activity.105

Part 3

Part 3 of the Civil Forfeiture Act deals with interim preservation orders for property

100 Ibid.
101 Ibid. Note, however, that the interpretation of this provision is the subject of ongoing litigation: see British Columbia (Director of Civil Forfeiture) v Angel Acres Recreation and Festival Property Ltd., 2020 BCSC 880 (currently under appeal).
102 Civil Forfeiture Act, s 3(1).
103 Ibid, s 3(2).
104 Ibid, s 4.
105 Ibid, s 6. For commentary on this provision see British Columbia (Director of Civil Forfeiture) v Wolff, 2012 BCCA 473, para 38 where Madam Justice Newbury held that relief should only be granted under this provision where a forfeiture order would be “manifestly harsh and inequitable.”
that may be subject to a forfeiture order. Section 8 allows the director to apply for an interim preservation order in relation to property that is the subject of legal proceedings under section 3, either on his or her own initiative or with the consent of one or more of the parties to that proceeding.\footnote{Civil Forfeiture Act, ss 8(1), 8(2).}

Section 8(3) sets out a non-exhaustive list of orders that can be sought by the director under that provision. These orders include:

- an order restraining the disposition or transmission of the property or the whole or the portion of the interest in property;
- an order for the possession, delivery to the director, or safekeeping of property;
- an order appointing a person to act as a receiver manager for property or the whole or a portion of an interest in property;
- an order for the disposition of the property or the whole or the portion of the interest in property in order to better preserve the value of the property or the whole or the portion of the interest in property;
- an order directing that the money arising from the disposition of the property or the whole or the portion of an interest in the property be paid into court pending the conclusion of the proceeding under section 3;
- for the purpose of securing performance of an obligation imposed by an order made under Part 2 or 3, an order granting to the director a lien for an amount set by the court on property or the whole or the portion of an interest in property;
- an order the court considers appropriate to prevent the property from being removed from British Columbia or used to engage in unlawful activity;
- an order the court considers appropriate for the preservation of the property or the rights of creditors and other interest holders; and
- any other order that the court considers appropriate in the circumstances.\footnote{Ibid, s 8(3).}

Unless it is clearly not in the interests of justice, the court must make the interim preservation order sought by the director if it is satisfied that there is a serious question to be tried with respect to the following issues:

- whether the whole or the portion of the interest in property that is the basis of the application is proceeds of unlawful activity; or
- whether the property that is the basis of the application is an instrument of unlawful activity.\footnote{Ibid, s 8(5).}
On May 16, 2019, the provincial government introduced new provisions intended to give the director enhanced powers to restrain property before and during a civil forfeiture action. These powers include section 11.02, which permits the director to seek an order restraining the disposition of property, mandating the disposition of property, preventing the property from being removed from British Columbia, or making any other order that the court considers appropriate before proceedings are commenced under section 3(1).109

The new provisions also allow the director to seek an order requiring any person to disclose to the director any information or records in the custody or control of that person that are reasonably required by the director in order to exercise the director’s powers or perform the director’s functions and duties under the relevant legislation.110

Part 3.1

Part 3.1 of the Civil Forfeiture Act creates a simplified administrative forfeiture regime for property, other than real property, that is valued at $75,000 or less and is in the possession of a public body such as a municipal police department. The purpose of these amendments was to create a more streamlined process for the forfeiture of low-value matters – such as small amounts of cash seized from local drug dealers – which are unlikely to be defended but require significant time and expense to process.111 Section 14.02 provides:

14.02 (1) This Part applies if
   (a) the director has reason to believe that
      (i) the whole or a portion of an interest in property, other than real property, is proceeds of unlawful activity, or
      (ii) property, other than real property, is an instrument of unlawful activity,
   (b) the director has reason to believe that the fair market value of the property referred to in paragraph (a) (i) or (ii) is $75,000 or less,
   (c) the property referred to in paragraph (a) (i) or (ii) is in British Columbia and is in the possession of a public body, and
   (d) the director has no reason to believe that there are any protected interest holders in relation to that property.112

109 Ibid, s 11.02.
110 Ibid, ss 11.01, 22.02.
112 Civil Forfeiture Act, s 14.02. “Public body” is defined in section 14.01 as an entity with which the director has an information-sharing agreement under section 22(4) or a public body prescribed by regulation. At present, the bodies prescribed by regulation include entities such as the Ministry of Finance, the Insurance Corporation of British Columbia, the BC Financial Services Authority, the Ministry of Public Safety and Solicitor General, the BC Lottery Corporation, and the BC Securities Commission: Civil Forfeiture Regulation, s 8(1).
Where the director intends to pursue administrative forfeiture under these provisions, it must file a notice of forfeiture in the personal property registry and give written notice of forfeiture to certain individuals and entities including:

- the person from whom the property was seized;
- any person claiming to be lawfully entitled to possession of the property;
- a person whom the director has reason to believe may be a registered or unregistered owner of an interest in the property; and
- the public body in possession of the property.113

Under section 14.07, a person who claims to have an interest in the subject property may dispute forfeiture by filing a notice of dispute within 30 days (the dispute period). The notice of dispute must be accompanied by a solemn declaration identifying:

- the name of the person disputing forfeiture;
- the nature of the person's interest in the property; and
- the reasons for disputing forfeiture.114

If the director receives a notice of dispute within the dispute period and still wishes to pursue forfeiture of the property, it must commence forfeiture proceedings under section 3:

14.08 Within 30 days of receiving a notice of dispute under section 14.07, the director must do the following:

(a) commence proceedings under section 3 or withdraw from proceeding under this Act in relation to the subject property;

(b) give notice to the public body and each known interest holder of the direction taken under paragraph (a).

If, however, the director does not receive a notice of dispute within seven days of the expiry of the dispute period, the property is forfeited to the government for disposal by the director without the need to commence proceedings under section 3.115

While forfeiture of the subject property is deemed to be immediate, section 14.11 gives an added layer of protection to property owners who fail to deliver a notice of dispute within the 30-day timeframe contemplated by section 14.07. Any such person

---

113 Civil Forfeiture Act, s 14.04. Under section 14.04(1)(c), the director is also required to publish a formal notice of forfeiture in the BC Gazette or a newspaper of general circulation in British Columbia that circulates in or near the area in which the property was seized.

114 Civil Forfeiture Act, s 14.07.

115 Ibid, s 14.09.
may commence legal proceedings for the value of the claimant’s interest in the subject property at the time of forfeiture or the liquidated value of the subject property that the government received upon disposition of the subject property (whichever is lesser).\textsuperscript{116}

However, the claimant must first establish that the failure to deliver a notice of dispute was not willful or deliberate, and that legal proceedings were commenced as soon as possible after the claimant learned of forfeiture. It is also open to the director to defend the proceeding on the basis that the whole or a portion of the claimant’s interest in the subject property is proceeds of unlawful activity or an instrument of unlawful activity.\textsuperscript{117}

\section*{Part 4}

Part 4 of the \textit{Civil Forfeiture Act} addresses the standard of proof in civil forfeiture proceedings and creates a number of statutory presumptions to assist the director in establishing that property subject to forfeiture is either proceeds of unlawful activity or an instrument of unlawful activity.

Section 16 provides that findings of fact in proceedings under Part 2 or 3 or section 14.11 and the discharge of any presumption are to be made on the balance of probabilities. Moreover, section 17 provides that proof that a person was convicted, found guilty, or found not criminally responsible on account of a mental disorder in respect of a criminal offence that falls within the definition of “unlawful activity” is proof that the person engaged in that activity and can be proven by filing a certificate signed by an officer having custody of the record of the court where the person was found guilty.\textsuperscript{118}

Section 18 provides that unlawful activity may be found to have occurred even if the person or persons alleged to have committed that offence have not been criminally charged or have been acquitted of a criminal offence.\textsuperscript{119}

Section 19 creates a statutory presumption that any property acquired by a person after participating in unlawful activity that resulted in or is likely to have resulted in the person receiving a financial benefit is proof – in the absence of evidence to the contrary – that the property is proceeds of unlawful activity.\textsuperscript{120}

Section 19.01 creates a statutory presumption for property owned or controlled by members of criminal organizations (as defined in section 467.1 of the \textit{Criminal Code}). In basic terms, it provides that any property owned or controlled by a member of a criminal organization, or property transferred by a member of a criminal organization for less than fair market value is presumed to be proceeds of unlawful activity in the

\begin{itemize}
\item \textsuperscript{116} Ibid, s 14.11.
\item \textsuperscript{117} Ibid, s 14.11.
\item \textsuperscript{118} Ibid, s 17.
\item \textsuperscript{119} Ibid, s 18.
\item \textsuperscript{120} Ibid, s 19.
\end{itemize}
absence of evidence to the contrary. One of the primary purposes of that provision is to address the prevalence of nominee ownership within criminal organizations.

Interestingly, section 19.03 creates a statutory presumption for cash or negotiable instruments found in close proximity to a controlled substance, or bundled or packaged in a manner that is not consistent with standard banking practices.

While not directly relevant to money laundering, the Civil Forfeiture Act also contains a number of statutory presumptions relating to instruments of unlawful activity. One is section 19.04, which provides that a motor vehicle, trailer, vessel, aircraft, or other conveyance is presumed to be an instrument of unlawful activity where certain types of firearms, controlled substances, and drug trafficking equipment are found inside. Another is section 19.05, which provides that a motor vehicle is presumed to be an instrument of unlawful activity where the driver fails to stop within a reasonable period of time after being signalled or requested to stop or uses the motor vehicle to flee from the peace officer.

Part 5

Part 5 of the Civil Forfeiture Act contemplates the appointment of a director of civil forfeiture to carry out certain powers, duties, and functions under the statute, including the collection, use, and disclosure of information; the commencement of legal proceedings under section 3; and the management and distribution of property forfeited to the government. At the time of writing, the director of civil forfeiture is assisted by a team of nine staff members who work out of the Civil Forfeiture Office in Victoria as well as two program managers who have been seconded to the RCMP and the Vancouver Police Department to facilitate the exchange of information between law enforcement and the Civil Forfeiture Office. Philip Tawtel, director of civil forfeiture, described the role of these program managers as follows:

The first responsibility or duty they have is to be a primary point of contact for the police within that department to facilitate the police’s understanding of the Civil Forfeiture Office and how the process to make a referral can be done. Those positions also facilitate the referrals of files from that department to the CFO, albeit indirectly. They cannot make a direct referral from them to the CFO. They are a CFO staff member. What they can do is they can compile the necessary package for review by a member of that police department who’s authorized to make a referral. So they work alongside other police officers who are assigned to the asset forfeiture unit, and ... their role is to ... facilitate a referral to our office.

---

121 Ibid, s 19.01. Section 19.02 provides that proof that a person was convicted, found guilty or found not criminally responsible on account of a mental disorder in respect of a criminal organization offence is proof – in the absence of evidence to the contrary – that the person is a member of a criminal organization.

122 Ibid, s 19.03.

The second role they have is to assist ... our office, with going back to those police departments if there are questions or follow up. So they're a point of contact for the director as well, and they may know who to reach out to within that department to follow up with the director's question.

And finally, as I mentioned earlier, their last role is really to act as an educator and to facilitate an understanding of the office to the police officers in that department.124

When the Civil Forfeiture Office receives a file from law enforcement, it is assessed in accordance with an internal file acceptance policy, which mandates that all files referred to the Civil Forfeiture Office be reviewed in accordance with the following criteria:

- public interest factors such as actual or potential harm to individuals (particularly vulnerable individuals such as the elderly), the use of firearms or other weapons in the underlying criminal activity, the involvement of gangs or organized crime, money laundering, the presence of hard drugs, financial exploitation of vulnerable individuals, and harm or potential harm to law enforcement;
- the strength and adequacy of the available evidence (i.e., the likelihood of a successful forfeiture application);
- financial considerations (i.e., the estimated cost of obtaining a successful forfeiture as compared with the estimated financial benefit); and
- the interests of justice (i.e., whether it is in the interest of justice to pursue forfeiture in that particular case).125

While it is important for the Civil Forfeiture Office to be “judicious” in making file acceptance decisions, Mr. Tawtel explained that there are cases where the office will accept a file even if the costs of pursuing forfeiture will exceed the expected recovery:

As a self-funding office, we have a responsibility to be judicious in how we make our decisions. So, it is important that we cover our costs ... And while the costs aren't excessive and typically forfeitures far exceed the costs of running the office, we still take a close look and we scrutinize the value of the asset against the likely cost of the litigation.

Now, that said, where the public interest is high, we will take on files where it's relatively clear from the outset that the cost is going to exceed the recovery.

...
So [an] actual example – and it’s easy to give one because it’s happened more than a handful of times – would be the nuisance house in the community where there’s a high volume of attendance of calls by the police, there’s been serious crime, there’s been drug trafficking, there’s been assaults, there’s been a number of very bad crimes taking place on the property, and those properties are frequently underwater. The value of the property is less than the mortgage. And in those cases, we will look at pursuing forfeiture, paying out the innocent interest holder, and getting that ... house out of that community the best we can.

Now, as noted, we know from the outset that there is going to be either no equity or a very small amount of equity to be taken from the property, and the legal costs will far exceed that. That said, we consider that a tremendous win for the community, and the anecdotal feedback we’ve had from the community is that was important to do.126

Importantly, the office relies exclusively on referrals from law enforcement agencies and does not generate any of its own files. Mr. Tawtel explained that the Civil Forfeiture Office does not have the investigative tools to be able to conduct a successful police investigation.127 He also emphasized the need for caution in giving the Civil Forfeiture Office the ability to investigate unlawful activity in a manner similar to law enforcement:

Well, obviously if you’re putting investigators out on the street to conduct surveillance, there’s a whole host of things that you will have to look at, which is: are they peace officers; what powers do they have; what protection do they have; what infrastructure do they have; ... do [they] seize things; when they seize things, do they become exhibits. So, you’re almost photocopying very much a policing model into the office. You have to have that infrastructure. And ... one of the things is you don’t want to be ... stepping on – and I’ll use that word “stepping on” – ongoing other investigations that you may not be aware of that police departments are doing.

So, it’s easy for ... one police department to know what another police department may be working on because they have that natural integration, they can see [the information on police databases], they have a sense that they won’t step on another investigation. If the [Civil Forfeiture] office goes down this sort of investigative capacity issue, we have to be careful that we aren’t doing that. We don’t want to ever be in a position where we’re stepping on an ongoing criminal investigation. That’s very important to us. And so, I think ... there’s going to have to be a lot of examination of what the scope and framework would be for an investigative capacity for the office.128

127 Ibid, pp 19–21 (“a successful police investigation requires the ability to meet with confidential informants to conduct surveillance, to issue special types of orders, tracking orders or surreptitious search warrants. So there is a whole infrastructure that would be required for the office to do that and the office simply does not have the tools or the legal structure for that”).
From 2006 to 2019, the Civil Forfeiture Office obtained approximately $114 million in forfeited assets, including approximately $13.4 million in 2019 and $10.7 million in 2018.

Table 43.2 sets out the referrals received and accepted, as well as the recoveries from civil forfeiture, each year between 2006 and 2019.129

Source: Exhibit 389, Affidavit No. 1 of Philip Tawtel, Exhibit H, p 66.

When viewed in light of the huge volume of illicit funds generated in this province each year, these numbers are surprisingly small. I expect that an increased focus on money laundering / proceeds of crime issues by law enforcement agencies will substantially increase the number and quality of referrals to the Civil Forfeiture Office. However, it is essential that the Civil Forfeiture Office take meaningful steps to “build out” the files it receives from law enforcement, in order to ensure that it more comprehensively targets unlawfully obtained assets and criminal instruments identified in the investigation or connected to the targets of the investigation (and their associates).

Organized crime groups, and others involved in serious criminal activity, including money laundering, should know that their actions will be the subject of focused attention by law enforcement. They should know that the assets they obtain from their

129 Exhibit 389, Affidavit No. 1 of Philip Tawtel, Exhibit H, p 66.
unlawful activity will be identified and vigorously pursued by a robust civil forfeiture agency, which uses the powerful tools at its disposal to deprive them of the profits of their unlawful activity and the instruments used to obtain those profits.

Mr. Tawtel was asked about the addition of investigators and analysts who would work to trace unlawfully obtained assets and instruments of crime. He said this was the “piece of the puzzle that’s missing.”\[^{130}\] He also suggested that the addition of these capabilities would greatly assist the Civil Forfeiture Office in fulfilling its mandate:

That’s the piece of the puzzle that’s missing. Between the director and counsel there was a piece missing, and that piece missing is financial investigators and analysts who could facilitate the tracing while the director is busy working on files coming into the office. So, if the director and counsel are left alone to do that work, it’s a lot like trying to change a tire while the car is moving. There’s just too much happening and too much volume of work coming in.

So I would agree with you that now that we’ve familiar with the legislative tools that have been provided to us ... having those positions would support that work.\[^{131}\]

While these investigators should not be given traditional law enforcement powers, they should make use of information in government and commercial databases – such as the Land Owner Transparency Registry - as well as other open-source information concerning the activities and assets of the individuals that are the subject of law enforcement referrals. The Civil Forfeiture Office should not be shy to bring in outside expertise, such as forensic accountants or investigators, to support their efforts to identify and target illicit assets and build their case against them. It should also, with the assistance of counsel, leverage the relatively new powers in sections 11.01 to 11.04 and 22.02 to 22.03 of the *Civil Forfeiture Act* to identify and target additional assets.

I see it as an essential step in the fight against money laundering that law enforcement agencies make money laundering / proceeds of crime issues a priority in investigations into profit-oriented criminal offences. The Civil Forfeiture Office must expand its focus from the forfeiture of the instruments of crime and low-value assets that were identified incidentally in law enforcement investigations, to the identification and forfeiture of significant and high-value assets owned or controlled by those involved in serious criminal activity *even if those assets have not been identified by law enforcement.*

I therefore recommend that the Civil Forfeiture Office significantly expand its operational capacity by adding investigators and analysts capable of identifying and targeting unlawfully obtained assets and instruments of unlawful activity beyond those identified in the police file.

**Recommendation 99:** I recommend that the Civil Forfeiture Office significantly expand its operational capacity by adding investigators and analysts capable of identifying and targeting unlawfully obtained assets and instruments of unlawful activity beyond those identified in the police file.

### Part 6

Part 6 of the *Civil Forfeiture Act* establishes a process for the distribution of funds following a final order of forfeiture under section 5 or the deemed forfeiture of property under section 14.10. In basic terms, any amounts received by the director through the civil forfeiture process (whether through the forfeiture of cash, the disposition of property, or a settlement agreement) must be paid into a special account in the consolidated revenue fund. Under section 27, the director may make payments out of the civil forfeiture account for any of the following purposes:

- compensation of eligible victims;
- prevention of unlawful activities;
- remediation of the effect of unlawful activities;
- administration of the statute, including any costs related to the preservation, management, or disposition of property;
- compliance with a court order; or
- other prescribed purposes (with the approval of the Minister of Finance).

From 2006 to 2019, the Civil Forfeiture Office obtained approximately $114 million in forfeited assets. Of those funds, it distributed approximately $55 million in crime prevention grants and $1.7 million in victim compensation (primarily to senior citizens who were victims of fraud). The remaining funds were used to run the office.

One of the benefits of the self-funding model adopted in British Columbia is that the Civil Forfeiture Office has control over its budget and does not rely on government to fund its operations. At the same time, the experiences of other jurisdictions – including the UK, Ireland, and Manitoba – suggest that the government-funding model would give the Civil Forfeiture Office more flexibility to pursue files that will cause significant disruption to organized crime groups – even if those cases are not “commercially viable” in the sense that the value of the asset exceeds the costs of pursuing a forfeiture action.

After considering the relative benefits of the two models, I believe that the province should transition from a self-funding model to a government-funded model similar to that in place in Ireland and Manitoba. The primary purpose of civil asset forfeiture is to serve the public interest by ensuring that the profits of unlawful
activity do not accrue and accumulate in the hands of those who carry out such activity, and the Civil Forfeiture Office should be free to pursue cases that have the greatest impact on organized crime groups, regardless of whether those cases are commercially viable.

I also expect that the increased law enforcement focus on money laundering issues / proceeds of crime recommended in Chapter 39, and the expanded role of the Civil Forfeiture Office in targeting illicit assets, will lead to the seizure and forfeiture of a significantly increased volume of illicit assets (and, in turn, revenue). The government should determine the allocation of that revenue. It may be, for example, that some of the proceeds generated from the sale of unlawfully obtained assets could appropriately be used to fund core government services such as health care.

I therefore recommend that the Province transition the Civil Forfeiture Office from a self-funded agency to a government-funded agency, in which the revenue generated by the Civil Forfeiture Office flows to government.

**Recommendation 100:** I recommend that the Province transition the Civil Forfeiture Office from a self-funded agency to a government-funded agency, in which the revenue generated by the Civil Forfeiture Office flows to government.

Of course, the risk of moving to a government funding model is that the operations of the Civil Forfeiture Office are not properly resourced. It is essential that the Province ensure that the Civil Forfeiture Office has the resources and personnel necessary to identify, target, and pursue unlawfully obtained assets.

### Part 7

Part 7 of the *Civil Forfeiture Act* contains a number of general provisions, including a regulation-making power that was used by the provincial government to enact the *Civil Forfeiture Regulation*. It also provides that the limitation period for commencing legal proceedings is 10 years from the date on which the unlawful activity occurred.

### Unexplained Wealth Orders

On November 22, 2019, the BC Ministry of Finance prepared a briefing document for the deputy minister recommending that the Province proceed with the development of an unexplained wealth order regime in British Columbia. The briefing document suggested using the UK’s unexplained wealth order legislation as a model and the proposal was subsequently approved by the deputy minister. However, I understand

---

that the development of that regime was put on hold to allow this Commission to study and make recommendations on this issue.  

After reviewing the international evidence with respect to unexplained wealth orders, and the challenges experienced by the Province in targeting money laundering and proceeds of crime, I am persuaded that such orders are a useful and effective tool in the fight against money laundering, and that the Province should proceed with its plan to introduce an unexplained wealth order regime similar to that in place in the UK.

In the United Kingdom, unexplained wealth orders are primarily an investigative tool that allow an enforcement authority (defined as the National Crime Agency, Her Majesty’s Revenue and Customs, the Serious Fraud Office, and various other law enforcement agencies) to apply for an order requiring a person to provide information concerning the nature and extent of that person's ownership interest in a particular property, and how they obtained that property. Such applications are filed before civil forfeiture proceedings are commenced and are almost invariably accompanied by an application for a restraint order preventing the property from being sold or transferred.

Under the UK system, where the recipient of an unexplained wealth order fails, without reasonable excuse, to comply with the requirements of that order, a presumption arises that the property was obtained through unlawful conduct. Note, however, that the presumption arising under that provision is rebuttable, meaning that the recipient of the unexplained wealth order is still, in the civil recovery proceedings, able to rebut the presumption by tendering evidence establishing that the property was not obtained through unlawful conduct.

While the primary purpose of the UK legislation was to address the movement of illicit wealth into London through the purchase of real estate and other high-value goods, I see merit in the use of unexplained wealth orders to address the accumulation of illicit wealth by organized crime groups and others involved in serious criminal activity in this province. There are often circumstances in which law enforcement agencies have reasonable grounds to suspect that a particular asset was obtained or derived from the commission of a criminal offence, but simply do not have the evidence required to prove that fact to the civil standard of proof. Through the introduction of an unexplained wealth order regime, the state can require a property owner to produce information concerning the provenance of a suspicious asset (which may assist the authority in deciding whether to pursue civil forfeiture).

---

134 Evidence of M. Sieben, Transcript, June 12, 2020, p 21.
135 I would, however, change some of the prerequisites for the issuance of such an order to allow the Civil Forfeiture Office to make more effective use of unexplained wealth orders in British Columbia.
136 For the proposition that unexplained wealth orders are an investigative tool, see Evidence of H. Wood, Transcript, December 20, 2020, p 11 (“... speaking in the UK context, the unexplained wealth order is purely an investigative tool. It sits under part 8 of the Proceeds of Crime Act 2002 with a range of other investigative tools that you may be familiar with from your domestic legislation, such as production orders, disclosure orders, account monitoring orders. So it should absolutely in the UK context be seen as an investigative tool to be used to gather information and evidence to support a wider investigation”).
137 Proceeds of Crime Act 2002, s 362C(2).
Where the asset was purchased with legitimate funds, it should not, in most cases, be difficult for the property owner to furnish evidence of that fact. People who legitimately own valuable assets, such as houses and luxury vehicles, are “uniquely well placed” to establish the provenance of those assets\(^{138}\) and it is difficult to think of a situation where a person who owns a valuable asset would be unable to furnish evidence as to the source of that asset.\(^{139}\) In providing this evidence, the owner of the asset would likely avoid the prospect of civil forfeiture proceedings. Where, however, an asset was purchased with illicit funds, the inability to account for the provenance of the asset will allow the Civil Forfeiture Office to target that asset in a civil forfeiture proceeding.

While unexplained wealth orders could be used in a wide variety of circumstances, they may be particularly useful in targeting the assets of individuals further up the criminal hierarchy, who are often involved in highly lucrative but less visible forms of criminal activity. If used properly, unexplained wealth orders also allow authorities to address problems such as nominee ownership, where those involved in criminal activity put unlawfully obtained assets into the hands of a family member or associate who is not involved in criminal activity with a view to insulating the asset from a forfeiture order.

An unexplained wealth order issued to a person suspected to be a nominee owner will force that person to provide evidence with respect to the nature of their interest in the property and provenance of the asset, or risk having the asset forfeited to the state in accordance with the Civil Forfeiture Act.\(^1\)

Another benefit of unexplained wealth orders is that they may discourage foreign corrupt officials and others involved in criminal activity from moving their illicit wealth to British Columbia through the purchase of real estate and other valuable assets.

One thing that has become apparent during the Commission process is that many of those involved in profit-oriented criminal activity are – especially at the higher end – rational actors who are aware of the different regulatory requirements in different jurisdictions, and consider those differences in determining where to place and launder their ill-gotten gains. Faced with the prospect of having to prove the provenance of a particular asset to avoid a forfeiture order, these offenders may choose to place their wealth in another jurisdiction.

While some have suggested that unexplained wealth orders give rise to concerns about the presumption of innocence and the right to silence,\(^{140}\) it is important to understand that the Civil Forfeiture Act does not impose any criminal penalties, and that any information provided in response to such an order cannot be used in a criminal prosecution. Moreover, I agree with Ms. Murray’s view that most, if not all, of the information provided in response to an unexplained wealth order could be obtained through the civil discovery process once a civil forfeiture action has been commenced.

---

139 Even if documents are not available to show the provenance of a particular asset, an affidavit setting out the circumstances in which the property was purchased should be sufficient to comply with the order.
140 Closing submission, BC Civil Liberties Association, pp 12–14.
I am strengthened in my view that unexplained wealth orders are a viable solution by a legal opinion on the constitutionality of a UK-style unexplained wealth order regime prepared for the Commission by the Honourable Thomas A. Cromwell, CC.\textsuperscript{141}

I therefore recommend that the Province proceed with its plan to develop an unexplained wealth order regime in British Columbia.

\textbf{Recommendation 101:} I recommend that the Province proceed with its plan to develop an unexplained wealth order regime in British Columbia.

Like the regime in place in the United Kingdom, the new regime should allow the Civil Forfeiture Office to apply for an order before the commencement of civil forfeiture proceedings requiring the person identified in the order to produce information and documents concerning:

- the nature and extent of the person's ownership interest in the property;
- the source of any funds used to purchase the property;
- the particulars of any trust arrangements concerning the property; and
- any other information specified by the court.

It will be important that such orders are sought with a high degree of specificity to avoid any uncertainty about whether the order has been complied with. Experiences of other jurisdictions have shown that where orders are drafted with insufficient particularity, non-compliance is difficult to establish.

Where the person does not provide the required information within the time period set out in the order, a presumption should arise that the property was obtained or derived as a result of unlawful activity. The legislation should also include significant consequences for the provision of false or misleading information,\textsuperscript{142} and make it clear that any information provided in response to the order cannot be used against the person in a criminal prosecution.

The Province will have work to do in drafting or amending legislation to support the new regime. I do not intend to set out in detail the architecture of the regime the Province should implement. I will, however, offer my thoughts on some of the features

---

\textsuperscript{141} A copy of that opinion is attached as Appendix I. Submissions in response to the opinion were made by two participants – the Province and the BC Civil Liberties Association. Both of those submissions have been posted on the Commission’s website.

\textsuperscript{142} In Manitoba, those who provide false or misleading information are liable, in the case of an individual, to a fine of not more than $10,000, or to imprisonment for a term of not more than six months (or both), or, in the case of a corporation, to a fine of not more than $25,000. In British Columbia, significantly higher penalties will be necessary to have any real deterrent effect.
I believe would enhance the regime and which I would encourage the Province to consider.

**Legal Standard for Issuance of an Unexplained Wealth Order**

While the international experience shows that different standards could be adopted for the issuance of an unexplained wealth order, I tend to think that a reasonable suspicion standard is the best fit for British Columbia. I view unexplained wealth orders primarily as an *investigative* tool that allows the Civil Forfeiture Office to gather evidence about the provenance of specific assets and make informed decisions about whether or not to pursue a civil forfeiture action. By setting a relatively low standard for the issuance of such an order, the Civil Forfeiture Office will be able to cast a wider net and pursue information about a larger number of assets than it would if a higher standard was adopted (such as reasonable grounds to believe). I note that it is always open to the owner to avoid the presumption by responding to the order with evidence of lawful ownership.

I also note that the reasonable suspicion standard is employed to obtain information in various other contexts, including under the *Criminal Code*, where the ultimate outcome could be a criminal conviction and a loss of liberty.

**Who Should the Order Apply To?**

I tend to think that both politically exposed persons[^1] and those involved in unlawful activity should be brought within the regime. However, the criteria for issuance of an unexplained wealth order should be different for each category of recipient.

For politically exposed persons, I tend to think that the order should issue where there are reasonable grounds to suspect that (a) the person is a politically exposed person; and (b) the person's known sources of income and assets would have been insufficient to enable them to acquire the property legitimately.

For those involved in unlawful activity, it makes sense for the order to issue where there are reasonable grounds to suspect that the legal or beneficial owner of the property has been involved in unlawful activity that resulted in or is likely to have resulted in the person receiving a financial benefit within the past 10 years. For persons in this category, I would not be inclined to include a requirement to prove that the person's known sources of income and assets would have been insufficient to enable them to acquire the property.

The UK and Australian experiences demonstrate that it is extraordinarily difficult to prove that the respondent's known sources of income and assets would have been

[^1]: For the purpose of this discussion, I will use the term politically exposed person to include politically exposed persons and heads of international organizations, as well as family members and close associates of politically exposed persons and heads of international organizations.
insufficient to enable him or her to acquire the property, particularly where the potential recipient is a criminal who does not “earn a salary [or have] a steady stream of predictable income.” Moreover, it would be difficult, if not impossible, to make out this requirement where the target also runs a legitimate business.

It is also essential that the provision be drafted so that it addresses the problem of nominee ownership, where a person involved in profit-oriented criminal activity puts legal ownership of the property in the name of another person to insulate the property from a potential forfeiture order. The legal owner of the property may not be involved in any criminality and may have legitimate sources of income or wealth. Nevertheless, the order should be available to target such assets.

It is also important to address the situation where a criminal “gifts” an asset obtained from criminal activity to a friend or family member (such as a spouse, child, or parent). In my view, the Province has a legitimate interest in seeking forfeiture of that asset even where the recipient is not holding the property as a nominee owner.

**Monetary Threshold**

I would suggest that the unexplained wealth order regime be reserved for assets with a fair market value of $75,000.00 or more. That is, the state should be required to establish that the fair market value of the property exceeds $75,000. I have suggested a $75,000 threshold to ensure that the provision is only used to target higher value assets. I also note that in respect of assets worth less than $75,000.00 (except real property), the administrative forfeiture provisions in the Civil Forfeiture Act already provide for an efficient method of targeting those assets.

**Time Limitation**

One concern associated with unexplained wealth orders is the challenges faced by owners required to establish the legitimacy of property acquired many years ago: witnesses with relevant information may no longer be available or documents may have been lost or destroyed.

I would therefore encourage the Province to consider limiting the reach of the legislation to assets acquired by the respondent within a prescribed time period.

**Conclusion**

I strongly believe that the civil asset forfeiture regime is an underutilized tool in the fight against money laundering, and that more should be done to identify and target unlawfully obtained assets owned or controlled by those involved in criminal activity.

144 Evidence of N. Skead, Transcript, December 17, 2020, pp 54–55.
While I anticipate that a by-product of the increased law enforcement focus on money laundering / proceeds of crime issues will be an increase in referrals to the Civil Forfeiture Office, it is important for the Civil Forfeiture Office to be more proactive in identifying and targeting unlawfully obtained assets owned or controlled by organized crime groups and others involved in serious criminal activity.

Unexplained wealth orders will provide a useful tool to the Civil Forfeiture Office in carrying out that work. However, they cannot be viewed as a substitute for the significant investigative and analytical work that must be undertaken by that office.
Conclusion

This Commission was established by Order in Council on May 15, 2019, a little over three years ago. The table of contents for this Report demonstrates the broad and encompassing sweep of the Commission’s Inquiry into money laundering. My aim in this conclusion is modest: to look back on some of the numerous topics covered in this Report and also to look ahead to the future. As the Province of British Columbia and various jurisdictions are demonstrating, this is a time of change and reform. Meaningful steps are being taken to combat money laundering (even if much more remains to be done). There are reasons for optimism.

I began this Report by setting out some introductory concepts: what money laundering is, who is involved in it, and how much money is laundered. I concluded that money laundering in British Columbia is a serious problem that needs to be addressed. From there, I considered the international, national, and provincial frameworks within which money laundering has come to be addressed by governmental and non-governmental organizations. Because the provincial framework comprises an uneven patchwork of activity by government, regulators, and law enforcement, I recommended that the Province establish an AML Commissioner – a new officer of the Legislature with expertise and insight into money laundering in British Columbia. The AML Commissioner will ensure that continued focus remains on anti-money laundering initiatives after this Inquiry concludes.

The bulk of this Report centres on specific sectors of the economy in British Columbia identified by my Terms of Reference. The sectors scrutinized include casinos, real estate, financial institutions, the corporate sector, lawyers and notaries, accountants, luxury goods, and virtual assets. However, while money launderers certainly take advantage of legitimate sectors of the economy, a significant amount of activity remains underground, including through bulk cash smuggling and informal value transfer systems.
Finally, I examined the effectiveness and the shortcomings of law enforcement and asset forfeiture work undertaken to stop money laundering enterprises. That review demonstrated that there is a real need in British Columbia for a dedicated provincial money laundering intelligence and investigation unit, which I have recommended in Chapter 41. Furthermore, I recommend a significantly stronger use of asset forfeiture – both criminal and civil – and the creation of an unexplained wealth order regime in BC.

From my canvass of these topic areas, some broad themes have emerged that bear some final discussion. The first and most obvious theme is that money laundering is an opportunistic crime, committed by those who seek out and exploit human and systemic vulnerabilities. Criminals who need to detoxify their profits by separating them from their illicit origin begin with an advantage: they are seeking to find uses for a common medium of exchange in a context where there is endless demand for it and almost unlimited uses. In practice, the only limitation on the use of funds in the laundering process is that the funds must ultimately serve the interests of those for whom they are being laundered, and the user must hide their illegitimate origins.

As with any crimes that rely on the presence of opportunities, money laundering is in a constant state of flux. As opportunities change, so does the focus of the money launderer. It was this characteristic of money laundering that led Peter German to describe attempts to suppress it as a game of “whack-a-mole.” Dr. German’s observation highlights the difficulty of finding an approach to solving the problem of money laundering that is not static, piecemeal, or confined to one sector of the economy. It is my hope that the AML Commissioner will help ensure that entities with an anti–money laundering mandate remain engaged and responsive to new threats.

A second theme that has emerged from the evidence is that the nature and extent of money laundering in British Columbia's economy – indeed in Canada’s economy and in the global economy – has not been reliably measured. Although I have discussed attempts to establish the quantum of money laundering in British Columbia’s economy, I have been unable to fix on a reliable estimate of the volume of money laundering activity in this province. But what the varied attempts at quantification have in common is one conclusion: the amount of money laundering taking place in British Columbia is enormous.

Unfortunately, when uncertainty pervades the public discussion about money laundering, it can contribute to a proliferation of ungrounded theories about the scale and nature of the problem. As a result, ideas have developed in the public discourse that promote generalizations about the involvement of ethnic or racial groups in money laundering activity in British Columbia. There is, for example, a theory that money laundering by Chinese criminals in the housing market in the Lower Mainland has contributed to a housing unaffordability crisis. I explored this theory in my Report and concluded that low supply, high demand, and low interest rates are the drivers of housing unaffordability in British Columbia – not money laundering. Although it is quite likely that British Columbia’s overheated housing market has been attractive to money
launderers, it does not follow that money laundering in residential real estate is the cause of housing unaffordability, as opposed to being a product of high housing prices.

Money laundering is a crime of opportunism. It flourishes in conditions that are created by other forces and convenient to exploit. Great care must be taken to avoid exciting a response to a significant socio-economic problem (prohibitively expensive housing) that not only misses the mark, but also vilifies ethnic or racial groups as responsible for a problem not of their making. Even with that in mind, however, the Province must recognize that money laundering is not only a threat within its borders, but often connected to external criminal activities from outside the province or the country.

The Commission dedicated significant attention to money laundering in the gaming sector. It became apparent that people with Chinese heritage who appeared to have a strong connection to gaming became primary targets for certain organized crime groups. These groups used such people to introduce large quantities of illicit cash into the legitimate British Columbia economy through Lower Mainland gaming venues.

Money laundering in the gaming sector was a significant part of the public debate in the time leading up to the establishment of this Commission. It presented a rare opportunity to study money laundering in action, on a large scale, over time, in the context of a public enterprise, notwithstanding law enforcement and regulatory oversight. It is difficult to conceive of a better opportunity to develop an understanding of how money laundering infiltrates economic systems and avoids enforcement attempts. It also highlights how money laundering has a global reach that is not easily stifled or isolated. Tracing how and why money laundering evolved in the gaming sector so successfully emphasizes both its opportunistic nature and why a strong political will is necessary to suppress it wherever it may take root.

This Commission was established in the context of such a political will. The Commission’s work and, in particular, the recommendations in this Report, are reliant on the continuance of that political will to overcome harms that money laundering can inflict, and has inflicted, on the social, political, and economic well-being of the province. Much needs to be done, and much can be done to oppose and reverse the inroads that money laundering enterprises have constructed into British Columbia’s social, political, and economic landscape. The importance of vigorously resisting money laundering should not be underestimated.

Commissions of inquiry aim to serve the public interest by taking on an intractable problem with the benefit of evidence and analysis. The reforms and recommendations in this Report fall to governments and agencies to be implemented, particularly by the Province. This Report makes plain that there remain enormous challenges – much work remains to be done. But there are sound reasons for optimism. British Columbians, governments, and agencies are now showing a real interest in tackling money laundering and giving it the priority that it has lacked for far too long. There are numerous policy reforms already underway. More will follow. This bodes well for the future.
Appendices
Appendix A
Terms of Reference

1. Definitions
In this order:

“Act” means the Public Inquiry Act;
“commission” means the commission established under section 2 of this order;
“money laundering” means the process used to disguise the source of money or assets derived from illegal activity.

2. Establishment of commission
1. A study and hearing commission called the Commission of Inquiry into Money Laundering in British Columbia is established under section 2 of the Act.
2. The Honourable Justice Austin F. Cullen is the sole commissioner of the Commission.

3. Purposes of commission
The purposes of the commission are as follows:
   a. to inquire into and report on money laundering in British Columbia;
   b. to make recommendations referred to in section 4 (2) (a).

4. Terms of reference
1. The terms of reference of the commission are to conduct hearings and make findings of fact respecting money laundering in British Columbia, including the following:
   a. the extent, growth, evolution and methods of money laundering in the following sectors:
i. gaming and horse racing;
ii. real estate;
iii. financial institution and money service, including unregulated entities and persons who provide banking-like services;
iv. corporate, in relation to the use of shell companies, trusts, securities and financial instruments for the purposes of money laundering;
v. luxury goods;
vi. professional service, including legal and accounting;
b. the acts or omissions of regulatory authorities or individuals with powers, duties or functions in respect of the sectors referred to in paragraph (a), or any other relevant sector, to determine whether those acts or omissions have contributed to money laundering in British Columbia and whether those acts or omissions have amounted to corruption;
c. the scope and effectiveness of the powers, duties and functions exercised or carried out by the regulatory authorities or individuals referred to in paragraph (b);
d. the barriers to effective law enforcement respecting money laundering in British Columbia.

2. Further terms of reference of the commission are as follows:

a. to make recommendations the commission considers necessary and advisable, including recommendations respecting the following:
   i. the regulation of the sectors referred to in subsection (1) (a) or any other relevant sector;
   ii. the acts or omissions referred to in subsection (1) (b);
   iii. the powers, duties and functions referred to in subsection (1) (c);
   iv. the barriers referred to in subsection (1) (d);

b. to review and take into consideration the following reports:

   i. Dirty Money: An Independent Review of Money Laundering in Lower Mainland Casinos conducted for the Attorney General of British Columbia, Peter M. German, Q.C., March 31, 2018;
   ii. Vancouver at Risk—Turning the Tide—An Independent Review of Money Laundering in B.C. Real Estate, Luxury Vehicle Sales & Horse Racing, Peter M. German, Q.C., March 31, 2019;
   iii. Real Estate Regulatory Structure Review (2018), Dan Perrin;
   iv. Combatting Money Laundering in BC Real Estate, Maureen Maloney, Tsur Somerville and Brigitte Unger, March 31, 2019;
c. to submit to the Minister of Public Safety and Solicitor General and Deputy Premier, the Attorney General and Minister Responsible for Housing and the Minister of Finance a final report on or before June 3, 2022.

3. The commission is to carry out the inquiry in such a way as to ensure the inquiry does not jeopardize any ongoing criminal investigation or proceeding.

4. The commission may not inquire into any matter respecting the exercise of prosecutorial discretion.

5. Expenses

Subject to the directives of Treasury Board, the commissioner is entitled to be reimbursed for reasonable travelling and living expenses at the rates specified for Group III employees set out in the government’s Core Policy and Procedures Manual.
Appendix B

Rules of Practice and Procedure

AUTHORIZED BY THE PUBLIC INQUIRY ACT, S.B.C. 2007, c. 9, s. 9

GENERAL

1. These rules of practice and procedure apply to the Commission of Inquiry into Money Laundering in British Columbia (the “Commission” or “Inquiry”).

2. The Commission will be conducted in accordance with the Public Inquiry Act, S.B.C. 2007, c. 9 (the “Act”) and pursuant to Order in Council No. 238/2019 (the “Terms of Reference”).

3. Subject to the Act and the Terms of Reference, the Commission has the power to control its own process.

4. The Commissioner may amend, supplement, vary or depart from any rule for the effective and efficient conduct of the Inquiry.

5. The Commissioner may issue directions or issue orders including on his own motion or following an application.

6. Except as otherwise ordered or directed by the Commissioner, participants, counsel and witnesses must comply with these rules.

7. Without limiting any other powers of enforcement, if any participant, counsel or witness fails to comply with any of these rules, including any time limits specified for taking any actions, the Commissioner, after giving reasonable notice to the participant, counsel or witness, may do one or more of the following:

   a. schedule a meeting or hearing;

   b. continue with the Inquiry and make a finding or recommendation based on the information before him, with or without providing an opportunity for submissions from that participant;
c. extend or abridge any time limit provided for in these rules; or

d. make any order necessary for the purpose of enforcing these rules or promoting the fair and efficient conduct of the Inquiry.

8. Commission counsel will communicate with participants primarily by email. Notice or service by email shall be considered adequate notice or service. All participants must identify to Commission counsel the email address they wish to use for this purpose.

COMMISSIONER'S POWERS RESPECTING PARTICIPANTS

9. The Commissioner may make orders respecting:
   a. the manner and extent of a participant's participation;
   b. the rights and obligations of a participant, if any; and
   c. any limits or conditions on a participant's participation.

10. In making an order under Rule 9, the Commissioner may:
    a. make different orders for different participants or classes of participants; and
    b. waive or modify one or more of his orders as necessary.

RIGHTS OF PARTICIPANTS

11. A participant:
    a. may participate on his or her own behalf; or
    b. may be represented by counsel or, with the approval of the Commissioner, by an agent.

RECORDS

General

12. In these rules, the term “record” has an extended meaning and includes a photograph, audio or video recording, any record of a permanent or semi-permanent character and any information recorded or stored by means of any device;

13. As soon as reasonably possible after being granted standing, a participant shall:
    a. identify to the Commission the nature and character of records in the participant's possession or under the participant's control relevant to the subject matter of the Inquiry;
b. if requested to do so, provide to the Commission a list of records or any subset of records in the participant’s possession or under the participant’s control; and

c. if requested to do so by the Commission, provide copies to and allow inspection of such records by the Commission. Wherever possible, records shall be provided electronically in the format requested by the Commission.

14. The obligation under paragraph 13(a) is a continuing obligation.

15. If it is claimed that a record is privileged from production, the claim must be set out when the record is listed pursuant to Rule 13(b) along with a statement of the grounds of privilege.

16. The nature of any record for which privilege from production is claimed must be described in a manner that, without revealing the information that is privileged, will permit a preliminary assessment of the validity of the claim for privilege.

17. Subject to Rule 18 (Undertaking), the Commission shall treat all records it receives as confidential unless and until they are made part of the public record in accordance with Rule 27. This does not preclude Commission counsel from showing or providing a record to a witness or potential witness, an expert, a consultant or a participant.

18. Commission counsel shall not provide a record to counsel for a participant or counsel for a witness until counsel has delivered to Commission counsel a signed undertaking, in a form approved by the Commission, that all records disclosed by the Commission will be used solely for the purpose of the Inquiry.

19. Counsel for a participant or a witness may provide a record to the participant or witness or expert or consultant only if that person has delivered to counsel a signed confidentiality agreement in a form approved by the Commission, that all records disclosed by the Commission will be used solely for the purpose of the Inquiry, and counsel has delivered the signed confidentiality agreement to Commission counsel.

20. Witnesses or participants who are unrepresented by counsel may be required to sign a confidentiality agreement, in a form approved by the Commission, before being provided records.

21. The Commissioner may:

   a. impose restrictions on the use and dissemination of records;

   b. require that a record that has not been entered as an exhibit in the evidentiary proceedings, and all copies of the record, be returned to the Commission; and

   c. on application, release counsel, a participant or a witness, in whole or in part, from the undertaking or confidentiality agreement in relation to any record, or may authorize the disclosure of a record to another person.
Applications for Further Disclosure of a Record

22. A participant may seek disclosure of a record from another person (“record holder”) by asking Commission counsel, in writing, to use the powers of the Commission to obtain the record.

23. The request must state:
   a. the reasons the participant believes the record holder possesses or controls the record; and
   b. the reasons the participant believes the record is relevant to a matter before the Commission.

24. If Commission counsel accepts the request, he or she will attempt to obtain the record.

25. If Commission counsel rejects the request, he or she will notify the participant, and the participant may apply to the Commissioner, in accordance with Rule 60 (Applications), for an order respecting the request.

26. If the participant applies to the Commissioner under Rule 60 (Applications), the Commission shall deliver the application and any supporting materials to the record holder and to each other participant having an interest in the subject matter of the record.

Public Access to Records

27. Unless the Commissioner otherwise determines:
   a. a record within the Commission’s control that has not been entered as an exhibit is not available for public inspection, copying or publication; and
   b. a record that has been entered as an exhibit may be made available to the public on the Commission’s website including with redactions made by Commission counsel.

28. A participant or witness may apply to the Commissioner in accordance with Rule 60 (Applications) for an order that an exhibit, or parts of an exhibit, be redacted, sealed or otherwise made unavailable to the public.

INTERVIEWS AND SECTION 22 MEETINGS

29. Commission counsel may interview any person who they believe may have information or records that have any bearing upon the subject matter of the Inquiry.

30. A person may be required by summons issued under s. 22(1) of the Act to attend a meeting with Commission counsel and answer questions.

31. Commission counsel may meet with and/or interview the same person more than once. Persons who are met with and/or interviewed are entitled, but not required, to have legal counsel present.
OVERVIEW REPORTS

32. Commission counsel may prepare overview reports derived from their investigations. These overview reports may contain core or background facts, referring to their sources. They may also describe facts and circumstances relevant to the subject matter under discussion.

33. Once final, an overview report is an exhibit before the Commissioner without the necessity of being introduced into evidence through a witness.

34. Before an overview report is finalized:
   a. Commission counsel will deliver a draft to each participant with standing to participate in respect of the subject matter of the overview report;
   b. such participants may provide comments in writing on the draft overview report, within 14 days or such other time as Commission counsel advises; and
   c. Commission counsel may modify the draft overview report in response to comments received from participants or on Commission counsel’s own initiative.

35. In accordance with Rule 46, participants may propose witnesses for Commission counsel to call during the evidentiary hearings to support, challenge or comment upon the overview report in ways that are likely to significantly contribute to an understanding of the issues relevant to the Inquiry.

EVIDENTIARY HEARINGS

General

36. The Commissioner will set dates, hours and places for the evidentiary hearings, and will publish this information on the Commission's website.

37. The Commissioner may receive and accept information that he considers relevant, necessary and appropriate, whether or not the information would be admissible in a court of law.

Public and Media Access to Evidentiary Hearings

38. Subject to Rule 39 (below), the Commission will:
   a. ensure that evidentiary hearings are open to the public, in person and/or through broadcast proceedings; and
   b. except as otherwise limited by these rules or order of the Commissioner, provide public access to information received in evidentiary hearings.

39. The Commissioner may, by order, prohibit or restrict a person or class of persons, or the public, from attending all or part of an evidentiary hearing, or from accessing all or part of any information provided to or held by the Commission,
a. if the government asserts privilege or immunity over the information under section 29 of the Act;

b. for any reason for which information could or must be withheld by a public body under sections 15 to 19 and 21 to 22.1 of the Freedom of Information and Protection of Privacy Act, R.S.B.C. 1996, c. 165; or

c. if the Commissioner has reason to believe that the order is necessary for the effective and efficient fulfillment of the Terms of Reference.

40. In making an order under Rule 39 (above), the Commissioner shall take into account the rights and interests of a participant against whom a finding of misconduct, or a report alleging misconduct, may be made.

41. The Commissioner may impose restrictions on the video and audio recording of the evidentiary hearing proceedings and may, on application, order that there be no video or audio recording of some or all of a witness's testimony.

42. The public and media may report the evidentiary hearing proceedings that are open to the public, except as otherwise ordered.

Witnesses

43. Commission counsel shall decide who will be called as a witness at the evidentiary hearings.

44. Each witness called shall, before testifying, be sworn or affirmed.

45. A witness may be called more than once.

46. Participants may propose witnesses to be called during the evidentiary hearings. Participants shall provide to Commission counsel at the earliest reasonable opportunity and in writing the name and contact information, if known, of any person who the participant believes should be called as a witness during the evidentiary hearings, with a statement of the subject matter of their proposed testimony, their experience and background, anticipated evidence and the estimated length of their testimony.

47. Commission counsel may decline to call a witness proposed by a participant. If the participant believes that the witness's evidence is necessary, the participant may apply, in accordance with Rule 60 (Applications), to the Commissioner for an order that Commission counsel call that witness.

Rules of Examination

48. Commission counsel will call all witnesses at the hearing and may adduce evidence by way of both leading and non-leading questions.

49. Each witness who testifies may, during his or her testimony, have counsel present.

50. Counsel for a witness who is not a participant may only ask questions of the witness with leave of the Commissioner.
51. Subject to direction by the Commissioner, participants may examine witnesses within the areas of their grant of standing.

52. The Commissioner may direct any counsel whose client shares a commonality of interest with the witness only to adduce evidence through non-leading questions.

53. Unless the Commissioner orders otherwise, the order of examinations of a witness will be as follows:
   a. Commission counsel;
   b. counsel for participants;
   c. Commission counsel, if appropriate.

54. The Commissioner may set reasonable time limits for the examination of witnesses and direct the order in which participants examine witnesses.

55. Commission counsel will provide reasonable notice in writing to participants of the name of each proposed witness, the subject matter of the proposed evidence of the witness and a list of records Commission counsel anticipates may be put to the witness.

56. Subject to direction of the Commissioner a participant may not put a record to a witness unless:
   a. the record has been disclosed to the Commission; and
   b. written notice has been given to the Commission at least five days prior to the date of the witnesses’ scheduled attendance and in the form directed by Commission counsel, identifying the record that the participant intends to put to the witness.

57. Commission counsel will provide all such notices to the witness.

58. The Commissioner has discretion to adjust or vary notice periods, and to determine whether the introduction of a subject matter or a record to a witness should be denied, allowed, or allowed on such terms as he directs.

**Panels of Witnesses**

59. Commission counsel may call a witness to give evidence as a member of a panel of witnesses.

**APPLICATIONS TO THE COMMISSIONER**

60. A person may apply to the Commissioner for an order by:
   a. preparing an application in writing;
   b. attaching to the application any supporting materials; and
   c. delivering the application and supporting materials to the Commission by email at applications@cullencommission.ca.
61. Unless the Commissioner otherwise directs, the Commission shall promptly deliver the application and supporting materials to each other participant.

62. Participants are entitled to respond to an application where their grant of standing identifies them as having an interest in the subject matter of the application.

63. Commission counsel may provide the Commissioner with any submissions or materials Commission counsel consider relevant and necessary to the proper resolution of the application.

64. The Commissioner will determine the schedule for the filing of submissions and materials and for the hearing of oral argument, if any.

65. The Commissioner may make an order or direction based on the written material filed or, at his discretion, after hearing oral argument.

NOTICES OF ALLEGED MISCONDUCT

66. The Commissioner will not make a finding of misconduct against a person or make a report that alleges misconduct by a person unless that person has had reasonable notice under s. 11(2) of the Act of the allegations against him or her and has had opportunity during the Inquiry to respond.

67. Any s. 11(2) notices will be delivered on a confidential basis to the persons or participants to whom they relate. Supplementary notices may be delivered from time to time by the Commission as warranted by the information before it.

68. If a person in receipt of a notice under s. 11(2) of the Act believes that it is necessary that additional evidence be received to respond to the allegations of misconduct, he or she may seek to have such evidence placed before the Commissioner in accordance with Rules 46 and 47.

STUDY COMMISSION ACTIVITIES

69. The Commission may use a range of investigative, research and policy development processes in its work.

SUBMISSIONS

70. Commission counsel, and each participant authorized to do so, may make submissions to the Commissioner as permitted by the Commissioner.
Appendix C

Rules for Standing

1. Commission counsel, who will assist the Commissioner to ensure the orderly conduct of the inquiry, have standing throughout the inquiry.

2. Commission counsel have the primary responsibility for representing the public interest at the inquiry, including the responsibility to ensure that all matters that bear upon the public interest are brought to the Commissioner’s attention.

3. Individuals, agencies, institutions or any other entities (collectively “persons”) who wish to participate in the inquiry may seek standing by submitting a written application to the Commission with the following information:
   1. the person’s name, address, telephone number and email address;
   2. the name of counsel, if any, representing the person, together with counsel’s address, telephone number and email address;
   3. the nature of the person’s interest in the subject matter of the inquiry, why he or she wishes standing, and how he or she proposes to contribute to the inquiry, having specific regard to the terms of reference; and
   4. the nature and extent of participation sought.

4. Applications for standing must not exceed ten (10) double-spaced pages in length, unless otherwise ordered by the Commissioner.

5. Applications for standing must be filed with the Commission in electronic format at participants@cullencommission.ca on or before September 6, 2019, or at the discretion of the Commissioner on any other date.
6. All applications for standing will be available to the public on the Commission’s website unless otherwise ordered by the Commissioner.

7. The Commissioner will determine the outcome of applications for standing on the basis of written applications, unless the Commissioner determines that an oral hearing is necessary. Any oral hearings on standing will take place on such dates as the Commissioner may determine.

8. The Commissioner may grant a person standing after considering all of the following:
   
   1. whether, and to what extent, the person’s interests may be affected by the findings of the Commission;
   
   2. whether the person’s participation would further the conduct of the inquiry; and
   
   3. whether the person’s participation would contribute to the fairness of the inquiry (Public Inquiry Act, s. 11(4)).

9. Those granted standing will be designated as participants before the inquiry.

10. The Commissioner will determine on what terms and in which parts of the inquiry a participant may participate, and the nature and extent of such participation. The Commissioner retains the discretion to vary a participant’s participation or rescind standing.

11. The Commissioner may direct that a number of applicants share in a single grant of standing.

Note: Pursuant to Standing Rule 6, the Commissioner has directed that applications for standing will not be published, but will be summarized in rulings.

British Columbia Civil Forfeiture Act
Commission of Inquiry into Money Laundering in British Columbia

Constitutionality of possible changes to the British Columbia Civil Forfeiture Act

Act:

- Unexplained wealth orders
- Information sharing
- Combining law enforcement and civil forfeiture personnel

Opinion of The Honourable Thomas A. Cromwell C.C.

Requested by the Commission of Inquiry into Money Laundering in British Columbia

I. **Introduction**

[1] This is my opinion as to whether three potential changes to British Columbia’s civil forfeiture scheme would be within provincial legislative competence\(^1\) and compliant with the *Charter*.\(^2\)

[2] The three potential changes are:

- Providing the Director of Civil Forfeiture with authority to apply for, and the courts with the authority to issue, “unexplained wealth orders”;
- Enabling the Director of Civil Forfeiture to share information obtained in the exercise of his or her information gathering powers with criminal law enforcement agencies, tax authorities and regulators; and
- Embedding a provincial civil forfeiture office within a provincial law enforcement agency or giving a provincial law enforcement agency a mandate to pursue civil asset forfeiture.

[3] An introductory word about the first of these changes—the unexplained wealth order—will be helpful. The “unexplained wealth order” (or “UWO”) would add to the information gathering tools in the *Civil Forfeiture Act*\(^3\) and introduce an evidentiary shortcut in civil forfeiture proceedings. These orders, like those provided for in Part 8 of the United Kingdom *Proceeds of Crime Act 2002*\(^4\), would authorize the director to apply to the court for an order requiring persons to provide information about the acquisition and ownership of property that may be subject to forfeiture. Failure to comply with the order would give rise to a presumption that the property is subject to forfeiture.

---

\(^{1}\) i.e. whether they would conform with the division of legislative powers under the *Constitution Act, 1867*, 30 & 31 Victoria, c 3 (UK) (“*Constitution Act, 1867*”).

\(^{3}\) *Civil Forfeiture Act*, SBC 2005, c 29 (“*CFA*”).

II. Overview of opinion

A. Unexplained wealth orders

[4] If the unexplained wealth order becomes part of the CFA, its constitutionality cannot be assessed apart from that of the CFA as a whole. In my opinion, with one exception, the current CFA provisions are validly enacted provincial legislation under British Columbia’s jurisdiction over property and civil rights within the province. The UWO provisions, viewed on their own and as part of the larger CFA scheme, would also, in my opinion, be validly enacted provincial legislation under the same head of power.

[5] The exception is the so-called “future use” aspect in relation to the instruments of criminal activity provisions. The Supreme Court of British Columbia has ruled this aspect of the scheme to be beyond provincial legislative competence. If that ruling is correct, the UWO provisions cannot validly operate in relation to the investigation of alleged “future use” cases.

[6] Turning to Charter compliance, provisions modeled on the UK UWO scheme would not constitute unjustified infringements of any right guaranteed by the Charter. However, the use of these powers would give rise to a number of Charter issues, which would, in some respects, limit their usefulness.

B. Information sharing

[7] In general, there is no constitutional impediment to a civil forfeiture office sharing information with other provincial regulatory bodies and agencies for valid provincial purposes. However, Charter, and perhaps division of powers issues, will arise if the British Columbia Civil Forfeiture Office (“CFO”) uses its investigative powers for the predominant purpose of investigating penal liability. For example, sharing compelled information with law enforcement for the purposes of a criminal investigation and prosecution likely breaches s. 7 of the Charter and likely engages s. 8 of the Charter.

C. Combining law enforcement and civil forfeiture personnel

[8] A critical element of both the division of powers and the Charter analyses concerns whether the civil forfeiture scheme and the powers it confers on the director are limited to
pursuing the valid provincial objectives of a civil forfeiture scheme and not directed to the investigation or prosecution of criminal offences. There is a serious risk that embedding a provincial civil forfeiture office in a law enforcement agency would blur this important distinction of purpose and, as a result, risk a finding that the scheme exists in fact, if not in form, for a criminal law, rather than purely civil forfeiture, purpose. This risk, in turn, opens the legislation to challenges on division of powers grounds and its operation to Charter challenges. The risk is even more serious in the case of giving a law enforcement agency a civil asset forfeiture mandate.

III. Analysis

A. Division of powers analysis

1. Introduction

[9] Provincial legislation may be “unconstitutional” in the division of powers sense in three ways but only one of them is relevant here.\(^5\) We are concerned solely with the question of whether provincial legislation comes within one or more of the classes of subjects over which provinces have legislative authority. If it does not, the legislation is ultra vires (beyond the power of) the province; if it does, the legislation is intra vires (within the power of) the province.

[10] To answer this question, we must focus first on whether the existing CFA, of which the UWO provisions would form a part, is within provincial legislative competence. If it is, the next question is whether adding the UWO provisions or the potential information sharing and embedding schemes would alter that conclusion. We must consider both the impact of the addition of new features on the constitutionality of the whole scheme, as well as whether any aspects of the new features are themselves constitutionally suspect.

[11] I will first turn to the question of whether the existing scheme is valid provincial legislation and then address whether the potential additional features would alter the division of powers analysis.

\(^5\) The other two are: (a) interjurisdictional immunity, the application of which makes a provincial law inapplicable to the extent that it intrudes into the essential core of a federal legislation power; and (b) paramountcy, the application of which makes a provincial law inoperative to the extent that it conflicts with a validly enacted federal law.
2. **Constitutional validity of the current CFA**

   a) **Analytical method**

   [12] The *Constitution Act, 1867*, in ss. 91 and 92, assigns exclusive, legislative authority to Parliament and the provincial legislatures, respectively, in relation to “Matters coming within the Classes of Subjects” set out in those sections. Following this basic structure, the analysis to determine whether a law or parts of a law fall within federal or provincial legislative jurisdiction follows two main steps. First, one characterizes the law to determine the “matter” to which it relates, its so-called “pith and substance.” Then, one classifies the law by determining which of the “classes of subjects” set out in either s. 91 or s. 92 that “matter” comes within. While this analytical method is simple to state, it can be challenging to apply: the justices of the Supreme Court of Canada recently split three ways over how best to describe the pith and substance of a challenged law.⁶

   [13] The constitutional analysis may be focused on the whole legislative scheme or only parts of it. In the latter situation, provisions that are found to be unconstitutional are severed, leaving the remaining provisions intact. However, severance will not be possible if the unconstitutional provisions are inextricably bound up with the constitutional ones such that the legislature would not have enacted one without the other.⁷

   b) **Characterization of the CFA—determining the law’s “pith and substance”**

      i) **General principles**

   [14] As explained earlier, the first step is to determine the “matter” of the law. This has been described as the law’s “pith and substance,” “the matter to which it essentially relates” or its “dominant purpose or true character.” In more everyday language, one asks, “What is the essence of what the law does and how does it do it?”⁸

---

[15] Both the law’s purpose and its legal and practical effects play a part in this analysis. It is the purpose and effects of the law, not its form, that determine its true character. The means by which the law sets out to accomplish its purpose are relevant, but must not be confused with its purpose. Where the challenged provisions are part of a larger legislative scheme, one considers the pith and substance of the challenged provisions in the context of that larger scheme. This is because the nature of the larger scheme may influence the assessment of the purpose and/or effects of the challenged provisions.

[16] The law’s “dominant purpose” is decisive in the pith and substance analysis; the law’s secondary objectives and effects have no impact on its characterization or on its constitutionality. Thus, where “the matter” of legislation is squarely within federal or provincial legislative authority, it may have substantial effects on matters that, considered on their own, would be outside that legislative authority. This point is often expressed by saying that “incidental effects”, that is, effects that may be of significant practical importance but are collateral and secondary to the mandate of the enacting legislature, do not alter the constitutionality of an otherwise valid law.

[17] Canadian constitutional law recognizes the so-called “double aspect doctrine.” This doctrine holds that a matter may, for one purpose and in one aspect, fall within federal jurisdiction while for another purpose, and in another aspect, it may fall within provincial competence. Standards for driving are a good example. Parliament can enact the offence of dangerous driving or criminal negligence causing death under its power in relation to criminal law, while the provinces can regulate driving within their borders, including by creating the provincial offence of careless driving under provincial authority in relation to property and civil rights.

[18] The potential for overlap inherent in this approach is addressed through the constitutional doctrines of pith and substance, interjurisdictional immunity and federal paramountcy. Overlap

---

10 See e.g. Reference re Genetic Non-discrimination Act, 2020 SCC 17 at paras 116 and 221.
11 Kirkbi AG v Ritvick Holdings Inc, 2005 SCC 65; by analogy, see also R v Comeau, 2018 SCC 15 at para 113.
that has only incidental effects is resolved by the pith and substance analysis. Overlap that
impairs the core of the other order of government’s legislative authority is addressed by
interjurisdictional immunity with the result that the impairing law is inapplicable to the extent of
that impairment. Overlap that results in a conflict between a provincial and a federal law is
addressed through federal paramountcy with the result that the provincial law is inoperative to
the extent of the conflict. As noted earlier, I do not consider either interjurisdictional immunity
or federal paramountcy to be relevant to the constitutional issues on which you have asked for
my opinion.

(ii) The purposes and effects of the CFA

[19] We turn, then, to the “pith and substance” of the CFA by looking at its purpose and
effects. The British Columbia Court of Appeal has held the CFA has three purposes: (a) to take
the profit out of unlawful activity; (b) to prevent the use of property for unlawfully acquiring
wealth or causing bodily injury; and (c) to compensate victims of crime and fund crime
prevention and remediation.15

[20] In broad terms, the CFA’s effects mirror these purposes.

[21] The focus of the CFA is forfeiture to government of property that is “proceeds of
unlawful activity” or “an instrument of unlawful activity.”16 The CFA defines “property” to
mean “a parcel of real property or tangible or intangible personal property,” including cash.17
The term “proceeds of unlawful activity” refers to various types of interests in property and an
“instrument of unlawful activity” is defined to mean property used or likely to be used to engage
in unlawful activity. Thus, the effects of forfeiture of such property furthers the first two
purposes of the CFA, taking the profit out of unlawful activity and preventing the use of property
to acquire wealth or cause bodily harm.

[22] Part 6 of the CFA furthers the third purpose, compensating victims of crime and funding
crime prevention and remediation. The proceeds of forfeiture are paid into the civil forfeiture

15 British Columbia (Director of Civil Forfeiture) v Onn, 2009 BCCA 402 at para 14; see also British Columbia
(Director of Civil Forfeiture) v Wolff, 2012 BCCA 473 at para 16.
16 CFA, s. 3.
17 CFA, s. 1(1).
account and the director may make payments out of it to, among other things, compensate eligible victims and to fund crime prevention and remediation.

[23] An application for forfeiture may be made “only with respect to property or an interest in property located in British Columbia.”\textsuperscript{18} This focus on property within the Province is further evidenced by the fact that proceedings for forfeiture orders under Part 2 and for other court orders (such as interim preservation orders) under Part 3 are proceedings in rem and not in personam.\textsuperscript{19} This means that the object of the proceeding is to make a determination of rights to the property that is conclusive against the world, regardless of who the owner is or who else might have an interest in it.\textsuperscript{20} In short, the whole scheme is directed to forfeit, to the provincial government, property in the province that is either the proceeds of crime or an instrument of unlawful activity and to devoting the value of that property to compensating victims of crime and funding crime prevention and remediation.

[24] The CFA contains a number of procedural provisions that, among other things, confer discretion on the court to dispense with or mitigate the effects of forfeiture where it would be in the interests of justice to do so, and establish rules concerning the burden and standard of proof for proceedings under the Act. It also provides for various interim preservation orders and for the director’s authority to provide notices to persons to produce information, including about accounts and account holders at financial institutions. All of these provisions are ancillary, and aim to further the CFA’s three purposes as articulated by the Court of Appeal.

(iii) Conclusion on pith and substance of the CFA

[25] The British Columbia courts have held that the pith and substance of the CFA is a property-based regime for the forfeiture and redistribution of property found to be tainted by crime for purposes related to the suppression of crime, including by preventing the use of

\textsuperscript{18} CFA, s. 3(3).
\textsuperscript{19} CFA, s. 15.01(2).
\textsuperscript{20} Law v Hansen (1895), 25 SCR 69 at p 73.
property to unlawfully acquire wealth or cause bodily injury, and to compensating victims of crime and funding crime prevention and remediation.21

[26] This closely tracks the conclusion reached by the Supreme Court of Canada in relation to the pith and substance of the Ontario Civil Remedies Act, 200122, legislation that in substance is similar to British Columbia’s CFA. The Court described the pith and substance of that legislation as creating “a property-based authority to seize money and other things shown on a balance of probabilities to be tainted by crime and thereafter to allocate the proceeds to compensating victims of and remedying the societal effects of criminality. The practical (and intended) effect is also to take the profit out of crime and to deter its present and would-be perpetrators.”23

[27] These statements capture the pith and substance or “the matter” of the CFA.

[28] However, I note my conclusion about the pith and substance of the CFA—and its classification (below)—might be different if the CFO were sharing information with criminal law enforcement agencies or tax authorities for the purposes of prosecutions under the Criminal Code24 or Income Tax Act25 or if the CFO is embedded in a provincial law enforcement agency or such an agency is given a civil forfeiture mandate. In R v Jarvis26, which is discussed further below in relation to Charter compliance, the Court held there was a distinction, for Charter purposes, between obtaining information in order to assess tax liability and obtaining information for the purposes of determining penal liability. The distinction turns on the “predominant purpose” for which the information is obtained. To determine the predominant purpose for which information is obtained, one must look to all factors that bear upon the nature of the inquiry. Apart from a clear decision to pursue a criminal investigation, no one factor is determinative.27

---

21 British Columbia (Director of Civil Forfeiture) v Onn, 2009 BCCA 402 at para 14; British Columbia (Director of Civil Forfeiture) v Wolff, 2012 BCCA 473 at para 16; British Columbia (Director of Civil Forfeiture) v Angel Acres Recreation and Festival Property Ltd., 2020 BCSC 880 at para 1399.
23 Chatterjee v Ontario (Attorney General), 2009 SCC 19 at para 23.
24 Criminal Code, RSC 1985, c C-46.
26 R v Jarvis, 2002 SCC 73.
27 The following factors may be considered: (a) did authorities have reasonable grounds to lay charges or could a decision have been made to proceed with a criminal investigation; (b) was the authorities’ general conduct consistent with a criminal investigation; (c) did the regulator transfer his or her file to the investigators; (d) was the
This has implications for the division of powers analysis as well. If the predominant purpose of the CFO in gathering information were to assist law enforcement agencies in their criminal investigations, then the information gathering process by the CFO might be characterized as a criminal investigation. If the CFO is embedded in a law enforcement agency or such an agency has a civil forfeiture mandate, then the characterization as a criminal investigation may be even more likely.

c) **Classification: assigning the “matter” to one the classes of subjects set out in ss. 91 and 92**

(i) Introduction

I now turn to the question of whether the matter to which the law relates—its “pith and substance”—falls within one of the classes of subjects established under ss. 91 and 92 of the *Constitution Act, 1867*. The focus of our concern is whether the *CFA* falls within provincial legislative authority over “property and civil rights in the province” under s. 92(13) or within federal legislative authority over “the criminal law except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters” under s. 91(27).

In classifying the matter, we must remember that “a matter” may have a dual aspect, that is, it may have aspects that are both federal and provincial. This allows the concurrent operation of federal and provincial laws each of which pursues objectives that are, in pith and substance, within their respective jurisdictions. Moreover, even where a matter may at first appear to fall within the legislative competence of one level of government, it may be assigned to a head of power of the other level where the matter is closely connected or integral to that head of power. For example, labour relations (generally a matter of property and civil rights within the regulator acting as an agent for the investigators; (e) did the investigators appear to intend to use the regulator as their agent; (f) was the evidence relevant to taxpayer liability generally or only to penal liability; and (g) were there other circumstances or factors suggesting an audit became a criminal investigation?

29 The language in quotations comes from the opening words of ss. 91 and 92. Parliament has exclusive legislative authority “in relation to all matters not coming within” the classes of subjects assigned to the provinces by s. 92 and this authority extends “to all matters coming within the classes of subjects” set out in s. 91. The provincial legislatures have exclusive legislative authority “in relation to matters coming with the classes of subjects” set out in s. 92.

province) may be integral to the operation of an interprovincial undertaking and therefore fall within federal legislative competence.  

[32] As discussed in more detail below, I conclude that the CFA, with the possible exception of the “future use” provisions, is within provincial legislative jurisdiction and that adding the UWO provisions would not alter that conclusion.

(ii) Criminal law and property and civil rights

[33] The two main contending heads of legislative power are the federal criminal law power and the provincial power in relation to property and civil rights in the province. A brief word about each, and about the relationship between them, is in order.

[34] Federal legislative power in relation to criminal law applies, as a general rule, to matters with a valid criminal law purpose (such as the public peace, order, security, health and morality) to which a prohibition and penalty are attached. The federal power extends to criminal procedure that regulates many aspects of criminal law enforcement such as arrest, search and seizure of evidence, the regulation of electronic surveillance and the forfeiture of stolen property.  

[35] Provincial legislative power in relation to property and civil rights within the province is “a broad, multi-faceted power difficult to summarize concisely.” Under this power, the provinces have authority to enact laws that govern relationships between individuals and their property (real, personal and intangible) as well as individuals and each other and their “civil rights.” Peter Hogg describes the power as “…a compendious description of the entire body of private law which governs the relationships between subject and subject, as opposed to the law which governs the relationships between the subject and the institutions of government.”

[36] A matter does not fall within property and civil rights simply because property is the subject-matter of the law. Classification of the challenged law turns not on its subject matter, but

---

31 See e.g. Bell Canada v Quebec (Commission de la Santé et de la Sécurité du Travail), 1981] 1 SCR 749.  
32 See e.g. Reference re Firearms Act (Can.), 2000 SCC 31 at paras 28 and 31; with respect to forfeiture of stolen property see Industrial Acceptance Corp. Ltd. v The Queen, [1953] 2 SCR 273.  
33 Ward v Canada (Attorney General), 2002 SCC 17 at para 42.  
on its “true nature and purpose.” Moreover, there are no “sharp lines” between criminal law and property and civil rights: food, drugs and obscene materials are all items of property but they are also legitimate subjects of criminal laws. As a further example, forfeiture of property used in the commission of a criminal offence has been recognized as an integral aspect of the criminal law.

[37] The Supreme Court’s decision in Johnson v AG for Alberta provides a nice illustration of the at-times fine distinctions that determine the dividing line between criminal law and property and civil rights. Alberta’s Slot Machine Act provided that no slot machine was capable of ownership or of being the subject of property rights in the Province. The law also authorized confiscation of such machines unless, at an inquiry before a justice of the peace, the court was satisfied that the machine was not a slot machine within the meaning of the Act. The legislation defined slot machine in a way that nearly mirrored the Criminal Code definition.

[38] The Court closely divided on how to characterize and classify the legislation. Kellock and Cartwright JJ. held that it related to the prohibition and punishment of keeping contrivances for playing games of chance and was therefore federal criminal law and ultra vires the province. Locke J. reasoned that, in essence, the Act was directed against gambling and was therefore properly characterized as criminal law. Estey J., in dissent, was of the view that the legislation was directed to prevention rather than punishment and was therefore within provincial legislative competence. Kerwin and Taschereau JJ., also in dissent, thought that the legislation concerned property and therefore was within provincial jurisdiction as a matter of property and civil rights within the province. For his part, Rand J. avoided characterization and classification by dealing with the case under the federal paramountcy doctrine, finding that the provincial law was inoperative because “the machines or devices struck at by the statute are the same as those dealt with in similar manner” by the Criminal Code.

---

36 See e.g. Switzman v Elbling and AG Quebec, [1957] SCR 285, per Nolan J. at p 314.
38 Industrial Acceptance Corp. Ltd. v The Queen, [1953] 2 SCR 273.
40 Slot Machine Act, RSA 1935, c 333.
[39] One dividing line is clear. A provincial law cannot authorize an inquiry into specific individuals in respect of specific criminal offences.\textsuperscript{41} The question in every case must be whether or not the primary purpose of the inquiry is an investigation of whether a specific crime was committed.\textsuperscript{42} Or, as Estey J. put it in his concurring judgment in \textit{Di Iorio v Warden of the Montreal Jail}, “where the object is in substance a circumvention of the prescribed criminal procedure by the use of the enquiry technique…., the provincial action will be invalid as being in violation of either the criminal procedure validly enacted by the authority of s. 91(27), or the substantive criminal law, or both.”\textsuperscript{43}

\hspace{1cm} \textit{d) Is the CFA valid provincial legislation in relation to property and civil rights in the province?}

\hspace{1cm} (i) The jurisprudence

[40] There is strong support for the view that the current CFA, with the exception of one aspect, is within provincial legislative authority in relation to property and civil rights. That support consists of the judgment of the Supreme Court of Canada in \textit{Chatterjee v Ontario (Attorney General)}\textsuperscript{44} and the decision of the Supreme Court of British Columbia in \textit{British Columbia (Director of Civil forfeiture) v Nguyen}.\textsuperscript{45} The exception to provincial authority arises from \textit{British Columbia (Director of Civil Forfeiture) v Angel Acres Recreation and Festival Property Ltd.}.\textsuperscript{46}

[41] The leading case on the constitutionality of provincial civil forfeiture schemes is \textit{Chatterjee}, which concerned aspects of the Ontario scheme.

[42] In issue was whether ss. 1 to 6 and 16 to 17 of the Ontario \textit{Civil Remedies Act, 2001} were \textit{intra vires} the Province. Sections 1 to 6 provided for applications to the Superior Court for

\textsuperscript{41} \textit{Starr v Houlden}, [1990] 1 SCR 1366.
\textsuperscript{43} \textit{Di Iorio v Warden of the Montreal Jail}, [1978] 1 SCR 152 at p 258.
\textsuperscript{44} \textit{Chatterjee v Ontario (Attorney General)}, 2009 SCC 19.
\textsuperscript{45} \textit{British Columbia (Director of Civil forfeiture) v Nguyen}, 2013 BCSC 1610, aff’d 2014 BCCA 460. And see \textit{British Columbia (Director of Civil Forfeiture) v Wolff}, 2012 BCCA 473 at paras 15-17, where the Court of Appeal noted that the constitutionality of the \textit{CFA} had not yet been determined by a British Columbia court, but cited \textit{Chatterjee v Ontario (Attorney General)}, 2009 SCC 19 and noted that the Court of Appeal confirmed the objectives of the \textit{CFA} in terms similar to those stated in s. 1 of the \textit{Civil Remedies Act, 2001}, which were accepted by the Court in \textit{Chatterjee}.
\textsuperscript{46} \textit{British Columbia (Director of Civil Forfeiture) v Angel Acres Recreation and Festival Property Ltd.}, 2020 BCSC 880.
forfeiture orders for the proceeds of crime and for orders to disclose information required for the administration of the Act. In addition, these provisions permitted the provincial Minister of Finance to make payments from funds forfeited to compensate victims of unlawful activity, to assist victims of unlawful activity or to compensate the province, municipalities and prescribed public bodies for pecuniary losses suffered as a result of unlawful activity, including costs incurred in remedying the effects of the unlawful activity. Sections 16 and 17 provided that the standard of proof under the CRA was on the balance of probabilities and that proof that a person has been convicted of an offence was proof that the person committed it.

[43] The appellant Chatterjee argued that to the extent these provisions provided for forfeiture of the proceeds of federal offences, they were in pith and substance criminal law and therefore beyond the legislative competence of the Province. In essence, the appellant argued that “forfeiture, in the context of property tainted by crime, is punishment.”

[44] A unanimous Supreme Court rejected this contention. Having set out the CRA’s pith and substance as noted above, the Court concluded that its dominant feature was in relation to the provincial legislative authority over property and civil rights in the province (s. 92(16)) although it incidentally affected the federal power in relation to criminal law and procedure (s. 91(27)). As Binnie J. put it on behalf of the Court:

… the CRA method of attack on crime is to authorize in rem forfeiture of its proceeds and differs from both the traditional criminal law which ordinarily couples a prohibition with a penalty … and criminal procedure which in general refers to the means by which an allegation of a particular criminal offence is proven against a particular offender.

The Constitution permits a province to enact measures to deter criminality and to deal with its financial consequence so long as those measures are taken in relation to a head of provincial competence and do not compromise the proper functioning of the Criminal Code including the sentencing provisions.

[45] The Court concluded that this was the case with Ontario’s CRA.

---

47 Chatterjee v Ontario (Attorney General), 2009 SCC 19 at para 38.
48 Chatterjee v Ontario (Attorney General), 2009 SCC 19 at paras 3 and 40.
This conclusion, strictly speaking, relates only to the CRA’s provisions relating to proceeds of crime and burden and standard of proof. However, the reasoning supporting the conclusion suggests that British Columbia has considerable latitude under its property and civil rights jurisdiction to legislate in relation to deterring crime and dealing with its financial consequences, provided, of course that those are its true and dominant purposes and effects.

The constitutionality of the CFA is also supported by the decision of the Supreme Court of British Columbia in British Columbia (Director of Civil forfeiture) v Nguyen. The Court rejected a division of powers challenge to ss. 15 to 22.1 of the CFA, provisions that cover the in rem nature of the proceedings, presumptions of fact and the standard of proof, among other things. There was no dispute that, following Chatterjee, the pith and substance of the CFA fell within provincial legislative competence. The challenge in Nguyen was that there was an operational conflict between the CFA and the Criminal Code in relation to how evidence in forfeiture cases is collected and in respect of procedures, burdens and presumptions. The Court rejected this challenge, concluding there was “no evidence of any incidental effects that create operational conflicts with federal criminal law and procedure.”

(ii) Conclusion

Based on these authorities, there are strong grounds for concluding that the CFA is generally valid provincial legislation enacted under British Columbia’s legislative authority in relation to property and civil rights in the province.

I turn now to the exception I noted earlier relating to the constitutionality of the CFA’s “future use” of “instruments of unlawful activity” provisions. In British Columbia (Director of Civil Forfeiture) v Angel Acres Recreation and Festival Property Ltd., there was a challenge to the instrument of unlawful activity provisions. The Court concluded that the “future use” provisions were in pith and substance criminal law and therefore ultra vires the Province.

An instrument of unlawful activity is property that has been used (the so-called “past use” provision) or is likely to be used (the so-called “future use” provision) to engage in unlawful

49 Chatterjee v Ontario (Attorney General), 2009 SCC 19 at para 55.
50 The Court of Appeal did not consider the constitutional issue.
51 British Columbia (Director of Civil Forfeiture) v Nguyen, 2013 BCSC 1610 at para 43.
activity. That unlawful activity must be one that resulted (or may result) in the acquisition of property or caused (or is likely to cause) serious bodily harm to a person and includes property realized from the disposition of such property.\textsuperscript{52} The submission in \textit{Angel Acres} was that these past and future use provisions are in pith and substance criminal law because they constitute \textit{in personam} criminal proceedings rather than \textit{in rem} civil proceedings like the other forfeiture provisions.

\[51\] The Court concluded that, to the extent the CFA permits forfeiture of property that is found to be an instrument of future crime, it is \textit{ultra vires} the Province. The future use provisions, in the Court’s view, “target the potential actions of an individual or group of individuals based upon propensity to offend. As such, they are punitive in their practical essence and in their legal effect, either by creating a new offence based upon the propensity to commit a criminal act or by further penalizing an unlawful act that has been previously punished.”\textsuperscript{53}

\[52\] While there are arguments to be made as to the soundness of this conclusion, it should be accepted as the law in British Columbia unless reversed on appeal.\textsuperscript{54}

\[53\] On the basis of this state of the authorities, I conclude that the overall scheme of the CFA is \textit{intra vires} the Province with the exception of the “future use” instruments of unlawful activity provisions with which \textit{Angel Acres} was concerned.

\[54\] The question therefore becomes whether adding enhanced investigative tools, such as UWOs, to the scheme would change the conclusion that the scheme is, in pith and substance, in relation to property and civil rights in the province. For reasons I will explain, my view is that it would not.

3. The impact on the division of powers analysis of adding UWOs to the civil forfeiture scheme

\textsuperscript{52} CFA, s. 1.
\textsuperscript{53} British Columbia (Director of Civil Forfeiture) v Angel Acres Recreation and Festival Property Ltd., 2020 BCSC 880 at para 1497.
\textsuperscript{54} Note that the finding of unconstitutionality was stayed with a judge of the Court of Appeal finding that the appeal from that finding raised a serious issue: British Columbia (Director of Civil Forfeiture) v Angel Acres Recreation and Festival Property Ltd., 2020 BCCA 290 at para 21.
a) Introduction

[55] The CFA confers some information gathering powers on the director and according to the case law, the discovery process under the Supreme Court Civil Rules applies to proceedings under the Act. It is also likely that information gathering processes within the inherent jurisdiction of a superior court, such as “Norwich orders” are available. You have not asked for my opinion concerning any division of powers or Charter issues that might arise in relation to the use of the civil discovery process in support of a civil forfeiture proceeding.

b) Overview of UWO provisions

[56] The focus of your inquiry relates to whether there would be division of powers or Charter concerns if the director had access to an information gathering device modelled on the UK UWO scheme. It will be useful first to provide a brief description of that device.

[57] Mrs. Justice Lang of the Queen’s Bench Division of the High Court of Justice recently set out the background and an overview of the UK UWO scheme in National Crime Agency v Baker et al. The following summary is drawn from her analysis.

[58] UWOs were introduced by the Criminal Finances Act 2017 and inserted into Part 8 of Proceeds of Crime Act 2002 at ss. 362A to 362R (relating to England, Wales and Northern

---

55 British Columbia (Director of Civil Forfeiture) v Day, 2019 BCCA 160; Director of Civil Forfeiture v Shoaist, 2011 BCSC 1199; British Columbia (Director of Civil Forfeiture) v Huynh, 2012 BCSC 740; British Columbia (Director of Civil Forfeiture) v Cronin, 2016 BCSC 284 at paras 13-14. Also, in Director of Civil Forfeiture v Lloydsmit, 2014 BCSC 72, while the Court of Appeal does not directly address this point, the Court assumes the civil rules, including discovery, apply to civil forfeiture proceedings. See also British Columbia (Director of Civil Forfeiture) v Crowley, 2013 BCCA 89. I note, however, that although the full panoply of civil discovery rules apply to an action brought by the director, if the director commences proceedings by petition, then the less extensive discovery applying in petitions under the Supreme Court Civil Rules would apply: CFA, s. 15.01(1).

56 Norwich orders are used to compel non-parties to disclose information or documents in their possession required by a claimant: Google Inc. v Equustek Solutions Inc., 2017 SCC 34 at paras 31 and 73, citing Norwich Pharmacal Co v Customs and Excise Commissioners, [1974] AC 133 (HL) at p 175. In British Columbia, they are issued under the court’s inherent jurisdiction: Kenney v Loewen, 1999 CanLII 6110 (BC SC); British Columbia (Director of Civil Forfeiture) v Hells Angels Motorcycle Corporation, 2014 BCCA 207 at para 26. While there are no cases addressing Norwich orders under CFA proceedings, the court’s inherent jurisdiction to manage its processes has been accepted in the civil forfeiture context: British Columbia (Director of Civil Forfeiture) v Kingdon, 2011 BCSC 1501; British Columbia (Director of Civil Forfeiture) v PacNet Services Ltd., 2019 BCSC 70 at para 102; Director of Civil Forfeiture v Doe, 2010 BCSC 940 at para 21; British Columbia (Director of Civil Forfeiture) v Crowley, 2013 BCCA 89 at para 78. Norwich orders in civil forfeiture proceedings have been issued in Ontario. See for example, Attorney General of Ontario v Two Financial Institutions, 2010 ONSC 47. In the CRA, the rules of civil procedure apply expressly: CRA, s. 15.6(3).

Ireland) and 396A-396U (relating to Scotland). Part 8 comprises a “toolkit” of investigative powers. UWOs are one of a number of investigation tools available to the National Crime Agency (or other designated enforcement authority). According to the Home Office’s Explanatory Notes:

12. The Act creates unexplained wealth orders (UWOs) that require a person who is suspected of involvement in or association with serious criminality to explain the origin of assets that appear to be disproportionate to their known income. A failure to provide a full response would give rise to a presumption that the property was recoverable, in order to assist any subsequent civil recovery action. A person could also be convicted of a criminal offence, if they make false or misleading statements in response to a UWO. Law enforcement agencies often have reasonable grounds to suspect that identified assets of such persons are the proceeds of serious crime. However, they are often unable to freeze or recover the assets under the previous provisions in POCA due to an inability to obtain evidence (often due to the inability to rely on full cooperation from other jurisdictions to obtain evidence).

13. The Act also allows for this power to be applied to “politically exposed persons”, that is, politicians or officials from outside the European Economic Area or those associated with them. A UWO made in relation to a non-EEA PEP would not require suspicion of serious criminality. This measure reflects the concern about those involved in corruption overseas, laundering the proceeds of crime in the UK; and the fact that it may be difficult for law enforcement agencies to satisfy the evidential standard at the outset of an investigation given that all relevant information may be outside of the jurisdiction.

[59] A number of other jurisdictions have unexplained wealth provisions, including Australia and Ireland. While “unexplained wealth” does not have the same meaning across jurisdictions, the common element in UWO laws is a presumption, arising from non-compliance with the order, that a person’s property constitutes proceeds of crime. This, in effect, compels persons to explain the provenance of their wealth.

[60] A more detailed description of the UK UWO device follows.

c) Detailed review of the statutory scheme

(i) What is an UWO?

[61] An UWO is an order of a superior court requiring the respondent to provide a statement setting out the nature and extent of that person’s interest in specified property, explaining how it was acquired, setting out the details of any trust arrangement and “other information in connection with the property as may be so specified.” The order may also require the respondent to produce documents “of a kind specified or described in the order.” The order will set out how, and within what period of time, the respondent is to provide the statement.

(ii) How is the UWO obtained?

[62] An “enforcement authority” (which I assume if the device were adopted in British Columbia, would be the Civil Forfeiture Office) may apply without notice to the superior court (the Supreme Court of British Columbia) for an UWO. The application must specify or describe the property in respect of which the order is sought and the person whom the enforcement authority thinks holds the property.

[63] To grant the order, the Court must be “satisfied” that:

- There is “reasonable cause to believe” that the respondent holds the property; it does not matter if there are other persons who also hold the property;
- There is reasonable cause to believe the value of the property (or if there is more than one item, the total value of all items) is greater that £50,000 [say CAD $86,000];
- The respondent is a “politically exposed person” (or a family member or known close associate) or there are “reasonable grounds for suspecting” that the respondent,

---

66 Proceeds of Crime Act 2002, 2002, c 29, ss. 362A(2) and 362I(1).
or person connected with the respondent, is or has been involved in serious crime in
the jurisdiction or elsewhere; and

➢ There are “reasonable grounds for suspecting” that the known sources of the
respondent’s lawfully obtained income would have been insufficient for the purposes
of enabling the respondent to obtain the property.

(iii) What is the effect of compliance with the UWO?

[64] If there is compliance (or purported compliance) with the UWO and there is no freezing
order in effect (as to which see below), the “enforcement authority” may, at any time, determine
what, if any, “enforcement or investigatory proceedings” it considers ought to be taken in
relation to the property. For our purposes, the “enforcement authority” would be the CFO. If a
freezing order is in effect, then the “enforcement authority” must make that determination within
60 days from the day the respondent complies with the order.

[65] In the UK legislation, “enforcement or investigatory proceedings” include three types of
proceedings: confiscation proceedings under Part 2 or 4 of the Proceeds of Crime Act 2002;
proceedings that may be taken under the UWO provisions; and civil recovery proceedings.

[66] Confiscation orders, which are made following conviction and relate to the amount of the
benefit the defendant is determined to have derived from the conduct concerned, may be made if
the enforcement authority is also a “prosecuting authority” under the Parts 2 or 4 of the Proceeds
of Crime Act 2002. As I understand it, these orders are very roughly equivalent to orders that
may be made under the Canadian Criminal Code and other federal statutes. I will assume that
they would not form part of potential provincial legislation.

---

69 “Politically exposed person” is defined in s. 362B(7), and, adjusted for the Canadian context, would mean a
person who is (a) an individual who is, or has been, entrusted with prominent public functions by an international
organisation or by a State other than Canada; (b) a family member or (c) a close associate or (d) otherwise connected
with of such a person.

70 Proceeds of Crime Act 2002, 2002, c 29, ss. 362B(9) to include offences
specified in Part 1 of Schedule 1 of the Serious Crimes Act 2007, 2007, c 27, which include such offences as drug
trafficking, people trafficking, terrorism, firearms offences, armed robbery, money laundering, fraud, etc.

71 Proceeds of Crime Act 2002, 2002, c 29, ss. 362B(4), “Serious crime” is defined in s. 362B(9) to include offences
specified in Part 1 of Schedule 1 of the Serious Crimes Act 2007, 2007, c 27, which include such offences as drug
trafficking, people trafficking, terrorism, firearms offences, armed robbery, money laundering, fraud, etc.

73 Proceeds of Crime Act 2002, 2002, c 29, ss. 362D(2) and (3).

With respect to proceedings under the UWO provisions, the main proceeding would be in relation to interim freezing orders that I will discuss shortly.

With respect to civil recovery proceedings, I will assume that these are the proceedings authorized under the CFA.

In purporting to comply with an UWO, it is an offence to make a false or misleading statement knowingly or recklessly. The respondent’s statement made in response to an UWO is not admissible in criminal proceedings, with some exceptions such as perjury prosecutions or if the person gives evidence inconsistent with the statement in a prosecution for another offence. It is admissible in subsequent civil proceedings. The UWO requirement to disclose information overrides any restrictions that would otherwise apply to disclosure. But there are certain protections for privileged material.

(iv) What are the consequences of non-compliance?

If the respondent fails without reasonable excuse to comply, or purport to comply, with UWO requirements, the property is presumed to be recoverable property unless the contrary is shown. For our purposes, I will assume that the presumption that property is “recoverable property” would, in potential provincial legislation, be a presumption that the property was “proceeds of unlawful activity” within the meaning of the CFA. The UK UWO scheme only applies to proceeds of crime. Unlike in the CFA, there is no concept of “instruments of crime.”

d) The impact on the pith and substance analysis of adding UWO provisions to the CFA

(i) Assumptions
Provincial legislation would be directed to politically exposed persons and those involved in serious crime;

The enforcement authority for the legislation would be the provincial CFO;

References to forfeiture proceedings in the legislation would be to the processes under the *CFA*, as amended; and

The UWO scheme would be directed to obtaining information about the nature of the respondent’s interest in the property and how it was acquired. It follows that the UWO scheme adapted to British Columbia would be directed to inquiries concerning whether property was the proceeds of unlawful activity but not whether it was an instrument of unlawful activity.

(ii) Purpose of UWO provisions

[72] As discussed in detail earlier, the first step in the division of powers analysis is to determine the “matter” or the “pith and substance” of the challenged provisions by considering their purpose and effects.

[73] The Home Office Explanatory Notes state that the purpose of the UWO provisions is to facilitate obtaining evidence that property is the proceeds of unlawful activity. The focus of the information that may be compelled by means of an UWO is the nature of the respondent’s interest in, and how he or she came to acquire, the property. It is true that the UWO may also require a statement “setting out such other information in connection with the property as may be so specified” but it is doubtful that this provision permits compelled statements about the use of the property. As noted, I have assumed that, adapted to the *CFA*, the UWO scheme would assist in determining whether property was the proceeds of unlawful activity, but not in determining whether the property was an instrument of unlawful activity.\(^{81}\)

[74] Thus, the UWO scheme is essentially an investigative tool aimed at discovering whether property is the proceeds of unlawful activity. The legislative scheme largely confirms this

\(^{81}\) In the *CFA*, the term “unlawful activity” has a broad definition. In short, it means that the conduct constitutes a provincial or federal offence or, if committed outside Canada, an offence that would be an offence in the Province if committed here: see *CFA*, s. 1.
purpose. The UWO provisions allow the authorities to obtain a court order that requires the respondent to explain the source of the property and failure to do so (or to purport to do so) gives rise to the presumption that the property is proceeds of unlawful activity unless the contrary is proved.

[75] I have considered the fact that the UWO scheme focuses on the conduct of individuals as much as on the status of the property. This is because one of the requirements that must be met before the UWO may be issued is that there are reasonable grounds for suspecting that the known sources of the respondent’s lawfully obtained income would have been insufficient for the purposes of enabling the respondent to obtain the property. This brings to the fore the question of how the respondent came to acquire the property which, in turn, will often devolve to the question of whether the respondent acquired it by means of unlawful activity. To this extent, the legislation may be seen as authorizing the investigation of criminal activity by a specific person by means of compelling that person to provide statements about how he or she could have obtained the property legally.

[76] However, I do not think that this moves the purpose of the scheme away from the provincial objectives of civil forfeiture into the realm of federal criminal law and procedure. The key is that the legislation limits the use of the information obtained to deciding what investigatory and enforcement proceedings may be initiated or continued in relation to the property. Also to note is that the UK scheme provides that statements a person makes in response to a UWO cannot be used as evidence against that person in criminal proceedings. Similar protection would apply in Canada by virtue of s. 13 of the Charter and, in fact, more extensive protection is likely provided in relation to use of the evidence as I will discuss in the Charter section of my opinion. Also, although provincial legislation cannot provide assurance about the subsequent use of statements compelled by provincial as well as by federal legislation, because the rules of evidence in criminal matters are within the legislative authority of Parliament, s. 5 of the federal Canada Evidence Act\(^\text{82}\) affords protection against the use in matters to which it applies, including of course criminal matters. All of this is consistent with the purpose of the UWO being focused on obtaining evidence that property is the proceeds of unlawful activity and the nature of the respondent’s interest in it.

\(^{82}\) Canada Evidence Act, RSC 1985, c C-5.
(iii) Effects of the UWO provisions

[77] The scheme has two main effects.

[78] First, the UWO requires individuals to provide evidence that may help to establish that property is the proceeds of unlawful activity. The specified matters which may be required by the order are directed exclusively to the proceeds of unlawful activity: the required statement may relate to the “nature and extent” of the person’s interest in the property; an explanation of how the person obtained it; and, if held by trustees, the details of the trust. These types of information are directed to the question of how the property was acquired and by whom, which are relevant only to the questions of whether the property is the proceeds of unlawful activity and whether the person being examined acquired it by means of unlawful activity. While the UK provision also authorizes the court to order the respondent to set out “such other information in connection with the property as may be” specified in the order, this broad provision would have to be interpreted to limit the court’s authority to order disclosure of matters consistent with the overall purpose of the scheme.

[79] Second, the person’s failure or refusal to comply with the UWO gives rise to a presumption that the person’s interest in the property is “recoverable property” unless the contrary is proved.83 Transplanted to the CFA, the presumption would be that the property is the proceeds of unlawful activity.

(iv) Pith and substance of the UWO provisions

[80] In my view, the pith and substance of the UWO provisions is that they compel persons to disclose how they acquired property and other information “in connection with the property” for the purpose of facilitating proof that the property is the proceeds of unlawful activity as well as the nature and extent of the person’s interest in it.84

---

84 However, in Australia, federal and state UWO provisions generally do not tie the UWO to a specific property. Rather, the legislation stipulates there must be reasonable grounds to suspect a person’s total wealth exceeds the value of wealth lawfully acquired: see e.g. Criminal Property Confiscation Act 2000 (Western Australia); Criminal Property Forfeiture Act 2002 (Northern Territory); Crimes Legislation Amendment (Serious and Organised Crime) Act 2010 (Commonwealth). Detaching the inquiry from specific property could be constitutionally problematic in Canada.
(v) Characterization of the UWO provisions and the impact of their addition to the CFA

[81] While I cannot give an unqualified view, my opinion is that the UWO provisions (excepting in relation to politically exposed persons, see further below) are properly classified as falling within provincial legislative authority over property and civil rights in the province. The provisions further the same valid provincial objectives as the larger CFA scheme; they are concerned with obtaining evidence about property for the purpose of initiating or pursuing forfeiture proceedings under the CFA and only for those purposes. As the Supreme Court of Canada put it in Chatterjee:

The Constitution permits a province to enact measures to deter criminality and to deal with its financial consequence so long as those measures are taken in relation to a head of provincial competence and do not compromise the proper functioning of the Criminal Code including the sentencing provisions.

[82] The UWO provisions would form part of, and share the purposes of, the overall scheme to deter criminality and to deal with its financial consequences. Taken on their own or considered as part of the larger CFA scheme, they are within the legislative competence of the Province to enact under its authority over property and civil rights in the province.

[83] I must qualify this opinion in two respects.

[84] First, as noted earlier, the Supreme Court of British Columbia has ruled that the “future use” provisions relating to instruments of unlawful activity are ultra vires the Province because they fall under Parliament’s authority in relation to criminal law and procedure. It would follow from this that the UWO provisions, if employed in relation to the future use provisions, would similarly be ultra vires the Province. They would be directed to the same criminal law purpose as the Supreme Court of British Columbia determined was that of the future use provisions. However, I have assumed that the UWO provisions would be used only to obtain evidence about whether the property was the proceeds of crime and not in relation to whether it was an instrument of criminal activity. If that were the case, any division of powers issue with respect to the “future use” provisions would not affect the UWO provisions.
[85] Second, the UWO provisions are likely to be challenged as being in relation to criminal law and procedure. The basis of the challenge would likely be that the provisions seek to establish that a specific individual committed some unlawful act in connection with acquisition of property. I think, however, that such a challenge is unlikely to succeed. The test set out in the jurisprudence from the Supreme Court of Canada is whether the purpose of the proceeding is solely to investigate whether a specific crime has been committed.85 This is not, in my view, the case with the UWO provisions. To paraphrase the words of the Court in another leading case on the point, “there is neither an accuser or an accused. The purpose … is not the prosecution or punishment of an accused.”86 Here, the investigative powers conferred by the UWO are directed to the forfeiture of property within the province to further valid provincial objectives.

[86] Provincial regulatory schemes and the criminal law are often interrelated and provincial statutes do not invade federal power over criminal law merely because their purposes are to target conduct that is also captured by the Criminal Code.87 Deterrence can be a purpose of provincial law.88 Moreover, the civil consequences of a criminal act are generally not considered “punishment” so as to bring a matter within the exclusive jurisdiction of Parliament.89 The Supreme Court has repeatedly upheld provincial schemes that overlapped with the federal power over criminal law, such as provincial drunk driving programs90, provincial dangerous driving prohibitions91, automatic suspension of driving licences after a Criminal Code conviction92, laws aimed at regulating “disorderly houses”93 and powers of coroners to investigate a death.94 The Court has consistently supported provincial jurisdiction over matters of crime prevention and personal safety.

85 See e.g. Starr v Houlden, [1990] SCR 1366.
86 Faber v The Queen, [1976] 2 SCR 9 at p 33.
87 Goodwin v British Columbia (Superintendent of Motor Vehicles), 2015 SCC 46: the province’s purpose in enacting the Automatic Roadside Prohibition (“ARP”) scheme was not to oust the criminal law, but rather to prevent death and serious injury on public roads by removing drunk drivers and deterring impaired driving. The pith and substance of the ARP scheme was the licensing of drivers, the enhancement of traffic safety and the deterrence of persons from driving while impaired by alcohol. Provinces have an important role in ensuring highway safety, which includes regulating who is able to drive and removing dangerous drivers from the roads.
88 Goodwin v British Columbia (Superintendent of Motor Vehicles), 2015 SCC 46.
89 Ross v Registrar of Motor Vehicles et al., [1975] 1 SCR 5.
90 Goodwin v British Columbia (Superintendent of Motor Vehicles), 2015 SCC 46.
93 Bédard v Dawson, [1823] SCR 681.
(vi) Politically exposed persons

[87] However, if UWOs were applied to “politically exposed persons” as is done in the UK, then such provisions might be ultra vires the Province. If the definition of “politically exposed persons” applies to people who are, or have been, entrusted with prominent public functions by an international organization or by a State other than Canada, then to the extent these people are foreign nationals (i.e. “aliens”), provincial legislation in respect of them might be found to be in relation the exclusive federal power in relation to “naturalization and aliens” under s. 91(25).95 There is also the possibility that extending the UWO scheme to such persons would run afoul of the prerogative powers of the Crown in Right of Canada to conduct foreign relations.96 This is not a division of powers issue, but concerns a power accorded by the common law to Canada.97 The power to conduct foreign relations is the “residue of discretionary or arbitrary authority, which at any given time is legally left in the hands of the Crown.”98

(vii) Conclusion

[88] With the qualifications mentioned, my opinion is that a UWO scheme similar to that in the UK could be enacted by the Province under its authority to legislate in relation to property and civil rights in the province.

B. Charter compliance

1. Introduction

[89] Many provincial legislative schemes include investigative powers to further their purposes. For example, restaurants are subject to public health inspections, work places are inspected by occupational health and safety officers and home owner and developer compliance

97 Canada (Prime Minister) v Khadr, 2010 SCC 3 at para 34.
98 Canada (Prime Minister) v Khadr, 2010 SCC 3 at para 34;
with building codes or zoning regulations is tested by inspection of their premises. 99 Similarly, compliance with minimum wage, employment equity and human rights legislation empowers the regulator to inspect an employer’s files and records. Powers of this nature are subject to Charter review, but have often been upheld by the courts.

[90] The question I address here is what limits, if any, does the Charter place on investigative powers that could be conferred on a civil forfeiture office. In relation to these powers, four broad categories of Charter issues arise.

[91] The first is whether the Charter applies at all to the powers in question. This depends on whether the challenged provision or activity is in popular parlance, “government action,” or to track the language of s. 32(1)(b) of the Charter, whether the actor is the “legislature [or] government of each province.” In general, powers of a public character conferred by statute are subject to the Charter 100 and I am confident that this is the case with respect any powers conferred by statute as part of a civil forfeiture scheme. 101

[92] However, to say that the Charter applies because there is government action does not mean that all of the rights conferred by the Charter apply to civil forfeiture investigatory powers. The various sections of the Charter apply in particular and limited contexts and so the second category of issues concerns which Charter rights are implicated by civil forfeiture.

[93] Some generally will not apply. For example, the rights under s. 11 apply to persons “charged with an offence” and will therefore generally not apply to a person whose property is the subject of civil forfeiture proceedings. There are, however, two situations in which s. 11

100 See e.g. Greater Vancouver Transportation Authority v Canadian Federation of Students – British Columbia Component, 2009 SCC 31 at paras 14-16: under s. 32, the Charter applies to not only Parliament, the legislatures and the government themselves, but also to all matters within the authority of these entities and there are two ways to determine whether the Charter applies to an entity’s activities: (a) by enquiring into the nature of the entity; or (b) by enquiring into the nature of its activities.
101 Jurisprudence in British Columbia, Alberta and Ontario confirms the Charter applies in civil forfeiture proceedings: Angel Acres Recreation and Festival Property Ltd. v British Columbia (Attorney General), 2019 BCSC 1421; British Columbia (Director of Civil Forfeiture) v Huynh, 2013 BCSC 980; British Columbia (Director of Civil Forfeiture) v Thandi, 2018 BCSC 215; Director of Civil Forfeiture v Lloydsmith, 2014 BCCA 72; Alberta (Justice and Attorney General) v Petros, 2011 ABQB 541; Alberta (Minister of Justice and Attorney General) v Squire, 2012 ABQB 194; Alberta (Justice) v Wong, 2012 ABQB 498; Feuerhelm v Alberta (Justice and Attorney General), 2017 ABQB 709; Ontario (Attorney General) v $78,000 in Canadian Currency, 2003 CanLII 16953 (ON SC); AG Ontario and $164,300 in Currency, 2019 ONSC 2024.
rights will be engaged even though the person is not, in normal parlance, “charged with an offence.” The first situation is where the proceedings against the person are criminal in nature and the second is where the proceedings may result in the imposition of “true penal consequences” on the person who is the subject of those proceedings.\(^{102}\)

[94] Whether proceedings are criminal in nature depends not on the “nature of the act which gave rise to the proceedings, but the nature of the proceedings themselves.”\(^{103}\) If the proceedings to enforce the prohibition and impose a penalty lack the conventional characteristics of a criminal prosecution (such as summons or arrest, the laying of an information or trial in a court of criminal jurisdiction), they will be considered administrative or regulatory and not criminal in nature.\(^{104}\) Turning to whether the proceedings impose a true penal consequence, this test will always be satisfied by the possibility of imprisonment being imposed.\(^{105}\) It may also be satisfied by a fine or other monetary penalty, but only, as the Court explained in *Martineau v Canada (Minister of National Revenue)*, if the fine or penalty, “by its magnitude,” is imposed to redress “a wrong done to society at large, as opposed to the purpose of maintaining the effectiveness” of a discrete regulatory or disciplinary regime.\(^{106}\)

[95] In my opinion, a person who is the subject of civil forfeiture proceedings is not a “person charged with an offence” within the meaning of s. 11 of the *Charter* and therefore does not benefit from any of the protections set out in that section. There is no “charge,” the proceedings are not “criminal in nature” and civil forfeiture is not a “true penal consequence.”\(^{107}\)

[96] However, there is much more scope for application of ss. 7 and 8 of the *Charter*.

[97] The rights under s. 7 of the *Charter* are engaged where a person’s right to “life, liberty [or] security of the person” are affected. State action in relation to a person’s interest in property does not, in general, do so. However, compulsion to testify or to provide documentary information likely will engage the liberty interest under s 7. Once the liberty interest is engaged,

---

\(^{102}\) *R v Wigglesworth*, [1987] 2 SCR 541 at pp 560-561, per Wilson J.
\(^{103}\) *R v Shubley*, [1990] 1 SCR 3 at pp 18-19; *Martineau v Canada (Minister of National Revenue)*, 2004 SCC 81.
\(^{104}\) *Martineau v Canada (Minister of National Revenue)*, 2004 SCC 81 at para 45.
\(^{106}\) *Martineau v Canada (Minister of National Revenue)*, 2004 SCC 81 at para 60; see also *Guindon v Canada*, 2015 SCC 41; *Goodwin v British Columbia (Superintendent of Motor Vehicles)*, 2015 SCC 46.
\(^{107}\) *Ontario (Attorney General) v Chatterjee*, 2007 ONCA 406 at paras 39-44; This issue was not addressed by the subsequent appeal to the Supreme Court of Canada.
the authorizing statute is open to challenge on the basis of arbitrariness, overbreadth and
disproportionality. Compulsion in relation to providing evidence also opens the door to claims
to protection under s. 7 for subsequent derivative use immunity of the evidence provided.

[98] The s. 8 right to be free of unreasonable search and seizure is also likely to apply given
the broad definition of search and seizure adopted by the jurisprudence.

[99] Thus, as we shall see, the main Charter issues in connection with the investigative
powers available in the civil forfeiture process are ss. 7 and 8.

[100] The third type of issue is whether the Charter invalidates the statute conferring the power
or simply imposes conditions or requirements for the Charter-compliant exercise of the power.
For example, in British Columbia Securities Commission v Branch, the Supreme Court held that
the general rule under the Charter is that witnesses may be compelled to testify but must receive
immunity against the use of the evidence for other purposes. Thus, the statutory provision
compelling the witness to answer was valid, but the Charter required that the witness have
protection against subsequent use.

[101] If the Charter applies, and a particular Charter right is implicated, the fourth type of
issue arises: what Charter standard will apply to assess whether the power and the manner of its
exercise in the particular case were Charter compliant? As the Supreme Court put it in R v
Fitzpatrick:

… the context of a Charter claim is crucial in determining the extent of the right asserted;… In particular, in Wholesale Travel, supra, at p. 226, Cory J. held that
“a Charter right may have different scope and implications in a regulatory context
than in a truly criminal one”, and that “constitutional standards developed in the
criminal context cannot be applied automatically to regulatory offences”.

[102] As the Supreme Court observed in Chatterjee, there will often be overlap between
measures enacted pursuant to the provincial power over property and civil rights and those taken
pursuant to the federal power over criminal law and procedure. This overlap tends to give rise

112 Chatterjee v Ontario (Attorney General), 2009 SCC 19 at para 29.
to questions about the true purpose of investigative powers. This question of purpose is an important factor in determining what Charter standard applies to a particular investigative power as well as to the manner of its exercise. For example, more robust Charter standards will likely apply if the predominant purpose of an investigation is to determine penal liability. On the other hand, the jurisprudence recognizes less exacting standards, for example, with respect to searches that are not part of a criminal investigation. These questions of overlap and purpose also have implications for information sharing between regulatory investigators and the police. To put it at a high level of generality, provincial investigative powers cannot be used to do an “end run” around the Charter protections that apply in a criminal investigation, nor can they be used for purposes other than carrying out the legislative objectives of the provincial scheme.

2. Overview of actual and potential investigative powers

If the CFA included provisions modeled on the UK UWO scheme, the following would be the result:

➤ The director could apply to the Supreme Court, ex parte, for an order requiring a respondent to provide a statement about his or her interest in property, explaining how he or she obtained it, details of any trust which holds the property and “such other information in connection with the property as may be so specified.” The order would have to specify the form and manner in which the statement is to be given and the place it is to be given, or if to be made in writing, the address to which it is to be sent. It would also require the respondent to produce documents of a kind specified or described in the order. It would be an offence for the respondent to make a statement that the person knows to be, or is reckless as to whether it is, false or misleading. There would be no stipulated sanction for non-compliance (although non-compliance gives rise to the presumption to be discussed below).

---

113 R v Jarvis, 2002 SCC 73.
114 See e.g. R v Daley, 2001 ABCA 155; Byers v Clancy, 1992 CanLII 257 (BC SC); Wong v Insurance Corp. of British Columbia, 1993 CanLII 685 (BC SC); Oughton v ICBC, 2004 BCSC 1567.
115 R v Colarusso, [1994] 1 SCR 20: lawful seizure of blood samples by a provincial coroner but turning the sample over to police for the purposes of a criminal investigation constituted an unreasonable search and seizure.
116 Proceeds of Crime Act 2002, 2002, c 29, ss. 362A(3) and (5).
Presumably the court’s contempt power could be invoked for wilful failure to comply with the court’s order; and

- When a court makes an UWO, it could also make an interim freezing order if it considered it necessary to do so for the purpose of avoiding the risk of any recovery order (i.e. forfeiture order) being frustrated. The order may include the appointment of a receiver.  

[104] The director has taken the position that the CFO does not have independent investigation authority. However, while the director cannot investigate crime, ss. 11.01 and 22.02 of the CFA give him or her access to information gathering powers roughly equivalent to, and potentially in some respects more robust than, those provided for in the UK UWO scheme.

[105] Similar to the UWO legislation, s. 11.01 of the CFA provides that the director may apply to the Supreme Court of British Columbia, ex parte, for an order requiring a person to disclose information about a suspect property. The wording of the provision is broad, referring to an order to produce “information or records in the custody or control of the person” that are “reasonably required…to exercise the director’s powers or perform the director’s functions and duties”, whereas in the UK UWO scheme the compelled statement is expressly limited to a statement about the respondent’s interest in the property. To grant an order under s. 11.01, the court must be satisfied that the information or records are reasonably required by the director in order to exercise his or her powers or perform his or her functions and duties under the Act. In contrast, to issue an UWO, the High Court must be satisfied that there are reasonable grounds for suspecting that the known sources of the respondent’s lawfully obtained income would have been insufficient for the purposes of enabling the respondent to obtain the property.

[106] Section 22.02 of the CFA gives the director additional information gathering powers that have no equivalent in the UK UWO legislation. Without a court order, but with “reason to believe” that property is proceeds of unlawful activity or is an instrument of unlawful activity in British Columbia, the director may require a financial institution holding the property, or a

120 Civil Forfeiture Office Information Policy dated July 1, 2006.
121 *CFA*, ss. 11.01 and 22.02 have not yet been judicially considered.
person with a registered interest in the property, to produce information about any accounts in which the property is held or about the person’s interest in the property. With respect to a person with an interest in the suspect property, the wording of the provision is broad and allows the director to issue a notice to the person to provide “information or particulars.”

[107] Once a forfeiture proceeding is commenced, the director is entitled to the benefit of the civil discovery process, including testimony under oath and document production from the respondent, as well as third parties (via Norwich orders).

[108] As discussed further below, under the UK legislation, if a respondent fails to comply with a UWO, the property is presumed to be recoverable property for the subsequent forfeiture proceedings. There is no such consequence for non-compliance with an order or notice issued under ss. 11.01 or 22.02.

[109] The Commission’s experts from the Royal United Services Institute testified that UWOs in the UK, as opposed to how they are used in Australia and Ireland, are primarily an information gathering tool. They also opined that the Proceeds of Crime Act 2002 has existing disclosure provisions that are more effective (or could be made more effective) for gathering information than UWOs.123

3. Charter compliance analysis

123 Testimony of Anton Moiseienko, Cullen Commission Transcripts, December 15, 2020 at pp 84-86 and 111. Part 8 of the Proceeds of Crime Act 2002, 2002 c 29, deals with civil forfeiture investigations. Under Part 8, an appropriate officer (it depends on the type of investigation, but generally, a National Crime Agency officer, an accredited financial investigator, a constable, a Serious Fraud Office officer, an officer of Revenue and Customs or an immigration officer: s. 378 of Part 8) may apply ex parte to a judge for a production order requiring a person subject to a confiscation, civil recovery, exploitation proceeds or money laundering investigation, to either produce “material” or give the agency access to the material: Proceeds of Crime Act 2002, 2002 c 29, ss. 345-346 and 351. The term “material” is not defined, but on their face, these provisions appear equivalent to the power of the director to apply for a production order under s. 11.01 of the CFA. However, under the Proceeds of Crime Act 2002 a judge may also issue an order to grant entry in relation to a production order: Proceeds of Crime Act 2002, 2002 c 29, s. 347. Part 8 also allows an agency to apply ex parte for search and seizure warrants in relation to an investigation: Proceeds of Crime Act 2002, 2002 c 29, ss. 352-353 and 356. There is no equivalent provision in the CFA. Part 8 of the Proceeds of Crime Act 2002 allows the relevant authority to apply to a judge ex parte for a disclosure order in relation to an investigation: Proceeds of Crime Act 2002, 2002 c 29, ss. 357 and 362. A disclosure order authorizes an appropriate officer to require any person the officer considers has information relevant to the investigations to answer questions, provide information specified in the notice and/or produce documents. The UK disclosure order scheme has some elements of an order under s. 11.01 of the CFA and a notice to produce information under s. 22.02, but applies much more broadly in that any person who has relevant information can be required to disclose information or documents.
Appendix I  • Constitutionality of Possible Changes to the British Columbia Civil Forfeiture Act

a) Compelled statements and document production

[110] There is no question that the Charter applies to statutory powers to compel statements and produce documents as well as to the manner of exercise of those powers. There are two main Charter issues.

(i) Self-incrimination

[111] The Charter’s protections against self-incrimination will not result in the compelled statement and document provisions of the UWO scheme being struck down as contrary to the Charter. However, the Charter does have important implications for those powers.

[112] Persons who are not “charged with an offence” do not have the s. 11 right to immunity from compulsion to testify in the proceedings against them. However, the principle against self-incrimination is a principle of fundamental justice that is engaged under s. 7 of the Charter when any person’s life, liberty or security of the person is implicated.

[113] Compelled testimony or statements generally engage the compelled person’s liberty interest because failure to comply with the requirement to provide a statement could lead to incarceration. However, such compulsion, if for a valid public purpose, will be consistent with the principles of fundamental justice so long as the witness receives protection against the subsequent use of the evidence in proceedings against him or her in which his or her s. 7 rights are implicated. Thus, while UWO provisions giving the director powers of compulsion for the purposes of the forfeiture scheme will generally be Charter compliant, the Charter nonetheless has two implications for the operation of those powers.

[114] First, in Branch, the Supreme Court of Canada held that although compulsion is generally permitted, the courts may grant exemptions from compulsion to testify where the predominant

124 Angel Acres Recreation and Festival Property Ltd. v British Columbia (Attorney General), 2019 BCSC 1421; British Columbia (Director of Civil Forfeiture) v Huynh, 2013 BCSC 980; British Columbia (Director of Civil Forfeiture) v Thandi, 2018 BCSC 215; Director of Civil Forfeiture v Lloydsmith, 2014 BCCA 72; Alberta (Justice and Attorney General) v Petros, 2011 ABQB 541; Alberta (Minister of Justice and Attorney General) v Squire, 2012 ABQB 194; Alberta (Justice) v Wong, 2012 ABQB 498; Feuerhelm v Alberta (Justice and Attorney General), 2017 ABQB 709; Ontario (Attorney General) v $578,000 in Canadian Currency, 2003 CanLII 16953 (ON SC); AG Ontario and $164,300 in Currency, 2019 ONSC 2024.

125 Charter, s. 11(c).

purpose for seeking the evidence is to obtain incriminating evidence against the person compelled to testify and not some other legitimate public purpose. This makes it critical to ensure that the compulsion powers under the UWO are not being used to obtain incriminating evidence for determining penal liability.

[115] The Court’s subsequent decision in Jarvis provides further guidance as to how to determine the predominant purpose of an inquiry. One must look to all factors that bear upon the nature of the inquiry. Apart from a clear intention to pursue a criminal investigation, no one factor is determinative. Factors include whether the authorities’ general conduct was consistent with a criminal investigation and whether the authorities were acting as agents for the criminal investigators.

[116] It follows from this that, while in general, compelled statement provisions modeled on the UWO scheme would be Charter compliant, the courts have the authority to grant exemptions from compulsion if the dominant purpose of the compulsion in a particular case is to determine penal liability.

[117] The second Charter implication concerns the use of the compelled statement. The Charter requires that the respondent receive “derivative use immunity”—that is protection against not only the use of the information provided as evidence against him or her in subsequent proceedings, but also protection against the use in subsequent proceedings of any further information derived from it. The leading case is Branch. The British Columbia Securities Commission served summonses on two officers of a company under investigation requiring them to attend for examination on oath and to produce all information and records in their possession relating to the company.127 The officers failed to appear and the Securities Commission sought a contempt order. The Supreme Court of Canada held that the compulsion was lawful but that the principle against self-incrimination was a principle of fundamental justice protected by s. 7 that means persons compelled to testify have derivative use immunity in addition to the use immunity guaranteed by s. 13 of the Charter.128

---

[118] The protections against subsequent use of compelled statements in the UK UWO provisions do not meet these Charter standards. The UK provisions simply provide that the respondent’s statements cannot (with exceptions for perjury and related offences) be used against him or her in criminal proceedings. Following Branch, the Canadian Charter requires, in addition, that evidence discovered as a result of the compelled statement not be used against that person in criminal proceedings. Provincial legislation cannot confer this sort of immunity in a criminal proceeding but it would not be necessary for provincial legislation to purport to do so given the holding in Branch that the Charter imposes this protection.

[119] Neither the UK legislation nor our Charter protect compelled statements from being used in subsequent civil proceedings. However, if inclined to recommend adoption of a UWO scheme for British Columbia, the Commissioner may wish to consider whether it would be fairer to provide explicit protection against the subsequent civil use of statements compelled in civil forfeiture proceedings.

[120] Compelled production of documents will often give rise to different considerations than those relating to testimonial compulsion. For example, documents brought into existence without compulsion, containing communications made before there was any such compulsion and independent of it, do not engage the s. 7 principle. Moreover, if a witness is compelled to testify, then his or her documents are also compellable subject to a possible claim against their subsequent use.

[121] There may be situations in which documentary evidence would not have been discovered without compulsion. These situations may support a claim for derivative use immunity but generally would not support a claim for exemption from the obligation to produce the documents. However, if a witness is exempted from compulsory testimony as described earlier, the witness would also be exempted from producing documents or communications that came into being because of the attempt to compel testimony.

---

129 See e.g. Klein v Bell, [1955] SCR 309; Marshall v The Queen, [1961] SCR 123.
(ii) Search and seizure

[122] Section 8 of the Charter provides that “[e]veryone has the right to be secure against unreasonable search or seizure.” The Charter standard for most searches in the criminal context is that the search must be authorized in advance by an impartial judicial officer, be based on reasonable and probable grounds to believe that relevant evidence will be found in the place to be searched and the search itself be conducted reasonably.\(^\text{134}\) However, even in the criminal law context, there are exceptions to this general standard. For example, searches incident to arrest are generally permitted if grounds to arrest exist\(^\text{135}\) and sniffer dog searches are permitted on the basis of reasonable suspicion.\(^\text{136}\) Outside of the criminal context, less exacting s. 8 standards are routinely applied.\(^\text{137}\)

[123] For example, in Thomson Newspapers Ltd. v Canada (Director of Investigation and Research, Restrictive Trade Practices Commission)\(^\text{138}\), the majority of the Supreme Court of Canada held an order to produce documents under the Combines Investigation Act\(^\text{139}\) was not an unreasonable seizure. The stringent standards usually applicable to criminal investigations were inappropriate to determine the reasonableness of resort to the order to produce.\(^\text{140}\) As the discovery of violations of the Act will often require access to information as to the internal affairs of business organisations, the power to compel production of documents was important to the overall effectiveness of the investigative machinery established by the Act and did not constitute an unreasonable intrusion on privacy. Business records and documents would normally be the only records and documents that could lawfully be demanded. There was only a relatively low expectation of privacy in respect of these documents since they were used or

\(^{140}\) Hunter v Southam Inc., [1984] 2 SCR 145.
produced in the course of activities which, although lawful, were subject to state regulation as a matter of course.

[124] As Dickson J. wrote for the Court in *Hunter v Southam Inc.*, assessing whether the law authorizing a search or seizure is reasonable requires determining whether in a particular situation, the public’s interest in being left alone by government must give way to the government’s interest in intruding on the individual’s privacy in order to advance its goals (which in *Southam*, was law enforcement). The Court in *Goodwin v British Columbia (Superintendent of Motor Vehicles)* identified a number of relevant considerations including the purpose and nature of the provincial scheme, the mechanism of the seizure and the availability of judicial oversight.

[125] In line with these principles, statutory regulatory powers compelling production of business, tax and similar records generally are not subject to the requirements of prior authorization or objective grounds for suspicion. The Supreme Court of Canada has also upheld powers, without requiring warrants or objective grounds for suspicion, to inspect businesses for regulatory compliance. To comply with s. 8 in this context, investigators need show only that they acted in good faith in pursuit of legitimate regulatory objectives. Such powers, the Court has stated, are necessary for the effective regulation of industrial and economic activity. Requiring warrants and probable grounds would frustrate government’s ability to protect the vulnerable and regulate in the public interest.

---

141 *Hunter v Southam Inc.*, [1984] 2 SCR 145 at pp 159-160.
142 *Goodwin v British Columbia (Superintendent of Motor Vehicles)*, 2015 SCC 46.
147 *Thomson Newspapers Ltd. v Canada (Director of Investigation and Research, Restrictive Trade Practices Commission)*, [1990] 1 SCR 425 at p 526. See also *R v McKinlay Transport Ltd.*, [1990] 1 SCR 627 at p 648, per Wilson J. Not all regulatory searches are exempt from the *Southam* requirements. The Supreme Court noted in *Thomson Newspapers*, for example, that prior authorization on probable grounds was required in *Southam* because
[126] *R v Colarusso* illustrates how different *Charter* standards will apply to searches and seizures depending on their purpose. The issue concerned (among other things) the coroner taking blood and urine samples pursuant to his statutory powers. Given that the power was exercised in furtherance of the coroner’s “essential non-criminal” role to investigate deaths and decide whether an inquest was required, the seizure did not engage the *Southam* requirements and did not violate s. 8. However, the police obtaining the samples from the coroner for the purposes of a criminal investigation did engage the usual, criminal law s. 8 protections.

[127] With these principles in mind, I turn to the compelled production of documents under the UK UWO scheme. In my opinion, compelled production of documents under the provisions modelled on the UK UWO scheme would be subject to s. 8 scrutiny but would not engage its criminal law standards. If the CFO obtains documents or records from defendants or third parties, using its own statutory powers and for the purposes of implementing the civil forfeiture scheme, the compelled production will meet the s. 8 standard of reasonableness, as it did for example in *Thomson Newspapers*.

[128] While not strictly within the scope of the opinion you have asked for, I should note that issues may arise in a forfeiture proceeding if the CFO relies on documents received from the police, which they obtained in the course of a criminal investigation. In that case, challenges to the propriety of the CFO’s use of those documents has focused on whether law enforcement authorities could acquire sensitive personal information as well as business documents: pp 520-521. See also *R v McKinlay Transport Ltd.*, [1990] 1 SCR 627 at p 649, *per* Wilson J.; *Baron v Canada*, [1993] 1 SCR 416 at pp 444-445. Warrants and probable grounds are also presumptively required where the state’s “predominant purpose” is to uncover evidence of ‘penal liability’ rather than monitor regulatory compliance: see *R v Jarvis*, 2002 SCC 73 at paras 2, 46, 88 and 99. *R v Colarusso*, [1994] 1 SCR 20.

See e.g. *Ontario (Attorney General) v Chatterjee*, 2007 ONCA 406 (the appellant claimed the preservation order infringed his rights; he did not challenge the propriety of the roadside stop), the Court of Appeal held there was no s. 8 violation, but there was no *Charter* argument at the Supreme Court of Canada; *British Columbia (Director of Civil Forfeiture) v Johnson*, 2016 BCSC 1570 (breach of the Johnsons’ ss. 8 and 10(b) rights, but not of their s. 9 or 10(a) rights); *British Columbia (Director of Civil Forfeiture) v Huynh*, 2013 BCSC 980; *Ontario Attorney General v $164,300.00 in Canadian Currency (In Rem)*, 2019 ONSC 2024; *AGO v $68,870 Cdn Currency & $3,700 US currency (In Rem)*, 2019 ONSC 6546; *Feuerhelm v Alberta (Justice and Attorney General)*, 2017 ABQB 709.

*Thomson Newspapers Ltd. v Canada (Director of Investigation and Research, Restrictive Trade Practices Commission)*, [1990] 1 SCR 425; *R v McKinlay Transport Ltd.*, [1990] 1 SCR 627 (tax); *R v Jarvis*, 2002 SCC 73; *R v Ling*, 2002 SCC 74; *British Columbia (Securities Commission) v Branch*, [1995] 2 SCR 3 at paras 51-64; *Comité paritaire de l’industrie de la chemise v Potash: Comite paritaire de l’industrie de la chemise v Selection Milton*, [1994] 2 SCR 406. I assume for the purpose of this opinion that document production under a UWO would be constrained by the purposes of the *CFA* and not extend to irrelevant documents or be a “fishing expedition.”
complied with the usual s. 8 requirements that apply in the course of criminal investigations when they obtained the documents.  

(iii) Preservation/freezing orders

[129] As noted earlier, both the CFA and the UWO scheme provide for orders preventing the disposition of, or otherwise dealing with, assets, the appointment of receivers, etc. I think it likely that imposing these sorts of freezing orders (called “preservation orders” in the CFA) constitutes a form of seizure and is therefore subject to s. 8. While there is authority to the contrary, it likely has been superseded by the Supreme Court of Canada’s decision in Quebec (Attorney General) v Laroche.

[130] In that case, a restraint order under s. 462.33 of the Criminal Code was held to be a “seizure” within the meaning of s. 8: it freezes property where there are reasonable and probable grounds to believe that a forfeiture order under other Code provisions should be made. LeBel J., for the majority, reasoned that freezing the property reduces the person in possession to the status of caretaker or administrator of his or her own property and places the property under the legal and actual control of the criminal justice system. To the same effect, in civil forfeiture proceedings in Alberta, s. 8 of the Charter has been held to apply to freezing orders (called “restraint orders” in the Alberta legislation).

---

151 See e.g. Angel Acres Recreation and Festival Property Ltd. v British Columbia (Attorney General), 2019 BCSC 1421; British Columbia (Director of Civil Forfeiture) v Huynh, 2013 BCSC 980; British Columbia (Director of Civil Forfeiture) v Thandi, 2018 BCSC 215; Alberta (Justice and Attorney General) v Petros, 2011 ABQB 541; Alberta (Minister of Justice and Attorney General) v Squire, 2012 ABQB 194; Alberta (Justice) v Wong, 2012 ABQB 498; Feuerhelm v Alberta (Justice and Attorney General), 2017 ABQB 709; Ontario (Attorney General) v Chatterjee, 2007 ONCA 406; Ontario (Attorney General) v $78,000 in Canadian Currency, 2003 CanLII 16953 (ON SC); AG Ontario and $164,300 in Currency, 2019 ONSC 2024.

152 See British Columbia (Director of Civil Forfeiture) v Fischer, 2010 BCSC 568 at para 36. And see Director of Civil Forfeiture v Angel Acres, 2007 BCSC 1648 at para 48. There is a stated case before the Supreme Court of British Columbia arising from the British Columbia Securities Commission in relation to whether the “freeze order” provisions of s. 151 of the Securities Act are contrary to s. 8: BC Securities Commission v Bridgemark Financial Corp et al, BCSC No. S1914058. A decision is outstanding, but may have some implications for CFA freezing orders.

153 See Quebec (Attorney General) v Laroche, 2002 SCC 72.

154 See Quebec (Attorney General) v Laroche, 2002 SCC 72.

155 If evidence obtained in breach of the Charter, s. 8 and is relied on for a restraint order, it can be excluded under s. 24(2): Alberta (Justice and Attorney General) v Petros, 2011 ABQB 541 at paras 62-66; Alberta (Minister of Justice and Attorney General) v Wong, 2012 ABQB 498 at paras 46-53; Alberta (Minister of Justice and Attorney General) v Squire, 2012 ABQB 194 at paras 71-75.
[131] If a freezing order constitutes a seizure and is therefore subject to s. 8, by what standards would the reasonableness of the seizure be assessed? The presumptive requirements from Southam are that the search or seizure be pre-authorized by an independent judicial officer, that reasonable and probable grounds exist\textsuperscript{157} and that the search or seizure be conducted reasonably. But as we have seen, the criminal standards for s. 8 have been relaxed in relation to search and seizure powers in provincial regulatory schemes and there is no “hard and fast” test for reasonableness.

[132] Having regard to the considerations set out in Goodwin, my view is that the legislation authorizing interim preservation orders under s. 8 and the preliminary orders to preserve property under s. 11.02 do not infringe s. 8 of the Charter. My conclusion is based on the purpose and nature of the civil forfeiture scheme, the mechanism of seizure and the degree of its potential intrusiveness and the judicial oversight of the interim and preliminary preservation orders.\textsuperscript{158}

[133] I turn to consider interim freezing orders under the UWO scheme. These orders may be made where the court makes an UWO if it considers it necessary to do so “for the purposes of avoiding the risk of any recovery order that might subsequently be obtained being frustrated.”\textsuperscript{159} Thus, before making the interim freezing order, the court must be satisfied that the requirements for making an UWO exist. Some of the key requirements must be shown only to the standard of “reasonable grounds for suspecting”, such as that the known sources of the respondent’s lawfully obtained income would have been insufficient for the purposes of enabling the respondent to obtain the property and that the respondent (or a person connected to the respondent) is or has been involved in serious crime.

[134] Based on the considerations set out in Goodwin, my view is that if amendments to the CFA are made to implement interim freezing orders as in the UK UWO scheme, this legislation is not likely to infringe s. 8 of the Charter. Evaluation of the purpose and nature of the regulatory scheme would be the same as considered above in relation to the CFA and preservation orders. The Proceeds of Crime Act 2002, ss. 362D, 362J and 362K provide for judicial oversight. The High Court issues the order and if there is non-compliance with the UWO, the Court must

\textsuperscript{157} Meaning reasonable and probable grounds to conclude there is a risk that property believed to be proceeds of crime will not remain available for possible forfeiture.

\textsuperscript{158} Goodwin v British Columbia (Superintendent of Motor Vehicles), 2015 SCC 46 at para 57.

\textsuperscript{159} Proceeds of Crime Act 2002, 2002, c 29, s. 362J.
discharge the order if a “relevant application” (restraint order, property freezing order or interim receiving order) has not been made within 48 hours, the relevant application is made within 48 hours but has been determined or otherwise disposed of or if there is notification from an enforcement authority that there are no further proceedings. If there is compliance with the UWO, then within 60 days of compliance (or purported compliance), the enforcement agency must determine what enforcement or investigatory proceedings, if any, ought to be taken. As with CFA preservation orders, the mechanism of seizure is of concern with respect to Charter compliance. However, for the same reasons as given above in relation to the CFA interim preservation orders, in my view, interim freezing orders would likely not infringe s. 8.

(iv) Presumption that the property is recoverable property

[135] In the UK, if the respondent fails to comply with the UWO, “the property is presumed to be recoverable property” for the purposes of forfeiture proceedings to the extent of the respondent’s interest in the property and if that interest exceeds a certain value threshold. The presumption may be rebutted by proof of the contrary. In other words, if the respondent fails to comply with the UWO, the burden of proof on the balance of probabilities is placed on him or her to show that the property is not “recoverable property”, or in the British Columbian context, the proceeds of unlawful activity. The presumption does not arise if the person “purports to comply” with the requirements of the UWO. (I should note that the CFA contains a number of presumptions, but you have not asked my opinion in relation to them.)

[136] There are two potential Charter issues with respect to this presumption. There is also a potential argument about the validity of this presumption because of its impact on judicial independence.

161 Proceeds of Crime Act 2002, 2002, c 29, ss. 363C(2) and 363C(3).
163 See e.g. CFA, ss. 17(2), 17(3), 19.01, 19.02, 19.03, 19.04(2), 19.04(3) and 19.05.
164 Reverse onus provisions in civil forfeiture schemes have been unsuccessfully challenged on the basis of the European Convention for the Protection of Human Rights and Fundamental Freedoms’ guarantees of the presumption of innocence and criminal procedural rights in Article 6, §§ 2-3; see e.g. Arcuri et al v Italy, ECHR, App no 52024/99, Judgment of 5 July 2001; Gogitidze et al v Georgia, ECHR, App No 36862/05, Judgment of 12 May 2015; Nedyalkov and Others v Bulgaria, ECHR, App no 663/11, Judgment of 10 September 2013.
[137] The first Charter issue relates to s. 7, but arises only if the presumption is found to engage the respondent’s life, liberty or security of the person. There is no specified penalty for failure to comply, but I have assumed that such failure could constitute contempt of court and be punished by imprisonment, thus engaging the liberty interest.

[138] If s. 7 is engaged, the presumption could be challenged as being contrary to the principle of fundamental justice that laws must not be arbitrary or overbroad. An arbitrary law is one in which there is “no rational connection between the object of the law and the limit it imposes on life, liberty or security of the person.” A law that is overbroad “takes away rights in a way that generally supports the object of the law, [but] goes too far by denying the rights of some individuals in a way that bears no relation to the object.” With respect to both arbitrariness and overbreadth, one compares the effects of the law with its objects.

[139] The object of the presumption is to provide proof that property is the proceeds of crime. It could be argued that the provision is arbitrary, or at least overbroad, because there is no connection, at least in some cases in which the presumption would apply, between the respondent’s non-compliance with the UWO and whether or not the property is the proceeds of crime.

[140] There are difficulties with this argument, however. One is that the presumption itself does not engage the respondent’s liberty interest. Only the failure to comply with the UWO may do that. It may be that there is an insufficient causal connection between the presumption and any potential deprivation of the respondent’s liberty interest to engage s. 7. Put differently, there is no relationship between the limitation on liberty—that is, the risk of imprisonment for failure to comply—and the operation of the presumption.

challenges failed because the countries’ civil forfeiture proceedings were not criminal in nature: Arcuri et al v Italy, ECtHR, App no 52024/99, Judgment of 5 July 2001; Gogitidze et al v Georgia, ECtHR, App No 36862/05, Judgment of 12 May 2015; Nedyalkov and Others v Bulgaria, ECtHR, App no 663/11, Judgment of 10 September 2013. The Commission’s expert, Anton Moiseienko, opined that the reverse onus provisions challenged in the European Court of Human Rights were stricter than the UK’s equivalent: Testimony of Anton Moiseienko, Cullen Commission Transcripts, December 15, 2020 at pp 128-131.

165 See e.g. Carter v Canada, 2015 SCC 5 at para 71ff.
166 Carter v Canada, 2015 SCC 5 at para 83.
Another difficulty is that the inference that the property is the proceeds of crime may not be irrational given what must be established to obtain the UWO. In brief, to issue the UWO, the court must be satisfied that there are reasonable grounds to believe that the respondent holds the property and reasonable grounds to suspect that the respondent or a person connected to the respondent has been involved in serious crime. In the face of those conclusions, the inference from the respondent’s refusal to comply with the UWO that the property is the proceeds of crime may not be strong, but it perhaps may not be dismissed as completely irrational either.\textsuperscript{168}

A second potential \textit{Charter} issue relates to s. 8. It is likely that a forfeiture of property as proceeds of crime is a “seizure” within the meaning of s. 8.\textsuperscript{169} If so, the question arises whether a seizure based on the presumption is reasonable. One might say that the presumption arises based on mere suspicion that the property is proceeds of crime. If that is right, it could be argued that basing a forfeiture order on the presumption amounts to allowing a permanent change of ownership of property based on mere suspicion that the statutory requirements for forfeiture have been met.

There is very little jurisprudence to assist in assessing the strength of these potential \textit{Charter} arguments. In my opinion, the s. 7 argument is weak and unlikely to be accepted, but the chances of success of the s. 8 argument cannot be dismissed as speculative.

Finally, I considered whether the UWO presumption would be contrary to the principle of judicial independence and impermissibly intrude into the jurisdiction of a s. 96 court. On the basis of \textit{British Columbia v Imperial Tobacco Canada Ltd.} I do not think the presumption would be impermissible on that basis.\textsuperscript{170} The appellants argued British Columbia’s \textit{Tobacco Damages and Health Care Costs Recovery Act}\textsuperscript{171} violated the independence of the judiciary because it shifted the onuses of proof of some elements of a claim and limited the compellability of certain

\textsuperscript{168} See e.g. \textit{Ewert v Canada}, 2018 SCC 30 at para 73.

\textsuperscript{169} \textit{Quebec (Attorney General) v Laroche}, 2002 SCC 72. There are no cases addressing whether forfeiture of property in the context of a scheme like the \textit{CFA}, where there is not necessarily seizure prior to forfeiture (unlike in other regulatory schemes like the \textit{Customs Act} or \textit{Fisheries Act}, where seizure precedes forfeiture), is a seizure subject to s. 8. However, trial courts in British Columbia, Alberta and Ontario have applied s. 8 to evidence relied on for a civil forfeiture order (in these cases the director, or equivalent, was attempting to submit evidence obtained from police): see e.g. \textit{British Columbia (Director of Civil Forfeiture) v Cronin}, 2016 BCSC 284; \textit{Alberta (Justice and Attorney General) v Petros}, 2011 ABQB 541; \textit{AG Ontario and $164,300 in Currency}, 2019 ONSC 2024.

\textsuperscript{170} \textit{British Columbia v Imperial Tobacco Canada Ltd.}, 2005 SCC 49.

\textsuperscript{171} \textit{Tobacco Damages and Health Care Costs Recovery Act}, SBC 2000, c 30.
information. The Supreme Court disagreed. In fact and appearance, the Act did not take away the court’s adjudicative role and a court retained the ability to exercise that role without interference. “Judicial independence can abide unconventional rules of civil procedure and evidence.” Similarly, in the UWO regime, if the respondent fails to comply (or purport to comply) with the UWO, he or she has the onus to show that the property is not recoverable property.

C. Information sharing

1. Introduction

[145] You have asked for my opinion on whether there are constitutional barriers to a provincial forfeiture office providing information obtained in the exercise of its investigative powers to: (a) criminal law enforcement agencies; (b) tax authorities; and (c) regulators.

[146] With respect to this last aspect of the question, there is no constitutional impediment to the CFO sharing information with other provincial regulatory bodies and agencies for valid provincial purposes. While not within the scope of my opinion, I simply note that there may be provincial statutory limitations on the sharing of such information.

---

172 The presumptions which shifted the onuses of proof were in relation to aggregate claims to recover expenditures on disease caused by exposure to cigarettes in ss. 3.1(1) and 3(2) of the Act. Once the government proves (a) the defendant manufacturer breached a common law, equitable or statutory duty or obligation it owed to persons in British Columbia who have been or might become exposed to cigarettes, (b) exposure to cigarettes can cause or contribute to disease, and (c) during the manufacturer’s breach, cigarettes manufactured or promoted by the manufacturer were offered for sale in British Columbia, then the court will presume that: (a) the population that is the basis for the government’s aggregate claim would not have been exposed to cigarettes but for the manufacturer’s breach; and (b) such exposure caused or contributed to disease in a portion of the population that is the basis for the government’s aggregate claim.

173 British Columbia v Imperial Tobacco Canada Ltd., 2005 SCC 49 at para 56.

175 The Freedom of Information and Protection of Privacy Act, RSBC 1996, c 165 (“FOIPPA”), governs disclosure of “personal information” by government. Schedule 1 defines “personal information” as recorded information about an identifiable individual other than contact information. Part 3 of FOIPPA is about protecting privacy. Key provisions include the following: (a) a public body must protect personal information in its custody or under its control by making reasonable security arrangements (s. 30); (b) if the head of a public body receives a request to disclose, produce or provide access to personal information from a foreign authority, then the minister responsible for FOIPPA must be notified (s. 30.2(2)); (c) an employee, officer or director of a public body cannot disclose personal information except as authorised under FOIPPA (s. 30.4); (d) a public body may use personal information only for the purpose for which the information was obtained or complied or for a use consistent with that purpose (s. 32); and (e) a public body may disclose personal information only as permitted under ss. 31.1, 33.2 or 33.3 (s. 33). There are exceptions for disclosure inside and outside of Canada in certain circumstances: FOIPPA, ss. 33.1, 33.2,
[147] With respect to sharing information with criminal law enforcement agencies and tax authorities, there are potential constitutional difficulties falling into two categories.

- Information sharing with criminal law enforcement agencies and tax authorities for the purposes of prosecutions under the federal *Income Tax Act* could result in a different characterization of the legislative scheme for division of powers purposes. I have discussed this risk in the division of powers section of my opinion; and

- Information sharing with criminal law enforcement agencies would have to take account of the principles in *R v Jarvis*. Application of those principles could result in a finding that the “predominant purpose” of the investigation by the CFO was the determination of penal liability with the result that law enforcement agencies could not use information received from the CFO at trial. Thus, a finding of a predominant purpose in relation to penal liability has implications for both the individual’s s. 7 and s. 8 *Charter* rights and would result in enhanced *Charter* protections that would not apply in the course of inquiries that were not undertaken for that predominant purpose. The predominant purpose for which the information was obtained is an important factor both in shaping the contours of the principle against self-incrimination under s. 7 and the applicability and content of the protection against unreasonable search and seizure under s. 8.

[148] I will first set out current and potential information sharing mechanisms, then turn to the key holdings of *Jarvis* and finally discuss their implications for ss. 7 and 8 of the *Charter*.

2. Current and potential information sharing

[149] The current *CFA* scheme is based on the CFO obtaining information from the police and regulatory agencies on which to base its forfeiture proceedings. The information sharing that is envisioned by the *CFA* and which has been put in place by virtue of powers conferred on the director to have access to information and to enter into information sharing arrangements is “one

---

35 and 36. The *CFA* deals with *FOIPPA* concerns indirectly as it gives the director the right to access information in the possession of a public body, some of which would otherwise be subject to *FOIPPA*: *CFA*, ss. 22(5) and 22(7).

176 *R v Jarvis*, 2002 SCC 73.
way” sharing: the information is “shared” by others with the director and not the other way around.

[150] As noted earlier, this sort of one-way information sharing does not give rise to any constitutional issues. Nonetheless, it will be helpful to summarize, briefly, the information sharing arrangements under the current *CFA*.

[151] The Act addresses information sharing in two ways. First, it provides that the director is entitled, despite any other enactment, to information in the custody of various “public bodies” prescribed by regulation. Second, the Act authorizes the director to enter into information sharing agreements with the full range of public bodies, both federal and provincial. Here are the details:

- Under s. 22(5): the director is entitled to request, and a public body designated by the Lieutenant Governor in Council must disclose to him or her on request, information that is: (a) in the custody or control of the public body; and (b) reasonably required by the director in order to exercise his or her powers or perform his or her functions and duties under the Act\(^{177}\); and

- Under s. 22(4) the director may, subject to the regulations, enter into information sharing agreements with Canada, a province or another jurisdiction in or outside Canada and a public body.\(^{178}\)

[152] The director has entered into an agreement with a number of British Columbia municipal police forces for information sharing by those forces.\(^{179}\) Briefly, the agreement is “one way” in that its purpose is to provide a framework for disclosure by the police to the director and is silent about the director sharing information with the police. It provides for sharing by the police with the director either on the initiative of the police or at the request for information by the director.

\(^{177}\) Also, s. 22(6) provides: A public body that has custody or control of information to which the director is entitled under subsection (5) must, on request, disclose that information to the director. Public bodies prescribed by regulation are: the Ministry of Environment and Climate Change Strategy; Ministry of Finance; Insurance Corporation of British Columbia and BC Financial Services Authority: BC Reg 164/2006, s. 8.

\(^{178}\) No regulation constrains this authority. “Public body” by virtue of s. 21(1) means a public body as defined in the *Freedom of Information and Protection of Privacy Act* and therefore includes a ministry of the British Columbia government, and agency board or commission, etc. listed in Schedule 2 of the *FOIPPA* and a local public body but does not include the offices of members or officers of the Legislature or the courts.

\(^{179}\) Information Sharing Agreement dated 25 August 2006.
and says that the information is to be used by the director solely for the purpose of exercising his or her powers and performing his or duties and functions under the Act. There are provisions with respect to the protection of investigations and investigation techniques, confidential informants and solicitor-client privilege.

[153] The Province also has an agreement with the Government of Canada regarding information sharing between federal government and provincial institutions, including police forces and, in particular, the Co-ordinated Enforcement Unit of the Ministry of the Attorney General of British Columbia. The purpose of the Agreement is to provide access to, and the use and disclosure of, information under the control of federal government institutions to British Columbia or a provincial institution. The Agreement stipulates that information disclosed pursuant to it will “only be used or disclosed for the purpose of administering or enforcing any law or carrying out a lawful investigation or for a subsequent use which is consistent therewith.”

Although this agreement pre-dates the CFA, I understand that it governs the sharing of information by the Royal Canadian Mounted Police (“RCMP”) with the CFO. Note that, as with respect to the agreement with municipal police forces, the Agreement is a “one way” agreement in that it deals only with the sharing of information by federal government institutions with provincial institutions and not the reverse situation.

[154] Given that all of these provisions and agreements are “one-way” in the sense that they deal only with others sharing their information with the director, I think they are constitutionally sound. The main questions are whether the police may lawfully turn over the information and the director may lawfully receive it. What case law there is affirms that the answer to both of these questions is “yes.” As I noted above, the issues that may arise if evidence shared with the director by the police or others was illegally obtained are beyond the scope of the opinion that

---

181 Information Sharing Agreement dated 27 July 1983, s. 2.
182 Angel Acres Recreation and Festival Property Ltd. v British Columbia (Attorney General), 2019 BCSC 1421; Director of Civil Forfeiture v Shoquist, 2011 BCSC 1199 at para 41; See e.g. Alberta (Justice and Attorney General) v Petros, 2011 ABQB 541; Alberta (Minister of Justice and Attorney General) v Squire, 2012 ABQB 194; Alberta (Justice) v Wong, 2012 ABQB 498; Feuerhelm v Alberta (Justice and Attorney General), 2017 ABQB 709; Brown v Canada, 2013 FCA 111 at para 16; Klundert v Canada, 2014 FCA 156 at para 10.
you have requested and in any event these issues would not go the constitutionality of the existing information sharing arrangements but only to their application in specific cases.  

[155] In addition to these information sharing agreements, there are other agreements in place to facilitate cooperation and coordination between the CFO and police. I will return to these later in my opinion where I discuss embedding a civil forfeiture office within a provincial law enforcement agency or having such an agency with a civil asset forfeiture mandate.

[156] Turning to potential information sharing by the director with the police, the main question is whether there would be *Charter* issues if the CFO were given enhanced investigative powers such those in the UK UWO scheme and shared the fruits of the use of those powers with the police. To take a specific example, I will assume that the CFO has obtained a UWO that requires a respondent to provide details about his or her acquisition of property and then wishes to share the respondent’s response to the order with the police.

3. **The importance of Jarvis**

[157] As discussed above, the leading case addressing the intermingling of regulatory and criminal investigative powers is *R v Jarvis*, which concerned the sharing of information between the audit and prosecution arms of the Canada Revenue Agency (“CCRA”). The decision is both complex and important for the purposes of my opinion. I will therefore discuss it in detail.

[158] A CCRA auditor pursued a tip that the taxpayer had not reported the proceeds of sales of his late wife’s art on his tax returns. The auditor obtained books and records and interviewed the taxpayer and his accountant. In assembling this information, the auditor used the so-called inspection power under s. 231.1(1) of the *Income Tax Act* to “inspect, audit or examine” a wide array of documents. The auditor then referred the entire file to the CCRA Special Investigations

---

183 The director may use information received from police in civil forfeiture proceedings subject to *Charter* scrutiny. As in a criminal trial, civil forfeiture defendants can allege the police obtained the information in violation of the *Charter* and seek a remedy under s. 24(2) for exclusion of that evidence in the civil forfeiture petition: *British Columbia (Director of Civil Forfeiture) v Huynh*, 2013 BCSC 980; *Director of Civil Forfeiture v Shoquist*, 2011 BCSC 1199; *Alberta (Justice and Attorney General) v Petros*, 2011 ABQB 541; *Alberta (Minister of Justice and Attorney General) v Squire*, 2012 ABQB 194; *Alberta (Justice) v Wong*, 2012 ABQB 498; *Feuerhelm v Alberta (Justice and Attorney General)*, 2017 ABQB 709.

184 *R v Jarvis*, 2002 SCC 73.
Appendix I  • Constitutionality of Possible Changes to the British Columbia Civil Forfeiture Act

Section, which began an investigation to determine whether prosecution for tax evasion was merited.

[159] Using the file material assembled by the auditor, the investigator obtained a search warrant and obtained additional information by way of “requirement letters” sent to various banks as provided for in s. 231.2(1) of the ITA. The taxpayer was charged with tax evasion.

[160] At trial, the trial judge ruled that the “audit” had at a certain point become a criminal investigation and that information obtained by the auditor after that point was obtained in violation of the taxpayer’s s. 7 rights and should be excluded from the trial evidence pursuant to s. 24(2) of the Charter. The judge also reviewed the search warrant and held that when the illegally obtained evidence was removed from the Information To Obtain, it no longer disclosed reasonable grounds for the search. The search was, therefore, not authorized by a warrant and the court excluded the evidence obtained as a result of it. The judge also concluded that the information obtained by the investigator by means of the “requirement letters” to the various banks was also illegally obtained and should be excluded. As a result of the exclusion of all of this evidence, the judge granted a directed verdict of acquittal.

[161] The main issues before the Supreme Court of Canada were whether there was a distinction between CCRA’s audit and investigation functions and, if so, what were the legal consequences of that distinction for the taxpayer. Note that the constitutionality of the provisions conferring the inspection and requirement powers was not in issue. Rather the case focused on the admissibility of the evidence obtained by the use of those powers at the trial for tax evasion.185

[162] The Court made three key holdings for our purposes.

[163] First, there is a distinction for Charter purposes between obtaining information in order to assess tax liability and obtaining information for the purposes of determining penal liability. The distinction turns on the “dominant purpose” for which the information is obtained.

185 The Court held in R v McKinlay Transport Ltd., [1990] 1 SCR 627, that s. 231.2 of the Income Tax Act, one of the sections conferring the powers in issue in Jarvis, did not infringe s. 8 of the Charter.
Second, powers conferred for tax assessment purposes cannot be used for the dominant purpose of determining penal liability. As a matter of statutory interpretation, the inspection and requirement powers in the *ITA* are not available for use in an investigation to determine penal liability.

Third, using compelled information for the dominant purpose of determining penal liability engages enhanced *Charter* protections for the target of the investigation.

I will examine each of these three key holdings in turn and note their implications for information sharing by the CFO.

To begin with the dominant purpose for which information is obtained, one must look to all factors that bear upon the nature of the inquiry. Apart from a clear decision to pursue a criminal investigation, no one factor is determinative. Even where reasonable grounds to suspect an offence exist, it will not always be true that the predominant purpose of an inquiry is the determination of penal liability. The following factors can be considered: (a) did authorities have reasonable grounds to lay charges or could a decision have been made to proceed with a criminal investigation; (b) was the authorities’ general conduct consistent with a criminal investigation; (c) did the regulator transfer his or her file to the investigators; (d) was the regulator acting as an agent for the investigators; (e) did the investigators appear to intend to use the regulator as their agent; (f) was the evidence relevant to taxpayer liability generally or only to penal liability; and (g) were there other circumstances or factors suggesting an audit became a criminal investigation?

The second key holding, as noted, is that powers conferred for tax assessment purposes cannot be used for the dominant purpose of determining penal liability. As Iacobucci and Major JJ. put it on behalf of the Court, “where the predominant purpose of a particular inquiry is the determination or penal liability, CCRA officials must relinquish the authority to use the inspection and requirement powers under ss. 231.1(1) and 231.2(1).” This means that the auditor in *Jarvis* should not have shared the information that she assembled under the inspection power after the point at which the dominant purpose became determination of penal liability. It

further means that the investigator should not have used the requirement power to further his investigation for that purpose.

[169] Neither of these holdings affects the constitutionality of information sharing provisions provided of course that they do not expressly authorize sharing that is off-side the *Jarvis* principles. However, the distinction between audit and criminal investigation, coupled with the highly fact-specific, multi-factored test to determine whether the predominant purpose of an inquiry is to determine penal liability opens many lines of challenge to information assembled in the civil forfeiture process that is shared with law enforcement. Thus, sharing the information may give rise to concerns about the purpose for which the information was in fact obtained and give rise to disputes about whether the director’s dominant purpose in obtaining the information was civil forfeiture. If a court concluded that this was not the director’s dominant purpose in obtaining the information, then this would open arguments in both the forfeiture and criminal proceedings that the director’s powers had been used for an improper purpose and that the evidence had therefore been illegally obtained. In deciding whether to recommend enhancement of the information sharing mandate of the director, the Commissioner may wish to consider the potential that such sharing has to prolong both forfeiture proceedings and criminal proceedings as a result of disputes of this nature.

[170] *Jarvis* tells us that the framework for assessing *Charter* breaches in a regulatory context is highly contextual. The result is that a bright-line “point in time” analysis, which requires an investigator to identify precisely when an inspection for regulatory compliance shifted to an investigation into possible offences under the regulatory scheme (i.e. became adversarial) is not necessarily determinative or even applicable.187 Regulatory inspections (unlike tax audits) always take place, broadly speaking, in a “penal” or “adversarial” context because regulatory powers to ensure compliance always raise the spectre of charges under the scheme. Therefore, depending on the context, the regulatory inspection powers may always be penal in the sense of *Jarvis* and thus the pertinent question will be whether what was done was within the scope of those regulatory powers and for the purposes for which the regulatory powers were conferred.

---

[171]  *R v Nolet* provides a helpful example. The accused were subject to a warrantless search during a random roadside stop after the police found provincial regulatory violations.\(^{188}\) The Court held that courts must conduct a step by step review of the interactions of the police and the accused from the initial stop onwards to determine whether, as the situation developed, the police stayed within their authority, having regard to the information they lawfully obtained at each stage of their inquiry. Although the accused challenged the search as unconstitutional on the basis of *Jarvis*, their reliance on *Jarvis* was misplaced.\(^{189}\) The context was always penal so the issue was whether the statutory powers had been properly exercised for the purposes for which they were given.

[172]  I now turn to the enhanced *Charter* protections engaged in inquiries with a dominant purpose of determining penal liability. The existence of this purpose affects the application of both ss. 7 and 8 to the conduct of those inquiries.

  a)  *Section 7*\(^{190}\)

[173]  The individual’s liberty interest is engaged by the introduction of statutorily compelled information at his or her trial for a criminal offence, which in turn engages the principle of fundamental justice in relation to self-incrimination. This principle does not prevent the use of information in all contexts in which it is statutorily compelled.\(^{191}\) However, “when the predominant purpose of a question or inquiry is the determination of penal liability, the ‘full panoply’ of *Charter* rights are engaged for the [individual’s] protection.”\(^{192}\) This means that the powers given to compel documents and statements and to require financial records under ss. 231.1(1) and 231.2(1) of the *ITA* cannot be used for the purpose of advancing the criminal

\(^{188}\) *R v Nolet*, 2010 SCC 24.

\(^{189}\) *R v Nolet*, 2010 SCC 24 at paras 45-46.

\(^{190}\) See also the section of this opinion discussing *Charter* compliance in relation to investigative powers (as opposed to information sharing).

\(^{191}\) Examples include *R v Fitzpatrick*, [1995] 4 SCR 154, in which information obtained under the federal *Fisheries Act*, RSC 1985, c F-14, for a regulatory purpose could be used for a criminal prosecution under that statute. In contrast, a statement concerning an accident which was compelled by the BC *Motor Vehicle Act*, RSCBC 1979, c 288, was held not to be admissible at a criminal trial of the maker of the statement on charges arising from the accident in *R v White*, [1999] 2 SCR 417.

\(^{192}\) *R v Jarvis*, 2002 SCC 73 at para 96.
investigation. These powers may continue to be used in an audit parallel to a criminal
investigation provided that they are used for audit purposes.\(^{193}\)

[174] I conclude that compelled statements in relation to civil forfeiture proceedings sought to
be used in criminal proceedings will be subject to the “full panoply” of Charter rights. Both
under the CFA, and particularly under the UWO scheme, the respondent can be required to
provide “information” (in the case of the CFA, s. 11.01) or a “statement” (in the case of the
UWO scheme). Both of these provisions contemplate that the respondent is required to disclose
information that has not been previously recorded in a document for some other purpose.

[175] My view is that a lower threshold will apply to production of pre-existing documents
unless their discovery is linked to the compulsion. This is because compelled production of
documents does not impinge on the right to silence if the communications were made
independently of, and before, the state compelled production.\(^{194}\) Although at common law and
under s. 7 in certain circumstances, compellability would impinge on the right to silence, this
does not occur where documents contain communications not brought into existence by the
exercise of state compulsion. In Thomson Newspapers, Sopinka J. illustrated this distinction
between communications as follows:

> It is a distinction that is made virtually every day in connection with police
> investigations. While suspects are entitled to remain silent, their documents
> may be seized by means of a search warrant under the Criminal Code. No right
to remain silent or privilege against self-incrimination will avail to protect
> against seizure of the documents…\(^{195}\)

[176] The production of documents itself can have communicative aspects, for example where
possession of a document permits an inference of knowledge of the contents of the document or
an inference of the truth of its contents.\(^{196}\) In Branch, the Court held that the communicative
aspects of document production may be of significance at the derivative evidence stage where a

\(^{193}\) R v Jarvis, 2002 SCC 73 at para 97.
\(^{196}\) British Columbia Securities Commission v Branch, [1995] 2 SCR 3 at para 47.
witness seeks to exclude all evidence that would not have been obtained but for the compelled testimony.\(^{197}\)

\(b\) Section 8

[177] The Court in *Jarvis* held that taxpayers have a very low expectation of privacy with respect to the material and records they are obliged to keep under the *ITA* and which they are obliged to produce during the course of an audit. It follows that there is “nothing preventing auditors from passing to investigators their files containing validly obtained audit materials. …[T]here is no principle of use immunity that prevents the investigators, in the exercise of their investigative function, from making use of evidence obtained through the proper exercise of the CCRA’s audit function. Nor, in respect of validly obtained audit information, is there any principle of derivative use immunity…”\(^{198}\)

[178] These statements must, however, be understood in the context of two important facts that have implications for information sharing obtained in the course of civil forfeiture proceedings.

[179] First, the auditor in *Jarvis* did not use the inspection power while conducting an investigation, the predominant purpose of which was a determination of penal liability. However, the Court made clear that once that becomes the predominant purpose, the results of the audit inquiries cannot be used in pursuance of the investigation or prosecution.\(^{199}\) This has two implications for civil forfeiture proceedings: civil forfeiture investigative procedures cannot be used for the dominant purpose of determining penal liability and once a criminal investigation has been started, information obtained after that date through the civil forfeiture process cannot be in pursuance of the investigation or prosecution.

[180] Second, the taxpayer had a low expectation of privacy with respect to the documents and records in issue in *Jarvis*. The s. 8 analysis might well be different if the material obtained in the civil forfeiture process was such that the respondent had a significant privacy interest, although this seems unlikely with respect to the sort of information about property and financial records that are likely to be relevant to a civil forfeiture proceeding.

\(^{198}\) *R v Jarvis*, 2002 SCC 73 at para 95.
\(^{199}\) *R v Jarvis*, 2002 SCC 73 at paras 99, point 3 and 103.
4. Conclusion on information sharing

[181] In summary, my opinion is:

➢ There are likely no constitutional barriers to a provincial civil forfeiture office providing information obtained using investigative tools provided for the purpose of civil forfeiture proceedings with other provincial regulators and tax authorities;

➢ Civil forfeiture offices cannot use their investigative powers for the predominant purpose of investigating penal liability;

➢ The sharing of compelled information for the purposes of a criminal investigation and prosecution likely breaches s. 7 of the Charter; and

➢ With respect to sharing information for the purposes of a criminal investigation in which there is a significant reasonable expectation of privacy, the sharing of such information also likely engages s. 8 of the Charter and will be subject to the Southam standard.

D. Combining law enforcement and civil forfeiture personnel

1. Introduction

[182] You have asked whether there are constitutional impediments to: (a) constituting a provincial law enforcement agency with a mandate to pursue civil asset forfeiture; or (b) embedding a civil forfeiture office within a provincial law enforcement agency. In both scenarios, the critical question is whether the change in administrative setting and arrangements would change the purpose of the scheme. This is critical because the purpose of the scheme has significant weight in both the “pith and substance” analysis for division of powers purposes and in the Charter analysis concerning what standards will be applied to the exercise of the power.

[183] The CFO and the RCMP have a Memorandum of Understanding (“MOU”)200 under which the CFO assigns one of its employees to the RCMP in the role of CFO RCMP Program

200 Memorandum of Understanding between The British Columbia Civil Forfeiture Office and the Royal Canadian Mounted Police “E” Division dated April 24, 2014.
Manager within the RCMP’s Federal Serious and Organized Crime Operations Support Group Asset Forfeiture Unit. There is also a secondment agreement between the British Columbia Ministry of Public Safety and Solicitor General and the Vancouver Police Board (“VPD”).201 The VPD has an “informally assembled” asset forfeiture team whose role includes identifying, seizing and recommending forfeiture of criminal assets and prosecution of “persons associated therewith” and cooperating with other jurisdictions for such purposes. The seconded person is “retained by the VPD under a contract to perform services for the VPD.” The seconded person’s role is to review and assess VPD files forwarded to the asset forfeiture team for potential referral to the CFO. The person is not to “browse police information” for potential referrals to the CFO.

[184] I have taken these arrangements into account in formulating my opinion about the constitutionality of the current scheme.

[185] I note that the British Columbia courts have held that: (a) it is lawful for the director to collect information from the RCMP; (b) the director can use information received from the RCMP under the 1983 Information Sharing Agreement to commence and conduct proceedings under the CFA; and (c) the director has the authority to assign an employee to the CFO RCMP Program Manager position.202

2. Analysis

a) Division of Powers

[186] For the civil forfeiture scheme to be within provincial legislative powers, its pith and substance must be in relation to property and civil rights within the province. As described in detail above, pith and substance depends on the law’s purposes and effects. The purposes and effects of the current CFA scheme are conceptually and practically distinct from federal legislative jurisdiction in relation to investigating crime and determining penal liability. The two scenarios on which you have asked my opinion involve a risk that the clarity of this distinction could be weakened or perhaps even lost.

202 British Columbia (Director of Civil Forfeiture) v Angel Acres Recreation and Festival Property Ltd., 2010 BCCA 539; Angel Acres Recreation and Festival Property Ltd. v British Columbia (Attorney General), 2019 BCSC 1421.
[187] If a civil forfeiture mandate were given to a criminal law enforcement agency, the lines between civil forfeiture and determining penal liability would inevitably be blurred. Different arms of the same agency would at times be simultaneously trying to determine if property was the proceeds, or an instrument, of crime and to determine penal liability. This in my view would make it more difficult to convince a court that the powers conferred for the purposes of the civil forfeiture scheme were not in fact being used for the purposes of determining penal liability. The same, in my view, could be said about embedding a civil forfeiture office within a criminal law enforcement agency.

[188] These risks could no doubt be mitigated. Confidentiality “walls” could be established around the work of the civil forfeiture arm and clear protocols put in place to avoid even the appearance that civil forfeiture powers were in fact being used for criminal investigation purposes. However, the blurring of the distinction between the two functions is at the least likely to lead to litigation. In my view, there is, at a minimum, a moderate risk that these changes could lead to a finding that the civil forfeiture scheme’s purposes and effects were not in relation to valid provincial objects.

b) Charter implications

[189] The Charter implications of these changes also depend on the risk that they would lead to a different conclusion about the dominant purpose for using civil forfeiture information gathering powers. The potential new arrangements would in my view increase the risk that those powers could be held to be for the dominant purposes of investigating and prosecuting crime.

[190] I have discussed the Jarvis case in detail earlier in my opinion. That case put in place a complex, multi-factored test for determining the dominant purpose for which information was gathered. It arose out of the fact that within the same overall organization, the CCRA, there were both audit and prosecution arms. The problem arose from the sharing of information acquired for audit purposes once a criminal investigation had been initiated. That same problem is likely to arise if civil forfeiture and criminal investigation functions exist side by side within the same organization.

[191] It is worth noting that the Supreme Court of British Columbia has expressed concern about the relationship between the RCMP and the CFO resulting from the MOU for the creation
of the CFO RCMP Program Manager position. The Court upheld the legality of the arrangement. However, it also expressed the view that “in some circumstances, the relationship between the police and the CFO with the attendant possibility of conflict arising from the intersection of criminal law substance and procedure and civil forfeiture law substance and procedure may require not only evidentiary oversight by the Court but also engage Charter scrutiny.” 203 These sorts of concerns will undoubtedly be more acute if the potential “embedding” arrangements are adopted.

203 British Columbia (Director of Civil Forfeiture) v Angel Acres Recreation and Festival Property Ltd., 2020 BCSC 880 at para 159.
